UNDER the Dingley Act revenues decreased during 1908 to such an extent that all parties agreed that a revision of the tariff was imperative. It was estimated that the expenditures for the fiscal year ending June 30, 1909, would exceed the receipts by $150,000,000.

President William H. Taft, in his inaugural address (March 4, 1909) referred to the situation as follows:

A matter of most pressing importance is the revision of the tariff. In accordance with the promises of the platform upon which I was elected, I shall call Congress into extra session to meet on the 15th day of March, in order that consideration may be at once given a bill revising the Dingley Act. This should secure an adequate revenue and adjust the duties in such a manner as to afford to labor and to all industries in this

country, whether of the farm, mine, or factory, protection by tariff equal to the difference between the cost of production abroad and the cost of production here, and have a provision which shall put into force, upon executive determination of certain facts, a higher or maximum tariff against those countries whose trade policy toward us equitably requires such discrimination. It is thought that there has been such a change in conditions since the enactment of the Dingley Act, drafted on a similarly protective principle, that the measure of the tariff above stated will permit the reduction of rates in certain schedules and will require the advancement of few, if any.

The proposal to revise the tariff made in such an authoritative way as to lead the business community to count upon it necessarily halts all those branches of business directly affected; and, as these are most important, it disturbs the whole business of the country. It is imperatively necessary, therefore, that a tariff bill will be drawn in good faith in accordance with promises made before the election by the party in power.

To secure the needed speed in the passage of the tariff bill, it would seem wise to attempt no other legislation at the extra session. I venture this as a suggestion only, for the course to be taken by Congress, upon the call of the Executive, is wholly within its discretion.

In the making of a tariff bill the prime motive is taxation and the securing thereby of a revenue. Should it be impossible to so arrange the duties as to secure an adequate income, I recommend a graduated inheritance tax as correct in principle and as certain and easy of collection.

On March 17 Sereno E. Payne [N. Y.] introduced in the House the expected bill, whose title was "a bill to provide revenue, equalize duties, and encourage the industries of the United States, and for other purposes." It was referred to the Committee on Ways and Means, of which Mr. Payne was chairman. It was reported back next day. It came up for discussion on March 22.

The Payne Tariff Bill

House of Representatives, March 22, 1909

Mr. Payne supported the measure.

The country is overwhelmingly in favor of a protective tariff.

It is an American policy. It seems to be acquiesced in by a great majority of the American people. It is true there are some looking for protection to industries who do not come out into the open, who declare themselves in favor of a tariff for revenue, disguising, or trying to disguise, their real belief in a tariff for protection. We have advanced some in the last twenty years in this regard, and now I do not believe that there is a man within the sound of my voice that would rise in his place and say that he is in favor of "tearing down every custom-house in the United States from turret to foundation stone."

Here Mr. Payne spoke in eulogy of the Dingley bill.

While it is true that this bill has not brought a surplus during every year of its existence, the expenditures have increased beyond the anticipation of any of the originators of the Dingley law. We did not dream then of the Spanish war. Much less did we imagine the increased expenditures that would come after that war had ceased, with great victory and honor to the national arms and the national flag, but it brought increased burdens and increased responsibilities. We jumped forward to a place as a world power without a peer in the world. Our relations with other countries were changed. We not only changed the map, but we changed our responsibility with the foreign nations, and with that change came the burdens; the burden of an increasing navy, which seems to be one of the most popular things we have among the citizens of the United States; an increased army, increased coast defences.

The grand result of the Dingley bill to-day is that, having paid all the expenses of the war and all the expenses incurred thereby, and having expended a large amount for the Panama Canal, there is a surplus of $25,000,000 for the entire period.

But time makes changes. It becomes necessary to have a revision of our revenue laws. There are two controlling reasons for this revision.

Since the time of the enactment of the Dingley bill other nations have been adopting the maximum and minimum tariff, with a lower tariff at protected rates and a maximum tariff much higher—even 100 per cent. over the minimum rates, scarcely ever below 40 per cent.—although some of the articles of these maximum and minimum tariff countries are at the same rates in both maximum and minimum schedules.

Then came the tug of war. Then came the hard part of the proposition. We saw our rivals for the trade of the world get-

ting conventional rates that we could not get, partially because of our system that under the Constitution no change can be made in the tariff except Congress takes the initiative. We must pass legislation to enable the Executive to offer favorable trade agreements. It is with us here to originate it.

Furthermore, the time had come to hunt for more revenue in a tariff bill, and these two considerations hastened the consideration by the House and the country of a new tariff act. Hence it came about that the Republican platform in the last election pledged the party to the revision of the tariff. Already, before that, your Committee on Ways and Means had begun its work, anticipating the verdict of the country, even before the Chicago convention met, and that committee had set its clerks to work looking up information that would aid the committee in the passage of this bill.

Now, the question of revenues under this bill is a serious question, and yet is not so serious as it would appear at first blush. It is true we had a big deficit on the 1st day of July last for the previous year, but we had had a big depression in business. Importations had halted, revenues had been cut down, and when that continued during the fiscal year 1909 down to the present time, showing a deficiency of $87,000,000, it looked like a difficult task to provide sufficient revenue for the expenditures of the Government.

But this was only a surface view of the case because, with reviving industry, with prosperity, with putting money in the purses of the people that their demands may be supplied, revenues will increase from all the sources from which the Government derives revenue.

Mr. Chairman, I will take up some of the schedules in the bill. In the first place we have provided a minimum and maximum tariff. Our minimum tariff is a protective tariff, built on the lines of our party platform and sometimes a little more than the party platform, because it is impossible to hold the scales evenly, even with all the information available to your committee on all these schedules.

We provide that any country which gives us as fair trade relations as they give to any other country, which makes no discrimination against us which they do not make against the most favored nation under their conventions or tariffs, shall receive this minimum tariff provided for in sections 1 and 2. But if they do not, if they do not give us an equal chance in their markets with any other nation, we do not propose to allow them to come into our market at this minimum rate. Our

market is the market of the world, for we are the greatest consumers, the greatest buyers of any nation on earth, consuming from one-third to one-half of the productions of the world over.

Now, Mr. Chairman, I am going to speak of some of the changes made in this bill. The committee have transferred some items from the free list to the dutiable list. The increases are few in number. They are not very serious, but every one of them was made for a reason, after examining the evidence that was before the committee.

Here Mr. Payne went into detailed discussion of the various changes. When he reached the question of women's gloves, upon which article he said the committee had recommended an advanced duty of $1.50, James B. Perkins [N. Y.] questioned him as follows:

The gentleman believes that this dollar and a half a dozen pairs will materially increase the price of women's gloves?

MR. PAYNE.—Yes; in the first operation it would—that is, while we were having protection, increasing the price first as a benefit to the manufacturers, and then when competition comes in you get back to the old rates, just as we have on men's gloves, or below.

MR. PERKINS.—Then, as I understand, this duty is not intended as a means of increasing the revenue?

MR. PAYNE.—Fortunately, both meet in this schedule. It is beautiful for revenue and magnificent for business.

MR. PERKINS.—Then I understand that, if we manufacture 90 per cent. of the women's gloves that are used, instead of what we are doing now, there will be no importation, and the revenue on gloves will certainly be less. You cannot both get the revenue and make the gloves without making the revenue less.

MR. PAYNE.—Well, we need the revenue now, right off, next year. The year after that we will not need so much of it, and before this bill is repealed I hope we will not need any from this source.

RICHARD YOUNG [N. Y.].—While the manufacture of gloves will be greater the importation of leather will be increased very much, and the revenue will not be so greatly changed as it would seem on the first statement of the case.

MR. PAYNE.—That is true. I am glad that my colleague made that statement.

CHOICE B. RANDELL [Tex.].—I will ask the gentleman from

New York what the purpose of the majority of the committee was, in drafting this bill, in reducing the tariff on barley to 15 cents a bushel and on barley malt to 20 cents a hundred? Was not that in favor of the brewers, or was it intended for some other purpose?

MR. PAYNE.—Fifteen cents is perfectly high protection on barley. It is in proportion to the duty on wheat and oats.

WILLIAM W. RUCKER [Mo.].—Is this a reduction to protect the American farmer or the beer manufacturer?

MR. PAYNE.—You gentlemen, every man of you, has gone on the stump and said these duties were prohibitive; that they did not need any such duties, and they were put in and held out as a sop to the American farmer. Have you not done so?

MR. RUCKER.—I have so charged and I believe it now——

MR. PAYNE.—Why are you whining about it now?

MR. RUCKER.—I believe this talk of protection to the products of the American farmer is a fraud, a sham, and a pretence. [Applause on the Democratic side.]

MR. PAYNE.—I never saw the like of the agility with which you gentlemen can get on both sides of the rail at the same time.

MR. RUCKER.—Not on both sides, but we want to get you on the other side a little bit. [Applause on the Democratic side.]

MR. PAYNE.—Now, Mr. Chairman, they say there is a joker as to coffee. Coffee is placed on the free list; but there is a proviso as to coffee, and what is it? That whenever any country levies an export tax on coffee we will levy an import tax equal to the amount on the coffee exported.

Brazil is now levying an export duty of forty-seven one-hundredths of a cent upon every pound of coffee exported to the United States. We are paying that, and it is added to the price of the coffee, and we are paying that toward the support of the Brazilian Government. Some South American republics are putting on a larger export tax even than that. We propose to meet them on that ground and say to them that whatever the amount of their export tax we will put the same amount as an import tax. We will double it, and we will get half of it and they will get the other half.

CHAMP CLARK [Mo.].—Does not that mean in plain, everyday English that the American consumer of coffee will be paying both taxes?

MR. PAYNE.—Well, now, I will come to that before I get through.

Now, there are some countries that do not levy an export tax. They are rivals of Brazil. If they can get in here forty-seven one-hundredths of a cent a pound cheaper than Brazil can, then, unless Brazil cuts off her export tax, the exporters of coffee in Brazil will be paying on their coffee to get into this market forty-seven one-hundredths of a cent to the Government of Brazil and forty-seven one-hundredths of a cent to the Government of the United States, or ninety-four one-hundredths of a cent, while the other countries will have no export tax and will not have to pay any duty to the United States. That is all the joker there is in this paragraph—a plain business proposition. We propose, if we let coffee free into the United States, by proper legislation, to compel those countries to export it free into the United States. [Applause on the Republican side.]

Mr. Chairman, we have put iron ore on the free list after full consideration by the committee. I do not think I will go into that in detail, but I want to say that the evidence of Judge Gary, president of the United States Steel Company, was that in the production of pig iron 2 tons of our iron would go as far as 3 tons of the iron imported from across the sea; and that is true also of the Nova Scotia iron, they yielding about 40 per cent. and ours about 60 per cent. Of course while that is true, it follows that there would be no occasion or necessity of a duty of 40 cents a ton on iron ore.

MR. RANDELL.—Is it not a fact, as shown by the evidence before the committee, that the imported iron ore is used simply on the Atlantic coast, and that to take off the tariff will not decrease the price of iron products to the consumer, but will be giving the revenue to certain furnaces in New England on the Atlantic coast? Is it not a fact that that amounts to about half a million dollars a year?

MR. PAYNE.—If we collect $200,000 on iron ore some one must pay it. The gentleman's theory has ever been that it was the ultimate consumer that paid that duty.

MR. RANDELL.—Is not this a special case, and do not the facts show that this action could not reduce the price of iron because it affects only certain furnaces at certain points, and that in this particular case it is a gift of that much revenue to these furnaces, and taking that much from the treasury?

MR. PAYNE.—The gentleman was solicitous about the steel trust for some reason or other in the hearings, and there has been some fear in some quarters that the steel trust might ultimately drive the smaller concerns out of business. Some of

the smaller concerns are located near the Atlantic sea coast—the Pennsylvania Steel Company at Sparrows Point; and perhaps this company is at more disadvantage than some of the others who are manufacturing iron and steel goods. If they can get their iron ore a little cheaper on account of the taking off of this duty, it would strengthen them and help them to keep on in the uneven race which they have with the great concern, the United States Steel Company.

MR. RANDELL.—But, Mr. Chairman, how can that happen when the tariff is taken off ore that belongs to the steel trust?

MR. PAYNE.—Well, if I have not made it plain to the gentleman, I despair, and will have to give it up.

Mr. Payne at this point postponed the conclusion of his speech until the morrow.

Champ Clark [Mo.] filed the report of the Committee on Ways and Means.

MINORITY REPORT

There are many changes—for the most part minor changes—of the Dingley rates, some up and some down. Most of the changes in a downward direction are reductions more apparent than real, the Payne rates being as prohibitive in their results in many cases as the Dingley rates.

The treatment of the farmer by this bill is along the same lines as have characterized Republican methods in the past. He gets practically no relief, and the laborer and producer have greater burdens imposed upon them. The cost of living for the average man is increased; the advantage of wealth and power is also increased.

As to the maximum and minimum tariff plan of the Payne bill, it is an open challenge to a trade war with every other nation on earth.

In this connection it may be well to ponder our relations with Cuba. Does any sane man suppose for one moment that the great commercial nations, our competitors for the world's trade, will concede that Cuba is one of our "dependencies"? It is a thing incredible. To ask that question is to answer it.

The bill is in many respects crude, indefinite, sectional, and prohibitive. It seems to us from our examination, which was necessarily hasty, that on the whole it increases the cost of living. Many increases of the sort might be mentioned. In numerous instances the protection exceeds the entire labor cost of

production. This can not be defended on any ground whatsoever, even by a standpatter. In all, the reductions, both apparent and real, fall far short of the substantial relief which the people were led to expect.

We do not desire to delay the passage of the tariff bill, and do not propose to waste an hour; but, having had no opportunity whatsoever to modify or amend it before it was reported, we will insist on having full opportunity to amend and debate it paragraph by paragraph under the five-minute rule, as is right and proper. That much we demand. We will be satisfied with nothing less.

Mr. Payne continued his analysis of the bill on March 23. In explaining the action of the committee in putting hides on the free list he said:

People do not raise animals for hides. They raise them for their meat, and the meat is the principal item when they come to sell the cattle. Not only that, but it is the foundation for half a dozen industries; and every time you put a duty on what is called sometimes the "raw material"—and, as far as hides are concerned, they are raw material—you have got to go all up along the line of goods made from that raw material and increase the duty. That is well recognized. There is no use in keeping hides out of this country in order to sell the domestic hides. If you have got to send domestic hides abroad to be tanned, to be made into shoes, to be made into harness, to be made into carriage leather, you want a duty on the manufactured goods, you gentlemen who are clamoring for a duty on hides.

The removal of the duty will not hurt anyone in the United States except the middlemen and the packers. The latter have gone into the tanning business and are tanning their own hides.

Mr. Chairman, I come now to the miscellaneous sections of the bill. Section 5 provides for free trade between the Philippine Islands and the United States on all articles except sugar and tobacco, and on sugar up to an importation of 300,000 tons in one year and on tobacco up to 300,000 pounds of wrapper and 3,000,000 pounds of filler and 150,000,000 cigars, beyond which the usual rates will apply.

I trust that this long-delayed measure of justice to the Philippine Islands will no longer be delayed, and under the beneficent provisions of this bill they will be allowed to enter our markets up to the extent of the limit. As far as the limits are

concerned, I would not have put them on, but a majority of the committee favored it.

It was a sort of compromise between the friends of the islands and the friends of the sugar beet and other outlying industries, and this section was adopted in the shape it is presented to the committee, and I hope it will meet with the approval of the House.

Section 6 provides that no part of this act shall abrogate or impair in any way the Cuban treaty for reciprocal trade, and the gentlemen of the minority are very much disturbed about this—a continuation of the Cuban treaty.

Now, the question is asked in the minority report whether any sane man supposed that the commercial countries of the world would stand for it to have us admit Cuban goods here at a discount of 20 per cent. of our duty and still allow us a minimum rate. If the gentlemen who asked that question had thought back for the last four or five years of the existence of the Cuban treaty, they would have found that nearly every nation of the earth did give us better trade relations and the same rate of duty that they gave to the most favored nations, although we were carrying out the Cuban treaty in full and to the letter, because these nations recognized what the minority of the committee do not, that when we give that concession to Cuba we get a concession from them of a reduction of 20 per cent. of her duty; and then the nations of the earth also recognize the relation which we have to Cuba as the guardian of her interests and of her people and our effort to uphold her government and try to make her an independent nation, that she may not have to come in under our flag.

Now I come to the inheritance tax, a proposition that has created a great deal of discussion throughout the country, as it did in the committee. We want some more revenue. We want about $20,000,000 worth of it in order to be sure to make ends meet under this bill. And the committee cast about for a proper subject for taxation. I think they considered everything in sight. Some suggestion was made about a tax on the net earnings of corporations. Now, no man will deny but that the corporations of the United States, during the last two years at least, have been in a pretty precarious condition in a great many instances. They pay taxes; they pay State taxes, municipal taxes, and all kinds of taxes; and, although we put a pretty good tax on their net revenue, we still would not get our $20,000,000; so the committee did not think it was best to put that tax on.

Then the question of the income tax was presented to the committee. Well, I have pretty strong convictions about the constitutionality of an income tax.

MR. CLARK.—The income tax that was incorporated in the Wilson bill was only declared unconstitutional as to the income arising from land or rents of lands, was it not?

MR. PAYNE.—Also the income from municipal bonds.

JAMES R. MANN [Ill.].—And also the income from personal property.

MR. CLARK.—Is it not true the President of the United States has intimated very broadly that an income tax can be drawn that the Supreme Court as now constituted would declare constitutional?

MR. PAYNE.—Whether he did or not, I have a right to my opinion about the constitutional law as well as has the President of the United States, and I want to say to the gentleman that that Wilson income-tax law has never been repealed in a single line or letter, and, if there is a court now that will hold that it is constitutional, why, it will be the law of the land.

MR. CLARK.—My idea of the Attorney-General is that one of his duties is to supervise the enforcement of all the laws that are on the statute books.

MR. PAYNE.—Whether they are constitutional or not?

MR. CLARK.—Certainly.

MR. PAYNE.—And after the Supreme Court has decided that they are not constitutional?

MR. CLARK.—I know that the Supreme Court never decided, except in certain features of it, that the Wilson income act was unconstitutional.

MR. PAYNE.—I can never sign a recommendation of the gentleman from Missouri for Attorney-General.

Now, Mr. Chairman, to proceed with the discussion. Even if an income tax was constitutional, I would greatly prefer an inheritance tax. There is no denying that an income tax occasions perjury and fraud unlimited. The knowledge of a man's income is within his own breast largely and he can cheat and defraud, and if he is one of that class of beings that do not stop at perjury he can cover up a large portion of his income. There is a great incentive in the minds of some men to do that thing.

The objection that I have raised to an income tax on account of the perjury and fraud which it breeds can not apply to an inheritance tax, because every time an estate passes by the death of either a testator or an intestate the estate goes to the probate court in the State. Everything is done publicly.

There is a hearing in the probate court. Witnesses are sworn, affidavits are filed, inventories of the estate are filed, valuations of the estate are made. Everything is done in readiness for the collection of this tax, and there is no question of perjury and fraud to be raised. In that case and for that reason it is infinitely to be preferred to an income tax.

The objection is made that most of the States already have an inheritance tax, and that is true. I think 33 out of the 45 States are collecting such a tax. In some States the tax is almost as great as that imposed in this bill, and in some fully as great, and in some greater.

We have provided in this bill 1 per cent. from $10,000 up to $100,000, 2 per cent. from $100,000 to $500,000, and after that 3 per cent. That is, where it is a direct descent, but in case of collaterals in this bill we provide a tax of 5 per cent. on all legacies and inheritances exceeding $500.

I think that if these people have to pay both the State and the national tax they are not overburdened with taxation if this bill should become a law. What easier tax to pay than this? A man gets a legacy, a stranger perhaps to the testator, a clear gain to him; why should not he pay a part of that to the support of the Government?

It is a fair tax; it is a tax easily collected; and it is a tax that this class of people ought not to hesitate to contribute for the support of the Government and the protection of the law.

Gentlemen say that it interferes with the State. Well, the States have a wider range of taxation than the Federal Government; they can tax all property in the State.

MR. CLARK.—Let me ask the gentleman this: Suppose there are no minor heirs to an estate and the estate is settled out of court, does not come into the probate court at all, is there not just as much premium upon perjury in that case in this inheritance tax matter as there would be in the case of an income tax?

MR. PAYNE.—Well, not quite, because the estate is more visible than the income is, but there would be a chance for perjury and fraud in that case. But I want to call the attention of the gentleman to the fact that a very small percentage of estates are settled in that way, at least that is so in my own locality.

Now, Mr. Chairman, I am anxious to get at the consideration of this bill and pass it through the House. The country is waiting for the action of Congress. Trade is waiting. The wheels of industry are silent until our action upon this bill.

I believe it will open the ports of other countries. I believe

it will give better trade relations the world over. I believe it will not stop the labor of a single hand. I believe it will start up industries throughout the United States. I believe that labor will be fully employed. I believe that good and blessing to the people of the United States will come from the passing of this bill, and my ambition and hope is that at the earliest possible moment the bill will go through the House and to the Senate, on its way to become a law. [Loud and long-continued applause on the Republican side.]

On March 24 Mr. Clark opposed the bill.

I desire to congratulate the distinguished chairman of the Ways and Means Committee [Mr. Payne]. He has now become a great historical personage. The history of the United States cannot be written now and leave out the name of Sereno E. Payne, of New York. [Applause.] He takes his place in the company of Henry Clay, Robert J. Walker, Justin S. Morrill, William McKinley, William L. Wilson, and Nelson Dingley, as father of a great tariff bill, which must be referred to as long as men discuss the tariff in the United States, which, judging the future by the past, will be until Gabriel blows his trumpet. [Laughter and applause.]

There is another thing on which I congratulate the chairman of the Committee on Ways and Means, that, by his nine and one-half hours' speech, he has knocked higher than a kite the idiotic theory of Doctor Osler.[1] [Laughter.]

It was a superb vindication of his physical and mental strength, and under the character of the speech he was making, explanatory and defensive, answering a good many questions from this side, and carrying on an extended debate with his political confrères on that side, I do not see how it could have been shorter; and, what is more, I am not dead sure but that it was the wisest thing he could have done from a political standpoint, because a good many Republican gentlemen, having fired their shots, will not want to make speeches on the bill.

For the benefit of all concerned, as this debate in all human probability will run in one shape and another for a good while, and as you all ought to be posted on both sides, I will give you my opinion about certain documents. There are four great documents on the subject of the tariff which are invaluable, and you can get them all now, as Professor Taussig has re-

[1] William Osler, M.D., a physician of international repute, was reported as declaring that a man was unfit for doing his best work after the age of forty.

printed them in a book, which is easy of access and which does not cost much.

The title of that book is "State Papers and Speeches on the Tariff." The four documents are Alexander Hamilton's great report on manufactures in 1790; Robert J. Walker's great tariff report on his bill in 1845; John Quincy Adams's great report in 1831; and Albert Gallatin's great free-trade memorial in 1832. Those are the documents that are invaluable. In addition there are four books which are almost invaluable—Professor Taussig's "History of the Tariff in the United States"; Professor Taussig's book, "State Papers and Speeches on the Tariff"; Franklin Pierce, on "The Tariff and the Trusts", and a book printed by Cicero W. Harris, with the strange title, "The Sectional Struggle." In addition to that I recommend to every man in this House to immediately lay hold of this book I have in my hands, "Imports and Duties," prepared by William W. Evans.

This is no time for an academic discussion of the tariff. Every tariff theory ever hatched in the brain of man has been discussed repeatedly in this country with thoroughness and splendid ability. Since John G. Carlisle made his first masterful tariff speech in the House, some thirty years ago, it is not much exaggeration to say that we have had a continuous tariff debate in this country.

There is no Democrat I know of who wants to consume one hour unnecessarily in the discussion of this bill—not one. [Applause.]

While the minority members of the committee have no desire whatever to waste one moment, we do desire a thorough consideration of the bill and a chance to amend it wherever we think it would be improved by amendment, and my judgment is that it could be greatly improved by amendment in many respects.

The tariff is a tax paid by the consumer. Nobody with any reputation for veracity or intelligence to lose will deny either of these two propositions. If he does deny them, he will be confounded by the evidence of high-protective advocates contained in the hearings before the Committee on Ways and Means, which hearings are made up almost exclusively of the evidence of such advocates. Most of the witnesses wanted an increase of the Dingley rates or wanted those held *in statu quo*. It seems from an examination of the hearings on the tariff bills of the past that the witnesses were usually the beneficiaries

of the tariff, struggling to keep what they had and to secure any increase they could.

Most of the cross firing among witnesses was where one set of protected manufacturers fell afoul of another, growing out of two facts: (1) That the tariff pie was not evenly distributed and each one wanted the biggest piece. Not more than half a dozen of them suggested that things be evened up by reducing their own tariff, but almost everyone that saw anybody else more highly protected than himself wanted the leveling process to consist of raising his tariff to the maximum; (2) that what is one man's finished product is another man's raw material, which produced clashes among some of the protected classes. For instance, neither Richard Cobden, Sir Robert Peel, John Bright, Henry George, nor Tom Johnson could yell more lustily for free trade on raw materials than the New England Republican tariff reformers, while, on the other hand, neither Benjamin Disraeli, Horace Greeley, Henry C. Carey, "Pig Iron" Kelley, Joseph Chamberlain, nor the gentleman from Michigan [Joseph W. Fordney] could yell louder for a prohibitive tariff on their manufactured products.

The situation in which the Ways and Means Committee found itself was unprecedented. Both parties claimed in platforms, in the public press, and on the stump during the late canvass to be in favor of reducing the tariff rates of the Dingley bill. Of course the Republican platform was equivocal and might be construed to mean either revision up or revision down. Judge Taft in his speeches construed it to mean revision down; but nevertheless many benighted Republicans did not believe he was candid, for they boldly came before the committee after the election asserting that the platform declared in favor of raising the tariff rates, and that they were here to demand their pound of flesh.

Of course I am not the official adviser of the Republican party. It may be very unfortunate that I am not, but I am not. [Laughter.] I believe that the Republicans made two tactical mistakes about the tariff very lately.

Here are the Republican tactical mistakes. The chairman of the Ways and Means Committee let us scare him last year into making on the floor of this House in the last Congress the declaration that he did make—that he violated no confidence in saying that they were going to revise the tariff and that he was in favor of a maximum and a minimum.

The second mistake, tactically, that the Republicans made was putting those two propositions into their platform. They

THE WARRIOR'S RETURN

[Referring to Roosevelt's reputed "back-down" on tariff revision]

Cartoon by Joseph Keppler in "Puck"

put them in there because we had scared them out of their wits. The reason that I say that they made tactical mistakes is that I believe recent events show you could have beaten us anyhow at the general election. [Laughter.] I will tell you what would have done it: The immense and widespread popularity of Theodore Roosevelt. [Applause.] I never had any delusions about that man and about his influence. But he has gone. Some of you Republicans wish he would never come back. [Laughter and applause.] All that I regret is that he left at all [applause], because, if he had stayed here, you would have been in such a row in less than ninety days that you would not have known whether you were Republicans or Democrats. [Laughter.]

The historian of our times will record as Mr. Roosevelt's highest honor that he refused a third term when he had it in his grasp.

Mr. Chairman, the most easily understood portion of this bill is the authorization to issue $250,000,000 of 3 per cent. bonds during any one year, to run for one year. That process can be kept up perpetually, which means really a permanent increase of the bonded debt by $250,000,000. This in a time of profound peace. The framers of the Payne bill do not use the unpopular word "bond"; they use the more euphonious word "certificate." But they are precisely the same. This bond provision proves beyond doubt that the Republican managers do not believe this bill will produce sufficient revenues and are fixing to issue bonds to supply the deficiency.

The Republican members of the Ways and Means Committee offer a great boon to the American people in the sugar schedule by cutting the tariff on refined sugar from 1.95 cents per pound down to 1.90 cents, a cut down of five one-hundredths of 1 cent per pound. Why this remarkable tenderness for the sugar trust? It receives a rake-off of 26 cents on every hundred pounds of refined sugar.

The same old "joker" on petroleum is in the Payne bill—ostensibly on the free list, but in reality a protective tariff of between 150 and 250 per cent. I do not know whether we are going to get a chance to amend this bill or not. I hope we will; and, if we do, I will risk my head on the proposition that that countervailing duty on petroleum goes out. [Applause on the Democratic side.]

CHARLES F. SCOTT [Kan.].—Those of us who represent districts in which there are large independent petroleum-producing interests have received a great many letters and publica-

tions urging us to insist upon the countervailing duty on petroleum on the ground that the very life of the independent petroleum-producing interests depends upon it. The argument is that the Standard Oil Company is a refining industry; that it is a purchaser of raw petroleum; that it produces only about 20 per cent. of the petroleum it uses and buys 80 per cent.; that it would really be to the advantage of the Standard Oil Company to be able to buy raw petroleum and import it into this country without any duty. I should like the opinion of the gentleman from Missouri upon the soundness of that argument from the standpoint of the independent petroleum producer.

MR. CLARK.—I think it is all a humbug. Year by year the Standard Oil Company produces less and less crude oil. It develops very few fields. It has too much sense. It permits the gentleman from Kansas and myself and the rest of us to go out hunting for oil fields, boring holes in the ground at our own expense, and when we have discovered a rich field it comes in and takes possession of it at its own figure. [Applause on the Democratic side.]

If I could be convinced that the revenue tariff on crude petroleum would help the producers of crude petroleum—that is, if they would get the benefit of it, at the same time raising revenue for the Government, and the Standard Oil Company would not get the benefit—I would vote for it. [Applause.]

The Standard Oil Company compels the producer to take its price, and then it compels the consumer of oil to pay its price; and I give it without any fear whatever that the Standard Oil Company is the greatest marauder that the sun ever looked down upon in six thousand years. [Applause.]

MR. SCOTT.—Would that condition be changed by eliminating this countervailing duty?

MR. CLARK.—Why, certainly. If they put up the price of refined oil too high, somebody else would ship refined oil in here. [Applause.] A straight revenue tariff of 15, 20, or 25 per cent., whatever the wisdom of the Congress thought, on petroleum would be an honest performance. But this countervailing duty is simply a dodge. [Applause.]

Now, one other thing. Under this drawback provision, a man that manufactures stuff out of foreign material gets back 99 per cent. of the tariff he has paid on that stuff when it is shipped out. The biggest user of tin plate in the United States, or in the world, is the Standard Oil Company. It does not use American tin plate. It uses foreign tin plate to make its cans for the foreign trade, and then gets 99 per cent. of the tariff

on that tin plate returned. [Loud applause.] Now, here you are in this bill giving it from 150 to 250 per cent. on oil, and then giving to it tin plate practically free. [Renewed applause.] I will not stand for any such performance. Remember that, while Standard Oil gets in its foreign tin plate for foreign export practically duty free, the rest of us have to pay a stiff tariff on all the tin plate which we use.

Of course, everybody stands around and asks what I think about zinc [a Missouri product]. I think the very same thing about zinc that I do about every other article of common consumption in the United States. If it turns out on investigation that a cent a pound is a good revenue tariff on zinc, I am going to vote for it; and if it turns out that it is a prohibitive tariff, or anywhere in the neighborhood of that, I am going to vote against it. [Applause.] I am in favor of a revenue tariff, and dead against a prohibitive tariff or anything approximating thereto.

I want to announce a general principle, and that is that I will not help any living human being oppress the great masses of the people of this country. [Loud applause.] I do not care a straw whether they come from Maine or from Missouri, all public plunderers look alike to me. [Loud applause.]

We are all tariff reformers. A few days ago there was a meeting at the White House, a conjunction, so the papers stated, of four stellar bodies of the first magnitude. Perhaps I ought to say one solar body and three stellar bodies—the President of the United States, Senator Aldrich, the Secretary of the Treasury, Mr. MacVeagh, and "my prophetic soul, my uncle," the Speaker of the House. [Laughter.] They met together as tariff reformers, so the papers said, to discuss what should be the Payne bill. When these four tariff reformers got together, if the angels did not weep it is because they were so completely dumfounded that they had completely lost all emotion whatsoever. [Laughter.]

JOSEPH G. CANNON [Ill.].—I do not recollect that the tariff was referred to or anything else except the general condition of the treasury, the desire for good administration, and so far as possible an organization and an administration of that great department that would tend to bring the expenditures of the Government within the revenues. [Applause.]

MR. CLARK.—Mr. Chairman, I do not propose to talk about all the schedules. But I cannot help remarking that the increase of 30 per cent. in the rates on hosiery is a cruel outrage on men, women, and children, for no man in his senses will

claim that hosiery is a luxury in this day and in this climate. These remarks apply with equal force to the increase of 75 per cent. on women's, misses', and children's gloves. In this connection it is well to remember that the women had much to do with overthrowing the Republican party on account of the extortions in the McKinley bill. It is to be hoped that history will repeat itself in this instance.

Here Mr. Clark discussed the rates on woolen manufactures, which, he said, were practically the same as those in the Dingley tariff. He characterized the continuation of these duties as "the most monstrous feature of the bill." To support his statement he read an editorial from the *Kansas City Star*, on "Tuberculosis and the Tariff," in which it was urged that cheap wool clothing would do more to suppress the disease than all the means now employed for that purpose.

Mr. Clark continued:

Probably the worst "joker" in this bill is the one on lumber. Now, in plain language, the situation is this: If any province, State, or dependency of any foreign country shall place any tariff rate or restriction on the exportation of any forest product, then the old Dingley rates go into effect against all the forest products of that entire country. It happens to be a fact that Ontario has a restriction as to the exportation of forest products cut (by government permission) from her forest reserves. Being a province of Canada and a dependency of Great Britain, then, under the involved provisions of the Payne bill, all the forest products of Great Britain and her dependencies and provinces, on entering this country, have to pay the rates in the Dingley law, the very rates that are so odious to the users of lumber in this country at this time.

Now, Mr. Chairman, as far as conserving the forests is concerned, I am in favor of free lumber for that reason. [Applause.]

FRANCIS W. CUSHMAN [Wash.].—Is not Mr. Gifford Pinchot the greatest expert in this country on questions of forest conservation? He said:

If the tariff on lumber were to be removed, it would be done, I take it, for one or both of two purposes; either to reduce the price to the consumer, or to preserve our forests. In my judgment it would accomplish neither.

MR. BATES.—Or, in the words the gentleman used a moment ago, reducing them to a competitive basis?

MR. UNDERWOOD.—Undoubtedly. They could not be at a revenue rate without their being on a competitive basis.

MR. BATES.—Precisely. Now, is the gentleman in favor of that, notwithstanding the fact that it would reduce the number of jobs for workmen in this country, or else reduce their wages? Is the gentleman in favor of reducing the wages of the American workman?

MR. UNDERWOOD.—No; I am not in favor of reducing the wages of the American workman, and if the industries of this country are put on a healthy competitive basis, when hard times come, when panics come, the workman of this country will hold his job, and foreign goods will cease to come in; but, when you build this protective tariff wall so high that the American people have got to buy every commodity and all they desire in times of great prosperity and great development alone from American manufacturers, you expand conditions, develop your business to such an extent that when hard times come there is no place to retrench or dispose of your surplus production, and you have got to shut up your factories at home. But if you build up the great industries of the country, not with an unhealthy, hothouse growth, but along conservative lines, recognizing fair competition and only revenue rates of duty all the time, while you might not build your industries as rapidly as under a forcing process, yet you would not have the present unhealthy growth, and, when hard times and panics come and it is necessary to reduce production, the foreign goods would be driven out; in most cases American mills would continue in operation. [Applause on the Democratic side.]

Morris Sheppard [Tex.] opposed the bill. In referring to the Republican platform of 1908 he said:

The tariff declaration in the Republican platform gives the protected interests a deed to the treasury of the United States. The wildest socialist could not have invented a more dangerous and alluring fallacy. The Payne bill completes the delivery of the treasury to the trusts, and the American people, unable to resist the appeals and promises of Republican leadership, a leadership buttressed with the oratory of Beveridge and Hughes, the perverted logic of Elihu Root, the fulminations of Roosevelt, and the imposing proportions of Mr. Taft, having indorsed the atrocious transaction at the polls, are now witnessing the violation of their confidence in this new license for unlimited pillage. Amusing, indeed, were the ponderous assurances of Mr. Taft that the Republican party would revise the tariff downward. His volcanic predecessor realized the hopelessness of such a proposition and evaded it to the last. Is it possible that the complacent Mr. Taft may succeed where the bifocal whirlwind that recently swept from Washington to Oyster Bay failed utterly? [Laughter.] I say to you that there is more real power in one 5-cent cigar between the iron lips of Joseph G. Cannon, the stand-pat leader, than in the big sticks of a whole regiment of Roosevelts and Tafts. [Laughter and applause.]

That is his letter addressed to Hon. Sereno E. Payne, chairman of the Ways and Means Committee.

MR. CLARK.—No man in America did as much to build up the sentiment in favor of free lumber as that same man, Gifford Pinchot. [Applause.] But wait a minute. These smart lumber kings and their attorneys got hold of him down here and pumped into his head their ideas and he was converted. As a conservator of forests he seems to have fallen from grace. I do not charge any corrupt motives in the case. I believe he has been deceived.

Now, in conclusion, I want to give it as my deliberate opinion, with what study I have been able to devote to it, that this bill raises the Dingley rates. [Applause on the Democratic side.]

I do not believe that the American people voted to do that. I believe that when we get that maximum and minimum into operation that will place the tariff rates more than 20 per cent. higher than they are in the Dingley bill. I believe that the speech that the chairman quoted yesterday from President McKinley, at Buffalo, which may be taken as his farewell address to the American people, was the thing that set in operation this widespread movement for the reduction of the tariff. It is a revolution, and revolutions do not move backward. No matter what happens, the men who are in favor of a tariff revision downward this year will be in favor of tariff revision downward next year, especially if you make the tariff bill higher than it is now. Revolutions do not move backward; they move forward.

Though beaten back in many a fray,
Yet freshening strength we'll borrow,
And where the vanguard halts to-day
The rear will camp to-morrow.

[Loud and long-continued applause on the Democratic side.]

On March 25 Oscar W. Underwood [Ala.] opposed the bill. On the question of free raw material Arthur L. Bates [Pa.] questioned him as follows:

The gentleman is opposed to free raw material?

MR. UNDERWOOD.—I am.

MR. BATES.—The gentleman is in favor, therefore, of reducing the tariff rate on manufactured goods?

MR. UNDERWOOD.—I am in favor of putting everything on a revenue rate.

On March 27 Nicholas Longworth [O.] supported the bill. In defending the Republican party in its relation to the tariff he said:

The President of the United States, in his inaugural address, said that, on account of the changes in conditions since the passage of the Dingley Act, a measure could be drawn on a principle equally protective which will permit the reduction of rates in certain schedules and require the advancement of few if any.

This bill illustrates the truth of that statement.

A number of gentlemen on that side have said that this bill in effect was not a reduction measure; that the reductions were insignificant in number. I propose to show that this claim is not founded on fact.

I do not see any better way to determine whether a tariff bill reduces duties than to take the number of duties it reduces, and the Payne bill has reduced five duties for every one that it has increased; and if you include the whole free list and include those articles transferred from the free list for dutiable purposes it reduces fifteen articles for every one that it increases. If that is not a genuine reduction I do not know how there can be one.

On March 29 Ollie M. James [Ky.] opposed the bill.

Mr. Chairman, we have heard a great deal said about the Republican platform and its provisions with reference to the question under consideration. The truth of it is that the last utterance of the Republican platform was the highest protective-tariff declaration ever written by any party. All the other Re-

publican platforms heretofore have contented themselves by declaring for a protective tariff that would equalize the cost of production at home and abroad; but the Republican platform adopted at Chicago in 1908 goes a step farther in this pillaging of humanity and declares not only that the tariff shall be high enough to equal the difference in the cost of production at home and abroad, but in addition thereto that there shall be given to the manufacturer a "reasonable profit." Now what is a "reasonable profit"? Who shall decide how much it shall be? And what right have you to provide that a certain class of our people shall receive a "reasonable profit" from all the rest?

As the trusts gather about this bill, looking over its various items, seeing safely written upon its pages their continued license to steal, a broad smile spreads over their faces, as they throw their hands up and exclaim, "Thank God, there is loot enough in it for us all!" [Laughter and continued applause on the Democratic side.]

On March 31 William Sulzer [N. Y.] opposed the bill as class and sectional legislation, and as injurious to our foreign trade. On the latter point he quoted President McKinley's last speech. He continued:

Sir, there is not a line in the Payne bill to restore the American merchant marine; and increase our revenue by taxing the carrying capacity of foreign-built ships in our deep-sea trade; and it is a matter of much regret that the few Republicans in Congress who control its affairs and dictate legislation favor a ship-subsidy bill, which is another phase of protection, but no remedy at all, only a mere temporary makeshift to rob the many for the benefit of the few by taking money out of the pockets of the taxpayers generally and giving it to a few favored individuals.

Sir, I am in favor of immediate action by Congress for the resumption of the shipping policy which prevailed under the first five Presidents of the Republic, and which brought forth and maintained the best merchant marine on the ocean without the cost of a cent to the American people. We do not need to take a dollar out of the treasury of the United States to revive our shipbuilding industries or restore our merchant marine. All we need to do is to repeal the restrictive laws against our deep-sea shipping now on our statute books, put in their place laws similar to the navigation laws that were enacted by the early statesmen of the country—laws that built up our merchant marine in those historic days—laws that placed our flag on the high seas and gave us nine-tenths of our entire over-seas carrying trade, and we would do it if it were not for the greed and the selfishness of the shipping trust. [Applause on the Democratic side.]

On April 1 Joseph H. Gaines [W. Va.] supported the bill. He spoke chiefly on the question of trusts. In conclusion he said:

I do not hesitate to say that, so far as I am concerned, being as hostile to what are known as "trusts" in all their unlawful operations as any other gentleman on this floor, I yet would not send the business of the country out of the country, even if it were under the control of a trust; and it might just as well be repeated here, that it may be known to as many persons as possible, that this country is the least trust-ridden country in the world. The other countries of the world have trusts more than we have. They may not have such big ones; they cannot have anything of any kind as big in a small country as in a country the size of this; but it ought to be known—and our Republican speakers have made very little of this fact in the great debates they have held with our Democratic friends—it ought to be known that, whereas our Government does whatever it can to destroy trusts or prevent their formation, almost all the other commercial countries of the world foster and aid the formation of manufacturing and selling combinations.

Arsène P. Pujo [La.] opposed the bill, particularly its provision for an inheritance tax.

I am not entirely persuaded that the inheritance tax, as provided for in the measure, will stand judicial scrutiny. While, of course, an inheritance tax has always been construed not as a tax upon property, but as a tax upon the right of succession, yet strong argument could be urged that it is as much a tax upon real estate, constituting the principal asset of the inheritance, as it was held in the income-tax cases that a tax upon rents was a direct tax, and could only be levied by apportionment among the several States. Conceding for a moment the constitutionality of this measure, the policy of its adoption is of doubtful wisdom.

The effect of the adoption of this measure would be the im-

position of a double tax upon the right of inheritance by bequest or by the operation of law.

The measure under discussion provides for a tax upon all inheritances exceeding $500. It is my firm belief that a large per cent. of the tax contemplated under this provision would be collected from people of moderate means, whose estates would not exceed $5,000 or $10,000, and I do not believe that it is a wise policy to impose taxes which would be borne principally by one class of people. However, it seems these days that the function of government is to devise new methods of taking away from the people that which they have worked for instead of making their burdens as light as possible.

Samuel W. McCall [Mass.] supported the bill.

I believe of this bill, as a whole, when we consider the necessities for revenue and the general conditions of the country, that it contains the best set of tariff schedules ever submitted to the House of Representatives by a Committee on Ways and Means. While it recognizes the principle of protection to American industries, and recognizes it as a national and not as a sectional policy, it is leveled against the idea that it is an important function of tariff taxation to increase the fortunes, already great, of those gentlemen who have secured control of some of the great natural resources of the country, or that it is a function of a tariff law to put duties so high that producers in this country by a combination to destroy competition may use them for the purpose of extorting excessive profits from the people.

On April 5 John Dalzell [Pa.] submitted, from the Committee on Rules, a resolution that general debate on the bill should close and certain specified amendments (as to duties on lumber, hides, barley, and petroleum) be acted upon. The resolution was adopted by a vote of 195 to 178.

The bill was amended upon the designated points generally by an increase in duties, and was passed on April 9 by a vote of 217 to 161.

The Senate referred the bill to the Committee on Finance, which, through its chairman, Nelson W. Aldrich [R. I.], reported it with amendments on April 19. It was debated at great length until July 8, when it was passed

by a vote of 45 to 34. A conference was appointed, which reported on July 30. Mr. Payne spoke upon the report on July 31.

Mr. Speaker, in presenting this conference report, I do it with confidence that it will be accepted by this House and that it will be accepted by the country at large as meeting the full requirements of the Republican platform, as meeting the pledges made by our candidate, now the President of the United States [applause on the Republican side], and at the same time will not stop a single wheel of industry, will close no factory, and will deprive no man of labor at a decent, fair wage. [Applause on the Republican side.]

The Senate did not agree with the House as to its provisions in the bill. Exercising their prerogatives under the Constitution, and in accordance with the usual practice, they made many amendments. Many of them were substantial. Great was the divergence of thought and great the disagreement as to the provisions of the bill. Your conferees have had no easy task in the past three weeks in striving to maintain the mandate of the House as put forth in the bill which passed the House. We have made concessions. We have exacted concessions from the Senate, and the concessions on both sides are embodied in this report. I am frank to say that many of the concessions which we made to the Senate improved the original bill, and, on the other hand, some of the concessions which we were obliged to make did not improve the original bill. But I think upon the whole the result is one upon which we may congratulate ourselves on having framed a bill which, if it becomes a law, will reflect credit upon the Congress which enacted it. [Applause on the Republican side.]

Here Mr. Payne discussed in detail various schedules of the conference report, comparing the duties with those imposed in the House bill. The most important changes were as follows:

The *ad valorem* duty on cotton was increased from 40.87 per cent. to 44.07.

The duty on paper was advanced from $2 a ton to $3.75.

The reciprocity provision concerning bituminous coal was omitted, and the duty reduced from 67 cents a ton to 45 cents.

Iron ore was taken from the list and subjected to a duty of 15 cents a ton.

The duty on belting leather and sole leather was reduced from 20 per cent. to 5 per cent., on shoes from 25 per cent. to 10 per cent., on harnesses from 40 per cent. to 20 per cent.

The duty on rough lumber was increased from $1 to $1.25, on shingles from 20 cents a thousand to 50 cents.

Mr. Payne continued:

I want to speak about a few things in the internal revenue. The House put a provision increasing the tax on cigarettes equal to the tax that was put upon cigarettes in the Spanish war revenue bill. The Senate added another provision taxing manufactured tobacco equal to the tax in the war revenue bill, or about equivalent to it, and the House accepted that provision. The House did not have much difficulty in reaching an agreement upon it. That provision altogether will bring in revenue estimated at $9,300,000, and that is quite an addition to the revenues.

Now, Mr. Speaker, the Senate put a tax on corporations of 2 per cent. on the net earnings. It is not for me here to give a history of that legislation in the Senate or why it was brought about, but it was brought about as an amendment to an income tax. I have no use for an income tax, and what use I have for a corporation tax is the fact that you can sometimes get rid of an unconstitutional income tax appended to a bill. It came before the conference committee. It came to the Republican side of that committee as an administration measure proposed by the President of the United States, and we accepted it. We did reduce the tax from 2 to 1 per cent., made some minor amendments, and reported it with confidence to the House. We may have preferred our inheritance tax to that proposition, but under tne circumstances we were more than justified in accepting this provision in the bill, which I hope in its workings will yet prove popular with the people of the United States.

Now it has been asked why the corporation tax as it went to the Senate excluded holding companies. There is no reason in the world why a corporation that owns stock in another company should pay a double tax upon those holdings. It is not equitable, it is not right, and it ought not to be exacted. [Applause.]

When it comes to the breaking up or absorption of a company in order to get rid of competition by another company, I will go the full length in preventing it; but I am not in favor of using the taxing power for that purpose, and, of course, a tax of 1 per cent. would not accomplish any purpose in that respect. It would be an additional burden upon the innocent stockholder who had stock in either corporation.

A word more as to the revenue. These rates increase the revenue from customs less than $4,000,000. The corporation tax is estimated to produce $26,000,000; tobacco, nine and one-third million dollars—about $40,000,000 of increase of revenue—revenue enough, when this bill gets into full working order, to supply the necessary demands of the Government; not to build the Panama Canal. We will leave that to another generation. We have provided for bonds that will establish the policy of the Government in that respect. The Dingley law during all its period of existence has provided ample revenue, and there is no doubt this law will do the same for another twelve years. Let us pass it, gentlemen on this side of the House. The duty is ours; the time has arrived. Vote against it if you want to drive your party into chaos; vote against it if you want eternal agitation about the tariff. Go on and vote against it if you choose, but do not do that on the idea that you are going back to the Dingley bill or the Dingley rates.

That is a delusion; you will not get it, but you will get agitation instead. There would come in another bill one of these days, and in the meantime the wheels of industry will stop, enterprise will be paralyzed; the country will stand still or will move backward, and you will curse the day when you failed to go with the great majority of your party, almost all of them, your President having lent his approval to this bill, if you fail to stand in the hour of the country's need and of your party's need and vote against this bill. Let us pass it when the hour of 8 o'clock arrives, and give courage and joy and happiness to the people of the United States. Let us start the remaining idle wheels of industry; let us put every man who wants to work at work; let us build up the happy homes in the United States as they will be, and they will bring the great pæans of their applause for your patriotism and statesmanship in meeting this emergency. [Loud and long-continued applause on the Republican side.]

Mr. Clark rose and was recognized amid prolonged applause on the Democratic side.

Mr. Speaker, this conference report has been heralded and headlined in the newspapers as a tremendous victory for President Taft over the forces of evil in the Republican party, represented by Senator Aldrich and other distinguished Republican statesmen. We are told that congratulations are pouring in upon him from every side.

Well, a man must have a very curiously constituted mind to conclude that the result of this conference is in any reasonable sense a redemption of Republican pledges before the last election to revise the Dingley rates down. [Applause on the Democratic side.]

I want to do President Taft justice. I am his personal friend, and have been since I first set eyes upon him. His laudable desire for the square deal and his love of fame would naturally and inevitably cause him to wish that his pledges be redeemed in such a way that he could look the American people proudly in the face; but he has been grossly misled as to the nature of this report. Those downward revisionists who are congratulating the President uproariously are most assuredly thankful for small favors. No man will begrudge him any glory justly his due; but when we reflect upon the fact that, even according to his most enthusiastic eulogists, he insisted at a late day on lowering the rates on only half a dozen items, or thereabouts, when the rates should have been lowered on hundreds of items, and that the conference report still reeks with largesse for the few and extortion from the many, his glory will experience a greater diminution than have the rates of the Dingley law.

Here the speaker presented a table comparing the Dingley duties with those of the conference report. It showed a total increase over Dingley duties, $5,649,002, or 1.71 per cent. increase. These estimates were based on the imports of 1907.

Mr. Clark continued:

These estimates do not take into consideration a whole lot of things which were taken from the free list in the Dingley bill and put on the tariff list in this conference report, and when they enter into the calculation it will run the average increase of the conference report above the rates in the Dingley bill by about 2 per cent.

The very best that the Republican arithmetician of the Republican conferees [Major Lord] can figure out as a great victory for the President and a great victory for the downward revisionists of the Republican party is that after all of this hullabaloo, after all of the time, delay, sweat, and toil on this bill, beginning on the 10th day of last November and coming down to the present day, you have made the infinitesimal reduction of ninety-seven one-hundredths of 1 per cent. [Applause on the Democratic side.] As a genuine tariff reformer, who has stood by his guns in season and out of season, in sunshine and in storm, I say that that is the most pitiful conclusion of a great movement that is recorded in the history of mankind. [Applause on the Democratic side.]

A classical scholar like my friend from Pennsylvania [Mr. Olmsted] must think of the old Latin sentence, *"Parturiunt montes; ridiculus mus nascetur,"* which, with tense changed, may be freely translated, The mountains were in labor and a ridiculous mouse was produced. [Laughter and applause on the Democratic side.]

Here Mr. Clark discussed the duty on lumber.

There is a great hullabaloo in the newspapers about the tariff on rough lumber having been reduced to $1.25. Is it reduced to $1.25? No. If rough lumber is worth $10 a thousand, when this bill goes into effect in March next the rate will be $1.25 per thousand and 25 per cent. *ad valorem,* which would make it $3.75 per thousand. So that instead of getting cheap lumber, which we have been clamoring for for a great many years, some on both sides of the House, we are to get very high-priced lumber, and I protest against it in the name of everyone who has to build a house between the two oceans. [Applause on the Democratic side.]

The lumber feature is a sample of the rest, 25 per cent. *ad valorem* increase above the conference rates on all the rest, and I say that, with that feature staring me in the face, as a proposition to reduce the tariff downward this bill is the most stupendous fake in the history of mankind. [Applause on the Democratic side.] It is a colossal bunko game. The people asked for bread and you are giving them a stone.

Here Mr. Clark declared that the bill would create a deficiency in the Treasury. He said in conclusion:

The final verdict on this bill is not made up by the sycophants and enthusiasts who sound praises into the ears of Presi-

dent Taft at this time, but the verdict on the merits of this bill will be made up piecemeal every time the head of a family, every time the woman of the house, buys a bill of goods in any store. [Applause on the Democratic side.]

Mr. Longworth supported the bill. He dwelt particularly on the corporation-tax feature. He denied that this provision had been evolved for the purpose of defeating the income tax in the Senate, declaring that it had been planned by President Taft even before his inauguration.

Three definite propositions have been considered since the beginning of this extra session—an inheritance tax, such as was contained in this bill as it passed the House; a tax upon the receipts of corporations, such as was contained in the bill as it passed the Senate; and a proposition which contained these two; and, in addition, a tax on individual incomes, which was presented in the Senate and was known as the Bailey-Cummins amendment. It is true that the inheritance-tax feature of this amendment is not precisely the same as that which passed the House, but it is, nevertheless, a tax on inheritances. It is true, also, that the corporation tax of this amendment is not the same as the corporation tax as it passed the Senate, but it is a tax upon the net income of all corporations, and in principle they are practically identical. While the Bailey-Cummins amendment is generally referred to as an income tax solely, it is, in fact, in addition to this, an inheritance tax and a corporation tax measure.

Generally speaking, the Bailey-Cummins amendment is an almost exact reproduction of the income tax adopted in the Wilson bill. Hardly any change has been made in it, except that the exemption has been increased from two to five thousand dollars. I gathered in the debate here the other day that some gentlemen on the other side would prefer that the exemption should be increased even above this point. The gentleman from Alabama [Henry D. Clayton], in reply to a question I addressed him, said that he would exempt incomes of $7,500. Evidently the gentleman from Alabama, if he had the drafting of an income-tax law, would see to it that those who voted for it should not be included in its provisions. [Laughter.]

MR. CLAYTON.—I would exempt all the poor men and all the men with small incomes, so that I might get their support, in order in that way to make the multimillionaires, who now pay

no taxes, contribute something to the support of the Government. [Applause on the Democratic side.]

MR. LONGWORTH.—Oh, the gentleman advocates a class system of taxation.

MR. CLAYTON.—It is not a class system. Does not the gentleman admit that every corporation whose net income does not exceed $5,000 is exempt?

MR. LONGWORTH.—Most assuredly.

MR. CLAYTON.—Is not that the same principle that would exempt the individual in an income tax? What is the difference in principle? I should like to have the gentleman elucidate it.

MR. LONGWORTH.—The difference between investigating the personal affairs of an individual and the affairs of a corporation, which I think should be made public.

SWAGAR SHERLEY [Ky.].—If the gentleman is warranted in saying that the corporation tax is superior to an income tax, how is the gentleman warranted in not taxing bondholders in place of stockholders?

MR. LONGWORTH.—It was seriously considered in drafting this measure, as I understand it, whether constitutionally the bonds could be gotten at, but it was deemed that it would make the measure unconstitutional, and for that reason it was not put in.

Mr. Speaker, that this measure discriminates between corporations and individuals is, to my mind, not a fault, but a virtue. I have heard over and over again this argument: Suppose A is a corporation engaged in doing business upon one corner of a street. B is a partnership doing a business precisely the same, both as to character and volume, on the other corner of the street. Is it fair that establishment A should pay a tax to the Government upon its net earnings, and that establishment B should go free? My answer is, "Yes." By virtue of having incorporated his business, A has certain advantages which B, managing his affairs as a partnership, has not. Among other things, his liabilities are limited, and he has the right of perpetual succession. He has paid something for the privilege of becoming a corporation and of enjoying these advantages, and hence has shown that he deems them to be of value. The members of the partnership have not asked from the Government any privileges that they are not entitled to as individuals, and it seems to me that they have the right to consider that their profits are their own private affair.

As to the constitutionality of this tax I shall have but little

to say, because I take it to be beyond argument. If anyone holds any doubt upon this question, I would recommend the reading of the speech recently made in the Senate by the junior Senator from New York [Mr. Root], in which he goes thoroughly into the question of the constitutionality of this legislation. His speech is a masterpiece of clearness and force, and leaves practically nothing to be said upon the subject.

But there is a feature of this measure which, to my mind, is of special importance, and that is the feature of publicity. This measure compels the corporations to state in general terms what their gross earnings have been, what has been charged off to repairs, renewals, maintenance, and overhead charges, and what remains which can reasonably be considered their net profit from the business every year. To my mind, it will be of immense advantage to the stockholders of corporations throughout the country. I venture to say that the vast majority of all the stockholders have no real idea of what their legitimate profits have actually been.

I have heard again and again urged against this measure the old argument that it will cut into the savings of the widows and orphans. This is the argument we always hear when any legislation is contemplated which affects a corporation. I believe this measure is for the direct benefit of the widows and orphans and all stockholders, to whose interest it is that the affairs of the corporations of which they are part owners shall be wisely and intelligently administered.

The junior Senator from New York, in his speech, called attention to another feature of this measure which I think is of the greatest importance, and that is the difficulty of making a well-considered protective tariff with the almost inconceivably meager information that we really have concerning the affairs of corporations which the tariff really affects.

I thoroughly believe that publicity in the affairs of corporations will be a benefit, not only to the public at large, not only for the benefit of the small stockholders, but for the benefit of the corporations themselves. I believe that a reasonable publicity will cause millions of the public's money to come out of hiding and seek investment in corporate stock, and that floods of money will come to this country from foreign investors.

I believe that this measure is in line with the great progressive measures which have been enacted by the Republican party in the past eight years for the supervision and regulation by the Government of corporate wealth, the question which, to my mind, together with the question of the conservation of our

national resources, overshadows all others in importance. I believe that in evolving and advocating the passage of this law the President of the United States has redeemed in the fullest measure his pledge that he would, during his administration, proceed along the paths blocked out by his predecessor; that he would use every effort to bring to his policies their fullest fruition. [Applause.]

Mr. Underwood, at the close of a speech, more or less statistical, against the bill, discussed the feature of the corporation tax.

I know there is a sentiment among some people that is antagonistic to corporations; that in some quarters the antagonism to corporate interests is intense; but the American people are just and cannot be misled by an appeal to prejudice, so I am surprised that a great political party should, under the cloak of that sentiment, attempt to put a tax on the people of the United States that is not intended primarily to raise revenue, but has for its ultimate goal the purpose of invading the rights of the States in their control of domestic corporations. [Applause on the Democratic side.]

The Democratic party, recognizing that every man should pay in proportion to what he has, proposed to exempt him on his consumed earnings, the money that the ordinary man spends in his living expenses, because he is already paying his taxes to the full amount of his living expenses, and proposed to adopt an income tax to make him pay taxes on his unconsumed wealth that the Government is protecting for him. Now that was fair, that was just. It was so just that when the Democrats in the United States Senate proposed such an amendment to this bill the Republican ranks could not stand the fire, and they broke to our standard. [Applause on the Democratic side.] They came to our proposition, that to put an income tax on the unconsumed wealth of this country was equality in taxation, and therefore just.

To defeat that proposition, to prevent that righteous verdict from being found, the President of the United States and the Republican leaders in Congress proposed this tax on the incomes of corporations—incomes that go to the poor as well as the rich; income that is consumed in living expenses as well as that which is unconsumed and hoarded.

ROBERT C. WICKLIFFE [La.].—Suppose a holding corporation has a net income of $5,000 derived from business, and in

addition to that it owns four-fifths of the stock in a dozen other corporations, no one of which other corporations has a net income exceeding $5,000; then this holding company would receive $53,000 net income if the income of each of these twelve corporations was $5,000; and yet under the provisions of this corporation-tax law as now written it would not pay one cent of taxation on that net income. Is not that correct?

Mr. Underwood.—The gentleman is absolutely correct, and his illustration is a good one to show the inequalities of this proposition.

Now, here is the proposition when you analyze it. The great corporations in this country that are violating the law of the land should be regulated by the Government, but there is no prejudice in the minds of the people against the little domestic corporations in the States that are doing a legitimate business. Their charters are granted by the States. If the people of the States think these corporations are performing an unrighteous act, they have the power to revoke their charters or to regulate them; but when you reach out, as in my opinion this law is intended to do, and first make these little corporations pay a small tax, then say they must take out a federal charter when they pay that tax, and then put an additional tax on all State corporations that have not taken out a federal charter, your State control has gone to the winds; you have destroyed your control at home and you have built up the vastest power in the Federal Government that the mind of man can conceive of. [Applause on the Democratic side.]

As to the question of the justice of the taxation, you can readily see that the great millionaire who has got hundreds of millions of dollars invested in bonds, hundreds of millions in real estate in some great city which is protected by the Government, pays no tax under this corporation-tax law he would pay under an income tax. And yet the small merchant or a dozen little fellows off in a State who have ten or twenty thousand each invested in some little corporation, the income from which they are spending in living expenses, every dollar that they are getting out of those corporations, paying taxes on it when they buy their clothes, when they buy their cigars, when they spend their money—and yet must have an additional tax placed on them because, forsooth, they have joined together under the State law for a legitimate purpose. For what purpose? Not for the purpose of raising more revenue for the Government, but to give the national Government control of domestic corporations, and that it might be used as a weapon to defeat an hon-

est income tax that would equalize the burdens of taxation on all the people. [Great applause on the Democratic side.]

The House agreed to the conference report by a vote of 195 to 183. The Senate agreed to the report on August 5 by a vote of 70 to 0. President Taft approved the bill on August 5, 1909.

CHAPTER XVII

The Income Tax

Origin of the Tax—Acts of 1861, 1870 and 1894—Act of 1861: in Favor, Representative Jacob H. Ela [N. Y.]; Opposed, Representative Dennis McCarthy [N. Y.]—Act of 1870: in Favor, Senator John Sherman [O.]; Opposed, Senator Roscoe Conkling [N. Y.]—Act of 1894: in Favor, Representative Benton McMillin [Tenn.], Representative Uriel S. Hall [Mo.]; Opposed, Representative W. Bourke Cockran [N. Y.]—Proposed Single Tax Substitute for Income Tax (1894): in Favor, James G. Maguire [Cal.], Tom L. Johnson [O.]—Income Tax (1894) Is Declared Unconstitutional by Supreme Court—Nelson W. Aldrich [R. I.] Reports in the Senate from the Committee on Finance a Joint Resolution Proposing the Submission to the States of a Constitutional Amendment Providing for an Income Tax—Debate: Speakers of Varying Views, Anselm J. McLaurin [Miss.], Norris Brown [Neb.], William J. Stone [Mo.], Joseph W. Bailey [Tex.], Joseph M. Dixon [Mont.], Weldon B. Heyburn [Ida.], Hernando D. Money [Miss.], Porter J. McCumber [N. D.], Albert J. Beveridge [Ind.]—Senate Passes Joint Resolution—Debate in the House on the Resolution: in Favor, Sereno E. Payne [N. Y.], Champ Clark [Mo.], Ollie M. James [Ky.], Gen. J. Warren Keifer [O.], Adam Byrd [Miss.], Richmond P. Hobson [Ala.]; Opposed, Samuel W. McCall [Mass.], Ebenezer J. Hill [Ct.]—Robert L. Henry [Tex.] Offers an Amendment to Joint Resolution to the Effect That Proposed Constitutional Amendment Be Submitted to the Conventions of the States Instead of the Legislatures—His Amendment Is Ruled Out of Order—Bill Is Passed by House, and Becomes Effective Without the Signature of the President.

SHORTLY after the outbreak of the Civil War, while the vexing question of raising revenue to supply a deficiency of $20,000,000 was before Congress, James R. Simmons [R. I.] advocated in the Senate "a moderate tax on all incomes exceeding $1,000." This tax, he declared, was well adapted to the purpose of providing the necessary money without public distress. It was heartily endorsed in both Houses as a fair and equitable measure.

Accordingly, on August 5, 1861, a provision was inserted in an internal revenue bill by which a general tax of three per cent. was laid on annual incomes, $800 being exempted from taxation in each case. Foreign residents, however, paid five per cent. upon incomes, and all owners, whether at home or abroad, of Government securities paid only one and one-half per cent. upon the interest from these.

Act of 1870.

When, in June, 1870, a bill to reduce internal revenue came before the House Dennis McCarthy [N. Y.] moved to strike out the income tax clause.

This tax is unequal, perjury-provoking, and crime-encouraging, because it is at war with the right of a person to keep private and regulate his business affairs and financial matters. The people demand that it shall not be renewed, but left to die a natural death and pass away into the future as pass away all the evils growing out of the Civil War.

Jacob H. Ela [N. Y.] opposed the motion.

I believe the income tax as at present paid is one of the most just taxes laid, and affects no person who has not received a net income above the amount required for the reasonable support of a family, while most other national taxes, except those from succession and legacies, come from people who are struggling to get the means of support.

Mr. McCarthy's motion was defeated by a vote of 60 to 124.

On June 3 various amendments proposed were voted upon. The minimum amount of income was fixed at $2,000. It was also agreed that the statements of incomes be kept secret from all but the Internal Revenue Department. Substitutes for the measure, namely, a tax on Government bonds, and a tax on corporations, to be deducted from interest and dividends before payment, were voted down.

When the bill came before the Senate, Roscoe Conkling [N. Y.] opposed the income tax feature.

This tax breeds more jealousy, more discontent, more invidious and odious discrimination, and more demoralization, I undertake to say, than any other tax enforced by law.

John Sherman [O.] replied to Mr. Conkling.

The Senator says this tax is unequal, that rogues escape and honest men pay. Is not that so with all taxes in all the

States? Was there ever a tax that was fairly assessed and honestly collected in all respects?

But, sir, there never was so just a tax levied as the income tax. Why? The income tax is simply an assessment upon a man according to his ability to pay.

The Senate greatly modified the income tax provision, limiting the operation of the tax to two years, and reducing the rate to two and one-half per cent.

ness interests of the country, is to change your tariff schedule every two years.

Another argument presented by Mr. Hall was that the income tax would reach a certain class of men living outside of the cities who had their property invested in choses in action, which were not taxable under the laws of most of the States.

W. Bourke Cockran [N. Y.] spoke against the amendment. It was opposed, he said, to the principles of the Democratic party.

This is not a tax upon the men who have enjoyed any special benefit from the Government; it is a tax upon the men who have made the best use of the benefits which are common to all. The vast majority of the persons affected by this tax have never received any special benefit from the Government, but have been injured by the inequality of tariff laws.

Sir, I protest against this betrayal of our ancient principles. I protest against this treason to our faith, to our platform, to our traditions, to our heroes. I protest against partial laws, whether they be intended to favor the few or the many. I demand for all men the same equality before the law which they enjoy in the sight of God.

On January 31 James G. Maguire [Cal.] proposed as a substitute for the income tax that a direct tax of $31,311,125 be annually laid on the land values, exclusive of improvements (the single tax), in the United States, and apportioned to the States and Territories and District of Columbia, these values to be assessed at the full market rates.

The immediate purpose of my amendment is to provide a method better than the general income tax for $31,000,000 to meet a portion of the deficiency expected to arise under the Wilson tariff bill. The income tax, proposed by the gentleman from Tennessee [Mr. McMillin], can nearly all be shifted from the immediate payers to the shoulders of the poor, or comparatively poor, who consume the products of the industries out of which the incomes arise, or who borrow the money upon which incomes, in the form of interest, are paid.

The house refusing to concur in all the Senate amendments, a conference committee was appointed. The committee in their report advised virtually the adoption of the Senate amendments in regard to the income tax. Both Houses concurred in the report, and the bill was signed by President Ulysses S. Grant on July 14, 1870.

Act of 1894.

On January 29, 1894, Benton McMillin [Tenn.], from the Committee on Ways and Means, offered in the House an amendment to the Wilson tariff bill, laying a two per cent. tax on incomes over $4,000 a year. In supporting his amendment he presented the following arguments:

1. An income tax would remove part of the great burden resting upon the consumer and place it upon accumulated wealth.
2. It was not unjust to tax wealth for the support of a government from which it receives protection.
3. The argument that an income tax is productive of perjury was not pertinent—to carry out this reasoning would be to advocate removing from our statute books every law that is enacted against crime.
4. A method was proposed by which the income tax was made less inquisitorial than customs and internal revenue taxes.
5. The amendment was so constructed that the income tax could not operate as a tax upon thrift. Each citizen was exempted from taxation to the extent of $4,000, and every income exceeding that amount was taxed at a uniform rate.
6. The adoption of an income tax would remove much of the discontent among the laboring classes.

Other speakers advanced various arguments in favor of an income tax. Uriel S. Hall [Mo.] said that one of its best features was the constant change in the amount of revenue collected under it.

Without an income tax the only method at your command for producing the proper flexibility of revenue to meet the flexible demands of the Government, without disturbing the busi-

The vote was taken at once on Mr. Maguire's amendment to Mr. McMillin's amendment—yeas 6, nays 180.

Tom L. Johnson [O.] said:

Mr. Chairman, I desire to put on record the names of the gentlemen who have had the foresight and the patriotism to vote for this single-tax amendment. They are the gentleman from California, Mr. Maguire (the mover of the amendment); the gentleman from New York, Charles Tracey; the gentleman from New York, John DeWitt Warner; the gentleman from Ohio, Michael D. Harter; the gentleman from Kansas, Jerry Simpson, and myself.

Mr. McMillin's amendment was then passed, amid loud applause on the Democratic side, by a vote of 175 to 56. Mr. Cockran voted in the negative.

The passage of the Wilson bill by the House carried with it this amendment. The income tax feature was upheld by the Senate, though strenuously opposed by David B. Hill [N. Y.] and others.

Income Tax Decision of the Supreme Court

On March 7, 1895, a suit [the Pollock case] was begun in the Supreme Court to test the constitutionality of the Income Tax law. On April 7 the Court decided:

(1) That taxes on the rent or income of real estate are direct taxes.

(2) That so much of the Act of 1894 as attempts to impose a tax upon the rent or income of real estate without apportionment (among the several States according to their population) is invalid.

These questions were decided by a vote of 6 to 2. The Court further decided that the tax upon income derived from municipal bonds was invalid. This tax, they declared, was a tax on the power of the States and their instrumentalities to borrow money, and was therefore unconstitutional. On this point the vote was unanimous.

On the other features of the law of 1894 the Court was evenly divided, and hence no opinion was expressed.

William D. Guthrie [Cal.], who had argued against the law before the Court, became impressed with the idea that, upon a rehearing, a majority of the Court could be induced to declare the entire act invalid. This led to an application for a rehearing, which was granted. The Court convened again to consider the case on May 7, 1895.

On May 11, by a majority of 1, the Court declared the Income Tax law constitutional. Chief-Justice Fuller began at once to prepare the opinion of the minority. Later, however, Justice Shiras, who, ever since the first hearing on the case had seemed in doubt on many points, changed his vote, thus turning a minority into a majority, and deciding adversely the fate of the entire Income Tax law. The final vote of the Court was as follows: Against the law—Chief-Justice Melville W. Fuller [Dem.], Justices Stephen J. Field [Dem.], Horace Gray [Rep.], David J. Brewer [Rep.], and George Shiras, Jr. [Rep.]. Dissenting—Justice John M. Harlan [Rep.], Henry B. Brown [Rep.], Howell E. Jackson [Dem.], and Edward D. White [Dem.].

The decision of the majority was taken on the ground that the taxes on income from real estate, as well as those on bonds, stocks, and investments of all kinds, were direct taxes not apportioned among the several States, and were therefore repugnant to the Constitution. And these taxes, they said, "formed a vital part of the whole scheme." If they were stricken out,

> This would leave the burden of the income tax to be borne by professions, trades, employments, and vocations, and in this way what was intended as a tax on capital would remain in substance a tax on occupations and labor. We cannot believe that such was the intention of Congress.

Justice Harlan delivered the principal dissenting opinion. He argued that the main feature of the income tax, *viz.:* the tax on income derived from rents, was not a direct tax. He also declared:

> The judgment just rendered defeats the purpose of Congress by taking out of the revenue not less than thirty and possibly

> fifty million dollars. We know that taxation would not have been reduced to the extent it was by the Wilson act, but for the belief that if the country had the benefit of revenue derived from a tax on incomes it could be safely done. If all the income tax sections of the Wilson act must fall because some of them are invalid, does not the judgment this day rendered furnish ground for the contention that the entire Wilson act falls when the court strikes from it all of the income tax provisions, without which the act would never have been passed?

This dissenting opinion of Justice Harlan was considered remarkable, not only for its arguments, but for its *delivery*. Said the New York *Herald:*

> He began in a low and distinct tone, but it soon became evident that there was a good deal of feeling in his words. He raised his voice and gesticulated with considerable violence to the members of the bar in front of him. It is doubtful if ever before in the history of the Supreme Court there has been witnessed a scene as remarkable as this, or if ever before a justice has gone to such lengths in criticizing and denouncing the action of a majority of a tribunal of which he was a member. Some of Justice Harlan's phrases almost caused consternation among the members of the bar who sat before him. His impassioned denunciation of the decision, and some of the criticisms he made on the reasoning of the justices who prepared it, indicated that his opinions had a strong leaning toward advanced socialism.

As we have seen in the debate on the Payne-Aldrich revenue bill, [see page 376ss], a strong desire arose in Congress in April, 1909, to embody in the general tariff bill an income tax provision that could not be construed by the Supreme Court as unconstitutional. This method, however, was finally discarded as impracticable—it was urged that, no matter how the provision might be formulated, the tax would be declared unconstitutional.

The logic of the situation, therefore, was that Congress, to be consistent, should place the constitutionality of the admittedly desirable tax beyond question. This could be done only by proposing an amendment to the Constitution, especially declaring that an income tax might be levied by the national legislature.

Consistency further required that the party in power introduce the proposition. Therefore, and with further appositeness, Nelson W. Aldrich [R. I.], the Republican leader in the Senate on the tariff bill, on June 28, 1909, while the tariff bill was still under discussion, reported from the Committee on Finance a joint resolution proposing the submission to the States of the following amendment to the Constitution:

> Article XVI. The Congress shall have power to lay and collect taxes on incomes, from whatever source derived, without apportionment among the several States and without regard to any census or enumeration.

The resolution was based on one which had been offered on April 27 by Norris Brown [Neb.] and referred to the committee.

The resolution came up for discussion on July 3.

The Income Tax [Constitutional Amendment]

Senate, July 3, 1909

Anselm J. McLaurin [Miss.].—Mr. President, I do not believe that there is any necessity for any constitutional amendment to authorize the Congress of the United States to enact an income tax. Whatever may be the intention in bringing forward the proposed amendment, I think the effect will be to defer the enactment of any law providing for an income tax. I think the effect of it will be that there will be probably more than a fourth of the States of the Union which will refuse to ratify the action of Congress when this proposed amendment to the Constitution is presented to the States for ratification, and then I think that will be presented to the Supreme Court of the United States as an argument why an income tax should be held to be unconstitutional. I think it would be urged as a very plausible argument before the Supreme Court of the United States that the people are not in favor of an income tax and do not believe that an income tax would be constitutional.

I cannot conceive that there can be any necessity for any constitutional amendment. If I understood the vote yesterday,

> the proponent of this proposed constitutional amendment voted against the income tax.
>
> Senator Brown.—I voted for an income tax.
>
> Senator McLaurin.—The Senator from Nebraska, as I heard it, voted to substitute the corporation tax for the income tax.
>
> Senator Brown.—I did. A corporation tax is a tax on incomes, which the court has sustained. I voted for that which the court sustained and rejected that which the court rejected.
>
> Senator McLaurin.—I do not see that the Congress of the United States should be called upon to zigzag around the inconsistent rulings of the Supreme Court of the United States. Without intending any reflection upon that tribunal, it is composed of men just exactly as the Congress of the United States is composed of men. I believe there are just as good lawyers in the House of Representatives and in the Senate of the United States as there are on the Supreme Bench.
>
> Senator Brown.—That is true; but they are not on the bench.
>
> Senator McLaurin.—I know that the members of the Senate and the members of the House are not on the Supreme Bench, but that does not necessitate nor argue for the abnegation of the right of the Senators and Representatives in Congress to pass their judgment upon a constitutional question. It is for us to pass that which we consider to be a constitutional law, and it is for the Supreme Court to undo it or not, as it sees proper.

On July 5 William J. Stone [Mo.] supported the Brown resolution.

> I wish to read a declaration contained in the Democratic national platform which was promulgated at Denver in 1908. It is as follows:
>
> We favor an income tax as part of our revenue system, and we urge the submission of a constitutional amendment specifically authorizing Congress to levy and collect a tax upon individual and corporate incomes, to the end that wealth may bear its proportionate share of the burdens of the Federal Government.

That declaration, clear and explicit, is alone sufficient to determine my attitude with regard to the resolution to be voted upon to-day. I am gratified to note this one more example, in addition to those I have heretofore pointed out, of Republicans following in the wake of Democratic leadership and along lines blazed by our Democratic pioneers. The President has taken

his stand on the Denver platform, and a Republican Senator has culled one of its declarations and formulated it into the legislative proposition now before the Senate.

Mr. President, fear has been expressed that more than one-fourth of the States will withhold their consent to the amendment and reject it, and then it is apprehended that an argument will be based on that circumstance to induce the Supreme Court to adhere to the doctrine announced in the Pollock case if ever the constitutionality of an income tax is again before that tribunal.

Mr. President, I cannot persuade myself that more than one-fourth of our American States will reject this proposed amendment to the Constitution. But if 12 States should by bare majorities in each reject the proposition, and 33 States should agree to it, as they would by large majorities, it would still be manifest that the great body of the people favored the amendment. If the Supreme Court should be called upon to review the Pollock case, and should be inclined to return to its earlier and, I think, sounder rulings, namely, that an income tax was within the Constitution, I can see no good reason why the court would hesitate to adopt that course even if this amendment should fail of ratification.

Joseph W. Bailey [Tex.] offered an amendment to the Brown resolution.

I move to strike out the word "legislatures," in line 5, and to substitute the word "conventions"; and in line 9, after the word "incomes," I move to add the words "and may grade the same."

Mr. President, of course the Senate will at once understand that the purpose of the first amendment is to submit the ratification of this proposed amendment to conventions called in each State for that purpose, rather than to the legislatures. Legislatures are elected with reference to many questions. Legislatures may be chosen upon local issues. The members may change their opinions, as members of the Senate have done upon this very question, between the time they are chosen to the legislature and the time when they are required to vote.

The second amendment, Mr. President, gives distinct and specific authority to graduate an income tax, and I think that necessary only as a matter of abundant caution. I would not, perhaps, have thought it necessary at all, except for the statement of Judge Brewer, in the case of Knowlton *vs.* Moore, where

he dissents from the opinion of the court sustaining the validity of the inheritance-tax law upon the ground that Congress had no power to grade it.

SENATOR MCLAURIN.—There are many Senators who believe that it is not necessary to have any amendment to the Constitution.

The mischief in reference to an income tax in every discussion of it before the court has grown out of six words, three of them in clause 3 of section 2 of Article I of the Constitution, and three of them in clause 2 of section 9 of Article I of the Constitution. In the first place it says:

> Representatives and direct taxes shall be apportioned among the several States—

The words "and direct taxes" in that instance, and in the next—

> No capitation or other direct tax shall be laid.

The words "or other direct" are the words that make the mischief in this clause 4 of section 9. With these six words stricken out of the Constitution in the places where they occur, as I have indicated, there could be no trouble about the levying and collecting of an income tax.

Senator McLaurin therefore proposed as a substitute for the Brown resolution to strike out of the Constitution the words indicated.

Joseph M. Dixon [Mont.] opposed the submission of the Amendment to State conventions.

In many of the States the expense of holding elections for delegates to a constitutional convention will be so large that the question of expense will be used as an argument against it. I think in my State it will cost the State $100,000 to hold its constitutional convention and the election for the choosing of delegates.

I am convinced this will complicate matters. On the other hand, if the joint resolution passes both the Senate and House, as it will undoubtedly, the governor of each State in the Union will certify to the next general assembly of the States the fact that the joint resolution has passed both Houses of Congress, and it will be brought directly and forcibly to the attention of the people in every State.

I for one believe that this amendment will carry in nearly every State of the Union. Suppose, as it has been intimated, that influences should be used in a State with the members of the legislature against it and that legislature returns and goes home without adopting the amendment, it makes it the burning live issue in that State. The joint resolution of Congress does not become *functus officio* because one legislature of a State at that time has not adopted it. It will rest on the legislatures that will assemble in the future, and whenever three-fourths have finally ratified it, whether it be one, two, three, five, or ten years, it then becomes a part of the fundamental law of the United States. I am thoroughly convinced that the convention method will complicate more than it will help.

WELDON B. HEYBURN [Ida.].—Does the Senator contend that it might be submitted to an indefinite number of subsequent legislatures, or would the action, either positive or negative, of the legislature to which it was first submitted exhaust the right?

SENATOR DIXON.—I presume if the legislative action were positive or negative it would be exhausted in that State.

SENATOR HEYBURN.—Then, if the legislature to which it was submitted failed to act that would be the equivalent of a rejection of the amendment.

SENATOR DIXON.—No; if the legislature failed to act, I do not think for a moment it would be.

SENATOR BROWN.—Unless some good controlling reason is presented why we should change our method of amending the Constitution, I do not think we can justify our vote against following the usual method. The legislature is an existing institution in every State. A convention would have to be arranged for. The legislatures, by virtue of the several State constitutions, meet every two years in most of the States. We do not have to wait for somebody to call a convention. The legislature is already called. We do not have to worry about the expense of the legislature, because the expense is already incurred.

In addition to all these objections, Mr. President, there is one other which ought to cause Senators in this body to vote against the proposed amendment for ratification by conventions. I know the fight that has been made in a large majority of the States of this country for a primary law. There has been a fight of the people in a majority of the States of the Union to get away from legislators who are nominated in conventions, and in many States they are now nominated at a primary. Members of Congress who used to be nominated in

conventions are now nominated at a primary. The members of the several legislatures of the States that have primary laws do not have conventions. They have no law for electing delegates to any convention at a primary.

Now, then, Mr. President, as to the other amendment offered by the Senator from Texas, where he asks that the words "and the right to grade" be put in, I think already the language of the joint resolution gives Congress the power to grade the income. The power to lay a tax includes the power to grade. Of that no doubt can reasonably exist, in my judgment.

HERNANDO D. MONEY [Miss.].—The difficulty that presents itself to my mind is to secure the 12 States which everybody admits are quite likely to defeat any amendment of this sort to the Constitution. The method presented by the Senator from Texas is probably the best, but the same influences that will control the votes of the legislature will prevent the legislature from calling a convention.

We had great difficulty in passing the last two amendments to the Constitution, which seemed to be so very necessary in our system of political economy as to fix the status of several million freedmen. I am one of those who do not believe that either the fourteenth or fifteenth amendment was ever validly made a part of the Constitution.

Mr. President, I do not believe that this amendment to the Constitution will ever be a part of it. I am willing to vote for it, and I should like to see it adopted, if possible; but I am quite sure that those influences which have prevented a vote on the income-tax amendment in this Senate will also prevent a vote in at least twelve of the legislatures of this Union. We can feel quite sure that an act of such far-reaching importance, that touches the pockets of very many rich people, is not very likely to become a part of the organic law of our Republic or of our confederation.

SENATOR BAILEY.—Mr. President, if, instead of submitting this amendment to the legislatures, that may act and react, and go forward and recede, we submit it to a convention in every State, then every member of that convention will be selected solely with reference to this single question; he will be compelled to stand in the presence of the people whose suffrage he seeks and declare, upon his honor as a man and as a citizen, whether or not he favors this amendment. This procedure will be as nearly as possible a submission of the question to a direct vote of the people.

Now, a number of Senators have suggested to me that the

question of expense might be an important one, and therefore I desire to say that, if the amendment I propose should be adopted and we should refer this joint resolution to conventions, instead of to the legislatures, I shall follow it with a resolution providing, out of the general treasury, for the expense of holding the conventions in every State.

PORTER J. MCCUMBER [N. D.].—If the legislature were composed of men who would naturally be against the amendment, would it not be more convenient and more easy for them to avoid the calling of a convention than it would to meet the matter directly?

SENATOR BAILEY.—If I were a member of the Texas legislature, and this amendment were submitted for ratification by the legislature, and I were opposed to it, I should vote against it; and they might bring Gatling guns and train them on the capitol, but I would still vote against it if I were honestly opposed to it. But, sir, if the amendment were submitted to the ratification or disposition of a convention, I should feel in honor bound, both as a member of the legislature and as a citizen, to afford to the people of Texas an opportunity to pass in a lawful and an orderly way upon the question.

So I do not hesitate to say that there is a vast difference between a legislator who might vote against the ratification of the amendment if submitted to the legislature and one who would vote against submitting it to a convention in pursuance of the resolution of Congress.

SENATOR HEYBURN.—As I read Article V of the Constitution, which is the article providing for amendments, a State legislature has nothing to do with the question whether or not an amendment shall be submitted to a convention. Congress is to say whether it shall be passed upon by the legislature or by a convention, and the legislature cannot refer it to a convention. Congress is clothed with the authority to adopt that course if it sees fit.

ALBERT J. BEVERIDGE [Ind.].—How could the convention be called if the legislature did not call it?

SENATOR HEYBURN.—The governor would call the convention if the act of Congress authorized him to do it.

SENATOR BAILEY.—The trouble with that is that it would be necessary to provide for the manner in which members should be elected, and the governor could hardly do that.

SENATOR BROWN.—That would require a session of the legislature.

SENATOR HEYBURN.—I merely gave out the suggestion be-

cause it seemed naturally to grow out of the language of Article V.

SENATOR BROWN.—Under the proposal of the Senator from Texas to refer the matter to a convention, we not only have the legislature still in the way, but we have the convention in the way. In other words, you have to have a legislature that is friendly enough to the proposition to pass a law that will be fair enough to allow the people to select delegates to a convention; and then you have to wait until the adjournment of the legislature, and until a convention is called, before you get any action either for or against the amendment. Will some Senator tell me the need of that postponement? In the West we can trust to the legislatures of the States.

Senator Bailey's first amendment was rejected by a vote of 30 yeas to 46 nays, and he withdrew his second amendment. Senator McLaurin's amendment was rejected. The joint resolution was passed by a vote of 77 to 0 on July 5, 1909.

The House referred the resolution to the Committee on Ways and Means, which reported it back on July 12.

THE INCOME TAX [CONSTITUTIONAL AMENDMENT]

HOUSE OF REPRESENTATIVES, JULY 12, 1909

SERENO E. PAYNE [N. Y.].—I am utterly opposed to the general policy of an income tax. I believe with Gladstone that it tends to make a nation of liars; I believe it is the most easily concealed of any tax that can be laid, the most difficult of enforcement, and the hardest to collect; that it is, in a word, a tax upon the income of the honest men and an exemption, to a greater or less extent, of the income of the rascals; and so I am opposed to any income tax whatever in time of peace. But if this nation should ever be under the stress of a great war, exhausting her resources, and the question of war now being a question as to which nation has the longest pocketbook, the greatest material resource in a great degree, I do not wish to be left, I do not wish this nation to be left, without an opportunity to avail itself of every resource to provide an income adequate to the carrying on of that war.

I hope that if the Constitution is amended in this way the

time will not come when the American people will ever want to enact an income tax except in time of war.

Samuel W. McCall [Mass.] opposed the income tax amendment. It abrogated, he said, one of the fundamental principles of the Constitution—the principle that direct taxes should be apportioned among the States according to population.

He continued:

While gentlemen say that they desire this power for time of war, we see to-day in time of peace an attempt to exercise the power to its utmost extent. Why not, then, limit it expressly to time of war? Why not, for the just protection and the equal rights of the people of New York and of the other great States of this Union, five of which probably will pay nine-tenths of an income tax, although they will have only one-ninth of the representation in the Senate—why not preserve the limitation upon the power of the central Government? Why drag every government power to Washington so that a vast centralized government may devour the States and the liberty of the individual as well?

Mr. Speaker, believing that this amendment, with no compensation whatever, does away with an important part of the great compromise of the Constitution, and that it is not limited to the emergency for which it is said to be intended, I shall vote against it. The amendment has not carefully been considered by a committee of this House or by anybody else in the United States that I know of, unless possibly by Mr. William J. Bryan. [Applause.]

CHAMP CLARK [Mo.].—The income tax is a Democratic proposition. We put it in the tariff bill of 1894. A very large majority of us have been in favor of it ever since. We wrote it in our platform of 1896 and have advocated it ever since. We proposed it as part of the war-tariff bill of 1898, and Republicans voted it down with practical unanimity. We are in favor of it now; and we welcome the conversion of the Republican party to another Democratic principle. [Loud applause on the Democratic side.] Better late than never. One by one the roses fall, and one by one you adopt the planks of our platform. [Renewed applause.] The whirligig of time brings its own revenges. What was denounced by Republicans in 1896 as anarchy is advocated by them to-day as sound political gos-

pel. My own judgment is that the wit of man never devised a fairer or juster tax than a graduated income tax.

It is monstrous to say—I do not care what the gentleman from Massachusetts or anybody else says—it is monstrous to say that the accumulated wealth of this country shall not bear its just proportion of the public burdens. [Loud general applause.] The decision on the income-tax law of 1894, when the peculiar circumstances under which it was rendered are considered, is one of the great blots on the judicial system of this country. Everybody knows that we had two income-tax laws prior to the act of 1894. They were held to be constitutional. I believe firmly that if we had been engaged in a war with a first-class power in 1898, instead of in a war with Spain, Congress would "incontinently," as the gentleman from Massachusetts [Mr. McCall] says, have reënacted the income-tax law of 1894 and that the Supreme Court of the United States would have held it to be constitutional. [Applause.] Nobody had any doubt of that then, and nobody has any doubt of that now. The vast majority of the American people have always believed the income-tax law of 1894 constitutional.

We would much prefer making an income tax part of the tariff bill than to vote for this joint resolution submitting an income-tax constitutional amendment for ratification to the States; but, as it has been demonstrated that we cannot secure the passage of an income tax through this Congress, we will do the best thing possible under the circumstances and vote for this joint resolution, hoping for the best.

The gentleman from Massachusetts [Mr. McCall] talks about the sacredness of the Constitution. I am glad to hear a Republican say something in that behalf. [Laughter on the Democratic side.] Of course the Constitution is sacred, but the fathers of the Republic acted according to their lights and according to the circumstances under which they lived.

We must act according to our own lights and the circumstances under which we live. At the time when those clauses that the gentleman from Massachusetts talks about were put into the Constitution population was about equally distributed, and wealth was also; but times change and men change with them, and things change, too.

The Constitution provides that you cannot levy a direct tax, except by making it a head tax. That is the plain English of it. No Congress is ever going to order a direct tax under that section of the Constitution except, perhaps, in the stress of a great war with a great power, because it is palpably unjust.

Arkansas has one-sixth as many people as New York has, and would under that provision of the Constitution pay one-sixth as much direct tax as New York would, but New York has thirty times as much property value as the State of Arkansas has.

The relative situation of people and of States having largely changed, there is no reason why we should longer adhere to that part of the Constitution relative to a head tax and population. Consequently, while Democrats revere the Constitution, they are in favor of amending it so that the swollen fortunes of the land can be justly taxed.

EBENEZER J. HILL [Conn.].—Mr. President and gentlemen of the House of Representatives, I shall vote against this amendment for the following reasons: In the first place, I do not believe that this extra session of Congress was called to completely change and revolutionize the taxation system of the United States. I think that a question of such magnitude should be submitted to the people and discussed in a campaign preparatory to the presentation of so important a matter as an amendment to the Constitution of the United States. This proposition was found in the Democratic platform and not in the Republican platform on which the presidential campaign of 1908 was won. My understanding is that Congress was called together for the sole purpose of revising the Dingley tariff law on the basis of the difference in the cost of production at home and abroad.

Stop a moment and consider what we are doing in voting to give this Government the power to lay an income tax in time of peace. I know of no better measure of the way in which this burden would fall on the various States in the Union than to judge of it by the inheritance tax laid to meet the expenses of the Spanish-American war.

Of the entire amount collected from the inheritance tax in the whole Union six States paid three-fourths of it.

All told, 35 States paid $31,000 less than the little States of Connecticut and Rhode Island, and yet you come and ask me in time of peace and to pay the ordinary current expenses of this Government to vote now for a constitutional amendment which will enable these 35 States to impose a far greater tax upon my people. But it is claimed that the property in the Eastern States escapes taxation. That is not true. In the State of Connecticut more than 80 per cent. of all the expenses of our State government is now paid by corporations, and during the past ten years no State tax has been laid upon our people, but the

whole amount has been met by corporation, inheritance, and other forms of direct taxation imposed by the State. Every corporation in the State is taxed; every legacy under the inheritance-tax law, which we have, pays its fair share.

Is it fair now, after two hundred years of expenditure on our part, that you should come and ask us to vote to tax ourselves in time of peace for a duplication of these things in all of the new and undeveloped States of the Union? It is not because our people desire to avoid taxation, and, as I have shown you, the accumulation of wealth in these Eastern States does not escape a fair and just charge upon it. We are ready to vote for an income tax to meet any emergencies which may arise in this Union and to stand by the Government in time of war; but do not ask us, at least without consultation with our people at home, to put this burden on them in addition to one already severe because of local expenditures, made necessary by our geographical position, but cheerfully assumed for the general good. [Applause.]

OLLIE M. JAMES [Ky.].—Mr. Speaker, I desire to say that the argument of the gentleman from Connecticut [Mr. Hill] does not appear to me to be one that will stand analysis. He tells us that Connecticut, which has been taxing all the rest of the people of the United States under the protective-tariff system until it has grown so rich, if this taxation upon incomes is placed upon her wealth, would pay more than 30 other States in the Union. Yet the gentleman is so patriotic that he is willing to state that when the poor man is willing to give his blood or his life when the Republic is in peril, when the battle is on, that not until then is he willing that his people shall make any contribution to sustain the Government out of the abundant fortunes they have piled up under the system of the protective tariff.

Here Mr. James dwelt at length on the constitutionality of a tax upon wealth. He quoted the dissenting opinions upon the income tax case of Justice Harlan and Justice Brown, and the arguments for constitutionality given by William J. Bryan in his speech in Madison Square Garden, New York City, in 1896. Of Mr. Bryan's stand on this question Mr. James said in conclusion:

Here we behold, Mr. Speaker, this patriot throwing down the gage of battle in the very citadel of wealth. He was ma-

ligned and slandered then, but what a glorious victory he is having upon this question! What a marvelous vindication he is receiving now! The whole nation upon tiptoe now approving his stand on the question of an income tax! And, sir, when those who have maligned him have been forgotten, this man who bore three times with honor and with courage the standard loved by millions of his countrymen, battling for equality of taxation, equality of opportunity, striving for the righteousness a republic owes to its people, obedience to law by the great and small, that the tax gatherer should visit alike the cabin and the palace, the hut, and the mansion, I say, sir, that, when the flunkeys and the adulators shall no longer find favor in their fawning nor pay for their abuse, the principles advocated by William J. Bryan, the lover of men and of the rights of men, will live in the Constitution and shine in the statute laws of the land.

To my mind the income tax is the most equitable of all systems of taxation. It is the ideal way to support the Government. Let those who prosper little pay little, for they are least indebted to the Government; let those who prosper more pay more; let those who prosper most pay most; let those who prosper greatly pay greatly, for certainly they have been most blessed and are therefore most indebted to the Government. What man is so ungrateful to his country that he is unwilling to pay a small tax upon his income above $5,000 to help sustain and perpetuate the Government under which he enjoys such success? Many bills have made such provision, but to meet defeat at the hands of the Republican party, which has always opposed taxing wealth in any degree.

Who is prepared to defend as just a system of taxation that requires a hod carrier, who for eight long hours each day wends his way to the dizzy heights of a lofty building with his load of mortar or brick, to pay as much to support this great Republic as John D. Rockefeller, whose fortune is so great that it staggers the imagination to contemplate it and whose property is in every city and State in the Republic and upon every sea protected by our flag. [Applause on the Democratic side.]

How men can defend a system of taxation in a republic which requires of the poor all of its taxes and exempts the rich absolutely I am totally unable to see. In the everyday walks of life we expect more for church, for charity, for the uplifting of society, and education from those who are most prosperous, most wealthy, most able to give.

I have heard it urged by some gentlemen upon the Repub-

lican side that the passage of an income-tax law would undermine and at last destroy the protective-tariff system. This, Mr. Speaker, is equivalent to saying that in order to give a few monopolists and manufacturers the right to reach into the pockets of all the people, you have kept the tax gatherer from reaching into the pockets of the few, the fortunate few, the intrenched few, the successful few; but you have driven the tax gatherer to the same pockets which monopolies pillaged under the protective tariff for taxes to sustain the Government. The protective-tariff system is vicious enough in itself without adding to it the iniquity of saying that in order to perpetuate it you must place the taxing burden of the Government upon the masses of the people, who must also bear the heavy burden the protective-tariff system inflicts upon them.

Mr. Speaker, this battle for an income tax will go on. This is the people's Government and the right will prevail. During all these years the mighty rich—an army of millionaires—have been exempted from taxation, but the people are now aroused. There are two lines of battle drawn for this great contest. Under which flag will you stand—the flag of democracy or the flag of plutocracy?

We shall win, for—

> Still, Truth proclaims this motto
> In letters of living light:
> No question is ever settled
> Until it is settled right.

[Applause on the Democratic side.]

And I would scorn, Mr. Speaker, a government whose taxing power provides that Lazarus must divide his crumbs with the tax gatherer, but that Dives shall not give of his riches. [Great applause on the Democratic side.]

J. WARREN KEIFER [O.].—If there ever is any necessity for an income tax, of course it is when the nation is at war. I want to say, Mr. Speaker, with the utmost kindness, that so far as history shows the Democratic party has not been in favor of an income tax in time of a great war, and it might well be that it should stand converted now. In the Civil War, in the most trying period of it to the Union, when the question of an income tax was voted upon on this floor, every Democrat present and voting voted against it and denounced it as unconstitutional. [Applause on the Republican side.]

Not a single Republican, as the *Congressional Record* shows, voted against it.

In the Senate of the United States at that time every Democrat voted against an income tax save Mr. McDougal, of California—one only in both Houses. Now I congratulate the Democratic party after these many years on a conversion to the income tax so that it may be levied in time of war.

Now, Mr. Speaker, there is something said about the necessity of an income tax to reach the idle rich; but, if we had only the idle rich, I think I would rather like the program; but there are in this country thousands and tens of thousands of enterprising spirits who have gone forth with energy, industry, and by displaying economy have acquired fortunes, and they are the persons who are to be reached by an income tax; and I am willing that they shall be reached when the trying times come.

While it may be true that those who by their ability and providence amass an estate are secure, an income must bear a proportionately great share of the government taxes; it should not be imposed upon them merely as a punishment.

ADAM M. BYRD [Miss.].—Mr. Speaker, I am afraid that the unanimous passage of this measure through the Senate and the favor with which it is being received in this House by your party are too hopeful of good to be accepted with a full measure of confidence. I am afraid that this is a case of "Greeks bearing gifts." It was introduced in the Senate for the avowed purpose of defeating the Bailey-Cummins income-tax bill, and I am apprehensive that after it shall have been rushed through this House and goes to the States for ratification all the power and influence that can be marshaled against it by sordid wealth and Republican chicanery will be used to compass its defeat. It is necessary to debauch the legislatures of only 12 States to secure its rejection, and the same evil influences that have corrupted and carried so many elections have already started a crusade against its adoption by the States.

We were warned by the gentleman from Connecticut [Mr. Hill], in his speech a few moments ago, what opposition might be expected from New England. He boldly contends that it is unjust to tax the wealth of those favored States for the support of the common country, stating that that section, because of its great prosperity, was now compelled to contribute more than its part of the internal-revenue tax. The inconsistency of such an argument is only excelled by the seeming avarice that prompted it. New England, that has bled the country of its wealth for quite half a century; that has her millionaires by the thousands—made so by virtue of the infamous policy of protection—should be the last section of the Union to reject this righteous measure. With her millions invested in manufactures, protected by the tax of from 50 to more than 100 per cent., it would be the height of political ingratitude for any statesmen from that section, whether Democrat or Republican, to act otherwise than to urge a speedy ratification of this amendment.

RICHMOND P. HOBSON [Ala.].—I believe that this measure is a wise movement in the direction of substituting direct taxation for indirect taxation. A prime advantage of the direct method is that the people know when they are being taxed. To-day I am sure that the great masses of the American people have not the slightest idea how many times in the day they are being taxed for all the comforts, conveniences, and necessities of life. If the people were fully informed they would not submit to such tariff schedules as have been in effect for many years and such as are now carried by the present bill.

Another prime advantage of a direct tax is that it enables a people to know *how much* they are being taxed, and only when they have such knowledge can they prevent abuse of the taxing power.

To-day I do not believe our people have the slightest idea of the amount of taxation that is levied upon them. One, 2, 3 per cent. is considered a sore burden, yet to-day our people are taxed 10, 20, even 30 per cent., and do not know it.

Still a third prime advantage of a direct tax is that we know *where* the tax goes. In the present juncture the bulk of the taxation of the American people does not go to the Government of the American people. I will illustrate: There are about 200,000 tons of pig iron imported into the United States in a year. The indirect tariff tax causes the Government to get the impost duty from 200,000 tons. The country consumes about 25,000,000 tons, the price of all of which is raised to the extent of the tariff. The net result is that the pig-iron tariff gives the tax on 200,000 tons to the Government and the tax on 24,800,000 tons to certain favored individuals, practically giving over to individuals the sovereign right of taxation that can only reside justly in the Government itself. When the people are taxed, they ought to know who gets the tax, and they would know under a system of direct taxation.

A fourth prime advantage of direct taxation is that it would be more adjustable to the legitimate needs of the Government, and it would tend to a more economical and efficient administration of the Government.

Robert L. Henry [Tex.] offered an amendment to the joint resolution to provide that the proposed constitutional amendment be submitted to the conventions of the States instead of the legislatures. The Speaker [Joseph G. Cannon] ruled the amendment out of order as violating the agreement between the party leaders of the House that debate be limited and a vote be reached at a specified time. This ruling was sustained by the House.

The bill then (on July 12, 1909) passed by a vote of 318 to 14. Having received a two-thirds majority in both Chambers it became effective without the signature of the President.

The constitutional amendment (Article XVI) was declared ratified by more than the necessary three-fourths of the States on February 25, 1913.

CHAPTER XVIII

RECIPROCITY WITH CANADA

The Treaty of 1854; It Provides for Free Trade with Canada on Natural Products—It Is Repealed by Congress in 1866; Debate in the House, in Favor of Repeal, Justin S. Morrill [Vt.], Frederick A. Pike [Me.]; opposed, Elijah Ward [N. Y.]—Reciprocity Provisions Are Embodied in Various Tariff Bills—President William H. Taft Negotiates a Reciprocity Treaty in 1911—Samuel W. McCall [Mass.] Introduces in the House from the Committee on Ways and Means a Bill "To Promote Reciprocal Trade Relations with the Dominion of Canada"—Report of the Minority of the Committee—Robert F. Broussard [La.] Presents Separate Report in Opposition to the Bill—Debate on the Bill: in Favor, Ebenezer J. Hill [Conn.], Oscar W. Underwood [Ala.], Champ Clark [Mo.], Mr. McCall, Isaac R. Sherwood [O.]; Opposed, Eben W. Martin [S. D.], George W. Norris [Neb.], J. Hampton Moore [Pa.], George W. Prince [Ill.], Andrew J. Volstead [Minn.], John Dalzell [Pa.], Gen. J. Warren Keifer [O.]—Bill Is Amended and Passed by House—It Fails to Come to a Vote in the Senate—The President Calls a Special Session of Congress—Mr. Underwood Reintroduces the Bill in the House and also a "Farmer's Free List Bill"—Debate on the General Reciprocity Measure: in Favor, Paul Howland [O.], Mr. Hill, Mr. McCall, Mr. Underwood; Opposed, Asher C. Hinds [Me.], Joseph W. Fordney [Mich.], Mr. Dalzell—Bill Is Passed by House—It Is Passed by Senate and Approved by the President—"Farmer's Free-List Bill" Is Passed by House and Senate—It Is Vetoed by the President—House Sustains Veto—Treaty for Reciprocity Is Rejected by Canada—Canadian Debate on Reciprocity: in Favor, W. S. Fielding, Ralph Smith, Sydney Fisher: Opposed, Z. A. Lash, T. Chase Casgrain, Prof. Stephen Leacock, Clifford Sifton.

AS early as 1848 a bill proposing reciprocity with Canada passed the House of Representatives. It was defeated in the Senate, however, because of the uncertainty then prevailing as to Canada's attitude toward American shipping on the St. Lawrence.

In 1853 Congress passed a resolution authorizing the President to arrange reciprocity by means of a treaty. On June 5 of the following year a treaty was signed by representatives of the two governments, and was subse-

quently validated by the national legislatures. It became a law by the signature of President Franklin Pierce on August 5.

This treaty provided for free interchange of natural products, settled the question of fisheries, and fixed the rights of navigation on the St. Lawrence.

In May, 1864, a joint resolution was introduced in the House of Representatives from the Committee on Commerce, authorizing President Lincoln to give notice for terminating the treaty, and negotiating a new one "based on the true principles of reciprocity."

Justin S. Morrill [Vt.] moved as an amendment to the bill that the Government simply give notice of the termination of the treaty.

Frederick A. Pike [Me.] supported the amendment. He was opposed to the renewal of the treaty on any terms. He said the old treaty operated adversely to our fishing interests, brought the balance of trade in favor of Canada, and caused a serious loss of revenue. He said:

Of course, if the treaty has failed in the respects I have mentioned, it must be regarded as a business failure. If our total exports have lessened since it went into operation, and particularly if our export of manufactured articles has diminished, and if in the meantime our commerce has not been benefited by additional employment, if the large fishing interest is anxious to put an end to this arrangement because of the detriment it receives from it, and if the revenue suffers greatly by its continuance, then I say as a commercial arrangement it has not answered the expectations which gave it existence, and it should be abrogated.

Elijah Ward [N. Y.] spoke in favor of a continuation of the treaty. He quoted statistics to show that, during the operation of the treaty, the excess of our exports to the Canadian provinces ($171,628,779) over imports therefrom ($144,183,096) was $26,445,683.

He continued:

It is argued that the treaty has deprived us of revenue. During the last year the imports and exports between the

United States and Canada of articles free under the treaty were nearly equal. If we levy duties on their productions they may do the same on ours. This principle is a two-edged sword. Or they may admit our products free of duty as they did before the treaty, and thus be the carriers of a considerable portion of our produce as well as of their own. When a revenue was paid to our Government on Canadian productions the provincial railroads and means of communication were imperfect and its population was comparatively scanty. By renewing the duties we shall drive away the trade and render our people less able to pay taxes. The utmost amount of revenue the Government can derive from duties on colonial productions is inconsiderable compared with the loss of commerce we shall sustain, and the consequent loss of employment to the laborer and profit to the merchant or capitalist.

By a vote of 77 yeas to 72 nays the bill was postponed until the next session.

During the next session Congress repealed the existing treaty, the House voting against it on December 13, 1863, by a vote of 85 yeas to 57 nays, and the Senate voting against it on January 12, 1865, by 33 yeas to 8 nays. The treaty expired during 1866.

Following the repeal of the treaty no legislation on the question of reciprocity with Canada was enacted until 1890, when, as we have seen in the debate on the McKinley tariff bill, certain provisions for reciprocity on a limited number of articles were adopted. Similar provisions were incorporated in the Dingley bill (1897) and the Payne-Aldrich bill (1909).

President William H. Taft in his second annual message, December 6, 1910, referred to the question of reciprocity with Canada as follows:

The policy of broader and closer trade relations with the Dominion of Canada, which was initiated in the adjustment of the maximum and minimum provisions of the tariff act of August, 1909, has proved mutually beneficial. It justifies further efforts for the readjustment of the commercial relations of the two countries so that their commerce may follow the channels natural to contiguous countries and be commensurate with the steady expansion of trade and industry on both sides

of the boundary line. The reciprocation on the part of the Dominion Government of the sentiment which was expressed by this Government was followed in October by the suggestion that it would be glad to have the negotiations, which had been temporarily suspended during the summer, resumed. In accordance with this suggestion the Secretary of State, by my direction, dispatched two representatives of the Department of State as special commissioners to Ottawa to confer with representatives of the Dominion Government. They were authorized to take such steps for formulating a reciprocal trade agreement as might be necessary and to receive and consider any propositions which the Dominion Government might care to submit.

Pursuant to the instructions issued, conferences were held by these commissioners with officials of the Dominion Government at Ottawa in the early part of November.

The negotiations were conducted on both sides in a spirit of mutual accommodation. The discussion of the common commercial interests of the two countries had for its object a satisfactory basis for a trade arrangement which offers the prospect of a freer interchange for the products of the United States and of Canada. The conferences were adjourned to be resumed in Washington in January, when it is hoped that the aspiration of both Governments for a mutually advantageous measure of reciprocity will be realized.

On January 26, 1911, the President sent a special message to Congress, in which he noted the success of the negotiations.

On the 7th of the present month two cabinet ministers[1] came to Washington as representatives of the Dominion Government, and the conferences were continued between them and the Secretary of State[2]. The result of the negotiations was that on the 21st instant a reciprocal trade agreement was reached, the text of which is herewith transmitted with accompanying correspondence and other data.

In accordance with the plans of the administration Samuel W. McCall [Mass.], on January 28, introduced in the House a bill "to promote reciprocal trade relations with the Dominion of Canada. It was referred to the Committee on Ways and Means.

[1] See speech of W. S. Fielding, one of the Canadian negotiators of the treaty, on p. 457.

[2] Philander C. Knox.

Early in February the bill was reported back with amendments. The report of the minority of the committee was filed by John Dalzell [Pa.]. It said in part:

The minority of the Committee on Ways and Means regret that the bill has been prosecuted by its advocates with such undue and precipitate haste that many of its features remain obscure and without explanation.

Up to the time when the President's message informed Congress that he had entered into a trade agreement with Canada, the House of Representatives—where all "bills raising revenue" must originate under the Constitution—knew nothing about it. It is safe to say that no member of Congress had been consulted as to it or its terms.

By the terms of the bill four general classes of products are affected:

First. Leading food and agricultural products, rough lumber, some raw materials, and printing paper. These are put on the free list.

Second. Secondary food products, such as fresh and canned meats, flours, and partly manufactured food preparations, upon which rates are reduced and made identical.

Third. Manufactured commodities, such as motor vehicles, cutlery, sanitary fixtures, and miscellaneous articles, on which rates are mutually reduced.

Fourth. A small list of articles on which special rates are given by each country. Canada reduces the duty on coal and cement, and the United States reduces the duty on iron ore and aluminum products.

The bill revises our tariff law in part, involves millions of the national revenue, involves also our commercial relations with other nations, and comes to us to be voted on after a week's deliberation.

We protest against its passage for the following, among other, reasons:

(1) It renews a trade agreement with Canada similar to one that heretofore existed from 1854 to 1866, and the operation of which proved disastrous to the United States.

As a business proposition it is wholly indefensible. Advantages under it will accrue to Canada without any corresponding advantages to the United States. It is uncalled for by any great body of our people.

(2) It is un-Republican. It proposes reciprocity in com-

peting products, which is absolutely inconsistent with the policy of protection. It is an abandonment of the protective policy. It is in violation of the history, the traditions, and the platforms of the Republican party.

(3) It is class legislation of the most obnoxious character. It selects from out all the classes of our community the farmer and deprives him of the protection accorded to all other classes. It compels him to produce in a free-trade market and to buy in a protected market. It is in the interest of the foreigner and against the American. The same undue haste that has characterized the treatment of this bill here seems to have prevailed also in the Canadian Parliament.

A new definition is sought to be given to the term protection. It is said not to apply as between parties whose production is substantially similar, and then it is asserted that Canadian production and American are substantially the same. The assertion is not borne out by the facts. The average of Canadian wages is below that of American wages. The value of Canadian lands is below the value of American lands. The Canadian gets his raw material from abroad at a lower import duty than does the American. He prefers others to us at the custom house. The Canadian manufacturer of metals is paid a bounty. An exhaustive investigation by the Mann committee into the pulp and paper question demonstrated that by reason of lower wage rates Canadians can make paper $2 a ton cheaper than we can. The same conditions that relate to wage rates in paper manufacture prevail all along the line.

Robert F. Broussard [La.] filed a separate report.

As a Democrat I wish to add to the report that I agree with almost everything urged except that the statement that the bill is un-Republican is not nearly so accurate as the further statement that it is also un-Democratic and absolutely un-American.

The bill came up for discussion on February 13.

THE COMMERCIAL TREATY WITH CANADA

HOUSE OF REPRESENTATIVES, FEBRUARY 13 AND 14, 1911

Ebenezer J. Hill [Conn.] supported the bill.

Mr. Chairman and gentlemen of the House of Representatives, a protective-tariff policy presupposes reciprocity and

trade agreements. A free-trade policy has nothing to give in return for concessions, and hence nothing to gain from them.

Since the Republican party was organized and while it has been in power there never has been a time but that reciprocal agreements with other countries have been in operation, and President Taft stands to-day in full harmony with Lincoln, Grant, McKinley, Roosevelt, and all of his illustrious predecessors with regard to that principle.

Under reciprocity trade between Hawaii and this country flourished to the great advantage of both, until by the logic of events the islands became a part of this nation.

Under reciprocity our trade with Cuba has more than doubled.

Under free trade with Porto Rico, which met with a storm of denunciation when first proposed, but which William McKinley declared to be our "plain duty," our trade with that island has increased nearly fifteenfold.

Under reciprocal relations with the Philippine Islands, a territory containing a larger population than the Dominion of Canada, our mutual trade has grown in less than a single year 70 per cent.

In every one of these cases the proposition to enter upon such trade relations was met with prophecies of dire disaster to some existing industry in our own country.

In every case the prophecy has failed of fulfillment, and the new policy has resulted in mutual advantage to both parties.

A new proposition confronts us now—a reciprocal trade agreement in some of the natural products of two contiguous countries with a like character of population, with a climate and soil very similar to that of each other, and with forms of government differing in few essential features, affecting the productive and consuming power of either people. Indeed, both parties to this proposed agreement are under the protective-tariff system, and from my point of view both are likely to continue that policy in the future, the United States striving to apply the policy on the fixed principle of the difference in the cost of production at home and abroad as the true measure of its protection, and Canada supplementing its protective rate with direct aid from the Government in many of its industries.

I stand for this treaty as a whole, without any qualification and without any amendment, for, if I am rightly informed, it must be so considered and it must stand or fall as a single proposition, except with reference to the paper and pulp schedule, upon which no final conclusions were reached by

the negotiators. If I could have my way, there are some things in it which I would change, and I have no criticism to make upon anyone who feels that the particular industries in which he is interested have not been cared for as he thinks they should have been. That feeling is but natural and is not confined to the United States, for I find by the perusal of the Canadian papers that the ratification of these proposals is looked upon by some citizens of Canada as absolutely destructive, not only to their agriculture, their fisheries, and their manufacturing, but also to the investments made by domestic and foreign capital in their railway systems and public improvements generally. So that we do not have in this country a monopoly of the timid ones, who look upon any change in the commercial relations of the two countries as a change for the worse, no matter how small or comparatively unimportant it may be.

This measure is a straightforward business arrangement for the reciprocal exchange of such articles as the representatives of both Governments believed, after most careful consideration, could be made with safety to each other and for the mutual advantage of both, and that would result in largely increased business transactions in other articles not directly affected or named in the agreement.

On February 14 Oscar W. Underwood [Ala.] spoke in favor of the bill.

Our Republican friends who wrote the Payne-Aldrich bill were so insistent that we should have a high tariff in this country and that no President, whoever he might be, should make any concessions from the high rates of taxation that they fixed that the President himself, under the law that he signed, has been driven to make a compact with Canada outside of the law to accomplish what was claimed could be accomplished when the law was originally written.

Now, the President, without warrant of law, has entered into an agreement with the Canadian Government—for what purpose? For the purpose of reducing taxes for the benefit of the American people. That is what this proposition is. It is not in the language that I would have written it, it is not in the language that many of you on this side of the House would have written it, but I want to say to you this, there is not one single item in this bill that does not reduce the taxes levied on the American people under the Payne law. The members of this House on

this side of the Chamber, both in this Chamber and before the American people last fall, repudiated the Payne-Aldrich law. They denounced it as unjust taxation. The opportunity has come to us to-day to reduce these taxes and reduce them on some of the necessities of life.

Champ Clark [Mo.], the Speaker, followed.

I am for this bill because I hope to see the day when the American flag will float over every square foot of the British North American possessions clear to the North Pole. They are people of our blood. They speak our language. Their institutions are much like ours. They are trained in the difficult art of self-government. My judgment is that if the treaty of 1854 had never been abrogated the chances of a consolidation of these two countries would have been much greater than they are now.

I am in favor of universal peace, and I am in favor of this reciprocity treaty because it helps along the cause of universal peace. [Applause.]

EBEN W. MARTIN [S. D.].—Will the gentleman favor the abrogation of our tariff law entirely so far as Canada is concerned, and making free trade with Canada on all products?

MR. CLARK.—By taking Canada in to become a part of the United States; yes.

MR. MARTIN.—No; I mean commercially. Would the gentleman support a policy of complete free trade with Canada on all products?

MR. CLARK.—I would support a Democratic tariff bill, prepared by the Ways and Means Committee, brought into a Democratic House, and passed by that Democratic House. [Applause on the Democratic side.]

GEORGE W. NORRIS. [Neb.].—I want to ask the gentleman something along the line of universal peace. As I understand it, the gentleman favors this bill, for at least one reason, that it will have a tendency in the end to bring Canada into the Union.

MR. CLARK.—Yes; I have no doubt about that.

MR. NORRIS.—Will that have a tendency to preserve peace with Great Britain?

MR. CLARK.—Why, certainly it will. I do not have any doubt whatever that the day is not far distant when Great Britain will joyfully see all of her North American possessions

become a part of this Republic. That is the way things are tending now.

MR. NORRIS.—Was the gentleman correctly quoted in the newspapers this morning, where it was stated that in his speech last night he said he was in favor of reciprocity with the entire world?

MR. CLARK.—Yes.

J. HAMPTON MOORE [Pa.].—Would these reciprocal treaties with European countries contemplate the raising of revenue sufficient to run this Government?

MR. CLARK.—Oh, if we did not get enough money in that way, we would collect it by a graduated income tax, and that would bring in enough. [Applause.]

Mr. Speaker, I would levy a revenue tax on lead and zinc, iron and coal, and cobalt, and everything that comes into the United States, except on the necessaries of life. Nothing on earth would induce me to help report a tariff bill which puts a tariff on salt. I would not do it, because free salt is a hereditary Missouri doctrine. Thomas Hart Benton worked for 28 years to get salt on the free list. And Theodore Roosevelt, who is somewhat of a Republican at least [laughter]—and it is hard to tell who is a Republican just now [laughter]——

GEORGE W. PRINCE [Ill.].—The Speaker is a Republican.

MR. CLARK.—I rather think the Speaker is. [Applause.]

Mr. Speaker, I am in favor of this bill because it enlarges our markets, because it brings us into closer relation with our neighbors, and because it increases the prospects of the consolidation of these two great countries in the days to come. [Prolonged applause on the Democratic side.]

Andrew J. Volstead [Minn.] opposed the bill. Reciprocity with Canada, he said, was entirely hostile to the agricultural interests.

The naked proposition is that this treaty has been entered into for the purpose of lowering the price of farm products, and that it will accomplish that purpose no one at all familiar with the situation can doubt. It is undisguised, selfish, class legislation in behalf of the cities as against the producers of food.

This treaty puts practically every farm product of the North on the free list, as Canada is the only country that can successfully compete. No pretence is made that the farmers are

to get anything in return except some slight reduction in the duty on lumber. The treaty does not open to the Northern farmer a market for a single bushel of grain or any other of his products, but it compels him to compete with Canada for his own market. We might consent to this if there were a corresponding reduction in manufactured products, but extreme care has been taken that no manufacturer shall suffer. As an illustration it might be noted that the American miller may buy his wheat in Canada, but the American farmer who has got to sell in competition with the Canadian farmer can not buy his flour in Canada without paying a tariff duty of fifty cents per barrel.

Mr. Dalzell, at the conclusion of a long speech in opposition to the bill, said:

Is it not an astounding proposition that we shall legislate away our advantages in the interest of the Canadians? Yet that will be the result of the passage of the bill reported by the Committee on Ways and Means. No concealment is made of the fact that we propose to give away $5,000,000 a year revenue in return for two millions and a half of Canadian revenue. In other words, we propose to trade a good American dollar for a Canadian half dollar. We propose to throw open the markets, the splendid markets, of 90,000,000 of prosperous people to the meager markets of less than 9,000,000. [Applause on the Republican side.] Why, the proposition is so astounding that it staggers belief.

Mr. Chairman, this measure is an unwise business measure. It is un-Republican; it violates the principles of the Republican party; it abandons protection and espouses free trade. It is a violation of the pledge of every Republican platform for the last 50 years of our history. [Applause.] This measure is obnoxious class legislation, it sacrifices the farmer, the bone and sinew of the Republic, and destroys his interests. And now I fain would appeal to party loyalty, but I know it is of no use. The Republican protectionist, when this vote is taken, marches to his doom. He can not resist a united Democratic party and such Republicans as hear from somewhere else an appeal louder than the appeal of party loyalty. United, together they will march to victory under Democratic leadership under the folds of the Democratic free-trade flag. I decline to follow. I shall stand where I have always stood, and go down with my party. [Applause.]

Samuel W. McCall [Mass.] supported his measure. At the conclusion of a speech more or less statistical he said:

Mr. Chairman, I hope this bill will pass as it was reported, and pass by a decisive majority. I believe that the President of the United States has risen above the narrow interests of localities and that he has comprehended the whole country, that he has not been swayed by the clamor of special interests, but that he has had the wisdom and the courage to negotiate an agreement in the interest of the masses of the people, and I trust that this House will rally behind him and share with him in the glory of having secured the establishment of a policy of enlightened statesmanship, of high patriotism, and of single-minded justice. [Applause.]

General J. Warren Keifer [O.] opposed the bill.

Mr. Speaker, I wish to give, without going into great detail, some of the reasons for my opposition to the so-called Canadian reciprocity agreement.

The bill purports to provide for reciprocity in tariff or import duties between the United States and Canada, though, by all known principles, it provides for no reciprocity at all.

The bill seems to fix, by its first section, certain uniform rates of import duties on the principal products of agriculture of the two countries, leaving Canada to maintain present and to establish further preferential rates with Great Britain and other foreign countries. No general trade relations, reciprocal or not, are proposed save as to farm products. Uniform rates on commodities produced in each of the two countries do not produce reciprocity.

Reciprocity in international trade requires an equivalent interchange of things under equal conditions, though not of the same kind. There is no such thing as reciprocity in an even exchange of the same kind of articles or commodities, as such exchange accomplishes nothing, and an exchange of such articles or commodities on an uneven basis means a cheat or a fraud on one or the other party.

Reciprocity imports an equivalent exchange of diverse articles produced in different countries. To secure something for one country without a corresponding equivalent moving to the other is the opposite of reciprocity. A trade arrangement that does not secure a market abroad for American goods, or which

only admits Canadian goods free into the United States to compete in the market with its goods, is far from reciprocity.

The bill does not, by providing the same duties on certain articles and free trade for certain other articles in both countries, establish reciprocity, but it only provides for putting the articles in trade competition in the markets. When an article of one country is found to be of less value than in the other country, it will go there for sale, but not for reciprocal exchange. This does not constitute reciprocity—only competition in selling in the country where naturally the higher price would be paid, and the country with the cheaper lands, and usually paying the lowest wages for labor, soils, etc., being equal, can undersell the other, and bring down the proper market price all around to the American farm producer. A trade agreement that does not secure a market abroad for American-produced articles only opens the door for foreign-produced articles commonly produced in both countries to come into the United States for sale, and this is the opposite of reciprocity—discriminates against our own country and works injustice upon our people.

Tested by these principles, the arrangement or bill provides for no possible or real reciprocity.

Isaac R. Sherwood [O.] supported the bill.

Less than 30 days ago the President was vigorously working the White House power plant for a high-priced tariff commission, made up of five members, for a long term of service, the president of the commission to draw $7,500 per year and the other four members $7,000 each per year. And the President really forced such a bill through the House. This bill provides that the commission shall travel, not only in the United States but in foreign countries, to ascertain the cost of labor at home and abroad, in order to make a thoroughly scientific tariff. And now, all of a sudden, the President sends to the House of Representatives a new compact, evidently prepared in secret (and surely in a hurry), providing for absolute free trade in all agricultural products of the farm and garden produced on "cheap Canadian lands by cheap Canadian labor." (Quotation from a prophet of protection.)

Is it any wonder that the "Old Guard" of "protection to American industry" refuse to be comforted? What they said to-day on the floor of the House, that President Taft has flopped to the economic ideas of the Democrats, is not a circumstance compared with what they are saying in private conversation.

There is a couplet in Milton's "Paradise Lost" that fittingly depicts the present plight of our shifty Chief Executive, as the stand-y protectionists think he should feel. I quote a couplet from Milton:

> Which way I fly is hell; myself am hell;
> And in the lowest deep a lower deep,
> Still threat'ning to devour me.

In conclusion Mr. Sherwood discussed the subject of the annexation of Canada.

Quite recently I had a conversation with an ex-member of the Canadian Parliament on the question of annexation. He said that 25 years ago there was a powerful element in Ontario and the other provinces in favor of annexation, but now the Canadians were almost universally opposed to annexation. He called my attention to the recent statement of the Canadian Premier, Laurier, that during the past two years over 80,000 United States farmers from North Dakota, Montana, Iowa, and other Western States had sold their farms and moved across the border into Canada in order to better their condition.

Why have we been losing the most thrifty and most valuable citizens of the Western States, who, from choice, have left the protection of our flag and renounced citizenship in a Republic to become citizens in the Canadian provinces under the protection of a British flag? Why have these valuable citizens left their homes and firesides in a mild climate to settle in the frozen north? Here comes the startling thought: Why should any United States farmer care to repudiate the flag of his country for the flag of Great Britain, or why are the Canadians opposed to annexation to the United States?

Is it because we have parted with the simple Republic of the fathers and are now tending rapidly to a military oligarchy, with the military spirit dominant and a present military establishment more costly than the Empire of Great Britain? Is it because of the corruption of American politics? Is it because of the present unrest of our industrial classes? Is it because there is an economic and financial system in the United States controlled by not more than 5 per cent. of our people, who either own or control all the railroads, steamship lines, iron mines, steel mines, oil refineries, tank lines, copper mines, and copper industry, the woolen industry, and the cotton industry? Is it because the average Canadian, looking across the border line, sees in this country no fair opportunity or a poor man's chance, outside the controlling influences of monopoly?

I have never heard or read an explanation of the hostility in Canada to annexation, and can but guess. I am not a political diagnostician.

An amendment of the bill relating to the paper and pulp schedule was adopted, and the bill was then passed by a vote of 221 to 92.

On February 15 the Senate referred the bill to the Committee on Finance, which reported it back on the 24th without amendment. The bill failed to come to a vote, however, in this session.

On April 4 the President called a special session of Congress to consider again the question of putting the reciprocity agreement in operation.

The House bill to carry the treaty into effect was this time introduced by Mr. Underwood. He, on the same day (April 12), introduced a bill "to place on the free list agricultural implements, cotton bagging, cotton ties, leather, boots and shoes, fence wire, meats, cereals, flour, bread, timber, lumber, sewing machines, salt, and other articles." This was known as the "Farmers' Free-List Bill."

Both bills were referred to the Committee on Ways and Means. The general reciprocity bill was reported back the next day. It came up for discussion on April 15.

The Commercial Treaty with Canada

House of Representatives, April 15, 1911

Asher C. Hinds [Me.] opposed the bill.

The manner in which this bill distributes its supposed benefits and its undoubted hardships violates mankind's fundamental idea of justice and equity. Since the dawn of time, through all mythologies and religions, man has expressed his inborn idea that to those who have the suffering and self-denial should come the bliss of the better world, the peace of the Elysian fields, the joy of the golden streets. That is real reciprocity.

But this bill introduces into that ancient, instinctive idea of equity a new principle; that one class of citizens is to have the sacrifices, while another class enjoys the rewards. The dairymen of New York and Ohio are to tread the earthly pathway of self-denial, and in reward the makers of barbed-wire fencing are to roam the Elysian fields [laughter]; the wheat farmers of the Dakotas are to keep the long vigil of unrestricted competition, and in return the automobile makers of Detroit are to speed over the streets of gold; the fishermen of Gloucester who keep watch and watch with death on the banks of Newfoundland are to surrender their market, and in return the Connecticut clock makers are to set up their timepieces in the realms of bliss, where a thousand years are but as a day; the potato farmer of Maine or Michigan is to have the troubles of Lazarus, but the maker of harvesting machines is to rest his head on the bosom of Abraham. [Laughter and applause.] One class sows that another may reap, and you call it reciprocity.

On April 18 Paul Howland [O.] spoke in favor of the bill. On the subject of Canadian opposition to reciprocity he said:

Mr. Chairman, it might be interesting, after all the eulogies which have been paid and all the tears that have been shed in behalf of protected interests in this country, to read a brief extract from the debate in the House of Commons at Ottawa on this subject.

Mr. Lemieux, on February 21, 1911, said:

> We are told by my honorable friend (Mr. Sproul) that it is a one-sided agreement, but we also have one of the highest protectionists on this continent, Mr. Joe Cannon—Uncle Joe—prominent in American public life, who objects to this agreement because it is one-sided. It is, indeed, strange to find protectionists on both sides of the line agreeing that it is a one-sided agreement to the prejudice of each.

[Laughter.]

On April 19 Joseph W. Fordney [Mich.] spoke in opposition to the bill.

Mr. Chairman, I want to call the attention of the gentleman from Massachusetts [Mr. McCall] and the gentleman from Connecticut [Mr. Hill] to one thing. They are very earnest in their efforts to bring about the adoption of Canadian reciprocity.

They are both protectionists. Just whether they can see beyond the limits of the State of Connecticut and the State of Massachusetts at this time I am not going to say. [Laughter.]

Ebenezer J. Hill [Conn.].—Mr. Chairman——

Mr. Fordney.—Just one moment. Let me say to you, you wanted free trade in leather, and you voted for protection on shoes. I have repeatedly said, and I repeat now, that any step toward a reduction of our duties was only a step toward free trade. You are in favor of Canadian reciprocity, and here comes a full-born child of free trade, a bill that puts shoes on the free list and leather on the free list, and I do wish it also put other things produced in New England on the free list. [Applause and laughter.] I am going to ask you if you are going to vote for that bill. I am going to introduce a bill, and I give notice now, and no better protectionist has ever lived than is found in me—and I hope my Democratic friends will support the bill—to put ships on the free list, so that American goods may be carried between two American ports by any foreign ship, and then we shall see how New England will like that.

Mr. Hill.—Mr. Chairman, I challenge the gentleman to vote with me in accordance with the principles laid down in the Republican national platform, that the true measure of protection is the difference in the cost of production at home and abroad, and, if he does it once, it will be the first time he ever did it in his life. [Laughter and applause.]

Mr. Fordney.—Mr. Chairman, I happened to be a member of the committee on resolutions at the last Republican national convention——

Mr. Hill.—Then the gentleman ought to be bound by the declaration.

Mr. Fordney.—Are you?

Mr. Hill.—I am. On manufactures from New England and lumber from Michigan, and on wheat also and every other product that we have in the United States.

Mr. Fordney.—Oh, now, do not get excited, because you are in error. That platform says that the Republican party proposes to give protection to American industry by a tariff wall sufficiently high to offset the difference in the cost of production here and abroad, and to add thereto a fair profit. Where is there any protection for a profit in the free trade for which you vote?

Mr. Hill.—I will ask the gentleman whether the figures on the other side do not also include a fair profit for them?

MR. FORDNEY.—Suppose the cost there was identical with the cost here?

MR. HILL.—Then I would have no duty. [Applause on the Democratic side.]

MR. FORDNEY.—Wait a minute. Where is your profit? Figure it out if you can.

MR. HILL.—Where is their profit? [Applause on the Democratic side.]

MR. FORDNEY.—Let them keep their own market and we will keep ours. [Applause on the Republican side.]

MR. HILL.—We would with the addition of from $3 to $5 a ton in our favor across the ocean.

MR. FORDNEY.—Mr. Chairman, I want to say that I am an admirer of our President, William H. Taft. He will be the Republican candidate for reëlection, if he lives until that time. [Applause on the Republican side.] I am frank to say, gentlemen, that I disagree with his views on Canadian reciprocity. I am exercising my judgment as my conscience dictates as to what is right and best for the American people; and upon that platform I am going to stand.

On April 21 Samuel W. McCall [Mass.] supported the bill. He said in conclusion:

The President is recognizing the laws of nature. The fact that that country buys from us nearly twice as much as she does from all the other nations of the world shows most powerfully how the ties of nature are drawing us commercially together. It is not wise to try to float upstream. We should permit the laws of nature to work without obstruction, and they will work, for the benefit of both countries. The size of our planet is dwindling every year. The discovery of all of the lands of the world, the wonderful inventions of the last century, the railroad and the telephone and the telegraph make this world to-day as small, compared with the world of the time of Columbus, as one of Jupiter's satellites is as compared with Jupiter. We are rapidly growing smaller, and here is this great neighbor of ours that is industrially a part of the United States. I say it is wise for us to recognize that fact and to pass this bill. It does not go far enough, but it takes a long step in the right direction.

Mr. Dalzell spoke in opposition to the measure. In discussing the question of its constitutionality he said:

It is a bill to validate a reciprocal trade agreement made by the President with certain Canadian officials so as to make changes in our revenue law. The Constitution provides "all bills for raising revenue shall originate in the House of Representatives."

Should the pending bill be passed by a majority of the votes of both Houses, you will have as the result only the unauthorized legislative indorsement of an unauthorized executive act, and I apprehend that the constitutional powers of the House and the constitutional power of the Executive are not beyond the power of judicial definition. [Applause on the Republican side.]

In this measure, whereby you are asked—to use the language of the President—to put *"the agreement in the form of a statute,"* the President and the Canadian commissioners have selected the objects of taxation and also the rates of tax, and you cannot dot an "i" or cross a "t."

In all its history the House of Representatives never before knew so humiliating a day as this, called upon, as it is, to renounce its constitutional prerogative and register an executive decree.

Here Mr. Dalzell discussed at length the general arguments of protectionists against the bill. In conclusion he said:

If neighborhood and kinship of race and language and history furnish reasons why trade barriers should be removed, they furnish equally good reasons why political barriers should be removed and the two peoples consolidated under one flag. And, disavow much as we may any intention in that direction, if we adopt this measure the force of events will ultimately assert itself to that end. This bill itself in its new section proposes another step toward bringing together the two peoples under one flag, and that flag will bear the Stars and Stripes.

In the absence of any good reason why this bill should pass there are many and potent reasons why it should not.

It is unnecessary, not responsive to the popular demand, disturbing of the business interests of the country.

But, more than that, it is unfair to the farmer, whose interests in particular it attacks.

The gentleman from North Carolina [Mr. Kitchin], who honored me with so much of his attentions, portrayed me as shedding tears for the farmer while I had in mind the manufacturer.

The gentleman from North Carolina in part was right. I had both the farmer and the manufacturer in mind. When you direct my attention to the subject of a tariff I always have in mind the great city, dear to my heart, whose interests it is my highest ambition to serve. I recall its pillar of cloud by day, its pillar of fire by night, the roar of its machinery, its myriad workingmen in the receipt of the highest wages paid any workingmen in any place on earth [applause], a city which is a shining exemplar of the beneficent results of the system of protection. And when I have in mind the fact that if the farmer be robbed of his protection my great city will be robbed of its protection I refuse to participate in the robbery. [Applause on the Republican side.]

The Republican party as the party of protection is on trial here to-day. You and I, my Republican brethren, are on trial. As we respond, so shall we and our party, the party of McKinley, be dealt with in the great forum of the American electorate. Sometimes it is swayed by popular clamor, sometimes by the shadow of a great name, but in the end its deliberate judgment is true to righteousness; its last verdict invariably loyal to the loyal. [Applause on the Republican side.]

Mr. Underwood closed the debate. In the conclusion of a speech mainly statistical he said:

This treaty with Canada will prevent, to a large extent, speculators and manipulators from cornering markets and at times forcing exorbitant prices upon the people of the country. [Applause on the Democratic side.] That may not be a good reason from the standpoint of you gentlemen who believe in protecting profits, but it is certainly a good reason from the standpoint of men on the Democratic side of the House who are opposed to any proposition that leads to monopoly or oppression. [Applause on the Democratic side.]

The bill was passed without amendment by a vote of 267 to 89.

The Senate, on April 24, referred the bill to the Committee on Finance, which reported it back on June 13. The bill was finally passed on July 22 by a vote of 53 to 27. President Taft approved the act on the same day.

The "Farmers' Free-List Bill" was passed by the House on May 8 by the following vote: Yeas, 236; nays, 109. The Senate, on May 9, referred it to the Committee

on Finance, which reported it back adversely on June 22. It was debated until August 1, when it was amended and passed by a vote of 48 to 30. The House finally concurred in the Senate amendments with certain additional amendments. These were agreed to by the Senate on August 17. The bill, however, was vetoed by President Taft on the following day. In explaining to Congress the reasons for his disapproval he said:

I withhold my approval from this bill for the reasons, first, because it should not be considered until the Tariff Board shall make report upon the schedules it affects; second, because the bill is so loosely drawn as to involve the Government in endless litigation and to leave the commercial community in disastrous doubt; third, because it places the finished product on the free list, but retains on the dutiable list the raw material and the machinery with which such finished product is made, and thus puts at a needless disadvantage our American manufacturers; and, fourth, that while purporting, by putting agricultural implements, meat, and flour on the free list, to reduce their price to the consumers, it does not do so, but only gives to Canada valuable concessions which might be used by the Executive to expand reciprocity with that country in accordance with the direction of Congress.

The House failed to pass the bill over the President's veto by a vote of 226 to 127, less than two-thirds thus voting in the affirmative.

Meanwhile, on April 28, President Taft had delivered an address in New York City in defence of the reciprocity treaty. In this address, which aroused unfavorable comment throughout both Canada and the United States, he said:

I have said that this was a critical time in the solution of the question of reciprocity. It is critical because unless it is now decided favorably to reciprocity it is exceedingly probable that no such opportunity will ever again come to the United States. The forces which are at work in England and Canada to separate her by a Chinese wall from the United States and to make her part of an imperial commercial band, reaching from England around the world to England again, by a system of preferential tariffs, will derive an impetus from the rejection of this treaty, and if we would have reciprocity, with all the

advantages that I have described and that I earnestly and sincerely believe will follow its adoption, we must take it now or give it up forever.

The London *Standard* referred to the speech as follows:

It is not too much to say that President Taft's address has completely altered the situation with regard to Canadian reciprocity. If Mr. Taft had desired to urge patriotic Canadians to oppose the agreement to the full extent of their powers, he could hardly have spoken otherwise.

The same opinion was expressed by many Canadian newspapers, not merely the partisan Conservative organs, but independent journals. The Conservative papers and orators went further, and charged President Taft with deliberately planning, through reciprocity, to annex Canada to the United States. They also used, with great effect against the measure, the outspoken declaration of Speaker Clark in favor of annexation.

The question of reciprocity became the vital issue in the Canadian parliamentary elections of August. The Liberals, under the leadership of Sir Wilfred Laurier, the Prime Minister, supported the commercial treaty as a financial proposition that must operate finally to the advantage of Canada through the opening of more extensive markets for the products of field and mine, while the Conservatives, under the guidance of Richard Borden, were opposed to all forms of reciprocal trade with the United States, asserting that the adoption of a commercial past would divert the lines of trade from east and west to north and south, undermine the British influence, and result inevitably in bringing up the question of annexation.

The result of the elections on August 21 brought to naught all legislation on the subject of reciprocity. The return to the Dominion Parliament of 137 Conservatives to 84 Liberals, thus bringing the Conservatives into power for the first time in fifteen years, indicated that the elections were in effect a popular rejection of reciprocity by Canada.

Reciprocity with the United States

Canadian Debate, March 20 and 25, 1911

The speeches of two public meetings held in Montreal, in March, 1911, form a debate that is typical of a number of discussions which took place in Canada on the ratification of the reciprocity treaty with the United States.

On March 20 Z. A. Lash, King's counsel, of Toronto; T. Chase Casgrain, Esq., and Professor Stephen Leacock of Montreal, and Clifford Sifton, a former Minister of the Interior in Laurier's Cabinet, spoke in Windsor Hall against ratification.

Mr. Lash called the proposition a "preposterous" one, and characterized the issue it presented as "the most important in the history of Canada." The agreement, he said, was made in Washington without the knowledge of its nature being communicated to the people of Canada. Of the Canadian negotiators he said:

They told us both parties, Liberal and Conservatives, were committed to reciprocity. Gentlemen, I deny that statement. I deny that the Conservatives in 1911 were committed to the principle of reciprocity with the United States. I shall demonstrate that twenty years ago Canada was opposed to such reciprocity, and that this is still the case. As I go along I shall show the difference between Canada twenty years ago and Canada to-day.

We have heard that the treaty of 1854 was beneficial to Canada. Canada in 1854 consisted of only the present provinces of Quebec and Ontario. Our efforts to create a nation began with the British North American Act of 1867, when these two provinces and Nova Scotia and New Brunswick were united into the Dominion of Canada. One clause of this act acknowledged the principle which has run through all our legislation, all our public policy, from that day to this, namely section 154, which declared that the building of the Intercolonial Railway is necessary to the union of the provinces—that east-and-west transportation is essential to the consolidation of British North America.

When British Columbia was admitted into the union in

1871 it was decided that the Canadian Pacific Railway should be built for this purpose. Prior to 1871 the Canadian Pacific Railway was being constructed by the Government in sections, on the plan of utilizing water stretches wherever possible. But when, in 1878, the Conservative party obtained power, it was decided to build the road right through, on the principle of section 154 of the consolidation act.

Accordingly in 1881 the Canadian Pacific Railway was started as a transcontinental road, and finished some six or seven years afterward. This was the beginning of the nation which we feel sure Canada is well on her way to become.

When we introduced protection we found that it was just the policy to aid this national aspiration. The Opposition went to the country upon this issue, advocating unrestricted reciprocity, and the country would have none of it, determining that we should go on in our own way.

In 1896 the present Government came into power. What did they do? Did they claim that the national policy was bad for Canada, and that we should not have protection for our own industries? On the contrary, they began to improve this policy, and in 1897 reappealed the clause relating to reciprocity with the United States. They began the construction of the Canadian Northern Railway, and committed the country to the expenditure of hundreds of millions of dollars in furthering the principle of section 154 of the consolidation act. On this the whole country was then agreed; there was no dissent to making Canada a nation by having that railway run from east to west, every inch on Canadian soil, and to-day, gentlemen, the purpose and principle remain the same: the trade of Canada must not be deviated to other channels—Canada must not lose the trade which by national right belongs to Canada. [Cheers.]

As a member of Sir Wilfrid Laurier's party in 1896, I was proud to hear him state in patriotic language that the policy of his Administration would be this national policy. Reciprocity with the United States had then been repealed. I say, therefore, that the Liberal Government in 1911 is inconsistent in reviving it; it should be considered a dead letter. [Cheers.]

Here the speaker illustrated the antagonism between reciprocity and the national policy by exhibiting a map showing J. J. Hill's railway system.

Do you see all these spurs, these feeders, running up from the main line to the Canadian border? They are all there ready

to go *over* the border, if this agreement goes into force, like a lot of snakes with their mouths open, waiting to devour our trade.

Why do we oppose this agreement—we Liberals, as well as the Conservatives? Because we are Canadians first and party men afterward. [Cheers.] It is not because the price of eggs or butter may be diminished. It is not because some parts of the country and some individuals may make a little money at the expense of other sections and persons, but because the whole principle of confederation is menaced. Our traffic should be with each other, and not with the people to the south of us—it should be across the seas to Great Britain and her colonies, if we are to hold our present proud position as the most important link in the world-encircling chain of British federation. [Applause.]

The speaker closed by quoting from speeches in Congress and editorials in newspapers of the United States advocating reciprocity as a step toward the annexation of Canada.

T. Chase Casgrain developed the closing theme of Mr. Lash. One-third of the population of western Canada, he said, was composed of immigrants from the United States. He had heard that in many places there the Stars and Stripes floated in place of the Union Jack; the good old British songs were forbidden in the schools; and the Fourth of July was celebrated in place of the King's birthday. (A voice: Shame!) These influences must be counteracted and the national ideal must be preserved.

What will be the result of this new policy inaugurated by Sir Wilfrid Laurier? We know what we now enjoy. Under the present system Canada has already become the most prosperous country in the world. Why not leave well enough alone? Why take a leap in the dark?

Our opponents answer that this attitude is that of the Chinese. If to be devoted to the interests of our country is Chinese, if to believe that its welfare is bound up in continuing our historic policy is Chinese, if to be firmly convinced that ours is the most prosperous nation in the world is Chinese, then all that I can say is that I am a Chinese with a pigtail. [Applause.]

Mr. Casgrain went on to make a local point by arguing that reciprocity in national products would be inevitably followed by reciprocity in manufactures to the ruination of rising industrial cities like Montreal. He also appealed to the racial feeling of the French Canadians, who formed a large part of his audience, by pointing them to the results of annexation to the United States which occurred in Louisiana. Let them take a lesson, he said, from the history of this old French province, which had now become Americanized, and where no French people had any rights.

Professor Leacock declared that the Government had acted in autocratic fashion in making the treaty with the United States, and it should be repudiated.

Shall two old gentlemen in a hurry sneak down to fat entertainments at Washington, and come back to us fellow citizens with a paper in their hands, and say: *"La chose est faite"*—the thing is done? Is this the way our democracy is to be conducted?

The professor then played upon the patriotism of his auditors, opposing to the admitted commercial advantages of the treaty the danger to national integrity lurking therein.

There is no gain in the treaty compared to the sacrifices. Shall the maritime provinces be sold for Boston novelties? We defy the Government to come before the country on this question. The very farmers, the Prince Edward Islanders, who hope to pocket two cents more a bushel for their potatoes by the treaty, would have uneasy consciences over its ratification.

I do not wish to speak any evil of the American Republic. The Americans are a great people, but fifty years ago we settled the question as to what our lot was to be with respect to them. We have decided once and for all that the British flag was good enough for us. [Cheers.]

We took this country when nobody wanted it; when it was *quelques arpents de neige*.[1] We made it our home, and, now that we have found that it is one of the greatest and noblest heritages, our sturdy American President [Mr. Taft] looks

[1] "Certain roods of snow."

over the wall, hoisted up with the block and tackle of his compatriots, and says: "Lo, there is a fair land," and, turning back to those who lifted him, remarks: "We have made a mistake; this place is well worth having. Hither to me, my trusts, and let us begin our onslaught upon the Dominion of Canada. Come hither, all ye of the Minneapolis Millers' Association, and my stalwarts of the paper trust, look what lies beyond the wall!"

And whom have we at Ottawa to look out for our interests? Come down to us, Mr. Fielding, and tell us how we may sell our potatoes and wheat, and with them the institutions which we so dearly prize.

Mr. Sifton, the last speaker, was greeted with great enthusiasm, and his speech was punctuated with applause and cheering. He said that he and Mr. Lash and other Liberals who opposed reciprocity, were consistent with their party's policy—it was the Laurier Administration that was inconsistent.

The fiscal policy of the Liberal party was partially settled in 1897, when our tariff was fixed substantially as it is now.

In 1898 there was an attempt to secure reciprocal trade relations with the United States. Sir Wilfrid Laurier and his associates spent a considerable time in Washington, but returned without having made any agreement.

In 1900 a general election was held in which the fiscal policy of the government was discussed from one end of Canada to the other, and the Liberal Government was retained in power by large majorities in almost every section of the country.

In 1904 and 1908 the fiscal policy of the Government was again discussed, and was similarly approved.

At no one of these three general elections was there a syllable breathed in favor of reciprocity with the United States by any member or spokesman of the Government.

Mr. Sifton then analyzed the tariff of 1897, and showed that under it the farmers were benefited, their products having risen greatly in price, and their purchases by a little.

So there is no ground for the suggestion that our manufacturing population is exploiting the farming population; on the contrary it appears the farmers are getting the better of it.

The question now is, Was the principle of reciprocity abandoned during all these years from 1897 to the present?

Sir Wilfrid Laurier says in Parliament that it was not abandoned—at least, that he was not conscious that it was abandoned. He says that it was held, not in abandonment, but in abeyance. [Laughter.]

When Mr. Laurier came back from Washington in 1898, after his abortive attempt to secure reciprocity, he gave out the following public statement:

If we know the hearts and minds of our people at present, I think I am not making too wide a statement when I say that the general feeling in Canada is not in favor of reciprocity. There was a time when Canadians would have given many things to obtain the American market. There was a time when the market of the great cities of the Union was the only market we had, but these days are past and over. We are not dependent on the American market now.

The speaker said that Mr. Laurier had repeated the substance of this declaration at various times from 1898 to 1909, giving, in the latter year, as justification for the Government's enormous expenditure on the Grand Trunk Pacific, the absolute necessity of rendering the Canadians independent of the Americans. Mr. Sifton therefore claimed that reciprocity had been definitely abandoned by Mr. Laurier's Administration, and was not "held in abeyance."

He then compared the industrial condition of Canada with that of the United States.

During the last twelve years we have had, with perhaps one exception, no break in our prosperity. There was in 1907 a falling off in our business to a certain extent, but it was not serious enough to be termed hard times.

On the other side of the line they have had at least three serious business depressions in the same period, that in 1907 amounting to a long-continued and widely extended panic, which was followed by great suffering, especially among the poorer classes, who were deprived of opportunities to labor.

The result of our tying ourselves up to the people to the south of us will be that we will go on enjoying our present prosperity until the next panic, when we will have the honor and the pleasure of joining them in their financial embarrassment.

The advocates of reciprocity say to us that it will give the Canadian farmers ninety millions of Americans to whom they can sell their products. In answer, we say that these ninety millions produce more agricultural products themselves than we do. For instance, in 1909 the United States exported over $400,000,000 of food products, the chief items being $216,000,000 breadstuffs and $156,000,000 animal products, both of which products are exported by us.

In this export the United States is our stiffest competitor. I do not think that any business man would succeed for long who let a rival run his factory.

One of the effects of reciprocity is that it puts a premium on bad farming by encouraging shipping raw products of Canada to a foreign country, there to be worked up at a profit, and sent back to us at an advanced price. Now there is no country in the world that ever made a practice of continuously shipping raw products of the farm to other countries, and at the same time succeeded in retaining its own country in a condition of agricultural prosperity.

Mr. Sifton then spoke of the manufacture of paper, which under the fiscal policy of the province of Quebec was developing there to the great advantage of the laboring people, and claimed that this industry would be ruined by reciprocity.

The newspaper association of the United States wants to get our pulp wood. The publishers do not want paper so much as pulp. Now it has been shown in the debates at Quebec that the province gets ten times as much benefit from the manufacture of paper as from the export of the raw material. We are satisfied to let the American publishers get cheap paper, but we want the mills to be located here. [Applause.]

Mr. Sifton then dilated upon the power of the great flour mills of the American Northwest and of the Chicago meat-packers, and claimed that it would be impossible for the small Canadian enterprises in these lines to maintain their existence against the competition which reciprocity would afford. Of the packing business he said:

The meat trust may think for diplomatic reasons it is ad-

visable to let a meat establishment live in Canada for a little while, but so far as living in competition with them is concerned we have not the slightest chance.

Of the railways he said:

The Canadian roads spend about fifty per cent. of cost of labor and materials in Canada. We are going to cut this off. By this treaty, which will carry trade north and south, we are going to take off a large slice of the earnings of our railways, and give it to the railroads of a foreign country.

Mr. Sifton next remarked upon the danger of entering upon a policy the continuance of which depended upon the will of an independent second party. The United States might abandon reciprocity.

Then we will have to go back to where we were twenty years ago, and start off all over again to build up our trade. The President of the United States tells us that we are "at the parting of the ways." Let the people of Canada decide which way they will take, that toward dependenec or that toward independence. Let them record their franchise on this question, and do their duty by burying this proposition so deeply that no government in Canada will ever again make the mistake which our friends in the present government have done. [Tremendous applause.]

On March 25 a meeting in favor of reciprocity was held in the same hall. The speakers were W. S. Fielding, Minister of Finance, and one of the two negotiators of the treaty at Washington; Ralph Smith, M. P. for Nanaimo, B. C., and Sydney Fisher, Minister of Agriculture.

Mr. Fielding began the discussion. He first denied *in toto* the statement of Mr. Casgrain that he, Mr. Fielding, a member of the Canadian Government, was an advocate of annexation to the United States. Reciprocity between the two countries was simply a commercial affair that would be to the advantage of every section of the nation, and so bind its parts together. Montreal, for example, was interested in building up western Canada and so making a market for the manufactures and importations of the eastern metropolis. How would reci-

procity make the west more prosperous? The miners of British Columbia were in favor of the measure since they would have a new market for their coke, this being admitted free of duty into the United States. The prairie provinces of Alberta and Saskatchewan, it was admitted, were solidly in favor of reciprocity for the benefits to the farmers it was expected to confer.

Mr. Fielding then replied to the criticism that the Government had received no mandate for making the reciprocity treaty.

Sir, we have a mandate. [Cheers.] We have the mandate of fifty years of Canadian history. There is a dividing line; there is a point at which the history must begin. That point has been chosen by one of the opponents of reciprocity, and I will take him at his choice. You have all read, I am sure, the letter of an enterprising citizen of Montreal, and one whom we all respect as an enterprising citizen, Sir William Van Horne. [Cheers.] Sir William Van Horne said:

"The other day, Mr. Fielding in a cable dispatch to the Canadian High Commissioner in London, said that for fifty years the people of Canada, in both political parties, had wished for reciprocity. That was true—"

[Cheers.]

But you must let me finish that sentence.

"That was true," said Sir William, "in the sixties and the seventies, but it has not been true since."

[Cheers.]

I am glad there are some to applaud because I want to hold them responsible for Sir William Van Horne's words.

Against that statement of Sir William I read the following clause from the Statutes of Canada in the year 1880:

Here Mr. Fielding read a standing offer to abolish the duty on virtually all important agricultural, animal, and sea products imported from the United States when that country abolished duties on similar Canadian products.

In 1886 the Statutes of Canada were revised, and that standing offer was crystallized into a permanent law. Yet Sir William says that nobody wanted reciprocity in the eighties. Which tes-

timony will you receive, my good friends—Sir William's or that of the law books of the Dominion of Canada.

In 1888 Sir Charles Tupper went to Washington in behalf of the Canadian Government to seek reciprocity. So anxious was he for the agreement that he offered, as an extra inducement, free fishing privileges in Canada. But he was turned down. At this time we have formed a treaty without this concession on our part. [Cheers.]

Sir William Van Horne says that nobody wanted reciprocity in the nineties. Well, in a speech from the throne at the opening of Parliament, April 3, 1894, I read as follows:

My advisers, availing themselves of opportunities which were presented in the closing months of last year, caused the Administration of the United States to be reminded of the willingness of the Government of Canada to join in making efforts for the extension and development of the trade between the Republic and the Dominion, as well as for the friendly adjustment of those matters of international character which remained unsettled. I am pleased to say that these representations have resulted in the assurance that in October next the Government of the United States will be prepared to consider the best means of arriving at a practical solution of these important questions.

That was the last speech Sir John Macdonald ever put in the mouth of the Governor-General. Not many weeks later he passed away, and others took his place. Again we find that the Conservative Government lived up to its traditions on that question, for they also declared that they were anxious for reciprocity. In the tariff act of 1894, the last tariff act of the Conservative Government, they put on the Statute Book another standing offer, not so broad as the previous one, but of very much the same kind.

And so we have this conclusively proved that, not in the ancient history of Canada, but down to the last day upon which the Conservative party ruled this Dominion, they were and proclaimed themselves to be advocates of reciprocity. In the elections of 1891 Sir John Macdonald criticized and assailed the wider policy of his opponents, but the Conservative party at that time declared everywhere that they were the champions of reciprocity, and in that campaign the chief Conservative organ, the Toronto *Mail and Empire*, made the statement that there had been ten offers of reciprocity to the United States, and nine of them had been made by the Conservative Government.

Well, the Conservative Government passed away and the Liberal Government came into power. [Cheers.] The Liberal

party had, at its convention in 1893, declared in the most positive terms that one plank in the platform of the Liberal party was that they wanted reciprocity. Here are the words of the resolution passed at the Liberal convention in 1893:

That a fair and liberal reciprocity treaty would develop the great natural resources of Canada, would enormously increase trade and commerce between the two countries, would tend to encourage friendly relations between the two peoples, would remove many causes which have in the past provoked irritation and trouble to the Governments of both countries, and would promote those kindly relations between the Empire and the Republic which afford the best guaranty for peace and prosperity.

That was the Liberal policy on reciprocity. But it has been said in a meeting held last week in this hall that the Liberal party had abandoned reciprocity in the tariff of 1897. Well, sir, the Liberal party at that date did not adopt the policy of the standing offer, because they did not think that was the best way, but in the very speech which, as Minister of Finance, I had the honor to make in bringing down the tariff of 1897, I said:

The Ottawa platform pledged the Liberal party to use all honorable efforts to bring about better trade relations with the United States. We have already taken the first step in that direction by commissioning two ministers of this government to visit Washington and make known the fact —if it is necessary to make it known—that Canada is willing to negotiate with our American neighbors for a fair and reasonable reciprocity treaty.

Was that abandoning reciprocity? [Cries of No.] Then I went on to say:

If our American friends wish to make a treaty with us we are willing to meet them and treat on fair and equitable terms. If it shall not please them to do that, we shall in one way regret the fact, but shall nevertheless go on our way rejoicing and find other markets to build up the prosperity of Canada independent of the American people.

Now, I have shown you that, through all these years when our good friend Sir William Van Horne said nobody in Canada wanted reciprocity with the United States, every public man of prominence on both sides of politics was declaring that he desired it. [Cheers.] Our American friends did not meet our advances in the spirit in which we thought they were entitled to be received, and there grew up in Canada a feeling, first of re-

gret and afterward perhaps of resentment, at what we regarded as unfair treatment. Then we ceased to look to Washington for reciprocity. It was not because reciprocity had ceased to be desirable, but because we saw no indication that we would get it. The economic facts did not change, and if reciprocity was a desirable thing in 1897 it was equally desirable in the year 1898 and so on for the intervening years.

A VOICE.—No.

MR. FIELDING.—What change had happened? Does my friend over there think that since 1897 the conditions in Canada changed so much that we did not need reciprocity?

THE VOICE.—Hear, hear.

MR. FIELDING.—Then, what he means to say is that reciprocity was needed desperately when the Tories were in power, but when the bright sun of prosperity came under Liberal rule Canada did not need reciprocity. [Cheers.]

Then we are told that this reciprocity agreement came as a great shock to the country; it was a bolt from the blue; everybody was astonished. Well, let us again see what the facts are. Just one year ago there were some negotiations at Washington. It would occupy too much time to explain just how the difficulty of that time arose, but we had some negotiations with the United States and we turned a very uncomfortable corner and brought happiness to the great mass of business people in Canada, who had been very much alarmed. At that time, arising out of these negotiations, the President of the United States through his Secretary of State declared that it was his desire that we should enter into negotiations for reciprocal trade arrangements. The government of Canada replied that they were glad to find the Americans in a better frame of mind, and that we would be very happy to discuss the question with them. Now, mark, if that was all wrong, if we did not need reciprocity, if that was a disloyal proceeding, why did not our good friends of the Conservative party meet us right there and say: "No, you must not do it, we do not want reciprocity." What happened? The arrangement we have had made at Washington—not for reciprocity, but that which has been called the foundation of these later proceedings—was adopted by a unanimous vote in the House of Commons. To-day there are men who will come on the platform and tell you that it was a bad arrangement. What a great pity it is that we cannot be as wise in advance as we are when we look behind!

At the opening of Parliament in November, 1910, a passage was inserted in the speech from the throne stating that we

were carrying on these negotiations and that we hoped they might result in success. Was anybody shocked then? No. That was the time to be alarmed if there was any cause for alarm, but instead of that we found that members of the House on the Conservative side were disposed to say that it would be a very good thing if we could make a satisfactory statement, but that they did not think we could succeed. [Cheers and laughter.] But we did succeed, and that was the "shock" to our Conservative friends.

Mr. Fielding then turned to the anti-reciprocity argument of the danger of interfering with the present prosperity of Canada.

Very ugly things are said just now about reciprocity. But the worst is not so bad as what Sir Charles Tupper said about the tariff policy of the Laurier Government when it was first introduced. If after a few years the Conservatives can forget all the ugly things they said, and can now come before a public meeting, and say: "We take it all back, the tariff policy of the government is lovely, and the country is prospering splendidly"; don't you think I have the right to expect that in about five or six years hence there will be a meeting in this hall and some good Conservative will tell you about the blessings of reciprocity and say that everything is lovely?

Now, this reciprocity agreement is chiefly confined to natural products, to the very things that were in the standing offer of the Conservative party for some years. If the public men of Canada, Liberal and Tory alike, for fifty years have not been fools, reciprocity in natural products is a good thing for this country. [Cheers.]

But what about the manufactures? This agreement should show to every intelligent manufacturer who reads it that manufacturing interests were carefully guarded. [Applause.] It is on public record—Mr. Taft, President of the United States, stated it in a speech a week ago—that his instructions to his commissioners were to offer Canada free trade in manufactures. I have no doubt he gave these instructions, but they never made a formal proposal of that character. They never were permitted to get near enough for that purpose. [Cheers.] We told them frankly at the beginning that in the matter of natural products we could meet them on even terms, but we said: "When it comes to manufactures we have to be more careful; we frankly admit that with your greater capital and your spe-

cialized organizations you are more than the equals of us in your manufacturing power, and we are not prepared to make a treaty with you including any wide range of manufactured goods." [Cheers.]

But it is said there are some manufactures on the list. Take up the whole list of free manufactures that you find in that agreement and you will discover that they are already in every case, or nearly so, free in Canada, and the only change made is that we are getting them free into the United States. How can that hurt us?—surely we are no worse off.

The manufacturers are not hurt; they are more frightened than hurt. [Applause.] I give it to you as my opinion,, worth much or worth little, that, if by the forces of the manufacturers this agreement be destroyed, there will grow up in the Western country a feeling that will be dangerous to the manufacturing interests of Canada and dangerous to the welfare of this Dominion. [Applause.]

It is urged very strongly that if we give free trade in agricultural products we cannot help giving free trade in manufactures. Now, to begin with, if that argument is used by a Conservative, it is a severe arraignment of the national policy, because the national policy, in the same act which established high protective duties, gives a standing offer of reciprocity in natural products. It is reasonable to suppose that when you put the farmer's products on the free list you do not sacrifice him, you satisfy him. He is asking you to have free trade in natural products, because, although there may be some little disadvantage locally, he knows he gets compensation in the larger markets of the United States. But that is not so with the manufacturer. With the great power and capital and specialized organization of the Americans they can, as a rule, beat us in manufacture. And if we were to have free trade in manufactures we would undoubtedly close up many of the factories of Canada. Well, we want factories in Canada. [Cheers.] We have guarded them in the past. [Cheers.] You manufacturers were told by the Conservatives in 1897 that if you trusted your fate to the Liberal Government dreadful things would happen. Did they happen? To-day you are teeming with prosperity as you see. Trust us again. [Cheers.]

Just a few words more and I will close.

Annexation! Is it not a scandal and a shame that our opponents should talk annexation? I read the other day a headline in the Montreal *Star* to a cable from England——

A VOICE.—Sorry you had nothing better to do.

MR. FIELDING.—It was a scare headline and it caught my eye. [Laughter.] It read: "Annexation hurts our issues," referring to the issues of securities in London. Now, if annexation hurts our issues who is responsible for it? The friends of reciprocity are not talking of annexation. [Hear, hear!] It is the opponents of reciprocity who are waving the flag—Heaven help us that the flag should be used for such a miserable purpose. [Cheers.] We are told that if we trade with the Americans we shall cease to be loyal; we are told that if we buy and sell with them we shall impair our loyalty. That's it, is it not?

SEVERAL VOICES.—That's it.

MR. FIELDING.—There comes back to my mind a memorable scene of my childhood days. It is the summer of 1860, nearly fifty-one years ago. All British America is astir with interest for the coming of the future King. The young Prince of Wales lands at Halifax. A procession is formed, and passes down through the streets. The housetops and windows are filled with loyal people, who with flag and wreath and loyal motto welcome the prince, while cheering thousands hail him as he passes along. Why do I recall this scene to-night? It is because that splendid demonstration of loyalty and devotion to the throne and person of our sovereign occurred in the very midst of the period of the old reciprocity treaty. [Cheers.] We had bought from the Americans and we had sold to the Americans. We had traveled to and fro and met them in all the walks of commercial and social life. But it never occurred to anybody to say that we ceased to be loyal. The scene in my native city of Halifax was repeated throughout every province of this country. And then something else of interest happened. Friendly trade relations with the United States had brought about friendly relations in other respects. The young prince was asked to cross the border and visit the American people. He accepted the invitation and traveled through a large section of the American nation and received everywhere from the people the utmost respect. The prince returned to the Motherland to tell the story of the happiness, contentment, prosperity, and loyalty of the Queen's subjects in British America, and of their happy and friendly relations with the people of the great republic. History will repeat itself. There is a young prince to-day in training for his duties as our future King. He will come out to Canada one of these days, as his grandfather, Edward the Peacemaker, came. I trust he will come in the midst of the new period of reciprocity, and then he will be able to testify as his grandfather

did: That the people of this country, trading though they are with the Americans, buying and selling and dealing with them, are nevertheless more devoted than ever to the throne and person of our gracious sovereign. [Cheers.]

Ralph Smith opposed the doctrine of Mr. Sifton that lumber should not be sent out of the country.

If we should not send lumber out of the country, then we should not send coal out of the country, and if we should not send coal and lumber out of the country we should not send fish out of the country. I am simply driving my friend, Mr. Sifton, to the logical conclusion of his argument; if it was reasonable to build a wall around Canada and say, "Canada for Canadians," if that is his policy, then we will deteriorate as a nation. Why, there is no man that has goods to sell to-day in Canada that would not be glad to sell them to the United States or to any other foreign country if he could get a better price.

Now, I come to the coke industry. What is free coke going to do? What is the position of that industry now? It has been demonstrated within the last two years that the deposits of bituminous coal in British Columbia are the largest in the world. The deposits of coal in Alberta and British Columbia, in point of quality and quantity, are not equaled by those of any other nation on the earth. Are you not going to permit us to send our coal to the Yankee, if he wants it? We cannot live if you do not. British Columbia was exporting coal fifty years ago. Where did she send it? She sent it to San Francisco, and, if we could not have got it into the United States even against a high duty, there would have been no British Columbia in the Confedcration in 1870 to pay the majority of the taxes for the Canadian people in 1911.

Now, what does that mean to British Columbia? The State of Washington has absolutely no coal that can be manufactured into coke. As a result of taking the duty of one dollar a ton off coke, all the great foundries and smelters in the Western States are going to use our product and then we will practically have a monopoly of the great markets of the American West for British Columbia coke manufactured out of British Columbia coal by British Columbia labor at good wages.

Let me look for a minute at this agreement with reference to its effect upon the consumer. The consumer represents the great interest of this country. The argument has been put up by a few people—How are you going to increase the price to the

farmer, and reduce the cost to the consumer? You must remember that in Canada we have a great agricultural country, that we have millions of acres of the richest land in the world. The opponents of this measure say that if the United States take our natural products it is going to create a strong demand for these commodities and the result will be that these natural products will be dear. That is the argument. But you must remember that simultaneously with the finding of the market for our agricultural products in the United States you will have the greatest development of agricultural production in this Dominion that has ever taken place. The very fact that you have millions of acres of land, the very fact that you create a market in the United States, and consequently create an extraordinary demand, will bring about an enormously increased investment of capital in agricultural land and an enormously increased production of agricultural commodities which will operate in favor of the consumers of this country. British Columbia consumes thirty millions worth of agricultural products a year and she produces only fourteen and a half millions a year. If the working men of British Columbia, who are engaged in or enter into these industries can get their food supplies at less cost, they will be able to buy more articles from the merchants and manufacturers in Montreal.

Mr. Smith then discussed the question of annexation. He denied that an increase of commerce with the United States would tend toward political incorporation into that country. Pointing to the cumulative growth in recent years of the business transacted between Canada and the United States, even without a reciprocity treaty, he asked if it had made the Canadians less loyal to their country than when the trade with their southern neighbors was meager.

I need not say, ladies and gentlemen, that the independence of this country and our connection with Britain do not depend, as history proves, upon any principle of trade. If they did, we would have been annexed years ago. How is it that we did three hundred and fifty million dollars' worth of business with the Americans without anybody ever suggesting that we were going to have annexation, and how is it that because we prefer to get another million dollars' worth of trade we are going headlong to the devil of annexation? There is nothing in the argu-

ment. The only American of importance that I ever heard say with any emphasis that we were likely to be annexed to the United States, was Champ Clark. I beg the pardon of my friend, Mr. Foster, and of my friend Mr. Borden when I say that Champ Clark has as much right to say that as they have, and as little basis for saying it. Gentlemen, I will never think that an increase of friendliness with Uncle Sam will interfere with my respect for the old parent, John Bull, for one minute. It is a slander on the loyalty and independence of this country. Mr. Gladstone once said: "Liberalism consists in trust in the people, qualified by prudence; Toryism consists in distrust in the people qualified by fear." That statement was made thirty years ago, and it is absolutely true to-day. Who are the fearful men in this country? [Cries of "The Tories."]

Mr. Smith.—Why, the Tories, of course. Who are the men who are willing to trust the people? [Cries of "We are" and "the Liberals."]

Mr. Smith.—The Liberals, of course. Ladies and gentlemen, any trade arrangement between the United States and Canada is a mere incident in the great Anglo-Saxon movement. The democracy of England have three times said: We will not permit you to tax the food supplies of this country. The democracy of Germany have risen almost to rebellion because of the cost of living and the small increase in wages. The democracy of the United States have scared the Republican President, the protectionist Republican President, to look after the interests of the people, as against the trusts of that country. Will statesmen in Canada read the writing on the wall? Mr. Taft was pretty nearly too late, but it did not take him long to get into line when the democracy spoke. The democracy of this country insist that no special privileges shall be given to the trusts that terrorize and interfere with the rights and liberties of the citizens, and one of the best things that Mr. Fielding did was to make free the food of the people of this country. He has left the protection to the manufacturers, and they will profit by the larger production of food products.

Mr. Fisher declared that the interests of Canada had been fully guaranteed in the reciprocity agreement.

It has been commonly said throughout Canada that if the Americans wanted reciprocal dealings with us they should bring down their tariff to our tariff.

By the agreement the American duty on every article in it is

brought down to the exact equivalent of the Canadian tariff. [Cheers.]

Again, this agreement has been brought about, not by a pilgrimage from Canada to Washington, but by a pilgrimage from Washington to Ottawa. We have been told that the Liberal party had deserted the reciprocity plank in their platform. We are told that since 1898, when Sir Wilfrid Laurier sent two of his ministers to Washington to obtain a reciprocity agreement, and the Americans turned the cold shoulder upon that offer, Sir Wilfrid has said: No more pilgrimages to Washington to secure reciprocity. That dictum of the leader of the Canadian people has been absolutely fulfilled. [Cheers.]

We left the American people to change their opinion of their own free will; we left them to come to Ottawa and ask us to resume the negotiations which in 1898 they had broken off somewhat abruptly. And, ladies and gentlemen, the result is that to-day we have reciprocity on Canada's conditions; reciprocity absolutely such as Canada has been wanting, absolutely such as Canada has been willing for all along. [Cheers.] And we have that reciprocity as the result of a request from Washington, and of friendly overtures which were made by the American Government to us.

Let me say a word in regard to the condition of affairs when that overture was made. The President of the United States, impressed by the agitation against the high cost of living in the United States, impressed with the necessity of overcoming in that country the mistake which was made when the Payne-Aldrich tariff, which was not received with favor by the people of the United States, was passed, felt it was necessary to do something to open to the people of that country the hope of lessening the cost of living, and he turned to reciprocity with this country.

We have heard much about annexation. It has been held up to us as a bugaboo to frighten the people. This is a line of argument which is very characteristic of our friends, but I want to say in solemn earnestness, and as a warning to the men who have so recklessly and unwarrantably raised this question before the people of Canada that to-day there is no annexation sentiment in Canada. Why? Because we have a prosperous and contented people, and we know that revolution cannot raise its head where the people are well off and contented. Annexation would be revolution.

I would say, however, that, if the Canadian people are to be divided, into one class in the East, selfishly looking to their own

interests, and one class in the West, and these men in the West are to be deprived of the opportunity to sell where they can sell best, they may insist on having it by annexation. I tell you that the men who are raising this cry here to-day, in the lightness of their heart, and the ignorance of their thought, are playing with fire; that, if it were once kindled, might destroy the fabric of this great and glorious Dominion, that we have been laying the foundation of and carrying on to its highest development. They talk about it being disloyal to trade with the Americans. They say that the farmer who sells a cow across the line is doing what he ought not to do in the interest of the empire, they say that a farmer who sells a tub of butter, a chicken, or an egg on the other side of the line is guilty of disloyalty to the empire. What do they do? I have a little list of some of the things in which we trade with the United States. I will give some of them. We bought one and a half million dollars' worth of automobiles from the United States. I have no doubt that the members of the Anti-Reciprocity League bought some of them.

The people of Canada bought sixteen million dollars' worth of coal from the United States. Why? It is disloyal to trade with the United States. You can buy coal in Nova Scotia, you can buy coal in British Columbia, and you can buy coal in Alberta. Why do these disloyal anti-Imperialists, and, according to this argument, annexationists, buy sixteen million dollars' worth of coal?

There are cotton factories here in Canada. Now, what do you think these people do? Do in the interest of their industry, do in the interest of their trade, do because it is the most profitable thing for them, so that they may pay larger and larger dividends on their highly protected product? What did they do? They went to the United States and bought nine million dollars' worth of raw cotton.

A Voice.—We do not grow cotton.

Mr. Fisher.—No, we do not grow cotton, but this, say the opponents of reciprocity, is an imperial question, and Egypt and India, parts of the empire, grow cotton. My friend down there is no doubt one of the Anti-Reciprocity Imperialists. He, however, cannot include the whole empire in his view. When it comes to a question of buying cotton he has no fear of annexation, and makes his purchases in the United States.

But there are other things. Of drugs and dyes we bought seven million dollars' worth from the United States, and of electrical appliances three million dollars' worth. We have a

large number of electrical establishments in Canada. How is it, then, that people go and buy three million dollars' worth of electrical apparatus from our hated rivals on the other side of the line? They are disloyal not only to the empire, but even to Canada.

Of furs we purchased three million dollars' worth, of rubber five million dollars' worth, and of hats one and a quarter million dollars' worth. I do not know whether these were men's hats or ladies' hats, but I would like to implore the Anti-Reciprocity League and the ladies never to buy their hats in future from the United States. Of leather hides we purchased three million dollars' worth, and of copper three million dollars' worth. We produce copper in Canada; we have some of the best copper mines in the world.

A Voice.—Owned by the Yankees.

Mr. Fisher.—Very likely, but still employing Canadian labor and producing Canadian wealth. We have been able to attract American capital over to Canada, and I hope to annex a very large portion of it, which, I suppose, is just as disloyal as it is to sell them an ox or a horse.

I said a few minutes ago what might happen if the question as between the East and the West were raised. It has been the glory of the Liberal party, led by Sir Wilfrid Laurier, so to regulate our policy and our administration as to bind not only different nationalities and creeds together, but to bind the different sections of this country from one ocean to the other in one great harmonious whole. When Mr. Fielding first amended the tariff of Canada fourteen years ago, we were told, even before we came into power, what folly it was for us to say that we could reduce the duties and raise the revenue. Mr. Fielding introduced in his tariff of 1897 reduced duties on a large number of individual items, and put a large number of items, chiefly the needs of the farmers and laboring classes, on the free list. When he had done that in a large measure, he introduced British preference and he cut a lot of the duties down on articles in which we trade with the Motherland, first by 12½ per cent. and then by 25 per cent. and then by 33 per cent. and produced a constantly growing and larger revenue. We have gone on from that day to this always carrying out the principal of the Liberal party in tariff adjustment, lowering the incidence of taxation upon the consuming classes, and at the same time so doing it by a proper, skillful, and scientific adjustment of the duties on individual items of the tariff on manufactured articles and raw material, that the industrial classes have prospered,

advanced, and progressed in a way that was never dreamed of before in the history of the country.

To-day we are taking another step in the same direction. We are reducing the scale of duties upon a larger number of things that are imported into and exported from Canada. For the first time in the history of this country we have a say, a voice, in the arrangement of the American tariff. It is a tribute to this country that we have reached that stage of progress and advancement in which our great American neighbors find that we are a people to be reckoned with, and they come to us and ask us to barter and to treat in the adjustment of their own tariff, as we are doing in the adjustment of our own. Is this an occasion for Canadians to feel humility? Is this an occasion for Canadians to feel lack of confidence in their country and in their nation? No, this is one of the greatest tributes Canada has ever received at the hands of a foreign land.

In doing that we are accepting the right hand of fellowship which was held out to us a year ago, and I believe that we were not only wise, but that we were right in doing that instead of inviting the big stick of the maximum, non-intercourse item of the Payne-Aldrich tariff.

What is the condition to-day of international affairs the world over? We see overtures being made by one nation and another in favor of closer relations, amity, and friendship. Our great American neighbor has made a proposal to the head of the British Empire for a general treaty of arbitration, a step in favor of peace and good-will upon earth such as has never been known before in the history of the world. We have seen the foreign office in England, in the words of that great statesman, Sir Edward Grey, welcoming this overture from the American nation. We have heard the universal pæan, the cry of admiration, that has gone up from the friends of peace the world over, that the two great Anglo-Saxon nations are in favor of universal peace. Seeing them join hands, are you men who are trying to decry this reciprocity arrangement prepared to invite Canada to block this advance step toward an *entente* between America and the British Empire?

I appeal to you people here in the great city of Montreal, the great commercial center which has been built up and developed in its industrial production and its commercial interests by the tariff policy of Mr. Fielding and the Liberal Government to believe that in the future, as in the past, we will guard your interests while we are doing what is necessary in the interest of the other parts of the Dominion and of every class in the Do-

minion. That has been the keynote of the Liberal policy—the lowering of the tariff, and the maintenance of industry. We can do this as we did it in 1897. We reduced the duties to a moderate level, while at the same time maintaining and increasing the revenue. To-day we are giving an increased market to the farmers of Canada, moderating the exclusive tariff of the United States against our products, and at the same time safeguarding the industrial and commercial interests of the country. You people are afraid; you believe that we cannot do what the Tories have failed to do. We have shown you that we were able to do it in the past, we know that we can do it in the future, and it is our determination, with the backing and support of the people of Canada to carry this as a crown to the glorious work that Sir Wilfrid Laurier has done not only for Canada but for the empire and the world.

GREAT DEBATES IN AMERICAN HISTORY

From the Debates in the British Parliament on the Colonial Stamp Act (1764–1765) to the Debates in Congress at the Close of the Taft Administration (1912–1913)

INTRODUCTION: The Need for Currency Reform 1
By Theodore E. Burton.

CHAPTER

I. PUBLIC CREDIT 8
Report of Alexander Hamilton, Secretary of the Treasury, recommending funding of national debt with assumption of State debts.
Debate in the House on recognizing original holders of the debt, and not speculators: in favor James Madison (Va.), James Jackson (Ga.): opposed, Elias Boudinot (N. J.).
Debate in the House on assumption of State debts: in favor, Theodore Sedgwick (Mass.), Fisher Ames (Mass.).
Debate in the House on authorizing Secretary Hamilton to report a plan for redemption of the national debt: Is this a ministerial function? affirmative, Thomas Fitzsimons (Pa.), William Vans Murray (Md.), Mr. Ames; opposed, John F. Mercer (Md.), Mr. Madison.
Resolutions of William B. Giles (Va.) against Secretary Hamilton.
Debate on Secretary Hamilton's Plan to Redeem the Public Debt: in favor, Mr. Ames, Mr. Sedgwick; opposed, Mr. Madison.

II. CONSTITUTIONALITY OF A NATIONAL BANK (*The First United States Bank Charter*) 32
Debate in the House: in favor of the charter, Fisher Ames (Mass.); opposed, James Madison.
Debate in the Senate on renewal of the Charter: in favor, William H. Crawford (Ga.), John Pope (Ky.); opposed, William B. Giles (Va.), Henry Clay (Ky.).

III. NATIONAL BANK CURRENCY (*The Second United States Bank*) 51
Debate in the House on the Bank issue of currency: in favor, John C. Calhoun (S. C.), Henry Clay (Ky.); opposed, John Randolph (Va.), Daniel Webster (N. H.).

IV. PRESIDENT JACKSON'S WAR ON THE UNITED STATES BANK 63
President Jackson's Message on Rechartering the Second United States Bank.
Arraignment of the Bank by Senator Thomas H. Benton (Mo.): "The Power Greater than the Government."

PAGE

Debate in the Senate on Renewal of the Bank's Charter: in Favor, George M. Dallas (Pa.), Daniel Webster (Mass.).
Message of President Jackson vetoing the charter.
Debate in the Senate on the Veto: in favor, Hugh L. White (Tenn.), Senator Benton; opposed, Senator Webster, Henry Clay (Ky.).

V. CENSURE OF PRESIDENT JACKSON FOR REMOVAL OF GOVERNMENT DEPOSITS FROM THE UNITED STATES BANK 91
Debate in the Senate: in favor of censure, Henry Clay (Ky.), John C. Calhoun (S. C.); opposed, Thomas H. Benton (Mo.).

VI. PAPER MONEY OR SPECIE? (*President Jackson's Treasury Circular*) 105
Message of President Jackson on "Evils of Inflation."
Debate in the Senate on rescinding order of the Treasury Circular to pay specie for public lands: in favor, Thomas Ewing, Sr. (O.), Daniel Webster (Mass.); opposed, Thomas H. Benton (Mo.).
Debate in the Senate on accepting banknotes payable in specie, for the lands: in favor, William C. Rives (Va.), Robert J. Walker (Miss.); opposed, Senator Benton.

VII. DIVORCE OF BANK AND STATE (*The Sub-Treasury Bill*) 125
Debate in the Senate on Van Buren Administration Bill to issue Treasury Notes to relieve Panic of 1837: in favor, Thomas H. Benton (Mo.); opposed, Daniel Webster (Mass.).
Debate in the Senate on Administration Bill to establish an Independent Treasury: in favor, Silas Wright (N. Y.), John C. Calhoun (S. C.), Senator Benton, Robert J. Walker (Miss.), James Buchanan (Pa.); opposed, William C. Rives (Va.), Nathaniel P. Tallmadge (N. Y.), Henry Clay (Ky.), Senator Webster.

VIII. THE WHIG FIGHT TO REESTABLISH A NATIONAL BANK 161
Inaugural Address of President William Henry Harrison: "The President's Power over the Purse."
Debate in the Senate on President Tyler's Veto of the National Bank Bill: in favor, William C. Rives (Va.); opposed, Henry Clay (Ky.).
Remarks of Senator Clay on the Whig "shivaree" of President Tyler for vetoing the bill: rejoinder by James Buchanan (Pa.).
Speech of Senator Thomas H. Benton (Mo.) on the second (disguised) Whig attempt to establish a National Bank: "The Cat in the Meal Tub."
Defence of President Tyler by Representative Caleb Cushing (Mass.); denunciation of Cushing by Representative Garrett Davis (Ky.).

CHAPTER PAGE

IX. TREASURY NOTES ("*Greenbacks*") 183
Debate in the House in 1862 on the issue of Treasury Notes: in favor, ELBRIDGE G. SPAULDING (N. Y.); opposed, GEORGE H. PENDLETON (O.), CLEMENT L. VALLANDIGHAM (O.).

X. NATIONAL BANKING SYSTEM 207
Debate in the Senate on bill to establish a National Banking System: in favor, JOHN SHERMAN (O.); opposed, LAZARUS W. POWELL (Ky.).
Debate in the House on the same: in favor, ELBRIDGE G. SPAULDING (N. Y.), REUBEN E. FENTON (N. Y.); opposed, STEPHEN BAKER (N. Y.), WARREN P. NOBLE (O.).

XI. EXTENSION OF NATIONAL BANK CHARTERS . . 233
Debate in the House: in favor, WILLIAM W. CRAPO (Mass.), ROSWELL P. FLOWER (N. Y.), BENJAMIN WILSON (W. Va.), AUGUSTUS A. HARDENBERGH (N. J.), WILLIAM D. KELLEY (Pa.), WALDO HUTCHINS (N. Y.), ABRAM S. HEWITT (N. Y.), BENJAMIN BUTTERWORTH (O.), GEORGE C. HAZELTON (Wis.); opposed, RICHARD P. BLAND (Mo.), ROGER Q. MILLS (Tex.), THOMAS R. COBB (Ind.), SAMUEL J. RANDALL (Pa.), AYLETT H. BUCKNER (Mo.), CHARLES N. BRUMM (Pa.), JOSEPH H. BURROWS (Mo.).

XII. GOLD OR GREENBACKS? (*Payment of Bond Interest*) . 276
Debate in the House: in favor of Gold, JAMES G. BLAINE (Me.): in favor of Greenbacks, Gen. BENJAMIN F. BUTLER (Mass.).

XIII. CONTRACTION OF THE CURRENCY 321
Report of HUGH MCCULLOCH, Secretary of the Treasury, on Contraction of the Currency, Gold Payment of Bond Interest, etc.
Debate in the House on bill to prevent Reduction of the Currency: in favor of bill, Gen. ROBERT C. SCHENCK (O.); opposed, JAMES G. BLAINE (Me.), Gen. JAMES A. GARFIELD (O.).
Debate in the Senate on the same: in favor, JOHN SHERMAN (O.), WILLIAM M. STEWART (Nev.), JOHN B. HENDERSON (Mo.), OLIVER P. MORTON (Ind.), TIMOTHY O. HOWE (Wis.); opposed, JUSTIN S. MORRILL (Vt.), HENRY W. CORBETT (Ore.), WILLIAM P. FESSENDEN (Me.), GEORGE F. EDMUNDS (Vt.), JOHN CONNESS (Cal.).

XIV. RESUMPTION OF SPECIE PAYMENTS 352
Speech of Senator OLIVER P. MORTON (Ind.) on his bill for Resumption of Specie Payments.
Speech of Senator JOHN SHERMAN (O.) on his bill for the same.
President GRANT on "Resumption of Specie Payments."

Debate in the Senate on the Sherman resolution to resume specie payments, and establish a currency redeemable in gold, and on the Ferry resolution against discrimination against greenbacks: in favor of Sherman resolution, GEORGE S. BOUTWELL (Mass.); in favor of Ferry resolution, THOMAS W. FERRY (Mich.), Gen. JOHN B. GORDON (Ga.).
President GRANT's second recommendation of Resumption of Specie Payments.
Debate in the Senate on the subject: varying views by Senator SHERMAN, ALLEN G. THURMAN (O.), CARL SCHURZ (Mo.), LEWIS V. BOGY (Mo.), THOMAS F. BAYARD (Del.).
Debate in the House on Repeal of the Sherman Law to Resume Specie Payments: in favor, General THOMAS EWING (O.); opposed, Gen. JAMES A. GARFIELD (O.).

INTRODUCTION

The Need for Currency Reform[1]

An examination of the subject of currency reform will fail to convince us of the necessity of any increase in the aggregate volume of money in circulation. With one exception, that of France, the quantity of money per capita in the United States is greater than in any prominent commercial nation in the world. On December 31, 1909, the average per inhabitant in this country was $35.21. In France it is $37.85, due principally to the fact that the use of checks as substitutes for currency is much less. If we include with the amount in circulation the $150,000,000 gold reserve and the Government assets in our national treasury, our average amount would be $38.45 per capita, being greater than that of any prominent nation in the world. But, whichever method of determining the per capita circulation is chosen, the amount is greater by nearly $15 than in the period of maximum inflation in the Civil War, and greater by almost an equal amount than in the very prosperous years of 1880 and 1881; greater also by approximately $10 than twelve years ago, and this notwithstanding the constantly increasing use of checks and other substitutes for currency.

The most distinctive feature of our currency may be expressed in a word, and that is its motley character. Many other features, closely connected with this one, affect our whole system. To explain in detail, we have,

[1] Adapted from an address delivered in Philadelphia before the American Academy of Political and Social Science, December 8, 1910.

first of all, what are called the greenbacks, legal tender notes, amounting to $346,000,000. That amount was fixed in the year 1878. From 1862, the date of their first issue, until 1879 they were not redeemable in gold, but since that time a gold reserve has been maintained for their redemption, the amount of which was fixed at $150,000,000 in the year 1900. The next variety of currency is the national bank notes, which now amount to $726,000,000, according to the statement of December 1, 1910. These rest upon the security of Government bonds. The greenbacks are the direct obligation of the Government. The national bank notes are indirectly the obligation of the Federal Government. Indeed, they are more than this, since, whenever a national bank note is presented to our treasury, it must be exchanged by the Government for greenbacks or other legal tender. The total amount of greenbacks and national bank notes together is $1,072,000,000. In addition to this amount there are outstanding 564,000,000 of silver dollars, which rest in part on the credit of the Government. On the silver dollar there are written the words "In God we trust." The intrinsic value of this silver dollar, according to the latest quotation of silver, is 42.8 cents, the remaining 57.2 cents depending upon the credit of the Government. This is semi-fiat money, and it would cause very great embarrassment in our circulation, except for the fact that it supplies the demand for currency in small denominations. In almost every country a certain amount of what is called token currency is required. The national authority assumes as its prerogative the coinage of fractional silver and derives a profit from it. For instance, in this country there are outstanding $156,000,000 of fractional silver and token coins. Only $84,000,000 in silver dollars are actually in circulation, the balance of $480,000,000 being represented by what are known as silver certificates. These are mostly in denominations of one, two, and five dollars. The national banks are forbidden to issue bills below $5, and the greenbacks, which are legal tender, are not issued below $5. Our people very much prefer to handle bills rather than coin, so in providing de-

nominations of $1, $2, and $5 the silver certificates are very useful.

The best feature of our currency system I have not yet mentioned. We have in this country $1,700,000,000 of gold coins, nearly one-half of the whole amount of our currency, which at the present time is approximately $3,500,000,000. The $1,700,000,000 of gold, of course, circulates anywhere on the globe, since it has intrinsic value. You may melt one of these gold coins in a crucible into a shapeless mass and after that operation is finished it has as much value as it had before. This would not be true of the silver dollar which I hold in my hand. It would be worth only 42.8 cents if melted.

The principal disadvantages of our system are, first, that too much of our currency rests upon the credit of the Government. While it is true that the man who accepts a silver dollar, a silver certificate, a greenback, or a national bank note has absolute confidence in it because it is backed by the Government, nevertheless the system by which the Government issues so large a share of the currency is a vicious one. The experiment of issuing legal tender paper money has been tried by almost every nation in the world, and it has been abandoned by practically every one of the most advanced countries except our own. Nothing but the very exceptional credit of the United States saves us from disaster because of this situation.

It is true that the greenbacks served a very useful purpose during the Civil War, but what we need now is a currency adapted to our present needs, not one based upon historical or sentimental reasons. We want the best monetary system that can possibly be devised.

Briefly stated, the argument against such issues is that when a government issues currency it is in response to its own and not to business needs. Its expenditures should, under any rational system, approximately balance its income, but when its outgo is more than its income, then there arises the temptation to issue its paper currency, and that is just the very worst thing to do. In doing this the Government uses its right to create debt,

to create issues of money, just at the time when such obligations ought not to be created. In a well-managed bank or financial institution circulation is small when its assets are small, and circulation is large, or should be large, when its assets are large. The quantity of money should respond to the demands of trade. Now it is not likely that we shall have any great calamity by reason of this quantity of Government money to which I have referred, but if there should be a crisis like the Civil War; if there should be a period in which our crops failed year after year; if there should be an enormous increase in the expenses of Government, a tremendous strain would be placed upon our financial system. Also, there should be an adjustment of the amount of paper currency to the increase or decrease of the gold supply. If there should ever be a cessation or material decrease in the present constantly increasing production of gold there would be such a readjustment in the course of exchanges as would necessitate considerable alteration in our currency system.

A rational currency system is one in which the quantity of money may be increased or decreased according to the demands of trade, and there is no criterion of these demands so correct as the quantity of business that is done. When there is a large quantity of wheat to be harvested and the supply of bills to pay for it is small, then is the time when it is proper and rational to issue an additional amount of currency. I do not wish to be understood as saying we should make a sudden change in our system; all changes should be made slowly. Custom, so potent in all monetary systems, has adapted itself to the present situation, however faulty it may be. But I do advocate that, little by little, step by step, with no retrogression, we should move away from this system under which the Government supports with its credit $346,000,000 directly, $726,000,000 indirectly, and $564,000,000 in part.

What our currency system lacks most and what any reform must supply is elasticity. The present system is one of rigidity. Those amounts of currency which I have mentioned remain practically the same year in

and year out. Everyone knows that the demand for currency is different at different times. More is needed at the end of the week than in the mid-week, and more at the end of the month than in the middle of the month. Then there are annual disbursements, semiannual disbursements, and quarterly dividends to be paid. At certain times in the fall the crops must be marketed. Then you have what is called in England "the autumn drain." The degree of activity in business also varies greatly in different years. The volume of currency should expand and contract automatically to meet these business demands. But under our present system the amount of currency has no elasticity, no flexibility, except that which may be brought about by imports or exports of gold and by increasing or decreasing the quantity of national bank notes, and the volume of these latter does not respond to the needs of business. The law as it now stands forbids decreasing the national bank notes by more than $9,000,000 a month. Undoubtedly the lack of elasticity is the most serious defect in our present currency system.

What is required, first of all, is the enactment into law of a definite policy under which the quantity of currency can be diminished as well as increased. There is no reason for having $3,500,000,000 in circulation when it is not all needed. The result is necessarily harmful, as I can readily show you. Our bankers naturally wish to utilize all the currency in their vaults. They desire to obtain an income from their money on deposit in seasons of slack demand as well as in seasons of large demand. In any monetary system like ours the tendency is to make the total stock of currency sufficient to meet only the minimum demands. Thus when an increased demand arises, as inevitably it must, there is a scarcity or insufficiency of currency which threatens disaster. Now what happens? After great quantities of money have been loaned out and probably used for stock speculation or in other equally doubtful enterprises, there arises an insistent demand for currency for harvesting the enormous crops of the country. And thus, at this time of the year, when we need all of the money in circulation, we find that it has already been absorbed. This causes a stringency in the money market. This will always happen under an inflexible currency system like ours. You will notice, if you follow the stock market in these seasons of slack demand, that usually stocks command higher prices. The reason is that the speculator can borrow money at cheap rates, and consequently the number of stock buyers is increased.

The principal facts or objects to be considered in the solution of this problem are, first, the need for contraction as well as expansion; second, the amount of circulation should be adjusted to the volume of trade; finally, there should be absolute security for every note issued. I may have personally a partiality for notes based upon negotiable paper and the liquid assets of banks rather than upon bonds or other permanent securities, but, whichever method you have, be sure that the note will be a good one, so that no man when he rises in the morning and reads in the newspapers that a certain bank has failed need fumble through his pocketbook to see whether he has any bills of that bank.

There are numerous obstacles to a reform in our currency. In the first place, there is no other field in which the visionary or the crank has such an opportunity as in questions pertaining to money and finance. Secretary Windom remarked to me twenty years ago: "There are a great many men scattered through the country, sitting on dry goods boxes, who may not be able to manage their own business affairs, but who are convinced that they could manage the Federal treasury a great deal better than it is now being managed." Again, there are a great many selfish interests which come to the front when there is any attempt toward judicious reform. Senator Sherman once said he never had taken part in the passage of any financial measure with which he was entirely satisfied. It was always necessary to make concessions to some one to get the bill passed.

Another difficulty is that for the last fifty years or more there has been a demand that the Government pursue a policy which would result in high prices for crops and at the same time low prices for what we buy

—that is, the Government is expected to make high prices for the seller and low prices for the consumer. I do not know how any system of currency or banking can perform this miracle. People have come, however, to associate a plentiful supply of money with good times. The issue of greenbacks was accompanied by great prosperity and a period of industrial reawakening throughout the country, and from that day to this people have thought that they were more prosperous when there was a large supply of money in circulation. But in any judicious system there must be provision for contraction as well as for expansion, and this has been exceedingly difficult to obtain in the face of adverse public opinion.

Perhaps you may not have realized that in the last fifty years, whenever laws relating to currency were passed, the providing of a good system was never the main object. In 1862, when the greenbacks were issued, it was not to provide a good monetary supply, but to save the very life of the Government in the midst of a rebellion. Then a year or two later came the national banks. The main object in establishing them was not to obtain a perfect monetary system, but to supersede the variety of issues of the State banks, and, in addition, to aid the sale of the bonds of the Government. Then we come to the silver acts of 1878 and 1890. They were passed not for the purpose of providing us with good currency, but in response to the demands of those who were shouting for more money—some of whom doubtless were anxious to pay their debts in a depreciated medium —and of those who were interested in silver mines and desired to sell their output to the Government.

As good citizens we should appreciate rightly all these difficulties and conflicting interests, my fellow citizens, and undertake this problem of currency reform with an eye single to the prosperity of the country, resolved to place our monetary system on a par with the very best systems of other great nations.

Theodore E. Burton

CHAPTER I

Public Credit

Report of Alexander Hamilton, Secretary of the Treasury, on Public Credit—Debate on the Report: Shall Discrimination Be Made in Favor of Original Holders of National Obligations and against Purchasers of the Same?—Proposition of James Madison [Va.] in Favor of Original Holders—It Is Voted Down after Debate—Speeches in the Debate: in Favor of the Proposition, by James Jackson [Ga.]; Against It, by Elias Boudinot [N. J.]—Debate on the Assumption of State Debts by the Federal Government; Speeches in the Debate by Theodore Sedgwick [Mass.] and Fisher Ames [Mass.]; The Debts Are Assumed—Motion of Thomas Fitzsimons [Pa.] That the Secretary of the Treasury Report a Plan for the Redemption of the Public Debt—Debate on Whether or Not This Is a Proper Ministerial Function: in Favor, William Vans Murray [Md.] and Mr. Ames; Opposed, John Francis Mercer [Md.] and Mr. Madison—Resolutions of William B. Giles [Va.] against Hamilton—They Are Defeated—Hamilton's Report on Redeeming the Public Debt—Debate: in Favor of the Plan, Mr. Ames and Mr. Sedgwick; Opposed to It, Mr. Madison.

At the opening of the second session of the First Congress President Washington especially recommended that provision be made for the support of the public credit, which had been the chief reason for the formation of the new Government.

The report of Alexander Hamilton, Secretary of the Treasury, respecting public credit, was submitted to the House on January 15, 1790. It showed that the public debt was more than $54,000,000. The foreign debt, due chiefly to France and Holland, with interest, was about $13,250,000; the domestic liquidated debt, with interest, was more than $40,000,000, and the unliquidated, $2,000,000.

The Secretary recommended the assumption of the debts of the several States to be paid equally with those of the Union, as "a measure of sound policy and substan-

tial justice." These were estimated at twenty-five millions of dollars. Doubts were expressed by the Secretary whether, in addition to all other expenses, it was in the power of the United States to make a secure and effectual provision for the payment of the interest of so large a sum on the terms of the original contracts. He therefore submitted to the House several plans for the modification, security, and payment of the domestic debt.

One proposition was to lower the rate of interest on the whole debt, another to postpone the payment of the interest on a portion of the principal to a distant day. No new modification, however, was to be made without the assent of the creditors.

This important subject was under the consideration of Congress until the 4th of August, 1790, when a law was passed, making a new loan of the whole of the domestic debt.

By the same act Congress assumed twenty-one millions and a half of the State debts; and this sum was apportioned among the States, having regard to the amount of the debts of each. The sum thus assumed was also to be lent to the United States by individuals holding certain evidences of State debts.

Says Timothy Pitkin in his "Political History of the United States":

Congress was much divided as to the mode and manner of providing for the security and payment of so large a debt, deemed of little value under the old Confederation, and particularly on the question of assuming the payment of the State debts. Unfortunately the public debt had become an object of extensive speculation. That some provision would be made for the payment of this debt, under the new Government, was the general expectation, and the propriety of making a discrimination between the original holders and the purchasers had been suggested in private circles as well as in the public newspapers. The idea of making such a discrimination was opposed by Secretary Hamilton as unjust, impolitic, and ruinous to public credit.

In an early stage of the proceedings on his report this question was submitted to the House of Representatives. James Madison [Va.] proposed that the purchasers should receive the highest average price at which the debt had been sold, and the original holders the residue, both to have interest at six per cent. The Government was to have no advantage from this arrangement.

In favor of the proposition it was, among other things, urged that the case was in many respects so extraordinary that the usual maxims were not strictly applicable. The debt originally contracted, it was said, was to be paid in gold and silver, but, instead of this, paper had been substituted, which the creditors were compelled to take. This paper they had parted with, either from necessity or a well-grounded distrust of the public. In either case they had been injured, and suffered loss from the default of the debtor, and in justice the debtor ought not to take advantage of this default. The original debt had never been discharged, because the paper had been forced upon the creditors. A composition, therefore, between the purchasers and the original holders, by allowing the former an average price at which the debt had been sold and paying the latter the residue, would do equal justice to both. In opposition to the measure it was said in the first place that the discrimination proposed was a violation of the original contract on the part of the public. That, by the terms of the certificates given to the original creditors, the debt was made payable to assignees or to bearer; and, of course, the contract was made with the purchaser as well as with the original holder. That it was impossible for Government to examine into the private transactions between the original creditor and his assignee. The debt had been purchased at the market price, and the creditor had parted with his security for what he deemed an equivalent; and, however unfortunate might be the situation of some, who from necessity had been obliged to part with their securities, redress could not be afforded them in the manner contemplated. In most instances the purchaser had placed greater confidence in the Government than the original

holder, and had run the risk of eventual payment, which, but for a change in the Federal Government, would perhaps never have been made.

The impolicy of the measure was also strongly urged as tending greatly to impair, if not totally destroy, public credit hereafter.

The interest of individuals, as well as the community, required that a public debt should be transferable; and its value in market would depend on a variety of circumstances. If Government should thus interfere, in case of transfers, all confidence in public engagements would be destroyed. It was likewise said that great injustice would be done in carrying the plan into effect in the manner proposed. That many of the original certificates were issued to persons who, in fact, had no interest in them, being for the benefit of others to whom, for various considerations, they were to transfer the same. That the immediate purchasers had, in many instances, suffered as much as or more than the original holders, and that no provision was proposed for them. The proposition was voted down by a large majority.

The following speeches, by James Jackson of Georgia and Elias Boudinot of New Jersey, are presented as typical of the debate. They bear upon the general subject of partial repudiation of the public debt as justified by an unfair advantage obtained by those speculating in the debt.

Speculation and Repudiation

House of Representatives, January 28, 1790

Mr. Jackson.—I know, sir, that there are, and will be, speculations in the funds of every nation possessed of public debt; but they are not such as the present report has given rise to, by the advantage those at the seat of government obtained of learning the plan contemplated by the principal of the Treasury Department, before others had heard a word thereof. If we had either received this report privately, or not sat in a large city, then, sir, none of these speculations would have arisen, because Congress could have devised means of diffusing the information so generally as to prevent any of its ill effects. Under these impressions, I am led to express my ardent wish to God that we had been on the banks of the Susquehanna or Potomac, or at any place in the woods, and out of the neighborhood of a populous city; all my unsuspecting fellow citizens might then have been warned of their danger and guarded themselves against the machinations of the speculators. To some gentlemen characters of this kind may appear to be of utility; but I, sir, view them in a different light; they are as rapacious wolves seeking whom they may devour, and preying upon the misfortunes of their fellow men, taking an undue advantage of their necessities.

Look at the gallant veteran, who nobly led your martial bands in the hour of extreme danger, whose patriotic soul acknowledged no other principle than that his life was the property of his country, and who evinced it by his repeated exposures to a vengeful enemy. See him deprived of those limbs which he sacrificed in your service! And behold his virtuous and tender wife sustaining him and his children in a wilderness, lonely, exposed to the arms of savages, where he and his family have been driven by this useful class of citizens, these speculators, who have drained from him the pittance which a grateful country had afforded him, in reward for his bravery and toils, and a long catalogue of merits. Nor is their insatiable avarice yet satisfied, while there remains a single class of citizens who retain the evidence of their demands upon the public; the State debts are to become an object for them to prey upon, until other citizens are driven into scenes of equal distress. Is it not the duty of the House to check this spirit of devastation? It most assuredly is. If, by the ill-timed promulgation of this report, we have laid the foundation for the calamity, ought we not to counteract it?

Jackson was replied to by a man of equally generous impulses but of calmer judgment, the wise and kindly Elias Boudinot, ex-President of Congress, and philanthropist.

Mr. Boudinot.—I would be sorry if, on this occasion, the House should decide that speculations in the funds are violations of either the moral or political law. A government hardly exists in which such speculation is disallowed; but it must, at the same time, be admitted that everything of this kind has proper bounds, which may be too small or too great. If you will not permit your creditor to transfer his debt, you deprive the com-

monwealth of a great part of her credit and capital; on the other hand, if speculation is carried on to such a degree as to divert the funds of productive labor into the pursuit of visionary objects, or destroy them, the community clearly loses the use of so much of its capital, which is a considerable evil. I agree with gentlemen that the spirit of speculation has now risen to an alarming height; but the only way to prevent its future effect is to give the public funds a degree of stability as soon as possible.

We should pay an ill compliment to the understanding and honor of every true American were we to adduce many arguments to show the baseness or bad policy of violating our national faith or omitting to pursue the measures necessary to preserve it. A bankrupt, faithless Republic would be a novelty in the political world, and appear, among reputable nations, like a common prostitute among chaste and respectable matrons.

I conceive, Mr. Chairman, after duly considering the momentous circumstances I have brought to your attention, there is no man possessed of the principles of common honesty, within the sound of my voice, that will hesitate to conclude with me that we are bound by every principle of honor, justice, and policy to fund the debt of the United States, which has been one great means, under heaven, of securing to us our independence. I presume, sir, on this point we shall have no dispute. All that remains, then, for our consideration is the manner and means of accomplishing it.

We must view it as a debt of honor, from the nature of the contract, from the objects effected, and the happy state we are now in. The principles of interest call loudly upon us to complete the business so happily begun. The Secretary, in the report before us, observes, with great justice, that exigencies are to be expected to occur in the affairs of nations, in which there will be a necessity for borrowing, and particularly in a country like this, possessed of little moneyed capital. How much, then, is it our interest to secure our public credit on a stable and sure foundation? Besides this, it is our interest in another point of view; by this means we shall introduce a medium into circulation which will give a spring to the agriculture, commerce, and manufactures of the Union.

Our policy also guides us into the adoption of some such measure as is proposed in the report. A punctual performance of our public engagements will invite moneyed men, in the days of distress, to lend us every pecuniary aid. Our debt undoubtedly is large; but not so large as might have been reasonably

expected, considering the magnitude of the object we have successfully accomplished; but it can by no means be considered so large as to prevent us from an attempt to discharge it.

Let us then adopt the motion now on your table, or something like it; not, perhaps, immediately, because it might be supposed to preclude that discussion which the subject requires, as the most important that has or can come before us.

Assumption of State Debts[1]

House of Representatives, February 15–May 28, 1790

The assumption of the State debts, however, was a subject which gave rise to more serious debate, and created divisions both in and out of Congress, the effects of which were long felt in the administration of the general Government.

The debts of the several States were very unequal. Those of Massachusetts and South Carolina amounted to more than ten millions and a half, while the debts of all the other States were only estimated at between fourteen and fifteen millions. The first proposition on this subject in the House of Representatives was to assume the whole of these debts. This was at first adopted, in committee of the whole, by a small majority. Afterward, when the members from North Carolina took their seats, the subject was recommitted, and negatived by a majority of two—31 to 29. Propositions were afterward made to assume specific sums from each, but were negatived. These various propositions occasioned long and violent debates among the members from different States, and led to an inquiry into the origin of the State debts and to a comparative view of the different exertions and expenses of the States themselves in their struggle for independence. The assumption of specific sums from each was finally carried in the Senate, by a majority of two, and was concurred in by the House by a majority of six.

Those in favor of the assumption contended that it was a measure of *justice* as well as *policy*. That it was

[1] Abridged from Timothy Pitkin's "Political History of the United States."

just in respect to the creditors themselves, as well as to the States. These debts, it was said, were incurred for services rendered, supplies furnished, or loans made, not for the particular benefit of the individual States, but for the benefit of the Union, for the common cause in which all were embarked. Justice, therefore, required that the persons to whom they were due should be placed on the same footing with those who had a direct claim on the United States; and that both should be paid out of a common fund. That, although some States might be able to provide ample funds for the payment of their debts, yet others, destitute of like resources, burdened with a larger debt, occasioned, perhaps, by greater exertions in the common cause, might be unable to make adequate provision. One class of creditors, therefore, who happened to live in a large State, abounding in wealth and resources, and, perhaps, with a comparatively small debt, might be paid in full, while another, equally meritorious, living in a small State, having a larger debt and destitute of resources, might receive little or nothing. It would be just in respect to the States, as in this way each would bear its proportion of the expenses incurred for one common object. It was to be considered also, it was said, that no inconsiderable proportion of the State debts were incurred at a time when the United States had little or no credit. It was also strongly contended that, as the Constitution had transferred to Congress the principal funds on which the States had relied for payment of their debts, it was just that the debts should follow the funds.

The policy of the measure, its advocates said, was not less apparent than its justice.

A provision for these debts by the States themselves would necessarily create an interference between the general and State Governments in their revenue systems highly injurious, if not ruinous, to both. The United States having the *exclusive* power to lay imposts, most of the States must have recourse to excises and direct taxes. These, it was said, must be very unequal in different States in consequence of the inequality of their debts. Great burdens, therefore, would be thrown on

those States whose exertions had been greatest in the common cause, and jealousies and dissatisfaction must be the necessary consequence. In those States where recourse was had to direct taxes a greater burden would be thrown on the landed interest, and this would produce emigration to other States less oppressed with taxes of this description. Where resort was had to excises, which would be laid on foreign as well as domestic articles, greater inducements would be held out to smuggling, materially affecting the revenue of the United States. In addition to this, commercial advantages might be greater in some States than in others, and a transfer of capital from one State to another be thereby encouraged. The collection of the same amount of taxes, it was said, might be made with less expense under the direction of one government than under several; and, by having the general management of the revenues of the country in their hands, the National Legislature would be enabled more fully to promote domestic industry and improvement throughout every part of the union.

In the course of the debates on this interesting question it was stated by the advocates of the assumption that a difference in the amount of State debts did not arise solely from a difference in exertions during the war, but that the debts of some States were lessened by the avails of confiscated property and from territorial acquisitions. And it was asked: whether those by whose offences a confiscation of property had been incurred had not offended against United America and not merely against that State where the offence was committed, and which alone received the benefit of the confiscation? And whether the acquisition of territory was not owing to the exertions of the national force, under national direction?

The opponents of the measure were not less decided in opinion that it was both *unjust* and *impolitic*, whether it went to a general or a partial assumption.

They denied that the State debts should be considered, in any way, the debts of the Union, or that the United States were under obligations to discharge any part of them, except the balance which, on a final settlement,

should be found due to particular States. If they were the debts of the United States, in the hands of individuals, it was asked whether they were not equally so when in the State treasuries; whether the United States were not equally bound to provide for them in both situations. Before the adoption of the Constitution, it was said, they had never been so considered. They contended, also, that, not being the debts of the Union, Congress were not warranted by the Constitution in assuming the payment of them.

As to the policy of the measure, its opponents said, among other things, if a public debt was a public evil the assumption would increase and perpetuate the evil; that the United States and the individual States together could discharge a debt of eighty millions much sooner than the United States alone; that, after the general Government had resorted to all the means of revenue in its power, the individual States would have other financial resources still remaining. It was also particularly urged that each State could raise money in a way most convenient for itself and to which it had been accustomed. Some of the States, they said, were hostile to excises, others to direct taxes, and no general system of internal taxation could be established which was adapted to the circumstances of each State, or which would give general satisfaction.

Some of the States had, by their exertions, paid a greater proportion of their debts than others, and it would be unjust, they alleged, to compel them to contribute to the payment of the debts of delinquent States. In answer to the suggestion that, unless the measure should be carried, great dissatisfaction would exist in some of the States, it was said that much greater dissatisfaction would follow from its adoption. A majority of the people of the United States, it was believed, was opposed to it, and the discordant interests as well as jealousies among the States, now too much felt, would be thereby greatly increased.

The opposers of the assumption also stated that the adoption of the measure would render State creditors

more dependent on the general Government; that it would greatly lessen the influence and importance of the States, and tend to consolidate the Union. The debts of Massachusetts, South Carolina, and Connecticut, as reported by the Secretary, amounted to about one-half of those of all the others. These States, therefore, felt a deep interest in the question. The legislature of South Carolina, in January, 1790, instructed their Representative in Congress to solicit the National Legislature to assume their debt, "it having been incurred," as they said, "in consequence of the war between the United States and Great Britain."

In the course of the debate Theodore Sedgwick, of Massachusetts, declared that Shay's Rebellion, which had then just taken place in Massachusetts, was occasioned by the burden of taxes necessarily imposed on the people of that State to pay a debt incurred merely for national purposes. Fisher Ames, of the same State, in his usual strain of eloquence asked, "but were the State debts contracted for the war? It appears by the books in the public offices that they were. Will anyone say that the whole expense of defending our common liberty ought not to be a common charge? Part of this charge was contracted by Massachusetts before Congress assumed the exercise of its powers. The first ammunition that repulsed the enemy at Lexington and made such havoc at Bunker Hill was purchased by the State and appears in the form of the State debt." The States of Virginia, North Carolina, and Georgia were most strenuous in their opposition.

This interesting question was finally decided in the Senate, 14 to 12. In this body the States of Massachusetts, Connecticut, New York, New Jersey, and South Carolina were unanimously in the affirmative; Rhode Island, Virginia, North Carolina, and Georgia, with equal unanimity in the negative, and Pennsylvania, Delaware, and Maryland divided.

In February, 1791, an act was passed for the establishment of a national bank [see chapter II.].

On November 19, 1792, Thomas Fitzsimons [Pa.] in-

troduced a resolution in the House, directing the Secretary of the Treasury to report a plan for the redemption of the public debt. This resolution was opposed by John F. Mercer [Md.] and Mr. Madison, and supported by William Vans Murray [Md.] and Mr. Ames.

On Ministerial Functions

House of Representatives, November 19-21, 1792

Mr. Mercer.—No question, he conceived, was of more importance than that involved in the motion before the House. He conceived it improper to commit to any man what he was bound himself to do. He conceived the power of the House to originate plans of finance, to lay new burdens on the people intrusted to them by their constituents, as incommunicable.

Mr. Madison drew a distinction between the deliberative functions of the House and the ministerial functions of the Executive powers. The deliberative functions, he conceived, should be first exercised before the ministerial began to act. It should be decided by the House, in the first instance, he conceived, whether the debt should be reduced by imposing new taxes, or by varying the burdens, or by new loans. The fundamental principles of any measure, he was of opinion, should be decided in the House, perhaps even before a reference to a select committee. He did not pretend to determine whether the motion now before the House might not involve a reference of a ministerial nature merely. But he well knew, he said, that the act establishing the Treasury Department had been so construed as to give it a greater latitude than was contemplated when the law passed, much against the opinion of a great portion of the people. In the infancy of our Government that latitude perhaps might be necessary; but he saw no necessity for it at present.

Mr. Murray conceived that the distinction drawn by the gentleman from Virginia [Mr. Madison] between deliberative and ministerial functions was qualified by the nature of things. It is qualified, he said, in this instance, by the law which establishes the Treasury Department. That law makes it the duty of the Secretary to digest and report plans to ameliorate our finances, without any call from the House. True, the business of the House is to deliberate; but, by reference, neither is the power of the House to deliberate infringed, nor does it give the Secretary a right legislatively to deliberate, but to deliberate

ministerially; and it was important, he conceived, in a government framed like ours, that such officers should have the power to deliberate in that manner. The result of their deliberations was not obligatory on the House, no further than it was warranted by wisdom.

Mr. Mercer.—The House may require from the heads of departments the exposition of the documents and information that arise in the administration of government. But I want no *opinions* from them. If these are to influence us, they are wrong; if not to influence, they are useless. This mode of procedure, of *originating* laws with the Secretary, destroys the responsibility; it throws it on a man not elected by the people, and over whom they have no control.

Mr. Ames.—What is the clause of the Constitution opposed to the receiving a plan of a sinking fund from the Secretary? Bills for raising revenue shall originate in this House. I verily believe the members of this House, and the citizens at large, would be very much surprised to hear this clause of the Constitution formally and gravely stated as repugnant to the reference to the Treasury Department for a plan, if they and we had not been long used to hear it.

To determine the force of this amazing constitutional objection, it will be sufficient to define terms.

What is a bill? It is a term of technical import, and surely it cannot need a definition; it is an act of an inchoate state, having the form but not the authority of the law.

What is originating a bill? Our rules decide it. Every bill shall be introduced by a motion for leave, or by a committee.

The opposers of this proposition surely will not adopt a construction of the Constitution. They have often told us we are to be guided by a strict adherence to the letter; that there is no end to the danger of constructions.

The letter is not repugnant; and will it be seriously affirmed that, according to the spirit and natural meaning of the Constitution, the report of the Secretary will be a revenue bill, or any other bill, and that this proposition is originating such a bill? If it be, where shall we stop? If the idea of such a measure, which first passes through the mind, be confounded with the measure subsequent to it, what confusion will ensue? The President, by suggesting the proposition, may as well be pretended to originate a revenue bill; even a newspaper plan would be a breach of the exclusive privilege of this House, and the liberty of the press, so justly dear to us, would be found unconstitutional. Yet if, without any order of the House, the draft of an

act were printed, and a copy laid before every member in his seat, no person will venture to say that it is a bill—that it is originated, or can be brought under cognizance of the House, unless by a motion.

I rely upon it that neither the letter of the Constitution, nor any meaning that it can be tortured into, will support the objection which has so often been urged with solemn emphasis and persevering zeal.

We may repeat it, what color is there for saying that the Secretary *legislates?* Neither my memory nor my understanding can discern any. I am well aware that no topic is better calculated to make popular impressions; but I cannot persuade myself that they will charge us with neglect or violation of duty, for putting ourselves into a situation to discharge it in the best and most circumspect manner.

MR. MADISON.—I insisted that a reference to the Secretary of the Treasury on subjects of loans, taxes, and provisions for loans, etc., was in fact a delegation of the authority of the legislature, although it would admit of much sophistical argument to the contrary.

The funding system generally, the assumption of the State debts, the national bank, and duties on domestic spirits had already been made objects of the most severe attack, and the Secretary of the Treasury, who was considered as the author of them, had become very unpopular in some parts of the Union.

The difference between the heads of the departments of State and Treasury on some important questions which had been agitated in the Cabinet was well known and felt in Congress and elsewhere. Thomas Jefferson was considered by the Federalists as hostile to the Constitution, and was accused of being opposed to the Administration of which he was a member, and of taking measures to reduce the powers of the general Government within too narrow limits. By the anti-Federalists, on the other hand, Alexander Hamilton was viewed not only as the author of the funding system, the national bank, and other measures deemed either unconstitutional or highly injurious to the public interest, but was also charged with hostility to republican principles and State rights.

GILES'S RESOLUTION AGAINST HAMILTON

During this session an inquiry was instituted in the House of Representatives into the official conduct of the Secretary of the Treasury. This was commenced by William B. Giles [Va.]—who was instigated, it is thought, by Madison—by calling for information from the President and Secretary relative to loans negotiated in pursuance of the acts of 1790, and the management and application of these loans, as well as the application and management of the revenue generally. The resolutions introduced for the purpose of obtaining this information were adopted by the House. The object of the mover was disclosed in his remarks in support of them at the end of which he said: "Candor, however, induces me to acknowledge that impressions resulting from my inquiries into this subject have been made upon my mind by no means favorable to the arrangements made by the gentleman at the head of the Treasury Department."

The report of the Secretary, in answer to this call for information, evinced that his pride was not a little wounded by the remarks of Mr. Giles. "The resolutions," he said, "to which I am to answer were not moved without a pretty copious display of the reasons on which they were founded. These reasons are of a nature to excite attention, to beget alarm, to inspire doubts.

"Deductions of a very extraordinary complexion may, without forcing the sense, be drawn from them. I feel it incumbent upon me to meet the suggestions which have been thrown out with decision and explicitness."

Having endeavored to show the fallacy of the statements made by the mover of the resolutions, in conclusion he observed: "Thus have I not only furnished a just and affirmative view of the real situation of the public accounts, but have likewise shown, I trust, in a conspicuous manner, fallacies enough in the statements from which the inference of an unaccounted for balance is drawn to evince that it is one tissue of error."

Soon after this report was made Mr. Giles submitted

to the House several resolutions containing charges against the Secretary. The subject of them was that he had failed to give Congress information, in due time, of moneys drawn from Europe; that he had violated the law of the 4th of August, 1790, by an unauthorized application of money borrowed under it; that he had drawn part of the money into the United States without any instructions from the President; that he had exceeded his authority in making loans under the acts; that, without instructions from the President, he had drawn more of the money borrowed in Holland than he was authorized by those acts, and that he had been guilty of indecorum to the House in undertaking to judge its motives in calling for information. The charges contained in these resolutions being considered either frivolous or unsupported, the resolutions themselves were negatived by large majorities. In the spring of 1794 Giles again brought forward his charges against Hamilton, moving for an investigation into his official conduct. An investigating committee was appointed, of which Giles was made chairman. It completely exonerated Hamilton.

HAMILTON'S REPORT ON PUBLIC CREDIT

On January 15, 1795, the Secretary of the Treasury submitted a plan to Congress for the redemption of the public debt.

The subject of making provision for the redemption of the public debt in accordance with the recommendation of the President in his message occasioned much debate as well as great division in the House of Representatives.

It was a favorite measure with the Secretary of the Treasury as well as with the President. The former, on the 15th of January, 1795, submitted to Congress a plan for this purpose, drawn with his usual ability.

The Secretary proposed an increase of the sinking fund by adding to it duties on imports and tonnage, on spirits distilled within the United States, and on stills, the avails of the sales of the public lands, the dividends

on bank stock belonging to the United States, and the interest of the money which should be redeemed, together with all moneys which should be received from debts due to the United States antecedent to the Constitution, and all surpluses of the amount of revenues which should remain at the end of every calendar year beyond the amount of appropriations charged upon them, and which, during the session of Congress commencing next thereafter, should not be especially appropriated. This fund was to be applied to the payment of the six per cent. and deferred stock, according to the right reserved to the United States, that is, to the payment of eight per cent. on account of the principal and interest; and was to continue until the whole should be paid and redeemed; and, after such redemption, the same fund was to continue appropriated until the residue of the debt of the United States, foreign and domestic, funded and unfunded, should be redeemed and discharged. The faith of the United States was to be firmly pledged to the creditors for the inviolable application of this fund to the payment of the debts until the same should be fully completed; and for this purpose the fund was to be vested in the commissioners of the sinking fund as *"property in trust."*

The importance of this measure for the purpose of preventing the evils arising from a great accumulation of debt was pressed upon Congress by the Secretary in a manner calculated to produce conviction.

"There is no sentiment which can better deserve the serious attention of the legislature of a country than the one expressed in the speech of the President, which indicates the danger to every government from the progressive accumulation of debt. A tendency to it is perhaps *the natural disease* of all governments; and it is not easy to conceive anything more likely than this to lead to great and convulsive revolutions of empires. On the one hand, the exigencies of a nation creating new causes of expenditure, as well from its own, as from the ambition, rapacity, injustice, intemperance, and folly of other nations, proceed in increasing and rapid succession. On the other, there is a general propensity in those who administer the affairs of

government, founded in the constitution of man, to shift off the burden from the present to a future day; a propensity which may be expected to be strong in proportion as the form of the state is popular."

The difficulties arising from this propensity in a republican government, as well as the inconsistency of those who, to obtain popularity, will loudly declaim against the accumulation of debt, and in favor of its reduction as *abstract questions;* and yet, from the same motives, will as loudly declaim against the very means which can alone prevent the one and effect the other, were stated by the Secretary with great perspicuity.

"To extinguish a debt which exists, and to avoid contracting more, are ideas almost always favored by public feeling and opinion, but to pay taxes for the one or the other purpose, which are the only means to avoid the evil, is always more or less unpopular. These contradictions are in human nature. And the lot of a country would be enviable indeed in which there were not always men ready to turn them to the account of their own popularity, or to some other sinister account. Hence it is no uncommon spectacle to see the same man clamoring for occasions of expense, when they happen to be in unison with the present humor of the community, well or ill directed; declaiming against a public debt, and for the reduction of it; yet vehement against every plan of taxation which is proposed to discharge old debts, or to avoid new, by defraying the expenses of exigencies as they emerge."

Act to Redeem the Public Debt

An act was finally passed on this subject during this session, substantially in accordance with the plan suggested by Secretary Hamilton, though Congress were divided on the question of pledging the internal duties. The funds appropriated for the reimbursement and redemption of the debt were by law *vested* in the commissioners of the sinking fund, *in trust* for that object, and the faith of the United States was pledged that the funds should inviolably so remain appropriated and vested until the whole debt should be paid.

These funds were to be applied to the payment of eight per cent. per annum on account of the principal and interest of the six per cent. deferred stock, and the surplus to the payment of the other debts, foreign and domestic. In pursuance of this compact with the public creditors the six per cent. stock was fully paid in the year 1818 and the deferred stock in 1824.

The total amount of the unredeemed debt of the United States (including the assumed debt) in 1795 was $76,096,468.17.

The chief supporters of Hamilton's plan were Fisher Ames [Mass.] and Theodore Sedgwick [Mass.]; the chief opponent was James Madison [Va.], who particularly objected to pledging the internal duties.

Redemption of the Public Debt

House of Representatives, December 23, 1794-March 2, 1795

Mr. Ames.—I am one of those who believe a nation ought to cherish public credit, for the same reason that it ought to have strength; for, in critical situations, credit is strength, and the want of it may happen to be not only weakness, but subjugation and ruin. And it is my belief that, although it may answer for a time to pay the interest, and neglect the principal, yet, at last, and in the course of affairs, it will appear that a nation which neglects to pay its debts will have no credit. That would be the case with an individual. Besides, if we neglect the interval of peace and prosperity to pay off, lessen, and, if possible, to extinguish the debt, we cannot expect, for any length of time, to avoid the occasion of adding to it. We have had eleven years of peace, one-half of which term, for want of a government, our debt was augmenting at least twelve or fifteen millions of dollars. It has been funded four years nearly, and less than three millions are yet paid off. Are we to hope for peace always? A blessing so great has been hitherto denied, perhaps in benevolence as well as wisdom, to the prayers of devotion and the tears of philanthropy, and, from all we know of the nature and history of man, we have reason to believe, if not to desire, that war will sometimes fall to the lot of a nation. Peace is the time to prepare for it, by extinguishing the burdens of the last war, by exhibiting, as a basis of present exultation, and, as a ground of future confidence and credit, the novel

spectacle of a great nation which has freed itself from debt.

It is true the opposers of the resolution are not bound to adopt the plan nor to continue these very duties, but they are bound by more than common sanctions to go even beyond the description of persons whom they have accused, in some plan, and to provide other taxes. No puny operation, no halfway measures will do. They stand pledged for some strong system, some efficient funds to bring into activity at least all the present revenue faculties of the country.

That bugbear, the irredeemable quality, so artificially conjured up to terrify the country, opposes no obstacle to the redemption of all this great amount—a mass of debt far exceeding the most extravagant conjectures of the product of the revenue for many years to come. And here let me observe, the argument almost solely opposed to the resolution is this: We have revenue enough, without the temporary taxes. Let it be allowed that we have, for argument's sake, what follows? That we have too much revenue with the temporary taxes. Will our money rust in the treasury chest for want of debt to employ it upon? Shall we not make greater progress with all the present taxes than with only a part of them? Is it a time to refuse the aid of these temporary taxes when we are finding out a new way for employing the product? Shall we, with any color of wisdom, go on at the same instant to extend our expenses and to diminish the income of the taxes? The argument that these taxes are not wanted is utterly hostile to the professions we make of paying off the public burdens as fast as possible. If the statement to support this reasoning is true, it is not so much an objection as an encouragement to our progress in the plan, as it proves, by the documents adduced on one side, that the other has under-reckoned the calculations of success.

It is objected against the resolution that fluctuations of the revenue laws are undesirable. It is true that shifting, unsteady laws are a public evil, and they are always felt as such by the dealers in the taxed articles. The first effect of a tax is a little to stagnate and derange the business of the dealers, but soon the current finds its way again, and the tax becomes a part of the price, a part of the settled order of things, which a hasty repeal would derange anew. This argument, it is said, requires that all resource laws should be permanent. Where there is a permanent occasion for taxes, and the proper objects of taxation are known to be selected, the fluctuation of the revenue laws would be an evil, and therefore it would be proper to make them permanent. But when the call for taxes is tem-

porary, or the mode of collection untried, the limitation of the bill to a short period may be no less proper.

Continuation of these taxes, it is said, will destroy manufacture of the commodities. If we regard the experience of other nations, we shall not find cause to dread the destruction of manufactures in consequence of taxes. Is England exempted from taxes, and yet where do manufactures flourish more? The truth is, in an increasing, thriving society, taxes are absorbed, and distributed over the whole mass of the community. No problem has been oftener debated than where the taxes ultimately fall, and yet experience has invariably refuted the gloomy anticipations of interested theory. The language that infant manufactures are not to be crushed is more declamatory than correct. They are not to be crushed; nor will the manufactures of snuff and loaf sugar fall, if the operation of the tax should be like that of other taxes, or of similar taxes in other countries.

A great object is before us, and if, after all, its attainment shall appear to be obstructed by much seeming and some real difficulty and embarrassment, still we owe it to our country, as well as to our own engagements, to proceed. Let us endeavor to overcome the prejudices of the over-apprehensive, and to conciliate the interests of the manufacturers with those of the public. In our other taxes we suppose it is done, and why should it be despaired of in this case? Greater difficulties than any that a calm and unprejudiced mind will discern in the plan before us ought to be expected, and readily acquiesced in, rather than to abandon the great object of freeing the nation from debt. It is worth some exertion and sacrifice. If we should effect it, any hopes of the destinies of our Government would brighten. There is nothing in the magnitude of the debt to discourage us, and still less in the prosperous circumstances and good dispositions of our citizens. It depends on ourselves whether we realize their expectations by acting in conformity with our own professions.

Mr. Madison.—Permanent taxes such as on property should be applied to permanent purposes, such as reducing the public debt, and temporary taxes, such as on manufactures, to temporary objects, such as the military establishment. If excises were to be preferred in reducing the public debt, it was in vain to hope they could be limited to a few trifling subjects, such as manufactured snuff and sugar. They must be extended to all the manufactures. The whole country would be covered in fact with excises. Every manufactory must be made to contribute, and even then it would not be possible to draw forth as much

revenue as would be paid in the other mode. He was aware that objections and prejudices existed against a tax laid on property. He regretted that such a difference of opinion prevailed, not only in Congress, but in different parts of the Union, on this subject. He was persuaded, nevertheless, that a tax on property was not only a more economical, and in every respect a more eligible resource, than a general system of excises, yielding the same amount of revenue, but that, on the whole, a majority of the people of America would be found less averse to it. He could speak with confidence on this point, as far as his own communications extended. Much, he thought, of the dislike to a tax on property might be removed by taking different objects in different States, as might be most convenient or acceptable to them.

This was perfectly consistent with the Constitution, which did not require uniformity in this instance. In some States a tax on land, in others a tax on other articles of property, or partly on land and partly on other articles, might be most satisfactory; and the tax laws of the States would always assist in digesting the regulations for the purpose. He supposed that if this course should be taken a million or even two millions of dollars or more could be raised in a year, and that the people would be willing to make such an exertion, rather than be saddled with a permanent debt; whereas he did not believe that an excise system, if extended to every article manufactured in the country, could be made to produce anything like such a sum.

All that was aimed at at this time with respect to the debt would be attained by allotting the temporary part of the revenue to temporary purposes.

Mr. Sedgwick.—Now is the time to reduce our public debt. When we compare our own debt with the more enormous ones of some other countries, we are too apt to console ourselves with its comparative smallness. Yet I would call your attention to the fact that, in the year of 1697, when there were more anxious forebodings of ruin from that source than perhaps at any period since, the debt of Great Britain was comparatively less than ours is now. Had the Government then, in earnest, attempted a reduction, it might have been effectually done, with less annual revenue than is now required, in time of peace, for their ordinary expenditure.

Whenever a provision for the public credit shall be beyond the public faculties, confusion and ruin must be the consequence. That cause has destroyed the strongest government in Europe. This we all hope will prove a blessing. The same

event here would blast the best hopes of the lovers of mankind.

Among all the causes which have operated to prevent the reduction of public debts, none has been more influential than that of diverting revenues appropriated to that purpose to other objects. If our appropriations of this kind shall be violated, we may despair of our country being ever discharged of its load of debts. To secure us against this evil, provision must be made, concomitantly with a sinking fund, for the other necessary expenses of government, and also an allowance made for those unforeseen and contingent demands which cannot be computed, but which will always occur. Otherwise we may be assured, unless America is to be exempted from the evils which have afflicted other countries, that our intention, however patriotic, will be defeated by a diversion of our permanent appropriations to temporary purposes. Our legislators may feel interested in the continuance of the debt; they may want energy of character; they may be indolent; they may meanly dread a loss of popularity, from imposing necessary burdens, or all these may combine to form a precedent, which, being once established, we may bid adieu to hope.

I will take the liberty of stating some of the reasons which have struck my mind with the greatest force why we should honestly unite in the attempt to reduce the public debt.

1. A debt, as an embarrassment to the faculties of a country, is an evil. To this there are, at some times, and in some countries, causes which counteract this evil, perhaps, in some instances, overbalance it; but I am confident those causes do not here operate to an extent which should induce us, for a moment, to suspend our efforts to reduce the debt.

2. A very cogent reason, and one which will influence every true patriot, is that our debt has been made a principal and ostensibly almost the only source of party. No man, then, who wishes a union of councils, a fraternity of sentiments, will seek for plausible reasons to defeat this important measure.

3. The experience of other countries has demonstrated a general disinclination in governments to liberate the pledged funds of the community. Every extraordinary demand accumulates, of course, the debt, and in the end must prove ruinous. It will be vain for us to profess ourselves the friends of republican government, and the admirers of our political institutions, if we are not, by the examples of others, warned against this evil.

4. A great portion of our debt is owned by foreigners, and from the value of capital here, compared with other countries,

we have reason to fear the evil will increase. It must be unnecessary to dwell on the impoverishing effects of a continued drain of specie from the community.

5. The proposed measure will, in my opinion, beyond any expedient which could be devised, tend to fix the market price of our six per cent. stock at par. This would make that species of debt less a subject, and more an instrument of commerce; and instead of acquiring it would supply the place of capital; and it would also enable the Government to employ beneficially our surplus of revenues in purchases in the market.

7. This measure will make us financially independent. Whatever our exigencies may be, we may be compelled to rely on our ordinary resources, without much aid from borrowing; for, from the smallness and value of capital here, we ought not to rely on domestic loans; and the uncertain issue of the troubles in Europe would prove it madness to depend on foreign aid.

CHAPTER II

Constitutionality of a National Bank

[THE FIRST UNITED STATES BANK CHARTER]

Chartering of the First National Bank—Debate: in Favor, Fisher Ames [Mass.]; Opposed, James Madison [Va.]—Expiration of the Bank's Charter—Debate in the Senate on Its Renewal: in Favor, William H. Crawford [Ga.] and John Pope [Ky.]; Opposed, William B. Giles [Va.] and Henry Clay [Ky.]; Charter Is Not Renewed.

UPON the recommendation of Alexander Hamilton, Secretary of the Treasury, Congress, on February 25, 1791, chartered a national bank to aid in the management of the national finances. The preamble of the act declared that:

"The bank will be conducive to the successful conducting of the national finances, give facility to the obtaining of loans for the use of the Government in sudden emergencies, and will also be productive of considerable advantage to trade and industry in general."

The capital stock of the bank was ten millions of dollars, two millions to be subscribed for the benefit of the United States, and the residue by individuals. One-fourth of the sums subscribed by individuals was to be paid in gold and silver, and three-fourths in the public debt. By the act of incorporation it was to be a bank of discount as well as deposit, and its bills, which were payable in gold and silver on demand, were made receivable in all payments to the United States. The bank was located at Philadelphia, with power in the directors to establish offices of discount and deposit only, wherever they should think fit, within the United States.

The duration of the charter was limited to the 4th of March, 1811, and the faith of the United States was

pledged that, during that period, no other bank should be established under their authority. One of the fundamental articles of the incorporation was that no loan should be made to the United States for more than one hundred thousand dollars, or to any particular State for more than fifty thousand, or to any foreign prince or State, unless previously authorized by a law of the United States. The books were opened for subscriptions in July, 1791, and a much larger sum subscribed than was allowed by the charter; and the bank went into successful operation. This measure was not adopted without warm and violent debates.

On the Establishment of a National Bank

House of Representatives, February 2-7, 1791

It was said in opposition, in the first place, that Congress had no power under the Constitution to create this or any other corporation; in the second place, that so large a moneyed institution would, in its effects, be highly injurious to the community.

Its advocates, on the other hand, contended generally that the establishment of an institution of this kind, though not within the express words of the Constitution, was among the incidental powers contemplated by that part of the instrument which enabled Congress to make all laws *necessary* and *proper* for carrying into execution the powers expressly granted.

An institution of this kind, they said, was necessary and proper for the attainment of the important ends contemplated in the Constitution; and that similar establishments, in all well-regulated communities, had been found necessary in the management of their finances and for the attainment of the great ends of civil government. In answer its opponents said that the Constitution was not only silent on the subject, but that no such power was intended to be granted by the framers of that instrument; that, in the general convention, a proposition to give Congress power to create corporations was made and

negatived. It was a power, they said, too important to be assumed by implication; nor could they agree to so broad a construction as was given by the advocates of the measure to the words "*necessary* and *proper*," as used in the Constitution. No means they considered to be *necessary* for the purpose of carrying into execution the *specified powers*, except those without which the powers granted would be *nugatory*, or the ends contemplated *absolutely unattainable*.

The leaders in the debate were James Madison [Va.] and Fisher Ames [Mass.], respectively opposing and advocating the bank.

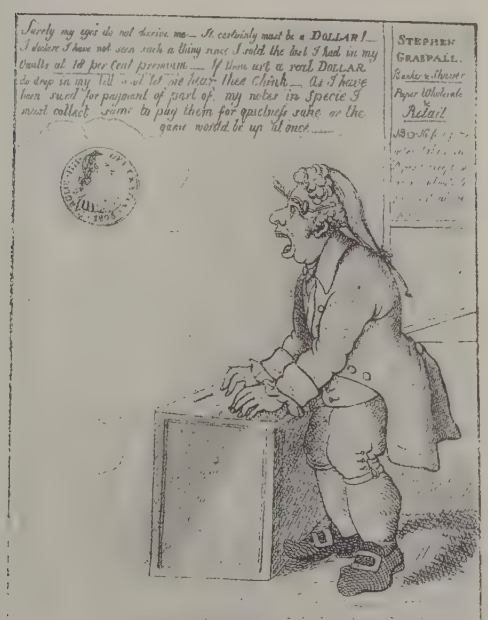
The bill was passed by a vote of 39 to 20. President Washington before approving the bill requested the opinions of the members of his Cabinet, in writing, as to its constitutionality. The Secretary of State [Thomas Jefferson] and Attorney-General [Edmund Randolph] were of the opinion that the bill was unconstitutional, while the Secretaries of the Treasury [Alexander Hamilton] and of War [Henry Knox] were of a different opinion and concurred with the majority in Congress. After mature deliberation the President put his signature to the bill.

Expiration of the National Bank Charter

The charter of the Bank of the United States expiring by law on March 4, 1811, on December 16, 1810, William Findley [Pa.] presented in the House of Representatives a petition from the stockholders of the bank, signed by David Lenox, the president, praying the renewal of its charter. The petition was referred to a select committee, which, on January 4, 1811, reported a bill to renew the act of incorporation. The question came before the House on January 16, and was debated exhaustively until January 24, when, by a vote of 65 to 64, the bill was defeated.

In this debate the constitutional arguments which were advanced developed those which had been presented

when the bank was chartered in 1790. The chief advocate of the bank was a dead man, the great Secretary of the Treasury, Alexander Hamilton, copies of whose pam-



Surely my eyes do not deceive me— It certainly must be a DOLLAR!—
I declare I have not seen such a thing since I sold the last I had in my
Quilts at 10 per Cent premium.— If there was a real DOLLAR
to drop in my Till — oh! let me hear! then think.— As I have
been sued for payment of part of my notes in Specie I
must collect some to pay them for quietness sake or the
game would be up at once.

THE GHOST OF A DOLLAR, OR THE BANKER'S SURPRISE

From the collection of the New York Public Library

phlets, "On the Constitutionality of a National Bank," were distributed among the Representatives by agents of the bank.

The petition for the renewal of the charter was presented in the Senate on December 18, 1810, and referred to a select committee, which in due time presented a bill to renew the act of incorporation. The Senate debated the bill from February 11 to February 20, 1811, when it was defeated by the casting vote of the presiding officer, George Clinton [N. Y.], Vice-President of the United States.

Senator Benton remarks in his "Debates of Congress":

> Thus terminated the existence of the first bank of the United States; but there was a fatal defect in terminating it in not providing a general currency in place of its notes, by reviving the gold currency, and in not creating an independent treasury for keeping the public moneys. Those who terminated the existence of the second bank [in 1834] avoided these errors, and thereby avoided all the evils and embarrassments which followed the termination of the first one.

In the debate in the Senate the chief advocates of the bank were William H. Crawford, of Georgia, and John Pope, of Kentucky; the chief opponents were William B. Giles, of Virginia, and Henry Clay, of Kentucky.

Senator Clay, while joining with the strict construction Republicans in this measure, showed the beginning of his opposition to that party by twitting Senator Giles, its protagonist, upon the contradictions into which he was led by an extreme application of his theory, yet, by his own opposition to the bank, Senator Clay laid a far more substantial basis for the charge of inconsistency against himself, since in 1816 he supported the application for a new charter.[1]

Senator Pope showed his animosity toward his fellow Kentuckian, Senator Clay, by a rather demagogic "insinuendo" (to employ a useful term coined in later years by a Representative from North Carolina) against his colleague, who had been elected to fill a vacancy in the Senate by an opposing faction in the State.

[1] See page 54 ss.

Constitutionality of a National Bank

Senate, February 11-20, 1811

Senator Crawford.—The object of the Constitution was twofold: first, the delegation of certain general powers, of a national nature, to the Government of the United States; and, second, the limitation or restriction of the State sovereignties. Upon the most thorough examination of this instrument I am induced to believe that many of the various constructions given to it are the result of a belief that it is absolutely perfect. It has become so extremely fashionable to eulogize this Constitution, whether the object of the eulogist is the extension or contraction of the powers of the Government, that whenever its eulogium is pronounced I feel an involuntary apprehension of mischief. Upon the faith of this imputed perfection it has been declared to be inconsistent with the entire spirit and character of this instrument to suppose that after it has given a general power it should afterward delegate a specific power fairly comprehended within the general power. A rational analysis of the Constitution will refute in the most demonstrative manner this idea of its perfection.

In the present case, if there be any who, under the conviction that the Constitution is perfect, are disposed to give it a construction that will render it wholly imbecile, the public welfare requires that the veil should be rent, and that its imperfection should be disclosed to public view. By this disclosure it will cease to be the object of adoration, but it will nevertheless be entitled to our warmest attachment.

The eighth section of the first article of the Constitution contains five grants of general power. Under the power to coin money it is conceived that Congress would have a right to provide for the punishment of counterfeiting the money after it was coined, and that this power is fairly incidental to, and comprehended in, the general power. The power to raise armies and provide and maintain a navy comprehends, beyond the possibility of doubt, the right to make rules for the government and regulation of the land and naval forces; and yet in these three cases the Constitution, after making the grant of general power, delegates specifically the powers which are fairly comprehended within the general power. Under the power to regulate commerce, Congress has exercised the power of erecting light-houses, as incident to that power, and fairly comprehended within it. Under the power to establish post-offices and post

roads, Congress has provided for the punishment of offences against the Post-Office Department. If the Congress can exercise an incidental power not granted in one case, it can in all cases of a similar kind. But it is said that the enumeration of certain powers excludes all other powers not enumerated. This is true so far as original substantive grants of power are concerned, but it is not true when applied to express grants of power, which are strictly incidental to some original and substantive grant of power. If all incidental powers are excluded except the few which are enumerated this would exclude from all claim to constitutionality nearly one-half of your laws, and, what is still more to be deprecated, would render your Constitution equally imbecile with the old Articles of Confederation.

When we come to examine the fourth article, the absurdity of this rule of construction, and also of the idea of perfection which has been attributed to the Constitution, will be equally manifest. This article appears to be of a miscellaneous character and very similar to the codicil of a will. The first three articles provide for the three great departments of government called into existence by the Constitution, but some other provisions just then occur, which ought to have been included in one or the other of the preceding articles, and these provisions are incorporated and compose the fourth article.

In the first section express authority has been given to Congress to prescribe the manner in which the records, etc., should be proved, and also the effect thereof, but in the other two [relating to extradition of criminals and return of fugitive slaves and bond servants] no authority is given to Congress, and yet the bare inspection of the three cases will prove that the interference of Congress is less necessary in the first than in the two remaining cases. According, however, to the rule of construction contended for, Congress cannot pass any law to carry the Constitution into effect in the two last cases selected, because express power has been given in the first and is withheld in the two last. Congress has nevertheless passed laws to carry those provisions into effect, and this exercise of power has never been complained of by the people or the States.

But it is said the advocates of the bank differ among themselves in fixing upon the general power to which the right to create a bank is incidental, and that this difference proves that there is no incidentality, to use a favorite expression, between that and any one of the enumerated general powers. The same reason can be urged, with equal force, against the constitution-

ality of every law for the erection of light-houses. Let the advocates of this doctrine lay their finger upon the power to which the right of erecting light-houses is incidental. It can be derived with as much apparent plausibility and reason from the right to lay duties as from the right to regulate commerce. Who is there, now, in this body who has not voted for the erection of a light-house? And no man in the nation, so far as my knowledge extends, has ever complained of the exercise of this power. The right to erect light-houses is exercised because the commerce of the nation or the collection of duties is greatly facilitated by that means; and, sir, the right to create a bank is exercised because the collection of your revenue and the safe-keeping and easy and speedy transmission of your public money are not simply facilitated, but because these important objects are more perfectly secured by the erection of a bank than they can be by any other means in the power of human imagination to devise. We say, therefore, in the words of the Constitution, that a bank is necessary and proper to enable the Government to carry into complete effect the right to lay and collect taxes, imposts, duties, and excises. We do not say that the existence of the Government absolutely depends upon the operations of a bank, but that a national bank enables the Government to manage its fiscal concerns more advantageously than it could do by any other means. The terms necessary and proper, according to the construction given to every part of the Constitution, impose no limitation upon the powers previously delegated. If these words had been omitted in the clause giving authority to pass laws to carry into execution the powers vested by the Constitution in the national Government, still Congress would have been bound to pass laws which were necessary and proper, and not such as were unnecessary and improper. Every legislative body, every person invested with power of any kind, is morally bound to use only those means which are necessary and proper for the correct execution of the powers delegated to them. But it is contended that, if a bank is necessary and proper for the management of the fiscal concerns of the nation, yet Congress has no power to incorporate one, because there are State banks which may be resorted to. Can it be seriously contended that, because the Constitution has in some cases made the Government of the United States dependent upon the State governments, in all which cases it has imposed the most solemn obligations upon them to act, that it will be necessary and proper for Congress to make itself dependent upon them in cases where no such obligation is imposed? The Constitution has defined all the

cases where this Government ought to be dependent upon the State governments; and it would be unwise and improvident for us to multiply these cases by legislative acts, especially where we have no power to compel them to perform the act for which we have made ourselves their dependents. In forming a permanent system of revenue, it would be unwise in Congress to rely, for its collection and transmission from one extreme of this extensive empire to the other, upon any accidental circumstance, wholly beyond their power or control. There are State banks in almost every State in the Union, but their existence is wholly independent of this Government, and their dissolution is equally so. The Secretary of the Treasury [Albert Gallatin] has informed you that he conceives a bank is necessary to the legitimate exercise of the powers vested by the Constitution in the Government. His testimony is entitled to great weight in the decision of this question, at least with those gentlemen who have no knowledge of the practical effects of the operation of the bank in the collection, safe-keeping, and transmission of your revenue. In the selection of means to carry any of your constitutional powers into effect, you must exercise a sound discretion; acting under its influence, you will discover that what is proper at one time may be extremely unfit and improper at another. The original powers granted to the Government by the Constitution can never change with the varying circumstances of the country, but the means by which those powers are to be carried into effect must necessarily vary with the varying state and circumstances of the nation. We are, when acting to-day, not to inquire what means were necessary and proper twenty years ago, not what were necessary and proper at the organization of the Government, but our inquiry must be, what means are necessary and proper this day. The Constitution, in relation to the means by which its powers are to be executed, is one eternal *now*. The state of things now, the precise point of time when we are called upon to act, must determine our choice in the selection of means to execute the delegated powers.

Senator Giles.—The gentleman from Georgia [Senator Crawford] proceeded to remark that in taking a review of the Constitution he found general as well as incidental powers enumerated therein. I did not see the precise application the gentleman intended to make of this remark, but I have been induced to review the Constitution in reference to this subject, and it does appear to me that the classification and definition of powers are as well arranged as human wisdom could devise. I know that nothing is perfect which is the work of man; that no

language is capable of perfect definition. But, as far as definition can be drawn from language, I conceive the Constitution exhibits as perfect an example as is in existence. In the next place, the gentleman remarked that there were a number of cases in which Congress had departed from the particular enumerated powers in the Constitution, and had resorted to implication or construction for the derivation of its powers. The remark is perfectly correct, and I am very ready to admit that there is no such thing as carrying into effect enumerated powers in any instrument whatever without the intervention of certain derivative and implied powers. But, if the gentleman had succeeded in showing that there had been aberrations by the Congress of the United States from the enumerated powers of the Constitution, would he think it correct to use those aberrations as precedents for still further aberrations? Ought they not rather to be considered as mementoes on the part of Congress to induce them to tread with more care, and, if they find that their former errors could not be supported by a fair and candid construction of the Constitution, to restrain the laws within its wholesome provisions?

I will now, Mr. President, proceed to examine those instances which the gentleman has presented of the supposed aberrations of the Congress of the United States from the enumerated powers, and I think it will not be difficult to show that there is not a single instance quoted but which is deducible from a fair and correct interpretation of the express words of the Constitution, giving them their common and appropriate meaning.

The first instance presented to our consideration by the honorable gentleman from Georgia [Senator Crawford] of the exercise of a power by Congress not enumerated in the Constitution was the erection of light-houses. The gentleman from Massachusetts [Senator Lloyd] superadded the instance of the erection of custom-houses.

I think Congress possesses the power to erect light-houses and custom-houses by the express words of the Constitution; for both of these descriptions of houses must necessarily be included within the term "needful buildings." But, if this term "needful buildings" had not been expressed in the Constitution, I should not hesitate to admit with these gentlemen that the erection of light-houses and custom-houses might properly be deduced from the power to lay and collect taxes, duties, etc., which are particular grants of power enumerated in the Constitution. Because custom-houses are appropriately necessary to the collection of duties, and have always been deemed indispensable for that object, as are light-houses to the due regulation of commerce.

The gentlemen, reasoning from a supposed analogy, have asked, if Congress can derive the right to erect light-houses and custom-houses from their necessary agency in effectuating the particular powers to which they are said to be appendant or appurtenant, why may it not in the same way derive the right of granting charters of incorporation for the same objects? The question is admitted to be a fair one; and, if a clear distinction cannot be made in the two cases, it will be admitted either that Congress may constitutionally establish a bank or that it has heretofore transcended its powers in erecting custom-houses, etc. A clear and most obvious distinction appears to me to exist in the cases suggested by the gentlemen to be analogous, arising from the striking difference in the nature and essential character of these powers. A custom-house is in its nature incidental and subservient to the collection of duties. It is one of the common, necessary, and proper means to effect that end. It is believed that in no commercial country in the world are duties collected without them. Besides, the erection of custom-houses does not involve in it the exercise of any other higher or consequential powers. The same remarks will apply to light-houses, as among the common, necessary, and proper means for the regulation of commerce, etc.

Is the incorporation of a bank of this character? No. It wants that connection, affiliation, and subserviency to some enumerated power which are clearly pointed out in relation to the two powers to which it has been said to be analogous. Besides, does granting a charter of incorporation to a bank involve no other higher or consequential power than merely erecting a needful building for collecting duties, etc.? It certainly does. It involves the power to grant charters of incorporation generally; and in this respect, principally, its character is essentially different from both of the powers cited by the gentleman. The power to grant charters of incorporation is not an incidental, subordinate, substantive power. It is a distinct, original, substantive power. It is also susceptible of the clearest definition; and, not being among the enumerated powers, it seems to me that Congress can have no fair claim to its exercise in any case. If Congress had been expressly authorized to grant charters of incorporation generally, then granting a charter of incorporation to a bank would have been an instance, or among the means, of carrying into effect that enumerated power, and would have been as much connected and

affiliated with it as is the erection of custom-houses with the collection of duties. I do not mean to exaggerate the consequences which might result from an assumption of the power to grant charters of incorporation, etc. It is sufficient for me to say that it is a power of primary importance; that it involves as many incidental powers in its exercise as any one of the enumerated powers; that it is equal, if not paramount, to any; and, therefore, in my judgment, cannot be assumed by fair construction as incidental and subservient to any; and, of course, not as among the necessary and proper means for carrying any into effect.

SENATOR CLAY.—As this subject, at the memorable period when the charter was granted, called forth the best talents of the nation; as it has, on various occasions, undergone the most thorough investigation; and as we can hardly expect that it is susceptible of receiving any further elucidation, it was to have been hoped that we should have been spared a useless debate. This was the more desirable because there are, I conceive, much superior claims upon us for every hour of the small portion of the session yet remaining to us. Under the operation of these motives, I had resolved to give a silent vote, until I felt myself bound, by the defying manner of the arguments advanced in support of the renewal, to obey the paramount duties I owe my country and its Constitution; to make one effort, however feeble, to avert the passage of what appears to me a most unjustifiable law.

After my honorable friend from Virginia [Senator Giles] had instructed and amused us with the very able and ingenious argument which he delivered on yesterday, I should have still forborne to trespass on the Senate but for the extraordinary character of his speech. He discussed both sides of the question, with great ability and eloquence, and certainly demonstrated to the satisfaction of all who heard him both that it was constitutional and unconstitutional, highly proper and improper to prolong the charter of the bank. The honorable gentleman appeared to me in the predicament in which the celebrated orator of Virginia, Patrick Henry, is said to have been once placed. Engaged in a most extensive and lucrative practice of the law, he mistook in one instance the side of the cause on which he was retained and addressed the court and jury in a very splendid and convincing speech in behalf of his antagonist. His distracted client came up to him while he was progressing, and, interrupting him, bitterly exclaimed, "You have undone me! you have ruined me!"—"Never mind, give yourself no concern," said the adroit advocate; and, turning to the court and jury, continued his argument by observing, "May it please your honors, and you, gentlemen of the jury, I have been stating to you what I presume my adversary may urge on his side. I will now show you how fallacious his reasoning and groundless his pretensions are." The skillful orator proceeded, satisfactorily refuted every argument he had advanced, and gained his cause! A success with which I trust the exertion of my honorable friend will on this occasion be crowned.

The gentleman from Georgia [Senator Crawford], after wandering throughout the whole Constitution in quest of some congenial spot whereon to fasten, has at length located it on that provision which authorizes Congress to lay and collect taxes, etc. In 1791 the power is referred to one part of the instrument; in 1811 to another. Sometimes it is alleged to be deducible from the power to regulate commerce. Hard pressed here, it disappears, and shows itself under the grant to coin money. The sagacious Secretary of the Treasury [Alexander Hamilton] in 1791 pursued the wisest course—he has taken shelter behind general, high-sounding, and imposing terms. He has declared in the preamble to the act establishing the bank that it will be very conducive to the successful conducting of the national finances; will tend to give facility to the obtaining of loans, and will be productive of considerable advantage to trade and industry in general. No allusion is made to the collection of taxes. The power to charter companies is not specified in the Constitution, and I contend is of a nature not transferable by mere implication. It is one of the most exalted attributes of sovereignty. In the exercise of this gigantic power we have seen an East India Company created, which has carried dismay, desolation, and death throughout one of the largest portions of the habitable world. A company which is, in itself, a sovereignty—which has subverted empires and set up new dynasties—and has not only made war, but war against its legitimate sovereign! Under the influence of this power, we have seen arise a South Sea company, and a Mississippi company, that distracted and convulsed all Europe, and menaced a total overthrow of all credit and confidence, and universal bankruptcy. Is it to be imagined that a power so vast would have been left by the wisdom of the Constitution to doubtful inference? In deducing the power to create corporations from the power to collect taxes, the relation and condition of principal and incident are prostrated and destroyed. The accessory is exalted above the principal. As well might it be said that the great luminary of day

is an accessory, a satellite to the humblest star that twinkles forth its feeble light in the firmament of heaven![1]

Suppose the Constitution had been silent as to an individual department of this Government, could you, under the power to lay and collect taxes, establish a judiciary? I presume not; but, if you could derive the power by mere implication, could you vest it with any other authority than to enforce the collection of the revenue? A bank is made for the ostensible purpose of aiding in the collection of the revenue, and, while it is engaged in this, the most inferior and subordinate of all its functions, it is made to diffuse itself through society, and to influence all the great operations of credit, circulation, and commerce. Like the Virginia justice, you tell the man whose turkey has been stolen that your book of precedents furnishes no form for his case, but then you will grant him a precept to search for a cow, and when looking for that he may possibly find his turkey! You say to this corporation, we cannot authorize you to discount —to emit paper—to regulate commerce, etc. No! Our book has no precedents of that kind. But then we can authorize you to collect the revenue, and, while occupied with that, you may do whatever else you please!

What is a corporation such as the bill contemplates? It is a splendid association of favored individuals, taken from the mass of society, and invested with exemptions and surrounded by immunities and privileges.

I contend that the States have the exclusive power to regulate contracts, to declare the capacities and incapacities to contract, and to provide as to the extent of responsibility of debtors to their creditors. If Congress have the power to erect an artificial body and say it shall be endowed with the attributes of an individual—if you can bestow on this object of your own creation the ability to contract, may you not, in contravention of State rights, confer upon slaves, infants, and *femmes couvertes* the ability to contract? And, if you have the power to say that an association of individuals shall be responsible for their debts only in a certain limited degree, what is to prevent an extension of a similar exemption to individuals? Where is the limitation upon this power to set up corporations? You establish one, in the heart of a State, the basis of whose capital is money. You may erect others whose capital shall consist of land, slaves, and personal estate, and thus the whole property within the jurisdiction of a State might be absorbed by these political bodies. The existing bank contends that it is beyond the power of a State to

[1] Senator Clay was evidently not strong on astronomy.

tax it, and, if this pretension be well founded, it is in the power of Congress, by chartering companies, to dry up the whole of the sources of State revenue. The United States own a great deal of land in the State of Ohio; can this Government, for the purpose of creating an ability to purchase it, charter a company? Aliens are forbidden, I believe, in that State, to hold real estate—could you, in order to multiply purchasers, confer upon them the capacity to hold land, in derogation of the local law? I imagine this will hardly be insisted upon; and yet there exists a more obvious connection between the undoubted power, which is possessed by this Government, to sell its land and the means of executing that power, by increasing the demand in the market, than there is between this bank and the collection of a tax. This Government has the power to levy taxes—to raise armies—provide a navy—make war—regulate commerce—coin money, etc. It would not be difficult to show as intimate a connection between a corporation, established for any purpose whatever, and some one or other of those great powers, as there is between the revenue and the bank of the United States.

It is urged by the gentleman from Massachusetts [Senator Lloyd] that, as this nation progresses in commerce, wealth, and population, new energies will be unfolded, new wants and exigencies will arise, and hence he infers that powers must be implied from the Constitution. But, sir, the question is, shall we stretch the instrument to embrace cases not fairly within its scope, or shall we resort to that remedy, by amendment, which the Constitution prescribes?

Gentlemen contend that the construction which they give to the Constitution has been acquiesced in by all parties, and under all administrations; and they rely particularly on an act which passed in 1804, for extending a branch to New Orleans, and another act, of 1807, for punishing those who should forge or utter forged paper of the bank. With regard to the first law, passed no doubt upon the recommendation of the Treasury Department, I would remark that it was the extension of a branch to a Territory, over which Congress possesses power of legislation almost uncontrolled, and where, without any constitutional impediment, charters of incorporation may be granted. As to the other act, it was passed no less for the benefit of the community than the bank—to protect the ignorant and unwary from counterfeit paper, purporting to have been emitted by the bank.

When gentlemen attempt to carry this measure, upon the ground of acquiescence or precedent, do they forget that we are not in Westminster Hall? In courts of justice, the utility of

uniformity of decision exacts of the judge a conformity to the adjudication of his predecessor. In the interpretation and administration of the law this practice is wise and proper; and without it, everything depending upon the caprice of the judge, we should have no security for our dearest rights. It is far otherwise when applied to the source of legislation. Here no rule exists but the Constitution; and to legislate upon the ground merely that our predecessors thought themselves authorized, under similar circumstances, to legislate is to sanctify error and perpetuate usurpation. But, if we are to be subjected to the trammels of precedents, I claim, on the other hand, the benefit of the restrictions under which the intelligent judge cautiously receives them. It is an established rule that to give to a previous adjudication any effect the mind of the judge who pronounced must have been awakened to the subject, and it must have been a deliberate opinion formed after full argument. In technical language, it must not have been *sub silentio*. Now, the acts of 1804 and 1807, relied upon as pledges for rechartering this company, passed not only without any discussions whatever of the constitutional power of Congress to establish a bank, but, I venture to say, without a single member having had his attention drawn to this question. I had the honor of a seat in the Senate[1] when the latter law passed, probably voted for it; and I declare, with the utmost sincerity, that I never once thought of that point; and I appeal confidently to every honorable member who was then present to say if that was not his situation.

This doctrine of precedents, applied to the legislature, appears to me to be fraught with the most mischievous consequences. The great advantage of our system of government over all others is that we have a written Constitution defining its limits and prescribing its authorities; and that, however for a time faction may convulse the nation, and passion and party prejudice sway its functionaries, the season of reflection will recur when calmly retracing their deeds, and all aberrations from fundamental principle will be corrected. But once substitute practice for principle, the expositions of the Constitution for the text of the Constitution, and in vain shall we look for the instrument in the instrument itself. It will be as diffused and intangible as the pretended constitution of England; and it must be sought for in the statute book, in the fugitive journals of Congress, and in reports of the Secretary of the Treasury. What would be our condition if we were to take the interpreta-

[1] Senator Clay was then as now filling a vacancy.

tions given to that sacred book which is or ought to be the criterion of our faith for the book itself? We should find the Holy Bible buried beneath the interpretations, glosses, and comments of councils, synods, and learned divines, which have produced swarms of intolerant and furious sects, partaking less of the mildness and meekness of their origin than of a vindictive spirit of hostility toward each other. They ought to afford us a solemn warning to make that Constitution, which we have sworn to support, our invariable guide.

I conceive, then, sir, that we are not empowered by the Constitution nor bound by any practice under it to renew the charter of this bank and I might here rest the argument. But, as there are strong objections to the renewal upon the score of expediency, and as the distresses which will attend the dissolution of the bank have been greatly exaggerated, I will ask your indulgence for a few moments longer. That some temporary inconvenience will arise I shall not deny; but most groundlessly have the recent failures in New York been attributed to the discontinuance of this bank. As well might you ascribe to that cause the failures of Amsterdam and Hamburg, of London and Liverpool. The embarrassments of commerce, the sequestration in France, the Danish captures—in fine, the belligerent edicts—are the obvious sources of these failures. Their immediate cause is the return of bills upon London, drawn upon the faith of unproductive or unprofitable shipments. Yes, sir, the protests of the notaries of London, not those of New York, have occasioned these bankruptcies.

The power of a nation is said to consist in the sword and the purse. Perhaps, at last, all power is resolvable into that of the purse, for with it you may command almost everything else. The specie circulation of the United States is estimated by some calculators at ten millions of dollars; and, if it be no more, one moiety is in the vaults of this bank. May not the time arrive when the concentration of such a vast portion of the circulating medium of the country in the hands of any corporation will be dangerous to our liberties? By whom is this immense power wielded? By a body who, in derogation of the great principle of all our institutions, responsibility to the people, is amenable only to a few stockholders, and they chiefly foreigners. Suppose an attempt to subvert this Government, would not the traitor first aim, by force or corruption, to acquire the treasure of this company? Look at it in another aspect. Seven-tenths of its capital are in the hands of foreigners, and these foreigners chiefly English subjects. We are possibly upon the eve of a

rupture with that nation. Should such an event occur, do you apprehend that the English Premier would experience any difficulty in obtaining the entire control of this institution? Republics, above all other nations, ought most studiously to guard against foreign influence. All history proves that the internal dissensions excited by foreign intrigue have produced the downfall of almost every free government that has hitherto existed; and yet gentlemen contend that we are benefited by the possession of this foreign capital. If we could have its use, without its attending abuse, I should be gratified also. But it is in vain to expect the one without the other. Wealth is power, and, under whatsoever form it exists, its proprietor, whether he lives on this or the other side of the Atlantic, will have a proportionate influence. It is argued that our possession of this English capital gives us a certain influence over the British Government. If this reasoning be sound, we had better revoke the interdiction as to aliens holding land, and invite foreigners to engross the whole property, real and personal, of the country. We had better at once exchange the condition of independent proprietors for that of stewards. We should then be able to govern foreign nations, according to the arguments of gentlemen on the other side. But let us put aside this theory, and appeal to the decisions of experience. Go to the other side of the Atlantic, and see what has been achieved for us there by Englishmen holding seven-tenths of the capital of this bank. Has it released from galling and ignominious bondage one solitary American seaman, bleeding under British oppression? Did it prevent the unmanly attack upon the *Chesapeake*? Did it arrest the promulgation, or has it abrogated the Orders in Council—those orders which have given birth to a new era in commerce? In spite of all its boasted effects, are not the two nations brought to the very brink of war? Are we quite sure that, on this side of the water, it has had no effect favorable to British interests? It has often been stated, and, although I do not know that it is susceptible of strict proof, I believe it to be a fact, that this bank exercised its influence in support of Jay's treaty; and may it not have contributed to blunt the public sentiment, or paralyze the efforts of this nation against British aggression?

The Duke of Northumberland is said to be the most considerable stockholder in the Bank of the United States. A late Lord Chancellor of England, besides other noblemen, was a large stockholder. Suppose the Prince of Essling, the Duke of Cadore, and other French dignitaries owned seven-eighths of the capital of this bank, should we witness the same exertions (I

allude not to any made in the Senate) to recharter it? So far from it, would not the danger of French influence be resounded throughout the nation?

Senator Pope.—My honorable friend from Georgia [Senator Crawford] has been reminded of the Macedonian phalanx. I trust, sir, we shall ever be found associated with a phalanx American, Republican, in heart and sentiment. I will not sacrifice the interest of my constituents for fear of being called hard names. The epithets of quidism, quadroonism, or any other ism which malice or policy may suggest shall not drive me from the course called for by the public good. I am proud that I represent a people just, generous, and independent, not to be carried away by unmeaning clamor. Before they discard a public servant, they will view him both on a political theater and in the walks of private life. They know, too well, that those are not always the best Christians who sing hallelujahs on the house top, nor have they forgotten the celebrated Sempronius, who, on the approach of Cæsar, thundered war in the Roman Senate, and at the same time was secretly coöperating with the traitor to overthrow the liberties of the Roman people.

Deeply impressed, Mr. President, with the opinion that the rejection of this bill will give at least a temporary check to the prosperity of the rising State from which I come, I shall give my negative to the motion to strike out the first section. Yes, sir, not only the interest but importance of that State in the Union is about to be sacrificed. When I look beyond the mountains, and remember that Kentucky has nurtured me almost from my cradle, that she has bestowed on me her choicest honors, my bosom is filled with emotions of gratitude which impel me to say on this, as on all other occasions, Kentucky, I am only thine!

CHAPTER III

National Bank Currency

[the second united states bank]

Proposals for Bank Charters, 1814-16—Bank of the United States of America Chartered in 1816—Debate in the House on the Effect of a National Bank on Currency: in Favor of the Bank, John C. Calhoun [S. C.], Henry Clay [Ky.]; Opposed, John Randolph [Va.], Daniel Webster [N. H.].

THE question of chartering a national bank came up again during the closing years of Madison's Administration. In January, 1814, sundry citizens of New York petitioned the House of Representatives for such a charter, but the committee to whom the matter was referred reported adversely, saying:

That the power to create corporations within the territorial limits of the States, without the consent of the States, is neither one of the powers delegated by the Constitution of the United States, nor essentially necessary for carrying into effect any delegated power.

John C. Calhoun [S. C.] then, in the following month (on February 4, 1814), proposed that the Committee of Ways and Means be instructed to inquire into the expediency of establishing a national bank in the District of Columbia, to do which, he said, came undoubtedly within the constitutional powers of Congress. On February 21 John W. Taylor [N. Y.], chairman of the committee, reported a bill to charter such a bank. Discussion of the report was deferred until the next session, when it was brought before the House on November 14, 1814, and discussed until November 28, when it was rejected by a vote of 49 to 104, owing to certain objectionable features.

The bill was then amended by the removal of certain

of these features. On December 8 it was ordered by the Senate to the third reading, and reported to the House of Representatives. The House referred it to a committee, which made other amendments, and reported it on January 6, 1815. It was passed on the following day by a vote of 120 to 38.

President Madison returned the bill to the Senate unsigned, and stated his objections to it. The nature of the bill may be inferred from the President's summary of his objections:

"On the whole, when it is considered that the proposed establishment will enjoy a monopoly of the profits of a national bank for a period of twenty years; that the monopolized profits will be continually growing, with the progress of the national population and wealth; that the nation will, during the same period, be dependent on the notes of the bank for that species of circulating medium, whenever the precious metals may be wanted, and at all times for so much thereof as may be an eligible substitute for a specie medium; and that the extensive employment of the notes in the collection of the augmented taxes will, moreover, enable the bank greatly to extend its profitable issues of them, without the expense of specie capital to support their circulation; it is as reasonable as it is requisite that the Government, in return for these extraordinary concessions to the bank, should have a greater security for attaining the public objects of the institution than is presented in the bill, and particularly for every practicable accommodation, both in the temporary advances necessary to anticipate the taxes, and in those more durable loans which are equally necessary to diminish the resort to taxes."

The Senate, on February 2, 1815, voted, 15 to 19, to pass the bill, and so failed to overrule the President's veto. On February 17, by a vote of 74 to 73, the House of Representatives indefinitely postponed the bill.

On the assembling of Congress in December, 1815, President Madison, in his message, after referring to the disordered condition of national finances due to the War of 1812, said:

"It is essential to every modification of the finances that the benefits of a uniform national currency should be restored

to the community. The absence of the precious metals will, it is believed, be a temporary evil; but, until they can again be rendered the general medium of exchange, it devolves on the wisdom of Congress to provide a substitute, which shall equally engage the confidence and accommodate the wants of the citizens throughout the Union. If the operation of the State banks cannot produce this result, the probable operation of a national bank will merit consideration."

This part of the President's message was referred by the House of Representatives to a special committee, of which John C. Calhoun was appointed chairman. On January 8, 1816, he reported a bill to establish The Bank of the United States, with a capital of $35,000,000, $7,000,000 to be subscribed by the Government and $28,000,000 to be subscribed for by individuals, companies, or corporations. The question came up for discussion in the House on February 26, and was debated until March 14, when it was passed by a vote of 80 to 71. It was brought forward in the Senate on March 25, and debated until April 3, when it was passed by a vote of 22 to 12. The act was approved by the President on April 10.

In all the later discussions of a national bank the constitutional arguments of the former were repeated, and hence need not be reproduced here. However, in the interim a special need had arisen for reformation of the *currency*, which, owing to the War of 1812, consisted wholly of paper, fluctuating greatly in value.

The effect of the establishment of a national bank in remedying this evil was the new feature in the later debates, and the arguments on this point are therefore presented. The leading speakers in behalf of the bank as an instrumentality tending toward a stable currency were Mr. Calhoun and Henry Clay [Ky.]. The leading opponent of the bank as not removing the evil complained of and as creating other evils was Daniel Webster [N. H.]. John Randolph [Va.], while denouncing the bill as proposing a "monstrous alliance between the bank and the Government," was so opposed to the evils of private banking that he was ready "almost in his heart" to vote for the bill.

It will be noted that Henry Clay reversed his attitude on the bank question. For some reason his speech in Congress on the establishment of the second bank was not reported. However, on his return to Kentucky he delivered an address to his constituents justifying his course, which repeated the arguments of the speech, and therefore has been here substituted for it.

The Effect of a National Bank on Currency

House of Representatives, February 26–March 14, 1816

Mr. Calhoun said: The state of our circulating medium is opposed to the principles of the Federal Constitution. The power was given to Congress by that instrument in express terms to regulate the currency of the United States. In point of fact, that power, though given to Congress, is not in their hands. The power is exercised by banking institutions, no longer responsible for the correctness with which they manage it. Gold and silver have disappeared entirely, there is no money but paper money, and that money is beyond the control of Congress. No one who refers to the Constitution can doubt that the money of the United States was intended to be placed entirely under the control of Congress. The only object the framers of the Constitution could have in view in giving to Congress the power "to coin money, regulate the value thereof, and of foreign coin" must have been to give a steadiness and fixed value to the currency of the United States. The state of things at the time of the adoption of the Constitution affords an argument in support of this construction. There then existed a depreciated paper currency, which could be regulated and made uniform only by giving a power for that purpose to the general Government. The States could not do it. Taking into view the prohibition against the States issuing bills of credit, there was a strong presumption this power was intended to be exclusively given to Congress.

There has been an extraordinary revolution in the currency of the country. By a sort of undercurrent the power of Congress to regulate the money of the country has caved in, and upon its ruin have sprung up those institutions which now exercise the right of making money for the United States—for gold and silver are not the only money, but whatever is the medium of purchase and sale, in which bank paper alone is now em-

ployed, and has, therefore, become the money of the country. A change, great and wonderful, has taken place, which divests you of your rights, and turns you back to the condition of the Revolutionary War, in which every State issued bills of credit, which were made a legal tender and were of various value.

This, then, is the evil. We have in lieu of gold and silver a paper medium, unequally but generally depreciated, which affects the trade and industry of the nation; which paralyzes the national arm; which sullies the faith, both public and private, of the United States; a paper no longer resting on gold and silver as its basis. We have indeed laws regulating the currency of foreign coin, but they are under present circumstances a mockery of legislation, because there is no coin in circulation. The right of making money—an attribute of sovereign power, a sacred and important right—is exercised by two hundred and sixty banks, scattered over every part of the United States, not responsible to any power whatever for their issues of paper. The next and great inquiry is, how this evil is to be remedied. Restore these institutions to their original use; cause them to give up their usurped power; cause them to return to their legitimate office of places of discount and deposit; let them be no longer mere paper machines; restore the state of things which existed anterior to 1813, which was consistent with the just policy and interests of the country; cause them to fulfill their contracts, to respect their broken faith, resolve that everywhere there shall be a uniform value to the national currency, your constitutional control will then prevail.

A national bank paying specie itself would have a tendency to make specie payments general, as well by its influence as by its example. It will be the interest of the national bank to produce this state of things, because otherwise its operations will be greatly circumscribed, as it must pay out specie or national bank notes; for I presume one of the first rules of such a bank would be to take the notes of no bank which did not pay in gold and silver. A national bank of thirty-five millions, with the aid of those banks which are at once ready to pay specie, would produce a powerful effect all over the Union. Further, a national bank would enable the Government to resort to measures which would make it unprofitable to banks to continue the violation of their contracts, and advantageous to return to the observance of them. The leading measures of this character would be to strip the banks refusing to pay specie of all the profits arising from the business of the Government, to prohibit deposits with them, and to

refuse to receive their notes in payment of dues to the Government.

The evil is a deep one; almost incurable, because connected with public opinion, over which banks have a great control; they have, in a great measure, a control over the press. For proof of which I refer to the fact that the present wretched state of the circulating medium has scarcely been denounced by a single paper within the United States. The derangement of a circulating medium is a joint thrown out of its socket; let it remain for a short time in that state and the sinews will be so knit that it cannot be replaced; apply the remedy soon, and it is an operation easy, though painful. The evil grows, while the resistance to it becomes weak; and, unless checked at once, will become irresistible.

Mr. Webster said: It is a mistaken idea, which I have heard uttered on this subject, that we are about to reform the national currency. No nation has a better currency than the United States; there is no nation which has guarded its currency with more care; for the framers of the Constitution, and those who enacted the early statutes on this subject, were hard-money men; they had felt and therefore duly appreciated the evils of a paper medium; they therefore sedulously guarded the currency of the United States from debasement. The legal currency of the United States was gold and silver coin. This was a subject in regard to which Congress had run into no folly.

What, then, is the present evil? Having a perfectly sound national currency—and the Government have no power, in fact, to make anything else current but gold and silver—there has grown up in different States a currency of paper issued by banks, setting out with the promises to pay gold and silver, which they have been wholly unable to redeem. The consequence is that there is a mass of paper afloat, of perhaps fifty millions, which sustains no immediate relation to the legal currency of the country—a paper which will not enable any man to pay money he owes to his neighbor, or his debts to the Government. The banks have issued more money than they can redeem, and the evil is severely felt. In consequence of the immense paper issues having banished specie from circulation, the Government has been obliged, in direct violation of existing statutes, to receive the amount of their taxes in something which is not recognized by law as the money of the country, and which is, in fact, greatly depreciated. This is the evil.

In my opinion, any remedy now to be applied to this evil must be applied to the depreciated mass of paper itself; it must

be some measure which will give heat and life to this mortified mass of the body politic. The evil is not to be remedied by introducing a new paper circulation; there can be no such thing as two media in circulation, the one credited and the other discredited. All bank paper derives its credit solely from its relation to gold and silver; and there is no remedy for the state of depreciation of the paper currency but the resumption of specie payments. If all the property of the United States was pledged for the redemption of these fifty millions of paper, it would not thereby be brought up to par; or, if it did, that would happen which has never yet happened in any other country. An issue of treasury notes would have no better effect than the establishment of a new bank paper. At a period anterior to the time of the reformation of the coin of England, when the existing coin had been much debased by clipping, an attempt had been made to correct the currency thus vitiated by throwing a quantity of sound coin into circulation with the debased; the result was that the sound coin disappeared, was hoarded up, because more valuable than that of the same nominal value which was in general circulation.

The establishment of a national bank not being in my opinion the proper remedy, I shall proceed to examine what is. The solvency of the banks is not questioned. There can be no doubt, if the banks would unite in the object, they might in three weeks resume the payment of specie, and render the adoption of any measure by this House wholly unnecessary. The banks are making, out of the present state of things, extravagant profits, which ought to be curtailed. The Bank of Pennsylvania, as exhibited in the return to the legislature of that State, is receiving interest on nearly three times the amount of its capital. This I consider an extraordinary fact. That bank has been pronounced by the legislature to be in "a flourishing state." It is so to the stockholders in the bank, I doubt not; but how is it to those who are affected by the depreciation of it—to the man who comes into an office for life, and relinquishes all his prospects and profits for a fixed salary, not to be diminished during his continuance in office; to the poor pensioner whose wounds received in his country's service are yet bleeding?

These banks not emanating from Congress, what engine is Congress to use for remedying the existing evil? Their only legitimate power is to interdict the paper of such banks as do not pay specie from being received at the custom-house. With a receipt of forty millions a year, if the Government is faithful to itself and to the interests of the people, they can control the

evil. In the end the taxes must be paid in the legal money of the country, and the sooner that is brought about the better.

MR. RANDOLPH.—The present time is one of the most disastrous I have ever witnessed in the Republic, and this bill proves it. The proposal to establish this great bank is like a crutch, and, as far as I understand it, it is a broken one: it would tend, instead of remedying the evil, to aggravate it. The evil of the times is a spirit engendered in this Republic, fatal to Republican principles, fatal to Republican virtue; a spirit to live by any means but those of honest industry; a spirit of profusion—in other words, the spirit of Catiline himself, *alieni avidus, sui profusus*—a spirit of expediency, not only in public but private life; the system of Diddler in the farce, living any way and well—wearing an expensive coat, and drinking the finest wines, at anybody's expense. This bank, I imagine (I am far from ascribing to the gentleman from South Carolina any such views), is to a certain extent a modification of the same system. Connected, as it is to be, with the Government, whenever it went into operation a scene would be exhibited on the great theater of the United States at the contemplation of which I shudder. If we mean to transmit our institutions unimpaired to posterity, if some now living wish to continue to live under the same institutions by which they are now ruled—and, with all its evils, real or imaginary, I presume no man would question that we live under the easiest government on the globe—we must put bounds to the spirit which seeks wealth by every path but the plain and regular path of honest industry and honest fame. This is one of the grounds on which I am hostile to this bill.

If the existing laws do not compel men to pay their debts, the establishment of a bank will not. Let us not disguise the fact; we think we are living in the better times of the Republic. We deceive ourselves; we are almost in the days of Sylla and Marius; yes, we have almost got down to the time of Jugurtha. It is unpleasant to put one's self in array against a great leading interest in a community, be they a knot of land speculators, paper jobbers, or what not; but every man you meet in this House or out of it, with some rare exceptions, which only serve to prove the rule, is either a stockholder, president, cashier, clerk, or doorkeeper, runner, engraver, papermaker, or mechanic in some other way to a bank. The gentleman from Pennsylvania might dismiss his fears for the State banks, with their one hundred and seventy millions of paper on eighty-two millions of capital. However great the evil of their conduct might

be, who is to bell the cat—who is to take the bull by the horns? You might as well attack Gibraltar with a pocket pistol as to attempt to punish them. There are very few who dare to speak truth to this mammoth; the banks are so linked together with the business of the world that there are very few men exempt from their influence. The true secret is the banks are creditors as well as debtors; and, if we were merely debtors to them for the paper in our pockets, they would soon, like Robert Morris, go to jail (figuratively speaking) for having issued more paper than they were able to pay when presented to them. We are tied hand and foot, and bound to conciliate this great mammoth,[1] which is set up to worship in this Christian land. Thus, while our Government denounces hierarchy—will permit no privileged order for conducting the service of the only true God—while it denounces nobility, etc., a privileged order of new men has grown up under it, the pressure of whose foot I at this moment feel on my neck. If anything could reconcile me to this monstrous alliance between the bank and the Government, I could, if the object could be attained of compelling these banks to fulfil their engagements, almost find in my heart to go with the gentleman in voting for it.

The stuff uttered on all hands, and absolutely got by rote by the haberdashers' boys behind the counters in the shops, that the paper now in circulation will buy anything you want as well as gold and silver, is answered by saying that you want to buy silver with it. The present mode of banking goes to demoralize society; it is as much swindling to issue notes with intent not to pay as it is burglary to break open a house. If they are unable to pay, the banks are bankrupts; if able to pay, and will not, they are fraudulent bankrupts. But a man might as well go to Constantinople to preach Christianity as to get up here and preach against banks. I despair, almost, of remedying the evil they cause when I see so many men of respectability directors, stockholders, debtors of the banks. To pass this bill would be like getting rid of the rats by setting fire to the house; whether any other remedy could be devised I do not now undertake to pronounce. The banks have lost all shame, and exemplify a beautiful and very just observation of one of the finest writers that men banded together in a common cause will collectively do that at which every individual of the combination would spurn.

MR. CLAY said: When I was a member of the Senate of the

[1] Randolph evidently used this word instead of "mammon" to suggest magnitude and monstrosity, as well as worship of wealth.

United States, I was induced to oppose the renewal of the charter to the old Bank of the United States by three general considerations: The first was that I was instructed to oppose it by the legislature of the State. What were the reasons that operated with the legislature, in giving the instruction, I do not know. I infer either that the legislature did not believe a bank to be unconstitutional or that it had formed no opinion on that point, from the fact that, although the two late Senators from this State, as well as the present Senators, voted for a national bank, the legislature, which must have been well apprised that such a measure was in contemplation, did not again interpose, either to protest against the measure itself or to censure the conduct of those Senators. From this silence on the part of a body which has ever fixed a watchful eye upon the proceedings of the general Government, I have a right to believe that the legislature of Kentucky now sees, without dissatisfaction, the proposal to establish a national bank; and that its opposition to the former one was upon grounds of expediency, applicable to that corporation alone, or no longer existing.

When the application was made to renew the old charter of the Bank of the United States, such an institution did not appear to me to be so necessary to the fulfillment of many of the objects specifically enumerated in the Constitution as to justify Congress in assuming, by construction, a power to establish it; it was supported mainly upon the ground that it was indispensable to the treasury operations. But the local institutions in the several States were, at that time, in prosperous existence, confided in by the community, having a confidence in each other, and maintaining an intercourse and connection the most intimate. Many of them were actually employed by the treasury to aid that department in a part of its fiscal arrangements; and they appeared to me to be fully capable of affording to it all the facility that it ought to desire in all of them. They superseded, in my judgment, the necessity of a national institution. But how stood the case in 1816, when I am called upon again to examine the power of the general Government to incorporate a national bank? A total change of circumstances is presented—events of the utmost magnitude have intervened.

A general suspension of specie payments has taken place, and this has led to a train of consequences of the most alarming nature. I behold, dispersed over the immense extent of the United States, about three hundred banking institutions, enjoying, in different degrees, the confidence of the public, shaken as to them all, under no direct control of the general Government,

and subject to no actual responsibility to the State authorities. These institutions are emitting the actual currency of the United States; a currency consisting of a paper on which they neither paid interest nor principal, while it was exchanged for the paper of the community on which both were paid. I see these institutions, in fact, exercising what has been considered at all times, and in all countries, one of the highest attributes of sovereignty—the regulation of the current medium of the country. They are no longer competent to assist the treasury in either of the great operations of collection, deposit, or distribution of the public revenue. In fact, the paper which they emit, and which the treasury, from the force of events, finds itself constrained to receive, is constantly obstructing the operations of that department; for it accumulates where it is not wanted, and cannot be used where it is wanted for the purposes of government without a ruinous and arbitrary brokerage. Every man who pays, or receives from, the Government pays or receives as much less than he ought to as is the difference between the medium in which the payment is made and specie. Taxes are no longer uniform. In New England, where specie payments have not been suspended, the people are called upon to pay larger contributions than where they are suspended. In Kentucky, as much more is paid by the people in their taxes than is paid, for example, in the State of Ohio, as Kentucky paper is worth more than Ohio paper.

Considering, then, that the state of the currency is such that no thinking man can contemplate it without the most serious alarm; that it threatens general distress, if it does not ultimately lead to convulsion and subversion of the Government, it appears to me to be the duty of Congress to apply a remedy, if a remedy can be devised. A national bank, with other auxiliary measures, is proposed as that remedy. I am determined to examine the question with as little prejudice as possible arising from my former opinion; I know that the safest course, if I were to pursue a cold, calculating prudence, is to adhere to that opinion, right or wrong. I am perfectly aware that, if I change or seem to change it, I shall expose myself to some censure; but, looking at the subject with the light shed upon it by events happening since the commencement of the war, I can no longer doubt. A bank appears not only necessary, but indispensably necessary, in connection with another measure, to remedy the evils of which all are but too sensible. I prefer to the suggestions of the pride of consistency the evident interests of the community, and determine to throw myself

upon their candor and justice. That which appeared to me in 1811, under the state of things then existing, not to be necessary to the general Government seems now to be necessary, under the present state of things. Had I then foreseen what now exists, and no objection had lain against the renewal of the charter, other than that derived from the Constitution, I should have voted for the renewal.

CHAPTER IV

President Jackson's War on the United States Bank

President Jackson's Message on Rechartering the Second United States Bank—Arraignment of the Bank by Senator Thomas H. Benton [Mo.]: "The Power Greater Than the Government"—Debate in the Senate on Renewal of the Bank's Charter: in Favor, George M. Dallas [Pa.], Daniel Webster [Mass.]—Bill Is Passed—The President Vetoes It; His Message—Debate in the Senate on the Veto: in Favor, Hugh L. White [Tenn.]; Opposed, Senator Benton, Senator Webster, Henry Clay [Ky.].

PRESIDENT JACKSON was of autocratic temper, brooking no superior to his will. He used his appointing power to build up what in later political parlance would be called a "Jackson machine." He dominated his Cabinet, dictating the policy of the Administration. Indeed, those with whom he chiefly conferred were men outside of his official family, who composed what was known as the "Kitchen Cabinet." He used the veto power of his office more freely and arbitrarily than his predecessors, overriding, indeed, the precedents set by them (see his veto of the Maysville Turnpike bill, Volume X, page 157), and thus subordinated Congress to the legislative power incident in the Executive.

Accordingly, when he saw the growth of new power in the country, the President first attempted to utilize it for his own aggrandizement, and then, on failure to do so, to crush it. This power was the Bank of the United States, which, by 1829, had become an extensive system composed of the parent bank at Philadelphia and twenty-five branch banks scattered over the country, but most thickly in New England and the Middle Atlantic States.

In June, 1829, the engineers of the Jackson "machine" in New Hampshire urged Nicholas Biddle, president of the bank, to remove the president of the branch

at Portsmouth and appoint a Jackson man in his place. Biddle flatly refused to do so. The Secretary of the Treasury, Samuel D. Ingham, then brought official pressure to bear, but in vain, Biddle declaring that the bank did not "acknowledge the slightest responsibility whatsoever to the Secretary of the Treasury touching the political opinions and conduct of its officers, that being a subject on which they never consult, and have no desire to know, the views of any Administration."

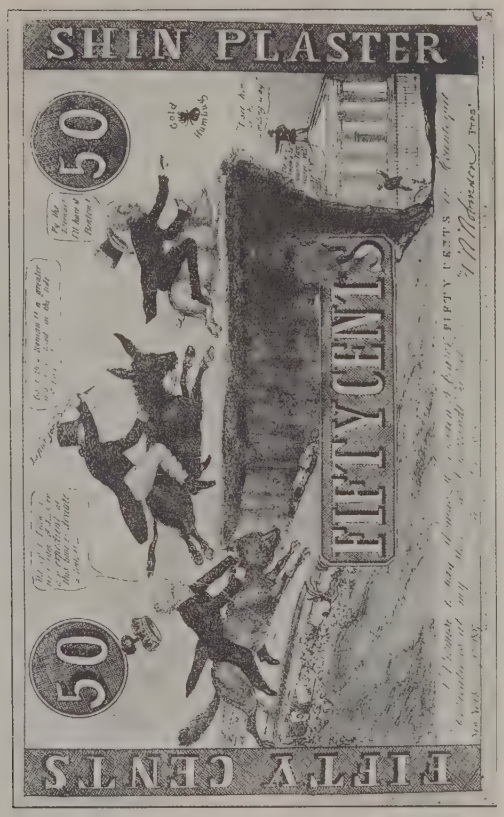
In his next message to Congress (December 8, 1829) President Jackson made the first move in his warfare against the bank. He said:

> The charter of the Bank of the United States expires in 1836, and its stockholders will most probably apply for a renewal of their privileges. In order to avoid the evils resulting from precipitancy in a measure involving such important principles, and such deep pecuniary interests, I feel that I cannot, in justice to the parties interested, too soon present it to the deliberate consideration of the legislature and the people. Both the constitutionality and the expediency of the law creating this bank are well questioned by a large portion of our fellow citizens; and it must be admitted by all that it has failed in the great end of establishing a uniform and sound currency.
>
> Under these circumstances, if such an institution is deemed essential to the fiscal operations of the Government, I submit to the wisdom of the legislature whether a national one founded upon the credit of the Government and its revenues might not be devised, which would avoid all constitutional difficulties and at the same time secure all the advantages to the Government and country that were expected to result from the present bank.

At the instigation of the President resolutions were offered, during the ensuing session, against the bank, but were laid on the table by a vote of 86 to 66.

During the congressional recess the President continued his fight on the bank through the Administration press. At the opening of the next session he repeated his former observations in regard to the bank, and amplified his argument in favor of a Treasury bank.

> Not being a corporate body, having no stockholders, debtors, or property, and but few officers, it would not be obnoxious to



"SHINPLASTER" CARICATURE OF BENTON, JACKSON, AND VAN BUREN

65

dollars, and to issue notes to the amount of thirty-five millions more. This makes ninety millions; and, in addition to this vast sum, there is an opening for an unlimited increase; or there is a dispensation in the charter to issue as many more notes as Congress, by law, may permit. This opens the door to boundless emissions; for what can be more unbounded than the will and pleasure of successive Congresses? The indirect power of the bank cannot be stated in figures; but it can be shown to be immense. In the first place, it has the keeping of the public moneys, now amounting to twenty-six millions per annum (the Post Office Department included), and the gratuitous use of the undrawn balances, large enough to constitute in themselves the capital of a great State bank. In the next place, its promissory notes are receivable, by law, in purchase of all property owned by the United States, and in payment of all debts due them; and this may increase its power to the amount of the annual revenue, by creating a demand for its notes to that amount. In the third place, it wears the name of the United States, and has the Federal Government for a partner; and this name and this partnership identify the credit of the bank with the credit of the Union. In the fourth place, it is armed with authority to disparage and discredit the notes of other banks, by excluding them from all payments to the United States; and this, added to all its other powers, direct and indirect, makes this institution the uncontrollable monarch of the moneyed system of the Union. To whom is all this power granted? To a company of private individuals, many of them foreigners. By whom is all this power to be exercised? By a directory of seven (it may be), governed by a majority of four (it may be), and none of these elected by the people, or responsible to them. Where is it to be exercised? At a single city, distant a thousand miles from some of the States, receiving the produce of none of them (except one); no interest in the welfare of any of them (except one); no commerce with the people; with branches in every State; and every branch subject to the secret and absolute orders of the supreme central head; thus constituting a system of centralism, hostile to the federative principle of our Union, encroaching upon the wealth and power of the States, and organized upon a principle to give the highest effect to the greatest power. This mass of power, thus concentrated, thus ramified, and thus directed, must necessarily become, under a prolonged existence, the absolute monopolist of American money, the sole manufacturer of paper currency, and the sole authority (for authority it will be) to which the Federal Government, the State

the constitutional objections which are urged against the present bank; and having no means to operate on the hopes, fears, or interests of large masses of the community, it would be shorn of the influence which makes that bank formidable. The States would be strengthened by having in their hands the means of furnishing the local paper currency through their own banks; while the Bank of the United States, though issuing no paper, would check the issues of the State banks, by taking their notes in deposit, and for exchange, only so long as they continue to be redeemed with specie. In times of public emergency, the capacities of such an institution might be enlarged by legislative provisions.

These suggestions are made, not so much as a recommendation, as with a view of calling the attention of Congress to the possible modifications of a system which cannot continue to exist in its present form without occasional collisions with the local authorities, and perpetual apprehensions and discontent on the part of the States and the people.

On February 2, 1831, Thomas H. Benton [Mo.], a spokesman of the Administration, introduced in the Senate a resolution "that the charter of the Bank of the United States ought not to be renewed," and advocated its adoption in a powerful speech, arraigning the bank not only for its actual, but also its potential, abuses.

"The Power Greater than the Government"

Speech of Senator Benton Against the National Bank

First: Mr. President, I object to the renewal of the charter of the Bank of the United States, because I look upon the bank as an institution too great and powerful to be tolerated in a government of free and equal laws. Its power is that of the purse; a power more potent than that of the sword; and this power it possesses to a degree and extent that will enable the bank to draw to itself too much of the political power of this Union; and too much of the individual property of the citizens of these States. The money power of the bank is both direct and indirect.

The direct power of the bank is now prodigious, and, in the event of the renewal of the charter, must speedily become boundless and uncontrollable. The bank is now authorized to own effects, lands inclusive, to the amount of fifty-five millions of

governments, the great cities, corporate bodies, merchants, traders, and every private citizen must of necessity apply for every loan which their exigencies may demand. "The rich ruleth the poor, and the borrower is the servant of the lender."

It is to no purpose that gentlemen may come forward, and vaunt the character of the United States Bank, and proclaim it too just and merciful to oppress the State. I must be permitted to repudiate both the pledge and the praise. The security is insufficient and the encomium belongs to Constantinople. "The Sultan is too just and merciful to abuse his power."

Secondly. I object to the continuance of this bank, because its tendencies are dangerous and pernicious to the Government and to the people.

What are the tendencies of a great moneyed power connected with the Government and controlling its fiscal operations? Are they not dangerous to every interest, public and private—political as well as pecuniary?

Such a bank tends to create public debt, by facilitating public loans and substituting unlimited supplies of paper for limited supplies of coin. The British debt is born of the Bank of England, which was chartered in 1694, and was nothing more nor less in the beginning than an act of Parliament for the incorporation of a company of subscribers to a government loan.

It tends to aggravate the inequality of fortunes; to make the rich richer, and the poor poorer; to multiply nabobs and paupers; and to deepen and widen the gulf which separates Dives from Lazarus. A great moneyed power is favorable to great capitalists; for it is the principle of money to favor money. It is unfavorable to small capitalists; for it is the principle of money to eschew the needy and unfortunate. It is injurious to the laboring classes; because they receive no favors, and they have the price of the property they wish to acquire raised to the paper maximum, while their wages remain at the silver minimum.

It tends to make and to break fortunes, by the flux and reflux of paper. Profuse issues and sudden contractions perform this operation, which can be repeated, like planetary and pestilential visitations, in every cycle of so many years; at every periodical return, transferring millions from the actual possessors of property to the Neptunes who preside over the flux and reflux of paper.

Thirdly. I object to the renewal of the charter, on account of the exclusive privileges and anti-republican monopoly which it gives to the stockholders. It gives, and that by an act of Con-

gress, to a company of individuals, the following exclusive legal privileges:

1. The imposing name, the incalculable credit, and the great and continuing revenues of the United States are given up to the use of this company, and constitute in themselves an immense capital to bank upon. The revenues of the Union are twenty-six millions of dollars, including the post office; and all this is so much capital in the hands of the bank, because the revenue is received by it, and is payable in its promissory notes.

2. To pay the revenues of the United States in their own notes. Other banks depend upon their credit for the receivability of their notes; but this favored institution has law on its side, and a chartered right to compel the reception of its paper by the Federal Government. The immediate consequence of this extraordinary privilege is that the United States becomes virtually bound to stand security for the bank, as much so as if she had signed a bond to that effect; and must stand forward to sustain the institution in all emergencies, in order to save her own revenue. This is what has already happened, some ten years ago, in the early progress of the bank, and when the immense aid given it by the Federal Government enabled it to survive the crisis of its own overwhelming mismanagement.

3. To hold the moneys of the United States in deposit, without making compensation for the use of the undrawn balances. This is a right which I deny; but, as the bank claims it, and, what is more material, enjoys it; and as the people of the United States have suffered to a vast extent in consequence of this claim and enjoyment, I shall not hesitate to set it down to the account of the bank. Let us then examine the value of this privilege and its effect upon the interest of the community; and, in the first place, let us have a full and accurate view of the amount of these undrawn balances from the establishment of the bank to the present day. Here it is! Look! Read!

Here Mr. Benton exhibited a table of the quarterly amounts of public money in the bank, averaging about four millions of dollars, and equivalent to a permanent deposit or loan without interest to that amount.

See, Mr. President, what masses of money, and always on hand. The paper is covered all over with millions; and yet, for all these vast sums, no interest is allowed; no compensation is made to the United States. The Bank of England, for the undrawn balances of the public money, has made an equitable

compensation to the British Government; namely, a permanent loan of half a million sterling, and a temporary loan of three millions for twenty years, without interest. Yet, when I moved for a like compensation to the United States, the proposition was utterly rejected by the Finance Committee, and treated as an attempt to violate the charter of the bank. At the same time it is incontestable that the United States have been borrowing these undrawn balances from the bank and paying an interest upon their own money.

4. To discredit and disparage the notes of all other banks, by excluding them from the collection of the federal revenue. In consequence of this exclusion they are also excluded from all the land offices, eleven in number, which deposit in the Branch Bank of St. Louis; and, being excluded from the land offices, they cease to be current money among the people. If a traveler or emigrant brings these notes to the country, or receives them in remittance; if a trader accepts them in exchange for produce, they are "*shaved*" out of their hands, and sent out of the country. This is a pecuniary injury done to the Northwest; it may be more—it may be a political injury also; for it contributes to break the communication between the two quarters of the Union, and encourages the idea that nothing good can come from the South—not even money! This power to disparage the notes of all other banks is a power to injure them; and, added to all the other privileges of the Bank of the United States, is a power to destroy them! The President (Mr. Biddle) answers, as the whole world would answer to a question of oppression, that it never had; and this response was as much as the interrogatory required. But it did not content the president of the bank; he chose to go further, and to do honor to the institution over which he presided, by showing that it was as just and generous as it was rich and powerful. He, therefore, adds the following words, for which, as a seeker after evidence to show the alarming and dangerous character of the bank, I return him my unfeigned thanks: "There are very few banks which might not have been destroyed by an exertion of the power of the bank."

This is enough! proof enough! not for me alone, but for all who are unwilling to see a moneyed domination set up—a moneyed oligarchy established in this land, and the entire Union subjected to its sovereign will. The power to destroy all other banks is admitted and declared; the inclination to do so is known to all rational beings to reside with the power! Policy may restrain the destroying faculties for the present; but they

exist; and will come forth when interest prompts and policy permits. They have been exercised; and the general prostration of the Southern and Western banks attests the fact. They will be exercised (the charter being renewed), and the remaining State banks will be swept with the besom of destruction. Not that all will have their signs knocked down and their doors closed up. Subjugation, in preference to destruction, will be the fate of many. Every planet must have its satellites; every tyranny must have its instruments; every knight is followed by his squire; even the king of beasts, the royal quadruped, whose roar subdues the forest, must have a small subservient animal to spring his prey. Just so of this imperial bank, when installed anew in its formidable and lasting power. The State banks spared by the sword will be passed under the yoke. They will become subordinate parts in the great machine; and thus the entire moneyed power of the Union will fall into the hands of one single institution, whose inexorable and invisible mandates, emanating from a center, would pervade the Union, giving or withholding money according to its own sovereign will and absolute pleasure. To a favored State, to an individual, or a class of individuals, favored by the central power, the golden stream of Pactolus would flow direct. To all such the munificent mandates of the High Directory would come, as the fabled god made his terrestrial visit of love and desire, enveloped in a shower of gold. But to others—to those not favored—and to those hated—the mandates of this same directory would be as "the planetary plague which hangs its poison in the sick air"; death to them! death to all who minister to their wants! What a state of things! What a condition for a confederacy of States! What grounds for alarm and terrible apprehension, when, in a confederacy of such vast extent, so many independent States, so many rival commercial cities, so much sectional jealousy, such violent political parties, such fierce contests for power, there should be but one moneyed tribunal before which all the rival and contending elements must appear! but one single dispenser of money, to which every citizen, every trader, every merchant, every manufacturer, every planter, every corporation, every city, every State, and the Federal Government itself must apply, in every emergency, for the most indispensable loan! and this, in the face of the fact that, in every contest for human rights, the great moneyed institutions of the world have uniformly been found on the side of kings and nobles, against the lives and liberties of the people.

5. To hold real estate, receive rents, and retain a body of

tenantry. This privilege is hostile to the nature of our republican Government, and inconsistent with the nature and design of a banking institution. Republics want freeholders, not landlords and tenants. Instead of remaining bankers, the corporators may turn land speculators; instead of having money to lend, they may turn you out tenants to vote. To an application for a loan, they may answer, and answer truly, that they have no money on hand; and the reason may be that they have laid it out in lands. The bank is now the greatest moneyed power in the Union; in the event of the renewal of its charter, it will soon be the sole one. Sole dispenser of money, it will soon be the chief owner of property. To unlimited means of acquisition would be united perpetuity of tenure; for a corporation never dies, and is free from the operation of the laws which govern the descent and distribution of real estate in the hands of individuals. Having all the money, it would be the sole lender; mortgages being the road to loans, all borrowers must travel that road. When birds enough are in the net, the fowler draws his string, and the heads are wrung off. So when mortgages enough are taken, the loans are called in; discounts cease; curtailments are made; failures to pay ensue; writs issue; judgments and executions follow; all the mortgaged premises are for sale at once; and the attorney of the bank appears at the elbow of the marshal, sole bidder, and sole purchaser.

What is the legal effect of this vast capacity to acquire, and this legal power to retain, real estate? Is it not the creation of a new species of mortmain? And of a kind more odious and dangerous than the mortmain of the church which it baffled the English Parliament so many ages to abolish. The mortmain of the church was a power in an ecclesiastical corporation to hold real estate, independent of the laws of distribution and descent: the mortmain of the bank is a power in a lay corporation to do the same thing. The evil of the two tenures is identical; the difference between the two corporations is no more than the difference between partners and money changers; the capacity to do mischief incomparably the greatest on the part of the lay corporators. The church could only operate upon the few who were thinking of the other world; the bank, upon all who are immersed in the business or the pleasures of this. The means of the church were nothing but prayers; the means of the bank is money! The church received what it could beg from dying sinners; the bank may extort what it pleases from the whole living generation of the just and unjust. Such is the parallel between the mortmain of the two corporations. They both end in monop-

oly of estates and perpetuity of succession; and the bank is the greatest monopolizer of the two. Monopolies and perpetual succession are the bane of republics. Our ancestors took care to provide against them, by abolishing entails and primogeniture. All the States abolished the anti-republican tenures; but Congress reëstablishes them, and in a manner more dangerous and offensive than before the revolution. They are now given, not generally, but to few; not to natives only, but to foreigners also; for foreigners are large owners of this bank. And thus the principles of the revolution sink before the privileges of an incorporated company. The laws of the States fall before the mandates of a central directory in Philadelphia. Foreigners become the landlords of free-born Americans; and the young and flourishing towns of the United States are verging to the fate of the family boroughs which belong to the great aristocracy of England.

6. To deal in pawns, merchandise, and bills of exchange. This bank, in addition to all its other attributes, is an incorporated company of pawnbrokers! The allegation staggers belief, but a reference to the charter will dispel incredulity. The bank is forbidden to deal in merchandise—proviso, unless in the case of goods pledged for money lent, and not redeemed to the day; and, proviso, again, unless for goods which shall be the proceeds of its lands. With the help of these two provisos it is clear that the limitation is undone; it is clear that the bank is at liberty to act the pawnbroker and merchant to any extent that it pleases. It may say to all the merchants who want loans, Pledge your stores, gentlemen! They must do it, or do worse; and, if any accident prevents redemption on the day, the pawn is forfeited, and the bank takes possession. On the other hand, it may lay out its rents for goods; it may sell its real estate, now worth three millions of dollars, for goods. Bills of exchange are also subjected to the traffic of this bank. It is a traffic unconnected with the trade of banking, dangerous for a great bank to hold, and now operating most injuriously in the South and West. It is the process which drains these quarters of the Union of their gold and silver, and stifles the growth of a fair commerce in the products of the country. The merchants, to make remittances, buy bills of exchange from the branch banks, instead of buying produce from the farmers. The bills are paid for in gold and silver; and, eventually, the gold and silver are sent to the mother bank, or to the branches in the Eastern cities, either to meet these bills, or to replenish their coffers, and to furnish vast loans to favorite States or individuals. Under this system the best of the Western banks sunk ten years ago. Under this system the entire West is now undergoing a silent, general, and invisible drain of its hard money; and, if this is not quickly arrested, these States will soon be, as far as the precious metals are concerned, no more than the empty skin of an immolated victim.

7. To establish branches in the different States without their consent, and in defiance of their resistance. No one can deny the degrading and injurious tendency of this privilege. It derogates from the sovereignty of a State; tramples upon her laws; injures her revenue and commerce; lays open her government to the attacks of centralism; impairs the property of her citizens; and fastens a vampire on her bosom to suck out her gold and silver. The Southern States, with three-fifths of the marketable productions of the Union, are not able to sustain thirty specie-paying banks; while the minority of the States north of the Potomac, without any of the great staples for export, have above four hundred of such banks. These States, without rice, without cotton, without tobacco, without sugar, and with less flour and provisions, to export, are saturated with gold and silver, while the Southern and Western States, with all the real sources of wealth, are in a state of the utmost destitution.

The *National Intelligencer* of this morning exults on the quantity of gold and silver in the vaults of the United States Bank. It declares that institution to be "overburdened" with gold and silver; and well may it be so overburdened, since it has lifted the load entirely from the South and West.

8. Exemption of the stockholders from individual liability on the failure of the bank. This privilege derogates from the common law, is contrary to the principle of partnerships, and injurious to the rights of the community. When a bank fails, its assets are always less than its debits; so that responsibility fails the instant that liability accrues. Let no one say that the Bank of the United States is too great to fail. One greater than it and its prototype has failed, and that in our own day, and for twenty years at a time: the Bank of England failed in 1797, and the Bank of the United States was on the point of failing in 1819. The same cause, namely, stockjobbing and overtrading, carried both to the brink of destruction; the same means saved both, namely, the name, the credit, and the helping hand of the governments which protected them. Yes, the Bank of the United States may fail; and its stockholders live in splendor upon the princely estates acquired with its notes, while the in-

dustrious classes, who hold these notes, will be unable to receive a shilling for them. This is unjust. It is a vice in the charter. The true principle in banking requires each stockholder to be liable to the amount of his shares; and subjects him to the summary action of every holder on the failure of the institution, till he has paid up the amount of his subscription. This is the true principle. It has prevailed in Scotland for the last century, and no such thing as a broken bank has been known there in all that time.

9. To have the United States for a partner. Sir, there is one consequence, one result of all partnerships between a government and individuals, which should of itself, and in a mere mercantile point of view, condemn this association on the part of the Federal Government. It is the principle which puts the strong partner forward to bear the burthen whenever the concern is in danger. The weaker members flock to the strong partner at the approach of the storm, and the necessity of venturing more to save what he has already staked leaves him no alternative. He becomes the Atlas of the firm, and bears all upon his own shoulders. This is the principle: what is the fact? Why, that the United States has already been compelled to sustain the Federal bank; to prop it with her revenues and her credit in the trials and crisis of its early administration. I pass over other instances of the damage suffered by the United States on account of this partnership; the immense standing deposits for which we receive no compensation; the loan of five millions of our own money, for which we have paid a million and a half in interest; the five per cent. stock note, on which we have paid our partners four million seven hundred and twenty-five thousand dollars in interest; the loss of ten millions on the three per cent. stock, and the ridiculous catastrophe of the miserable *bonus*, which has been paid to us with a fraction of our own money: I pass over all this, and come to the point of a direct loss, as a partner, in the dividends upon the stock itself. Upon this naked point of profit and loss, to be decided by a rule in arithmetic, we have sustained a direct and heavy loss. The stock held by the United States, as everybody knows, was subscribed, not paid. It was a stock note, deposited for seven millions of dollars, bearing an interest of five per cent. The inducement to this subscription was the seductive conception that, by paying five per cent. on its note the United States would clear four or five per cent. in getting a dividend of eight or ten. This was the inducement; now for the realization of this fine conception. Let us see it. Here it is: an official return from

the Register of the Treasury of interest paid, and of dividends received. The account stands thus:

Interest paid by the United States,	$4,725,000
Dividends received by the United States,	4,629,426
Loss to the United States,	$95,574

Disadvantageous as this partnership must be to the United States in a moneyed point of view, there is a far more grave and serious aspect under which to view it. It is the political aspect, resulting from the union between the bank and the Government. This union has been tried in England, and has been found there to be just as disastrous a conjunction as the union of church and State. It is the conjunction of the lender and the borrower, and holy writ has told us which of these categories will be master of the other. But suppose they agree to drop rivalry, and unite their resources. Suppose they combine and make a push for political power: how great is the mischief which they may accomplish!

I wish to secure the Union from all chance of harm from this bank. I wish to provide against its friendship, as well as its enmity—against all danger from its hug, as well as from its blow.

10. To have foreigners for partners. This, Mr. President, will be a strange story to be told in the West. The downright and upright people of that unsophisticated region believe that words mean what they signify, and that "the Bank of the United States" is the Bank of the United States. How great then must be their astonishment to learn that this belief is a false conception, and that this bank (its whole name to the contrary nowithstanding) is just as much the bank of foreigners as it is of the Federal Government. The report of the Committee of Ways and Means, in the House of Representatives, for the last session of Congress, admits that foreigners own seven millions of the stock of this bank; and everybody knows that the Federal Government owns seven millions also.

Thus it is proved that foreigners are as deeply interested in this bank as the United States itself. In the event of a renewal of the charter they will be much more deeply interested than at present; for a prospect of a rise in the stock to two hundred and fifty, and the unsettled state of things in Europe, will induce them to make great investments. It is to no purpose to say that the foreign stockholders cannot be voters or directors. The answer to that suggestion is this: the foreigners have the money;

they pay down the cash, and want no accommodations; they are lenders, not borrowers; and in a great moneyed institution such stockholders must have the greatest influence.

If I have shown it to be dangerous for the United States to be in partnership with its own citizens, how much stronger is not the argument against a partnership with foreigners? What a prospect for loans when at war with a foreign power, and the subjects of that power large owners of the bank here, from which alone, or from banks liable to be destroyed by it, we can obtain money to carry on the war! What a state of things if, in the division of political parties, one of these parties, and the foreigners, coalescing, should have the exclusive control of all the money in the Union, and, in addition to the money, should have bodies of debtors, tenants, and bank officers stationed in all the States, with a supreme and irresponsible system of centralism to direct the whole! Dangers from such contingencies are too great and obvious to be insisted upon. They strike the common sense of all mankind, and were powerful considerations for the old whig republicans for the non-renewal of the charter of 1791. Mr. Jefferson and the whig republicans staked their political existence on the non-renewal of that charter. They succeeded; and, by succeeding, prevented the country from being laid at the mercy of British and ultra federalists for funds to carry on the last war. It is said the United States lost forty millions by using depreciated currency during the last war. That, probably, is a mistake of one-half. But be it so! For what are forty millions compared to the loss of the war itself—compared to the ruin and infamy of having the Government arrested for want of money—stopped and paralyzed by the reception of such a note as the younger Pitt received from the Bank of England in 1795, withdrawing its assistance from the Government?

11. Exemption from due course of law for violations of its charter.—It is the right of every citizen to set the laws in motion against every offender; and it is the constitution of the law, when set in motion, to work through, like a machine, regardless of powers and principalities, cutting down the guilty which may stand in its way. Not so in the case of this bank. In its behalf there are barriers erected between the citizen and his oppressor, between the wrong and the remedy, between the law and the offender. Instead of a right to sue out a *scire facias* or a *quo warranto*, the injured citizen, with an humble petition in his hand, must repair to the President of the United States, or to Congress, and crave their leave to do so.

If leave is denied (and denied it will be whenever the bank has a peculiar friend in the President, or a majority of such friends in Congress, the convenient pretext being always at hand that the general welfare requires the bank to be sustained), he can proceed no further. Thus the administration of justice is subject to be strangled in its birth for the shelter and protection of this bank. But this is not all. Another and most alarming mischief results from the same extraordinary privilege. It gives the bank a direct interest in the presidential and congressional elections; it gives it need for friends in Congress and in the presidential chair. Its fate, its very existence may often depend upon the friendship of the President and Congress; and, in such cases, it is not in human nature to avoid using the immense means in the hands of the bank to influence the elections of these officers.

An impartial President or Congress might let the laws take their course; those of a different temper might interpose their veto. What a crisis for the bank! It beholds the sword of Damocles suspended over its head! What an interest in keeping those away who might suffer the hair to be cut.

12. To have all these unjust privileges secured to the corporators as a monopoly by a pledge of the public faith to charter no other bank.—This is the most hideous feature in the whole mass of deformity. If these banks are beneficial institutions, why not several? one, at least, and each independent of the other, to each great section of the Union? If malignant, why create one? The restriction constitutes the monopoly, and renders more invidious what was sufficiently hateful in itself. It is, indeed, a double monopoly, legislative as well as banking; for the Congress of 1816 monopolized the power to grant these monopolies. It has tied up the hands of its successors; and if this can be done on one subject, and for twenty years, why not upon all subjects, and for all time?

Fourthly. I object, Mr. President, to the renewal of the bank charter, because this bank is an institution too costly and expensive for the American people to keep up.

Let no one cavil at this head of objection, under the belief that the Bank of the United States supports itself, like the hibernal bear, by sucking its own paws; or that it derives its revenues, as a spider spins its web, from the recesses of its own abdomen. Such a belief would be essentially erroneous, and highly unbecoming the intelligence of the nineteenth century. The fact is that the bank lives upon the people; that all its expenses are made out of the people; all its profits derived from,

and all its losses reimbursed by, them. This is the naked truth; by consequence every shilling held, or issued, by the bank, over and above the capital stock, is a tax upon the people. In the case of every other tax, in all the contributions levied for the purposes of Government, there is some alleviation of the burden—some restitution of the abducted treasure—some return to the people—some reinfusion of strength into their ranks—in the customary reimbursement of the revenue. The Government usually pays it back, or a portion of it for salaries, services, and supplies. But, in the case of the bank tax, there is nothing of this reimbursement. The bank refunds nothing; but all the money it makes out of the people is gone from them forever. It goes into a corner of the Union, and remains there; it goes into private hands, and becomes individual property. The stockholders divide it among themselves. Twice, in every year, they make the division of these modern *spolia opima*—these dearest spoils—not of the enemy's general killed in battle, but of American citizens fleeced at home. This is a grievous aggravation of the amount of the tax. It is the aggravation which renders taxation insupportable. It is "absenteeism" in a new and legalized form. It is the whole mischief of that system of absenteeism, which drains off the wealth of Ireland to fertilize England, France, and Italy, leaving Ireland itself the most distressed and exhausted country in Europe, instead of remaining, as God created it, one of the richest and most flourishing. Eternal drawing out, and no bringing back, is a process which no people, or country, can endure. It is a process which would exhaust the resources of nature herself. The earth would be deprived of its moisture, and changed into a desert, if the exhalations of the day did not return in dews at night. The vast ocean itself, with all its deep and boundless waters, would be sucked up and dried away, if the vapors drawn up by the sun did not form into clouds, and descend in rain and snow. So will any people be exhausted of their wealth, no matter how great that wealth may be, whose miserable destiny shall subject them to a system of taxation which is forever levying, and never refunding: a system whose cry is that of the horse leech, more! more! more!—whose voice is that of the grave, give! give! give! —whose attribute is that of the grave also, never to render back!—and such precisely is the system of taxation to which the people of these States are now subjected by the federal bank.

I am willing to see the charter expire, without providing any substitute for the present bank. I am willing to see the currency of the Federal Government left to the hard money men-

tioned and intended in the Constitution; I am willing to have a hard-money government, as that of France has been since the time of *assignats* and *mandats*. Every species of paper might be left to the State authorities, unrecognized by the Federal Government, and only touched by it for its own convenience when equivalent to gold and silver. Such a currency filled France with the precious metals, when England, with her overgrown bank, was a prey to all the evils of unconvertible paper. It furnished money enough for the imperial Government when the population of the empire was three times more numerous, and the expenses of government twelve times greater, than the population and expenses of the United States; and, when France possessed no mines of gold or silver, and was destitute of the exports which command the specie of other countries. The United States possess gold mines, now yielding half a million per annum, with every prospect of equaling those of Peru. But this is not the best dependence. We have what is superior to mines, namely, the exports which command the money of the world; that is to say, the food which sustains life, and the raw materials which sustain manufactures. Gold and silver is the best currency for a republic; it suits the men of middle property and the working people best; and, if I was going to establish a workingman's party, it should be on the basis of hard money; a hard-money party against a paper party.

The Senate by an adverse vote refused leave for the introduction of the resolution.

In his message at the opening of the next session of Congress (December 6, 1831) the President stated that, after discharging his constitutional duty by bringing the matter before the national legislature, he now left the question of renewing the bank's charter to the people. This was in effect a notice that he would make it a leading issue in the coming presidential campaign.

The National Republican party, at its convention on December 12, 1831, accepted the challenge, and nominated as its candidates Henry Clay [Ky.] and John Sergeant [Pa.], prominent advocates of the bank, upon a platform approving the institution as wholly beneficial and as essential to the business of the country.

Owing to the fact that Congress at this time was in favor of the bank, Clay instigated the officers of the insti-

tution to apply for a new charter even though the old one had four years to run.

Clay reasoned, in his own interest, that the passage of the bill would give him an advantage over Jackson by doubly fortifying his defensive position. He already counted on wresting the Democratic State of Pennsylvania from his opponent, owing to the universal sentiment in that State in favor of the bank, which had been expressed in a unanimous endorsement of the institution by the legislature.

The application for the new charter was made in the Senate on January 9, 1832, through George M. Dallas [Pa.]. It came up for discussion on May 23.

Renewal of the Bank Charter

Senate, May 23, 1832

Senator Dallas upheld the motion, saying:

The committee could not be insensible, not merely to the inutility, but to the positively disastrous consequences, to the people, and to their Government, of substituting, for the present, another Bank of the United States; of compelling this to close its enormous business, or to transfer it to other hands; of leaving the immense interests of the industrious, enterprising, and prosperous people of our country, to the extent of more than a hundred millions of dollars, to be rapidly, if not suddenly, shifted in arrangement, responsibility, and connection; or of again committing the monetary system of the entire Confederacy to the charge of local and detached and conflicting State institutions, over which no control whatever could be exercised. Such an unnecessary, involuntary, forced diversion of the great streams of commercial and moneyed operations could not be effected without incalculable and incurable injury to every class, and especially to the laborious, and most worthy, and most useful class, and without sacrificing many of the great purposes of government for which the Constitution was formed. Wherefore, indeed, should such an experiment be made? The practical operations of the existing bank, under its now matured system, have attained every desired object. The currency is uniform, and representing a metallic basis; it is better for all purposes than gold or silver. The collection and distribution of

the nation's revenue are gently, safely, and satisfactorily effected. Facilities of every description had been experienced in the financial movements of the Government. Salutary checks and remedies had been applied to the irregularities and fluctuations of foreign and domestic exchanges. And in all parts of the country, particularly in the progressive and enterprising regions of the West, capital and accommodation, at all times and without stint, had, in a manner alike salutary and judicious, been accorded to the people.

Daniel Webster [Mass.] also spoke in favor of the bank, particularly as a means of giving stability to the currency. He said:

The influence of the bank, Mr. President, on the interests of the Government, and the interests of the people, may be considered in several points of view. It may be regarded as it affects the currency of the country; as it affects the collection and disbursement of the public revenue; as it respects foreign exchanges; as it respects domestic exchanges; and as it affects, either generally or locally, the agriculture, commerce, or manufactures of the Union.

First, as to the currency of the country. This is, at all times, a most important political object. A sound currency is an essential and indispensable security for the fruits of industry and honest enterprise. Every man of property or industry, every man who desires to preserve what he honestly possesses, or to obtain what he can honestly earn, has a direct interest in maintaining a safe circulating medium; such a medium as shall be a real and substantial representative of property, not liable to vibrate with opinions, not subject to be blown up or blown down by the breath of speculation, but made stable and secure, by its immediate relation to that which the whole world regards as of permanent value. A disordered currency is one of the greatest of political evils. It undermines the virtues necessary for the support of the social system, and encourages propensities destructive of its happiness. It wars against industry, frugality, and economy; and it fosters the evil spirits of extravagance and speculation. Of all the contrivances for cheating the laboring classes of mankind, none has been more effectual than that which deludes them with paper money. This is the most effectual of inventions to fertilize the rich man's field by the sweat of the poor man's brow. Ordinary tyranny, oppression, excessive taxation, these bear lightly on the happiness of

the mass of the community, compared with fraudulent currencies, and the robberies committed by depreciated paper. Our own history has recorded for our instruction enough, and more than enough, of the demoralizing tendency, the injustice, and the intolerable oppression on the virtuous and well-disposed of a degraded paper currency, authorized by law, or in any way countenanced by Government.

We all know, sir, that the establishment of a sound and uniform currency was one of the great ends contemplated in the adoption of the present Constitution. It cannot well be questioned that it was intended by that Constitution to submit the whole subject of the currency of the country, all that regards the actual medium of payment and exchange, whatever that should be, to the control and legislation of Congress. But, notwithstanding this apparent purpose in the Constitution, the truth is that the currency of the country is now, to a very great extent, practically and effectually under the control of the several State governments; if it be not more correct to say that it is under the control of the banking institutions created by the States: for the States seem first to have taken possession of the power, and then to have delegated it.

Whether the States can constitutionally exercise this power, or delegate it to others, is a point which I do not intend, at present, either to concede or to argue. It is much to be hoped that no controversy on the point may ever become necessary. But it is a matter highly deserving of consideration that, although clothed by the Constitution with exclusive power over the metallic currency, Congress, unless through the agency of a bank established by its authority, has no control whatever over that which, in the character of a mere representative of the metallic currency, fills up almost all the channels of pecuniary circulation.

In the absence of a Bank of the United States, the State banks become effectually the regulators of the public currency. Their numbers, their capital, and the interests connected with them give them, in that state of things, a power which nothing is competent to control.

I am of opinion, sir, that a well-conducted national bank has an exceedingly useful and effective operation on the general paper circulation of the country. I think its tendency is manifestly to restrain, within some bounds, the paper issues of other institutions. If it be said, on the other hand, that these institutions in turn hold in check the issues of the national bank, so much the better. Let that check go to its full extent. An over-

issue by the bank itself no one can desire. But it is plain that, by holding the State institutions, which come into immediate contact with itself and its branches, to an accountability for their issues, not yearly or quarterly, but daily and hourly, an important restraint is exercised. Be it remembered always that what it is to expect from others it is to perform itself; and that its own paper is at all times to turn into coin by the first touch of its own counter.

The bill passed the Senate on June 11, 1832, by a vote of 28 to 20, and the House on July 3 by a vote of 109 to 76. It was charged that the bank had secured its passage by making loans to Congressmen, and a partisan anti-bank committee of investigation, subsequently appointed by the Democratic Speaker of the House, Andrew Stevenson [Va.], reported that, for three years, from 54 to 59 Congressmen had been so accommodated.

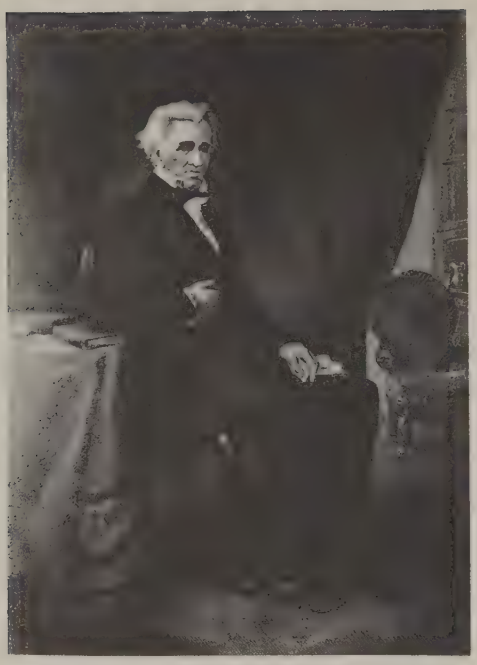
The Opposition felt that it had won a decisive victory in the passage of the bill, because no veto was to be expected, since the Supreme Court, in the case of McCulloch *vs.* Maryland (4 Wheat. 316), had declared that the act of April 10, 1816, incorporating the Bank of the United States, was in "pursuance of the Constitution."

But their expectation was confuted, at once and with great effectiveness, by a message from the President on July 10, 1832, vetoing the bill, and presenting bold and cogent reasons for this action. After a long argument against the abuses of the bank, he said:

Veto of the National Bank

Message of President Jackson, July 10, 1832

It is maintained by the advocates of the bank that its constitutionality, in all its features, ought to be considered as settled by precedent, and by the decision of the Supreme Court. To this conclusion I cannot assent. Mere precedent is a dangerous source of authority, and should not be regarded as deciding questions of constitutional power, except where the acquiescence of the people and the States can be considered as well settled. So far from this being the case on this subject, an argument against the bank might be based on precedent. One Con-



Andrew Jackson

gress, in 1791, decided in favor of a bank; another, in 1811, decided against it. One Congress, in 1815, decided against a bank; another, in 1816, decided in its favor. Prior to the present Congress, therefore, the precedents drawn from that source were equal. If we resort to the States, the expressions of legislative, judicial, and executive opinions against the bank have been, probably, to those in its favor as four to one. There is nothing in precedent, therefore, which, if its authority were admitted, ought to weigh in favor of the act before me.

If the opinion of the Supreme Court covered the whole ground of this act, it ought not to control the coördinate authorities of this Government. The Congress, the Executive, and the court must each for itself be guided by its own opinion of the Constitution. Each public officer who takes an oath to support the Constitution swears that he will support it as he understands it, and not as it is understood by others. It is as much the duty of the House of Representatives, of the Senate, and of the President to decide upon the constitutionality of any bill or resolution which may be presented to them for passage or approval as it is of the supreme judges, when it may be brought before them for judicial decision. The opinion of the judges has no more authority over Congress than the opinion of Congress has over the judges; and on that point the President is independent of both. The authority of the Supreme Court must not, therefore, be permitted to control the Congress or the Executive, when acting in their legislative capacities, but to have only such influence as the force of their reasoning may deserve.

But, in the case relied upon, the Supreme Court have not decided that all the features of this corporation are compatible with the Constitution. It is true that the court have said that the law incorporating the bank is a constitutional exercise of power by Congress. But taking into view the whole opinion of the court, and the reasoning by which they have come to that conclusion, I understand them to have decided that, inasmuch as a bank is an appropriate means for carrying into effect the enumerated powers of the general Government, therefore the law incorporating it is in accordance with that provision of the Constitution which declares that Congress shall have power "to make all laws which shall be necessary and proper for carrying those powers into execution." Having satisfied themselves that the word "necessary," in the Constitution, means "needful," "requisite," "essential," "conducive to," and that "a bank" is a convenient, a useful, and essential instrument in the prosecution of the Government's "fiscal operations," they conclude

that to "use one must be within the discretion of Congress"; and that "the act to incorporate the Bank of the United States is a law made in pursuance of the Constitution." "But," say they, "where the law is not prohibited, and is really calculated to effect any of the objects intrusted to the Government, to undertake here to inquire into the degree of its necessity would be to pass the line which circumscribes the judicial department, and to tread on legislative ground."

The principle here affirmed is that the "degree of its necessity," involving all the details of a banking institution, is a question exclusively for legislative consideration. A bank is constitutional; but it is the province of the legislature to determine whether this or that particular power, privilege, or exemption is "necessary and proper" to enable the bank to discharge its duties to the Government; and from their decision there is no appeal to the courts of justice. Under the decision of the Supreme Court, therefore, it is the exclusive province of Congress and the President to decide whether the particular features of this act are "necessary and proper," in order to enable the bank to perform, conveniently and efficiently, the public duties assigned to it as a fiscal agent, and therefore constitutional, or unnecessary and improper, and therefore unconstitutional.

In this manner President Jackson checked, to the aggrandizement of his own office, the power of the Supreme Court, which, since the accession of John Marshall to the Supreme Bench in 1801, had been extending its authority above that of both the legislative and executive branches of the Government.

A debate ensued in the Senate on the message, in which Daniel Webster [Mass.] and Henry Clay [Ky.] denounced the President's action, and Hugh L. White [Tenn.] and Thomas H. Benton [Mo.] defended it.

On the President's Veto

Senate, July 11-12, 1832

Senator Webster.—Mr. President, we have arrived at a new epoch. We are entering on experiments with the Government and the Constitution of the country, hitherto untried, and of fearful and appalling aspect. This message calls us to the contemplation of a future which little resembles the past. Its

principles are at war with all that public opinion has sustained, and all which the experience of the Government has sanctioned. It denies first principles. It contradicts truths heretofore received as indisputable. It denies to the judiciary the interpretation of law, and demands to divide with Congress the origination of statutes. It extends the grasp of Executive pretension over every power of the Government. But this is not all. It presents the Chief Magistrate of the Union in the attitude of arguing away the powers of that Government over which he has been chosen to preside; and adopting, for this purpose, modes of reasoning which, even under the influence of all proper feeling toward high official station, it is difficult to regard as respectable. It appeals to every prejudice which may betray men into a mistaken view of their own interests; and to every passion which may lead them to disobey the impulses of their understanding. It urges all the specious topics of State rights and national encroachment, against that which a great majority of the States have affirmed to be rightful, and in which all of them have acquiesced. It sows, in an unsparing manner, the seeds of jealousy and ill will against that government of which its author is the official head. It raises a cry that liberty is in danger, at the very moment when it puts forth claims to power heretofore unknown and unheard of. It affects alarm for the public freedom, when nothing so much endangers that freedom as its own unparalleled pretences. This, even, is not all. It manifestly seeks to influence the poor against the rich. It wantonly attacks whole classes of the people for the purpose of turning against them the prejudices and resentments of other classes. It is a State paper which finds no topic too exciting for its use; no passion too inflammable for its address and its solicitation. Such is the message. It remains now for the people of the United States to choose between the principles here avowed and their Government. These cannot subsist together. The one or the other must be rejected. If the sentiments of the message shall receive general approbation, the Constitution will have perished even earlier than the moment which its enemies originally allowed for the termination of its existence. It will not have survived to its fiftieth year.

Senator White.—Mr. President, in submitting this message, one of the highest duties of the Chief Magistrate has been performed. Under peculiar and trying circumstances he has given his sentiments, plainly and frankly, as he believed his duty required.

When the excitement of the time in which we act shall have

passed away, and the historian and biographer shall be employed in giving his account of the acts of our most distinguished public men, and comes to the name of Andrew Jackson; when he shall have recounted all the great and good deeds done by this man in the course of a long and eventful life, and the circumstances under which this message was communicated shall have been stated, the conclusion will be that, in doing this, he has shown a willingness to risk more to promote the happiness of his fellow men, and to secure their liberties, than by the doing of any other act whatever.

SENATOR CLAY.—The veto is an extraordinary power, which, though tolerated by the Constitution, was not expected by the convention to be used in ordinary cases. It was designed for instances of precipitate legislation, in unguarded moments. Thus restricted, and it had been thus restricted by all former Presidents, it might not be mischievous. During Mr. Madison's Administration of eight years there had occurred but two or three cases of its exercise. During the last Administration I do not now recollect that it was once. In a period little upward of three years the present Chief Magistrate has employed the veto four times. We now hear quite frequently, in the progress of measures through Congress, the statement that the President will veto them urged as an objection to their passage.

The veto is hardly reconcilable with the genius of representative government. It is totally irreconcilable with it, if it is to be frequently employed, in respect to the expediency of measures, as well as their constitutionality. It is a feature of our Government borrowed from a prerogative of the British King. And it is remarkable that in England it has grown obsolete, not having been used for upward of a century. At the commencement of the French revolution, in discussing the principles of their Constitution, in the national convention, the veto held a conspicuous figure. The gay, laughing population of Paris bestowed on the King the appellation of Monsieur Veto, and the Queen that of Madame Veto. The convention finally decreed that, if a measure rejected by the King should obtain the sanction of the two concurring legislatures, it should be a law, notwithstanding the veto. In the constitution of Kentucky, and perhaps in some of the State constitutions, it is provided that if, after the rejection of a bill by the governor, it shall be passed by a majority of all the members elected to both Houses it shall become a law, notwithstanding the governor's objections. As a coördinate branch of the Government, the Chief Magistrate has great weight. If, after a respectful

consideration of his objections urged against a bill, a majority of all the members elected to the legislature shall still pass it, notwithstanding his official influence and the force of his reasons, ought it not to become a law? Ought the opinion of one man to overrule that of a legislative body twice deliberately expressed?

It cannot be imagined that the convention contemplated the application of the veto to a question which has been so long, so often, and so thoroughly scrutinized as that of the Bank of the United States, by every department of the Government, in almost every stage of its existence, and by the people, and by the State legislatures. Of all the controverted questions which have sprung up under our Government, not one has been so fully investigated as that of its power to establish a Bank of the United States. More than seventeen years ago, in January, 1815, Mr. Madison then said in a message to the Senate of the United States: "Waiving the question of the constitutional authority of the legislature to establish an incorporated bank, as being precluded, in my judgment, by repeated recognitions, under varied circumstances, of the validity of such an institution, in acts of the legislative, executive, and judicial branches of the Government, accompanied by indications, in different modes, of a concurrence of the general will of the nation." Mr. Madison, himself opposed to the first Bank of the United States, yielded his own convictions to those of the nation, and all the departments of the Government thus often expressed.

After the President had directed public attention to this question in 1829, it became not only a topic of popular conversation, but was discussed in the press, and employed as a theme in popular elections. It seemed as if a sort of general order had gone out from headquarters to the partisans of the Administration everywhere, to agitate and make the most of the question. They have done so: and their condition now reminds me of the fable invented by Dr. Franklin of the Eagle and the Cat, to demonstrate that Æsop had not exhausted inventions in the construction of his memorable fables. The eagle, you know, Mr. President, pounced, from his lofty flight in the air, upon a cat, taking it to be a pig. Having borne off his prize, he quickly felt most painfully the paws of the cat thrust deeply into his sides and body. While flying, he held a parley with the supposed pig, and proposed to let go his hold, if the other would let him alone. No, says puss, you brought me from yonder earth below, and I will hold fast to you until you carry me back; a condition to which the eagle readily assented.

The friends of the President, who have been for nearly three years agitating this question, now turn round upon their opponents who have supposed the President quite serious and in earnest in presenting it for public consideration, and charge them with prematurely agitating it. And that for electioneering purposes! The other side understands perfectly the policy of preferring an unjust charge in order to avoid a well-founded accusation.

Mr. President, we are about to close one of the longest and most arduous sessions of Congress under the present Constitution; and, when we return among our constituents, what account of the operations of their Government shall we be bound to communicate? We shall be compelled to say that the Supreme Court is paralyzed; that the Executive, through the Secretary of the Treasury, sent to Congress a tariff bill which would have destroyed numerous branches of our domestic industry, and led to the final destruction of all; that the veto has been applied to the Bank of the United States, our only reliance for a sound and uniform currency; that the Senate has been violently attacked for the exercise of a clear constitutional power; that the House of Representatives has been unnecessarily assailed; and that the President has promulgated a rule of action for those who have taken the oath to support the Constitution of the United States, that must, if there be practical conformity to it, introduce general nullification, and end in the absolute subversion of the Government.

Senator Benton turned the point of Dr. Franklin's fable in another direction than Senator Clay had done. He said:

An eagle towering in his pride of height was—not by a mousing owl, but by a pig under a jimpson weed—not hawked and killed, but caught and whipped. The opening he thought grand; the conclusion rather bathotic. The mistake of the sharp-eyed bird of Jove, he thought, might be attributed to old age dimming the sight, and to his neglect of his spectacles that morning. He was rather surprised at the whim of the cat in not choosing to fall, seeing that a cat (unlike a politician sometimes) always falls on its legs; but concluded it was a piece of pride in puss, and a wish to assimilate itself still closer to an aëronaut; and, having gone up pendant to a balloon, it would come down artistically, with a parachute spread over its head. It was a pretty fable, and well told; but the moral—the appli-

cation? Æsop always had a moral to his fable; and Dr. Franklin, his imputed continuator in this particular, though not yet the rival of his master in fabulous reputation, yet had a large sprinkling of practical sense; and never wrote or spoke without a point and an application. And now, what is the point here? And the Senator from Kentucky has not left that to be inferred; he has told it himself. General Jackson is the eagle; the bank is the cat; the parley is the proposition of the bank to the President to sign its charter, and it will support him for the presidency—if not, will keep his claws stuck in his sides. But, Jackson, different from the eagle with his cat, will have no compromise or bargain with the bank. One or the other shall fall, and be dashed into atoms!

CHAPTER V

Censure of President Jackson

[for his removal of government deposits from the united states bank]

President Jackson Removes Government Deposits from the United States Bank—The House Supports the President, and the Bank Terminates Its Existence as a National Institution—The Senate Censures the President for His Action—Debate on the Resolution of Censure: in Favor, Henry Clay [Ky.], John C. Calhoun [S. C.]; Opposed, Thomas H. Benton [Mo.]—The Resolution Is Expunged (1837).

IN his fourth annual message of December 4, 1832, President Jackson stated that the Bank of the United States was insolvent, and recommended that the Government's stock in it be sold. This recommendation was not followed by the old Congress, which was anti-Jackson in sentiment. The President thereupon took it upon himself to remove the Government's deposits of money from the bank (or, more strictly, to cease making new deposits, and drawing on the old for Government expenses), justifying his action by the unsafe condition of the bank's affairs, and its conversion into a "permanent electioneering machine" (Annual Message, December, 1833). The Secretary of the Treasury, William J. Duane, had refused to make the removal, whereupon the President replaced him with Roger B. Taney, who carried out the Executive orders. The funds were then deposited in certain State banks, which, because favoritism in their selection was charged, were called "pet banks."

This action of the President became the leading subject of controversy in the next Congress, which met on December 2, 1833. The new House was pro-Jackson, while the Senate remained opposed to the President.

The Senate censured the President for his action, and the House, after a debate continuing through almost the entire session, on April 4, 1834, voted (1) that the bank ought not to be rechartered, (2) that the deposits ought not to be restored, (3) that they should be left in the State banks, and (4) that the affairs of the bank should be investigated. Owing to the obstacles the bank placed in the way the investigation was fruitless. The bank, however, realized that it was doomed, and so applied for a charter from Pennsylvania, receiving which it subsided into a State bank.

The chief speakers in the Senate upon the censure of the President were Henry Clay [Ky.] and John C. Calhoun [S. C.] in favor of censure[1], and Thomas H. Benton [Mo.] opposed to it.

Censure of President Jackson for Removing the Bank Deposits

Senate Session of 1833-34

Senator Clay.—Mr. President, when Congress adjourned at the termination of the last session, there was one remnant of its powers—that over the purse—left untouched. The two most important powers of civil government are those of the sword and purse; the first, with some restrictions, is confided by the Constitution to the Executive, and the last to the legislative department. If they are separate, and exercised by different responsible departments, civil liberty is safe; but, if they are united in the hands of the same individual, it is gone. That clear-sighted and revolutionary orator and patriot, Patrick Henry, justly said, in the Virginia convention, in reply to one of his opponents, "'Let him candidly tell me where and when did freedom exist, when the sword and purse were given up from the people? Unless a miracle in human affairs interposed, no nation ever retained its liberty after the loss of the sword and the purse. Can you prove, by any argumentative deduction, that it is possible to be safe without one of them? If you give them up, you are gone."

Up to the period of the termination of the last session of Congress, the exclusive constitutional power of Congress over

[1] These two statesmen had entered into a coalition against the President.

the treasury of the United States had never been contested. Prior to the establishment of the present Bank of the United States, no treasury or place had been provided or designated by law for the safe keeping of the public moneys, but the treasurer was left to his own discretion and responsibility. When the existing bank was established, it was provided that the public moneys should be deposited with it, and, consequently, that bank became the treasury of the United States; for, whatever place is designated by law for the keeping of the public money of the United States, under the care of the treasurer of the United States, is, for the time being, the treasury. Its safety was drawn in question by the Chief Magistrate, and an agent was appointed a little more than a year ago to investigate its ability. He reported to the Executive that it was perfectly safe. His apprehensions of its solidity were communicated by the President to Congress, and a committee was appointed to examine the subject; they also reported in favor of its security. And finally, among the last acts of the House of Representatives, prior to the close of the last session, was the adoption of a resolution, manifesting its entire confidence in the ability and solidity of the bank.

After all these testimonies to the perfect safety of the public moneys in the place appointed by Congress, who could have supposed that the place would have been changed? Who could have imagined that, within sixty days of the meeting of Congress, and, as it were, in utter contempt of its authority, the change should have been ordered? Who would have dreamed that the treasurer should have thrown away the single key to the treasury, over which Congress held ample control, and accepted, in lieu of it, some dozens of keys, over which neither Congress nor he has any adequate control? Yet, sir, all this has been done; and it is now our solemn duty to inquire, 1st. By whose authority it has been ordered; and, 2d. Whether the order has been given in conformity with the Constitution and laws of the United States.

I agree, sir, and I am very happy whenever I can agree with the President, as to the immense importance of these questions. He says, in the paper which I hold in my hand, that he looks upon the pending question as involving higher considerations than the "mere transfer of a sum of money from one bank to another. Its decision may affect the character of our Government for ages to come." And, with him, I view it as "of transcendent importance, both in the principles and the consequences it involves." It is a question of all time, for posterity

as well as for us—of constitutional government or monarchy—of liberty or slavery. As I regard it, I hold the bank as nothing, as perfectly insignificant, faithful as it has been in the performance of all its duties. I hold a sound currency as nothing, essential as it is to the prosperity of every branch of business, and to all conditions of society, and efficient as the agency of the bank has been in providing the country with a currency as sound as ever existed, and unsurpassed by any in Christendom. I consider even the public faith, sacred and inviolable as it ever should be, as comparatively nothing. All these questions are merged in the greater and mightier question of the constitutional distribution of the powers of the Government, as affected by the recent executive innovation. The real inquiry is, Shall all the barriers which have been erected by the caution and wisdom of our ancestors, for the preservation of civil liberty, be prostrated and trodden under foot, and the sword and the purse be at once united in the hands of one man? Shall the power of Congress over the treasury of the United States, hitherto never contested, be wrested from its possession, and be henceforward wielded by the Chief Magistrate?

The President says that "upon him has been devolved, by the Constitution and the suffrages of the American people, the duty of superintending the operation of the executive departments of the Government and seeing that the laws are faithfully executed." If there existed any such double source of executive power, it has been seen that the Treasury Department is not an executive department; but that, in all that concerns the public treasury, the Secretary is the agent or representative of Congress, acting in obedience to their will, and maintaining a direct intercourse with them. By what authority does the President derive power from the mere result of an election? In another part of this same cabinet paper he refers to the suffrages of the people as a source of power, independent of a system in which power has been most carefully separated, and distributed between three separate and independent departments. We have been told a thousand times, and all experience assures us, that such a division is indispensable to the existence and preservation of freedom. We have established and designated offices, and appointed officers in each of those departments, to execute the duties respectively allotted to them. The President, it is true, presides over the whole; specific duties are often assigned by particular laws to him alone, or to other officers under his superintendence. His parental eye is presumed to survey the whole extent of the system in all its movements;

but has he power to come into Congress, and to say such laws only shall you pass; to go into the courts, and prescribe the decisions which they may pronounce; or even to enter the offices of administration, and, where duties are specifically confided to those officers, to substitute his will to their duty? Or has he a right, when those functionaries, deliberating upon their own solemn obligations to the people, have moved forward in their assigned spheres, to arrest their lawful progress, because they have dared to act contrary to his pleasure? No, sir; no, sir. His is a high and glorious station, but it is one of observation and superintendence. It is to see that obstructions in the forward movement of government, unlawfully interposed, shall be abated by legitimate and competent means.

What security have the people against the lawless conduct of any President? Where is the boundary to the tremendous power which he has assumed? Sir, every barrier around the public treasury is broken down and annihilated. From the moment that the President pronounced the words, "This measure is my own; I take upon myself the responsibility of it," every safeguard around the treasury was prostrated, and henceforward it might as well be at the Hermitage.[1] The measure adopted by the President is without precedent. I beg pardon—there is one; but we must go down for it to the commencement of the Christian era. It will be recollected by those who are conversant with Roman history that, after Pompey was compelled to retire to Brundusium, Cæsar, who had been anxious to give him battle, returned to Rome, "having reduced Italy," says the venerable Plutarch, "in sixty days—[the exact period between the day of the removal of the deposits and that of the commencement of the present session of Congress, without the usual allowance of any days of grace]—in sixty days, without bloodshed." The biographer proceeds:

"Finding the city in a more settled condition than he expected, and many senators there, he addressed them in a mild and gracious manner [as the President addressed his late Secretary of the Treasury], and desired them to send deputies to Pompey with an offer of honorable terms of peace, &c. As Metellus, the tribune, opposed his taking money out of the public treasury, and cited some laws against it—[such, sir, I suppose, as I have endeavored to cite on this occasion]—Cæsar said, 'Arms and laws do not flourish together. If you are not pleased at what I am about, you have only to withdraw. [Leave the office, Mr. Duane!] War, indeed, will not tolerate much liberty of

[1] The name of Andrew Jackson's home in Tennessee.

speech. When I say this, I am renouncing my own right; for you, and all those whom I have found exciting a spirit of faction against me, are at my disposal.' Having said this, he approached the doors of the treasury, and, as the keys were not produced, he sent for workmen to break them open. Metellus again opposed him, and gained credit with some for his firmness; but Cæsar, with an elevated voice, threatened to put him to death if he gave him any further trouble. 'And you know very well, young man,' said he, 'that this is harder for me to say than to do.' Metellus, terrified by the menace, retired; and Cæsar was afterward easily and readily supplied with everything necessary for that war."

For more than fifteen years, Mr. President, I have been struggling to avoid the present state of things. I thought I perceived, in some proceedings, during the conduct of the Seminole war, a spirit of defiance to the Constitution and to all law. With what sincerity and truth—with what earnestness and devotion to civil liberty I have struggled the Searcher of all human hearts best knows. With what fortune, the bleeding Constitution of my country now fatally attests.

I have, nevertheless, persevered; and, under every discouragement, during the short time that I expect to remain in the public councils I will persevere. And if a bountiful Providence would allow an unworthy sinner to approach the throne of grace, I would beseech Him, as the greatest favor He could grant to me here below, to spare me until I live to behold the people, rising in their majesty, with a peaceful and constitutional exercise of their power, to expel the Goths from Rome; to rescue the public treasury from pillage, to preserve the constitution of the United States; to uphold the Union against the danger of the concentration and consolidation of *all* power in the hands of the Executive; and to sustain the liberties of the people of this country against the imminent perils to which they now stand exposed.

The eyes and the hopes of the American people are anxiously turned to Congress. They feel that they have been deceived and insulted; their confidence abused; their interest betrayed; and their liberties in danger. They see a rapid and alarming concentration of all power in one man's hands. They see that, by the exercise of the positive authority of the Executive, and his negative power exerted over Congress, the will of one man alone prevails, and governs the republic. The question is no longer what laws will Congress pass, but what will the Executive not veto? The President, and not Congress, is ad-

dressed for legislative action. We have seen a corporation, charged with the execution of a great national work, dismiss an experienced, faithful, and zealous president, afterwards testify to his ability by a voluntary resolution, and reward his extraordinary services by a large gratuity, and appoint in his place an executive favorite, totally inexperienced and incompetent, to propitiate the President. We behold the usual incidents of approaching tyranny. The land is filled with spies and informers, and detraction and denunciation are the orders of the day. People, especially official incumbents in this place, no longer dare speak in the fearless tones of manly freemen, but in the cautious whispers of trembling slaves. The premonitory symptoms of depotism are upon us; and if Congress do not apply an instantaneous and effective remedy, the fatal collapse will soon come on, and we shall die—ignobly die—base, mean, and abject slaves; the scorn and contempt of mankind; unpitied, unwept, unmourned!

Senator Benton.—The Senator from Kentucky calls upon the people to rise and drive the Goths from the capitol. Who are those Goths? They are General Jackson and the Democratic party,—he just elected President over the Senator himself, and the party just been made the majority in the House—all by the vote of the people. It is their act that has put these Goths in possession of the capitol to the discomfiture of the Senator and his friends; and he ought to be quite sure that he felt no resentment at an event so disastrous to his hopes, when he has indulged himself with so much license in vituperating those whom the country has put over him.

The Senator from Kentucky says the eyes and the hopes of the country are now turned upon Congress. Yes, Congress is his word, and I hold him to it. And what do they see? They see one House of Congress—the one to which the Constitution gives the care of the purse, and the origination of impeachments, and which is fresh from the popular elections; they see that body with a majority of above fifty in favor of the President and the Secretary of the Treasury, and approving the act which the Senator condemns. They see that popular approbation in looking at one branch of Congress, and the one charged by the Constitution with the inquisition into federal grievances. In the other branch they see a body far removed from the people, neglecting its proper duties, seizing upon those of another branch, converting itself into a grand inquest, and trying offences which itself prefers; and in a spirit which bespeaks a zeal quickened by the sting of personal mortification. He says

the country feels itself deceived and betrayed—insulted and wronged—its liberties endangered—and the treasury robbed; the representatives of the people in the other House say the reverse of all this—that the President has saved the country from the corrupt domination of a great corrupting bank, by taking away from her the public money which she was using in bribing the press, subsidizing members, purchasing the venal, and installing herself in supreme political power.

The Senator wishes to know what we are to do? What is our duty to do? I answer, to keep ourselves within our constitutional duties—to leave this impeachment to the House of Representatives—leave it to the House to which it belongs, and to those who have no private griefs to avenge—and to judges, each of whom should retire from the bench, if he happened to feel in his heart the spirit of a prosecutor instead of a judge. The Senate now tries General Jackson; it is subject to trial itself—to be tried by the people, and to have its sentence reversed.

The coalition between Clay and Calhoun against the President was openly acknowledged by both Senators, Clay at the beginning of the debate announcing that he counted on the support of the "Nullifiers," and Calhoun responding as follows:

Senator Calhoun.—The Senator from Kentucky [Mr. Clay] anticipates with confidence that the small party who were denounced at the last session as traitors and disunionists[1] will be found, on this trying occasion, standing in the front rank, and manfully resisting the advance of despotic power. I heard the anticipation with pleasure, not on account of the compliment which it implied, but the evidence which it affords that the cloud which has been so industriously thrown over the character and motive of that small but patriotic party begins to be dissipated. The Senator hazarded nothing in the prediction. That party is the determined, the fixed, and sworn enemy to usurpation, come from what quarter and under what form it may—whether from the Executive upon the other departments of this Government, or from this Government on the sovereignty and rights of the States. The resolution and fortitude with which it maintained its position at the last session, under so many difficulties and dangers, in defence of the States against the encroachments of the general Government, furnished evi-

[1] See Volume V, chapter III.

dence not to be mistaken that that party, in the present momentous struggle, would be found arrayed in defence of the rights of Congress against the encroachments of the President. And let me tell the Senator from Kentucky that, if the present struggle against executive usurpation be successful, it will be owing to the success with which we, the nullifiers—I am not afraid of the word—maintained the rights of the States against the encroachment of the general Government at the last session.

The Senator from Kentucky read a striking passage from one of the most pleasing and instructive writers in any language [Plutarch], the description of Cæsar forcing himself, sword in hand, into the treasury of the Roman commonwealth. We are at the same stage of our political revolution, and the analogy between the two cases is complete, varied only by the character of the actors and the circumstances of the times. That was a case of an intrepid and bold warrior, as an open plunderer, seizing forcibly the treasury of the country, which, in that republic, as well as ours, was confined to the custody of the legislative department of the Government. The actors in our case are of a different character—artful, cunning, and corrupt politicians, and not fearless warriors. They have entered the treasury, not sword in hand, as public plunderers, but, with the false keys of sophistry, as pilferers, under the silence of midnight. The motive and the object are the same, varied in like manner by circumstances and character. "With money I will get men, and with men money," was the maxim of the Roman plunderer. With money we will get partisans, with partisans votes, and with votes money, is the maxim of our public pilferers. With men and money Cæsar struck down Roman liberty, at the fatal battle of Pharsalia, never to rise again; from which disastrous hour all the powers of the Roman republic were consolidated in the person of Cæsar, and perpetuated in his line. With money and corrupt partisans a great effort is now making to choke and stifle the voice of American liberty, through all its natural organs; by corrupting the press; by overawing the other departments; and, finally, by setting up a new and polluted organ, composed of officeholders and corrupt partisans, under the name of a national convention, which, counterfeiting the voice of the people, will, if not resisted, in their name dictate the succession. When this deed is done, the revolution will be completed, and all the powers of our republic, in like manner, will be consolidated in the President, and perpetuated by his dictation.

Senator Calhoun nevertheless showed his independence by differing from his new colleague on their ancient point of difference, the tariff, and claimed that it was the action of the "Nullifiers" which had strengthened Clay in his present position. Since Clay had to submit to this humiliating view of the situation as the price of Calhoun's support, the Senator from South Carolina gained the "whip-hand" in the coalition.

The revolution, in the midst of which we are, began, not as supposed by the Senator from Kentucky, shortly before the commencement of the present session, but many years ago, with the commencement of the restrictive system, and terminated its first stage with the passage of the force bill of the last session, which absorbed all the rights and sovereignty of the States, and consolidated them in this Government. While this process was going on, of absorbing the reserved powers of the States, on the part of the general Government, another commenced, of concentrating in the Executive the powers of the other two—the legislative and judicial departments of the Government; which constitutes the second stage of the revolution, in which we have advanced almost to the termination.

To the interposition of the State of South Carolina we are indebted for the adjustment of the tariff question; without it, all the influence of the Senator from Kentucky over the manufacturing interest, great as it deservedly is, would have been wholly incompetent, if he had even thought proper to exert it, to adjust the question. The attempt would have prostrated him, and those who acted with him, and not the system. It was the separate action of the State that gave him the place to stand upon, created the necessity for the adjustment, and disposed the minds of all to compromise.

I will venture to add to these remarks another, in connection with the point under consideration, not less true. We are not only indebted to the cause which I have stated for our present strength in this body against the present usurpation of the Executive, but if the adjustment of the tariff had stood alone, as it ought to have done, without the odious bill which accompanied it—if those who led in the compromise had joined the State-rights party in their resistance to that unconstitutional measure, and thrown the responsibility on its real authors, the Administration, their party would have been so prostrated throughout the entire South, and their power, in consequence,

so reduced, that they would not have dared to attempt the present measure; or, if they had, they would have been broken and defeated.

The President replied as follows to the censure:

Protest Against Censure

President Jackson

The resolution [of censure] charges in substance that, in certain proceedings relating to the public revenue, the President has usurped authority and power not conferred upon him by the Constitution and laws, and that in doing so he violated both. Any such act constitutes a high crime—one of the highest, indeed, which the President can commit—a crime which justly exposes him to impeachment by the House of Representatives, and, upon due conviction, to removal from office, and to the complete and immutable disfranchisement prescribed by the Constitution.

The resolution, then, is in substance an impeachment of the President; and in its passage amounts to a declaration by a majority of the Senate that he is guilty of an impeachable offence. As such it is spread upon the journals of the Senate—published to the nation and to the world—made part of our enduring archives—and incorporated in the history of the age. The punishment of removal from office and future disqualification does not, it is true, follow this decision; nor would it have followed the like decision, if the regular forms of proceeding had been pursued, because the requisite number did not concur in the result. But the moral influence of a solemn declaration, by a majority of the Senate, that the accused is guilty of the offence charged upon him has been as effectually secured as if the like declaration had been made upon an impeachment expressed in the same terms. Indeed, a greater practical effect has been gained, because the votes given for the resolution, though not sufficient to authorize a judgment of guilty on an impeachment, were numerous enough to carry that resolution.

The President of the United States, therefore, has been by a majority of his constitutional triers, accused and found guilty of an impeachable offence; but in no part of this proceeding have the directions of the Constitution been observed.

The impeachment, instead of being preferred and prosecuted by the House of Representatives, originated in the Senate, and

was prosecuted without the aid or concurrence of the other House. The oath or affirmation prescribed by the Constitution was not taken by the Senators; the Chief Justice did not preside; no notice of the charge was given to the accused; and no opportunity afforded him to respond to the accusation, to meet his accusers face to face, to cross-examine the witnesses, to procure counteracting testimony, or to be heard in his defence. These safeguards and formalities were not only practically disregarded, in the commencement and conduct of these proceedings, but in their result I find myself convicted by less than two-thirds of the members present of an impeachable offence.

For the reasons which have been stated, I do hereby solemnly protest against the aforementioned proceedings of the Senate, as unauthorized by the Constitution; contrary to its spirit and to several of its express provisions; subversive of that distribution of the powers of government which it has ordained and established; destructive of the checks and safeguards by which those powers were intended, on the one hand, to be controlled, and, on the other, to be protected; and calculated, by their immediate and collateral effects, by their character and tendency, to concentrate in the hands of a body not directly amenable to the people a degree of influence and power dangerous to their liberties, and fatal to the constitution of their choice.

The resolution of the Senate contains an imputation upon my private as well as upon my public character; and, as it must stand forever on their journals, I cannot close this substitute for that defence which I have not been allowed to present in the ordinary form without remarking that I have lived in vain if it be necessary to enter into a formal vindication of my character and purposes from such an imputation. In vain do I bear upon my person enduring memorials of that contest in which American liberty was purchased; in vain have I since periled property, fame, and life in defence of the rights and privileges so dearly bought; in vain am I now, without a personal aspiration, or the hope of individual advantage, encountering responsibilities and dangers, from which, by mere inactivity in relation to a single point, I might have been exempt—if any serious doubts can be entertained as to the purity of my purposes and motives. If I had been ambitious, I should have sought an alliance with that powerful institution which even now aspires to no divided empire. If I had been venal, I should have sold myself to its designs. Had I preferred personal comfort and official ease to the performance of my arduous duty, I should have ceased to molest it. In the history of conquerors and

usurpers, never, in the fire of youth, nor in the vigor of manhood, could I find an attraction to lure me from the path of duty; and now I shall scarcely find an inducement to commence the career of ambition, when gray hairs and a decaying frame, instead of inviting to toil and battle, call me to the contemplation of other worlds, where conquerors cease to be honored, and usurpers expiate their crimes. The only ambition I can feel is to acquit myself to Him to whom I must soon render an account of my stewardship, to serve my fellow-men, and live respected and honored in the history of my country. No; the ambition which leads me on is an anxious desire and a fixed determination to return to the people, unimpaired, the sacred trust they have confided to my charge—to heal the wounds of the Constitution and preserve it from further violation; to persuade my countrymen, so far as I may, that it is not in a splendid government, supported by powerful monopolies and aristocratical establishments, that they will find happiness, or their liberties protected, but in a plain system, void of pomp—protecting all, and granting favors to none—dispensing its blessings like the dews of heaven, unseen and unfelt, save in the freshness and beauty they contribute to produce. It is such a government that the genius of our people requires—such a one only under which our States may remain for ages to come united, prosperous, and free. If the Almighty Being who has hitherto sustained and protected me will but vouchsafe to make my feeble powers instrumental to such a result, I shall anticipate with pleasure the place to be assigned me in the history of my country, and die contented with the belief that I have contributed in some small degree to increase the value and prolong the duration of American liberty.

To the end that the resolution of the Senate may not be hereafter drawn into precedent, with the authority of silent acquiescence on the part of the Executive Department; and to the end, also, that my motives and views in the Executive proceeding denounced in that resolution may be known to my fellow-citizens, to the world, and to all posterity, I respectfully request that this message and protest may be entered at length on the journals of the Senate.

The resolution, after many debates in which Senators Benton and William R. King [Ala.] led in defence of the President, and Webster, Clay, and Calhoun were the chief opponents, was expunged from the Senate journal on January 14, 1837, by a vote of 24 to 19.

CHAPTER VI

Paper Money or Specie?

[PRESIDENT JACKSON'S TREASURY CIRCULAR]

Inflation of the Currency by State Bank Notes—President Jackson on the Evils of Such a Currency—The Treasury Circular Ordering Payments in Specie for Public Lands—Thomas Ewing, Sr. [O.] Moves in the Senate to Rescind the Order—Debate on the Resolution: in Favor, Senator Ewing, Daniel Webster [Mass.]; Opposed, Thomas H. Benton [Mo.]—William C. Rives [Va.] Moves in the Senate That Only Bank Notes of Large Denominations and Payable in Specie Be Accepted by the Government—Debate on a Bill Based on the Resolution: in Favor, Senator Rives, Robert J. Walker [Miss.]; Opposed, Senator Benton—Bill Is Carried, but Receives the President's "Pocket" Veto.

THE demise of the Bank of the United States left the State banks the only available receptacle of the public funds, and these were in a condition far from sound, owing to the liberality of their charters, which permitted them to issue notes to an extent far beyond their actual capital, thus flooding the country with paper money, which caused a general increase in the price of all property and great and sudden fluctuations in land values in particular. An era of land speculation began which promised to end in disaster.

Accordingly, finance became a chief subject of interest with Congress. In 1835 the national legislature took preparatory steps to bring the currency back to the hard money system intended by the Constitution, by greatly increasing the output of the mint (incidentally increasing the ratio of silver and gold to 16 to 1 from 15 to 1), and by passing various acts forbidding the receipt or payment on public account of the small notes of the State banks. In his annual message of December 6, 1836, President Jackson spoke of the problem as follows:

Evil Effects of Inflation of the Currency

President Jackson

Variableness must ever be the characteristic of a currency, of which the precious metals are not the chief ingredient, or which can be expanded or contracted without regard to the principles that regulate the value of those metals as a standard in the general trade of the world. With us, bank issues constitute such a currency, and must ever do so, until they are made dependent on those just proportions of gold and silver, as a circulating medium, which experience has proved to be necessary, not only in this, but in all other commercial countries. Where those proportions are not infused into the circulation, and do not control it, it is manifest that prices must vary according to the tide of bank issues, and the value and stability of property must stand exposed to all the uncertainty which attends the administration of institutions that are constantly liable to the temptation of an interest distinct from that of the community in which they are established.

The progress of an expansion, or rather a depreciation, of the currency, by excessive bank issues, is always attended by a loss to the laboring classes. This portion of the community have neither time nor opportunity to watch the ebbs and flows of the money market. Engaged from day to day in their useful toils, they do not perceive that, although their wages are nominally the same, or even somewhat higher, they are greatly reduced, in fact, by the rapid increase of a spurious currency; which, as it appears to make money abound, they are at first inclined to consider a blessing. It is not so with the speculator, by whom this operation is better understood, and is made to contribute to his advantage. It is not until the prices of the necessaries of life become so dear that the laboring classes cannot supply their wants out of their wages that the wages rise and gradually reach a justly proportioned rate to that of the products of their labor. When thus, by the depreciation in consequence of the quantity of paper in circulation, wages as well as prices become exorbitant, it is soon found that the whole effect of the adulterations is a tariff on our home industry for the benefit of the countries where gold and silver circulate and maintain uniformity and moderation in prices. It is then perceived that the enhancement of the price of land and labor produces a corresponding increase in the price of products, until

THE MODERN BALAAM AND HIS ASS
[Caricature of Jackson and Van Buren, and, for the first time, of the Democratic Donkey.]
From the collection of the New York Historical Society

these products do not sustain a competition with similar ones in other countries, and thus both manufactured and agricultural productions cease to bear exportation from the country of the spurious currency, because they cannot be sold for cost. This is the process by which specie is banished by the paper of the banks. Their vaults are soon exhausted to pay for foreign commodities; the next step is a stoppage of specie payment—a total degradation of paper as a currency—unusual depression of prices, the ruin of debtors, and the accumulation of property in the hands of creditors and cautious capitalists.

It was in view of these evils, together with the dangerous power wielded by the Bank of the United States, and its repugnance to our Constitution, that I was induced to exert the power conferred upon me by the American people to prevent the continuance of that institution. But, although various dangers to our republican institutions have been obviated by the failure of that bank to extort from the Government a renewal of its charter, it is obvious that little has been accomplished except a salutary change of public opinion toward restoring to the country the sound currency provided for in the Constitution. In the acts of several of the States prohibiting the circulation of small notes, and the auxiliary enactments of Congress at the last session, forbidding their reception or payment on public account, the true policy of the country has been advanced, and a larger portion of the precious metals infused into our circulating medium. These measures will probably be followed up in due time by the enactment of State laws, banishing from circulation bank notes of still higher denominations; and the object may be materially promoted by further acts of Congress, forbidding the employment, as fiscal agents, of such banks as continue to issue notes of low denominations, and throw impediments in the way of the circulation of gold and silver.

The effects of an extension of bank credits and over-issues of bank paper have been strikingly illustrated in the sales of the public lands. From the returns made by the various registers and receivers in the early part of last summer, it was perceived that the receipts arising from the sales of the public lands were increasing to an unprecedented amount. In effect, however, these receipts amounted to nothing more than credits in bank. The banks let out their notes to speculators; they were paid to the receivers, and immediately returned to the banks to be sent out again and again, being mere instruments to transfer to speculators the most valuable public land, and pay the Government by a credit on the books of the banks. Those credits on the books of some of the Western banks, usually called deposits, were already greatly beyond their immediate means of payment and were rapidly increasing. Indeed, each speculation furnished means for another; for no sooner had one individual or company paid in their notes than they were immediately lent to another for a like purpose; and the banks were extending their business and their issues so largely as to alarm considerate men, and render it doubtful whether these bank credits, if permitted to accumulate, would ultimately be of the least value to the Government. The spirit of expansion and speculation was not confined to the deposit banks, but pervaded the whole multitude of banks throughout the Union, and was giveing rise to new institutions to aggravate the evil.

The safety of the public funds, and the interest of the people, generally, required that these operations should be checked and it became the duty of every branch of the general and State governments to adopt all legitimate and proper means to produce that salutary effect. Under this view of my duty, I directed the issuing of the order[1] which will be laid before you by the Secretary of the Treasury, requiring payment for the public lands sold to be made in specie, with an exception until the fifteenth of the present month in favor of actual settlers. This measure has produced many salutary consequences. It checked the career of the Western banks, and gave them additional strength in anticipation of the pressure which has since pervaded our Eastern as well as the European commercial cities. By preventing the extension of the credit system, it measurably cut off the means of speculation, and retarded its progress in monopolizing the most valuable of the public lands. It has tended to save the new States from a non-resident proprietorship, one of the greatest obstacles to the advancement of a new country and the prosperity of an old one. It has tended to keep open the public lands for entry by emigrants, at Government prices, instead of their being compelled to purchase of speculators at double or treble prices. And it is conveying into the interior large sums in silver and gold, there to enter permanently into the currency of the country, and place it on a firmer foundation.

The President accordingly recommended Congress to take further steps in this direction, especially in preventing the excessive issue of bank paper.

[1] On July 11, 1836.

On December 14 Thomas Ewing, Sr. [Ohio] introduced in the Senate resolutions rescinding the order of the Secretary of the Treasury mentioned by the President in his message. Upon these an extended debate took place, in which the order was attacked by Senator Ewing and Daniel Webster [Mass.], and defended by Thomas H. Benton [Mo.]

The Treasury Circular

Senate, December 14-21, 1836

Senator Ewing.—It was foreseen, prior to the commencement of the last session of Congress, that there would be a very large surplus of money in the public treasury beyond the wants of the country for all their reasonable expenditures. It was also well understood that the land bill, or some other measure for the distribution of this fund, would be again presented to Congress; and, if the true condition of the public treasury were known and understood, that its distribution, in some form or other, would be demanded by the country. On the other hand, it seems to have been determined by the party, and some of those who act with it thoroughly, that the money should remain where it was, in the deposit banks, so that it could be wielded at pleasure by the Executive.

Senators, in the course of the debate which afterward sprung up on the land bill, denied, and most unequivocally, that there was any surplus, or that there would be any; and, when some of us offered an estimate of what would be the receipts into the treasury in the current year, we were told that it would be very difficult to fasten that estimate upon us at this session of Congress.

But when the true state of things became too obvious to be any longer successfully contested; when it became apparent to everyone here and to the public that there was a large amount of public money lying in the deposit banks, and likely to remain there for years, an injury to the public, and beneficial to nobody, except bankers and brokers, the deposit bill passed, after a desperate struggle, and then came this measure—the treasury order—intended to destroy its effect.

This order was issued not by the advice of Congress nor under the sanction of any law. It was delayed until Congress was fairly out of the city, and all possibility of interference by legislation was removed, and then came forth this new and last

expedient. It was known that these funds, received for public lands, had become a chief source of revenue, and it may have occurred to some that the passage of a treasury order of this kind would have a tendency to embarrass the country; and, as the bill for the regulation of the deposits had just passed, the public might be brought to believe that all the mischief occasioned by the order was the effect of the distribution bill. It has, indeed, happened that this scheme has failed; the public understand it rightly, but that was not by any means certain at the time the measure was devised. It was not then foreseen that the people would as generally see through the contrivance as it has since been found that they do.

There may have been various other motives which led to the measure. Many minds were probably to be consulted, for it is not to be presumed that a step like this was taken without consultation, and guided by the will of a single individual alone. That is not the way in which these things are done. No doubt one effect hoped for by some was that a check would be given to the sales of the public lands. The operation of the order would naturally be to raise the price of land by raising the price of the currency in which it was to be paid for. But, while this would be the effect on small buyers, those who purchased on a large scale would be enabled to sell at an advance of ten or fifteen per cent. over what would have been given if the United States lands had been open to purchasers in the ordinary way. Those who had borrowed money of the deposit banks and paid it out for lands would thus be enabled to make sales to advantage, and by means of such sales make payment to the banks who found it necessary to call in their large loans, in order to meet the provisions of the deposit bill. The order, therefore, was likely to operate to the common benefit of the deposit banks and the great land dealers, while it counteracted the efforts of the obnoxious deposit bill.

There may have been yet another motive actuating some of those who devised this order. There was danger that the deposit banks, when called upon to refund the public treasure, would be unable to do it; indeed, it was said on this floor that the immediate effect of the distribution bill would be to break those banks. Now this treasury order would operate to collect the specie of the country into the land offices, whence it would immediately go into the deposit banks, and would prove an acceptable aid to them while making the transfers required by law. These seem to me to have been among the real motives which led to the adoption of that order.

SENATOR BENTON.—The treasury order was a measure of regulation upon the State banks, intended to save the finances and the currency, as well as the public lands. The Bank of the United States regulated the State banks by the simple process of excluding their paper from the Federal receipts and expenditures. She excluded them to make room for her own notes; and this is the extent of her skill and of her merit in all this boasted regulation of local currencies of which we hear so much. The Federal Government has only to do the same, and the State bank issues are repelled upon their sources, and become comparatively harmless. It is receivability for Federal dues; it is receivability at the land offices, customhouses, and post offices, which gives them wings to fly over the continent, and enables them to pass, without regard to the credit or solvency of the bank from which they come. It is the Federal Government indorsement which does the mischief; and this indorsement, for all the purposes of false credit and want of responsibility, is given to the whole issue of every bank whose paper is made receivable for public dues. The experiment has been tried, and local paper has failed as a national currency, and out of that failure arose the second United States Bank. It will fail again, and again, and forever! There is no safety for the Federal revenues but in the total exclusion of local paper, and that from every branch of the revenue—customs, lands, and post office. There is no safety for the national finances but in the constitutional medium of gold and silver. After forty years of wandering in the wilderness of paper money, we have approached the confines of the constitutional medium. Seventy-five millions of specie in the country, with the prospect of an annual increase of ten or twelve millions for the next four years, three branch mints to commence next spring, and the complete restoration of the gold currency announce the success of President Jackson's great measures for the reform of the currency, and vindicate the Constitution from the libel of having prescribed an impracticable currency. The success is complete; and there is no way to thwart it, but to put down the treasury order, and to reopen the public lands to the inundation of paper money. Of this, it is not to be dissembled, there is great danger. Four deeply interested classes are at work to do it—speculators, local banks, United States Bank, and politicians out of power. They may succeed, but he (Mr. B.) would not despair. The darkest hour of night is just before the break of day; and, through the gloom ahead, he saw the bright vision of the constitutional currency erect, radiant, and victorious. Through

regulation or explosion success must eventually come. If reform measures go on, gold and silver will be gradually and temperately restored; if reform measures are stopped, then the paper system runs riot, and explodes from its own expansion. Then the Bank of the United States will exult on the catastrophe, and claim its own reëstablishment, as the only adequate regulator of the local banks. Then it will be said the specie experiment has failed! But no; the contrary will be known, that the specie experiment has not failed, but it was put down by the voice and power of the interested classes, and must be put up again by the voice and power of the disinterested community.

SENATOR WEBSTER.—What is meant by the "constitutional currency," about which so much is said? What species, or forms, of currency does the Constitution allow, and what does it forbid? It is plain enough that this depends on what we understand by currency. Currency, in a large and, perhaps, in a just sense, includes not only gold and silver and bank notes, but bills of exchange also. It may include all that adjusts exchanges, and settles balances, in the operations of trade and business. But if we understand by currency the legal money of the country, that which constitutes a lawful tender for debts, and is the statute measure of value, then, undoubtedly, nothing is included but gold and silver. Most unquestionably there is no legal tender, and there can be no legal tender, in this country, under the authority of this Government or any other, but gold and silver, either the coinage of our own mints, or foreign coins, at rates regulated by Congress. This is a constitutional principle, perfectly plain, and of the very highest importance. The States are expressly prohibited from making anything but gold and silver a tender in payment of debts; and, although no such express prohibition is applied to Congress, yet, as Congress has no power granted to it, in this respect, but to coin money, and to regulate the value of foreign coins, it clearly has no power to substitute paper, or anything else, for coin, as a tender in payment of debts and in discharge of contracts.

The only question, therefore, is, what is the law, or what was the law, when the Secretary issued his order?

The Secretary considers that that which has been uniformly done for twenty years, that is to say, the receiving of payment for the public lands in the bills of specie-paying banks, is against law. He calls it an "indulgence," and this "indulgence" the order proposes to continue for a limited time, and in favor of a particular class of purchasers. If this were

an indulgence, and against law, one might well ask, how has it happened that it should have continued so long, especially through recent years, marked by such a spirit of thorough and searching reform? It might be asked, too, if this be illegal, and an indulgence only, why continue it longer, and especially why continue it as to some, and refuse to continue it as to others?

But, sir, it is time to turn to the statute, and to see what the legal provision is. On the 30th of April, 1816, a resolution passed both Houses of Congress. It was in the common form of a joint resolution, and was approved by the President. It provides that, "from and after the 20th day of February next (1817), no duties, taxes, debts, or sums of money, accruing or becoming payable to the United States, ought to be collected or received otherwise than in the legal currency of the United States, or treasury notes, or notes of the Bank of the United States, or *in notes of banks which are payable in specie on demand*, in the said legal currency of the United States."

The honorable member from Missouri has, indeed, himself furnished a complete answer to the Secretary's idea; that is to say, he defends the order on grounds not only differing from, but totally inconsistent with, those assumed by the Secretary. He does not consider the receipt of bank notes hitherto, or up to the time of issuing the order, as an indulgence, but as a lawful right while it lasted. Thus his argument entirely deprives the Secretary of the only ground assigned by him for the treasury order.

I am, therefore, of opinion that the treasury order of the 11th of July is against the plain words and meaning of the law of 1816; against the whole practice of the Government under that law; against the honorable gentleman's own opinion, as expressed in his resolution of the 23d of April; and not reconcilable with the necessity which was supposed to exist for the passage of the act of last session.

On January 10, 1837, Senator William C. Rives [Va.] proposed, as a substitute for Senator Ewing's motion, the resolution that thereafter all sums of money due the United States should be paid in specie, or in bank notes which were payable in specie on demand, subject to the restriction that notes of low denomination should not be received, there being a stated gradual increase in the minimum amount of the receivable notes. The resolu-

tions of Ewing and Rives were referred to the Committee on Public Lands, which reported Rive's resolution with the proviso that the public deposits should be withdrawn from those banks which refused to receive and credit to the United States notes receivable under the act.

Senator Rives and Robert J. Walker [Miss.] defended the resolution, and Senator Benton opposed it. Rives's speech is valuable chiefly for its clear presentation of economic laws, notably Sir Thomas Gresham's law that "bad money drives good out of circulation," as amplified by Adam Smith. Rives held that paper and specie could both be used, if they were not of the same denomination. Benton insisted on hard money alone, whence he received the nickname of "Old Bullion."[1]

RELATIONS OF PAPER MONEY AND SPECIE

SENATE, JANUARY 10-28, 1837

SENATOR RIVES.—In discussing the question of a reform of the currency, it is necessary to settle our ideas clearly as to two things: first, the nature and extent of the end to be aimed at; secondly, the means by which it is to be attained. If I am asked what is the end I propose, whether I am in favor of a specie circulation exclusively, and the total suppression of bank paper, I answer No. Even if such an object were desirable, it is plainly impracticable. In the present state of commercial progress and refinement throughout the world, it would probably be impracticable anywhere; but in this country, and under our system of government especially, it is obviously wholly unattainable. Whether right or wrong, we find twenty-six independent State legislatures possessed of the power to create banking corporations. Whatever speculative doubts may exist in the minds of some as to the constitutional validity of this power, the States now actually possess and exercise it, as they have invariably done from the foundation of the Government, and there is not the slightest probability that they will ever be divested of it. In every sober and practical scheme of policy we must proceed upon the assumption that this independent State power will remain. How, then, can the banking system

[1] This name also squinted at "billon," precious metal containing a large alloy of baser, which Senator Benton suggested should be used in our currency (see page 123).

be suppressed by this Government? Such a notion, if entertained anywhere, would indeed be Utopian and visionary.

My object, then, would be, not the destruction of the banking system and the total suppression of bank paper, but an efficient regulation of it, and its restriction to safe and proper limits; not the exclusive use of specie as a circulating medium, but such a substantial enlargement and general diffusion of it, in actual circulation, as would make it the practical currency of common life, the universal medium of ordinary transactions; in short, the money of the farmer, the mechanic, the laborer, and the tradesman; while the merchant should be left in the enjoyment of the facilities of a sound and restricted paper currency for his larger operations. Such a reformation in the currency as this would, in my opinion, be productive of the most beneficial results. It would give security to the industrious classes of society for the products of their labor, against the casualties incident to the paper system. The laborer, in returning to the bosom of his family from his weekly toil, would no longer find his slumbers broken by the apprehension that the hard earnings of the week, perhaps the accumulation of long years of honest industry, might be dissipated in a moment by the explosion of a bank, or the bursting of some paper bubble. It would give security, to a great extent, to the whole body of the community against those disastrous fluctuations in the value of property and contracts which arise from the ebbs and flows of an unrestricted paper currency. It would give security to the banks themselves, by providing them, in the daily internal circulation of the country, an abundant and accessible fund for recruiting their resources, whenever they should be exposed to an extraordinary pressure.

This, sir, is the happy state of things we might promise ourselves from replacing (as it is the aim of the proposition which I have had the honor to submit to do) all bank bills, under the denomination of twenty dollars, with a solid circulation of gold and silver. Is there anything wild, anything visionary, anything pernicious, in such a system of currency as this? It has the sanction, Mr. President, of the profoundest writers on questions of political economy, and has received the practical assent of the wisest nations. I am well aware that it would ill become me to present for the consideration of the Senate any scheme which was not thus tested and approved. Of all the writers who have treated and examined questions of this character, none possess so high an authority as the author of the "Wealth of Nations." It has been well and justly

said that Adam Smith had done for the science of political economy what Bacon and Newton had done for physical science, and Sydney and Locke for the science of government and the fundamental principles of civil and political liberty. His work, appearing contemporaneously with the American Revolution, was deeply imbued with the free spirit and the large and vigorous thought which so remarkably distinguished that great era. He came forth as the zealous and powerful champion of free trade, the inflexible opponent of monopoly and restriction, in all their multiplied forms, the ardent advocate of everything that is liberal, generous, and popular, in the institutions of society and the intercourse of nations. No work has ever exercised so large an influence for good on the policy and destiny of nations; and none, I am sure, considering the stamp of liberty as well as wisdom impressed upon it, is better entitled to the respect of an assembly of American legislators. Adam Smith, by a strange mistake, has been held up, rather opprobriously, as the advocate of a paper system—as the founder, in fact, of the paper school! Sir, there can be no greater mistake than this. While he recognized the utility of a judicious system of banking, in liberating and putting into productive employment capital which would otherwise remain dead and inactive, and the facilities it is calculated to afford to commerce, he yet insists that the general circulation of the country should be gold and silver.

As the general principles he has laid down on the subjects of banking and currency continue still to be appealed to by the enlightened writers who have followed him, as affording the soundest exposition of those subjects, whatever modifications of subordinate points may have been made by subsequent inquirers, I will give to the Senate, and principally in the words of Adam Smith himself, an outline of his system of currency. After speaking of the advantages to be expected from a judicious and properly conducted system of banking, he says expressly that "the commerce and industry of a country are not so secure when suspended, as it were, on the Dædalian wings of paper money, as when they travel about on the solid ground of gold and silver." He says, therefore, it is the policy of wise governments "to guard, not only against that excessive multiplication of paper money which ruins the very banks which issue it, but even against that multiplication of it which enables them to fill the greater part of the circulation of the country with it." He then proceeds to show that "the circulation of every country may be considered as divided into two different

branches: the circulation of the dealers with one another, and the circulation between the dealers and consumers." His next position is, "that paper money may be so regulated as either to confine itself very much to the circulation between the different dealers, or to extend itself likewise to a great part of that between the dealers and consumers." The regulation is effected by fixing the denomination of the notes permitted to be issued. "It were better," he adds, "that no bank notes were issued in any part of the kingdom for a smaller sum than five pounds. Paper money would then confine itself to the circulation between the different dealers"; and, where this is the case, he says, "there is always plenty of gold and silver. But where it extends itself to a considerable part of the circulation between dealers and consumers it banishes gold and silver almost entirely from the country." The system of Adam Smith, then, resolves itself into this: that the circulation between dealer and dealer may be of paper, but that the circulation between dealer and consumer should be of the precious metals; that this result ought to be secured by prohibiting the issue of bank notes for a less sum than five pounds, and that, if such a restriction be adopted, there "will always be plenty of gold and silver" in circulation, performing all the offices of exchange in the "ordinary transactions" of society, while the use of paper would be confined to commercial operations of a larger scale.

Instead of being the advocate, far less the founder, of an unrestricted paper system, Smith urges the necessity of confining it to commercial accommodation in the larger transactions between dealer and dealer. He is in favor of the suppression of all bank notes under five pounds; whereby gold and silver will fill the ordinary channels of circulation, and become, in fact, the common practical currency of the country.

It is in vain to expect to bring gold and silver coins into circulation, without a previous suppression of all notes of corresponding denominations. The reason is obvious. If there exist in any country two distinct currencies, both of them answering equally well the purposes of domestic circulation, but one of them possessing only a local value, confined to the country of its emission, while the other has a universal and equal value throughout the world, the latter will necessarily go abroad into the commerce of the world, in quest of the riches and productions of foreign nations, leaving the former at home to perform an office which it does equally as well, though it would be wholly without use or value abroad. The total incompatibility, therefore, of a paper and metallic currency of the same denominations has grown into an axiom. Edmund Burke (whose sagacity in questions of this sort is well known), at the memorable period of the bill brought forward by Mr. Pitt for the suspension of specie payments by the Bank of England, in 1797, in a letter written during his last illness to Mr. Canning, which the latter gentleman brought most touchingly to the notice of the House of Commons, in a debate of great interest and instruction, on this whole subject, at a much more recent period (1826), used these memorable words: "Tell Mr. Pitt that, if he consents to the issue of one-pound notes, he will never see a guinea again." The prophecy, sir, became history. No one saw a guinea in circulation in England while the bank continued the issue of one-pound notes.

Mr. Burke's remark also applies most forcibly to our present situation. We have voted the metallic money, we have coined it, but it will not circulate. We have coined at our own mint, within little more than two years, ten millions of gold. But where is it? In the vaults of the banks, or hoarded by individuals! and we shall never see it in circulation until we have opened the way for it by a previous suppression of the small notes.

SENATOR BENTON.—We stand upon a constitution which recognizes nothing but gold and silver for money; we stand upon a legislation of near fifty years, which recognizes nothing but gold and silver for money. Now, for the first time, we have a statutory enactment proposed to recognize the paper of a wilderness of local banks for money, and in so doing to repeal all prior legislation by law, and the Constitution by fact. This is an era in our legislation. It is statute law to control all other law, and is not a resolution to aid other laws, and to express the opinions of Congress.

Mr. B. said, the effects of this statute would be to make a paper government—to insure the exportation of our specie—to leave the State banks without foundations to rest upon—to produce a certain catastrophe in the whole paper system—to revive the pretensions of the United States Bank—and to fasten, for a time, the Adam Smith system upon the Federal Government and the whole Union.

Mr. B. objected, totally, to the idea of continuing to receive paper money for the dues of the Federal Government. This bill was intended to be a permanent law; there was no limitation of time in it. It was intended to continue paper money forever as the currency of the Federal Government. There

was no longer any plea of necessity to justify such a gross departure from the Constitution. It is not now as it was in 1816, when the joint resolution of that year was passed. Then, there was less specie in the country than ever was known; now there is more than ever was known. The joint resolution of 1816 was a great advance upon the existing state of things at that time: the same resolution would be a retrograde movement, and a great falling back at the present day. We have now near eighty millions of specie; that sum is far beyond any possible demand that the collection of the revenues in specie could demand. Everybody knows that it does not require an amount of money equal to the whole amount of annual payments to make those payments. This might be the case if every creditor ate all the money which he received; but as he does not eat it, but pays it over to somebody else, it follows that the same piece of money performs many payments in the course of the year; and, consequently, that a sum far below the amount of annual payments will be sufficient to effect all those payments. A proportionate supply, then, is all that is wanted; and that proportion is fixed by political economists at the one-tenth.

It is the faculty of issuing paper currency which makes banks dangerous to the country, and the height to which this danger has risen in the United States, and the progress which it is making should rouse and alarm the whole community. It is destroying all standard of value. It is subjecting the country to demoralizing and ruinous fluctuations of price. It is making a lottery of property, and making merchandise of money, which has to be bought by the ticket holders in the great lottery at two and three per cent. a month. It is equivalent to the destruction of weights and measures, and like buying and selling without counting, weighing, or measuring. It is the realization, in a different form, of the debasement and arbitrary alteration of the value of coins practiced by the kings of Europe in former ages, and now by the Sultan of Turkey. It is extinguishing the idea of fixed, moderate, annual interest. Great duties are thus imposed upon the legislator; and the first of these duties is to revive and favor the class of banks of discount and deposit; banks to make loans, keep money, transfer credits on books, buy and sell exchange, deal in bullion; but to issue no paper. This class of banks should be revived and favored; and the United States could easily revive them by confiding to them the public deposits. The next great duty of the legislator is to limit the issues of banks of circulation, and make them

indemnify the community in some little degree, by refunding, in annual taxes, some part of their undue gains.

The amount of capital reported by the banks to have been paid in is about $300,000,000; and the quantity of paper money which they are authorized by their charters to issue is about $750,000,000. How much of this is actually issued can never be known with any precision; for such are the fluctuations in the amount of a paper currency, flowing from 750 fountains, that the circulation of one day cannot be relied upon for the next. This, upon its face, and without recourse to any other evidence, is proof that our banking system, as a whole, is unsolid and delusive, and a frightful imposition upon the people. Nothing but specie can form the capital of a bank; there are not above sixty or seventy millions of specie in the country, and of that the banks have not the one-half. Thirty millions in specie is the extent; the remainder of the capital must have been made up of that undefinable material called "specie funds," or "funds equivalent to specie," the fallacy of which is established by the facts already stated, and which show that all the specie in the country put together is not sufficient to meet the one-fifth part of these "specie funds," or "funds equivalent to specie." The equivalent, then, does not exist! credit alone exists; and any general attempt to realize these "specie funds," and turn them into specie, would explode the whole banking system, and cover the country with ruin. There may be some solid and substantial banks in the country, and undoubtedly there are better and worse among them; but as a whole—and it is in that point of view the community is interested—as a whole, the system is unsolid and delusive; and there is no safety for the country until great and radical reforms are effected.

Mr. B. said this was a faint sketch of the banking system as carried on in the United States, where every bank is a coiner of paper currency, and where every town, in some States, must have its banks of circulation (while such cities as Liverpool and Manchester have no such banks), and where the paper money of all these machines receives wings to fly over the whole continent, and to infest the whole land, from its universal receivability by the Federal Government in payment of all dues at their customhouses, land offices, post offices, and by all the district attorneys, marshals, and clerks, employed under the Federal judiciary. The improvidence of the States, in chartering such institutions, is great and deplorable; but their error was trifling, compared to the improvidence of the Federal Govern-

ment in taking the paper coinage of all these banks for the currency of the Federal Government, maugre that clause in the Constitution which recognizes nothing but gold and silver for currency, and which was intended forever to defend and preserve this Union from the evils of paper money.

Mr. B. averred, with a perfect knowledge of the fact, that the banking system of the United States was on a worse footing than it was in any country upon the face of the earth; and that, in addition to its deep and dangerous defects, it was also the most expensive and burdensome, and gave the most undue advantages to one part of the community over another. He had no doubt but that this banking system was more burdensome to the free citizens of the United States than ever the feudal system was to the villeins, and serfs, and peasants of Europe. And what did they get in return for this vast burden? A pestiferous currency of small paper! when they might have a gold currency without paying interest, or suffering losses, if their banks, like those in Liverpool and Manchester, issued no currency except as bills of exchange. And with how much real capital is this banking system, so burdensome to the people of the United States, carried on? About $30,000,000! Yes; on about $30,000,000 of specie rests the $300,000,000 paid in, and on which the community are paying interest, and giving profits to bankers, and blindly yielding their faith and confidence, as if the whole $30,000,000 was a solid bed of gold and silver, instead of being, as it is, one-tenth part specie, and nine-tenths paper credit!

Sir, I have performed a duty to myself, not pleasant, but necessary. This bill is to be an era in our legislation and in our political history. It is to be a point upon which the future age will be thrown back, and from which future consequences will be traced. I separate myself from it; I wash my hands of it; I oppose it. I am one of those who promised gold, not paper. I promised the currency of the Constitution, not the currency of corporations. I did not join in putting down the Bank of the United States, to put up a wilderness of local banks. I did not join in putting down the paper currency of a national bank, to put up a national paper currency of a thousand local banks. I did not strike Cæsar, to make Antony master of Rome.

Senator Walker.—Congress, no more than a State legislature, can make anything but gold or silver a tender in payment of debts by one citizen to another; but that Congress, or a State legislature, or an individual, may waive their constitutional rights, and receive bank paper or drafts, in payment of

any debt, is a principle of universal adoption in theory and practice, and never doubted by anyone until at the present session by the Senator from Missouri. The distinction of the Senator in this respect was as incomprehensible to him (Mr. W.) as he believed it was to every Senator, and, indeed, was discernible only by the magnifying powers of a solar microscope. It was a point-no-point, which, like the logarithmic spiral, or asymptote of the hyperbolic curve, might be forever approached without reaching; an infinitesimal, the ghost of an idea, not only without length, breadth, thickness, shape, weight, or dimensions, but without position—a mere imaginary nothing, which flitted before the bewildered vision of the honorable Senator, when traversing, in his fitful somnambulism, that tesselated pavement of gold, silver, and billion,[1] which that Senator delighted to occupy. Sir, the Senator from Missouri might have heaped mountain-high his piles of metal; he might have swept, in his Quixotic flight, over the banks of the States, putting to the sword their officers, stockholders, directory, and legislative bodies by which they were chartered; he might, in his reveries, have demolished their charters, and consumed their paper by the fire of his eloquence; he might have transacted, in fancy, with a metallic currency of twenty-eight millions in circulation, an actual annual business of fifteen hundred millions, and Mr. W. would not have disturbed his beatific visions, nor would any other Senator—for they were visions only that could never be realized—but when, descending from his ethereal flights, he seized upon the Committee on Public Lands as criminals, arraigned them as violators of the Constitution, and prayed Heaven for deliverance from them, Mr. W. could be silent no longer. Yes, even then he would have passed lightly over the ashes of the theories of the honorable Senator, for, if he desired to make assaults upon any, it would be upon the living, and not the dead; but that Senator, in the opening of his (Mr. W.'s) address, had rejected the olive branch which, upon the urgent solicitation of mutual friends, against his own judgment, he had extended to the honorable Senator. The Senator from Missouri had thus, in substance, declared his "voice was still for war." Be it so; he thanked God that he was not so abject or degraded as to submit, with impunity, to unprovoked attacks or unfounded accusations from any quarter. Could he thus submit, he would be unfit to represent the noble, generous, and gallant people, whose rights and interests it was his pride and

[1] A coin composed of both gold and silver which Senator Benton had proposed.

glory to endeavor to protect, whose honor and character were dearer to him than life itself, and should never be tarnished by any act of his, as one of their humble representatives upon this floor.

The bill was passed by Congress, but so late in the session that the President did not have the constitutional period of ten days for considering it. He therefore virtually vetoed it by retaining it without action, a disposition which became known about that time as the "pocket" veto.

CHAPTER VII

Divorce of Bank and State
[the subtreasury bill]

Panic of 1837—President Van Buren Calls Congress in Special Session—Administration Bill to Issue Treasury Notes: Opposed, in Senate, by Daniel Webster [Mass.]; Defended by Thomas H. Benton [Mo.]; Carried—Administration Bill to Establish Independent Treasury: in Favor, Silas Wright [N. Y.] (Mover); John C. Calhoun [S. C.], Senator Benton, Robert J. Walker [Miss.], James Buchanan [Pa.]; Opposed, William C. Rives [Va.], Nathaniel P. Tallmadge [N. Y.], Henry Clay [Ky.], Senator Webster; Carried—Bill Is Lost in the House—It Is Reintroduced in the Senate (1838)—Bill Is Passed 1840; Repealed 1842; Re-Enacted 1846.

PRESIDENT VAN BUREN entered office during a period of financial disaster. In November, 1836, the liquidation of several English banks caused the ruin of three mercantile houses doing an extensive business with the United States, and precipitated a financial, industrial and agricultural panic in this country. The Dry Dock Bank of New York, one of the Federal deposit banks, stopped cash payments early in May, 1837, and on the 10th of the month all the other banks in the city followed suit. The suspension quickly became general throughout the country; many mercantile houses were ruined, and many factories closed their doors, and land and agricultural products slumped greatly in value. The Government was blamed for this condition, and great pressure was brought to bear, from every direction, upon the new Administration to change the financial policy it had inherited from the old, especially to rescind the treasury circular of July 11, 1836, ordering payment for the public lands to be made in specie, and to reëstablish a national bank.

President Van Buren refused to rescind the order or

to endorse the reëstablishment of the bank, but yielded to the pressure in so far as to call a special session of Congress to relieve the situation. Congress met on September 4, 1837. In his message the President outlined an entirely new organization of administering the finances, recommending an entire dissolution of the connection of the Government with banks of issue, and the establishment of an independent treasury system. He also recommended the passage of a "uniform law concerning bankruptcies of corporations, and other bankers" as a "salutary check on the issues of paper money, and an effectual remedy given to the citizen, in a way at once equal in all parts of the Union, and fully authorized by the Constitution." In order to provide for the needs of the Government, in view of the approaching deficit in revenue due to the general suspension of specie payments, the President advised that the fourth instalment of the deposit to be made with the States be withheld, and a temporary issue of treasury notes or warrants be made to supply the deficiency until the incoming revenue should be sufficient to redeem them.

Senator Daniel Webster [Mass.] assailed the proposed issue of treasury notes as a return to the old Continental currency, and taunted the Democratic party with so early a failure in its policy for getting back to hard money.

Senator Thomas H. Benton [Mo.] defended the issue as being one of "notes to raise loans, and to be laid by as investments, and not as notes for currency to be pushed into circulation by the power of the Government."

A bill for the issue of the notes passed the Senate on September 18 by a vote of 42 to 5, Webster voting in its favor, and Henry Clay [Ky.] against it.

A bill imposing additional duties on public officers as depositaries for receiving the public money (Independent or Sub-Treasury system) was introduced in the Senate on September 19, by Silas Wright [N. Y.], chairman of the Finance Committee. Leading speakers in favor of the bill were John C. Calhoun [S. C.]—who thereby realigned himself with the Democratic party, breaking his

coalition with Henry Clay, now that its cause, a common antagonism toward Andrew Jackson, had passed—Senator Benton, Robert J. Walker [Miss.], James Buchanan

THE REJECTED MINISTER

"WE CAN NEVER MAKE HIM PRESIDENT WITHOUT FIRST MAKING HIM VICE-PRESIDENT"

Jackson Bearing Van Buren to the Presidency

From the collection of the New York Historical Society

[Pa.], and Senator Wright. Chief of the opponents of the bill were William C. Rives [Va.], Nathaniel P. Tallmadge [N. Y.], Senator Clay, and Senator Webster. The bill passed the Senate on October 4, 1837, by a vote of 26 to 20. It then went to the House, where, after full debate (in which, however, no arguments additional to those of the Senate were adduced), it was, on October 14, laid on the table by a vote of 119 to 107.

The Sub-Treasury Bill

Senate, September 19–October 4, 1837

Senator Calhoun.—An extraordinary course of events, with which all are too familiar to need recital, has separated, in fact, the Government and the banks. What relation shall they bear hereafter? Shall the banks again be used as fiscal agents of the Government? be the depositories of the public money? And, above all, shall their notes be considered and treated as money, in the receipts and expenditures of the Government? This is the great and leading question; one of the first magnitude, and full of consequences. I have given it my most anxious and deliberate attention; and have come to the conclusion that we have reached the period when the interests both of the Government and the banks forbid a reunion.

If, Mr. President, there be any one point fully established by experience and reason, I hold it to be the utter incompetency of the State banks to furnish, of themselves, a sound and stable currency. They may succeed in prosperous times, but the first adverse current necessarily throws them into utter confusion. Nor has any device been found to give them the requisite strength and stability, but a great, central, and controlling bank, instituted under the authority of this Government.

But there are difficulties in the way of a national bank, no less formidable than a reconnection with the State banks. It is utterly impracticable, at present, to establish one. There is reason to believe that a majority of the people of the United States are deliberately and unalterably opposed to it. At all events, there is a numerous, respectable, and powerful party (I refer to the old State Rights party), who are, and ever have been, from the beginning of the Government, opposed to the bank; and whose opinions, thus long and firmly entertained, ought at least to be so much respected as to forbid the creation of one, without an amendment of the Constitution. To this must be added the insuperable difficulty, that the Executive branch of the Government is openly opposed to it, and pledged to interpose his veto, on constitutional grounds, should a bill pass to incorporate one. For four years, at least, then, it will be impracticable to charter a bank. What must be done in the meantime? Shall the treasury be reorganized to perform the functions which have been recently discharged by the banks, or shall the State institutions be again employed until a bank can be created?

My opposition to a reunion with the banks is not confined to objections limited to national or State banks. It goes beyond, and comprehends others of a more general nature, relating to the currency, which to me are decisive. I am of the impression that the connection has a most pernicious influence over bank currency; that it tends to disturb that stability and uniformity of value which are essential to a sound currency; and are among the leading causes of that tendency to expansion and contraction which experience has shown is incident to bank notes as a currency. They are, in my opinion, at best, without the requisite qualities to constitute a currency, even when unconnected with the Government; and are doubly disqualified by reason of that connection, which subjects them to sudden expansions and contractions, and exposes them to fatal catastrophes, such as the present.

I will explain my views. A bank note circulates, not merely on account of the credit of the institution by which it is issued, but because Government receives it, like gold and silver, in all its dues, and thus adds its own credit to that of the bank. It, in fact, virtually indorses on the note of every specie-paying bank, "receivable by Government in its dues." To understand how greatly this adds to the circulation of bank notes, we must remember that Government is the great money dealer of the country, and the holder of immense public domains; and that it has the power of creating a demand against every citizen, as high as it pleases, in the shape of a tax, or duty, which can be discharged, as the law now is, only by bank notes or gold and silver. This, of course, cannot but add greatly to the credit of bank notes, and contribute much to their circulation.

It follows, as a necessary consequence, that, to the extent of this influence, the issues of the banks expand and contract with the expansion and contraction of the fiscal action of the Government; with the increase of its duties, taxes, income, and expenditure; with the deposits in its vaults acting as additional capital, and the amount of bank notes withdrawn, in consequence, from circulation; all of which must directly affect the amount of their business and issues; and bank currency must of course partake of all those vibrations to which the fiscal action of the Government is necessarily exposed, and, when great and sudden, must expose the system to catastrophes such as we now witness.

It is often easy to prevent what cannot be remedied, which the present instance strongly illustrates. If the Administration had formed a true conception of the danger in time, what

has since happened might have then been easily averted. The near approach of the expiration of the charter of the United States Bank would have afforded ample means of staying the desolation, if it had been timely and properly used. I saw it then, and proposed to renew the charter, for a limited period, with such modifications as would have effectually resisted the increasing expansion of the currency; and, at the same time, gradually and finally, wear out the connection between the bank and the Government:—to use the expression I then used, "to unbank the banks"; to let down the system easily, and so to effect the separation between the bank and the Government as to avoid the possibility of that shock which I then saw was inevitable without some such remedy. The moment was eminently propitious. The precious metals were flowing in on us from every quarter, and the vigorous measures I proposed to adopt in the renewal of the charter would have effectually arrested the increase of banks and checked the excess of their discounts and issues; so that the accumulating mass of gold and silver, instead of being converted into bank capital, and swelling the tide of paper circulation, would have been substituted in the place of bank notes, as a permanent and wholesome addition to the currency of the country.

But neither the Administration nor the opposition sustained me, and the precious opportunity passed unseized. I then clearly saw the coming calamity was inevitable, and it has neither arrived sooner, nor is it greater, than what I expected.

That the connection between the banks and the Government, the receiving and paying away their notes as cash, and the use of the public money from the time of the collection to the disbursement, is the source of immense profit to the banks, cannot be questioned. It is impossible to ascertain with any precision to what extent their issues and circulation depend upon it, but it certainly constitutes a large proportion. A single illustration may throw light upon this point. Suppose the Government were to take up the veriest beggar in the street, and enter into a contract with him, that nothing should be received in payment of its dues or for the sales of its public lands in future, except gold and silver and his promissory notes, and that he should have the use of the public funds from the time of their collection until their disbursement. Can anyone estimate the wealth which such a contract would confer? His notes would circulate far and wide over the whole extent of the Union; would be the medium through which the exchanges of the country would be performed; and his ample and extended credit would give him a control over all the banking institutions and moneyed transactions of the community. The possession of a hundred millions would not give a control more effectual. I ask, would it be fair, would it be equal, would it be consistent with the spirit of our institutions, to confer such advantages on any individual? And, if not on one, would it be if conferred on any number? And, if not, why should it be conferred on any corporate body of individuals? How can they possibly be entitled to benefits so vast, which all must acknowledge could not be justly conferred on any number of unincorporated individuals?

The union between bank and Government is not only a main source of that dangerous expansion and contraction in the banking system, which I have already illustrated, but is also one of the principal causes of that powerful and almost irresistible tendency to the increase of banks, which even its friends see and deplore. We have made banking too profitable—far, very far, too profitable; and, I may add, influential. One of the most ample sources of this profit and influence may be traced, as I have shown, to the connection with the Government; and is, of course, among the prominent causes of the strong and incessant tendency of the system to increase, which even its friends see must finally overwhelm either the banks or the institutions of the country. There can be but one safe and consistent remedy for this; the rendering banking, as a business, less profitable and influential; and the first and decisive step toward this is a disseverance between the banks and the Government.

I pass over other important objections to the connection; the corrupting influence and the spirit of speculation which it spreads far and wide over the land. Who has not seen and deplored the vast and corrupting influence brought to bear upon the legislatures to obtain charters, and the means necessary to participate in the profits of the institutions. This gives a control to the Government, which grants such favors, of a most extensive and pernicious character; all of which must continue to spread and increase, if the connection should continue, until the whole community must become one contaminated and corrupted mass.

There is another, and a final reason, which I shall assign against the reunion with the banks. We have reached a new era with regard to these institutions. He who would judge of the future by the past, in reference to them, will be wholly mistaken. The year 1833 marks the commencement of this era.

That extraordinary man who had the power of imprinting his own feelings on the community then commenced his hostile attacks, which have left such effects behind, that the war then commenced against the banks, I clearly see, will not terminate, unless there be a separation between them and the Government—until one or the other triumphs—till the Government becomes the bank, or the bank the Government. In resisting their union I act as the friend of both. I have, as I have said, no unkind feelings toward the banks. I am neither a bank man nor an anti-bank man. I have had little connection with them. Many of my best friends, for whom I have the highest esteem, have a deep interest in their prosperity, and as far as friendship or personal attachment extends, my inclination would be strongly in their favor. But I stand up here as the representative of no particular interest. I look to the whole, and to the future as well as the present; and I shall steadily pursue that course which, under the most enlarged view, I believe to be my duty. In 1834 I saw the present crisis. I in vain raised a warning voice, and endeavored to avert it. I now see, with equal certainty, one far more portentous. If this struggle is to go on—if the banks will insist upon a reunion with the Government, against the sense of a large and influential portion of the community—and, above all, if they should succeed in effecting it, a reflux flood will inevitably sweep away the whole system. A deep popular excitement is never without some reason, and ought ever to be treated with respect; and it is the part of wisdom to look timely into the cause, and correct it before the excitement shall become so great as to demolish the object, with all its good and evil, against which it is directed.

The only safe course for both Government and banks is to remain as they are, separated—each in the use of its own credit and in the management of its own affairs. The less the control and influence of the one over the other, the better. Confined to their legitimate sphere—that of affording temporary credit to commercial and business men, bank notes would furnish a safe and convenient circulation in the range of commerce and business, within which the banks may be respectively situated, exempt almost entirely from those fluctuations and convulsions to which they are now so exposed; or, if they should occasionally be subject to them, the evil would be local and temporary, leaving undisturbed the action of the Government, and the general currency of the country, on the stability of which the prosperity and safety of the community so much depend.

I am of the impression, to make this great measure successful and secure it against reaction, some stable and safe medium of circulation, to take the place of bank notes in the fiscal operations of the Government, ought to be issued. I intend to propose nothing. It would be impossible, with so great a weight of opposition, to pass any measure without the entire support of the Administration. I then intend merely to throw out suggestions, in order to excite the reflection of others on a subject so delicate, and of so much importance—acting on the principle that it is the duty of all in so great a juncture to present their views without reserve.

It is, then, my impression that, in the present condition of the world, a paper currency, in some form, if not necessary, is almost indispensable in financial and commercial operations of civilized and extensive communities. In many respects it has a vast superiority over a metallic currency, especially in great and extended transactions, by its greater cheapness, lightness, and the facility of determining the amount. The great desideratum is to ascertain what description of paper has the requisite qualities of being free from fluctuation in value, and liability to abuse, in the greatest perfection. I have shown, I trust, that the bank notes do not possess these requisites in a degree sufficiently high for this purpose. I go further. It appears to me, after bestowing the best reflection I can give the subject, that no convertible paper—that is, no paper whose credit rests upon a *promise to pay*—is suitable for currency. It is the form of credit proper in private transactions between man and man, but not for a standard of value, to perform exchanges generally, which constitute the appropriate functions of money or currency. The measures of safety in the two cases are wholly different. A promissory note, or convertible paper, is considered safe so long as the drawer has ample means to meet his engagements; and, in passing from hand to hand, regard is had only to his ability and willingness to pay. Very different is the case in currency. The aggregate value of the currency of a country necessarily bears a small proportion to the aggregate value of its property. It follows that an increase in the amount of the currency, by the addition of a paper circulation of no intrinsic value, but increases the nominal value of the aggregate property of the country in the same proportion that the increase bears to the whole amount of currency; so that, if the currency be doubled, the nominal value of the property will also be doubled. Hence it is that, when the paper currency of a country is in the shape of promissory

notes, there is a constant tendency to excess. And hence, with other causes, there is the constant tendency to an excessive issue of bank notes in prosperous times, when so large a portion of the community are anxious to obtain accommodation, and who are disappointed when negotiable paper is refused by the banks—not reflecting that it would not be safe to discount beyond the limits of a safe circulation, however good the paper offered.

On what, then, ought a paper currency to rest? I would say, on demand and supply simply, which regulates the value of everything else—the constant demand which the Government has on the community for its necessary supplies. A medium, resting on this demand, which simply obligates the Government to receive it in all of its dues, to the exclusion of everything else, except gold and silver—and which shall be optional with those who have demands on Government to receive or not, would, it seems to me, be as stable in its value as those metals themselves, and be as little liable to abuse as the power of coining. It would contain within itself a self-regulating power. It could only be issued to those who had claims on the Government, and to those only with their consent, and, of course, only at or above par with gold and silver, which would be its habitual state; for, so far as the Government was concerned, it would be equal, in every respect, to gold and silver, and superior in many, particularly in regulating the distant exchanges of the country. Should, however, a demand for gold and silver from abroad, or other accidental causes, depress it temporarily, as compared with the precious metals, it would then return to the treasury, and as it could not be paid out during such depression, its gradual diminution in the market would soon restore it to an equality, when it would again flow out into the general circulation. Thus there would be a constant alternate flux and reflux into and from the treasury, between it and the precious metals; but, if at any time a permanent depression in its value be possible from any cause, the only effect would be to operate as a reduction of taxes on the community, and the only sufferer would be the Government itself. Against this its own interest would be a sufficient guaranty.

Nothing but experience can determine what amount and of what denominations might be safely issued; but it may be safely assumed that the country would absorb an amount greatly exceeding its annual income. Much of its exchanges, which amount to a vast sum, as well as its banking business, would revolve about it, and many millions would thus be kept in circulation beyond the demands of the Government. It may throw some light on this subject to state that North Carolina, just after the Revolution, issued a large amount of paper, which was made receivable in dues to her. It was also made a legal tender, but which, of course, was not obligatory after the adoption of the Federal Constitution. A large amount, say between four and five hundred thousand dollars, remained in circulation after that period, and continued to circulate for more than twenty years at par with gold and silver during the whole time, with no other advantage than being received in the revenue of the State, which was much less than $100,000 per annum.

No one can doubt that the fact of the Government receiving and paying away bank notes in all its fiscal transactions is one of the principal sources of their great circulation; and it was mainly on that account that the notes of the late Bank of the United States so freely circulated all over the Union. I would ask, then, why should the Government mingle its credit with that of private corporations? No one can doubt but that the Government credit is better than that of any bank—more stable and more safe. Why then should it mix it up with the less perfect credit of those institutions? Why not use its own credit to the amount of its own transactions? Why should it not be safe in its own hands, while it shall be considered safe in the hands of eight hundred private institutions scattered all over the country, and which have no other object but their own private profits, to increase which, they almost constantly extend their business to the most dangerous extremes? And why should the community be compelled to give six per cent. discount for the Government credit blended with that of the banks, when the superior credit of the Government could be furnished separately, without discount, to the mutual advantage of the Government and the community? Why, let me ask, should the Government be exposed to such difficulties as the present, by mingling its credit with the banks, when it could be exempt from all such by using by itself its own safer credit? It is time the community, which has so deep an interest in a sound and cheap currency, and the equality of the laws between one portion of the citizens and the country and another, should reflect seriously on these things; not for the purpose of oppressing any interest, but to correct gradually disorders of a dangerous character, which have insensibly, in the long course of years, without being perceived by anyone, crept into the State.

Having now presented my views of the course and the

measures which the permanent policy of the country, looking to its liberty and lasting prosperity, requires, I come finally to the question of relief. The patient lies under a dangerous disease, with a burning thirst and other symptoms, which distress him more than the vital organs which are attacked. The skillful physician first makes himself master of the nature of the disease, and then determines on the treatment necessary for the restoration of health. This done, he next alleviates the distressing symptoms, as far as is consistent with the restoration of health, and no further. Such shall be my course.

After the best reflection, I am of the opinion that the Government can do but little in the way of relief, and that it is a case which must be mainly left to the constitution of the patient, who, thank God, is young, vigorous, and robust, with a constitution sufficient to sustain and overcome the severest attack. I dread the doctor and his drugs much more than the disease itself. The distress of the country consists in its indebtedness, and can only be relieved by payment of its debts. To effect this, industry, frugality, economy, and *time* are necessary. I rely more on the growing crop—on the cotton, rice, and tobacco of the South—than on all the projects or devices of politicians. I am utterly opposed to all coercion by this Government. But Government may do something to relieve the distress. It is out of debt, and is one of the principal creditors both of the banks and of the merchants, and should set an example of liberal indulgence. This I am willing to give freely. I am also prepared to vote freely the use of Government credit, in some safe form, to supply any deficit in the circulation during the process of recovery, as far as its financial wants will permit. I see not what more can be safely done.

We have, Mr. President, arrived at a remarkable era in our political history. The days of legislative and executive encroachments, of tariffs and surpluses, of bank and public debt, and extravagant expenditure are past for the present. The Government stands in a position disentangled from the past, and freer to choose its future course than it ever has been since its commencement. We are about to take a fresh start. I move off under the State Rights banner, and go in the direction in which I have been so long moving. I seize the opportunity thoroughly to reform the Government; to bring it back to its original principles; to retrench and economize, and rigidly to enforce accountability. I shall oppose, strenuously, all attempts to originate a new debt; to create a national bank; to reunite the political and money powers (more dangerous than Church

and State) in any form or shape; to prevent the disturbances of the compromise, which is gradually removing the last vestige of the tariff system; and, mainly, I shall use my best efforts to give an ascendency to the great conservative principle of State sovereignty, over the dangerous and despotic doctrine of consolidation. I rejoice to think that the Executive Department of the Government is now so reduced in power and means that it can no longer rely on its influence and patronage to secure a majority. Henceforward it can have no hope of supporting itself but on wisdom, moderation, patriotism, and devoted attachment to the Constitution, which I trust will make it, in its own defence, an ally in effecting the reform which I deem indispensable to the salvation of the country and its institutions.

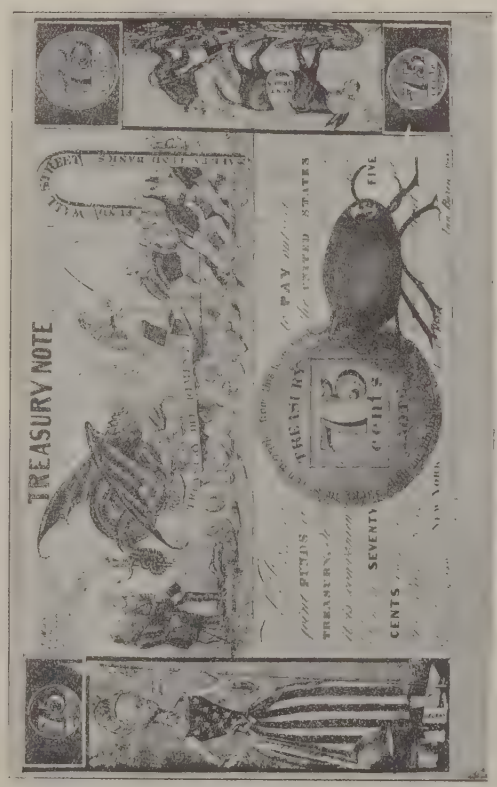
SENATOR RIVES.—Sir, I have always been taught to believe—my honorable colleague and myself learned it from the bill of rights of our own State as soon as we were capable of reading—that a common interest between the governors and the governed is a fundamental principle of free institutions, and that the best means of "restraining the former from oppression is to make them feel and participate in the burdens of the latter." Let the Government share the same fate with the citizen, and you give it the strongest of all motives to watch over the general interests. On the other hand, place it in a position different from that of the great body of the community, especially in so vital a matter as that of its revenue and pecuniary support, and you make it at once callous and indifferent to the sufferings of the people, and even give it an interest to perpetuate those sufferings. You destroy all sympathy on the part of the Government with the people, and you alienate the confidence and affections of the people from the Government.

What, sir, is at this moment the ungracious attitude in which the Government is placed toward the people? Its officers and contractors are paid in gold and silver, or in treasury drafts made receivable in discharge of public dues, and therefore nearly equivalent to gold and silver, while the community at large are left to conduct their business as they may, in an irredeemable paper currency. Does not this operate as a virtual increase of the salaries of public officers, in the midst of general distress affecting all the rest of the community? The gold and silver which they receive is at a premium of ten or twelve per cent., and the treasury drafts at seven or eight per cent., above the actual and common currency of the country. This premium is, I repeat, an addition of so much to the amount of their salaries; for, in a practical sense, there has as yet been

no depreciation in the value of current bank notes. They pass for as much in the ordinary business of life—in the payment of debts, in the purchase of necessaries and conveniences, of whatever is worn, drunk, or eaten—as they ever did. The premium, then, which the public officers and contractors obtain on their gold and silver and treasury drafts is so much clear gain to them. And at whose expense is it acquired? Is it not at that of the great body of the people, the ultimate taxpayers and supporters of the Government? Does anyone suppose that the importing merchant, who has to give ten or twelve per cent. for the gold and silver, and seven or eight per cent. for the treasury drafts, with which he pays his duties to the Government, does not add an equal amount, with the usual profit upon it, to the price of his goods? It is, then, the consumer at last, or, in other words, the great body of the people, who are subject to increased taxation for the benefit of the officeholder and the contractor.

Sir, this is a state of things which I do not wish to see perpetuated. It is contrary to the genius and fundamental principles of our republican system. Of all schemes of policy I can conceive, that which proposes a permanent distinction between the Government and the people in their pecuniary interests—one currency, and that the better one, for the Government, and another and inferior currency for the people—such a system of discrimination is, to my mind, of all others, the most injurious and revolting in principle, the most heartless in character, and the most despotic in its tendencies. It is like quartering the Government, as a foreign enemy, on the heart of the country. You intrench it behind a frowning fortification, surround it with battlements, and lay the country, far and near, under contribution for the support of this garrison of officeholders. Desolation and oppression are without, while the tenants of the citadel are reveling in luxury and profusion within. I am not willing, for one, to see the Government of my country placed in this anti-social, if not belligerent, attitude toward the people. I am not willing that this favored land, to which the nations of the earth are looking for a successful example of the practical enjoyment of free institutions, should exhibit such a spectacle of inequality and oppression in the eyes of the world.

Much reliance, Mr. President, has been placed on the popular catchword of divorcing the Government from all connection with banks. Nothing is more delusive and treacherous than catchwords. How often has the revered name of liberty been invoked, in every quarter of the globe, and every age of the world, to disguise and sanctify the most heartless despot-



"SHINPLASTER" CARICATURE OF VAN BUREN, JACKSON, AND CALHOUN
From the collection of the New York Historical Society

ism. Let us beware that, in attempting to divorce the Government from all connection with banks, we do not end with divorcing the Government from the people.

SENATOR TALLMADGE.—The banks are now as able, with the aid and confidence of the Government, to perform all the duties required of them as they were before. We have the testimony of the President and the Secretary of the Treasury that they performed them as well as the Bank of the United States. They are capable of doing the same again in the same way. I am not, therefore, prepared to say that, on account of the calamity which has befallen the country, the experiment has failed, and they ought not to be employed a second time. No, sir; such a catastrophe may not occur again in the course of a century. One reason assigned for it now was the existence of an enormous surplus in the treasury. This cause is not likely to exist hereafter, for every man is willing to bring down our receipts to the measure of our wants; and under that, as a general rule, such a catastrophe might never happen again. The banks have abundance of means to meet all their engagements. Such being the case, all that is necessary is to create confidence, to restore confidence, and they will be found able to perform all that is required of them. Let that confidence be extended to them by the Government in good faith, and let them be placed on their former footing. Let the Government pursue a system which has been tried, and which we know will prove effectual, instead of attempting an "untried expedient," the disastrous consequences of which cannot be anticipated, and which, I fear, imagination can scarcely depict.

This new experiment consists in a "divorce of bank and state." This is a mere catchphrase, which was originally introduced by artful and designing politicians to impose upon the credulity and honesty of the people. Many have adopted it without reflecting or inquiring as to its import or its consequences. First impressions are favorable to it; it summons to our recollection our early impressions of a "divorce of church and state." But it is the duty of wise statesmen and discreet politicians to consider well the evils which must follow the adoption of any system heretofore untried and of doubtful policy, however euphonious the phrase may be which designates its character before the people.

The proposition contained in these few catchwords strikes at the very foundation of the credit system of the country. It does not stop with the destruction of bank credit, but strangles, in its withering grasp, commercial credit also. It establishes

a depreciated paper currency for the people, and an appreciated specie currency for the incumbents of office, and for Government contractors. It gives the baser currency to the master, and the "better currency" to the servant. In a Government like ours it is impossible long to preserve our institutions or our liberties if such distinctions are to prevail. It separates the Government of the people from the people themselves, as if those whom the people have chosen to direct their affairs were of a superior order, or distinct class in society, endowed with peculiar privileges beyond the rest of the community. It has a tendency to alienate the affections of the people from the Government. They will come to consider it not as a Government identified with their feelings and interests, but as something foreign to them. This is not all. The Government itself will lose in a measure the idea of dependence on the people. This want of dependence is too much felt already. Put this additional power into its hands, and the identity of interests which exists, or ought to exist between them, is done away.

Under this system, the specie of the country will be drawn from circulation, and from the vaults of the banks, where it is the basis of circulation and of confidence, and deposited in these sub-treasury vaults, till the country is left without a sufficient circulating medium to transact its ordinary business. The farmer, the merchant, the manufacturer, and the mechanic will be unable to command the means to pursue their ordinary avocations, no matter what their property may be. They may be rich in houses and lands, in goods and merchandise, in manufactures and machinery, in materials, in tools and implements of trade, nay, they may possess the best of bonds and mortgages, and every species of stock which has heretofore been deemed equivalent to money, and still they will be unable to carry on their ordinary business for want of a circulating medium by which to transact it. Credit is the poor man's capital, as well as the auxiliary of the rich. Deprive him of this, and his habits of industry, his character for probity, his good name and reputation avail him nothing. He has no means by which he can rise above the ordinary occupation of a day laborer. With a growing family, and the increased expense of living, he is doomed to abject poverty, without the slightest hope of ever gaining that standing and that condition in society which a "well-regulated credit system" always holds out to the enterprising, the honest, the industrious portion of the community.

The tendency of this scheme is to bring the country virtu-

ally to an exclusive metallic currency. Whatever gentlemen may say on this subject, this wild and visionary theory is gaining ground with a certain portion of our population. It is propagated by reason of the countenance which it is supposed to receive from men in high places. Meetings have been held in New York and elsewhere, at which an exclusive metallic currency has been resolved on as the only true policy. All paper money of every description has been repudiated, as contrary to the genius of our Government and the spirit of our institutions. In the same resolutions, men in elevated stations have been applauded by name for maintaining the same doctrines. The proceedings of such meetings have been responded to in terms of approbation, thereby tacitly acquiescing in all the principles set forth in them, and thus giving currency to them with the people. It is the belief that such principles are recognized by those to whose approval they are submitted that excites the alarm and apprehension which pervade the rational and thinking portion of the community. It is this, too, which gives countenance to the idea that the sub-treasury scheme is intended to bring about an exclusive metallic currency.

Gentlemen are very anxious, apparently, for this divorce, as they are pleased to term it. I would remind them, however, that, while they are talking of a divorce, they are getting up an incestuous union between members of the same family—a marriage which is unlawful; and which I would say comes within the Levitical decrees, and therefore ought to be forbidden.

This union which is now proposed is a most unsafe and dangerous one. It reminds me of an anecdote of a captain of a packet with whom I was acquainted, who informed me that he always found it indispensably necessary, for the safety of his ship's stores, to have his cook and his steward of different families, and if possible of different colors, and, if he could get up a fight between them, it was all the better; for, if they were connected together in a common bond of interest or affection, the stores were apt to be wasted. So here, I think our stores, the stores of the ship of state, will not be safe, if a union take place between the Government and the public treasury, which ought to be separated in different sets of hands, and those, too, antagonistic hands.

I do not wish to disparage our public officers or those who may be employed under this system. But I look at human nature as it is. I look at the temptations to which they are exposed. The confidence of individuals in their own integrity may be unbounded, and they will never suspect it till put to

the test of such temptations as will be presented under this system. I mean no unnecessary or improper disparagement when I say I have no faith in the safety of the public money if this scheme goes into operation. There is danger in every stage of it. And no opportunity will pass unimproved where the temptation is sufficiently presented. There is no safety in it.

> "You may as well spread out the unsunn'd heaps
> Of miser's treasure by an outlaw's den,
> And tell me it is safe, as bid me hope
> Danger will wink on opportunity."

SENATOR BENTON.—I am for restoring to the Federal treasury the currency of the Constitution. I am for carrying back this Government to the solidity projected by its founders. This is a great object in itself—a reform of the first magnitude—a reformation with healing on its wings, bringing safety to the Government and blessings to the people. The currency is a thing which reaches every individual and every institution.

Great are the evils, political, pecuniary, and moral, which have flowed from this departure from our Constitution. Through the Federal Government alone—through it, not by it—two millions and a half of money have been lost in the last four months. Thirty-two millions of public money was the amount in the deposit banks when they stopped payment; of this sum twenty-five millions have been paid over to Government creditors, or transferred to the States. But how paid, and how transferred? In what? In real money, or its equivalent? Not at all! But in the notes of suspended banks—in notes depreciated, on an average, ten per cent. Here then were two and a half millions lost. Who bore the loss? The public creditors and the States. Who gained it? for where there is a loss to one there must be a gain to another. Who gained the two and a half millions thus sunk upon the hands of the creditors and the States? The banks were the gainers; they gained it; the public creditors and the States lost it; and to the creditors it was a forced loss. It is in vain to say that they consented to take it. They had no alternative. It was that or nothing. The banks forced it upon the Government; the Government forced it upon the creditor. Consent was out of the question. Power ruled, and that power was in the banks; and they gained the two and a half millions which the States and the public creditors lost.

The Senator from New York [Mr. Tallmadge] has predicted

an argument in favor of the local banks on account of the small amount of the public money which has been lost in their hands; but here is two and a half millions in a single operation, and without going back to the period of bank stoppages in 1819 and 1814. He confines himself to direct losses, but that is a most imperfect view of the question. The full view embraces, besides direct losses, all that are incidental to the use of depreciated paper money; increased prices—disappointed operations by sea and land in time of war—and embarrassed operations in time of peace; per centums shaved off at every step; the ignorant, the helpless, the necessitous imposed upon; and one vast scene of pushing off bad paper on each other exhibited all over the country.

I do not pretend to estimate the moneyed losses, direct or indirect, to the Government alone, from the use of local bank notes, in the last twenty-five years, including the war, and covering three general suspensions. Leaving the people out of view, as a field of losses beyond calculation, I confine myself to the Federal Government, and say its losses have been enormous, prodigious, and incalculable. We have had three general stoppages of the local banks in the short space of twenty-two years. It is at the average rate of one in seven years; and who is to guarantee us from another, and from the consequent losses, if we continue to receive their bills in payment of public dues. Another stoppage must come, and that, reasoning from all analogies, in less than seven years after the resumption. Many must perish in the attempt to resume, and would do better to wind up at once, without attempting to go on, without adequate means, and against appalling obstacles. Another revulsion must come. Thus it was after the last resumption (in 1817). Why was it that, within two years after resumption, both in England and in our America, these disastrous revulsions ensued? Loss of confidence was the cause; and that loss resulting, not from the act of Government, but from the conduct of the banks themselves. The banks had failed, and, therefore, could fail. The people had seen them fail, and, therefore, they feared they might do so again. There was no confidence in them; no more than the coachman places in the balking horse when he comes to the hill. The gentleman from Virginia [Mr. Rives] wishes the Government to do something to reanimate confidence in these banks. Could a law of Congress inspire confidence into his coachman, and give him faith in the balking horse? No more can it be done in relation to these banks. They have stopped, universally and simultaneously, in a season of profound peace and general prosperity—no war, no pestilence, no famine—with four times as much specie in the country as ever was in it before; and this stoppage has killed confidence. It is dead by the act of the banks, and cannot be legislated into existence again by act of Congress. Confidence is a plant of voluntary and not of forced existence. It is said by an eminent man to be a plant of slow growth. We all know it to be so; and we know, besides, that, when this plant is once pulled up by the roots, it rarely takes root again in the same place.

The Senators from New York and Virginia [Messrs. Tallmadge and Rives] push this point of confidence a little further; they address a question to me, and ask if I would lose confidence in all steamboats, and have them all discarded, if one or two blew up in the Mississippi? I answer the question in all frankness and say that I should not. But if, instead of one or two in the Mississippi, all the steamboats in the Union should blow up at once—in every creek, river, and bay—while all the passengers were sleeping in confidence, and the pilots crying out all is well; if the whole should blow up from one end of the Union to the other just as fast as they could hear each other's explosions; then, indeed, I should lose confidence in them, and never again trust wife, or child, or my own foot, or anything not intended for destruction, on board such sympathetic and contagious engines of death. I answer further, and tell the gentlemen that, if only one or two banks had stopped last May in New York, I should not have lost all confidence in the remaining nine hundred and ninety-nine; but when the whole thousand stopped at once; tumbled down together—fell in a lump—lie there—and when one of their number, by a sign with the little finger, can make the whole lie still, then, indeed, confidence is gone! And this is the case with the banks. It did not take a national calamity—a war to stop them! They fell in time of peace and prosperity! We read of people in the West Indies and in South America who rebuild their cities on the same spot where earthquakes have overthrown them; we are astonished at their fatuity; we wonder that they will build again on the same perilous foundations. But these people have a reason for their conduct; it is that their cities are destroyed only by earthquakes; and, when there is no earthquake, they are safe. But suppose their cities fell down without any commotion in the earth or the air—fell in a season of perfect calm and serenity—and after that the survivors should go to building again in the same place; would not all the world say that they were demented and were doomed to destruction? So of the Govern-

ment of the United States by these banks. If it continues to use them, and to receive their notes for revenue, after what has happened, and in the face of what now exists, it argues fatuity and a doom to destruction.

Resume when they will, or when they shall, and the longer it is delayed the worse for themselves, the epoch of resumption is to be a perilous crisis to many. This stopping and resuming by banks is the realization of the poetical description of the descent into hell, and the return from it. *Facilis descensus Averni—sed revocare gradum—hoc opus, hic labor est.* Easy is the descent into the regions below, but to return! this is work, this is labor indeed! Our banks have made the descent; they have gone down with ease; but to return—to ascend the rugged steps, and behold again the light above—how many will falter and fall back again into the gloomy regions below!

Banks of circulation are banks of hazard and of failure. It is an incident of their nature. Those without circulation rarely fail. That of Venice has stood seven hundred years; those of Hamburg, Amsterdam, and others have stood for centuries. The Bank of England, the great mother of banks of circulation, besides an actual stoppage of a quarter of a century, has had her crisis and convulsion in average periods of seven or eight years, for the last half century—in 1783, '93, '97, 1814, '19, '25, '36—and has been saved from repeated failure only by the powerful support of the British Government and profuse supplies of exchequer bills. Her numerous progeny of private and joint stock banks of circulation have had the same convulsions; and, not being supported by the Government, have sunk by hundreds at a time. All the banks of the United States are banks of circulation; they are all subject to the inherent dangers of that class of banks, and are, besides, subject to new dangers peculiar to themselves. From the quantity of their stock held by foreigners, the quantity of other stocks in their hands, and the current foreign balance against the United States, our paper system has become an appendage to that of England. As such, it suffers from sympathy when the English system suffers. In addition to this, a new doctrine is now broached—that our first duty is to foreigners! and, upon this principle, when the banks of the two countries are in peril, ours are to be sacrificed to save those of England!

The power of a few banks over the whole presents a new feature of danger in our system. It consolidates the banks of the whole Union into one mass, and subjects them to one fate, and that fate to be decided by a few, without even the knowledge

of the rest. An unknown divan of bankers sends forth an edict which sweeps over the empire, crosses the lines of States with the facility of a Turkish firman, prostrating all State institutions, breaking up all engagements, and leveling all law before it. This is consolidation of a kind which the genius of Patrick Henry had not even conceived. But, while this firman is thus potent and irresistible for prostration, it is impotent and powerless for resurrection. It goes out in vain, bidding the prostrate banks to rise. A veto power intervenes. One voice is sufficient to keep all down; and thus we have seen one word from Philadelphia[1] annihilate the New York proposition for resumption, and condemn the many solvent banks to the continuation of a condition as mortifying to their feelings as it is injurious to their future interests.

But what excuse, what apology, what justification have we for surrendering, abandoning, and losing the precise advantage for which the present Constitution was formed? What was that advantage—what the leading and governing object which led to the abandonment of the old confederation and induced the adoption of the present form of government? It was revenue! independent revenue! a revenue under the absolute control of this Government, and free from the action of the States. This was the motive, the leading and governing motive, which led to the formation of this Government. The reason was that the old Confederation, being dependent upon the States, was often left without money. This state of being was incompatible with its existence; it deprived it of all power; its imbecility was a proverb. To extricate it from that condition was the design and the cardinal design of the new Constitution. An independent revenue was given to it—independent even of the States. Is it not suicidal to surrender that independence, and to surrender it, not to States, but to money corporations? What does history record of the penury and moneyed destitution of the old Confederation, comparable to the annihilation of the revenues of this Government in May last, when the banks shut down, in one night, upon a revenue in hand of thirty-two millions; even upon that which was in the names of disbursing officers, and refuse a nine-pence or a picaillon[2] in money from that day to this? The old Confederation was often reduced low—often near empty-handed—but never saw itself stripped in an instant, as if by enchantment, of tens of millions and heard the shout of triumph thundered over its head, and the notes of

[1] From Nicholas Biddle, President of the Bank of the United States.
[2] Picayune.

exultation sung over its supposed destruction! Yet this is what we have seen—what we now see—from having surrendered to corporations our moneyed independence, and unwisely abandoned the precise advantage which led to the formation of this Federal Government.

I do not go into the moral view of this question. It is too obvious, too impressive, too grave, to escape the observation of anyone. Demoralization follows in the train of an unconvertible paper money. The whole community becomes exposed to a moral pestilence. Every individual becomes the victim of some imposition, and, in self-defence, imposes upon some one else. The weak, the ignorant, the uninformed, the necessitous are the sufferers; the crafty and the opulent are the gainers. The evil augments until the moral sense of the community, revolting at the frightful accumulation of fraud and misery, applies the radical remedy of total reform.

Thus pecuniary, political, and moral considerations require the Government to retrace its steps, to return to first principles, and to restore its fiscal action to the safe and solid path of the Constitution. Reform is demanded. It is called for by every public and by every private consideration. Now is the time to make it. The connection between bank and State is actually dissolved. It is dissolved by operation of law, and by the delinquency of these institutions. They have forfeited the right to the deposits, and lost the privilege of paying the revenue in their notes, by ceasing to pay specie. The Government is now going on without them, and all that is wanting is the appropriate legislation to perpetuate the divorce which, in point of fact, has already taken place. Now is the time to act; this the moment to restore the constitutional currency to the Federal Government; to restore the custody of the public moneys to national keepers; and to avoid, in time to come, the calamitous revulsions and perilous catastrophes of 1814, 1819, and 1837.

SENATOR CLAY.—We are told that it is necessary to separate, divorce the Government from the banks. Let us not be deluded by sounds. Senators might as well talk of separating the Government from the States, or from the people, or from the country. We are all—people—States—Union—banks—bound up and interwoven together, united in fortune and destiny, and all, all entitled to the protecting care of a parental government. You may as well attempt to make the Government breathe a different air, drink a different water, be lit and warmed by a different sun from the people! A hard-money government and a paper-money people! A Government, an official corps—the

servants of the people—glittering in gold, and the people themselves, their masters, buried in ruin, and surrounded with rags.

No prudent or practical government will in its measures run counter to the long-settled habits and usages of the people. Religion, language, laws, the established currency and business of the whole country cannot be easily or suddenly uprooted. After the denomination of our coin was changed to dollars and cents many years elapsed before the old method of keeping accounts, in pounds, shillings, and pence, was abandoned. And to this day there are probably some men of the last century who adhere to it. If a fundamental change becomes necessary, it should not be sudden, but conducted by slow and cautious degrees. The people of the United States have always been a paper-money people. It was paper money that carried us through the Revolution, established our liberties, and made us a free and independent people. And, if the experience of the Revolutionary War convinced our ancestors, as we are convinced, of the evils of an irredeemable paper medium, it was put aside only to give place to that convertible paper which has so powerfully contributed to our rapid advancement, prosperity, and greatness.

The proposed substitution of an exclusive metallic currency, to the mixed medium with which we have been so long familiar, is forbidden by the principles of eternal justice. Assuming the currency of the country to consist of two-thirds of paper and one of specie, and assuming also that the money of a country, whatever may be its component parts, regulates all values, and expresses the true amount which the debtor has to pay to his creditor, the effect of the change upon that relation and upon the property of the country would be most ruinous. All property would be reduced in value to one-third of its present nominal amount; and every debtor would, in effect, have to pay three times as much as he had contracted for. The pressure of our foreign debt would be three times as great as it is, while the six hundred millions, which is about the sum now probably due to the banks from the people, would be multiplied into eighteen hundred millions.

There are more specific objections to this project of subtreasuries, which deserve to be noticed. The chief is the fearful increase of Executive patronage.

Hundreds and thousands of new officers are to be created; for this bill is a mere commencement of the system, and all are to be placed under the direct control of the President.

The Senator from South Carolina [Mr. Calhoun] thinks

that the Executive is now weak, and that no danger is to be apprehended from its patronage. I wish to God I could see the subject in the same light that he does. I wish that I could feel free from that alarm at Executive encroachments by which he and I were so recently animated. When and how, let me ask, has that power, lately so feared and formidable, suddenly become so weak and harmless? Where is that corps of one hundred thousand officeholders and dependents whose organized strength, directed by the will of a single man, was lately held up in such vivid colors and powerful language by a report made by the Senator himself? When were they disbanded? What has become of proscription? Its victims may be exhausted, but the spirit and the power which sacrificed them remain unsubdued. What of the dismissing power? What of the vote? Of that practice of withholding bills, contrary to the Constitution, still more reprehensible than the abuses of the veto? Of treasury orders, put in force and maintained in defiance and contempt of the legislative authority? And, although last, not least, of that expunging power which degraded the Senate, and placed it at the feet of the Executive?

Which of all these enormous powers and pretensions has the present Chief Magistrate disavowed? So far from disclaiming any one of them, has he not announced his intention to follow in the very footsteps of his predecessor? And has he not done it? Was it against the person of Andrew Jackson that the Senator from South Carolina so ably coöperated with us? No, sir, no, sir, no. It was against his usurpations, as we believed them; against his arbitrary administration; above all, against that tremendous and frightful augmentation of the power of the Executive branch of the Government, that we patriotically but vainly contended. The person of the Chief Magistrate is changed, but there stands the Executive power, perpetuated in all its vast magnitude, undiminished, reasserted, and overshadowing all the other departments of the Government. Every trophy which the late President won from them now decorates the Executive mansion. Every power which he tore from a bleeding Constitution is now in the Executive armory, ready, as time and occasion may prompt the existing incumbent, whoever he may be, to be thundered against the liberties of the people.

Whatever may have been the motives or the course of others, I owe it to myself and to truth to say that, in deprecating the election of General Andrew Jackson to the office of Chief Magistrate, it was not from any private considerations, but because

I considered it would be a great calamity to my country; and that, in whatever opposition I made to measures of his Administration, which more than realized my worst apprehensions, I was guided solely by a sense of public duty. And I do now declare my solemn and unshaken conviction that, until the Executive power, as enlarged, extended, and consolidated by him, is reduced within its true constitutional limits, there is no permanent security for the liberties and happiness of this people.

Pass this bill, and whatever divorce its friends may profess to be its aim, that perilous union of the purse and the sword, so justly dreaded by our British and Revolutionary ancestors, becomes absolute and complete. And who can doubt it who knows that over the Secretary of the Treasury at Washington, and every sub-treasurer, the President claims the power to exercise uncontrolled sway?

SENATOR WALKER.—Sir, the Senator from South Carolina [Mr. Calhoun] is right; and I hail him back with pleasure, on this question, to the ranks of the Democracy, of which he was so long the pride and ornament. Well may he who has on this floor so repeatedly opposed the augmentation of Executive power—well may he support the bill now under consideration; because it not only adds nothing to Executive patronage, but takes from it that alarming patronage and power that it could have acquired through the deposit bank system.

Vague and general denunciation we have indeed had, but how one iota of power or patronage will be conferred on the President by this bill, in addition to that which he already possesses, has not been designated; but, were it so conferred, the bank patronage, of which this bill deprives him, would be infinitely greater.

The President's message is against the extension of Executive patronage. Its cardinal doctrine is this: "A limitation of the expenses of the Government to its actual wants, and of the revenue to those expenses." This, then, is the President's doctrine, openly avowed in his message—reduction of the expenses and of the revenue, economy in all public expenditures, and no "interference with the pursuits of the citizen." "No special favors to individuals or any classes of them, to create systems of agriculture, manufactures, or trade." These are the doctrines of the message; and do they enlarge Executive patronage? How is Executive patronage enlarged? It is chiefly by extending the powers of this Government, and augmenting its revenues; for every increase of the powers and revenue of the Government is an augmentation of the power of the Executive

functionary. This the message avoids; but what measures would the Senator from Kentucky give us to reduce Executive patronage? His policy would give us a quadruple alliance between the surplus, the bank, the tariff, and internal improvements, all certainly tending to, and terminating in, a national debt, to create a new tariff. The tariff to regulate the whole industry of the whole people of the Union and build up vast manufacturing establishments by the extension and perversion of the taxing power of this Government. A great national bank, to grow rich upon the revenue deposited from the proceeds of the tariff, deriving its profits from Government moneys, and, of course, the ally of the Administration which feeds and created it. The internal improvement policy, growing and extending with the increase of the tariff, and making roads and canals in some favored States, by taxes collected from the whole people; and, lastly, to give universality to the principle, the surplus—the annual surplus for distribution, from sales, by townships and counties at an entry, to speculators in the public lands—a system calculated to debauch and corrupt the States; to break down every feeling of State independence; to feed them annually, from the public treasury, mere stipendiaries upon our bounty; supporting even their State governments and State officers from the revenues of this Government. And at the head of this mighty system, this consolidation of all powers in this Government, would stand the Executive of those powers—the President of the United States, a monarch in everything but a name. And, sir, this league of State banks, confederated by the Government, and fed by the tariff, increasing its deposits and profits, would be the next most potent ally of these systems. It would station some hundred bank fortresses throughout the States, armed and equipped by Government deposits, and extending Executive power and influence. All this President Van Buren would avoid. No, sir, no; it is not the principle or policy of this Administration—Give us patronage and we will make ourselves popular.

It is said this bill, separating the Government from the banks, will divorce the Government from the people. Are the banks the people? No, sir; this bill will elevate the people, and the Government of the people, and of the States, above the banks, and prevent them from arresting the Government, as they now do, by withholding the public revenue. It will have a still greater tendency to elevate the people above the banks, by diminishing, by its incidental operation, the amount of bank paper, and increasing the circulation of gold and silver—for the

payment of it into the treasury will be as constantly flowing out, enriching and fertilizing the whole country.

We have been told that the terms divorce of bank and state, as reminding the people of the divorce of church and state, are popular catchwords. I have not used these terms, although I firmly believe that the union of bank and state would soon prove as fatal to liberty as the union of church and state; but, let me ask, are not the terms used upon the other side—one currency for the people, and another for the Government—and the terms separating the Government from the people, mere popular catchwords, which will not bear, as we have seen, the slightest examination. It is said this bill will destroy credit by impairing confidence in banks. Have we not had too much confidence in banks, and have they not proved the greatest and universal destroyers of all credit and all confidence? Yes, these very banks, by their expansions, contractions, and failures, destroyed all confidence and all credit, not only in themselves, but also between man and man, and almost between nation and nation. It is the banks that render prices, confidence, and credit fluctuating and uncertain; and, before their existence, the page of history tells that confidence and credit, between man and man, were infinitely more universal, and that protest of bills of exchange and mercantile failures were then almost wholly unknown. Specie was not hoarded nor credit withheld from honest industry, but universally extended, unchecked by that overthrow of all confidence and all credit, arising from expansions, contractions, and explosions of the bank paper system. We are told that confidence, confidence is the magic word, and the Government has only to breathe into these banks the breath of confidence, and all will be well. Sir, if these banks, limited and restrained by the State legislatures, ought to be continued, I would rather, by the ultimate incidental operation of this bill, push a little more of their paper out of circulation, and much more specie into the vaults, than all the false and delusive confidence that could be excited by the Government indorsement of eight hundred and twenty-three suspended State banks.

While this measure will have a most beneficial effect upon the whole country, it is to me an inexpressible gratification that to the sunny South it will prove a fountain of wealth and prosperity. The war of overexpanded credit upon labor and its products, aided by a great national bank at some distant capital, or by the concentration at or near the same point of the great Northern banking capital, sustained by the Government deposits and indorsements, must cease, and paper credit

and the products of labor, left a fair field, without artificial aid, will find labor and its products rising in the scale of importance and influence, and leaving the great staple States a fair opportunity of carrying out their own exports, and introducing their own imports, and the balances in gold and silver, the real, solid, substantial business of their banks, being more safely augmented than all the ruinous aid they can ever receive from Government patronage. And now, sir, if the distinguished Senators opposed to the Administration on this floor will go home to their constituents and explain the full and precise effects of this measure, they can, in aiding the establishment of a sound credit on sound principles—aiding in inspiring a just confidence in the relief this great measure will ultimately extend to all the great interests of the country—they can have almost a moneyed millennium dawn upon the country at once. I appeal to them, then, as patriots, with hearts overflowing with sympathy for the distress of the country, as we have so repeatedly heard on this floor, to unite with us in producing this great, this glorious result; and the thanks of millions of grateful freemen will give them more real happiness, more genuine consolation, and more true and durable applause than all the party triumphs that could adorn the proudest political conquerors. Let them imitate the noble example of the distinguished Senator and statesman from South Carolina, in laying down, in support of this bill, his personal and political prejudices as a burnt offering upon the patriot's altar of his country's good, and for them, also, the swelling heart of a mighty nation will throb with love and gratitude. But should they esteem it their duty to determine otherwise—should their inspiring eloquence and great intellectual power be exerted in appeals to the people against this measure—should it be represented as a tropical tornado, about to sweep in its destructive career over all the great and cherished institutions of our common country, panics and pressures may follow for a time; but soon, yes, very soon, the great principles involved in this bill must and will triumph, and it will then go forth with healing on its wings, hailed by the approving voice of the people. The measure itself will be justly viewed as a third declaration of American independence, and the day of its passage be celebrated in all time to come as a great and glorious national jubilee.

Senator Webster.—Mr. President, the honorable member from South Carolina [Mr. Calhoun] remarked the other day with great frankness and good humor that, in the political classifications of the times, he desired to be considered as noth-

ing but an "honest nullifier." And I am very much afraid, sir, that (whatever he may think of it himself) it has been under the influence of those sentiments which belong to his character as a nullifier that he has so readily and so zealously embraced the doctrines of the President's message. In my opinion, the message, the bill before us, and the honorable member's amendment form, together, a system, a code of practical politics, the direct tendency of which is to nullify and expunge, or, perhaps, more correctly speaking, by a united and mixed process of nullification and expunging, to abolish a highly important and useful power of the Government. It strikes down the principle upon which the Government has been administered, in regard to the subject of the currency, through its whole history; and it seeks to obliterate, or to draw black lines around, that part of the Constitution on which this principle of administration has rested. The system proposed, in my opinion, is not only anti-commercial, but anti-constitutional also, and anti-union in a high degree.

Now, sir, when we look at the message, the bill, and the proposed amendment, their single, exclusive, and undivided object is found to be relief to the Government. Not one single provision is adopted or recommended with direct reference to the relief of the people. They all speak of revenue, of finance, of duties and customs, of taxes and collections; and the evils which the people suffer by the derangement of the currency and the exchanges, and the breaking up of commercial credit, instead of being put forth as prominent and leading objects of regard, are dismissed with a slight intimation, here and there, that, in providing for the superior and paramount interests of Government, some incidental or collateral benefits may, perhaps, accrue to the community. But is Government, I ask, to care for nothing but itself? Is self-preservation the great end of Government? Has it no trust powers? Does it owe no duties but to itself? If it keeps itself in being does it fulfill all the objects of its creation? I think not. I think Government exists, not for its own ends, but for the public utility. It is an agency established to promote the common good by common counsels; its chief duties are to the people; and it seems to me strange and preposterous, in a moment of great and general distress, that Government should confine all its deliberations to the single object of its own revenues, its own convenience, its own undisturbed administration.

Now, sir, my present purpose chiefly is to maintain two propositions:

1. That it is the constitutional duty of this Government to see that a proper currency, suitable to the circumstances of the times, and to the wants of trade and business, as well as to the payment of debts due to Government, be maintained and preserved; a currency of general credit, and capable of aiding the operations of exchange, so far as those operations may be conducted by means of the circulating medium; and that there are duties, therefore, devolving on Congress, in relation to currency, beyond the mere regulation of the gold and silver coins.

2. That the message, the bill, and the proposed amendment, all, in effect, deny any such duty, disclaim all such power, and confine the constitutional obligation of Government to the mere regulation of the coins and the care of its own revenues.

Webster then argued at great length in favor of his propositions, showing that it was the duty of Congress to regulate the paper as well as the metallic currency, and that the proper regulation of the paper currency was a national bank; and concluded:

In every respect this project is objectionable. It is but another "experiment"; and those who recommend it so zealously were the authors of the last, and were equally full of confidence and assurance in regard to that.

Who invite us to try this experiment? What voices do we hear raised in its recommendation? Are they not the well-known voices which we heard so often when the late "experiment" was begun? We know of but one accession. The voice of the honorable member from South Carolina is heard, it is true, now mingling with the general strain; and that is all. Where, then, is the ground for confidence in this experiment, more than there was for it in the last?

This scheme, too, is against all our usages and all our habits. It locks up the revenue, under bolts and bars, from the time of collection to the time of disbursement. Our practice has been otherwise, and it has been a useful practice. In 1833 the Secretary of the Treasury admonished the deposit banks, since they had obtained the custody of the public funds, to accommodate the public, to loan freely, especially to importing merchants. And now a system is proposed to us, according to which any use of the public funds, by way of loan or accommodation to the public, is made a criminal offence, and to be prosecuted by indictment! Admirable, admirable consistency!

Senator Buchanan.—Mr. President: The exhaustion of the human system does not succeed a high degree of unnatural excitement with more unerring certainty than that a depression in the business of the country must follow excessive speculation. The one is a law of nature, the other a scarcely less uniform law of trade.

Whence this eternal vicissitude in the business of the country? What is the secret spring of all these calamities? I answer, the spirit of enterprise, so natural to American citizens, excited into furious action by the stimulus of excessive banking. It operates as does the inhaling of oxygen gas upon the human mind, urging it on to every extravagance and to every folly.

Senators have attributed some portion of the existing distress to the act of 1834, regulating the standard of our gold coins. They have not told us, and they cannot tell us, how this act could have produced such an effect. It was no party measure, and, upon its passage, there were but few, I believe seven, votes against it in the Senate. It was a measure of absolute necessity, if we desired that our own gold coins should ever circulate in this country. Before its passage a half eagle, as an article of merchandise, was intrinsically worth about five dollars and thirty-three cents in silver, while its standard value, as currency under our laws, was only five dollars. It is manifest, therefore, that eagles and half eagles never could have entered into general circulation had it not been for the passage of this act, which is now condemned. It was a mere adjustment of the relative value of gold to silver, according to the standard of other nations.

I have been utterly at a loss to conceive the cause of the hostility of Senators to this necessary measure, unless it be from a feeling similar to that which, it is said, made a distinguished gentleman desire to kill every sheep which came in his way. He could feel no personal hostility to these innocent and harmless animals; but was such a violent anti-tariff man that the sight of them always reminded him of our woolen manufacturers. Certainly no gentleman can entertain any objection to the eagle and half eagle themselves; but they may remind Senators of the efficient and untiring exertions of the Senator from Missouri [Mr. Benton] to introduce a gold currency into circulation. As gold, they may like these coins; but, as Bentonian mint drops, they are detestable.

Without the agency of any of these secondary causes the present distress must have come. It was inevitable as fate. No law of nature is more fixed than that our overbanking and our

overtrading must have produced the disastrous results under which we are now suffering.

In this crisis all that the general Government can effect is, in the first place, to withhold its deposits from the banks, and thus refrain from contributing their funds to swell the torrent of wild speculation; and, in the second place, to restrain the extravagance of their credits and issues, in some small degree, by collecting and disbursing our revenue exclusively in specie, or in the notes of banks which will pay the balances due from them in specie, at short intervals. To accomplish these two purposes, as well as to render the public revenue more secure, are the objects of the bill and amendment now before the Senate.

The evils of a redundant paper circulation are now manifest to every eye. It alternately raises and sinks the value of every man's property. It makes a beggar of the man to-morrow who is indulging in dreams of wealth to-day. It converts the business of society into a mere lottery; while those who distribute the prizes are wholly irresponsible to the people. When the collapse comes, as come it must, it casts laborers out of employment, crushes manufacturers and merchants, and ruins thousands of honest and industrious citizens. Shall we, then, by our policy, any longer contribute to such fatal results? That is the question.

The system of extravagant banking benefits no person except the shrewd speculator, who knows how to take advantage of the perpetual fluctuation in prices which a redundant paper currency never fails to produce. He sees, in the general causes which operate upon the commercial world, when money is about to be scarce, and when it will become plenty. He studies the run as a gambler does that of the cards. He knows when to buy and when to sell, and thus often realizes a large estate in a few happy ventures. Those who have been initiated into the mysteries of the paper money market can thus accumulate rapid fortunes at the expense of their less skillful neighbors.

The question before the Senate is not whether we shall divorce the Government from the banks. The banks themselves have done that already. The alliance is already dissolved. The question now is, shall we, with all the experience of the past, restore this ill-fated union? No propitious divinities would grace the new nuptials; but the fatal sisters would be there ready again to cut the cord at the first approach of difficulty and danger.

Senator Wright.—Is it not most desirable to free the legislation of Congress from bank influence altogether? Will it

not tend more than any other single act we could perform to take from our debates and deliberations that bitterness and acrimony which have too strongly characterized them for the last few years, but which, I am proud to say, have entered, in a much less degree, into the present debate in the Senate than into any similar debate for many years? For myself I feel that this consideration alone demands the passage of this bill; that it is entirely paramount to any objections I have yet heard urged against it; that it is as much superior to considerations of financial convenience and pecuniary profit, as are the purity and permanency of our political institutions to temporary advantages of a bargain or facilities of borrowing money.

Can it be desirable to preserve a connection which is the subject of incessant complaint on the part of the banks and their friends, and of constant embarrassment to the operations of the public treasury, and of imputation upon the most faithful and worthy public officers? I consider this connection of the fiscal affairs of the Government with the credit and business of the banks, and of business and commercial men, and the constant imputations brought upon the Government thereby, as promoting a political morality in the public mind most dangerous to our institutions; as doing more to weaken the confidence of the people in the Government of their choice than any and all other causes of distrust combined. If we would listen to the slander and misrepresentations of the times, we must believe that all our misfortunes, public and private, are imputable to our Government—all our prosperity to a resistance to its measures and its policy. And whence do these imputations come but from our connection with the banks? They all emanate from that source, and from no other. That connection is now dissolved by the operation of law and the voluntary action of the banks themselves; and I would say, let it be perpetual—let it never be renewed.

The Wright bill was introduced at the next session (the regular one beginning December 4, 1837) and passed by the Senate and voted down by the House.

In the debate in the Senate an exchange of personalities occurred between Henry Clay and John C. Calhoun, which is of special interest owing to the fact that they had for a number of years been close allies in opposition to President Jackson.

Senator Thomas H. Benton [Mo.] gives an account

of this forensic duel in his "Thirty Years' View" (Vol. II, page 97), to which the reader is referred.

The Wright bill to establish an independent treasury was again introduced in the session of 1838-39, and met its former fate. A new Congress assembled in 1839-40, in which a few sub-treasury Whigs held the balance of power, and the Wright bill passed both Houses, and became a law, by the approval of the President, on July 4, 1840—a date evidently chosen in order to help along the prophecy of Senator Walker that the enactment of the bill would be hailed as the "third Declaration of Independence" (the confirmation by the people of the Revolution of 1798 in electing Thomas Jefferson to the presidency in 1800 being considered the second). None of the evil results foretold by the Whigs came to pass; everything working smoothly under the new system.

However, in the session of 1841-42, the Whigs came into control of both the legislative and executive branches of the Government, and, being committed to the policy of a national bank, they repealed the sub-treasury act as the first step toward the bank's resurrection. For five years the Government's finances were conducted virtually at the discretion of the Secretary of the Treasury. The election in 1844 of James K. Polk to the presidency and of a Congress Democratic in both branches afforded an opportunity to reënact the sub-treasury bill, which became law on August 6, 1846, and has remained in force down to the present time. The ghost of the "murdered" national bank was effectually laid, never again rising to disturb the national councils.

CHAPTER VIII

The Whig Fight to Reëstablish a National Bank

Election of William Henry Harrison and John Tyler—Harrison's Inaugural Address—Death of Harrison—The Whigs in Congress Pass a National Bank Bill—It Is Vetoed by President Tyler—Debate in the Senate on the Veto: in Favor, William C. Rives [Va.]; Opposed, Henry Clay [Ky.]; Veto Is Sustained—Whig Mob "Shivarees" the President While Democratic Congressmen Are Congratulating Him—Humorous Remarks by Senator Clay on the Incident—Rejoinder by Senator James Buchanan [Pa.]—Second Attempt to Pass a Bank Bill—It Is Vetoed by the President and Lampooned by Senator Thomas H. Benton [Mo.]—Resignations of the Cabinet, Daniel Webster Excepted—Repudiation of the President by His Party—Representative Caleb Cushing [Mass.] in His Defence—Denunciation of Cushing by Representative Garrett Davis [Ky.].

IN 1840 William Henry Harrison [O.], the previous Whig candidate, and John Tyler [Va.], a former Democrat, were nominated by the Whigs as their candidates for President and Vice-President respectively against President Van Buren and Vice-President Johnson, who stood for reëlection. Harrison and Tyler were overwhelmingly elected by 234 votes out of 294.

In his inaugural address the President adverted to the sub-treasury policy of his predecessor, as follows:

The President's Power Over the Purse

Inaugural Address of William Henry Harrison

By making the President the sole distributor of all the patronage of the Government the framers of the Constitution do not appear to have anticipated at how short a period it would become a formidable instrument to control the free operations of the State governments. Of trifling importance at first, it had, early in Mr. Jefferson's Administration, become so power-

ful as to create great alarm in the mind of that patriot, from the potent influence it might exert in controlling the freedom of the elective franchise. If such could have been the effects of its influence, how much greater must be the danger at this time, quadrupled in amount, as it certainly is, and more completely under the control of the Executive will than their construction of their powers allowed, or the forbearing characters of all the early Presidents permitted them to make? But it is not by the extent of its patronage alone that the Executive Department has become dangerous, but by the use which it appears may be made of the appointing power to bring under its control the whole revenue of the country. The Constitution has declared it to be the duty of the President to see that the laws are executed, and it makes him the Commander-in-Chief of the armies and navy of the United States. If the opinion of the most approved writers upon that species of mixed government, which, in modern Europe, is termed *monarchy*, in contradistinction to *despotism*, is correct, there was wanting no other addition to the powers of our Chief Magistrate to stamp a monarchical character on our Government but the control of the public finances. And to me it appears strange, indeed, that anyone should doubt that the entire control which the President possesses over the officers who have the custody of the public money, by the power of removal with or without cause, does, for all mischievous purposes at least, virtually subject the treasure also to his disposal. The first Roman Emperor, in his attempt to seize the sacred treasure, silenced the opposition of the officer to whose charge it had been committed by a significant allusion to his sword. By a selection of political instruments for the care of the public money, a reference to their commissions by a President would be quite as effectual an argument as that of Cæsar to the Roman knight. I am not insensible of the great difficulty that exists in devising a proper plan for the safe-keeping and disbursement of the public revenues, and I know the importance which has been attached by men of great abilities and patriotism to the divorce, as it is called, of the treasury from the banking institutions. It is not the divorce which is complained of, but the unhallowed union of the treasury with the Executive Department which has created such extensive alarm. To this danger to our republican institutions, and that created by the influence given to the Executive through the instrumentality of the Federal officers, I propose to apply all the remedies which may be at my command. It was certainly a great error in the framers of the Constitution not to have made the officer at the head of the Treasury Depart-

ment entirely independent of the Executive. He should at least have been removable only upon the demand of the popular branch of the legislature. I have determined never to remove a Secretary of the Treasury without communicating all the circumstances attending such removal to both Houses of Congress.

At the instigation of Senator Henry Clay President Harrison convened Congress in extra session to revise the treasury system, but died before the date set, which was May 31, 1841.[1]

President Tyler entered into office with a majority of his party in both Houses of Congress, and therefore with the prospect of conducting a harmonious and successful Administration. In the short space of three months he was at odds with the leading members of the party, who accused him of violating its principles, coining from his name a new synonym for the word "apostatize"—namely, "Tylerize." Being unyielding in character Tyler destroyed all hope of rendering his term of office notable for anything other than discord and failure.

The chief message for the passage of which Senator Clay had instigated the special session of Congress was the establishment of a national bank. Because both Harrison and Tyler had opposed such a bank when they were members of the Democratic party, this issue had been kept in the background during the presidential campaign—as, indeed, had been almost every important issue, the campaign being conducted along personal lines by opposing the rough democratic character of the Western Indian fighter, General Harrison ("Tippecanoe," as he was called from his famous victory), to the suave and supposedly aristocratic temperament of the "Fox of Kinderhook," as Van Buren was termed, and by visibly impressing this contrast upon the voters in the form of replicas of the log cabin in which Harrison had lived, and the free distribution of "hard cider," his favorite beverage—it being represented that his opponent lived in a lordly mansion and drank only foreign wines.

Senator Clay called upon Thomas Ewing, Sr., Secre-

[1] The date of President Harrison's death was April 4, 1841, just one month after his inauguration.

tary of the Treasury, for a plan of a national bank. The Secretary drafted the bill with a special view to removing every constitutional objection to the bank, and so to enable the President to sign the act without laying himself open to the charge of inconsistency, but in the course of the bill through committee it acquired features which caused the President, when it had been passed (by a vote of 26 to 23 in the Senate and 128 to 98 in the House), to veto the bill, giving his reasons for the action, and saying:

Entertaining the opinions alluded to, and having taken this oath, the Senate and the country will see that I could not give my sanction to a measure of the character described without surrendering all claim to the respect of honorable men—all confidence on the part of the people—all self-respect—all regard for moral and religious obligations; without an observance of which no government can be prosperous and no people can be happy. It would be to commit a *crime* which I would not wilfully commit to gain any earthly reward, and which would *justly* subject me to the ridicule and scorn of all virtuous men.

Senator Clay attacked the President for his action, and William C. Rives [Va.] defended him.

The Veto of the National Bank

Senate, August, 1841

Senator Clay.—On the 4th of April last, the lamented Harrison, the President of the United States, paid the debt of nature. President Tyler, who, as Vice-President, succeeded to the duties of that office, arrived in the city of Washington on the 6th of that month. He found the whole metropolis wrapped in gloom, every heart filled with sorrow and sadness, every eye streaming with tears, and the surrounding hills yet flinging back the echo of the bells which were tolled on that melancholy occasion. On entering the presidential mansion he contemplated the pale body of his predecessor stretched before him, and clothed in the black habiliments of death. At that solemn moment I have no doubt that the heart of President Tyler was overflowing with mingled emotions of grief, of patriotism and

Whig Caricature of Van Buren, Tyler, Jackson, Webster, Clay, Calhoun, et al. BURIAL OF THE "FOX OF KINDERHOOK"
From the collection of the New York Historical Society

gratitude—above all, of gratitude to that country by a majority of whose suffrages, bestowed at the preceding November, he then stood the most distinguished, the most elevated, the most honored of all living Whigs of the United States.

It was under these circumstances and in this probable state of mind that President Tyler, on the 10th day of the same month of April, voluntarily promulgated an address to the people of the United States. That address was in the nature of a coronation oath, which the chief of the state in other countries and under other forms takes upon ascending the throne. It referred to the solemn obligations and the profound sense of duty under which the new President entered upon the high trust which had devolved upon him by the joint acts of the people and of Providence, and it stated the principles and delineated the policy by which he would be governed in his exalted station. It was emphatically a Whig address from beginning to end—every inch of it was Whig, and was patriotic.

In that address the President, in respect to the subject-matter embraced in the present bill, held the following conclusive and emphatic language: "I shall promptly give my sanction to any constitutional measure which, originating in Congress, shall have for its object the restoration of a sound circulating medium, so essentially necessary to give confidence in all the transactions of life, to secure to industry its just and adequate rewards, and to reëstablish the public prosperity. In deciding upon the adaptation of any such measure to the end proposed, as well as its conformity to the Constitution, I shall resort to the fathers of the great republican school for advice and instruction, to be drawn from their sage views of our system of government, and the light of their ever-glorious example."

To this clause in the address of the President I believe but one interpretation was given throughout this whole country, by friend and foe, by Whig and Democrat, and by the presses of both parties. It was by every man with whom I conversed on the subject at the time of its appearance, or of whom I have since inquired, construed to mean that the President intended to occupy the Madison ground, and to regard the question of the power to establish a national bank as immovably settled. And I think I may confidently appeal to the Senate and to the country to sustain the fact that this was the contemporaneous and unanimous judgment of the public.

Entertaining this opinion of the address, I came to Washington at the commencement of the session with the most confi-

dent and buoyant hopes that the Whigs would be able to carry all their prominent measures, and especially a Bank of the United States, by far that one of the greatest immediate importance. I anticipated nothing but cordial coöperation between the two departments of government; and I reflected with pleasure that I should find at the head of the Executive branch a personal and political friend, whom I had long and intimately known and highly esteemed.

Upon the opening of the session, but especially on the receipt of the plan of a national bank, as proposed by the Secretary of the Treasury, fears were excited that the President had been misunderstood in his address, and that he had not waived but adhered to his constitutional scruples. Under these circumstances it was hoped that, by the indulgence of a mutual spirit of compromise and concession, a bank, competent to fulfill the expectations and satisfy the wants of the people, might be established.

In this hope the friends of the bank have been deceived, as the message before you indicates. I must think, and hope I may be allowed to say, with profound deference to the Chief Magistrate, that it appears to me he has viewed with too lively sensibility the personal consequences to himself of his approval of the bill; and that, surrendering himself to a vivid imagination, he has depicted them in much too glowing and exaggerated colors, and that it would have been most happy if he had looked more to the deplorable consequences of a veto upon the hopes, the interests, and the happiness of his country. Does it follow that a magistrate who yields his private judgment to the concurring authority of numerous decisions, repeatedly and deliberately pronounced, after the lapse of long intervals, by all the departments of government, and by all parties, incurs the dreadful penalties described by the President? Can any man be disgraced and dishonored who yields his private opinion to the judgment of the nation? In this case the country (I mean a majority), Congress, and, according to common fame, a unanimous Cabinet were all united in favor of the bill. Should any man feel himself humbled and degraded in yielding to the conjoint force of such high authority? Does any man, who at one period of his life shall have expressed a particular opinion, and at a subsequent period shall act upon the opposite opinion, expose himself to the terrible consequences which have been portrayed by the President? How is it with the judge, in the case by no means rare, who bows to the authority of repeated precedents, settling a particular question, while in his private judg-

ment the law is otherwise? How is it with that numerous class of public men in this country, and with the two great parties that have divided it, who, at different periods, have maintained and acted on opposite opinions in respect to this very bank question?

How is it with James Madison, the father of the Constitution—that great man whose services to his country placed him only second to Washington—whose virtues and purity in private life—whose patriotism, intelligence, and wisdom in public councils stand unsurpassed? He was a member of the national convention that formed, and of the Virginia convention that adopted, the Constitution. No man understood it better than he did. He was opposed in 1791 to the establishment of the Bank of the United States upon constitutional ground; and in 1816 he approved and signed the charter of the late Bank of the United States. It is a part of the secret history connected with the first bank that James Madison had, at the instance of General Washington, prepared a veto for him in the contingency of his rejection of the bill. Thus stood James Madison when, in 1815, he applied the veto to a bill to charter a bank upon considerations of expediency, but with a clear and express admission of the existence of a constitutional power in Congress to charter one. In 1816, the bill which was then presented to him being free from the objections applicable to that of the previous year, he sanctioned and signed it. Did James Madison surrender "all claim to the respect of honorable men—all confidence on the part of the people—all self-respect—all regard for moral and religious obligations"? Did the pure, the virtuous, the gifted James Madison, by his sanction and signature to the charter of the late Bank of the United States, commit a crime which justly subjected him "to the ridicule and scorn of all virtuous men"?

Senator Rives.—What was the real issue before the Senate? Was it not the naked question between the bill and the objections to it, as compared with each other? I really had hoped that the honorable Senator, after announcing to us the issue in this very proper manner, would have confined his observations to it alone; and if he had done so I should not have troubled the Senate with a single word. But what has been the course of the honorable Senator? I do not reproach him with it. He, no doubt, felt it necessary, in order to vindicate his own position before the country, to inculpate the course taken by the President; and accordingly about two-thirds of his speech, howsoever qualified by expressions of personal kindness and respect,

were taken up in a solemn arraignment of the President of the United States. Most of the allegations put forth by the Senator seem to arrange themselves under the general charge of perfidy —of faithlessness to his party and to the people.

Senator Rives went on to defend the President at all points, declaring the question of a bank was not an issue in the election—repelling the imputation of perfidy and arguing that General Harrison himself would have disapproved the same bill if he had lived and it had been presented to him.

Senator Clay rejoined to Senator Rives, and became more close and pointed in his personal remarks upon Mr. Tyler's conduct, commencing with Mr. Rives' lodgment in the "halfway house," *i. e.*, the pet bank system—which was supposed to have been a camping station in the transition from the Democratic to the Whig camp. He began thus:

I have no desire to prolong this unpleasant discussion, but I must say that I heard with great surprise and regret the closing remark, especially, of the honorable gentleman from Virginia, as, indeed, I did many of those which preceded it. That gentleman stands in a peculiar situation. I found him several years ago in the halfway house, where he seems afraid to remain, and from which he is yet unwilling to go. I had thought, after the thorough riddling which the roof of the house had received in the breaking up of the pet bank system, he would have fled somewhere else for refuge; but there he still stands, solitary and alone, shivering and pelted by the pitiless storm. The sub-treasury is repealed—the pet bank system is abandoned—the United States Bank bill is vetoed—and now, when there is as complete and perfect a reunion of the purse and the sword in the hands of the Executive as ever there was under General Jackson or Mr. Van Buren, the Senator is for doing nothing.

There was a rumor of a design to make a third party, of which the President was to be the head; and, as a part of the scheme, to foment a quarrel between him and Senator Clay, in which Clay was to be made the aggressor. Senator Clay brought this rumor to the notice of

Senator Rives, repelling the part which inculpated himself, and leaving the rest for Senator Rives to answer.

Senator Clay.—Why, sir, what possible, what conceivable motive can I have to quarrel with the President, or to break up the Whig party? What earthly motive can impel me to wish for any other result than that that party shall remain in perfect harmony, undivided, and shall move undismayed, boldly, and unitedly forward to the accomplishment of the all-important public objects which it has avowed to be its aim? What imaginable interest or feeling can I have other than the success, the triumph, the glory of the Whig party? But that there may be designs and purposes on the part of certain other individuals to place me in inimical relations with the President, and to represent me as personally opposed to him, I can well imagine—individuals who are beating up for recruits, and endeavoring to form a third party, with materials so scanty as to be wholly insufficient to compose a decent corporal's guard. I fear there are such individuals, though I do not charge the Senator as being himself one of them. What a spectacle has been presented to this nation during this entire session of Congress! That of the cherished and confidential friends of John Tyler, persons who boast and claim to be, *par excellence*, his exclusive and genuine friends, being the bitter, systematic, determined, uncompromising opponents of every leading measure of John Tyler's administration! Was there ever before such an example presented in this or any other age, in this or any other country? I have myself known the President too long, and cherished toward him too sincere a friendship, to allow my feelings to be affected or alienated by anything which has passed here to-day. If the President chooses—which I am sure he cannot, unless falsehood has been whispered into his ears or poison poured into his heart—to detach himself from me, I shall deeply regret it, for the sake of our common friendship and our common country. I now repeat, what I before said, that, of all the measures of relief which the American people have called upon us for, that of a national bank and a sound and uniform currency has been the most loudly and importunately demanded.

The Senator says that, if placed in like circumstances, I would have been the last man to avoid putting a direct veto upon the bill, had it met my disapprobation; and he does me the honor to attribute to me high qualities of stern and unbending intrepidity. I hope that in all that relates to personal firmness—all that concerns a just appreciation of the insignificance

of human life—whatever may be attempted to threaten or alarm a soul not easily swayed by opposition, or awed or intimidated by menace—a stout heart and a steady eye that can survey, unmoved and undaunted, any mere personal perils that assail this poor transient, perishing frame—I may, without disparagement, compare with other men. But there is a sort of courage which, I frankly confess it, I do not possess—a boldness to which I dare not aspire—a valor which I cannot covet. I cannot lay myself down in the way of the welfare and happiness of my country. That I cannot, I have not the courage to do. I cannot interpose the power with which I may be invested—a power conferred not for my personal benefit, not for my aggrandizement, but for my country's good—to check her onward march to greatness and glory. I have not courage enough, I am too cowardly for that. I would not, I dare not, in the exercise of such a trust, lie down and place my body across the path that leads my country to prosperity and happiness. This is a sort of courage widely different from that which a man may display in his private conduct and personal relations. Personal or private courage is totally distinct from that higher and nobler courage which prompts the patriot to offer himself a voluntary sacrifice to his country's good. Apprehensions of the imputation of the want of firmness sometimes impel us to perform rash and inconsiderate acts. It is the greatest courage to be able to bear the imputation of the want of courage. But pride, vanity, egotism, so unamiable and offensive in private life, are vices which partake of the character of crimes in the conduct of public affairs. The unfortunate victim of these passions cannot see beyond the little, petty, contemptible circle of his own personal interests. All his thoughts are withdrawn from his country, and concentrated on his consistency, his firmness, himself. The high, the exalted, the sublime emotions of a patriotism which, soaring toward Heaven, rises far above all mean, low, or selfish things, and is absorbed by one soul-transporting thought of the good and the glory of one's country, are never felt in his impenetrable bosom. That patriotism which, catching its inspiration from the immortal God, and leaving, at an immeasurable distance below, all lesser, groveling, personal interests and feelings, animates and prompts to deeds of self-sacrifice, of valor, of devotion, and of death itself—that is public virtue—that is the noblest, the sublimest of all public virtues!

Senator Rives.—The Senator from Kentucky says he found me several years ago in this halfway house, which, after the thorough riddling the roof had received in the breaking up of

the pet bank system, he had supposed I would have abandoned. How could I find it in my heart, Mr. President, to abandon it when I found the honorable Senator from Kentucky (even after what he calls the riddling of the roof) so anxious to take refuge in it from the ruins of his own condemned and repudiated system, and where he actually took refuge for four long years, as I have already stated. When I first had the honor to meet the honorable Senator in this body, I found him not occupying the humble but comfortable halfway house which has given him shelter from the storm for the last four years, but a more lordly mansion, gaudy to look upon, but altogether unsafe to inhabit; old, decayed, rat-eaten, which has since tumbled to the ground with its own rottenness, devoted to destruction alike by the indignation of man and the wrath of heaven. Yet the honorable Senator, unmindful of the past, and heedless of the warnings of the present, which are still ringing in his ears, will hear of nothing but the instant reconstruction of this devoted edifice.

I owe it to myself, Mr. President, before I close, to say one or two words in regard to this gorgon of a cabal, which the Senators tells us, upon the authority of dame rumor, has been formed to break up the Cabinet, to dissolve the Whig party, and to form a new or third party. Although the Senator was pleased to acquit me of being a member of this supposed cabal, he yet seemed to have some lurking jealousies and suspicions in his mind on the subject. I will tell the honorable Senator, then, that I know of no such cabal, and I should really think that I was the last man that ought to be suspected of any wish or design to form a new or third party. I have shown myself at all times restive under mere party influence and control from any quarter. All party, in my humble judgment, tends, in its modern degeneracy, to tyranny, and is attended with serious hazard of sacrificing an honest sense of duty, and the great interests of the country, to an arbitrary lead, directed by other aims. I desire, therefore, to take upon myself no new party bonds, while I am anxious to fulfill, to the fullest extent that a sense of duty to the country will permit, every honorable engagement implied in existing ones. The Senator from Kentucky may rest satisfied that he will never see me in any Cabinet, under this or any other Administration. During the brief remnant of my public life, the measure of my ambition will be filled by the humble but honest part I may be permitted to take on this floor in consultations for the common good.

Having disposed of this rumor of a cabal, to the satisfaction, I trust, of the honorable Senator, I will tell him of another rumor I have heard, which, I trust, may be equally destitute of foundation. Rumor is busy in alleging that there is an organized dictatorship, in permanent session in this capitol, seeking to control the whole action of the Government, in both the legislative and executive branches, and sending deputation after deputation to the President of the United States to teach him his duty, and bring him to terms. I do not vouch for the correctness of this rumor. I humbly hope it may not be true; but, if it should unfortunately be so, I will say that it is fraught with far more danger to the regular and salutary action of our balanced Constitution, and to the liberties of the people than any secret cabal that ever has existed or ever will exist.

The Whig leaders attempted to pass the bill over the President's veto, but signally failed, the vote in the Senate, instead of yielding the requisite two-thirds majority, being a tie—24 to 24. That night a crowd of Whig partisans assembled before the executive mansion and hooted the President[1] while he was receiving congratulations from a number of Democratic Senators and Representatives. Levi Woodbury [N. H.] proposed in the Senate an inquiry into the disturbance, which was abandoned upon the discovery of the low and irresponsible character of the participants.

Senator Clay took occasion of this motion to animadvert on the assembly within the executive mansion on the night of the disturbance. Professing artfully that he had not been conclusively informed of the demonstration by the populace, he said:

I did hear that about eight or nine o'clock on that same night of the famous 16th of August there was an irruption on the President's house of the whole loco foco party[2] in Congress; and I did not know but that the alleged disorders might have grown out of or had some connection with that fact. I un-

[1] A serenade of this character was called at the time a "shivaree," a corruption of the French word "charivari."

[2] A Whig term for the Democrats, especially the extreme State Rights wing, derived from an incident (1835) in Tammany (New York) politics, where an attempt to break up a political meeting by blowing out the candles was frustrated by a number relighting them with friction matches —then a novelty and known as "loco-focos." The Whigs attempted to fasten this name upon their opponents by refusing to recognize them as "Democrats."

derstand that the whole party were there. No spectacle, I am sure, could have been more supremely amusing and ridiculous. If I could have been in a position in which, without being seen, I could have witnessed that most extraordinary reunion, I should have had an enjoyment which no dramatic performance could possibly communicate. I think that I can now see the principal *dramatis personæ* who figured in the scene. There stood the grave and distinguished Senator from South Carolina——

[Senator Calhoun here instantly rose, and earnestly insisted on explaining; but Senator Clay refused to be interrupted or to yield the floor.]

Senator Clay.—There, I say, I can imagine stood the Senator from South Carolina—tall, careworn, with furrowed brow, haggard, and intensely gazing, looking as if he were dissecting the last and newest abstraction which sprung from metaphysician's brain, and muttering to himself, in half-uttered sounds, "This is indeed a real crisis!" Then there was the Senator from Alabama [Mr. King], standing upright and gracefully, as if he were ready to settle in the most authoritative manner any question of order, or of etiquette, that might possibly arise between the high assembled parties on that new and unprecedented occasion. Not far off stood the honorable Senators from Arkansas and from Missouri [Mr. Sevier and Mr. Benton], the latter looking at the Senator from South Carolina, with an indignant curl on his lip and scorn in his eye, and pointing his finger with contempt toward that Senator [Mr. Calhoun], while he said, or rather seemed to say, "He call himself a statesman! why, he has never even produced a decent humbug!"

Senator Benton [interrupting].—The Senator from Missouri was not there.

Senator Clay.—I stand corrected; I was only imagining what you would have said if you had been there. Then there stood the Senator from Georgia [Mr. Cuthbert], conning over in his mind on what point he should make his next attack upon the Senator from Kentucky. On yonder ottoman reclined the other Senator from Missouri on my left [Mr. Linn], indulging, with smiles on his face, in pleasing meditations on the rise, growth, and future power of his new colony of Oregon. The honorable Senator from Pennsylvania [Mr. Buchanan], I presume, stood forward as spokesman for his whole party; and, although I cannot pretend to imitate his well-known eloquence, I beg leave to

make an humble essay toward what I presume to have been the kind of speech delivered by him on that august occasion:

"May it please your Excellency: A number of your present political friends, late your political opponents, in company with myself, have come to deposit at your Excellency's feet the evidences of our loyalty and devotion; and they have done me the honor to make me the organ of their sentiments and feelings. We are here more particularly to present to your Excellency our grateful and most cordial congratulations on your rescue of the country from a flagrant and alarming violation of the Constitution, by the creation of a Bank of the United States; and also our profound acknowledgments for the veto, by which you have illustrated the wisdom of your administration and so greatly honored yourself. And we would dwell particularly on the unanswerable reasons and cogent arguments with which the notification of the act to the legislature had been accompanied. We had been, ourselves, struggling for days and weeks to arrest the passage of the bill, and to prevent the creation of the monster to which it gives birth. We had expended all our logic, exerted all our ability, employed all our eloquence; but in spite of all our utmost efforts, the friends of your Excellency in the Senate and House of Representatives proved too strong for us. And we have now come most heartily to thank your Excellency that you have accomplished for us that against your friends, which we, with our most strenuous exertions, were unable to achieve."

I hope the honorable Senators on the other side of the chamber will pardon me for having conceived it possible that, amid the popping of champagne, the intoxication of their joy, the ecstasy of their glorification, they might have been the parties who created a disturbance, of which they never could have been guilty had they waited for their "*sober second thoughts.*" I have no doubt the very learned ex-Secretary of the Treasury, who conducted that department with such distinguished ability, and such happy results to the country, and who now has such a profound abhorrence of all the taxes on tea and coffee, though, in his own official reports, he so distinctly recommended them, would, if appointed chairman of the committee, have conducted the investigation with that industry which so eminently distinguishes him; and would have favored the Senate with a report, marked with all his accustomed precision and ability, and with the most perfectly lucid clearness.

Senator Buchanan.—The honorable Senator has, with great power of humor, and much felicity of description, drawn for

us a picture of the scene which he supposes to have been presented at the President's house on the ever-memorable evening of the veto. It was a happy effort; but, unfortunately, it was but a fancy sketch—at least so far as I am concerned. I was not there at all upon the occasion. But, I ask, what scenes were enacted on that eventful night at this end of the avenue? The Senator would have no cause to complain if I should attempt, in humble imitation of him, to present a picture, true to the life, of the proceedings of himself and his friends. Amid the dark and lowering clouds of that never-to-be-forgotten night a caucus assembled in one of the apartments of this gloomy building, and sat in melancholy conclave, deploring the unhappy fate of the Whig party. Some rose and advocated vengeance; "their voice was still for war." Others, more moderate, sought to repress the ardent zeal of their fiery compatriots, and advised to peace and prudence. It was finally concluded that, instead of making open war upon Captain Tyler, they should resort to stratagem, and, in the elegant language of one of their number, that they should endeavor "to head" him. The question was earnestly debated by what means they could best accomplish this purpose; and it was resolved to try the effect of the "Fiscality" now before us. Unfortunately for the success of the scheme, "Captain Tyler" was forewarned and forearmed by means of a private and confidential letter addressed by mistake to a Virginia coffee house. It is by means like this that "enterprises of great pith and moment" often fail. But so desperately intent are the Whig party still on the creation of a bank that one of my friends on this side of the House told me that a bank they would have, though its exchanges should be made in bacon hams, and its currency be small potatoes.

Other Senators took the imaginary scene, in which they had been made to act parts, in thoroughly good temper; and thus the debate on the first proposal of a charter to establish a Fiscal Bank was brought to a conclusion with more amicability than that with which it had been conducted.

A second attempt was made by the Whigs in the same year [1841] to establish a national bank, this time disguised as "The Fiscal Corporation of the United States"—a pretentious title which was much ridiculed by the Democrats. Thus Senator Thomas H. Benton [Mo.] exclaimed:

The Cat in the Meal Tub

Senator Benton

Heavens what a name! long as the moral law—half subtreasury and half national bank—and all fraudulent and deceptive, to conceal what it is; and entirely too long. The name is too long. People will never stand it. They cannot go through all that. We must have something shorter—something that will do for every-day use. Corporosity! that would be a great abridgment; but it is still too long. It is five syllables, and people will not go above two syllables, or three at most, and often hang at one, in names which have to be incontinently repeated. They are all economical at that, let them be as extravagant as they may be in spending their money. They will not spend their breath upon long names which have to be repeated every day. They must have something short and pointed; and, if you don't give it to them, they will make it for themselves. The defunct Fiscal Bank was rapidly taking the title of fiscality; and by alliteration, rascality; and, if it had lived, would soon have been compendiously and emphatically designated by some brief and significant title. The Fiscal Corporation cannot expect to have better luck. It must undergo the fate of all great men and of all great measures, overburdened with titles—it must submit to a short name. There is much virtue in a name; and the poets tell us there are many on whose conception Phœbus never smiled, and at whose birth no muse nor grace was present. In that predicament would seem to be this intrusive corporosity, which we have received from the other House, and sent to our young committee, and which has mutation of title without alteration of substance, and without accession of euphony or addition of sense. Some say a name is nothing—that a rose by any other name would smell as sweet. So it will; and a thorn by any other name would stick as deep. And so of these fiscals, whether to be called banks or corporations. They will still be the same thing—a thorn in our side—but a short name they must have. This corporosity must retrench its extravagance of title.

Senator Benton here told the story of a steamboat to which the owner, in honor of his sweetheart, a Louisiana girl of French parentage, had given the captivating designation of "La Belle Creole"—a name which was

successively shortened to "Creole" (pronounced cree-owl) and to "Owl." This story was greeted with roars of laughter, one Senator exclaiming that it was a good name for a bank; that there had been an Owl-Creek Bank in Ohio once, now dead and insolvent, though in its day as good as the best.

Mr. B. continued. I do not know whether owl will do for this child of long name and many fathers; but we must have a name, and must continue trying till we get one. Let us hunt far and wide. Let us have recourse to the most renowned Æsop and his fables, and to that one of his fables which teaches us how an old black cat succeeded in getting at the rats again after having eaten up too many of them, and become too well known, under her proper form, to catch any more. She rolled herself over in a meal tub—converted her black skin into white—and walked forth among the rats as a new and innocent animal that they had never seen before. All were charmed to see her! but a quick application of teeth and claws to the throats and bellies of the rats let them see that it was their old acquaintance, the black cat; and that whitening the skin did not alter the instincts of the animal nor blunt the points of its teeth and claws. The rats, after that, called her the meal-tub cat and the mealy cat. May we not call this corporosity the meal-tub bank? A cattish name would certainly suit it in one particular; for, like a cat, it has many lives, and a cat, you know, must be killed nine times before it will die; so say the traditions of the nursery; and of all histories the traditions of children are the most veracious. They teach us that cats have nine lines. So of this bank. It has been killed several times, but here it is still, scratching, biting, and clawing. Jackson killed it in 1832; Tyler killed it last week. But this is only a beginning. Seven times more the *Fates* must cut the thread of its hydra life before it will yield up the ghost.

The meal tub! No insignificant or vulgar name. It lives in history, and connects its fame with kings and statesmen. We all know the Stuarts of England—an honest and bigoted race in the beginning, but always unfortunate in the end. The second Charles was beset by plots and cabals. There were many attempts or supposed attempts to kill him; many plots against him, and some very ridiculous; among the rest one which goes by the name of the meal-tub plot; because the papers which discovered it were found in the meal tub where the conspirators or their enemies had hid them.

When a small boy I went to school in a Scotch-Irish neighborhood and learned many words and phrases which I have not met with since, but which were words of great pith and power; among the rest shake-poke. Poke signifies bag, and is a phrase much used among the Scotch-Irish in America. A pig is carried to market in a poke, and, if you buy it without taking it out first, you may be "taken in." So corn is carried to a mill in a poke, and when brought home, ground into meal, the meal remains in the poke, in the houses of poor families, until it is used up. When the bag is nearly empty it is turned upside down and shaken; and the meal that comes out is called the shake-poke, that is to say, the last shake of the bag. By an easy and natural metaphor this term is also applied to the last child that is born in a family; especially if it is puny or a rickety concern. The last child, like the last meal, is called a shake-poke; and may we not call this *fiscalous corporation* a shake-poke also, and for the same reason? It is the last—the last at all events for the session! it is the last meal in their bag—their shake-poke! and it is certainly a rickety concern.

I do not pretend to impose a name upon this bantling; that is a privilege of paternity or of sponsorship, and I stand in neither relation to this babe. But a name of brevity—of brevity and significance—it must have; and, if the fathers and sponsors do not bestow it, the people will; for a long name is abhorred and eschewed in all countries. Remember the fate of John Barebone, the canting hypocrite in Cromwell's time. He had a very good name, John Barebone; but the knave composed a long verse, like Scripture, to sanctify himself with it, and intituled himself thus:—"Praise God, Barebone, for, if Christ had not died for you, you would be damned, Barebone." Now, this was very sanctimonious; but it was too long—too much of a good thing—and so the people cut it all off but the last two words, and called the fellow "damned Barebone," and nothing else but damned Barebone, all his life after. So let this corporosity beware: it may get itself damned before it is done with us, and Tyler, too.[1]

This bill, like the former, was passed by Congress, vetoed by the President, and failed to pass over the veto.

On account of his action on the bank bill, the members of the Cabinet, whom the President had inherited from

[1] A reference to the Whig campaign slogan: "Tippecanoe and Tyler too!"

Harrison, resigned on September 11, 1841, with the exception of Daniel Webster, Secretary of State, who refused to go out with the others on the patriotic ground that he was conducting "delicate and important affairs" in his department. The vacancies were filled by the President with Democrats and Whigs friendly to his interest. The Whigs in Congress met in caucus and issued a manifesto repudiating him. Representative Caleb Cushing [Mass.], in an able paper, rushed to the President's defence, attacking Henry Clay as a "dictator"—at the instigation, it was said, of Daniel Webster—and in the succeeding years of the Administration he supported the President through thick and thin, calling forth the following severe denunciation by Representative Garrett Davis [Ky.].

The Pupil of Machiavelli

Denunciation of Caleb Cushing by Representative Davis

The gentleman occupies a strange position, and puts forth extraordinary notions, considering the measures and principles which he always, until the commencement of this Administration, advocated with so much zeal and ability. I had read many of his speeches before I knew him. I admired his talents and attainments; I approved of the soundness of his views, and was instructed and fortified in my own. But he is wonderfully metamorphosed; and I think, if he will examine the matter deliberately, he will find it to be quite as true, that he has broken his neck politically in jumping his somersets, as that "the Whig party has knocked out its brains against the fixed fact." He tells us that party is nothing but an association of men struggling for power; and that he contemns measures—that measures are not principles. The gentleman must have been reading the celebrated treatise, "The Prince," for such *dicta* are of the school of Machiavelli; and his sudden and total abandonment of all the principles as well as measures, to which he was as strongly pledged as any Whig, good and true, proves that he has studied his lesson to some purpose. At the extra session of 1837 he opposed the sub-treasury in a very elaborate speech. Now he is the unscrupulous advocate of the exchequer, a measure embodying both the sub-treasury and a great organized govern-

From the collection of the New York Historical Society

ment bank, and fraught with more frightful dangers than his own excited imagination had pictured in the whole three years.

He was one of the stanchest supporters of a United States bank. He characterized "the refusal of the late President (Jackson) to sign the bill rechartering the bank, like the removal of the deposits, to be in defiance and violation of the popular will," and characterized as felicitous the periods of time when we possessed a national bank, and as calamitous the periods that we were without it. And yet, sir, he has denied that he was ever the supporter of a bank of the United States, and is now one of the most rabid revilers of such an institution.

He was for Mr. Clay's land bill; and he has abandoned and now contemns it. No man has been more frequent and unsparing in his denunciations of General Jackson; and now he is the sycophantic eulogist of the old hero. He was the unflinching defender of the constitutional rights and powers of Congress. This Administration has not only resorted to the most flagitious abuse of the veto power, but has renewed every other assault, open or insidious, of Presidents Jackson and Van Buren upon Congress, which he, at the time, so indignantly rebuked; and he now justifies them all. He has gone far ahead of the extremest parasites of executive power. John Tyler vetoed four acts of Congress which the gentleman had voted for, and strange, by his subtle sophistry, he defended each of the vetoes; and, most strange, when the House, in conformity to the provisions of the Constitution, voted again upon the measures, his vote was recorded in their favor, and to overrule the very vetoes of which he had just been the venal advocate."

CHAPTER IX

Treasury Notes
["greenbacks"]

Elbridge G. Spaulding [N. Y.] Introduces Bill in the House to Authorize a Large Issue of Treasury Notes ("Greenbacks")—Debate: in Favor, Mr. Spaulding; Opposed, George H. Pendleton [O.], Clement L. Vallandigham [O.]; the Bill Is Passed.

CONGRESS at various times during the session of 1861-62 appropriated vast sums of money for the prosecution of the war, and authorized repeated issues of treasury notes ("greenbacks") to pay the same.

On January 22, 1862, Elbridge G. Spaulding [N. Y.], from the Committee on Ways and Means, introduced in the House a bill to authorize $100,000,000 of such notes, and to fund the floating national debt. Such notes were to bear no interest and to be payable "at the pleasure of the United States"; no note should be for less than $5; such notes were to be receivable for all debts due the Government and for all debts of the Government due to individuals, corporations, etc., within the United States; they were to be "legal tender in payment of all debts, public and private, within the United States"; when deposited in multiples of $50 in the treasury, six per cent. bonds, payable in twenty years at the pleasure of the Government, were to be issued therefor, and when not less than $2,500 of these bonds were presented the Secretary of the Treasury, if he deemed it expedient, might issue therefor bonds whose principal and interest were payable in foreign lands in foreign currency; the treasury notes were to be lawful payment at par value for Government bonds thereafter to be issued.

To fund the public debt the Secretary of the Treasury was authorized to issue bonds to an amount not exceeding $500,000,000, bearing six per cent. interest, and redeemable at the pleasure of the Government twenty years from date; the denominations of the bonds were to be not less than $50, and the amount issued to each person or corporation not less than $2,500; the Secretary might, if he deemed it expedient, issue for these bonds similar ones payable in foreign lands in foreign currency; he was also authorized to pay creditors of the United States with the bonds, or to exchange them for lawful money of the United States, including treasury notes.

Treasury Notes

House of Representatives, January 28–February 25, 1862

In advocacy of the bill Mr. Spaulding, on January 28, said:

The bill before us is a war measure—a measure of *necessity*, and not of choice, presented by the Committee of Ways and Means, to meet the most pressing demands upon the treasury, to sustain the army and navy until they can make a vigorous advance upon the traitors and crush out the rebellion. These are extraordinary times, and extraordinary measures must be resorted to in order to save our Government and preserve our nationality.

At the extra session in July last Congress authorized the Secretary of the Treasury to borrow $250,000,000, for which he was authorized to issue coupon bonds, or registered bonds, or treasury notes, in such proportions of each as he might deem advisable. The bonds were to be issued for twenty years at a rate not exceeding seven per cent. interest per annum, payable half yearly; and the treasury notes were to be issued in denominations of not less than $50 each, at three years, with interest at seven and three-tenths per cent. per annum, payable half yearly, and exchangeable at any time for twenty-year six per cent. bonds. Or, at the option of the Secretary, he was permitted to issue $50,000,000 of the above loan in treasury notes, on demand, in denominations of not less than $5 each without interest, and made receivable in payment of salaries or other dues owing by the United States; or, in his discretion, he was authorized to issue treasury notes at one year, bearing interest at three and sixty-five hundredths per cent. per annum, exchangeable at any time in sums of $100 or upward for the three-year treasury notes bearing seven and three-tenths per cent. interest, but in the aggregate not to exceed $250,000,000. A further provision, however, was made, to wit: that the Secretary of the Treasury might negotiate any part of the loan for six per cent. twenty-year bonds *at a rate not less than the equivalent of par for bonds, bearing seven per cent. interest per annum half yearly, payable in twenty years.*

Under these provisions the Secretary of the Treasury has borrowed $203,516,500.

The total amount of the public debt up to the present time, and for which United States stock and treasury notes have been issued, is, liquidated and unliquidated, to July 1, 1863, $1,200,000,000.

There is now over $100,000,000 of accrued indebtedness in different forms that should be paid at an early day.

With this large accrued indebtedness, and with the prospect that (unless this bill is adopted) the Government will put on the market to the highest bidder still further issues of bonds to the amount of two hundred and fifty to three hundred millions of dollars, to pay current expenses to July next, it is not expected that even the present price of United States stocks can be maintained if forced on the market at this time. We have this alternative, either to go into the market and sell our bonds for what they will command or to pass this bill, or find some other better mode, if one can be devised, to raise means to carry on the war. The Secretary has the means of defraying the daily expenses required to be disbursed from the treasury for only a few days longer. With the enormous expenditures of the Government, to pay the extraordinary expenses of the war, it requires no extended calculation to show that the treasury must be supplied from some source, or the Government must stop payment in a very few days.

You cannot borrow of capitalists any more money on twenty-year seven per cent. bonds, nor on your seven and three-tenths per cent. treasury notes, at the rates fixed by the act of July last. If you offer to the people, and put on the market, $300,000,000 more to the highest bidder, in the present aspect of affairs, they would not be taken except at ruinous rates of discount. That policy would depreciate the bonds already taken by the banks and the people, who are most loyal to the Government, and who came forward as your best friends and furnished the means so

much needed during the last few months to organize your army and navy; and, besides, such depreciation would greatly increase the debt, by requiring a much larger amount of bonds to be issued than would be needed if your loans were taken at par. A loan put upon the market in the present depressed state of United States stocks, to be followed by other large loans, is not regarded as a favorable mode of providing means for maintaining the Government at the present time. If it had been adopted at first, it might possibly have been the best mode; but it is now too late to essay that plan, and I believe it would be ruinous to adopt it. I fear the twenty-year six per cent. bonds would, under the pressure, fall to seventy-five, seventy, sixty, and even fifty cents. This would be a ruinous mode of raising the means to carry on the Government.

What, then, is to be done? The Secretary of the Treasury [Salmon P. Chase] in his annual report does not recommend the issue of demand treasury notes, although he points out many advantages that would result to the Government from their issue. He suggests two plans: first, the issue of demand treasury notes; and, second, a national currency secured by a pledge of United States stocks, to be issued by banks and associations, with proper regulations for their redemption by the banks themselves.

On the propriety of the issue of treasury notes by the Government, to be put in circulation as money, the Secretary says:

> "The first of these plans was partially adopted at the last session of Congress, in the provision authorizing the Secretary to issue United States notes, payable in coin, to an amount not exceeding $50,000,000. That provision may be so extended as to reach the average circulation of the country, while a moderate tax, gradually augmented, on bank notes, will relieve the national from the competition of local circulation. It has been already suggested that the substitution of a national for a State currency, upon this plan, would be equivalent to a loan to the Government without interest, except on the fund to be kept in coin, and without expense, except the cost of preparation, issue, and redemption, while the people would gain the additional advantage of a uniform currency, and relief from a considerable burden in the form of interest on debt."

These remarks of the Secretary were made before the suspension of specie payments. The situation of the country is now very different from what it was two months ago. The circumstances have changed, and the Secretary and Congress will find it necessary, in the present exigency, to conform their action to what *can* be done, and not to what they would *like* to do were it otherwise practicable.

The second plan of the Secretary, and the one which he recommends for adoption, namely: a national currency, to be issued by banks, and secured by a pledge of United States stocks, the sub-Committee of Ways and Means have examined with considerable care. A bill has been prepared and printed for the use of the committee, which may, after some modification, be reported to this House for its action. The committee have come to the conclusion that, however meritorious this system may be in providing a way for funding the stocks of the United States, and however perfect the system may be made by Congress, it cannot, if adopted, be made available soon enough to meet the immediately impending necessities of the Government.

The new system of banking would necessarily go into operation slowly. The existing circulation of bank notes in the loyal States is supposed to be about one hundred and forty millions of dollars. This new currency, when issued, would come into competition with the existing circulation of the banks already established in the several States, and, in the present embarrassed condition of monetary affairs, several months must necessarily elapse before any considerable amount of United States stocks would be absorbed by banks under this proposed new law. As an ultimate mode of funding some part of the large amount of Government stock which has already been issued, and which must from time to time be issued, it may be very valuable; and the national currency issued upon it would no doubt obtain a wide circulation, and greatly facilitate the payment of taxes and other dues to the Government. But with a navy, and an army of six hundred thousand men in the field, requiring, with the other expenses of the Government, an average daily expenditure of more than $1,600,000, this new system of banking will not afford relief to the treasury in time to enable the Secretary to meet the pressing demands that are made upon him.

The duties received at the different customhouses, and the taxes levied at the extra session, or that may now be levied, will be wholly inadequate to meet the requirements of the treasury in the present emergency during the next six months. If you cannot borrow the money on the credit of the United States, except at ruinous rates of discount, and cannot make the new banking system available in time, and cannot realize the amount required from your tariff and tax bills, in what mode can the means be obtained and the Government be carried on? It is believed that the only way in which it can be done is by issuing treasury notes, payable on demand, and making them a legal tender in payment of all debts, public and private, and by ade-

quate taxation to be imposed by new bills. This will bring into full exercise all the higher powers of Government under the Constitution. (See article one, section eight.)

The tables from the Census Bureau show that the true value of the property, real and personal, within the United States, is $16,159,616,068, and the assessed value is $12,006,756,585.

The power in the Constitution to "lay and collect taxes, duties, imposts, and excises" is general and unlimited. Congress has the power to levy and collect any amount of taxes that may be necessary to preserve its existence and pay all its *debts*. Government has a claim—a mortgage, in fact—on all this property to that extent. Will Congress do its duty by passing bills to collect these taxes? This is the vital question. Will Congress have the firmness and the courage to impose the necessary taxation to sustain the credit of the Government? Direct taxation, excises, and internal duties are new features within the United States. They will be heavy burdens on the people, but essential to sustain the circulation of demand treasury notes. The tax gatherer will be an unwelcome visitor to most people, but his face must soon be familiar.

Some members of Congress may hesitate to vote for the tax bills, fearing that they may not be in favor with their constituency at home. Under these circumstances will members of Congress meet the question boldly and firmly? Here is the whole property of the country at the will of Congress. You have the power to tax it to an unlimited extent if necessary to sustain the Government.

This is the *capital*, $16,000,000,000 in amount, on which your treasury notes and bonds rest. This claim of Government in the hands of Congress is direct and specific on the banks throughout the United States, including the gold and silver in their vaults; on commerce, on all kinds of production and business; on railroads, steamboats, and their passengers; on gas companies, on manufacturing companies of all kinds; in short, all real and personal estate of every kind is held subject to the payment of the treasury notes and bonds issued by the Government. Congress is clothed with this mighty power to sustain the nation at this time.

Will you hesitate to do your duty? This is what the people —the capitalist, the merchant, and all who confide in your demand notes—want to know. If they take these notes they want to know positively whether you will enforce the claim of the Government upon the property of the country to the full extent necessary to redeem the treasury notes, and pay punctually

the interest on the bonds which they take of you to sustain the Government. Unless you are prepared to satisfy the country on this point, it is in vain to issue bonds or notes and expect them to pass currently among all the people. Unless this is done they will depreciate, and they ought to depreciate; but with ample taxation, cheerfully voted by Congress, they will be the very best security in the country, because the whole property of the country is held for their redemption. Congress has a plain duty to perform; it has ample power. This power should now be enforced.

In carrying on this existing war and putting down the rebellion it is necessary to bring into exercise all the sovereign power of the Government to sustain itself. The war power must be exercised to its full extent. The money power of the Government must be brought into requisition. The power to tax must be availed of. All the energies of the nation must be aroused and brought into action. The power of the Government and the means of the people must all be devoted to this great work. The Government must be preserved, and this nation of thirty-four States must be perpetuated. The life of the nation is in peril, and all we have and all we hope for must be devoted to maintain its existence, until peace and quiet are restored in every part of our common country.

This bill is a *necessary means* of carrying into execution the powers granted in the Constitution "to raise and *support* armies," and "to provide and *maintain* a navy.

In the present *crisis* of our national affairs it is necessary that the army should be "supported," and the navy "maintained." This necessity will not be questioned by any loyal member on this floor.

The Constitution provides that "*all the laws necessary and proper* for carrying into execution the foregoing powers" may be passed by Congress.

If the *end* be legitimate, and within the scope of the Constitution, all the *means* that are appropriate, which are plainly adapted to that end, and which are not prohibited, may be constitutionally employed to carry it into effect.

If a certain means to the exercise of any of the powers expressly given by the Constitution to the Government of the Union be an appropriate measure, not prohibited by the Constitution, the degree of its necessity is a question of *legislative discretion*, not of judicial cognizance.

The Government of the United States is not prohibited by the Constitution from issuing treasury notes on demand, and

making them a *legal tender* in payment of all debts within its jurisdiction. The Constitution (article one, section ten) prohibits the *States* from making anything but gold and silver coin a legal tender in payment of debts; but this does not at all restrict the sovereign power of the United States. Congress has the power to coin money, "regulate the *value* thereof and of foreign coin." Gold and silver by long practice—a practice that has continued for centuries among all nations—have become the legal money of the world in all commercial transactions. Their real intrinsic value is not as great as that fixed upon it by governments. All governments fix the value of gold and silver; and without their government stamp gold and silver would be a simple commodity, like other things having intrinsic value. Some governments fix the value of coin higher, and some lower; just as each for itself chooses to determine. Any other metal or thing that should be stamped, and its value regulated by all the governments of the world, would pass equally well in all commercial transactions, as gold and silver, although not intrinsically as valuable. Exchequer bills or treasury notes, whose value is fixed by Government, and stamped as money, would pass as money in the payment of debts within the jurisdiction of the Government fixing such value.

In regulating the value of "coin"—either foreign or domestic—Congress may provide that gold and silver shall be of no greater value in the payment of debts, within the United States, than the treasury notes issued on the credit of this Government, which stamps such coin and fixes its value. These high powers of government have been frequently exercised by Great Britain during her continental wars, in making the Bank of England notes receivable for public dues, and virtually in payment of debts, by a suspension of specie payments within the United Kingdom; and other governments of Europe have exercised the same high prerogatives wherever necessary to preserve their existence. But we are not left to this argument alone for constitutional power to issue these demand notes and make them a legal tender in payment of debts.

Here the speaker read an opinion from Attorney-General Edward Bates, supporting the constitutional soundness of the proposition.

The Attorney-General, in an unofficial opinion, given to me at my solicitation, says:

"Certainly the Constitution contains no direct verbal prohibition, and I think it contains no inferential prohibition that can be fairly drawn from its expressed terms. The first article of the Constitution, section eight, grants to Congress specifically a great mass of powers. Section nine contains divers limitations upon Congress, upon the United States, and upon individuals; and section ten contains restrictions upon the several States. This last section is the only one that treats of *tender*. 'No *State* shall make anything but gold and silver coin a tender in payment of debts.' This applies to a *State* only, and not to the nation; and thus it has been always understood.

"With regard to the next preceding clause in the same section—'No State shall emit bills of credit;' the prohibition to emit *bills of credit* is quite as strong as the prohibition to make anything but gold and silver coin a legal tender, yet nobody doubts, Congress does not doubt, its power to issue bills of credit. Treasury notes *are* bills of credit, and I think one is just as much prohibited as the other. Neither is forbidden to Congress."

The Constitution provides that Congress shall have power to pass "all laws necessary and proper" for carrying into execution all the powers granted to the Government of the United States, or any department or officer thereof.

The word "necessary," as used, is not limited by the additional word "proper," but enlarged thereby.

"If the word *necessary* were used in the strict, rigorous sense, it would be an extraordinary departure from the usual course of the human mind, as exhibited in solemn instruments, to add another word, the only possible effect of which is to qualify that strict and rigorous meaning, and to present clearly the idea of a choice of means in the course of legislation. If no means are to be resorted to but such as are *indispensably* necessary, there can be neither sense nor utility in adding the word *'proper;'* for the *indispensable necessity* would shut out from view all consideration of the *propriety* of the means."—3 Story's "Commentaries," sec. 122.

Mr. Spaulding also read from the "Federalist," No. 23, in which Alexander Hamilton contended that the powers of the sword and purse in the Federal Government were unlimited.

Congress may judge of the necessity in the present exigency. It may decide whether it will authorize the Secretary of the Treasury to issue demand treasury notes, and make them a legal tender in payment of debts, or whether it will put its six or seven per cent. bonds on the market, at various rates of discount, and raise the money at any sacrifice the money lender may require to meet the pressing demands upon the treasury. In the one case the Government will be able to pay its debts at fair rates of interest; in the other it must go into the streets

"shinning" for the means, like an individual in failing circumstances, and sure of being used up in the end by the avarice of those who may exact unreasonable terms. The Government needs and should have in her present peril the aid and protection of all patriotic citizens.

But, sir, knowing the power of money, and the disposition there is among men to use it for the acquisition of greater gain, I am unwilling that this Government, with all its immense power and resources, should be left in the hands of any class of men, bankers or money lenders, however respectable and patriotic they may be. The Government is much stronger than any of them. Its capital is much greater. It has control of the bankers' money, and all the brokers' money, and all the property of the thirty millions of people under its jurisdiction. Why, then, should it go into Wall street, State street, Chestnut street, or any other street begging for money? Their money is not as secure as Government money. All the gold they possess would not carry on the Government for ninety days. They issue only promises to pay, which, if Congress does its duty, are not half as secure as United States treasury notes based on adequate taxation upon all the property of the country.

Why then go into the streets at all to borrow money? I am opposed, in our present extremity, to all shifts of this kind. I prefer to assert the power and dignity of the Government, by the issue of its own notes, pledging the faith, the honor, and property of the whole loyal people of the country to maintain their circulation and provide for their redemption.

On the question of constitutional power we are not left without the recorded opinions of the ablest jurists in the country. (1 Kent's "Commentaries," 351-52; McCulloch *vs.* the State of Maryland, 4 Wheaton's R. 413-20.)

A suspension of specie payments is greatly to be deplored, but it is not a fatal step in an exigency like the present. The British Government and the Bank of England remained under suspension from 1797 to 1821-22, a period of twenty-five years. During this time England successfully resisted the imperial power of the Emperor Napoleon, and preserved her own imperiled existence. As a measure of necessity, she made the Bank of England notes virtually a legal tender by suspending the specie restriction. During all this time the people of Great Britain advanced in wealth, population, and resources. Gold is not as valuable as the productions of the farmer and mechanic, for it is not as indispensable as are food and raiment. Our army and navy must have what is far more valuable to them

than gold and silver. They must have food, clothing, and the material of war. Treasury notes issued by the Government, on the faith of the whole people, will purchase these indispensable articles, and the war can be prosecuted until we can enforce obedience to the Constitution and laws, and an honorable peace be thereby secured. This being accomplished, I will be among the first to advocate a speedy return to specie payments, and all measures that are calculated to preserve the honor and dignity of the Government in time of peace, and which I regret are not practicable in the prosecution of this war.

An early and successful advance of our armies is of the utmost importance; we need such an advance to sustain the financial credit of the Government; we need it to prevent foreign intervention; we need it to rouse the flagging energies of the people; and, above all, we need it to vindicate the courage and invincibility of our brave soldiers, who are so anxious to be led on to victory.

On January 29 George H. Pendleton [O.] spoke against the bill.

I have examined, Mr. Chairman, with some care, every law authorizing the issue of treasury notes which has been passed from the foundation of the Government up to this hour, and I find that this bill differs from all of them in several essential particulars. Every other law authorizing the issue of treasury notes provided that they should bear some rate of interest, whereas these are to bear none; that they should be payable at a fixed time prescribed in the note, whereas these are only to be payable at the pleasure of the United States; that the notes thereby authorized should be receivable in payment of public debts only by those who were willing to receive them at par, while these notes are to be received by every public creditor who is not willing to forfeit his right to payment at all. These notes are to be made lawful money, and a legal tender in discharge of all pecuniary obligations, either by the Government or by individuals, a characteristic which has never been given to any note of the United States or any note of the Bank of the United States by any law ever passed. Not only, sir, was such a law never passed, but such a law was never voted on, never proposed, never introduced, never recommended by any department of the Government; the measure was never seriously entertained in debate in either branch of Congress.

If this bill shall pass, we are about to take a departure from

the settled financial policy of the Government. We are about to launch ourselves, with sails all set, upon an ocean of experiment, upon which the wise men who administered the Government before we came into power, warned by the example of other nations, would not permit it even to enter. I believe that this Government has reached a crisis in its history. I believe that it is approaching a period in the history of its legislation which may determine the question of its continuance. By wisdom it may overcome the evils of secession; by its great powers and resources it may be able to defend itself against those in arms against it; but I firmly believe that it cannot maintain itself against the shock of the accumulated and manifold dangers which follow inevitably, closely in the wake of an illegal, unsound, and depreciated Government paper currency.

The feature of this bill which first strikes every thinking man even in these days of novelties, is the proposition that these notes shall be made a legal tender in discharge of all pecuniary obligations, as well those which have accrued in virtue of contracts already made as those which are yet to accrue in pursuance of contracts which shall hereafter be made. Do gentlemen appreciate the full import and meaning of that clause? Do they realize the full extent to which it will carry them? Every contract for the payment of money is in legal contemplation a contract for the payment of gold and silver coin. Every promissory note, every bill of exchange, every lease reserving rent, every loan of money reserving interest, every bond issued by this Government, is a contract to which the faith of the obligor is pledged that the amount, whether rent, interest, or principal, shall be paid in the gold and silver coin of the country. Every contract for the performance of some other thing than the payment of money carries with it, as the penalty of its infraction, that damages shall be assessed, and that these damages shall be paid, even if necessary at the end of an execution, in the gold and silver coin of the country. Every verdict which has been rendered, every judgment which has been entered up, every decree for the payment of money has been made upon that hypothesis. That is the measure of the obligation of the one party, and of the right of the other.

The provisions of this bill contemplate impairing the obligation of every contract of that kind, and disturbing the basis upon which every judgment and decree and verdict has been entered. It proposes to say to a party who has entered into a contract, "You shall be discharged from the obligations of that contract by doing something else than that which you have

agreed to do." It proposes to say to every party with whom a contract has been made, "Though you are entitled to demand one thing, you shall, perforce, remain satisfied with the doing of another." It proposes to say, "Although you have agreed to pay gold and silver, you shall be discharged upon the payment of these notes; although you are entitled to demand gold and silver, you shall rest content with the reception of this paper." It proposes, in one word, to release the one party from the obligation of his contract, and to divest the other party of the right which has been vested in him by that contract. Sir, I am sure I need only state the proposition to shock the mind of the legal profession of the country, so thoroughly has it been imbued with the idea of the sanctity of the obligation of contracts by those who have taught it the beneficent maxims of constitutional law.

As for the rest, this bill provides that it shall be illegal to make a contract for dealing in gold and silver coin; or, to state it more exactly, it provides that, whatever executory contracts parties may make concerning the gold and silver coin of the country, they shall be discharged upon the performance of another and different duty—by the delivery of an equivalent number of dollars in these notes. Where, sir, does Congress get this power? Where is the grant to be found? One would suppose that a power like that—a power which involves the impairing of the obligations of such a vast class of contracts, which proposes to disturb vested rights to such an immense extent—would be worthy of a place in the express grants of the Constitution.

The gentleman from New York [Mr. Spaulding], in his argument yesterday, deduced this power from the general powers of the Government. He told us that Congress had power to lay and collect taxes; to raise and support armies; to provide and maintain a navy; and that all power necessary to effectuate these purposes was expressly given by the general grant of the Constitution. If I should admit his statement in the very language in which he has made it, am I not entitled to ask whether he has shown us any legitimate connection between making these notes a legal tender and the power to raise an army? Might I not ask whether the repudiation of the obligations of the Government to pay its interest is a legitimate means for providing and sustaining a navy? Whether impairing the obligations of contracts between private individuals throughout the country will, in any degree, assist the Government in its great duty of laying and collecting taxes? We had no demonstration of the necessity or propriety of these means to accomplish those ends.

The gentleman spoke quite at large in reference to the sovereign power of the Government. He told us that this power was not prohibited in the Constitution. He told us that in times of great emergency everything may be done except that which is prohibited; and he read an argument from the Attorney-General, which concludes, as it began, with the proposition that such a power is not prohibited to Congress. Sir, I repudiate this whole idea. I think it has no solid foundation in the Constitution. In all its external relations, standing among the nations of the earth, the Government of the United States is sovereign, and is invested with all the attributes of sovereignty; but in its relations to its own citizens, in its relations to the States, in its relations to its own constituents, it has no power except that which is granted. It has no original power; its powers are all delegated, and delegated by the terms of the Constitution itself. I repudiate the idea that all the sovereign power which rightfully resides in the nation must necessarily find expression in any department of the Government, whether it be national or State. I stand upon the provision of the Constitution, that all power which is not delegated to the Federal Government is reserved from it; and that all power which is not delegated to it, and thereby reserved from it, resides either in the States or the people. There are many powers which are denied by the Constitution to the States, and yet not delegated to the general Government. They find their proper repository in the people.

When I come to examine the powers of Congress, according to the principles of interpretation to which I adhere, I look to the grants of the Constitution. I find no grant of this power in direct terms, or, as I think, by fair implication. It is not an accidental omission; it was intentionally left out of the Constitution, because it was designed that the power should not reside in the Federal Government.

Prior to the adoption of the Constitution the States had nearly all—perhaps all—emitted paper money, and had made it a legal tender in the payment of debts. It was designed originally to forbid to the States the exercise of that power, and to delegate it to the Federal Government; and, accordingly, the first draft of the Constitution reported by the committee of revision contained a clause prohibiting this power to the States, and another clause granting to the Federal Government the right "to borrow money and emit bills on the credit of the United States." When that clause came up for discussion—as it appears from page 1343 of the third volume of the Madison Papers—

"Mr. Gouverneur Morris moved to strike out 'and emit bills on the credit of the United States.' He said, if the United States had credit, such bills would be unnecessary; if they had not, unjust and useless."

Mr. Madison thought it was advisable to leave in the Constitution the provision that Congress might *emit bills of credit*, and to deprive Congress of the power of making them a *legal tender*, thus removing

"the temptation to emit them with unjust views. And promissory notes, in that shape, may in some emergencies be best."

A very sharp debate followed upon the proposition to strike out from the Constitution the clause conferring that power:

"Mr. Ellsworth thought this a favorable moment to shut and bar the door against paper money. The mischiefs of the various experiments which had been made were now fresh in the public mind, and had excited the disgust of all the respectable part of America. By withholding the power from the new Government, more friends of influence would be gained to it than by almost anything else. Paper money can in no case be necessary. Give the Government credit, and other resources will offer. The power may do harm, never good." . . . . . .

"Mr. Butler remarked that paper was a legal tender in no country in Europe. He was urgent for disarming the Government of such a power." . . . . . .

"Mr. Read thought the words, if not struck out, would be as alarming as the mark of the beast in Revelation."

And, on the motion to strike out those words from the Constitution, it was decided by a vote of nine States "aye," and two States "no."

And so thoroughly was that understood to be the meaning and policy of the Government that none of the early statesmen of the country, either those who had been present at the time of the making of the Constitution or those who followed so closely after as that they were familiar with those who did make it, even suggested that such a power existed.

Mr. Hamilton, certainly, a gentleman who was in favor of enlarging to the utmost the powers of the Government, in his very first report to Congress upon the subject of a national bank, takes a distinction between the emission of bills by the Government and the creation of a bank with power to emit its own bills. In that famous report on a national bank, in 1790, he uses this language:

"The emitting of paper money by the authority of the Government is wisely prohibited to the individual States by the national Constitution;

and the spirit of that prohibition ought not to be disregarded by the Government of the United States. Though paper emissions, under a general authority, might have some advantages not applicable, and be free from some disadvantages which are applicable to the like emissions by the States separately, yet they are of a nature so liable to abuse—and, it may even be affirmed, so certain of being abused—that the wisdom of the Government will be shown in never trusting itself with the use of so seducing and dangerous an expedient. In times of tranquillity it might have no ill consequence; it might even perhaps be managed in a way to be productive of good; but, in great and trying emergencies, there is almost a moral certainty of its becoming mischievous. The stamping of paper is an operation so much easier than the laying of taxes that a Government in the practice of paper emissions would rarely fail, in any such emergency, to indulge itself too far in the employment of that resource to avoid, as much as possible, one less auspicious to present popularity."—"Hamilton's Works," Vol. 3, p. 124.

And Mr. Webster, who followed closely the principles of government and of finance laid down by Mr. Hamilton, sought occasion several times in his speeches in Congress to express his decided and firm convictions upon this subject. In his speech upon the renewal of the charter of the United States Bank, made in 1832, Mr. Webster says:

"Congress can alone coin money. Congress can alone fix the value of foreign coin. No State can coin money. No State can fix the value of foreign coin. No State, *not even Congress itself*, can make anything a tender but gold and silver in payment of debts."—"Webster's Works," Vol. 2, page 81.

And again, sir, in 1836, when Mr. Webster was at the very height of his intellectual power, and when by the financial condition of the country he was led to apply all his power to develop the true meaning of the Constitution in this regard, and to devise legislation suited to the evils then existing, in his speech upon the specie circular, says:

"But if we understand by currency the *legal money* of the country, and that which constitutes a lawful tender for debts, and is the statute measure of value, then, undoubtedly, nothing is included but gold and silver. Most unquestionably there is no legal tender in this country under the authority of this Government, or any other, but gold and silver, either the coinage of our own mints, or foreign coins, at rates regulated by Congress. This is a constitutional principle, perfectly plain, and of the very highest importance. The States are expressly prohibited from making anything but gold and silver a tender in payment of debts; and although no such express prohibition is applied to Congress, yet, as Congress has no power granted to it, in this respect, but to coin money and to regulate the value of foreign coins, it clearly has no power to substitute paper, or anything else, for coin, as a tender in payment of debts and in discharge of contracts."—"Webster's Works," Vol. 4, page 271.

RUNNING THE MACHINE

[Meeting of Lincoln's Cabinet, with Pesenden Grinding Out Greenbacks]

From the collection of the New York Historical Society

And Mr. Calhoun, in his speech on the bill authorizing the issue of treasury notes, in 1837, assumes, as indisputable, that Congress possesses no such power.—3 "Calhoun's Works," p. 102.

Sir, it seems to me that if the language of the Constitution and the weight of authority can settle any proposition, it is that Congress has not the power to do that which it is proposed shall be done by the provisions of this bill.

Now, sir, the argument which I have made in reference to the constitutional power of Congress does not depend in any degree upon the question whether or not these notes can maintain their par value in gold and silver. But it may give point to the argument to show the effect which will be produced by the provisions of the bill itself in that respect.

The bill fixes the values of these notes; they shall be equivalent to an equal number of dollars expressed in the twenty-year bonds of the United States, carrying six per cent. interest. What are these bonds worth to-day? Sir, I read in the New York papers that last Saturday they were selling at eighty-nine cents on the dollar. Thus you confiscate, wickedly and unnecessarily, one-tenth—even at the present rates—of all the indebtedness of the country. Sir, it is a monstrous proposition, which I hope will not be tolerated by this House.

But, Mr. Chairman, I go a step further. I doubt whether there is any power in the Federal Government to issue the notes described in this bill, whether they are made a legal tender or not. I have shown to you that the power to "emit bills of credit" was expressly withheld by the convention which framed the Constitution. Now, what is a bill of credit? Chief Justice Marshall, in the case of Craig against the State of Missouri (4 Peters's Reports), defines it. He says:

> "To emit bills of credit conveys to the mind the idea of issuing paper intended to circulate through the community as money, which paper is redeemable at a future day. This is the sense in which the terms have been always understood. The term has acquired an appropriate meaning; and "bills of credit" signify a paper medium intended to circulate between individuals, and between Government and individuals, for the ordinary purposes of society."

Judge Story, in his dissenting opinion in the case of the Bank of the Commonwealth of Kentucky, defines them in the same way. What are these notes? They are made, by the very language—it is their chief purpose—of the bill, lawful money. They are intended to circulate as currency. They come within the definition of "bills of credit."

But, even if I believed this bill to be constitutional in both aspects, I yet see enough in it to merit, as I think, the hearty condemnation of the House. It provides that these notes shall be redeemable only at the pleasure of the United States. The gentleman from New York [Mr. Spaulding] called them "demand notes." They have been so called throughout the country. They do not bear a single characteristic of a demand note. There is no time, from the hour when they shall pass into the hands of the holder, when he can by their terms demand that they shall be redeemed. There is no time when the faith of the Government is pledged to their payment. The holder may present them, and he is told that the time has not arrived at which, by the face of the bill, they are to be paid. They will inevitably depreciate. The wit of man has never discovered a means by which paper currency can be kept at par value, except by its speedy, cheap, certain convertibility into gold and silver. I need not cite gentlemen to history or to authorities—writers on political economy—to prove it. Unless convertible they have always depreciated; they always will depreciate; they ought to depreciate, because they are only valuable as the representatives of gold and silver; and, if they are not convertible into that of which they are the representative, they must necessarily lose their value. You send these notes out into the world stamped with irredeemability. You put on them the mark of Cain, and, like Cain, they will go forth to be vagabonds and fugitives on the earth. What then will be the consequence? It requires no prophet to tell what will be their history. The currency will be expanded; prices will be inflated; fixed values will depreciate; incomes will be diminished; the savings of the poor will vanish; the hoardings of the widow will melt away; bonds, mortgages, and notes, everything of fixed value will lose their value; everything of changeable value will be appreciated; the necessaries of life will rise in value; the Government will pay twofold—certainly largely more than it ought—for everything that it goes into the market to buy; gold and silver will be driven out of the country. What then? The day of reckoning must come. Contractions will follow. Private ruin and public bankruptcy, either with or without repudiation, will inevitably follow.

Can we not learn something from the early experience of our own country? Can we not learn something from the overthrow of the revolutionary government of France by this very over-issue of depreciated paper? Can we not learn something from those throes which the society of England endured during the

long suspension of, and at its return to, specie currency in 1822? Can we not now rise to a wisdom of statesmanship which shall control the finanical necessities of the country without plunging it into that gulf from which there is, with honor and safety, no recovery?

Sir, I beg gentlemen to permit me to read, in closing what I have to say, one more lesson of wisdom from that statesman of New England [Daniel Webster], to whom I have had occasion to refer.

> "No nation had a better currency than the United States. There was no nation which had guarded its currency with more care, for the framers of the Constitution and those who had enacted the early statutes on the subject were *hard money men*. They had felt and duly appreciated the evils of a paper medium; they therefore sedulously guarded the currency of the United States from debasement. The legal currency of the United States was gold and silver coin. This was a subject in regard to which Congress had run into no folly. Gold and silver currency was the law of the land at home, the law of the world abroad; there could, in the present condition of the world, be no other currency."

Let gentlemen heed this lesson of wisdom. Let them, if need be, tax the energies and wealth of the country sufficiently to restore the credit of the Government. Let them borrow whatever money in addition may be necessary—borrow it to the full extent that may be necessary—and let us adhere rigidly, firmly, consistently, persistently, and to the end, to the principle of refusing to surrender that currency which the Constitution has given us, and in the maintenance of which this Government has never, as yet, for one moment wavered.

On February 3 Clement L. Vallandigham [O.] spoke against the bill.

I do not agree, Mr. Chairman, with the gentleman who opened this debate [Mr. Spaulding] that this bill is a war measure. Certainly, sir, it has been forced upon us by the war; but if peace were restored to-morrow these $100,000,000 of treasury notes would be just as essential to the public credit as they are to-day. The argument of "military necessity" has been carried quite far enough already, without being now urged in behalf of the proposition—so unconstitutional, disastrous, and unjust—to make paper money a legal tender in discharge of all debts. I support this measure—not, indeed, as reported—impossible—but as I would have it amended—because it is absolutely essential to even the ordinary credit of the Government, and because without it I see nothing but bankruptcy to the Government in

the midst of immense aggregate wealth among the people. The credit of the country is the honor and strength and support of the country, and it must be maintained at all hazards, and no matter who is President or what party is in power. And I am not willing to hazard the entire credit and honor and good faith of the country, because the Administration may, perchance, use this recuperated credit to continue a war which I have not approved. "War is disunion," said Mr. Douglas; and bankruptcy is disunion, and, as a true Union man, I have opposed the first, as I shall labor now to avert the last.

Sir, disguise it as you may, this bill is but a forced loan from the people. It is an abuse and a stretch of power which no Government, except one either in the first throes of revolutionary madness and desperation, or in the last agonies of dissolution, or in the midst of the most imminent danger of either bankruptcy or conquest and overthrow, and no king or potentate, except a usurper, ever ventured to exert. If voluntarily submitted to, or by fear or power enforced, it will corrupt, derange, and debase the currency, and afflict the country with financial and commercial disaster and ruin, and shake the foundations of public and private credit for half a century to come. But we shall be fortunate if it does not precipitate a revolution, sooner or later, in our own midst.

But, independently of all this, tried by the plainest principles of finance, the commonest maxims of political economy, as exhibited and enforced in the experience of other nations, this bold but ill-advised and most hazardous experiment of forcing a paper currency upon the people, ought to be met by the representatives of the people with unanimous and emphatic condemnation. Otherwise, the experiment, if successful, will be followed by other enormous issues, till not a dollar of gold or silver will be seen again in your day or mine, and but little of ordinary bank paper. Exportation, hoarding, melting, and manufacture into articles of luxury of every kind will follow as the legitimate and inevitable consequence of your irredeemable Government paper currency. The golden age of America henceforth will belong only to the *Saturnia regna*[1] of poets and mythologists.

Nor is this all, nor the worst. An immense inflation or bloat in this wonderful paper money which our financial Midas by his touch is to convert into gold must come next. Cheap in material, easy of issue, worked by steam, signed by machinery, there will be no end to the legions of paper devils which shall

[1] "Reign of Saturn," *i. e.*, the "Golden Age."

pour forth from the loins of the Secretary. Sir, let the army rejoice; there will be no more "shoddy," for there will be no more rags out of which to manufacture it.

And now, sir, what must follow from all this? First, that which never has failed in times of bloated currency—high prices, extravagant speculation, enormous sudden fortunes, immense fictitious wealth, general insanity. These belong to all inordinate and excessive paper issues, and even to plethoras in the circulation of gold and silver, if such plethoras could occur. But the evil will not stop here. Every banker, every lender, every merchant, every business man, and every seller of real or personal estate, or anything else, compelled to receive in payment for whatever he lends or sells an irredeemable paper money, dependent for its value solely upon force, and without the smallest credit, and himself having no confidence in the Government, and no special good will to the borrower or buyer who forces him to take its paper, will demand a still higher price, by way of insurance, than if the currency were sound and safe, no matter how much inflated.

And now, sir, what is to be the result of all this? What else but the result from like causes in years past in foreign countries and in our own? It is written in the commercial convulsions and sufferings of France in 1720, and of England a century later, and of the United States in 1837. The collapse follows the inflation, and is terrible and disastrous just in proportion as the bubble has been magnificent. Your legal tender laws will avail nothing. They have been tried before; tried in this country and tried abroad; and have always failed in the end. The regent of France proclaimed them in Law's time, in 1717; and what followed? Let M. Thiers answer:

"Violent and vexatious as the measures were to sustain the credit of the notes, they were insufficient to give them a value which they did not possess. *Dishonest debtors alone used them to pay their debts.* Coin was secretly used for daily purchases, and was concealed with care. Many accumulated it clandestinely. The greater part buried it in the earth, and the rich realizers used every artifice to transfer it to foreign countries. Another portion of our coin left France; and although the exportation of specie is not necessarily injurious, it was so at this time, since it left behind only a false paper currency and an imaginary capital."

But again, sir: this bill declares these notes to be "payable *at the pleasure of the United States.*" In other words, the debtor dictates terms to the creditor, and declares that a debt payable in cash down or on demand shall be paid at the pleasure of the debtor, or otherwise, in either case, shall be utterly

extinguished. O most wonderful, righteous, and equitable Secretary!

Sir, there is no subject so delicate as credit. What is it? Confidence, trust, faith. In its very nature it is voluntary, and you can no more coerce credit than you can compel belief in a particular creed or religion, or love between man and woman. It withers before suspicion, and languishes and dies at the sight of force. Sir, in the reign of Henry VIII, Parliament passed "an act for the *abolishing of diversity of opinion* in certain articles concerning the Christian religion." How much worse or more abused, I ask, was that act than the bill before us? Good faith is the foundation of all credit; but this bill proposes, not bold and outright, but timid—I will not say cowardly—and indirect repudiation. More than this: it is an open confession of bankruptcy. If the Government has solid means, it needs no notes. If it has credit, why declare its notes lawful money and a legal tender, equal with gold? If it has neither means nor credit, it is exactly what is meant by a bankrupt.

Here, sir, is one of the Continental bills of November, 1776. It bears small resemblance to the delicate paper issues and exquisite engraving of the present day in the United States. It smacks a little of the poverty of "Dixie." Instead of the effigies of Lincoln, it bears on its face a rudely carved wood cut of the wild boar of the forest. It was bad money, sir; but issued in a noble cause. It is redolent of liberty; it smells of habeas corpus, free speech, a free press, free ballot, the right of petition, the consent of the governed, the right of the people to govern, public indictment, speedy public trial, trial by jury, and all the great rights of political and individual liberty for which martyrs have died and heroes contended for ages—although I am not quite sure, sir, that even now it is altogether without somewhat of the odor of rebellion lingering about it. But even this Continental bill purports to be payable, though not paid, in specie. It recites that "this bill entitles the bearer to receive four Spanish milled dollars, or the value thereof in gold and silver, according to a resolution of Congress, passed at Philadelphia, November 2, 1776," and it is issued in the name of "the United Colonies."

But though in the midst of a revolution, and struggling for liberty and life, and in the darkest hour of that sore trial—it was just previous to the victory at Trenton—it never occurred to the just men and patriots of that day to usurp the power to make this paper money a legal tender, and to force it, by this usurpation, into credit and circulation by the strong arm of the

law; and to that extent—and it is great—the United States notes proposed by this bill are fifty-fold worse and more to be abhorred than Continental money. But this paper of 1776 bears no interest, is payable to bearer, payable in gold and silver, payable at no particular time, intended to circulate permanently and generally as money, and without a dollar of tax or revenue to support it. The men of that day relied on patriotism to keep their bills in credit; and yet we know that even then, in the purest and best times of the Republic, they sank in value till at the close of the war $1,000 in paper were worth but one dollar in specie. In short, sir, they so utterly depreciated that to this day, if a profane man would describe anything as totally and hopelessly worthless, he would say of it that it was "not" worth a Continental—*dollar.*"

Sir, what I beg to know is the object of this bill, if it be not to create an enormous and endless public debt, to be interwoven with every political, social, and business relation of life; to subjugate the States and the people perpetually to the Federal Government, and therefore never to be extinguished? The seven years of famine are upon us, and our modern Joseph is to buy in the property of the whole people, and lease it out to them again as tenants at a perpetual rent. Sir, I commend to him the ancient and significant Hebrew proverb: *Quum lateres duplicantur venit Moses*—when the bricks are doubled, Moses comes.

Mr. Vallandigham then proposed a substitute measure, the chief feature of which was the elimination of the legal tender provision of the original.

The bill was passed by Congress and approved by President Lincoln on February 25, 1862, with various amendments. The amount of issue was increased to $150,000,000; the notes were not to be receivable for customs duties nor for interest on Government securities; Government bonds were to be exempt from State taxation. The legal tender provision, which had been the chief cause of objection to the bill, was retained. Salmon P. Chase, Secretary of the Treasury, who was opposed fo it, finally yielded to its retention on the score of military necessity.

CHAPTER X

National Banking System

Salmon P. Chase, Secretary of the Treasury, Proposes a National Banking System to Supply Currency—John Sherman [O.] Introduces Bill for Same in the Senate—Debate: in Favor, Sen. Sherman; Opposed, Lazarus W. Powell [Ky.]—Bill Is Passed and Goes to the House—Debate: in Favor, Elbridge G. Spaulding [N. Y.], Reuben E. Fenton [N. Y.]; Opposed, Stephen Baker [N. Y.], Warren P. Noble [O.]—Bill Is Passed.

IN his annual report, of December, 1861, Salmon P. Chase, Secretary of the Treasury, deriving his idea from a free banking law of the State of New York, which had been in successful operation since 1838, had proposed an act authorizing the organization of banking associations to provide a currency (national banknotes) based on the combined credit of these organizations and of the Government. No action was taken upon it by Congress during the ensuing session, the issue of treasury notes ("greenbacks"), which was then authorized, being deemed sufficient to provide the Government with the needed funds. In his report of December 4, 1862, the Secretary renewed his proposition which the steady depreciation of the greenbacks in value, due to Union defeats which foreshadowed a long and doubtful war, rendered more acceptable now to Congress and the country. The provisions of the measure and the arguments in its favor were thus set forth:

The National Banking System

Report of Secretary of the Treasury Chase

The central idea of the proposed measure is the establishment of one sound, uniform circulation, of equal value through-

out the country, upon the foundation of national credit combined with private capital.

Such a currency, it is believed, can be secured through banking associations organized under national legislation.

It is proposed that these associations be entirely voluntary. Any persons, desirous of employing real capital in sufficient amounts, can unite together under proper articles, and, having contributed the requisite capital, can invest such part of it, not less than a fixed minimum, in United States bonds, and having deposited these bonds with the proper officer of the United States, can receive United States notes in such denominations as may be desired, and employ them as money in discounts and exchanges. The stockholders of any existing banks can, in like manner, organize under the act, and transfer, by such degrees as may be found convenient, the capital of the old to the use of the new associations. The notes thus put into circulation will be payable, until resumption, in United States notes, and, after resumption, in specie, by the association which issues them, on demand; and if not so paid will be redeemable at the treasury of the United States from the proceeds of the bonds pledged in security. In case any association shall fail in such redemption, the Treasurer of the United States will probably, under discretionary authority, pay the notes and cancel the public debt held as security.

It seems difficult to conceive of a note circulation which will combine higher local and general credit than this. After a few years no other circulation would be used, nor could the issues of the national circulation be easily increased beyond the legitimate demands of business. Every dollar of circulation would represent real capital, actually invested in national stocks, and the total amount issued could always be easily and quickly ascertained from the books of the treasury. These circumstances, if they might not wholly remove the temptation to excessive issues, would certainly reduce it to the lowest point, while the form of the notes, the uniformity of devices, the signatures of national officers, and the imprint of the national seal, authenticating the declaration borne on each that it is secured by bonds which represent the faith and capital of the whole country, could not fail to make every note as good in any part of the world as the best known and best esteemed national securities.

The organization proposed, if sanctioned by Congress, would require within a very few years, for deposit as security for circulation, bonds of the United States to an amount not less than $250,000,000. It may well be expected, indeed, since the circulation, by uniformity in credit and value, and capacity of quick and cheap transportation, will be likely to be used more extensively than any hitherto issued, that the demand for bonds will overpass this limit. Should Congress see fit to restrict the privilege of deposit to the bonds known as five-twentieths, authorized by the act of last session, the demand would promptly absorb all of that description already issued, and make large room for more. A steady market for the bonds would thus be established and the negotiation of them greatly facilitated.

But it is not in immediate results that the value of this support would be only or chiefly seen. There are always holders who desire to sell securities of whatever kind. If buyers are few or uncertain, the market value must decline. But the plan proposed would create a constant demand, equaling and often exceeding the supply. Thus a steady uniformity in price would be maintained, and generally at a rate somewhat above those of bonds of equal credit, but not available to banking associations. It is not easy to appreciate the full benefits of such conditions to a government obliged to borrow.

Another advantage to be derived from such associations would be found in the convenient agencies which they would furnish for the deposit of public moneys.

The Secretary does not propose to interfere with the independent treasury. It may be advantageously retained, with the assistant treasurers already established in the most important cities, where the customs may be collected as now, in coin or treasury notes issued directly by the Government, but not furnished to banking associations.

But whatever the advantages of such arrangements in the commercial cities in relation to customs, it seems clear that the secured national circulation furnished to the banking associations should be received everywhere for all other dues than customs, and that these associations will constitute the best and safest depositaries of the revenues derived from such receipts. The convenience and utility to the Government of their employment in this capacity, and often, also, as agents for payments and as distributors of internal revenue stamps, need no demonstration.

Another and very important advantage of the proposed plan is that it will reconcile, as far as practicable, the interests of existing institutions with those of the whole people.

All changes, however important, should be introduced with caution, and proceeded in with careful regard to every affected interest. Rash innovation is not less dangerous than stupefied

inaction. The time has come when a circulation of United States notes, in some form, must be employed. The people demand uniformity in currency, and claim at least part of the benefit of debt without interest, made into money, hitherto enjoyed exclusively by the banks. These demands are just, and must be respected. But there need be no sudden change; there need be no hurtful interference with existing interests. As yet the United States note circulation hardly fills the vacuum caused by the temporary withdrawal of coin; it does not, perhaps, fully meet the demand for increased circulation created by the increased number, variety, and activity of payments in money. There is opportunity, therefore, for the wise and beneficial regulation of its substitution for other circulation. The mode of substitution also may be judiciously adapted to actual circumstances. The plan suggested consults both purposes. It contemplates gradual withdrawal of bank note circulation, and proposes a United States note circulation, furnished to banking associations, in the advantages of which they may participate in full proportion to the care and responsibility assumed, and the services performed by them. The promptitude and zeal with which many of the existing institutions came to the financial support of the Government in the dark days which followed the outbreak of the rebellion are not forgotten. They ventured largely and boldly and patriotically on the side of the Union and the constitutional supremacy of the nation over States and citizens. It does not at all detract from the merit of the act that the losses which they feared, but unhesitatingly risked, were transmuted into unexpected gains. It is a solid recommendation of the suggested plan that it offers the opportunity to those and kindred institutions to reorganize, continue their business under the proposed act, and, with little loss, and much advantage, participate in maintaining the new and uniform national currency.

The proposed plan is recommended, finally, by the firm anchorage it will supply to the union of the States. Every banking association whose bonds are deposited in the treasury of the Union; every individual who holds a dollar of the circulation secured by such deposit; every merchant, every manufacturer, every farmer, every mechanic, interested in transactions dependent for success on the credit of that circulation, will feel as an injury every attempt to rend the national unity, with the permanence and stability of which all their interests are so closely and vitally connected. Had the system been possible, and had it actually existed two years ago, can it be doubted that

the national interests and sentiments enlisted by it for the Union would have so strengthened the motives for adhesion derived from other sources that the wild treason of secession would have been impossible?

The Secretary does not yield to the fantasy that taxation is a blessing and debt a benefit; but it is the duty of public men to extract good from evil whenever it is possible. The burdens of taxation may be lightened and even made productive of incidental benefits by wise, and aggravated and made intolerable by unwise legislation. In like manner debt, by no means desirable in itself, may, when circumstances compel nations to incur its obligations, be made by discreet use less burdensome, and even instrumental in the promotion of public and private security and welfare.

The rebellion has brought a great debt upon us. It is proposed to use a part of it in such a way that the sense of its burden may be lost in the experience of incidental advantages. The issue of United States notes is such a use; but, if exclusive, is hazardous and temporary. The security by national bonds of similar notes furnished to banking associations is such a use, and is comparatively safe and permanent; and with this use may be connected for the present, and occasionally, as circumstances may require hereafter, the use of the ordinary United States notes in limited amounts.

No very early day will probably witness the reduction of the public debt to the amount required as a basis for secured circulation. Should no future wars arrest reduction and again demand expenditures beyond revenue, that day will however at length come. When it shall arrive the debt may be retained on low interest at that amount, or some other security for circulation may be devised, or possibly the vast supplies of our rich mines may render all circulation unadvisable except gold and the absolute representatives and equivalents, dollar for dollar, of gold in the treasury or on safe deposit elsewhere. But these considerations may be for another generation.

The Secretary forbears extended argument on the constitutionality of the suggested system. It is proposed as an auxiliary to the power to borrow money; as an agency of the power to collect and disburse taxes; and as an exercise of the power to regulate commerce, and of the power to regulate the value of coin. Of the first two sources of power nothing need be said. The argument relating to them was long since exhausted and is well known. Of the other two there is not room nor does it seem needful to say much. If Congress can prescribe the struc-

ture, equipment, and management of vessels to navigate rivers flowing between or through different States as a regulation of commerce, Congress may assuredly determine what currency shall be employed in the interchange of their commodities, which is the very essence of commerce. Statesmen who have agreed in little else have concurred in the opinion that the power to regulate coin is, in substance and effect, a power to regulate currency, and that the framers of the Constitution so intended. It may well enough be admitted that, while Congress confines its regulation to weight, fineness, shape, and device, banks and individuals may issue notes for currency in competition with coin. But it is difficult to conceive by what process of logic the unquestioned power to regulate coin can be separated from the power to maintain or restore its circulation, by excluding from currency all private or corporate substitutes which affect its value, whenever Congress shall see fit to exercise that power for that purpose.

The recommendations now submitted, of the limited issue of United States notes as a wise expedient for the present time, and as an occasional expedient in future times, and of the organization of banking associations to supply circulation secured by national bonds, and convertible always into United States notes, and after resumption of specie payments into coin, are prompted by no favor to excessive issues of any description of credit money.

On the contrary, it is the Secretary's firm belief that by no other path can the resumption of specie payments be so surely reached and so certainly maintained. United States notes receivable for bonds bearing a secure specie interest are next best to notes convertible into coin. The circulation of banking associations organized under a general act of Congress, secured by such bonds, can be most surely and safely maintained at the point of certain convertibility into coin. If, temporary, these associations redeem their issues with United States notes; resumption of specie payments will not thereby be delayed or endangered, but hastened and secured; for, just as soon as victory shall restore peace, the ample revenue, already secured by wise legislation, will enable the Government, through advantageous purchases of specie, to replace at once large amounts, and, at no distant day, the whole of this circulation, by coin without detriment to any interest, but, on the contrary, with great and manifest benefit to all interests.

The Secretary recommends, therefore, no mere paper money scheme, but, on the contrary, a series of measures looking to a

safe and gradual return to gold and silver as the only permanent basis, standard, and measure of values recognized by the Constitution—between which and an irredeemable paper currency, as he believes, the choice is now to be made.

The National Banking System

Congress, February 9-20, 1863

On February 9, 1863, John Sherman [O.] brought forward in the Senate a bill from the Committee of Finance framed in accordance with the proposition of Secretary Chase. A discussion followed, chiefly upon the details of the bill.

Lazarus W. Powell [Ky.], however, attacked the measure in a fundamental point. Proposing an amendment requiring each banking association to keep in its vaults gold and silver coin to the amount of at least one-fourth of the issue of notes, he said:

This is to me a most singular bank bill. I have read it over hastily twice, and I have not observed the words "gold and silver coin" mentioned anywhere. I am clearly of the opinion that any bank note issued upon any other than a specie basis will be injurious to the country in which it is issued. Bank notes, in my judgment, to be a benefit to the community, should be redeemable at the counter at which they are issued, in coin. Any other issues in my judgment are destructive to the best interests of the country. The amendment I propose requires each one of these banks to keep in its vaults in coin at all times an amount equal to one-fourth of its issues. That is a very limited amount; but, when you take the United States bonds at their present value, it would not be more than sufficient to protect the note holder against loss in case the institution should wind up.

These issues are to be made upon United States bonds. The issue of notes is, I believe, to be within ten per cent. of the value of the bonds. These notes are to be issued on that basis. Now, suppose it should turn out—and I verily believe it will turn out whenever it is submitted to an intelligent court—that the legal tender clause of your note law will be declared unconstitutional, what will become of the security of the note holder? Your United States bond to-day, I suppose, is not worth over fifty or sixty dollars on the hundred. When I speak of dollars, I

mean gold or silver dollars. If the legal tender note should be declared unconstitutional, this money will be in the hands of the people, and they will be driven to the United States bond for security, and it will be worth still less for the redemption of these notes, and at least forty per cent. of these notes would be found to be without any adequate fund out of which they could be redeemed, and consequently this worthless trash would be in the hands of the people throughout the country without any hope of redemption.

I am opposed to this bill in every form; but, if it is to be passed, I think it proper that we should give it at least a little stiffening. If the amendment that I propose should be adopted I think it would greatly benefit the bill, but I do not wish Senators to understand that even then I shall vote for it. It should be guarded and protected by such wholesome amendments as will secure the note holders against loss. As it is, the note holder will have but very little security. Of all bank issues, that, in my judgment, is the least secure which is issued upon a credit. You propose to issue bank notes here upon the credit of the United States, upon the bonds of the United States. That is to be the basis for the redemption of the notes, and for the security of the note holder. Your bonds to-day are at a very great discount. Where is the security of the note holder? Gentlemen may fall back on the individual liability clause that they have inserted, but that will be worth very little when you have to go all over the country hunting the persons who own stock in these banks, and perhaps two-thirds of them will be worth nothing except the stock they have in the banks, and, when that is gone, nine-tenths of them, perhaps, will have nothing which can be taken on execution.

It is clear to my mind that we should require these banks to keep some portion of coin in their vaults, at least, as security to the holders. All the States which have adopted this free banking system, as far as I know, require the banks to keep on hand a limited amount of specie, some twelve per cent., some thirty per cent., some more. Here, however, is a proposition for a series of banks, a gigantic scheme that absolutely does not require them to pay coin or keep any on hand at all. It is a system of banking that, in my judgment, with all intelligent bankers and merchants will fall still-born. I have conversed with some very intelligent merchants and business men from New York, Boston, and Philadelphia, about this *projet*, and I have yet to find the first one that does not condemn it.

Senator Sherman.—When this bill was drawn I did not

expect that my friend from Kentucky would vote for it; nor did I expect that he would vote for any bill which required the banks which might be organized under it to pay specie from this moment, because, as he knows, that would be futile. His amendment would require these banks to keep twenty-five per cent. of gold and silver in their vaults. The bill as reported provides that they shall keep twenty-five per cent. in lawful money of the United States in their vaults. If the courts shall decide, as the Senator says they will, that the paper money of the United States is worthless trash, illegal and unconstitutional, then the phrase "lawful money of the United States" would mean gold and silver; and the bill suits him now. If the courts shall decide that the paper money of the United States is not worth anything, is unconstitutional, is worthless trash, then the only lawful money left will be gold and silver coin; and the bill as it stands requires the banks to keep twenty-five per cent. of lawful money in their vaults.

But, Mr. President, while we are in war specie payments are naturally suspended. They always will be, as they always have been in every country involved in a great war. They were suspended in England during her wars with Napoleon. Would it not have been singular if some man had stood up in the British Parliament, when during a long war specie payments were suspended, and the Bank of England notes were made the basis of currency, and had denounced the Bank of England paper as worthless trash? It would have been considered a very remarkable thing; and yet that is done now. The United States money, to which the faith of the United States is pledged, to which the faith of every State in the Union is pledged, to which all the property of the United States is pledged, is here denounced, in the Senate of the United States, as worthless trash. And yet without this "worthless trash" we must submit to be overrun by armed confederates who are seeking to subvert the Government, and every man knows it. Every man knows—none better than the Sentaor from Kentucky—that without the issue of paper money it would be impossible to carry on the operations of the Government, and there would be nothing to prevent Jeff Davis from encamping within sight of New York City. It is by the use of just such money that armies are formed in the South.

None of the banks of the United States now pay gold and silver, nor can they; and therefore the amendment was moved, I think, not with much expectation that it would prevail, but to enable the Senator to announce as his opinion that the money of the United States, the notes issued by this Government, are

worthless trash, unconstitutional and unlawful, and that therefore all the banks which might be founded upon it would be unlawful.

Sir, the very moment this war is over; the very moment our credit is good; the very moment the bonds of the United States are worth above par, that moment all these banks will be specie paying banks. My hope is that Congress will never authorize the issue of more than $400,000,000 of United States notes, and that these will be made the basis during the war of the currency of the country, and that by this bill the money of the people, through their banking associations organized all over the country, may be combined in support of the credit of the United States to make a safe and stable currency which will give us during time of war the best substitute possible for gold and silver. That, I believe, will be done; but the very moment our bonds are equivalent to par with gold and silver, as they will be when the war is over, that moment all these banks will be specie paying banks, and every one of them will then be required to keep the very amount of specie in their vaults that the Senator provides for; that is, twenty-five per cent. of the lawful money of the United States. There are but two species of lawful money; one gold or silver coin, and the other the United States greenbacks, as they are called. During the war the greenbacks are necessary to carry on the Government, and necessary as lawful money. They are made so by the Government.

Senator Powell.—It is singular to me that the Senator cannot discuss a legitimate matter of finance without lugging in "Jeff Davis" here as a kind of bugbear to somebody. I do not know what Mr. Jefferson Davis has to do with this matter.

I believe the legal tender clause of your note bill to be unconstitutional. I do not believe that, if a man has contracted to pay me $1,000, which meant $1,000 in gold or silver coin, this Congress can pass a law saying that I shall receive it in paper money, and paper money that is at as heavy a discount as this is.

The Senator says you cannot go on with the war without the issue of greenbacks. I think, and I have always thought, that it was an unwise policy to issue one of them. I know very well that in these times it would be impossible to get along with the sub-treasury law requiring all the receipts and disbursements of the public treasury to be coined. I would have repealed that much of the sub-treasury law, and I would have allowed the notes of solvent banks to be received and paid for the public dues; and then I would have gone into the market and borrowed

money. Your bonds were selling at a premium, in gold and silver coin, too, before you commenced grinding out this paper money. You have ground out paper money until now your bonds are at a discount, payable in paper money that is itself at a very heavy discount, a discount of some forty per cent. and upward; forty-seven I believe to-day. This policy has already ruined the credit of the nation, or at least very much weakened it; destroyed it to a very great extent. In my judgment this has been caused by the unwise financial policy of the Government. I desire to keep up the credit of the Government, and I believe it cannot be kept up by the excessive issue of irredeemable paper money. That is my firm conviction. I wish to put, if I can do it, a little stiffening into the Senator's bill, and I intend at the proper time to move to strike out the clauses which require these notes to be redeemed by what he calls "lawful money," and to insert "gold and silver coin," believing as I do that no bank issue will ever be of use to any country that is not convertible into gold and silver.

I shall move further to amend the bill, if this money is to be thrown on the people, by striking out that provision which prevents it from being received for your customs. If we compel the people to take it in every direction, the Government itself should receive it. I think it is disreputable to a Government to issue and force on its people paper money that it will not take itself. I think that of itself is a clear indication that those who issue it have no confidence in it. If this money is issued and forced on the people, the Government should take it for all its public dues. It should treat the people as it does itself. It should not compel them to use a depreciated currency, while itself, for a large portion of its public dues, demands coin.

Senator Powell's amendments were defeated. The bill was passed on February 12 by a vote of 23 to 21. It went to the House, and was there taken up for discussion on February 19.

Elbridge G. Spaulding [N. Y.] spoke in favor of the measure.

On a full review of this proposed plan of a national currency, it will be seen that it is based on public and private faith; that it proposes to combine the interest of the nation with the rich individuals belonging to it. Only men of surplus capital can profitably engage in the business of banking. If speculators and adventurers, without positive capital, attempt to bank

under this bill they will fail. Money lenders, and not money borrowers, can successfully organize and manage banking associations under the provisions of this act.

The Bank of England is a striking example of the combined power of public authority and private influence in sustaining the credit of Government. We may safely profit by this example. This bank has been the chief agent in sustaining the British Government in the long and exhausting wars in which she has been engaged. The Bank of England is the fiscal agent of the British Government, and, notwithstanding it is a bank of discount, deposit, and circulation, it has thus far received and disbursed the public moneys without the loss of a dollar of the money intrusted to it.

It is also well known that our Government never lost any of the money deposited in the first or second Bank of the United States. They were both fiscal agents of the Government. All the public money was received and disbursed by them with fidelity and usefulness to both parties. Sound and well-managed banks tend to increase public and private credit, and extend as well as to facilitate commerce with States and individuals. They stimulate industry, commodities are multiplied, agriculture, mining, and manufactures flourish; these constitute the true wealth, greatness, and prosperity of the country. If there had been established years ago a sound national bank of $200,000,000 capital, which had been in full operation as the fiscal and financial agent of the Government at the time of the breaking out of the present rebellion, what a mighty support it would have been in sustaining the Government at the present time! The independent treasury law unnecessarily isolated the Government from all the capitalists and the accumulated capital of the country. A sound national bank, upheld and supported by the combined credit of the Government and rich men residing in all the States of the Union, would have been a strong bond of union before the rebellion broke out, and a still stronger support to the Government in maintaining the army and navy to put it down.

Sir, the United States Government has thus far established no permanent system of national currency except that of gold and silver. Ever since the adoption of the Constitution there has been a conflict of opinion among the ablest statesmen of the country upon the question of a national currency. Jefferson opposed the creation of all banks, both State and national. Alexander Hamilton proposed a national bank during the struggle for American independence in 1780, but his suggestions

were not then adopted. During Washington's Administration, in 1791, the first Bank of the United States was incorporated, mainly under the influence of Mr. Hamilton, which continued in operation until 1811, when its charter expired. No national bank was in existence during the second war with Great Britain. That war was carried on by loans and by the issue of treasury notes. In 1816 the second Bank of the United States was chartered, and continued in existence until 1836, when its charter again expired. All will remember the decided opposition of General Jackson to its recharter, and the fierce struggle that ensued between the friends and opponents of a United States bank. The friends of the bank were finally beaten when Jackson was reëlected President in the fall of 1832. The friends of a United States bank again rallied in 1840-41, but were again defeated by the veto of John Tyler. In 1846 the independent treasury law was finally adopted, by which it was established that the operations of the Government should thereafter be carried on wholly in gold and silver coin, and that this money of the Government should be kept separate from all banks and banking transactions. Thus the law continued up to the session of the present Congress.

No settled policy has as yet been established by which the Government has assumed permanent control over the national currency. State banks still go on issuing circulating notes, selling exchange, discounting promissory notes and bills, and receiving deposits, and the sub-treasury law is still unrepealed. A national currency, adequate to the operations of the Government in *peace* and *war*, has yet to be established. It seems that the present is a propitious time to enact this great measure as a permanent system, and that the duty of the Government in providing a national currency shall no longer be neglected.

In the absence of a national bank the State banks have been most liberal in making loans to the Government since the war began. There is in the present imperiled condition of the Union more distrust of the stability of the general Government than there is of the State governments. Some doubt exists, owing to divisions at the North, as to our final success in crushing the rebellion. Could you make it certain that the Union will be preserved, and the national jurisdiction maintained over all the thirty-four States and the $16,000,000,000 of taxable property therein, which is liable for our public debt, excluding therefrom the debt of the rebel government, said to be $900,000,000, the six per cent. bonds of the United States would not be five per cent. below par, while the six per cent. bonds of the State

of New York are worth a premium of twenty-eight per cent. Capitalists are naturally timid, and will hesitate about entering into new projects until they can see the way clear. They desire to know that the Union is to be maintained and the Government perpetuated. Being fully assured of this, your bonds will be immediately above par, and there will be less difficulty in organizing banking associations and carrying this act into effect.

Sir, banking is eminently a practical business. To be successful, it must be based on accumulated capital, and conducted by practical men, who are intimately acquainted with the commerce and business of the country. Finance and financial questions must all be finally brought to a practical standard. However fine spun the theories of visionary men may be, they cannot now be relied on to provide money in the present exigency to pay the army and navy and other needy creditors of the Government. Our plan of finance must be simple, efficient, and practical. It consists of two parts, debts and taxation, namely:

1. Contracting debts for the supply of the army and navy, issuing legal tender notes, and borrowing money in some form on the faith of the Government.

2. Taxation on the entire property, commerce, and business of the country, amply sufficient to pay the principal and interest of all the debts which have been or may be contracted on the faith of the Government.

It will require a strong, stable government, wisely administered, to adjust and enforce the collection of so large an amount of taxes as will be required to pay the extraordinary war debt that must be contracted to crush the rebellion and restore peace and tranquillity over the whole Union.

Many of our friends express sanguine expectations of immediate relief from the passage of this national bank bill, and I should be much gratified to know hereafter that their expectations have been fully realized. But, sir, in my judgment, the Secretary of the Treasury must not place too much reliance upon this plan. It will not give much relief to the treasury for one, two, or three years. It will not to any considerable extent supersede the necessity for the issue of treasury notes. It will go into operation slowly. The Government, having heretofore failed to provide a national currency, the State banks in the older States have been organized, become deeply rooted, and firmly established. It will take a long time to supplant these banks. Every coercive or violent attempt to do so will do more harm than good. This new system will come in competition not only with existing institutions, but will encounter the prejudices

of a large class of people who are hostile to banks, and especially hostile to a United States bank. It will be toward the close of the war, when the Government is firmly established and its authority respected in all the States, that it will be most valuable in providing a way for funding the public debt and establishing a permanent system of national currency. It is chiefly on this ground that I am induced to support the bill at this time. It is more for the benefits to be realized in the future than during the pending war that I am induced to give it my support.

Every day that the war is prolonged the debt is largely increased. The daily increasing debt of $2,500,000 must all be raised by taxation in some form, or the debt will not be paid. The Government is spending at a fearful rate the accumulations of former years of prosperity. Every dollar of debt contracted becomes a first mortgage upon the entire property and productive industry of the country. It affects the farmer, laborer, mechanic, manufacturer, merchant, banker, commission merchant, professional man, and retired capitalist. Every pound of tea, coffee, and sugar used is taxed to pay the expenses of the war, and the persons using these articles of daily consumption pay the tax in the increased price.

This war tax is already beginning to be noticed by the people; but as the war is procrastinated and the debt increased, the burden will be more deeply felt. While we are running along at forty miles an hour, under the pressure of irredeemable paper, necessarily issued and circulated to prosecute the war, the present taxation is easily paid, and there is a seeming prosperity; but I can assure gentlemen that a reckoning day will surely come. Look at the immense army in the field, their commissariat, supply vessels, supply trains, ambulance corps, sutlers, teamsters, hangers-on, idlers, and assistants of all kinds, extending over a line of military operations of more than four thousand miles, and you will be impressed with two important facts:

1. The enormous expenditures necessary to their present support, and the future bounties and pensions that must be paid.

2. The number of men that are withdrawn from industrial pursuits, and the consequent loss of productive industry which ought to be added to the wealth of the country.

All this immense army add nothing by their labor to the wealth of the country, and the expense of supporting such an army devolves upon those who do labor and those who have already acquired property. What a mighty drain this war is upon the productive energies and resources of the country! It is, in-

deed, an exhausting as well as bloody war. Whether it be successful or unsuccessful, vast consequences are involved. If terminated successfully within three years, the Union maintained and the Government perpetuated under the Constitution, the results to flow from such a triumph would amply compensate for all this expenditure of blood and treasure. If it terminates unsuccessfully, the Union divided and the rebel government maintained, the war debt must still be paid; but no man here is wise enough to predict what results will follow such a calamity.

Reuben E. Fenton [N. Y.] supported the bill only as a war measure.

In times of peace and prosperity, when the receipts of the treasury from various sources were more than adequate to meet the expenditures of the Government, I might, indeed, hesitate and even oppose any congressional action which would make innovation upon the systems of banking established by the people of the different States. But now, when that peace and security, which we fancied would endure forever, have been so wantonly disturbed, and the former sources of revenue constitute but a fraction to meet the immense demands, the conviction of the necessity of a change, so as to give the Government the control of the currency of the country, cannot be avoided. Indeed, it has been found necessary, in the course of this extraordinary contest, to strengthen and enlarge the powers of almost every department of the Government.

That the present money system is not adequate for the wants of the crisis, and cannot be trusted as the instrument to work out the great fiscal problem of national finance, is evident by the greatly depreciated state of the currency. I do not here lose sight of or undervalue the aid and advantage of the banks to the Government. To say that those connected with them have not again and again responded to the calls of the Government, by direct loan or by purchase of bonds, would be a denial of facts and ingratitude. But considering the monetary system the banks bring to us—theoretically based on the precious metals and a paper currency which financial regulations have allowed to represent them, issued by banking institutions scattered over the Republic, more than one thousand in number, created by differing local legislation, in some States with a limited circulation and in others unrestrained, in some States based on solid securities, in others with no pledge for public safety other than the integrity of their management—the wonder is that such a

system should have subserved the wants of a great commercial country so well, even previous to our present public disorders. And but for the wise policy of the Government in authorizing issues of treasury notes, everywhere receivable for public and private dues, it must have failed in a serious degree to meet the demands of the Government or the people; Government loans could not have been negotiated, its pecuniary engagements could not have been met, and paper depreciation, with general financial ruin, would have involved both Government and people, and the misfortune would have been as great as would be disaster in the field.

Having so far survived impending perils, we are to consider this uniform currency scheme, as it is called, with the view to provide for the future exigencies of the Government and country. It is warmly recommended by the finance minister of the Government, with the concurrence, as it is understood, of all the members of the Administration, and approved by experienced financiers in every section of the country. It is to have uniform value—everywhere receivable for public dues—and it is believed, without deranging business interests, or adversely to any great extent affecting existing banking institutions, will ultimately become the circulating medium—the money—of the country. It is not the immediate practice of this system which will alone produce the promised results; but the prospect—the being, and is to be—assured by the constant change to and adoption of the system by bankers and capitalists, together with the receptacle it furnishes for the Government bonds. Abstract questions on political economy, the possible effect in diminishing the speculative value of gold, or in regulating the currency so as at all times to prevent inflation and consequent derangement of business, I do not propose to discuss. It is observable, however, that gold has been withdrawn from circulation; and individuals who may have been fearful of the stability of the present system of banking, or who have availed themselves of the opportunities afforded by the system of banking and Government dependence, have made it, instead of a circulating medium or basis for a circulating medium, one of the most lucrative and favorite objects of speculation.

Specie having been heretofore considered the immediate basis of issue and circulation of paper currency, with the present system, as the large Government expenditures shall continue and the public debt increase, may we not expect a still greater depreciation of currency, or greater speculative value to gold, inflation, and derangement, until bankruptcy and ruin confront

us? There is another evil, however, with the present system which should not be overlooked, and which has largely contributed to the depreciation of the currency; for it seems to be sufficiently established that there is not an alarming excess of currency in the aggregate; nevertheless, some of the banking institutions have overissued. It is *this uncontrolled issue and circulation* of paper as currency by irresponsible banks that I refer to.

In only nine of the States out of the thirty-four has the principle of securing payment of circulation by the banks by State bonds been adopted. In some of the loyal States where this regulation has prevailed as a basis of issue and circulation the bonds of some of the States now in rebellion were included in the securities. The past few years, in 1837 and 1857 especially, bring to mind suspensions and failures, the result in part of unregulated bank expansions and contractions and a want of proper basis, often involving in ruin institutions and individuals of long standing and reputation.

In the State of Illinois alone the failures of banks numbered eighty-nine within the last two years, and their paper is reduced from one hundred per cent. to thirty-eight in some instances. The great loss resulting from these failures of course falls upon the people who loan to these banks to the amount of the notes they hold at the time of the failures. Of the $12,000,000 of bank circulation created by and in Illinois two or three years ago, the people have lost two or three millions directly, besides the indirect loss of as many millions more by derangement of business and ruin to private interests.

This system not being compulsory upon existing banks, it will not be regarded with the jealousy of a purely rival scheme, and an intelligent consideration of their own interests, the interests of the Government and the people, which, after all, are *one* interest, will lead them to modify any contemplated opposition; and, even if their individual profits and the present modes of business are somewhat injuriously affected, the same liberal and devoted patriotism in support of the public credit heretofore exhibited will insure their acquiescence in all public measures deemed necessary to preserve that credit.

It is generally known that the bank circulation of New York is based on pledge in part of State and United States securities. There are now on deposit for this purpose in the banking department of that State some $19,000,000 of State and $12,000,000 of United States Government securities. New York State stocks, from their known safety and partly from their use for

banking purposes, have long commanded considerable premiums above par. And it is urged by our bankers that one oppressive effect of this national scheme will be to subject them to depreciation and loss on their State securities, as existing banks may be obliged—by unequal competition, if not by taxation, or favor with the people to this uniform national currency—to abandon their present system, and organize under the one we propose. In my opinion all the banking institutions in the country would find it to their advantage to gradually work into this system, thus establishing one reliable, uniform currency; and while there is no intervention or compulsion to effect this, and State banks would make the change a matter of interest and convenience, of course those not of a reliable and solid character would be supplanted by this national system.

It can hardly be doubted, with these figures before us, that the banking interests of New York are largely concerned in the adoption of such a system as will save this vast national debt, in the form of stocks and bonds and treasury notes, from depreciation, and therefore from loss or ruin on the securities they hold, equaling almost their entire aggregate bank capital.

Many question this desirable result from adopting the Government scheme. They are not convinced that the three hundred millions or more of public stocks eventually required will be soon enough absorbed to make an early market for the securities and thus keep up their value. Let me again say that it is the assurance of a general national system—furnishing a sale for a portion of our public stocks, the interwoven interest of the people with the Government in the use, stability, and ownership of the currency—that gives value and stability to our entire amount of public stocks. We should create confidence resulting from the pledge of national faith and security, and the whole people would become immediately interested in sustaining the credit of the Government. Were the plan *now* inaugurated, with prospect of becoming the permanent currency system of the country, sagacious capitalists would at once invest in these securities, well relying on the safety of the investment and the steady market value and demand for them.

The Government bonds are certainly among the safest and most desirable obligations that can be obtained for the security both of currency and loans. If confidence is not to be placed in such securities, then it is difficult to conceive of any obligations which could insure it. The whole capital of the nation is pledged for their redemption; and the honor, welfare, and very life of the Republic rest upon their being kept inviolate. In-

deed, if it was possible for the Government to fail; if this fabric, erected by the wisdom and sacrifices of the fathers, is to perish, then, indeed, is not only "life, liberty, and the pursuit of happiness" a thing of the past, but property, in all its forms, and capital, invested in whatever security, unsafe and insecure. In the preservation of the Government rests the security of all property, and with its preservation, of which I have never for a moment had a doubt, the best class of securities are those which it is proposed to make the basis of this uniform national currency, and to which the confidence and faith of the people are invoked.

Considered in a financial and industrial point of view, our large expenditures and heavy national indebtedness may not after all prove so damaging or disastrous as many suppose. It certainly increases the activity and business of the nation. The destruction of the vast amount of property by the war is somewhat compensated by the increased energy, skill, and production of the people. The productions of industry and skill constitute largely a people's wealth, and the nation or people which have the greatest capacity and facilities for production, protected by reliable and uniform currency and finance systems, will eventually, with equal physical force and patriotic purpose, triumph over the other.

The destruction of Moscow excited the Russian people to an activity and energy that it had not before known, and what was lost by its destruction was regained by the incentive to active industry which was aroused. In our country the destruction of our vessels of war in the Norfolk navy yard gave place to thrice as many more in an incredibly short space of time. The timber standing in our forests, and the iron imbedded in the earth to-day, to-morrow are used in the construction of vessels of war, and next day ride proudly on the bosom of the sea, protecting our national rights and the integrity of our national cause.

The railroads, engines, and cars, the wagons, arms, clothing, subsistence, and all other supplies for our vast army, destroyed to-day, but quicken and increase the industry and skill of our people to replace them in a new and improved manner to-morrow; and when the season for seed time returns, notwithstanding the large drain of men for the service from agricultural as well as other pursuits, we find still more hands, or more skill and industry, seeking the plow and the other implements and appliances of husbandry. Moderate capital that was in slothful hands is now made active; and, even when peace, with its gentle influence, shall again return to our distracted country, these les-

sons and habits of increased industry and production, stimulated by the necessities of the period, will remain with the people, and aid in rapidly restoring the lost wealth, if they do not carry us in a few years beyond the point we should otherwise have attained.

On February 20 Stephen Baker [N. Y.] opposed the bill as unnecessary and as interfering with the State banks.

The management of our finances, by resorting only to temporary expedients, has been grossly and radically wrong. I believe from the very outbreak of the rebellion that our permanent securities could have been sold to a large amount, and that the necessity of such an enormous and profligate issue of treasury notes could have been obviated. At the beginning of the war I favored the issue of interest-bearing notes to keep them out of circulation; and I should have been extremely gratified by the organization of a permanent sinking fund for the ultimate redemption of our large and accumulating public debt.

Sir, I have a deep and abiding confidence in the speedy success of our arms, and that success will overcome all financial distress and all financial disarrangements; and that victories by sea and land will restore the credit of the Government to a high standard, so that its treasury may be amply replenished.

I believe, too, that with the success of the holy and righteous cause in which we are engaged of preserving the integrity of the Union and of restoring every part of this widespread land in complete obedience to the Constitution and laws of the country, we shall rapidly recuperate from that prostration which now overwhelms a large portion of the country, and quiet that discord which distracts the halls of Congress. I am firmly convinced, moreover, that, under an improved system of labor, the South will become as productive and prosperous as other portions of our country, and that, with redoubled energy, increased resources, and added wealth, we shall soon recover from all the disasters of this accursed rebellion and go on in a career of unmatched glory and renown.

Warren P. Noble [O.] opposed the bill on constitutional grounds.

In the first place, I do not believe it was ever intended by the framers of our Constitution to grant any such power to

Congress by that instrument. Let us examine and see how liberal and even strained must be the construction of its provisions in order to even claim that such was their intention. Here the speaker read the eighth section of the first article:

The Secretary of the Treasury, in advocating the adoption of the system, has found it difficult to decide just where the power to create a national banking system is to be found. He says that it is proposed as an auxiliary to the power to borrow money, as an agency of the power to collect and disburse taxes, and as an exercise of the power to regulate commerce, and of the power to regulate the value of coin. Thus it will be seen that he bases his claim of power upon four different and distinct clauses of the Constitution, separately and distinctly divided from each other.

How the system is to be or become auxiliary to the business of borrowing money on the credit of the Government, or the business of collecting taxes, it would, indeed, seem difficult to determine, and the Secretary has not seen proper to tell us. The Government may obtain money on loan from its own citizens, from banks, or from other Governments; and to the party who has money to loan the only questions are interest and security. Is the security satisfactory? And is it his interest to make the loan? Anything, then, that will enable the Government to give better or more satisfactory security and to pay better interest may be auxiliary to the business of borrowing money. On the subject of collecting and disbursing taxes it is difficult to see how this system can possibly have any beneficial connection whatever with the subject. There never has been any difficulty in disbursing money when the Government had it to disburse, even in its palmiest days of prosperity; and now, when it is deeply involved and every creditor will be anxious to receive his dues, there will be far less prospect of any difficulty in this respect. Collections are facilitated only by anything that will render the collector more prompt or the debtor more able and willing to pay; any other agency than this would seem to be superfluous. If it were possible by this agency to collect the taxes imposed by the late excise laws at less expense than is now incurred, then there might be some claim, but nothing of that kind is pretended.

The next two grounds on which the Secretary bases his claim of constitutionality seem to stand in about the same relation to the subject, namely, that it is an exercise of the power to *regulate* commerce and to regulate the value of coin. To regulate means to adjust or govern by certain uniform rules or restrictions; it does not mean to destroy or to create, but merely to govern by certain rules of law. To regulate commerce was never intended by the framers of the Constitution to carry with it or include the power to establish a paper-moneyed banking system merely because the currency created by such a system might thereafter be used in paying for the commodities that might be interchanged by such commerce. It seems to me that such a claim would be a little too far-fetched to be worthy of any very serious consideration.

To coin money and regulate the value thereof—of what? Of the coin thus made. Is it not strange that anyone should contend at this day that a paper currency could in any way affect the *real* value of coin? Yet this is one of the principal claims on which the constitutionality of this bill is based. Coin is, and ever must be, the standard of all *real value* the world over; and what our Constitution meant by giving the power to coin money was merely to fix by law the size, shape, quality of metal, weight, value, and devices that should characterize the different coins that might be authorized by the Government of the United States. This is a power that is possessed and exercised by all civilized nations; and when confined to its legitimate purpose is certainly a very necessary and salutary power, as without it there would most likely be no uniformity or fixed and certain value to the coin or currency of the country. Without it the different kinds of coin might be so numerous and so various in kinds and values as to render exchanges very troublesome and vexatious. But with its proper exercise, as, for instance, in the case of our own Government, by fixing the size, weight, quality of metal, and devices of the Federal dollar, both in gold and silver, and then by adjusting and measuring the value of all other coins by this, we have a system which renders exchanges easy and convenient.

These provisions of the Constitution, together with that other provision in section ten of the first article, by which it is provided "that no State shall coin money, emit bills of credit, or make anything but gold and silver coin a tender in payment of debts," satisfy me that it was never the intention of the framers of the Constitution to authorize anything to be made a legal tender in payment of debts, excepting only what I am pleased to denominate the good old constitutional currency of gold and silver. It would be strange, indeed, if it was the intention of the framers of the Constitution that the Federal Government should have the power to issue or authorize to be issued and put in circulation any other currency which might

be made a legal tender in payment of debts by it, and yet that it should restrict the States from allowing the same money which it might thus provide or authorize to be received as a legal tender. No one can be convinced for a moment that it was the intention that the Federal Government should have power to create a currency which the States should not have the right to give as much credit to as might be given to it by the Federal Government. The proposition is preposterous, and will not bear the test of reason. If this had been the intention of the framers of the Constitution, instead of providing that nothing but gold and silver should be made a legal tender in payment of debts, they would have provided that nothing but gold and silver coin and such other currency as might be authorized by law of Congress should be received in payment of debts.

If it were true, as some suppose, that in order that the Government should be able to make its great expenditures it must first have an amount of currency equal to the whole amount to be expended, it would require all the money of both America and Europe to carry on this war. This Government has already expended, since the war commenced, more than double the whole amount of all the circulation the whole nation and all its people possess, including all its gold and silver, bank bills, and treasury notes; and the present prospect is that this is not the half of what will be expended before the war closes. There never was a greater delusion than to suppose that because the Government expends large sums it must have money or currency to an equal amount. What the Government must have to carry on the war is means, capital, munitions of war, and supplies; and these it can only obtain by draft upon its citizens and their property. The capital and wealth of the nation is but a very small part of it in the shape of currency. Two hundred and fifty or two hundred and seventy-five million dollars, at most, would include every dollar of the gold and silver of the whole nation, while the last census shows the amount of individual wealth of the nation to be over sixteen thousand million dollars. The Government must be a self-sustaining institution. When its expenses are large it can only sustain itself by drawing more from its subjects in the shape of taxes, either direct or indirect. There is no other mode; this is its legitimate and only resort, unless it be to its credit, by contracting debts which must eventually be paid in the same way, by tax upon the citizen.

When the war commenced the currency of the country was all founded upon a specie basis; nothing but gold and silver could be made a legal tender in payment of debts. The banking

institutions of the several States received credit in proportion to the public confidence in their ability to pay specie *on demand* for all their issues. As long as this continued to be the scheme of our financial system, there could be no great danger of sudden and disastrous eruptions in the currency of the country. But as soon as the treasury note legal tender scheme was adopted, and a sudden increase or expansion of the amount of circulation accrued, what followed was inevitable—sudden and astonishing increase in the prices of goods; or it might be more properly styled sudden and astonishing depreciation of all the paper currency of the country, legal tender and all. It to-day requires $1.70 of this paper, backed by the Government with all its wealth, to buy a single dollar of gold. And, in common parlance, it is said gold has gone up; the truth is, paper has gone down, and is still going down.

Mr. Speaker, what is the effect this system is now having upon the country and its business? A single illustration may serve to throw some light upon the subject, and may not be improper. When our soldiers entered the field their wages were made by law thirteen dollars per month, under the then financial system. The supplies for their families might then be bought for about the following prices, namely: muslins, prints, checks, cotton cloths, and drillings, at from eight to twelve and a half cents per yard; now these same articles will cost them more than twice as high. Almost the same thing may be said in reference to boots, shoes, coffee, sugar, molasses, and almost everything in the shape of necessary supplies for their families. The average increase in price of all these things will not be less than the average depreciation in the value of paper money. That is, they will now pay no less than $1.70 for what would then have cost them one dollar. Yet it is often boastingly said that "the greenbacks came to help the soldier." He may well say, save me from such blessings; a few more such would render him bankrupt, and bring his wife and children, who are dependent upon his pay for support, to the brink of starvation. To make his monthly pay equal now to what it was when he entered the service, and prior to the adoption of the paper system, we should be compelled to add seventy per cent., or more, to his pay, which would make his monthly wages, instead of thirteen dollars, about twenty-two dollars and ten cents. And yet, in my humble judgment, the Government itself has lost more than it has gained by adopting this system.

Mr. Speaker, I object to converting our treasury building into a printing establishment, or making our Secretary a printer

to grind out paper money. I doubt not the integrity and honesty of the present Secretary; but we do not know who is to be his successor, and that they would not make use of such power for political or other purposes. Such things have occurred in the past, as in the case of the famous financier, Baron Brock, minister of finance of Austria, who committed suicide when his heavy forgeries were discovered; and in our own country there are names that have figured prominently in our public affairs to our national disgrace. But the greatest danger is among that class of employees who are subordinate to the Secretary, and necessarily must have control of these various departments in the manufacture of the notes, who, possessing no responsibility, and often of questionable character for strict integrity, have it in their power to purloin and overissue to any amount, thus causing the most serious disasters to the public and to the circulation of our national currency.

In regard to the economy which I have heard put forth as an argument in favor of this proposed money-making establishment, I can merely refer to the established fact that it costs our Government a great deal more to manufacture anything and everything for its own wants than to be supplied by private contracts; and I have good reason to believe that parties deeply interested in this enterprise are confident of realizing their dearest wishes by having the Government purse to support them, which does not present a very plausible evidence of economy, but is evidence that it would result more for the benefit of a few individuals than for the public good.

Mr. Speaker, it looks to me as if this was only another of the many schemes brought forward during the present Administration which have so abundantly opened the door to fraud and plunder upon our bleeding treasury, already amounting to many million dollars.

The bill was passed by a vote of 78 to 64. It was approved by President Lincoln on February 25, 1863.

CHAPTER XI

Extension of National Bank Charters [1882]

William W. Crapo [Mass.] Introduces in the House a Bill to Extend National Bank Charters—Debate: in Favor, Mr. Crapo, Roswell P. Flower [N. Y.], Benjamin Wilson [W. Va.], Augustus A. Hardenbergh [N. J.], William D. Kelley [Pa.], Waldo Hutchins [N. Y.], Abram S. Hewitt [N. Y.], Benjamin Butterworth [O.], George C. Hazelton [Wis.]; Opposed, Richard P. Bland [Mo.], Roger Q. Mills [Tex.], Thomas R. Cobb [Ind.], Samuel J. Randall [Pa.], Aylett H. Buckner [Mo.], Charles N. Brumm [Pa.], Joseph H. Burrows [Mo.]; Bill Is Passed by House and Senate, and Approved by President Arthur.

ON February 7, 1882, William W. Crapo [Rep.], of Massachusetts, introduced in the House, from the majority of the Committee on Banking and Currency, a bill "to enable national banking associations to extend their corporate existence."

National Banks

House of Representatives, April 17–May 17, 1882

The bill came up for discussion on April 17. Richard P. Bland [Dem.], of Missouri, gave notice that he had introduced a bill which he would like to be discussed in the same connection. This bill provided for retiring the circulation of the national banks and, on the expiration of their charters, continuing these banks as banks of discount and deposit.

Mr. Crapo supported his measure.

The indifference or possibly the ignorance of some gentlemen in reference to the financial or business interests of the country is to my mind simply amazing. There are to-day in operation fifty more national banks than there were six months

ago, and yet to-day the national bank note circulation is $1,400,000 less than it was six months ago. How far these figures are the result of a belief on the part of business men that Congress is indisposed to act upon this and kindred questions I shall not undertake to say. But they indicate the possibility of a contraction which the failure to act upon this bill will greatly increase.

I do not wish to be understood as asserting that if the bank charters are extended there will be no diminution of national bank circulation, because as that bank circulation becomes unprofitable the tendency is naturally for its withdrawal; but by the extension of the charters of the national banks it may be safely assumed that the withdrawal will be less rapid, less extensive, and less serious. The consideration of this bill brings up all the questions which the friends or opponents of the measure may desire to present, and enables a vote to be obtained upon all propositions designed to substitute treasury notes for national bank bills. Let us by action upon the bill inform the business men of the country what they may expect, and give them the opportunity to prepare for the situation.

Mr. Crapo yielded time successively to Roswell P. Flower [N. Y.], Benjamin Wilson [W. Va.], and Augustus A. Hardenbergh [W. Va.], Democrats, who supported the bill.

Mr. Flower.—The financial policy of the Government touches every home throughout the length and breadth of this Union. The slightest discussion of it is felt everywhere. As long as it is before us there is no confidence nor business enterprise; no investments are made; employment of labor ceases, and widespread distress ensues. We have again and again had instances of the same thing.

The contemplation of a resumption of specie payment from 1875 to 1879 reduced us almost to beggary. The settlement of the question restored confidence and led to our present prosperity. The refusal of the House last Monday to consider this matter has caused a large amount of money to be withdrawn from trade already. What the discussion of the banking system must bring is further uncertainty and a decrease of prosperity, and the longer it is put off the greater will be our distress. The banks can under the present law liquidate, divide their surplus, change their names, put greenbacks into the treasury to the amount of their outstanding notes, draw new notes, and go on as before. The consequence of such action is contraction of the currency and disturbance to business. No one can estimate the distress which will be occasioned, but everyone will feel as though there were disturbing forces at work forbidding him to increase his business and compelling him to proceed with caution. No one can tell how he will be affected, but everyone will regard with dismay the approach of each successive charter expiration and will fear and tremble at the mention of the 25th of February next, when two hundred and ninety-seven bank charters expire and fifty-three million greenbacks will be placed in the treasury for the redemption of their notes, or thirty-five millions more than the banks foolishly withdrew in 1881.

Business men are always sorry when Congress assembles and pleased when it adjourns. I sincerely trust that in this case at least they will not have cause to say the House has neglected their interests.

Mr. Wilson and Mr. Hardenbergh spoke in like tenor.

At the conclusion of Mr. Hardenbergh's speech Roger Q. Mills [Tex.] congratulated Mr. Crapo on "the splendid strategy he has displayed in getting the Republican heresy advocated by Democrats."

Thomas R. Cobb [Dem.], of Indiana, opposed the bill.

This proposition was substantially presented to the House two weeks ago and was then voted down. But the bankers have thrust it upon us again to consume the time of the House as against other important matters of legislation. This organized system of capital has ever since I have been a member of this House constantly been thrusting itself in here to control legislation for its benefit to the injury of the country. This morning we see its hand again. It was said when this question was up before that the national banking system was a Democratic measure. I deny it. I assert that it is opposed to the teachings of Democracy. There were scarcely half a dozen Democrats in Congress who voted for the present national bank law when it was passed.

It is said by the friends of the banks that if the bill pending in the House is not passed the banks will go into liquidation, and that in consequence the business interests of the country will be shocked and untold ruin will befall the country. This is done to alarm the House. It is not the first time we have heard the bankers sound the alarm on this floor. They did it when the

bill to remonetize silver and the bill to stop the contraction of the greenbacks were pending in this House. They then predicted ruin to the country if these bills passed. They passed, however, and the country was blessed instead of being injured. But why this attempted alarm? The banks can reorganize under the law as now existing. There are but few, comparatively, of these banks whose charters expire before the 1st of December next; not enough of them to shock the financial interests of the country. Congress meets then, and can take action if necessary.

We are required to take this bill as prepared by the hands of the bankers without amendment, or we must defeat it. For one, I will never vote for the extension of the bank charters. I surely never will unless we are allowed to throw what I conceive to be necessary safeguards around the system. This system of banking is not satisfactory to the people. The agricultural, mechanical, and laboring classes are opposed to it. The great Northwest and South are opposed to it. But the capitalists of the East are in favor of it, and they will force the question on this House to the exclusion of all other business, however important that may be to the country.

SAMUEL J. RANDALL [Pa.].—The circulation of the national banks is based upon the debt of the United States, and as long as that debt exists that circulation can be maintained. It is proposed, however, that treasury notes shall be issued in lieu of such circulation. We cannot give to the treasury notes any other quality than that they shall be received by the Government in payment of public debts. It will hardly be contended that we can give to the treasury notes the quality of legal tender for the payment of all debts. Now, with all the advantages that pertain to the national bank circulation, there are gross abuses existing in connection therewith, and, if we are to be denied the opportunity of correcting those abuses, we must in self-defence resist the effort to continue these corporations in existence, so as to bring the national banks to their senses.

Owing to Democratic opposition consideration of the bill was postponed. It came up again on May 1.

Aylett H. Buckner [Dem.], of Missouri, of the minority of the Committee on Banking and Currency, opposed the bill.

I believe, sir, that this bill, if passed, will turn out to be a delusion and a cheat. The difficulty with the national banks is

not that their charters are expiring, but it grows out of the fact that the debt upon which their circulation is based is bound to be paid at the rate of $100,000,000 a year for the next four years at least. Already the banks have decreased their circulation in the neighborhood of $1,000,000 since the 1st of January last, owing to the fact that the 3½ per cent. bonds held by the banks are being called in.

I say that the duty of this Congress to the country, and even to the banks, is, if possible, to find some constituent in place of the foundation being undermined by this determination of the people to pay these 3½ per cents. That is what they need, and not this legislation, or anything like it; for, sir, it will delude the people into the idea that everything is going on smoothly when there is danger and great danger ahead of us from the rapid contraction which will necessarily follow from the payment of this portion of the public debt.

WILLIAM D. KELLEY [Pa.].—Would not a reduction of the revenues of the Government to such an extent as to check the unwholesome rapidity with which our bonds are being called in leave a basis for the banks?

MR. BUCKNER.—Unquestionably it would. But there is no more universal sentiment existing in this country than the determination of the people of the United States to pay off the national debt, without reference to the banks or anything else, as rapidly as the condition of the country will permit. [Applause.]

WALDO HUTCHINS [N. Y.].—The gentleman from Missouri [Mr. Buckner] and the other gentleman from Missouri [Mr. Bland] do not propose to give up the national banking system, but only desire to have a change from the national banking currency to the treasury notes of the Government. That question, however, should stand by itself, and we ought to reserve our opinion as to the best mode of reaching a desirable solution of it, for the present considering one thing at a time. My friend from Missouri says it is unnecessary to take action now. I want to say to him that in my opinion the action taken by the House heretofore renders it necessary that we should take action, and favorable action, without delay.

As every gentleman knows who has ever had anything to do with banking and currency, there is nothing so timid as capital. The business men of the country do not understand the situation of this matter; but there is an impression among them in the State of Missouri, as well as in the State of New York, that there is something wrong, and unless action is taken to provide for the extension of bank charters about expiring there will be trouble

in the money market. And therefore the wheels of finance are being stopped. Men who were intending to go into operations that called for the expenditure of large sums of money have countermanded the order, waiting to see the action of this House, and there is not a gentleman here who, if he were called upon to enter into a new enterprise involving the expenditure of a large sum of money, not even my friend from Missouri [Mr. Buckner] but would refuse to enter into it till this question was settled.

I am sure this Congress has the ability, the sense, and the patriotism to arrive at last at a conclusion that will bring continued peace and prosperity to our whole country. [Applause.]

MR. HARDENBERGH.—If this were a question to-day before the House as to whether the national banking system should be created anew or not, then some of us might understand how to vote. But the national banking system goes on, because your banks can reorganize in a very day, and perpetuate their existence for twenty years. Therefore, by no discussion that you give to this bill, nor by any action of yours do you restrict its provisions or prevent the operations of the system throughout the country.

What, then, is the question before us? What is the difference between the two methods—the reorganization and the extension of the charters? The question is whether those banks shall liquidate or whether their existence shall be continued by your action upon this bill. If you force them to liquidate, you produce a contraction of over sixty millions of money that must be called away from the industrial interests of the country, and that just as we are going on conquering and to conquer in all our industrial pursuits.

The bank of which I am president has a capital of $250,000, a surplus of $225,000, loans out to the extent of $1,000,000 on call and on time. Now, if you refuse to-day, or before this Congress adjourns, to say the charter of that bank shall be extended it must immediately contract to recover the $225,000 of surplus to pay the stockholders. You force my bank into liquidation. Any five men can come forward and write their names for $50,000 each, and you have as perfect a monopoly as ever existed.

ROGER Q. MILLS [Tex.].—Will your bank have to go into liquidation unless this bill is passed?

MR. HARDENBERGH.—Certainly it will.

MR. MILLS.—Then I make the point of order that the gentleman cannot vote on this bill.

MR. HARDENBERGH.—I have this to say to the gentleman from

Texas [Mr. Mills]: if he thinks that the ownership of a thousand dollars of stock in the bank in which I happen to be president will control my action here he little understands me or the constituency I represent.

On May 16 Abram S. Hewitt [N. Y.] supported the bill.

As we are to have banks, the only question is whether they shall be national banks or State banks. We have tried the State banks. They were a failure. No one who has studied the history of the past would consent on any terms whatever to go back to the State banking system even when the most perfect, as in the State of New York, where we had the safety-fund system, which provided absolute security for the circulation.

Now, if we would not go back to the State banks and must have banks, we are driven to the conclusion they must be national banks. In regard to these national banks I think there is no controversy at this day except on one point. Even my friend from Missouri [Mr. Bland] in the substitute he has offered recognizes the propriety of their continuance as banks of discount and deposit. It is only, therefore, on the question of circulation that there is any criticism to be made upon the banks. Now, the circulating medium is in finance what the life-blood is to the human body. We must keep it in the best possible condition or disease is sure to occur and ruin and death, industrial death, to follow.

The system which we have is a national one. The currency is entirely supplied by the Government. It is at par everywhere, and no doubt exists in the mind of any human being, when he gets one of these bills, whether it be a Government note or a national bank note, that he can get for it in coin one hundred cents on the dollar.

I recognize facts as I find them. I would never by vote or act authorize or contribute to the issue of these legal-tender notes. I should be very glad if they could be retired. I do not think that this Government was created for the purpose of supplying circulation; on the contrary, I think the fathers and founders of the Constitution intended to prohibit the exercise of any such power.

I agree with Hamilton, whose superior as a financier has never lived, when he says, "to emit an unfounded paper as the sign of value ought not to continue a formal part of the Constitution, nor ever hereafter to be employed; being in its

nature pregnant with abuses, and liable to be made the engine of imposition and fraud; holding out temptations equally pernicious to the integrity of government and to the morals of the people." (Hamilton's Works, II, 271.)

But we have Government paper money, and it now works well in practice. I know that principle is a good thing, but when you have a condition of things which works well it is dangerous to disturb it.

I am willing, no matter what the coming decision of the Supreme Court may be as to the legal-tender clause, that the $346,000,000 of Government notes now outstanding shall remain as a currency for the country until some better and more economical system shall be devised by the experience, not of Congress, but of men engaged in business.

How is the balance of the circulating medium provided? I assume that the $346,000,000 of Government notes will never come in for redemption. The balance is now provided by the national banks. The amount which the public receives fluctuates from day to day.

Now, somebody must provide for the redemption of these notes, and for their issue in accordance with the demands of business. Any banking system to be good, or, I should rather say, any circulating medium to be good, must have two elements. First, it must be surely redeemable in coin on demand; and, secondly, it must be issued daily in amounts sufficient to meet the legitimate requirements of business. That is precisely the condition we have now. The banks are ready, with adequate security, to wit, the security of the Government debt, to redeem every note that is presented. And, secondly, they are in condition, either out of the reserves which they have on hand, or out of the new bills which they can get for the deposit of additional Government bonds, to provide for whatever amount of currency the requirements of business may make necessary. And it is not conceivable that so far as business is concerned there should be a better state of things than this.

But I am met by the statement that this circulation is a source of profit; that the creation of circulation is a sovereign right, and that the profit belongs to the State, to the Government, to the people. Therefore if there be any profit in this circulation it ought to be taken by the Government, and the banks are not entitled to any of it.

Now, if the Government assumes this duty, if it has any such right, which I deny, if it assumes to itself this duty it must also assume the duty of redemption and of the expansion and contraction of the currency to meet the fluctuating demands of business. Now, I think I speak only the lesson of history when I say that redemption depending upon congressional action would be a delusion and a snare.

I think I may go further and say that not only would there be no certainty of redemption, but it is absolutely certain that there would come a time when in the absence of congressional action, or by congressional action, redemption would be made impossible. Therefore the first element of a sound circulation is absent, that is, if made dependent upon action of Congress.

Secondly, it would be impossible for Congress by any earthly contrivance to meet the demands which are made daily for a change in the amounts of the currency. We are not always in session; and when we are in session gentlemen about me know how exceedingly difficult it is to secure action upon any question, and much more upon questions so much in doubt and controversy as the currency question is. Therefore there could be no automatic action of expansion and contraction in the currency (which is the fundamental element in a good circulating medium) by the legislation of this body.

I shall be told that it would be possible to relieve Congress of this duty, and transfer it to a board who should decide from day to day, and from week to week, how the currency should be issued, and the methods by which it should be got into circulation. My answer to that is that we have had during the refunding operations and since the war an experience of the dangers of confiding power over the currency to public officers, however capable and however honest. The fact is that to put the control of the currency into individual hands is to put the whole property of the country at the mercy of the men who control the currency. The power is too great not only for human knowledge, but for human character. It is impossible to find any one man, or any half dozen men, who can comprehend the wants and business interests of a country like ours; and it is impossible to find men who can separate themselves absolutely from the interests which they themselves may hold, or which may be represented by their faith.

I have no personal knowledge of the alleged scandals in regard to refunding; I do not propose here to make any charges; but this I say, it is notorious that in the refunding operation particular banks, representing particular individuals, had practically a monopoly of that vast transaction, and that one bank in my own State cleared its capital stock five times over in the course of the refunding operations in two years.

That may have been all legitimate. The refunding operation was the grandest financial operation that has ever been made in the history of man.

But, sir, for one, I do not want what little I have laboriously gotten together to be placed at the mercy of any man. I should like to be able to manage my own property, and to keep or give in my own way what I have accumulated. I do not want a *deus ex machina* to administer the business of this country. There could be but one result of such a system, utter and absolute ruin. I therefore dismiss as impracticable the idea that any board composed of men can undertake this task which is beyond the reach of human capacity.

I come back to the fact that currency we must have, and that this currency will not be issued unless it be made profitable to the parties who issue it. Banks are not benevolent institutions. They are not governmental agencies except in a very narrow sense. They are organizations of men with capital for the purpose of carrying on a business which is not only lawful, but absolutely necessary to the community. They are not going to conduct this business without profit; it ought not to be asked of them. But, if the profits should ever become excessive, the taxing power resides in Congress. There is no difficulty at all in regulating the business and taking to the Government as we now do such portions of these profits as Congress may think belong legitimately to the treasury.

But more than that; when a business is free, and when there is no monopoly at all, excessive profits cannot long endure. Only show me that a bank is able to make more than I can make in my iron business. I should take my capital out of the iron business and put it in banks. There is no possibility that the profits of these institutions can for any considerable period of time, except in very abnormal circumstances, exceed those of legitimate business in other directions. The fact is that these banks, while they have been highly profitable at times, made their money very largely out of the refunding operation. That operation is done and ended; it will not be renewed in our day. On the contrary we should pay off the existing national debt, and, as I hope, never in our time should we have occasion to create another.

So that on the question of what the profits of these banks may be, it seems to me it must be conceded that as we must have agencies, and the banks are acceptable agencies to the business of the country, and as we can regulate their profits by law, and as they are still better regulated by free competition, nobody

who is willing to get rid of his prejudices can make any fair criticism against the continuance of the present national banking system.

Now, we have been told that, while the circulation of the national banks is at present adequately secured, there will very shortly come a time when Government bonds will be retired, and there will be no such security for this circulation.

What, then, are we to do in regard to the circulation of the country? There my friend from Missouri comes in and says give us treasury notes in lieu of it. I have shown you, I think, conclusively that treasury notes would not answer the valid purposes of money. The banks that will close up their business unless they take out new charters under the operation of existing law will in the present year withdraw a very considerable amount of money.

The reason is that owing to the low rate of money all over the world it will not pay the banks to purchase such Government bonds as they can buy to replace the called bonds, and the result is they will take their money and retire the circulation.

A remedy was suggested by my colleague [Mr. Flower] which is the prompt passage of a refunding bill, so that these bonds may be replaced by the new 3 per cent. bonds which will be created by that refunding bill.

And I want to say to gentlemen on the other side of the House that the responsibility, the onus, in this business is on them. This side of the House in the last Congress, of which I had not the honor to be a member, did pass a refunding bill, which was vetoed. If the Republicans fail to make it possible for the banks to replace the bonds which will be withdrawn, followed by a withdrawal of circulation, then there will be a tide of indignation sweeping over this country which will carry their majority away, and put some other party in power which is ready to meet the necessities of the adverse condition in which the country will find itself.

Now, by extending these charters we actually give no new rights to the banks. They may reorganize and are organizing all the time under the bank act, taking out new charters for twenty years. I would prefer to allow them to run on; first, to avoid the expense of reorganization, and, secondly, to avoid the inconvenience of winding up their affairs and starting again; but more particularly to avoid the distribution of $128,000,000 of surplus profits which they hold on hand and which is the basis of business in this country to the extent at least of $1,000,000,000 per annum.

I will make some suggestions as to what kind of a currency might be substituted when the stock of Government bonds shall be sensibly diminished. I would still continue to require that $50,000 of the capital of each of the national banks should be invested in Government bonds, and this for reasons which will be obvious to every gentleman present.

I propose that the national banking system under the law as it now stands shall not be changed in any respect whatever except one. I would do all that as is done at present under the law, but I would no longer compel the banks to deposit Government bonds for the amount of the circulation issued to them.

What security would I substitute?

I would deliver to banks 90 per cent. in circulating notes on the amount of their capital. I would make the notes of the bank a first lien on the assets of the bank. Secondly, I would make the stockholders, as they now are, personally liable for 100 per cent. in addition to the capital of the bank, and make the notes of the bank a first lien upon this amount. Now, I have at least under this arrangement 200 per cent. behind the notes. Thirdly, I would compel the banks to put a redemption fund of 10 per cent. in coin into the hands of the Treasurer of the United States. Taking the present capital of the banks, $360,000,000, that would put $36,000,000 of coin as a redemption fund in the hands of the Treasurer. Lastly, I would make the banks as a whole guarantee the circulation of each individual bank.

Now, let us see what will happen. A bank breaks; its note is redeemable at the treasury of the United States in coin without a moment's delay. Next, I would recoup the amount paid out for redemption of these notes by immediate assessment on the banks and require them to make it good, and when the bank is wound up and the lien for circulation is collected I would refund the money to the banks for the assessment they might have paid.

I submit to this House whether it is conceivable that a circulation secured in that way would be irredeemable, or that there would be a particle of doubt about it from one end of the land to the other. But while it is so absolutely secure as to be bomb-proof and fire-proof it imposes no harder condition on the banks than does the present law, which requires the stockholders to be personally liable for an amount equal to the capital stock held by each.

Benjamin Butterworth [O.] supported the bill.

I would pay the greenbacks as we are pledged to do, and dissociate the Government from all banking operations, and remit the issuing of paper to the national banks, under charters so restricted, so limited, as to impose individual liability; and with the certain result that bad faith, corrupt management, reckless issue should entail the first and most disastrous calamity to the banks and bankers.

It is strange that there is no end to the folly that constantly repeats itself in shouting about the outrage of permitting the national banks to deposit one hundred thousand dollars in bonds and draw out ninety thousand dollars of what certain very clever but thoughtless persons insist on calling money. National bank notes represent credit. The national banker wants to loan the credit of the bank to such as may desire to utilize it in their business or pursuits. To facilitate this enterprise, and for the convenience of the bank and the borrower, certain printed evidences of credit known as bank notes are provided by the Government at the cost of the bank, and the bank is permitted, under certain restrictions, to loan these credit notes. The Government, however, for the protection of those who borrow those notes and those into whose hands they may come, says to the bank, "Before you can issue these notes of credit you must secure the noteholders against loss; you must deposit with the Government United States bonds to secure the redemption and payment of the notes"; not to secure their exchange for other notes or paper, but their payment, and payment means the delivery of gold or silver.

The Government does not give to the banker a cent of money, not a farthing. If it did deliver money to the banks there would be no need of providing for its redemption. Who ever heard of redeeming gold dollars or silver dollars? So, when gentlemen talk about depositing bonds with the Secretary of the Treasury and receiving so much money, they simply confuse and mislead and positively misstate the fact, through ignorance in many cases, and in a spirit of demagogy in other cases.

The whole system is simply a means of loaning credit to those who desire to borrow. Business demands such convenience, and the Government regulates its utilization so as to be most advantageous and safest to the borrower and holder of the legal evidence of the credit so loaned.

The statement that the Government or that the people are thus compelled to pay double interest, etc., and suffer hardships unnecessarily, is amusing, or would be if it was not pronounced with such seriousness as to befog and mislead. Will gentlemen

devise some scheme, or suggest one, by which those who borrow money or credit will not have to pay interest? If they borrow gold they must pay interest. If they borrow greenbacks they must pay interest. The Government does not distribute treasury notes gratuitously nor loan without interest. The bonds would bear interest even if not deposited to secure the redemption of bank circulation.

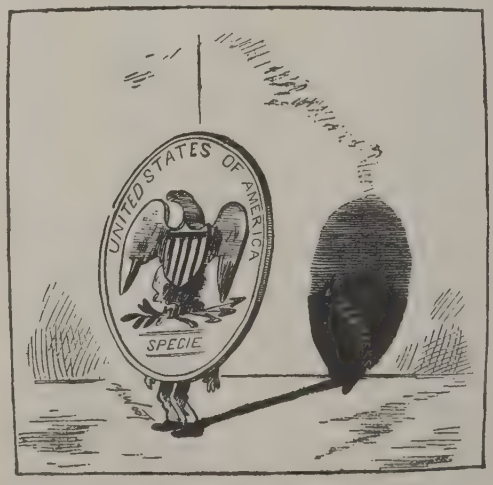
Touching the proposition that the bonds should be paid in greenbacks, it is needless to discuss it. Those who deem it honest to make such payment, regardless of the value of the greenbacks, are laboring with a difficulty which has its seat in their moral nature; logic will not reach it.

Those who think it is consonant with the spirit of the contract contained in the bond to compel the surrender of that interest-bearing bond which on its face provides for payment in money, and the acceptance in payment thereof of a large number of non-interest-bearing promissory notes, have a moral and intellectual make-up which is, I am glad to say, exceptional in this country. The Government was in the throes of dissolution. She had issued her non-interest-bearing promissory notes, and our people had taken them. Great uncertainty existed as to whether she ever would or could redeem these promissory notes. They had ceased to be worth more than fifty cents on the dollar. The Government offered to take them up and issue time-interest-bearing bonds to such as would take them. Many patriotic citizens took them. Now some gentlemen solemnly propose that, the country being now out of danger, these men who accepted the bonds shall be called up and told that the Government is ready and willing to rescind the bargain, and in fact insists on taking up its interest-bearing bond and restoring the non-interest-bearing promissory notes; and not only that, but insists on calling it payment.

In an individual this would be plain swindling. In my judgment it would in the Government be something worse. Of course if the holder of our promises to pay, or whatever they may be called, are willing to take other paper which is par, there can be no objection. But until this Government is fouled with dishonor and debased beyond recovery we will not adopt a system of paying which does not in fact discharge the debt. Bankers do best and flourish most when trade and commerce are in their normal condition, when the law of supply and healthful demand regulate our manufacturing and producing industries. They find their prosperity in the general prosperity. Their reserves should be in coin. No paper partition of greenbacks should be

permitted between the note holder and the coin dollar it represents.

But what will become of your national banks when the national debt is paid? Well, I am not of opinion that as much good to ourselves or to posterity will result from the hurried ex-



SUBSTANCE AND SHADOW
Cartoon by M. Woolf

tinguishment of the national debt as from its utilization to secure the redemption of our circulating paper currency. I would make it when reduced to, say, twelve hundred millions the security for our circulation, and also the basis of a postal-saving system, which would afford our people the means of safely investing their earnings and preparing a fund against age and the rainy day which comes to us all. As to the interest on the bonds, we collect the full amount from the banks in taxes imposed by the United States and by State and local taxation.

There may be a better system than the national bank system. But nobody to this hour has pointed it out. When it is presented we will make haste to adopt it. Time and experience have demonstrated that the old State and wild-cat system could only be restored with a view to rob the laborers and producers of the country. If the world's experience teaches anything, it is that the issue of paper money by the Government, in the discretion of Congress, would entail like disaster. No nation ever failed to abuse that power when once conceded to it. No nation ever redeemed its notes so issued. Ours has not to this hour, and I predict that it never will.

The idea of leaving the volume of the currency to be regulated by the wants of trade and the discretion of Congress excites alternately laughter and disgust. The very time Congress should stand firm and resist the panicky clamor for larger volume of currency it would bend like a reed. Congress wants to be right, but there is one thing that it wants still more, and that is to be popular. It wants to protect the best interest of the people, but it must have their votes; and it unfortunately occurs that that which is wisest and best is not always most popular at the time when action is to be had, and it occurs that we sometimes please the people least when we serve them best, and *vice versa*. Can you not trust the people, questions some Solon? Yes, certainly. So our fathers did, but they none the less provided a Constitution to prevent them from governing themselves too much under sudden impulse, under stress of adverse circumstances, when prejudice, passion, and excitement clouded or unhorsed the judgment—a Constitution to restrain us in hours of peril until wise and intelligent judgment could assert its sway.

We have few systems, few institutions on this earth that are unmixed good—few that are unmixed evils. National banks are not an exception. I am told that in urging the observance of good faith on the part of the Government in the payment of the greenbacks and the bonds, and the restriction of the volume of our paper currency, I am digging my political grave. So be it. If to insist upon preserving the national honor and maintaining the national faith is to be buried, so be it. I shall have some consolation in remembering that there is a resurrection for the just. If for insisting that the man who labors shall not be robbed by being paid in dishonest money; if for insisting that the wage man's dollar shall be worth a hundred cents throughout the year and everywhere; if for insisting that we shall not have under the influence of an inflated currency a few

years of fatness, followed by a longer term of leanness and hunger; if to insist that our prosperity shall be real and not imaginary is to compass my political death, I will accept the reward of my stewardship with calmness and satisfaction. I would rather be retired by my people with the consciousness of having served them faithfully and been right than to be promoted by them amid acclamations of applause burdened with the knowledge that I had, to secure their favor, betrayed their interests.

I am asked if I would perpetuate the national debt; if I deem it a national blessing. I answer: A national debt is in a sense a burden. It may be so utilized as to become a blessing. I can readily see that if it was the basis and security of a wise postal-saving system, by which the mechanics, the artisans, the laborers, and such of the producing classes as would could find absolute security for the investment of their earnings, thus encouraging industry, sobriety, and economy among all classes, the debt, being transferred to this class, would prove indeed a blessing.

It would not only encourage the cultivation of the virtues to which I have referred, but it would induce all these people to feel and take a watchful and intelligent interest in their government; to study carefully its proper functions and labor to see that it is confined to them. They would be prompted by principle and interest alike to shield and protect the public faith and credit in the preservation of which each depositor would find his hope and safety. It is a question of the greatest good, and rather than return to the old scheme of organized plunder of the ante-war period, which robbed the toilers of this country every day in the year, I would without hesitation fund the bonds at 3 per cent., after the manner of the English consols, and make them the security of the noteholders of the country and the basis of the postal-saving system; the good resulting from such a course being so far paramount to any ill or inconvenience it would entail as not only to be defensible but to render it greatly to be desired.

The charge that I am for the bankers and gold bugs is one that a very moderate ability can make. Those who have such words on their tongues may not be malicious. Their trouble is usually congenital.

I have never eaten food that I have not earned in the sweat of my face.

I have three boys whose lines will not fall in more auspicious places. They, too, must eat their bread in the sweat of their

faces. And in advocating a sound currency, and a just financial system and the preservation of the national faith and credit, I only desire to preserve to them the equal opportunity to labor with their fellows and that they shall be paid for that labor with dollars that are worth one hundred cents, with money the value of which does not depend upon the whim or caprice of a Congress or the fidelity of bank directors or conditions of war or peace, which shall be worth one hundred cents every day in the year and everywhere.

Charles N. Brumm [Pa.], a "Greenbacker," on the committee, opposed the bill.

Mr. Speaker, we live in a remarkable period, one in which there have been greater advances in arts and sciences, greater social, intellectual, and moral development than in any previous age. We are living in an age that has reduced time and space, brought mankind together from the remotest regions of the earth, and utilized and subordinated the elements to the use of man, thus enabling us to increase our productions and ease our burdens a hundred to a thousand fold.

We have advanced and progressed in everything except finance, *i. e.*, we have multiplied our commodities or resources a thousandfold, but have not advanced the system of distributing or interchanging these commodities or resources one jot. We are still adhering to the barbarous system of barter, namely, intrinsic value for value, varied only by a postponement of the delivery of the intrinsic value commodity by a promise to pay or deliver that commodity in future, and this promise made by individuals or corporations the creatures of the Government, instead of reserving to the sovereign the exercise and use of one of its most vital functions, and by controlling the currency or the circulating medium to exert practically a control of the interchange of every commodity that man creates or can utilize. We thus give to individuals the exercise of that sovereign power of government which enables them to control everything that money can buy. To this great question the tariff, transportation, and wages are but incidents, monopolies are subordinate, the social problem contingent, and the moral and intelligent status dependent.

In discussing this question I propose not only to separate bank functions from the Government, as suggested by my friend from Ohio [Mr. Butterworth], but also to separate all Government functions from banks. What does this bill contemplate?

I contend that it contemplates the continuation of the issuing function of the banks, the discount function, the deposit function, and the function of exchange and transmission of money.

There is no war at present upon any of these three functions, but simply upon the issuing of money. This is not a banking function; it is a right that belongs exclusively to the sovereign power of a government.

I say here frankly that the national banking system is the best banking system of any we have ever had, and while I say this I also say that the worst system we have ever had was the wild-cat State banking system.

Now, sir, the great trouble in the discussion of this question has been that gentlemen who urge the continuance of the issuing function of the national banks measure all their advantages and virtues by their comparison with the old rotten State banks. I say that is unfair. No man on this side of the House, that I know of at least, is in favor of the old State banking system. We only oppose at this time, so far as I know, the national banks in their issuing functions.

Now, to consider this question intelligently it becomes necessary for us to ask ourselves, first, what is money? I contend, sir, that money is a creature of law created only as a medium to facilitate the interchange of commodities, and therefore should not be a commodity itself, but only a representative of the value of commodities.

But to do this it must have one essential function or attribute, which can only be imparted to it by the highest power known to man, namely, the sovereign power of the nation; and that is the function of legal tender for the payment of all debts.

And this does not conflict with the rights of States to control contracts between individuals, as suggested by my colleague on the committee from Missouri [Mr. Buckner] for a legal tender, or the power of a legal tender, is simply this: when John owes money to Jake and John makes him a tender of that which the Government has said is a legal tender and Jake refuses to take it, then Jake cannot go into the courts established by authority of law and say that the State must take hold of John and put its hands into his pocket or levy upon his goods and take from him that which will pay the debt in kind. But if I make a contract to barter, trade, or swap one commodity for another, then the interchange must be made in kind; *e. g.*, if I agree to furnish labor for potatoes, when my labor is performed the legal-tender act will not prohibit the man who is to pay me for my labor from making a tender to me in the potatoes agreed upon.

The legal-tender act has nothing to do with it. It is only when I agree to do a certain thing or to sell a certain commodity for money that then I must carry out that contract in good faith, so that, when that money which the Government has established in its sovereign capacity is tendered, then I must either accept that money, or that tender will be a good plea in bar. That is the whole sum and substance of legal tender and its effect.

Gentlemen tell us that we must have money which will pass current in England and the rest of the world. I ask any man here to show me or tell me if he has ever seen the money of the world, whether he has ever seen or ever heard of money that will pass current and is a tender anywhere except within the jurisdiction of the sovereign that has issued it, be he prince, potentate, or fifty million freemen. There is no money of the world. Whenever you go within the border of England or any other nation you settle your balances there, not with money, even if it is your legal-tender eagle or dollar, whether gold or silver. They will not count them; they weigh them. They but take the faith of the Government from the stamp on it, as to its fineness, and in that way they will make their calculation and receive it, not as money, but as commodity, merchandise, or bullion.

Gold is not money; neither is money gold. Money is only that which is so created by law, whether made of gold, silver, nickel, copper, brass, iron, or paper. Gentlemen have a great deal to say about fiat money. Now, I ask you in all sincerity, and I want gentlemen to answer the question if they can, did any of you ever see a dollar of money that was not fiat money? I pause for a reply; and I challenge you to show me a dollar of money that is not fiat money. I care not whether it be made of gold or silver or nickel or copper, or whether it be made of paper. Why, sir, you may take your subsidiary coin, and how much of that has intrinsic value, and how much is fiat? Take the Bland dollar, which is worth in the market some twenty cents more than the trade dollar. One is a legal-tender dollar, while the other has a superabundance of commodity, but no legal tender; and yet it is worth twenty cents less. Take your copper and nickel coin; it does not contain near the commodity value of gold or silver, and yet to the extent that it is legal tender it will buy as much as any other money, and always serves the purpose contemplated within the jurisdiction of the government that utters it. What are your bank bills? Are they money? No. Take the act that has created them, take the bill itself and read it, and you will find that they are promises to pay money, and not money at all. When gentlemen talk

about Continental paper money, French *assignats*, and Confederate scrip as repudiated and worthless money, they talk of that which never existed. There never was Continental paper money; there never was Confederate paper money. They were mere promises to pay money. The French *assignats* were never money; they were mere promises to pay land.

Gentlemen talk also of the standard of value; and my friend from Ohio who has just taken his seat said he wanted a standard of value, and that the standard of value he wanted shall be gold or silver, or both, because the value is there in the commodity before it is uttered; and also that that value was based or depended upon the amount of labor or the cost of production. I deny the whole proposition. The cost of labor and the cost of production have nothing to do with the value of any commodity. The question of value rests exclusively upon the matter of supply and demand.

Take an acre of ground on Broadway, New York; cost nothing to create; it's worth millions. Take an acre on a mountain top; cost the same; worth nothing. Build an ocean steamer on the mountain top; it costs more money and labor than to build it at the shipyard, yet it is worthless. Build it where there is a demand or use for it, and it is worth millions. All the gold on the ship was not worth as much to Robinson Crusoe as a needle. There was no demand for gold; there was use for a needle. Therefore, what nonsense it is for any gentleman to attempt to establish the proposition that you can fix a standard of value. The value of all things depends exclusively upon their usefulness. Take it upon your own proposition. Even if the value depends upon the price of production there can be no standard, for the price of production will depend upon the demand and supply. Value is ever shifting. It has no permanence. Specific gravity, distance, bulk, etc., can be fixed, but values are as shifting as the winds, and have no maximum nor minimum.

When, therefore, gentlemen talk of the standard of value they talk of that which cannot exist and which never existed. You may have a unit by which you may measure values, and that is the closest you can possibly come to it; and when you adopt that unit you may make it a dollar, or you may call it a pound, or you may call it a franc, or whatever you will, but it is still the unit established by the Government, and by that unit men may measure the value relatively of one article with another, and that is all the use there is in money so far as the question of value is concerned.

The question of supply and demand as to money is a question of judgment. There is no standard for that. There is nothing that you can fix it by. I contend that the best scale by which you can ascertain it is the price of money, namely, interest.

Money, if you allow the Government to issue it, will not hang for the want of supply, because the Government will be able to issue it in unlimited amounts if necessary; and therefore the question of supply and demand does not apply. Government can control the supply of money, and to a great extent the demand for money. At any rate it may control entirely the supply of money if you only let it exercise that function which it has a right to exercise and not limit it to any specific commodity, such as gold and silver.

I have said this is only a matter of judgment. The only difference between my friends and myself on that proposition is that they want to have the judgment of a part and I want to have the judgment of the whole. I want the judgment of fifty millions of freemen. They want the judgment of directly interested and soulless corporations, responsible to no God for their acts, responsible to no penal code, responsible to nothing but to the extent of their assets in a civil sense; while man, responsible to God, to his neighbor, to his family, penally and civilly, would be a better, a more disinterested judge than these corporations, whose existence and prosperity depend, not as my friend says, on their being able to see that there is a stability in the currency, but, as the experience of ages shows, on their being able to see that there is anything else but a stability in the volume of the currency. In that sense, having the avarice of humanity at least, they control it in their own interest, asking no questions as to what the effect of it will be on the rest of mankind. Therefore I again repeat that the question of volume shall be left to the people. They will be better able to take care of themselves than the banks will be to take care of them. Besides, when the bankers control the volume they keep it hovering between universal bankruptcy and the highest possible interest that can be squeezed out of business, for the lower the volume the higher the interest. Therefore the bankers always keep the volume as close to the brink of bankruptcy as possible, with the margin so small that the slightest flurry brings on a crisis; for, mark you, the banker makes more money with one dollar out at 6 per cent. than he does with two dollars out at 3 per cent.; besides he requires only half the capital, runs less risk, and requires less work. When interest is six cents on one dollar the

purchasing power of those six cents is much greater than when the interest is six cents on two dollars.

I know it is often said, "Why, you contend that by the Government putting its fiat under the law upon a piece of paper that will make that paper worth a dollar"; and they tell us, "But you cannot legislate a value out of nothing"; they tell us, "You cannot make that dollar worth a dollar, because it is not issued upon value." Just at this point let me tell you, sir, that you are wrong. Value depends entirely upon utility; everything is valuable only according to its usefulness. Anything that is of no use is of no value; hence if by legislation we can grant a franchise, extend a privilege, create a function, prevent an evil, or establish anything that will do good or be of use, we are by such legislation creating value just to the extent of that usefulness; and here, if you will bear with me, I will illustrate to you the difference between this fiat dollar and that which you call the dollar, the bank note. I here first say that a bank note is never issued. No man can show me a bank note that ever was issued. Banks do not issue money. What do they do? They loan money out. They give their promissory note for the individual's promissory note, always taking care to pay the individual nothing for his promissory note, but demanding of the individual interest for the promissory note of the bank, and the result is there is not a dollar of bank money out to-day, and never was, that is not drawing interest by day and by night, on week days and Sundays, on holidays and work days; and labor has to make up that interest.

How is it with the Government issue? There never was a dollar of Government money put out that was not put out for value received. I want to repeat that, for I wish you to remember it. Governments do not loan money out; governments pay money out, and they pay it for value received.

Will gentlemen tell us that when this Government called its 75,000 boys in blue, and then its 300,000 more, and repeated it from call to call, and paid these soldiers in the greenback dollar, the Government did not get value received? When these men sacrificed their right arms or their legs, shed their blood, laid down their lives, that the nation might live, will gentlemen say that the Government did not get value received? And, if it did, those greenbacks still represent that value.

But, they say, how are you going to redeem it? Sir, if ever there was a holy redemption the redemption of the greenback by the sacrifice of the soldiers of this country was as holy a redemption as any since the advent of the Son of God? Do you

ask me how it was redeemed from the hands of the soldier? Why, when that soldier sent his greenback home to his wife and little ones, and when that wife and those little ones ate the bread they bought with it from the baker, that greenback was redeemed in bread. And when the baker paid for his flour that greenback was redeemed again. So when you start money out right, you start it out for value received, and every time it passes from hand to hand it is redeemed. In that very passage it is its own redeemer, and when it comes back to the Government in the shape of taxes or dues it comes to its fountain source, as the rain which rises from the ocean gets back to the spring and trickles down the mountain and waters the valley and again finds its outlet into its mother ocean. So would we have the Government money, not based upon gold, not based upon silver, not based upon any one or two commodities, but by the Government's power of taxation based upon every commodity that the American people can create; based upon the whole wealth of the nation, based upon the entire credit, the honor, the integrity, the patriotism, and the intelligence of the American people; paid out for value, and, not like the bank note, loaned out on interest.

DIETRICH C. SMITH [Ill.].—I understand the gentleman to say that he wants all the currency of the country to be issued directly by the Government. I would like him to state who is to determine the limits of the amount of currency to be issued?

MR. BRUMM.—The difference between the banks determining the amount of currency and the Government determining the amount of it is that in one instance the banks are made the judge, and in the other fifty millions of freemen are made the judge. Now, if the gentleman wants something more specific——

MR. SMITH.—I do.

MR. BRUMM.—I will state that I believe with my friend from Ohio [Mr. Butterworth] that a postal system of deposits is a healthy one. I believe that by such a system of deposits we could absorb the plethora of money, and by that system the amount of circulation could be gauged, because it would gauge the rate of interest. I do not know but that the introduction of one of the functions of the Bank of England might be a good one in connection with the postal system of deposits. That is, that a commission established by the Government shall, upon due notice to the holders of the certificates of deposits, raise or lower the rates of interest just as money may become plethoric or scarce in the business of the country. The amount of circulation could be regulated in that way, for when money would be scarce the rate of interest could be lowered and men would draw their money from deposit, and when there was a plethora of money the rate of interest could be raised and men would put the money on deposit. In that way you would have an automatic system within the control of the Government by the people and for the people, not by the banks and for the banks. That is but one scheme, and there are others, but I cannot now take the time to state them all.

MR. SMITH.—I understand the gentleman to say that the treasury should be authorized to issue promises to pay for all debts of the Government.

MR. BRUMM.—No, sir; oh, no! I would never have the Government or anyone issue promises to pay, but would have them pay at once.

MR. SMITH.—Issue currency?

MR. BRUMM.—Yes, currency. Issue fiat dollars to pay the debts of the Government under its sovereign power and exclusive jurisdiction over the subject-matter, and not postpone the payment of its honest debts by issuing promises, especially when those promises are burdened with interest.

MR. HARDENBERGH.—Would they not be promises to pay?

MR. BRUMM.—No; they would be the same as coin. Your gold dollar and your silver dollar is not a promise to pay. You cannot go to the Government and ask it to redeem this half dollar [holding one in his hand] or a gold eagle. The Government would tell you that they had nothing to do with that; that you might pay it to the Government for a debt and that would be all. Even then, if it were worn or short in weight, the Government would not receive it for as much in value as it was worth when it was issued. It would not receive it as money at all, but would receive it according to weight as a commodity or bullion for recoinage only, while it will receive its paper dollar for full value at all times.

As my colleague on the Committee on Banking and Currency, the gentleman from Massachusetts [Mr. Crapo], says, the currency of the country should rest upon the prudence as well as upon the power of the Government.

That brings me back again to the original proposition. You must not issue too much money. We understand very well what inflation means, and we do not ask for anything of the kind. But we do ask that you keep the issuing function, even though it be gold, silver, fiat paper money, or Government promises to pay, under the exclusive control of the Government, and let it

be regulated by any scheme or plan that will establish a proper bulk or quantity of currency.

MR. SMITH.—What part of the Government is to determine the amount to be issued?

MR. BRUMM.—I said that I would recommend the election of a commission, under control of Congress, or would have it under direct control of Congress. We might by act of Congress give the treasury unlimited power to issue fiat or full legal-tender paper money (which is the same thing) as long as money fetches more than 3 per cent. interest. Whenever it gets down to that point I would have it stop the issue; if it should go up again, then I would have it issue more. But you never need contract currency that is properly issued.

I agree with my friend from Ohio [Mr. Butterworth] that of all the evils of currency that of contraction and expansion is the greatest. The laborer is the last to feel the effects of inflation and the first to feel the effects of contraction. Therefore I would put it where there would be no amount issued that would ever need to be contracted, except by natural results, such as loss and destruction. If the Government keeps within the bounds of wisdom, as it can, and in my judgment will, as soon as the issuing function is forever taken from the banks, it never need contract the currency.

Gentlemen may tell us that during the war it would not have done to have issued an unlimited amount of paper currency. I answer no; but as the Government issued the currency it could draw it back by taxation and thus keep the volume at a healthy point at all times. During the war, when we had an immense army, the Government could do this. In time of peace I grant you the Government cannot do it easily; but in such a time there is no necessity for a superabundance of issue, and therefore of course there is no occasion for absorbing it by taxation. But in time of war the Government can set a limit upon the issue by the exercise of the power of taxation, drawing back the currency and keeping it at all times in a healthy condition.

MR. HARDENBERGH.—How are you going to get that money out, and how are you going to restrict or regulate the issue? Suppose you have an extravagant Congress or commission that issues more money than is required, so that people throughout the country refuse to take it. You then establish a gold basis, a silver basis, and what you call your treasury-note basis. Confidence is gone, and the people suffer.

MR. BRUMM.—No, I propose to establish nothing of the kind. We would get this money out just as the people want it by al-

ways paying and receiving for value. When there is a Government issue you cannot get more money out than the Government can receive value for. The amount of money in circulation is thus limited at all times. If after the debt is paid the amount of currency in circulation should not be sufficient, our friends from the South are asking us to educate their people. In the North, too, we have ignoramuses enough that ought to be educated, and I would recommend that the Government issue its fiat money and educate the people, if perchance there should be no other way of getting money in circulation. Internal improvements would be another method. Thus you enable the Government to be master of the situation at all times. Neither would there ever be a lack of confidence, for confidence is only lost when you make a lot of promises in shape of bank notes, etc., that you cannot redeem, whereas if you have cash legal-tender money based on the power and wisdom of the whole nation you have the very essence of confidence itself.

MR. HARDENBERGH.—I would like to ask my friend what volume of currency under his system he would issue? Would he pay every bond and obligation of the United States now out by this fiat money, as he calls it?

MR. BRUMM.—No, sir; not at once, but as fast as they mature and as rapidly as consistent with financial stability. I am unable to state the exact amount which would be proper for the volume of currency; and no other man in the world is able to do it. But I can do so just as well as the banker can. No man can tell beforehand the amount of currency required for a country like ours. Experience as the money is out will settle the question; and nothing else under the sun can.

The gentleman from Massachusetts [Mr. Crapo], my colleague on the committee, remarked in regard to the banks that "the necessities of their creation have not been forgotten." He also speaks of their past "patriotic services." What did the gentleman mean? Did he mean to corroborate my other colleague on the committee [Mr. Hardenbergh], who said that the bank note paid the soldier and carried us through the war? If he did, I deny the proposition. I say that no soldier ever received one dollar of national-bank-note money. I read from Judge Martin:

> There was not one national bank note issued until 1864.

Why, sir, Vicksburg had fallen then; Gettysburg, the turning point of the war, had been won. Our soldiers were

marching triumphantly, crushing the shell of the late rebellion. Confidence had been restored; the danger of foreign intervention had passed; and the war was practically over. The battle had been fought and the victory won. Then these national banks came in and said: "Now we want you to let us control the currency."

MR. HARDENBERGH.—The Government forced them to do it.

MR. BRUMM.—The Government did not force them to do it. Wall street came here to Congress. In the language of the old commoner, Thad. Stevens, "a wail came up from the caverns of Wall street," and insisted upon an amendment in the Senate to the House bill reported by him as chairman of the Committee on Ways and Means, putting in a clause that repudiated the greenback and became the basis of the national-bank system. It was done at the bidding of Wall street. Yet gentlemen tell us that the banks were forced to take control of the currency. The Government did say to the State banks, "we will tax you 10 per cent. on your circulation"; but did that force anybody to establish national banks?

MR. HARDENBERGH.—Certainly it did.

MR. BRUMM.—No; it simply got rid of the wild-cat system of bank notes.

MR. HARDENBERGH.—Was not the primal evidence that Salmon P. Chase "wiped out" the State banks by putting the tax of 10 per cent. on their circulation and forcing the national banks to take bonds whether they wanted to do so or not?

MR. BRUMM.—I do not care what the primal idea of Mr. Chase or any other man was. The fact is the Government issued these treasury notes. He made the bankers receive these treasury notes; he made them receive the first $60,000,000 for debts, although it had not been put in the original act, but was rather left to his discretion.

MR. CRAPO.—My colleague on the committee seems to have forgotten that part of the history of the country when the Government had a large amount of 7.30 bonds[1] and when the question of funding the public debt was an intricate and doubtful one, and when the banks did come forward and aid the Government in the funding process, converting the 7.30 bonds into those of a lower rate of interest.

[1] Really notes bearing interest at 7.30 per cent., and payable in three years, which, by an act passed shortly after their issue, were made convertible into "five-twenty" bonds, that is, bonds payable after five years at the option of the Government, and peremptorily redeemable in twenty years. The "five-twenty" bonds bore six per cent. interest. [See Chapter IX.]

MR. BRUMM.—Yes, they did come and refund the debt; that is, they so refunded it that, instead of the Government owing the debt to the bondholders, to the contractors, and to the soldiers whose pay was far in arrears, they made it over to the bankers at 40 cents on the dollar. They came and helped to refund the debt, which was the cause of the crisis of 1873. They did come and aided the Government to do that which brought on the greatest calamity this nation ever had save alone the last rebellion. They did come and make the Government refund this debt by contracting the currency so rapidly that labor lay prostrate, and men, women, and children were starving throughout the length and breadth of the land.

While on this point, Mr. Speaker, let me say that gentlemen here are fond of throwing into the teeth of the "Greenbackers" the fact that we prophesied the Government never could resume specie payment under your refunding system. I insist that we were right when we said that, for, sir, you have not resumed to-day. Under your original refunding act and resumption policy you changed your policy. You were going to cut down every dollar of greenbacks. You had demonetized silver, and, when the greenback prophecy was proved to be only too true, you changed your policy and you remonetized silver, stopped the destruction of the greenback and made it a full legal tender except for the payment of the public debt.

What is the result to-day? You boast of resumption. I deny it. You have not resumption, and especially of specie payment on demand for national bank notes. To resume is to get back to where you started. This you have not done. You have a new idea of redeeming the national bank note by a redeemer for which we on this side of the House are denounced.[1]

After you call in the entire $350,000,000 bank notes and redeem them in greenbacks, you may resume by taking a fixed sum, not less than $50, pay the expense, and run the risk of getting it to and from New York City, and then put it in a little bit of a hole in that city and have it redeemed. That is what you gentlemen boast of as your resumption policy.

Now, my colleague, the chairman of the Committee on Banking and Currency, says that banks are not large moneyed monopolies. For the purpose of showing the power of the national banks, I read a small extract from the secretary's report of the proceedings of the National Bankers' Association, held at Saratoga in 1879.

[1] Judge Brumm acted with the majority of the Democrats on financial questions. He was a protectionist, however, on the tariff question.

Bank managers are the most apathetic business people that I have ever come in contact with; an earthquake will hardly induce them to move out of their easy-chairs. They need not be suppliants. They want justice and not favors. Did they but realize their strength, and, acting together, exert it as do other great interests, they would have to ask but once, and any proper request would be granted. The banks represent the entire commerce of the country, the mining, the iron, the manufacturing, the agricultural, even the whisky and tobacco interests are dependent upon and are tributary to the banks, and the banks in turn to them. Suppose banks and bankers should stop discounting for any one of these interests for thirty or forty days; nay, suppose the banks should cease making discounts to all of these interests at the same time, would not chaos come again? The movable capital of the entire commercial public of the country is in the banks.

There are over 6,000 banks and bankers in the United States, wielding of capital and deposits over $3,000,000,000. They have only to move along the lines and retire from business and let the windy demagogues supply their place with money and credits, if they can. They will soon be told by the farmers that they want something besides words for their wheat, and so also will the manufacturers and other producers for their productions. Nothing is so timid as capital, nothing so easily scared as one million, unless it be two millions.

Here is an acknowledgment that two of the most dangerous elements to republican institutions are incident to your banks, namely, unlimited power and unmitigated cowardice.

Now, Mr. Speaker, I want to ask our national bank friends what redeeming feature has the national bank note that the greenback note has not? What advantage to the people of the country, to the business interests of the country, has the national bank note that the national treasury legal-tender note does not possess?

Do you say that it is current all over the Union? I say amen; but so is the greenback. Do you say it has the confidence of the people? I say amen, for that confidence is based on the people themselves, that confidence is based on the Government, and on its redeemer and savior, the greenback dollar. Do you say it will surely be redeemed? I again say amen; it will be redeemed, but by the greenback dollar.

And now let me ask another question. Let me ask the gentleman what advantage has the greenback that the national bank note has not got? We claim that it has a number of advantages that your national bank note has not got. In the first place, it saves the interest on the bond upon which the bank note is based, whatever that may be, great or small. In the second place, it saves the discount paid the broker or the banker; I have illustrated that heretofore; that is, the national bank note goes out for interest and interest must be paid; hence the

Government pays interest first on the bond, then the man who receives the discount pays interest on the bill, both of which are wiped out the moment you allow the Government to issue this money in the first instance. Then, sir, it does not bridge the chasm between the creditor and the debtor, as has been said by both my colleagues on the committee, the gentleman from Massachusetts [Mr. Crapo] and the gentleman from Illinois [Mr. Smith]. The national bank note does not bridge the chasm; it widens the chasm; because it makes the holder of the note pay double interest. It leaves the volume to the people and prevents the concentration of power in the hands of the few. I wish I had time to illustrate the damning and blighting effect of this concentration of power by the moneyed men of the country in the hands of perhaps a few dozen men practically in the city of New York. Any system of issuing banks fosters this centralization of power.

Again, there is a centralization of power in this that, whenever you take from the Government at large any of its functions, any of its rights, and give them to a portion of that Government, you take it from the aggregate and give it to a few, and they in their selfishness would always use it and utilize it to their own interest. Functions that are sovereign should be held sacred by the Government, and not delegated to the few under any circumstances. You change it from an interest-bearing to a non-interest-bearing debt; and, let me ask gentlemen who are so solicitous about the redemption of the greenback, is it not easier to redeem a debt, even if it is to be redeemed in kind, is it not easier to redeem a debt bearing no interest than it is to redeem a debt bearing interest? If you wipe out the interest of the bonds, cut them up into small denominations, make them legal tenders and serve the purposes of money; when the time comes for redemption the Government will be better able to redeem them if you do not charge interest than it will be if you compel it to pay interest for twenty-five or one hundred years.

Again, when you liquidate the Government debt by the issue of greenbacks you take the Government out of the money market. To-day the Government is one of the greatest if not the greatest competitor in the money market for loans. The Government is practically a bidder against any man who wants to borrow money. The Government is a borrower of money under a national-bank system and a competitor in the business market for the money of the country, whereas it ought to stand back and be a helpmeet, rather than to draw that money.

There will be no currency suspension as there was of the

national banks in 1873. The national currency will redeem the bonds. Do gentlemen ask me, do I want to repudiate? I say no; I say I want the debt paid, dollar for dollar, according to the contract; coin, since it says so; gold, if the Government makes it so; blood, if the necessity requires it. I want it paid according to the contract. But I say that the national treasury note will pay this bond without repudiating a dollar or a penny.

Senator Sherman said that some six hundred millions of the national debt was redeemed and paid in the national treasury note; not because the Government said it must be, but because the holder of the bond said: "I do not want your gold and silver; I would rather take the national treasury note, and let the Government take of its surplus at any time and call in so much of the debt as there is surplus." There will scarcely be one man that will say, "I want gold or silver." If they do say so, the Treasurer can easily tell them to go back up their cart and take the silver that is now in the treasury; and, as they take it out, it will come back in the twinkling of an eye, and then it can say, in the language of the barber, "'Next;' back up your cart and we will give you your silver again"; and it can keep this up till the national debt is paid. I would not pay it off so quickly as to bring on any calamity. There must be wisdom as well as honesty, and the Government will act in a truly wise and judicious manner if you only give it a chance.

There will be no currency suspension. The Government need never be troubled about suspending specie payments under that system. The only reason that specie payments are in danger to-day is because under your banking system you allow the banks of the country districts to deposit their money in the city banks. They deposit all their surplus and the banks in the city loan it to stock speculators and gamblers. In the country they would rather put it out on call loans at 3 per cent. than on a permanent loan at 6 or 7, because their deposits are on call. In the city they keep it in a spasmodic condition, loaning it constantly to stock-jobbers and speculators, and hence, when in 1873 stocks fell and could not be sold, a demand was made suddenly upon the banks for this money, and then it was that banks suspended not only specie payments, and honoring their own notes, but closed their doors, and refused to honor the drafts and checks of their depositors; then it was that they suspended all payments, and the result was the crisis of 1873.

And then it was that the Government was compelled to bridge over the chasm by loaning these very banks $26,000,000 of legal-tender notes. Therefore, not only during the war did

you rely upon your treasury notes, but in time of profound peace, in times of crises you have always called upon your savior to come to your relief in all emergencies.

But, again, the most important element of the system is in the fact that it will prevent the contraction and expansion of the currency. It will keep it on a permanent basis, not subject to the double fluctuations of gold and silver as commodities, and as coin, nor to the whim, caprice, and avarice of biased individuals or interested corporations. It will be on a permanent basis, for the money will never be issued beyond the amount that is wanted, and will be contracted only in a wholesome degree. Now, as to the merits of this bill and of the several amendments, I would ask what do gentlemen really expect to accomplish by the passage of this bill?

You come down now to the proposition that you must either have a perpetual national debt or the days of the national banks are numbered. Either one or the other of these horns of the dilemma you must take. You must either say that you want to mortgage our children and their prosperity indefinitely or that national banks must give up their issue. Now, since the days of the issuing function of national banks are numbered, and since you do not propose any substitute for it, let me ask if we had not better begin now to let them down easy, to let them down gradually? You say they have lived for nineteen years and that you want them to have twenty years more of existence. If you give that to them, then at the end of that time you must either give them twenty years more or else let the bottom drop out all of a sudden.

Now, I do not want anything of the kind. I am more generous toward the national banks than that. I want them to start now and prepare for the day of judgment. The time is at hand, and their days are numbered. I only ask them to prepare now, that they may meet their judgment when it comes upon them, and not inflict another crisis upon this country like that which they have heretofore inflicted.

I have submitted a compromise measure which does all that is contemplated by the Crapo bill except that it provides for the contingency of a crisis, in this, that as the national-bank notes are wiped out we shall substitute therefor the treasury notes—legal-tenders—just as they are to-day. Besides, this substitute fixes twelve months as the time for the final payment or liquidation of those national-bank notes that are lost or destroyed.

Gentlemen talk about giving banks the right to issue money

because the Government cannot do it. How can bankers do it? To what extent can they do it? To the full extent of the national debt, less 10 per cent. Now, gentlemen, if you are honest in claiming that the Government should not issue money, but that creatures of the Government should issue it, I ask why do you not offer a proposition something like this, that any individual may go to the Secretary of the Treasury with a bond of not less than $100, and not exceeding, I would say, $20,000, and receive not bank notes, but individual notes, if you please? What objection is there to allowing an individual the same privilege which you allow to a corporation? What is the difference?

John Smith, a business man in my county, has $20,000. He wants to go into manufacturing business. He finds that it will take $18,000 to build his factory. He says: "Here is a banking corporation with $25,000 capital that can go to the United States Treasury and by depositing bonds get money for them to the full amount of the bonds, less 10 per cent., and shave the people with it. Why should I not do the same thing? I will go to the Secretary of the Treasury, and say to him: 'Here are $20,000 of Government bonds; give me $18,000 in notes.' I will take these notes home—not for the purpose of shaving my neighbors, not to draw sweat and blood from them by usury. I will use them in erecting my factory, in giving employment to my neighbors, in building up the industries of the country. I will not loan out this money to draw the blood from the man who wants to build a factory. I will build the factory myself. I only ask the Government to do for me what it is doing for the national banks." He says to the Secretary of the Treasury: "Give me money upon the same terms on which you give it to this soulless corporation." The Secretary says: "No, no; you are a creature of God; you are a being of flesh and bone and blood; a responsible creature; I cannot give you this money. Besides, you want this money to use it as a blessing to your neighbors; that is against our policy."

What does John Smith do? He goes home and gets several of his neighbors to join with him. Then say we will apply to the Secretary of the Treasury; and it will no longer be the application of John Smith; it will be the First National Bank of Hookstown. They go to the Secretary of the Treasury, and he says: "Oh, I see; you are not here as a responsible creature, a creature of God—a mortal man, with soul immortal; you are an immortal creature without a soul. Deposit your $25,000 of bonds, and I will give you $22,500 in money. You may then go home—not to erect factories, not to give employment to your

neighbors, not to build railroads and other improvements, but to shave your fellow-citizens, to draw from them their life-blood.

MR. CRAPO.—Let me ask my colleague whether the greenback is a promise to pay?

MR. BRUMM.—The greenback on its face is a promise to pay. It is not the money I want, but it comes nearest to what I want and what I can get under the present circumstances. On its face it is a promise to pay, but by the act creating it it does not promise to pay. Under the act which created it, it is provided that it shall be receivable in payment of dues, and may be convertible into bonds. The bankers of Wall street are those who put this character upon the greenbacks. Under the act creating the greenback it is not redeemable either in gold or silver.

GEORGE C. HAZELTON [Wis.].—Has not the Supreme Court decided that you can issue nothing except a promise to pay in gold or silver dollars, and that there is no such idea as a fiat dollar, or a paper dollar, under our Government? If so, how are you to get around it?

MR. BRUMM.—There never can be a dollar that is not a fiat dollar.

MR. HAZELTON.—Have they not so decided?

MR. BRUMM.—The Supreme Court have gone so far as to say that the Government treasury note is a legal tender, first; and here let me say that the first money that the Government issued or created was a paper dollar—a promise to pay, a treasury note. It issued treasury notes before it ever issued coin of any kind, or before it ever coined a silver dollar, or a gold dollar, or a copper coin. The next money coined was copper; the next was silver, and the last was that gold of which my friend from Missouri talks so much. The men who framed the Constitution knew what they intended to do, and they passed an act establishing a Government national bank, with a right to issue legal tenders to the Government, I grant you, not to individuals; and they then issued treasury notes—the very men who sat in the constitutional convention. Now, the Supreme Court has gone further; Chief Justice Chase deciding that our greenback note is a legal tender for every debt, public and private, except those reserved in the act.

The Supreme Court, lacking two of being full, when it was filled went further, went beyond and up to that point that my friend, Judge Buckner, is so much afraid of, that is, that they are legal tender for the payment of antecedent debts. We do not ask you to go that far. We are willing to stand by the first

decision of the court. We do not ask you to go as far as Judge Strong went when he rendered the opinion of the court. We only ask you to make your notes legal tender, not to the Government alone, but to the individual as well.

MR. HAZELTON.—Suppose you had a piece of paper and the Government said "this is a dollar," would that be good money under your construction?

MR. BRUMM.—Yes, sir.

MR. HAZELTON.—That is all I want to know. The Supreme Court, in the legal-tender cases, decided that it would not be money.

MR. BRUMM.—I beg the gentleman's pardon; that question was not presented at that time. I say the Government has a right to make this a dollar, and it will be a dollar, if the Government so declares, regardless of its intrinsic value.

MR. HAZELTON.—Well, now, again on that same point, if the Government says this seat is a dollar, according to that construction it will be a dollar, won't it?

MR. BRUMM.—It would be a dollar, so far as it goes, but it could not be utilized.

MR. HAZELTON.—The Constitution only mentions gold and silver. It does not mention seats or old boots.

MR. BRUMM.—I am aware of that; nor shad. [Laughter.]

The gentleman from Ohio [Mr. Butterworth] said he wants a dollar that is an honest dollar, that has a hundred cents to the dollar. Will the gentleman, or will anybody else, a friend of his, show me a dollar that has not a hundred cents? Did you ever see any? Did you ever know a dollar that had not a hundred cents in it and was not worth a dollar? When I ask you what is a dollar, what do you tell me? If you ask me, I say it is a hundred cents, or a unit fixed by the Government by which you may measure value. That is all you can say. You may make this dollar of gold, or part gold, and can put a certain kind and quantity of gold in it. And so you may of silver, of nickel, of copper, or of paper. That is all there is in that. The constitutional right of the Government is to coin money and regulate the value thereof, and to save itself, and to do all that is necessary and incident to the exercise of any sovereign power.

Now, then, as to seats and old boots, and shad. I have heard that thing spoken of before. They say, suppose you take a block of wood, and the Government puts its stamp on it and says, "This is a shad," and you throw it into the Potomac and a fisherman down the river fishes it up, and, when he looks, he reads, "by the authority of the United States this is a shad"; then says "but I do not believe anything of the kind; I would not want to eat it, and, of course, it is not a shad."

Let me illustrate. These questions are asked by the money changers, just as the tempter asked Jesus Christ when he said, "To whom shall we pay tribute?" Christ said, "Show me your token, your tribute money." The tempter showed him a token, a penny token, I believe. Christ said, "Whose superscription is that?" The tempter said, "Cæsar's superscription." Christ said, "Render unto Cæsar that which is Cæsar's and unto God that which is God's." And so I say to my friend, when you talk of the coining of money, it is a function of Cæsar, of the Government; therefore render unto that Government, that Cæsar, that which is Cæsar's. When you talk of making shad, that is a function of the Deity, and therefore render unto God that which is God's. When you talk of seats, boots, etc., they are functions of individuals; therefore render to the carpenter and shoemaker their functions. Do not attempt to rob God Almighty and the poor carpenter and shoemaker of their proper functions, simply for the purpose of justifying your attempt at robbing the Government of one of its most sacred functions.

The only reason that I can imagine why bankers oppose such a proposition as mine is that they are determined to have either national-bank notes or force us back into the old wild-cat State-bank notes, and for that reason will not allow us to issue any more legal-tender treasury notes. Yet I submit that unless some substitute be provided we cannot escape a contraction of the currency, which must necessarily bring about another crisis very soon; hence the only question is, shall that substitute be the pure legal-tender greenback or shall it be the thirty-eight species of State-bank vermin to poison our issue, or shall it be the Democratic mongrel treasury note, not a legal tender, as contemplated by the Bland-Buckner substitutes? And here let me say that I would rather vote for the Crapo bill a thousand times than vote for this Democratic wolf in sheep's clothing. Though the Crapo bill makes us bear the ills we have, the Buckner-Bland frauds drive us to others we know not of. By the Crapo bill we are at a stand-still; by the others we drift back to the State wild-cat system, and rivet it with multiplied horrors more firmly than ever upon our body-politic. Sir, you issue treasury notes now not a legal tender; you deny by implication the right of the Government to issue a full legal tender in time of peace; and thus you force the final withdrawal of the greenback, and substitute for it your half-breed apology. Then

you throw yourself, soul and body, into the clutches of bankers, money-changers, and monopolists, and allow them to repudiate your issue by refusing to receive them in payment of commercial paper or any other debt, and by declaring that they are not current funds force them below par. And thus you make them repugnant to the people, and create a clamor against any national issue of money; and when the people are in that temper we will again fall an easy prey to the demands of the money-sharks for the restoration of State banks. Thus you cheat the people by making them believe that you are Simon Pure Greenbackers, and by diverting their attention from the true doctrine you become our most dangerous enemies.

In fighting a righteous cause it is an easy thing to subdue an open enemy, for then we can give blow for blow, but it is hard to fight guerilla skulkers and dodgers who steal into our camp under the guise of friendship and attempt to cut the legal-tender heart out of us; and then because we will not tamely submit to their butchery, and allow them to sail under false colors, they denounce us and say they are better Greenbackers than we are, and by thus robbing the livery of Greenbackism to serve the Democracy they put us on the defensive, and compel us to combat all the ridiculous heresies preached by these hypocrites.

Gold, silver, bank notes, and Democratic mongrels may do for financial dress parade, but in the heat and brunt of battle, and in every crisis, you must resort to the nation's credit. The bankers always urge the necessity of their assistance in time of peace and prosperity, but leave the nation to its fate in time of war. "A friend in need is a friend indeed." The money that could bear the terrible strain of the rebellion, spurned, mutilated, and crushed as it was by Wall Street, will always be strong enough to resist every shock or crisis in peace. Even now they are the support of the national-bank note. Wall Street and my friend Butterworth agree that during the war legal tenders were constitutional, that is, the legal-tender clause is only a war measure. But why? Because then Wall Street & Co. shrank and, coward-like, refused their aid. When this nation was struck by the leprosy of rebellion, we were too loathsome to be treated by these doctors of finance. When England and our other very friendly neighbors across the pond left us to our fate, and joined the enemy, these professors of monetary *materia medica* were the first to desert from our camp with their physic. When the martyred Lincoln called for seventy-five thousand men and then for three hundred thousand more,

the youth and bloom of our country promptly responded with the best blood of our land. But when he called for the money to pay them to keep their wives and little ones from starving at home these currency scientists could make no sacrifice for such a holy cause. When defeat followed disaster foreign intervention was threatened, our armies driven back, our soldiers slaughtered by the thousands, and the darkest cloud of rebellion hung over us, there was no succor from Wall Street. When the loyal heart was bursting with anguish, its gaunt arm extended, begging for help, the mighty North with all its powers and resources lying prostrate at the feet of Wall Street, naked, hungry, sick, and sore, these frozen blood physicians refused all nourishment, not even encouragement or honest medical advice. They had nothing to offer but second-hand porous-plasters in shape of wild-cat bank bills. No sooner did the patient convalesce under the nourishment of the greenback when this ungrateful and unblushing quack again intrudes himself upon our forgetful and forgiving nation, and acknowledges that, while we are sick, weak, and in great distress, the best thing to strengthen and cure us is that greenback which produced a good and healthy circulation, and that during the war we were right in using the national legal-tender panacea, for then it seemed to agree with our constitution, and really saved our life and made us the greatest nation of the earth. But now that we are so strong and vigorous they don't think that our constitution will bear any more of this national legal-tender nourishment, that is, it is not good to be too healthy; our constitution requires that in time of peace we should have some financial poison to stagnate our circulation. Then you know we will be so fashionable, and like our royal English neighbors we can get an occasional financial fit or spasm, and sometimes faint away and get downright sick. Then these financial mountebanks will take the best care of us, for they are so well posted in the anatomy of finance, and the physiology of political economy, that they alone are fit to take charge of our system, especially our circulation, as they still believe in the old practice of phlebotomy, and therefore they will draw our blood until our commercial heart almost ceases to beat, when they must again resort to the greenback nourishment, even in time of peace, as they did during the financial plague of 1873.

Joseph H. Burrows [Mo.], a "Greenbacker," opposed the bill. His conclusion was as follows:

Gentlemen who profess to be anti-monopolists, who can see the evils of railway monopoly, of gas monopoly, of water monopoly, of shipping or manufacturing monopolies, shut their eyes at the command of the banker who exacts tribute from them under guise of doing them the favor to shave their notes or discount their paper credit, and obediently refuse to see the size or iniquitous character of the master monopoly of them all, the parent monopoly of all the rest, that of the money or currency monopoly of these national banks.

How dare you pass this bill? When its indefensible provisions, its ridiculous subserviency to the power of the "reserve fund" and the "other undivided profits" are exposed before your constituents, as they surely will be; when the appeal is taken from your action here to the people whom you by this bill propose to keep enslaved to the money-kings; when the faithful Greenbackers go to the hustings to expose to the people the full extent of this crime against their rights and best interests, as we surely will do; when, finally, want, oppression, monopoly, and enlightened public opinion combine to bring to justice or to scourge with stripes the men who chose to obey the money-kings rather than the people, you who vote for this bill will be praying for the mountains to fall on you and the waves of a political oblivion to hide you forever.

Upon no ground can the passage of this bill be defended with success. For no valid reason can a vote be asked for it.

It is one of the most wicked, defenseless, inexcusable, flagrant cases of a popular swindle that ever came before Congress, not excepting the land-grant, Crédit Mobilier, granite contract, river and harbor, whisky bill, or other swindles that have disgraced the Congressional legislation of the past or threaten it at the present moment. Here and now gentlemen must make their record and choose their fate. They know whether they will serve the people, who are opposed to this bill and to the national banking system, or whether they will obey the commands of the Shylock Radicals and Bourbon Democrats who conspire to pass this measure. The crisis has come, and the old dodge of Bourbons and Radicals talking against the national-bank swindle in their districts to get votes and voting with the political harlots who think they conceal their acts from their distant constituents can be played no longer with any hope of success.

In conclusion, I ask, in all candor and seriousness, why should we, how can we, and how dare we pass such a bill as this? Let the bank charters expire. Banking will not cease.

Over two-thirds of the banks and banking of the country is already done without these bank charters. Let the charters expire, and put all the banks on a level. Let the charters expire, and put the Government again in sole and exclusive possession of its rights. Let the charters expire, and put the vast revenue accumulations in the bank vaults into trade, commerce, business, and productive enterprises. Let the charters expire, and behold "the best banking system the world ever saw" thereby superseded by the best currency and most equitable financial system that man has ever devised. Let the charters expire, and forbid with the spirit of Andrew Jackson the rechartering of banks by the Government or by any authority which shall claim the right to empower them to issue currency! Let the charters expire, and the end of monopoly will be in full view! Let the charters expire, and let the people live freed from the national-bank incubus that now assumes to be their master.

Could we have a financial Peter the Hermit to thunder over the land his anathemas, and to preach a new crusade against these banks, his cry at this moment would be: The national banks must go! Let the charters expire!

Mr. Hardenbergh replied to the "Greenbackers."

Seven years ago I took my seat and with uplifted hand swore to support the Constitution of the United States and the laws made in accordance therewith. Since then my constituents have seen proper to retain me in the position I have occupied; and I come to it with a spirit to discharge simply what I believe to be its duties as a matter of right to my people, as well as in a spirit of justice and fairness to all, and in opposition to that miserable, wretched spirit of communism and socialism now extending itself throughout the land, which threatens capital in whatever shape or whatever amount or however it be invested with the most dire and dreadful consequences.

Why, sir, it was but two days ago, in my morning mail, came a letter signed by generous-hearted Peter Cooper, of New York, a man ninety-two years of age, a man who has been known, honored, and trusted by the American people; whose whole life has been one of benevolence, piety, and justice, but who in his declining years, when the shadows of the next world are gathering thick around him, and when his mind cannot be in the course of nature as clear and bright and strong as it was, indorses doctrines the most unwise in our financial history.

Enclosed with the letter was a pamphlet. Read it, representatives of the people, and you will see that, instead of strikes against labor, suggestions are made to men to save three months of their wages to buy Gatling-guns and, with three months of provisions, to crush out monopolies of whatever kind. And this, Mr. Speaker, in a representative government of the American people. Crush where you can monopolied power, but let it be done by proper process of law. Why, sir, what can there be behind all this crusade upon the national banks? Men are tender in their utterances about it as if they were afraid to speak their minds. I believe in educating the people and elevating them to a full knowledge of these great questions rather than pander to sentiments born of hasty and unreasoning prejudice. [Applause.] I have been advised by letters, time and often, to be careful of my public political aspirations as to what I may say upon the national banking system lest it may thwart them all. Sir, I will accept all the responsibility and will in face of all such opposition stand by what I conceive to be the principles of justice and right. [Applause.]

Now, sir, I have thought that in this war which has been waged against this national banking system there were other interests behind it. Can you conceive that a system that has been acceptable for twenty years to the American people should all of a sudden, within the last six months, especially since Congress has been in session, be found so imperfect that we have been called upon by a pressing public demand not only to denounce, but to degrade and crush it, and to refuse to extend their charters, merely because the system is in the interest of monopoly? There must be something else behind all this. The movement is not an honest one. It may be the tariff; it may be railroad monopolies; but there is something behind it. It is not a spontaneous movement. It has not the sanction of the American people, and never can and never will have this sanction.

You and I have been in our brief lifetime witnesses of great events in American history. We have seen how the swelling tide of public opinion has risen and surged from one end of the Republic to the other. We remember the days of Know-nothingism, when a man was compelled to announce where his great-grandfather was born, and when the tattered remnants of a political piety were flaunted upon the cross of an insulted Saviour. That was considered then as American patriotism, but buried and damned to-day and forever, as it will be by any republic on earth which seeks to create distinctions between its

citizens or refuses to extend to the humblest citizen the broad shield of its common protection.

What next? Then came the mighty exigencies of war. What carried us through that war? It was not the greenbacks. My friend from Pennsylvania [Mr. Brumm] announces the greenback as the redeemer, the great redeemer of his country. Why, sir, the redeemer that I acknowledge is always at par, and can save you under any circumstances; but the redeemer of my friend rose and fell in its redemption power, and you never can tell whether you are saved or lost. [Laughter.]

A national bank is not a monopoly. By a law that was passed some few years ago the national banking act was made general; any seven citizens accumulating a capital of $50,000 could organize a national bank. All the monopoly features of it were taken away.

Capital is timid; it does not dare to defy public opinion; it must do what is right; it must conform to the action of Congress. The national banks must obey the national banking law. They must keep their reserves as required by law; they must pay their taxes.

Now, gentlemen, take one course of the two; refuse to extend these charters and divide this reserve, force contraction within one year of $128,000,000, tell the people you have done it, and, when hungry mouths and vacant hands come to you and ask you why, tell them behind it there is some railroad monopoly scare that forced you to make a war on the national banks.

No, gentlemen, you have high, you have awful, responsible duties to discharge. Do it not in fear of communism, not in fear of socialism, but do it as the representatives of Christian America which God gave to the nation for the salvation of a world. Then we shall agree in harmony in our actions here. Then we may go forth to the people feeling our duties are discharged, and it will be "a grander sight than fleets of mightiest admirals seen beneath the lifted clouds of battle; grander by far than the serried tramp of armed men marching by tens of thousands to the music of an unjust glory." [Applause.]

The bill was passed on May 19 by a vote of 125 to 67. After an extended discussion in the Senate it was passed with amendments on June 22 by a vote of 34 to 13. A joint conference was held, and an agreement reached, which was ratified by both Chambers on July 11. President Arthur approved the bill on July 18, 1882.

CHAPTER XII

Gold or Greenbacks?

[PAYMENT OF BOND INTEREST]

Debate in the House: in Favor of Gold, James G. Blaine [Me.]; in Favor of Greenbacks, Gen. Benjamin F. Butler [Mass.].

NEXT to reconstruction the problem of the currency was most discussed during Johnson's Administration. On this question a new alignment of Congress formed, in which the old party divisions of Republican and Democrat, Administration and Opposition, were broken. On the one side were those who supported national banks, insisted on payment in coin of interest on all Government bonds, and wished to retire treasury notes ("greenbacks") from circulation; on the other were those who wished to make treasury notes the main element of the currency, and to pay these as interest upon those bonds which did not specifically call for such payment in coin.

Men who had been bitter opponents upon reconstruction, such as Representatives Thaddeus Stevens [Pa.] and Thomas E. Noell [Mo.], joined together to uphold "greenback" currency. Outside of Congress ex-Senator George H. Pendleton [O.], and inside of it General Benjamin F. Butler [Mass.], a new Representative, were the leaders in opposition to the banking interests. James G. Blaine [Me.] was the protagonist of the bank supporters in the House.

Blaine and Butler met on November 26, 1867, in a culminating debate on the question of the kind of money to be paid as interest on Government bonds.

Payment of Bond Interest—In Gold or "Greenbacks"?

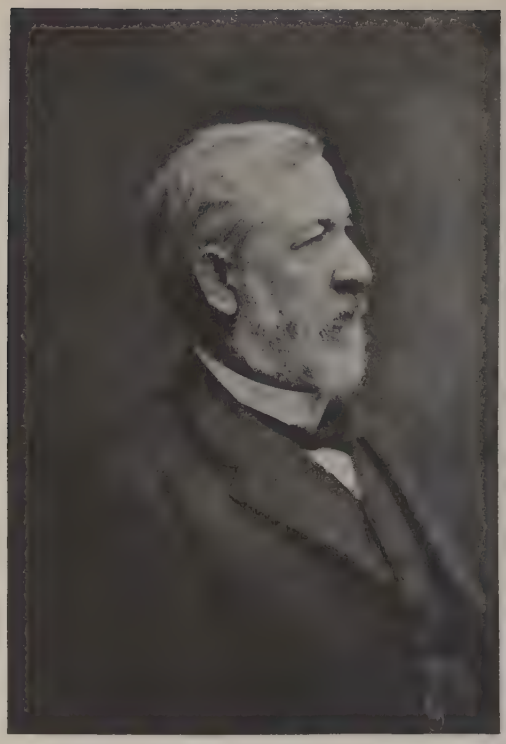
House of Representatives, November 26, 1867.

Mr. Blaine.—Within the past few months, Mr. Chairman, some erroneous and mischievous views have been put forward in regard to the nature of the public obligation imposed by the debt of the United States. Without stopping to notice the lesser lights of the new doctrine, and not caring to analyze the various forms of repudiation suggested from irresponsible sources throughout the country, I propose to review, as briefly as may be, the position contemporaneously assumed by two able and distinguished gentlemen—the one from the West, the other from the East—the one the late candidate of the Democratic party for the Vice-Presidency—(George Pendleton, of Ohio)—the other a prominent member of this House from one of the strongest Republican districts of the State of Massachusetts [Mr. Butler].

The position of these gentlemen I understand to be simply this: *that the principal of the United States bonds, known as the five-twenties, may be fairly and legally paid in paper currency by the Government after the expiration of five years from the date of issue.*

A brief review of the origin of the five-twenty bonds will demonstrate, I think, that this position is in contravention of the honor and good faith of the national Government; that it is hostile to the spirit and the letter of the law; that it contemptuously ignores the common understanding between borrower and lender at the time the loan was negotiated; and that finally, even if such mode of payment were honorable and practicable, it would prove disastrous to the financial interests of the Government and the general prosperity of the country.

The issue of the five-twenty bonds was originally authorized by the act of February 25, 1862, which provided for the large amount of $500,000,000. It was this series which was sold so successfully by Jay Cooke & Co. in 1863, and of which so great a proportion was subsequently purchased by foreign capitalists. It will be borne in mind that up to that time in all the loan bills passed by Congress not one word had ever been said in regard to gold payment either of bond or coupon; and yet it will be equally borne in mind that gold payment, both of the principal and interest of the public debt, had been the invariable rule from the foundation of the Government. No instance to the contrary can be found in our history. In the pithy language of



James G. Blaine

Nathaniel Macon, "our Government was a hard-money Government, founded by hard-money men, and its debts were hard-money debts."

And it will be still further borne in mind that when the bill authorizing the original issue of five-twenties was under discussion in Congress no man of any party, either in the Senate or the House, ever intimated that those bonds were to be paid in anything else than gold or silver. The issue of legal-tender notes of contemporaneous origin was regarded as a temporary expedient, forced upon us by the cruel necessities and demands of war, and it was universally conceded that the specie basis was to be resumed long before the bonds should mature for payment. And in order that the public creditor might have the amplest assurance *of the payment of both principal and interest in coin* it was specially enacted that all duties on imports should be paid in coin, and the amount thus raised was distinctly pledged, not only to the payment of the interest in coin, but to the formation of a sinking fund for the ultimate redemption of the principal in coin. This provision is so important that I quoted entire. After providing that the duties shall be paid in coin, the act devotes that coin to the following purposes:

"First. To the payment in coin of the interest on the bonds of the United States.

"Second. To the purchase or payment of one per cent. of the entire debt of the United States, to be made within each fiscal year after the 1st day of July, 1862, which is to be set apart as a sinking fund, and the interest of which shall be in like manner applied to the purchase or payment of the public debt, as the Secretary of the Treasury shall from time to time direct.

"Third. The residue thereof shall be paid into the Treasury of the United States."

Considerable carping and criticism have been expended on the second clause of this provision, mainly by those who seem desirous of wresting and distorting its plain and obvious meaning. Brushing aside all fine-spun construction and cunning fallacy, it is quite manifest that the sinking fund herein authorized was primarily to be formed from gold, and that it was only to be invested and reinvested in securities whose interest was equally pledged and guaranteed in gold; that this process was not to be confined to any specific number of years, but was limited only by the amount and the duration of the debt which was ultimately to be redeemed by the sinking fund thus constituted. The sinking fund was thus to receive an annual incre-

ment *in gold* amounting to the one-hundredth part of the entire debt of the Government; and this increment was to be invested only in securities which would yield *gold* interest for the further increment of the fund. It would be difficult to conceive how the language of an enactment could more distinctly recognize and provide for the ultimate coin payment of the entire bonded debt of the nation. And, instead of the Government having the right at this late day to change its gold obligation into one of paper, it seems to me that the public creditors could with far more consistency allege that the Government had not fully kept its faith with them in failing, as it has, to provide the sinking fund which was thus guaranteed at the outset as one of the special securities of the loan.

But we do not rest merely on the after construction of a statute to prove that the principal of the five-twenties is payable in coin. The declarations in Congress at the time the measure was under consideration were numerous, direct, and specific. Indeed, no other possible mode of payment was even hinted at, and Mr. Stevens, as chairman of the Ways and Means, was emphatic and repeated in his assertions to the effect that the bonds were *redeemable in gold*. He stated this fact no less than three times in his speech of February 6, 1862, giving it all the prominence and emphasis that iteration and reiteration could impart. He spoke of the "redemption in gold in twenty years" as one of the special inducements for capitalists to take the loan, and he gave, in every form that language could assume, the sanction of his influential position, and still more influential name, to the maintenance of the gold standard in the payment of the bonds.

It may astonish even the gentleman from Pennsylvania himself to be reminded that within less than three years from the date of these declarations he asserted on this floor—referring to the five-twenty bonds—that *"it is just as clear as anything is clear that the interest is payable in gold, but the principal in lawful money."* He made this startling statement in answer to a question addressed to him by my honorable friend from Ohio [Rufus P. Spalding]. Should this scheme of repudiation ever succeed it is but just to give the gentleman from Pennsylvania the honor of first proposing it. He announced it on this floor while yet the gentleman from Massachusetts was doing honorable service on the tented field, and while Mr. Pendleton was still adhering to those hard-money theories of which he was a conspicuous and eloquent defender during his service in this House.

While so many gentlemen in both branches of Congress were repeating that these bonds were redeemable in gold, it is a very significant circumstance, as already intimated, that no one ventured the opposite opinion. The universality of the understanding at that time is that which renders a different construction now so reprehensible. Mr. Pendleton was present in his seat during the whole discussion of the measure, and he was an active and frequent participant therein. Then was his time to have enunciated his scheme of greenback payment if he ever intended it in good faith. As a gentleman of candor, however, I am sure he will confess that he never dreamed of such an idea till long after the bonds were purchased by the people, and possibly not until some prospect of party vantage lured him to the adoption of a theory which is equally at war with the letter of the law and with sound principles of finance.

After the bill became a law Mr. Chase, the Secretary of the Treasury, proceeded to place the loan formally on the market, and following the uniform previous practice of the Government, and especially adopting the language used by Mr. Stevens, and other gentlemen in both branches of Congress, he officially proclaimed through the loan agents of the Government that the five-twenty bonds were *"a six per cent. loan, the interest and principal payable in coin."* And it was on this basis, with this understanding, with this public proclamation, that the people were asked to subscribe to the loan. They had the assurance of an unbroken practice on the part of the Government, rendered still more significant by the provision for a sinking fund in coin; they had the general assurance of both branches of Congress, especially expressed through the appropriate channels of the chairman of Finance in the Senate and the chairman of Ways and Means in the House, and further and finally enforced by a distinct declaration to that effect by the public advertisement proposing the loan to the people, issued by the authority and under the direction of the Secretary of the Treasury. If anything could constitute an honorable contract between borrower and lender—between Government and people—then was it a contract that the five-twenty bonds should be redeemed in coin.

The next loan bill passed by Congress was that of March 3, 1863, authorizing the borrowing of $900,000,000. This is commonly known as the ten-forty act, and it contains the special provision that both principal and interest shall be payable in coin. But this provision was never inserted by way of discrimination against the five-twenties, implying that they were

to be paid in paper currency. The origin of the provision palpably discredits any such inference. It was moved as an amendment by Mr. Benjamin F. Thomas, of Massachusetts, and it was moved to meet and repel the first covert insinuation that any bond of the United States was redeemable in anything else than coin. The chairman of Ways and Means, in apparent forgetfulness of his declaration the preceding year, had for the first time intimated that the principal of United States bonds was payable in paper money, and the amendment of Mr. Thomas, as the discussion reported in the *Globe* clearly discloses, was intended as a sharp protest against this heresy of the gentleman from Pennsylvania, and as such it was adopted by the House by a majority so overwhelming that its opponents did not call for a division.

In this connection I desire the special attention of the House to one fact of conclusive import, and it is this: at the time this ten-forty loan bill was passed, March 3, 1863, only $25,000,000 of the five-twenty loan, authorized the year before, had been disposed of. It was in the succeeding summer and autumn of 1863, especially after the triumph of the Union arms at Vicksburg and Gettysburg, that those marvelous sales of $500,000,000 were effected through the Government agency of Jay Cooke & Co. And yet the gentleman from Massachusetts would have us believe that the people subscribed for a loan of $500,000,000 that was payable in five years in paper currency, when another loan, for a larger amount, to run forty years, absolutely payable in gold, was already authorized and about to be put on the market. Such a conclusion cannot be reconciled even with the common sanity, to say nothing of the proverbial shrewdness, of those who invested their money in the five-twenty loan. Why, sir, every one sees, every one knows, that not one dollar of the five-twenty loan could have been disposed of on the understanding that the bonds were redeemable in currency, when another loan for a longer and more favorable period, possibly at the same rate of interest, for the bill so allowed, and absolutely redeemable in gold, was already authorized by Congress, and immediately to be offered to the public.

The next loan bill in the order of time was the act of March 3, 1864, which was merely supplementary to the ten-forty bill, whose history I have just reviewed. It covered the amount of $200,000,000, and, like the bill to which it formed a supplement, it provided for both interest and principal to be paid in coin. Under this bill more than one hundred and seventy-five million dollars were negotiated, partly in ten-forties, and partly in five-

twenties; by far the greater part in the former. But, as some five-twenties were negotiated under it, the gentleman from Massachusetts, even on the line of logic which he has sought to travel, will be compelled to acknowledge that they were payable in coin, and hence, according to his theory, some of the five-twenties are redeemable in coin and some in paper—a distinction which has never yet been proclaimed, and the equity of which would hardly be apparent to the holders of the same description of bonds—precisely identical in phrase, and differing only in the subordinate and immaterial circumstance of date.

The last loan bill to which I need specially refer is that of June 30, 1864, under the provisions of which the five-twenties bearing that date were issued. The seven-thirties, authorized by the same act, as well as by the subsequent acts of January 28 and March 3, 1865, were convertible into five-twenties of the same tenor and description with those whose issue was directly authorized; so that in reviewing the history of the loan bill of June 30, 1864, I shall in effect close the narrative of congressional proceedings in regard to five-twenty bonds. And the history of that bill shall be brief. It was discussed in its various provisions very elaborately in both branches of Congress. As reported from the Ways and Means Committee it was worded like all previous bonds, promising to pay so many dollars to the holder, without specifying that they were to be anything else than gold dollars, in which United States bonds had always been paid. Toward the close of the discussion James Brooks, of New York, then, as now, a member of this House, moved to insert an amendment providing especially that the bonds should be *"payable in coin."* Mr. Brooks was answered by Samuel Hooper, of Massachusetts, on behalf of the Ways and Means Committee, as follows:

"The bill of last year, the $900,000,000 bill, contained these words, but it was not deemed necessary or considered expedient to insert them in this bill. A letter from the Secretary of the Treasury gives his views upon this point:

"TREASURY DEPARTMENT, May 18, 1864.

"It has been the constant usage of the department to redeem all coupon and registered bonds, forming part of the funded or permanent debt of the United States, in coin, and this usage has not been deviated from during my administration of its affairs.

"All the treasury notes and other obligations forming part of the temporary loan are payable, and will be redeemed, in lawful money; that is, in United States notes, until after the resumption of specie payment, when they also will doubtless be redeemed in coin or equivalent notes.

"The five-twenty sixes, payable twenty years from date, though redeem-

able after five years, are considered as belonging to the funded or permanent debt, and so also are the twenty years sixes, into which the three years seven-thirty notes are convertible. These bonds, therefore, according to the usage of the Government, are payable in coin.

"The three years seven-thirty treasury notes are part of the temporary loan, and will be paid in United States notes, unless holders prefer conversion to payment.

"S. P. CHASE, *Secretary.*"

Mr. Brooks, apparently satisfied with this statement, withdrew his amendment, regarding the point as conclusively settled, I suppose, not only by the uniform practice of the Government, but by the special declaration of the Secretary of the Treasury, who immediately afterward proceeded on the basis of that letter to put the bonds on the market.

We thus find that the voice of Congress has been uniform and consistent in support of the principle of paying the bonded debt in gold. No vote in Congress, even implying the opposite theory, has ever been given; even the weighty influence and conceded ability of the distinguished gentleman from Pennsylvania failing to carry with him any support whatever when he made his surprising and unprecedented change on this question. But the public creditors did not rely solely on the declarations of leading men in Congress in regard to gold payment, nor did they rest wholly on the past practice and the good faith of the Government. They had, in addition to both these strong grounds of confidence and assurance, the more direct and implicit guaranty of the treasury department, the authorized agent of the Government, speaking *ex cathedra*, with the knowledge and assent of Congress.

I have already quoted Secretary Chase's significant declarations in his letters and his public proposals for loans, and I have now to quote one of his equally significant acts. At the close of 1862 the twenty-year loan of 1842, amounting to nearly three million dollars, fell due. Nothing was said in that loan about coin payment, and thus a grand opportunity was afforded to test the theory of paper payment. Circumstances all conspired to favor such a policy if it could be honorably adopted. Gold was at a high premium, and the Government was passing through the darkest and most doubtful hours of the whole struggle. Could there have been even a decent pretext to pay the debt in paper currency the temptation was surely great enough to resort to it, if not fully to justify it. But in the face of all the adverse circumstances; with gold very high and daily rising; with expenses enormous and daily increasing; with

resources already embarrassed and daily growing more so, and with a military situation rendered well nigh desperate by months of almost unbroken disaster, Secretary Chase decided that the faith of the Government demanded that its funded debt, falling due no matter when and owned by no matter whom, must be paid in coin. *And it was paid in coin;* and no voice but the voice of approval was raised in either branch of Congress. The course of Secretary Chase was not only honorable to himself and the country, but it was in the highest degree wise merely from the standpoint of worldly wisdom; for it created such a profound confidence in the good faith of our Government that it aided us incalculably in the negotiation of all our great loans for the war. When the Government paid its debt to the uttermost farthing at such a time capitalists at once argued that there never could come a crisis when any evasion or denial of public obligation would be resorted to. It has been reserved for the gentleman from Massachusetts, and the gentleman from Ohio, and the gentleman from Pennsylvania, jointly and severally, to propose that our Government should adopt a policy in the calm sunshine and prosperity of peace which it scorned to resort to in the terrible storms and dark adversities of war.

The course of Secretary Chase in guaranteeing gold payment on all bonds of the United States was followed, indorsed, and repeated by his successors, Fessenden and McCulloch.

In view of the uniform declarations of the treasury department, made through official reports, through public proposals for loans, and through personal letters of assurance, all guaranteeing coin payment of the five-twenty bonds, I submit that the Government is bound thereto even if there were no other obligation expressed or implied. These official and unofficial promulgations from the treasury department were made with the full knowledge of Congress, and without the slightest expression of dissent on the part of Congress. It is too late for Congress to declare now that the Government is not bound by the stipulations which the treasury department proclaimed to all lenders of money—proclaimed with the full knowledge and the full assent of Congress. Had Congress not believed or intended that the five-twenty bonds were to be paid in coin the Secretary should not have been allowed with its evident assent to so advertise; and for Congress, after this permission and warrant so significantly given, to step forward at this late day and declare itself not bound by the conditions published by the Secretary is simply to place the United States Government in the position of a man playing a "confidence game" of the meanest

description, in which the treasury department and Congress are the confederate knaves, and the whole mass of bondholders the unfortunate victims.

But now, Mr. Speaker, suppose, for the sake of argument, we admit that the Government may fairly and legally pay the five-twenty bonds in paper currency, what then? I ask the gentleman from Massachusetts to tell us, what then? It is easy, I know, to issue just as many greenbacks as will pay the maturing bonds, regardless of the effect upon the inflation of prices and the general derangement of business. Five hundred millions of the five-twenties are now payable, and according to the easy mode suggested all we have to do is to set the printing presses in motion, and "so long as rags and lampblack hold out" we need have no embarrassment about paying our national debt. But the ugly question recurs, what are you going to do with the greenbacks thus put afloat? Five hundred millions this year, and eleven hundred millions more on this theory of payment by the year 1872, so that within the period of four or five years we would only have added to our paper money the trifling inflation of $1,600,000,000. We should all have splendid times doubtless! Wheat under the new dispensation ought to bring twenty dollars a bushel, and boots would not be worth more than $200 a pair, and the farmers of our country would be as well off as Santa Anna's rabble of Mexican soldiers, who were allowed ten dollars a day for their services and charged eleven for their rations and clothing. This $1,600,000,000 of greenbacks, added to the amount already issued, would give us some $2,300,000,000 paper money, and I suppose the theory of the new doctrine would leave this vast mass permanently in circulation, for it would hardly be consistent to advocate the redemption of the greenbacks in gold after having repudiated and forsworn our obligation on the bonds.

But if it be intended to redeem the legal tenders in gold, what will have been the net gain to the Government in the whole transaction? If any gentleman will tell me, I shall be glad to learn how it will be easier to pay $1,600,000,000 in gold in the redemption of greenbacks than to pay the same amount in the redemption of five-twenty bonds? The policy advocated, it seems to me, has only two alternatives: the one to ruinously inflate the currency and leave it so reckless of results; the other to ruinously inflate the currency at the outset, only to render redemption in gold far more burdensome in the end.

I know it may be claimed that the means necessary to redeem the five-twenties in greenbacks may be realized by a new

issue of currency bonds to be placed on the market. Of results in the future every gentleman has the right to his own opinion, and all may alike indulge in speculation. But it does seem to me that the Government would be placed in an awkward attitude when it should enter the money market to negotiate a loan the avails of which were to be devoted to breaking faith with those who already held its most sacred obligations! What possible security would the new class of creditors have that, when *their* debts matured, some new form of evasion would not be resorted to by which they in turn would be deprived of their just and honest dues? *Falsus in uno, falsus in omnibus*[1] would supply the ready form of protest against trusting a Government with a new loan when it had just ignored its plain obligation on an old one.

Payment of the five-twenty bonds in paper currency involves, therefore, a limitless issue of greenbacks, with attendant evils of gigantic magnitude and far-reaching consequence. And the worst evil of the whole is the delusion which calls this a payment at all. It is no payment in any proper sense, for it neither gives the creditor what he is entitled to, nor does it release the debtor from subsequent responsibility. You may get rid of the five-twenty by issuing the greenback, but how will you get rid of the greenback except by paying gold? The only escape from ultimate payment of gold is to declare that as a nation we permanently and finally renounce all idea of ever attaining a specie standard; that we launch ourselves upon an ocean of paper money, without shore or sounding, with no rudder to guide us and no compass to steer by. And this is precisely what is involved if we adopt this mischievous suggestion of "a new way to pay old debts." Our fate in attempting such a course may be easily read in the history of similar follies both in Europe and in our own country. Prostration of credit, financial disaster, widespread distress among all classes of the community, would form the closing scenes in our career of gratuitous folly and national dishonor. And from such an abyss of sorrow and humiliation it would be a painful and toilsome effort to regain as sound a position in our finances as we are asked voluntarily to abandon to-day.

The remedy for our financial troubles, Mr. Speaker, will not be found in a superabundance of depreciated paper currency. It lies in the opposite direction; and the sooner the nation finds itself on a specie basis the sooner will the public treasury be freed from embarrassment and private business relieved from

[1] "False in one thing, false in all things."

discouragement. Instead, therefore, of entering upon a reckless and boundless issue of legal tenders, with their consequent depression, if not destruction, of value, let us set resolutely to work and make those already in circulation equal to so many gold dollars. When that result shall be accomplished we can proceed to pay our five-twenties either in coin or paper, for the one would be the equivalent of the other. But to proceed deliberately on a scheme of depreciating our legal tenders, and then forcing the holders of Government bonds to accept them in payment, would resemble in point of honor the policy of a merchant who, with abundant resources and prosperous business, should devise a plan for throwing discredit on his own notes with the view of having them bought up at a discount ruinous to the holders and immensely profitable to his own knavish pocket. This comparison may faintly illustrate the wrongfulness of the policy, but not its consummate folly; for in the case of the Government, unlike the merchant, the stern necessity would recur of making good in the end, by the payment of hard coin, all the discount that might be gained by the temporary substitution of paper.

Discarding all such schemes as at once unworthy and unprofitable, let us direct our policy steadily, but not rashly, toward the resumption of specie payment. And when we have attained that end—easily attainable at no distant day if the proper policy be pursued—we can all unite on some honorable plan for the redemption of the five-twenty bonds, and the issuing instead thereof a new series of bonds which can be more favorably placed at a lower rate of interest. When we shall have reached the specie basis the value of United States securities will be so high in the money markets of the world that we can command our own terms. We can then call in our five-twenties according to the very letter and spirit of the bond, and adjust a new loan that will be eagerly sought for by capitalists, and will be free from those elements of discontent that in some measure surround the existing funded debt of the country.

As to the particular measures of legislation requisite to hasten the resumption of specie payment gentlemen equally entitled to respect may widely differ; but there is one line of policy conducive thereto on which we all ought to agree, and that is on a serious reduction of the Government expenses and a consequent lightening of the burdens of taxation. The interest-bearing debt of the United States, when permanently funded, will not exceed $2,100,000,000, imposing an annual interest of about $125,000,000. Our other expenses, including

war, navy, the pension list, and the civil list, ought not to exceed $100,000,000; so that if we raise $250,000,000 from customs and internal revenue combined we should have $25,000,000 annual surplus to apply to the reduction of the public debt. But to attain this end we must mend our ways and practice an economy far more consistent and severe than any we have attempted in the past. Our military peace establishment must be reduced one half at least, and our naval appropriations correspondingly curtailed; and innumerable leaks and gaps and loose ends that have so long attended our Government expenditure must be taken up and stopped. If such a policy be pursued by Congress neither the principal of the debt nor the interest of the debt, nor the annual expenses of Government, will be burdensome to the people. We can raise $250,000,000 of revenue on the gold basis, and at the same time have a vast reduction in our taxes. And we can do this without repudiation in any form, either open or covert, avowed or indirect, but with every obligation of the Government fulfilled and discharged in its exact letter and in its generous spirit.

And this, Mr. Speaker, we shall do. Our national honor demands it; our national interest equally demands it. We have vindicated our claim to the highest heroism on a hundred bloody battlefields, and have stopped at no sacrifice of life needful to the maintenance of our national integrity. I am sure that in the peace which our arms have conquered we shall not dishonor ourselves by withholding from any public creditor a dollar that we promised to pay him, nor seek by cunning construction and clever afterthought to evade or escape the full responsibility of our national indebtedness. It will doubtless cost us a vast sum to pay that indebtedness, but it would cost us incalculably more not to pay it!

General Butler.—I hold that, by the letter, by the spirit, and by the justice of the contract, the five-twenties are payable in the lawful money of the United States.

Now, there are three grounds upon which the gentleman from Maine [Mr. Blaine] insists that this is not so. He says, first, by the letter of the law the five-twenties are payable in coin. Let us carefully examine that proposition. Up to the time of the issuing of the five-twenties no loan of the United States had ever been issued payable in anything else than coin. The gentleman says no loan had ever been issued in which anything was said as to what was the currency in which it was payable. Why? Because up to that time there was never any currency known to the Government of the United States other

than coin. Therefore the seven-thirties of 1861 and the 1881 sixes of 1861, with all the debt prior to the war, were, in letter and in spirit, payable in coin. Because Congress in issuing them was dealing with a condition of things and a currency then existing, and therefore the 1881 sixes are payable, according to the fair spirit of the contract, in coin. Therefore I enunciate, as my first proposition, and one that I shall endeavor to enforce on the House and the country, that every dollar of indebtment of the United States which is contracted by the acts of Congress making it payable in coin shall be paid in coin although it takes the last dollar to pay it; but every debt contracted not payable in coin shall be paid in the lawful money of the United States, such as you paid your soldiers with and such as you furnish to your citizens; such as alone is now used as money of the Government, and upon which alone you impress the image and superscription of the Government as a guaranty that it shall hereafter be made good.

Now, then, when the argument is pressed upon me that in the loan bills passed previously to the five-twenty loan nothing was said as to the currency in which the bonds should be paid, I reply that there was but one currency at the time they were passed in which they could be contracted or payable. But that state of things changed on the 25th of February, 1862. The Congress of the United States had to provide means for carrying on the war; accordingly it passed a law, the first section of which provided for $150,000,000 of legal-tender notes, the language of which, as to their validity and effect, is in these words:

"And such notes, herein authorized, shall be receivable in payment of all taxes, internal duties, excises, debts, and demands of every kind, due to the United States, except duties on imports, and for all claims and demands against the United States of every kind whatsoever"—

Except what?

"except for interest upon bonds and notes, which shall be paid in coin; and shall also be lawful money and a legal tender in payment of all debts, public and private, within the United States, except duties on imports and interests as aforesaid."

These are the provisions of the first section of the act thus creating "a lawful money," payable and receivable for every debt, public or private, known to the law or known in the United States, except what? Except interest on the bonds and notes of the United States.

Now, what does the second section provide? It authorized

$500,000,000 of bonds, registered or coupon, payable at the option of the United States in five years, and in twenty years at all events. Payable how? Let me read again, so that I may not be mistaken:

"to an amount not exceeding $500,000,000, payable in twenty years from date, and bearing a rate of six per cent., payable semi-annually."

Not a word is here said as to the money in which these bonds shall be paid, either as to principal or interest. And why? Because the very section preceding had provided that the interest of all notes or bonds of the United States should be paid in coin, and had further enacted another lawful money which should be receivable in payment of all indebtment of the United States whatsoever, except duties on imports, and interest on the public debt. Is not the principal of the debt an indebtment other than interest?

There is the plain letter of the law. I need not discuss this point further. If there is any lawyer who, reading this law without taking into consideration anything except what stands on the statute-book, will tell me that this law enacts that the principal of the five-twenties is payable in coin, then "for him have I offended," and either he is or I am so stupid as not to be worthy of an argument.

But the gentleman does not leave his proposition upon this only. The next ground he puts it on is what this or that Congressman said or omitted to say in his speech as to the currency in which this loan should be paid. And the first evidence of the contract he puts forward is that the honorable member from Pennsylvania [Mr. Stevens]—not now in his seat—did not say, at the time the act was passed, that the principal was payable in currency. Well, the gentleman from Pennsylvania sets forth, in a letter recently written by him as a reason why he did not say it was payable in currency, that he did not think anybody but a fool would think it was not. That is not my language; it is his; that is the ground he puts it on; and when he comes in he and the gentleman from Maine can fight the battle out. I am quite certain that the old man sarcastic will take care of himself when he does get here without any aid from me; and therefore I pass from further consideration of this topic.

But it is said that various speeches were made on the one side and the other, which are cited to interpret this contract. I had supposed that there is no better settled rule of interpretation of either public or municipal law, or of the law of nations,

than that nobody is bound by any portion of the negotiations or any portion of the declarations made either in regard to a treaty or a law prior to the enactment of the law or conclusion of the treaty, because the enactment settles the terms of the whole obligation, and you cannot go to the speech of this member or that member, in case of legislation, to find out what the legislation means, nor can you go to the protocols and negotiations prior to a treaty to find out what the treaty means. You must take it upon the letter, and I have never yet found any man bold enough—until my friend from Maine exhibited a degree of courage much superior to any bravery required to face Minie bullets in the field—bold enough to insist that the letter of the law did not authorize payment of the principal of the five-twenty bonds in lawful money of the United States.

The next class of arguments that the gentleman from Maine puts forward on this question is the proposals in the advertisements of those he terms the authorized agents of the United States who disposed of the loan. Allow me here to say that for contracting a national debt I know no other authorized agent of the nation but the Congress of the United States; I know no broker, whether he is in the treasury office or out of it, that has a right to fix the terms of the national debt for the United States. No man is authorized to pay a dollar of money unless appropriated by the Congress of the United States, and therefore no man can contract a dollar's debt unless authorized directly and distinctly by an act of the Congress of the United States. I agree that Mr. Jay Cooke advertised, after some sort, when endeavoring to sell it, that the principal of this loan was payable in coin; but in the same newspaper you find another of his advertisements, intended also to sell the loan, that "a national debt is a national blessing." Are we bound by contract to that? If, as the gentleman claims, we are bound by advertisements in the one case, we are bound as well in the other; and does my friend insist that Mr. Jay Cooke has bound the country to the proposition that a national debt is a national blessing to anybody except bankers? With that amendment I might agree to the declaration. When I called the attention of the country to this some little time ago Mr. Jay Cooke, for whom I have very high respect, wrote me that I was mistaken; that what he did advertise was that a national debt rightly managed was a national blessing. I am at issue with him upon that. I insist that a national debt managed any how, by anybody—the Angel Gabriel or Jay Cooke or any other body—is not a national blessing. [Laughter.] No management of a national debt can

make it a national blessing. And yet, if we are bound by brokers' advertisements we are bound to the doctrine that it is a national blessing which we must enjoy and bequeath to our posterity forever!

The next evidence which the gentleman from Maine presents in support of his contract to pay the five-twenties in gold is the declarations of Secretaries of the Treasury. Now, no Secretary of the Treasury had a right to make any declarations on this subject which can be binding on the country. The gentleman does not claim that he had; he only says that Congress stood by and saw the Secretary make declarations and did not interfere. Once for all I protest against Congress being bound by what Secretaries do or do not do that Congress does not interfere with. If you once admit that doctrine you will involve Congress in difficulties which it will take a long time and great wisdom to unravel.

But no one of the Secretaries ever has said that the contract is that the principal of this loan is payable in coin; and if there has been disingenuousness on this subject it has not been on our part, but on the part of the Secretaries in their attempts to interpret this law so as to sell the loan. The first thing said about the probability that this debt would be paid in gold was in the answer of Secretary Chase to a letter sent him from abroad—Frankfort, I believe. It was said in that letter—I do not give the words, but the substance—"It is not understood here in Frankfort that these bonds are payable in gold. If it should be so understood they would bring a much higher price." Why was it not so understood? Because a foreign lawyer reading the act would never think of such a thing for a moment. The bonds were selling—for what? For forty cents on the dollar, and that at a time when the Confederate loan was at a premium in Europe.

Now, I will not think so meanly of this country as to believe it could be supposed these bonds were payable in gold, and then were at this discount even in Europe, which was against us. And I will not think so meanly of this nation as to believe that there could have been any question in the minds of the people of Europe as to our being able to pay more than thirty per cent. of our debt in gold if such had been our plain contract and obligation. No, sir; the bankers in Europe of that day were simply betting as to whether we should pay our paper money in gold; they were betting on that proposition when they were buying our bonds at from sixty to seventy per cent. discount. They knew that every other government that had issued paper

money had depreciated it, and the question was whether we, who set out here so differently from other governments, would in the end depreciate our paper money.

This letter was sent over here as a stock-jobbing proposition to Mr. Chase. How did he answer it? Through his assistant secretary. The answer all will remember. "The Government of the United States has always paid all its obligations in gold, and it is to be presumed that it always will." It was an evasive answer—an answer tending to mislead; whether intended so to do I do not know or say.

What was the next act and declaration of a Secretary of the Treasury? Mr. Fessenden is cited. I have a bone to pick with Mr. Fessenden upon this subject. I am very glad he has been brought in here, for I should have felt some delicacy in saying a word about him, as he is a member of the other House, had not his friend from Maine [Mr. Blaine] brought him upon this floor in his capacity of Secretary of the Treasury. I can therefore deal with the Secretary of the Treasury as roughly as I please, without infringing upon the courtesy due to a Senator of the United States. Mr. Fessenden, as Secretary of the Treasury, was called upon to say whether the three-year loan treasury notes, issued in 1861, when there was nothing but gold to pay with, and for which gold was paid by the people to the Government, were payable in coin or in currency. He decided that these gold-bought and gold-contracted notes were payable in currency; and the whole of that issue, put forth at a time when there was nothing but gold as currency, for which the faith of the country was pledged, under the decision of Mr. Fessenden, had to be received by the people (who paid for it in gold) in paper, or they were compelled to convert it into such bonds as the Government chose to give them.

Mr. Blaine.—The decision in regard to the payment of the first series of seven-thirty notes was made on the 18th of May, 1862, by Salmon P. Chase, Secretary of the Treasury, in these words:

"The three-year seven-thirty treasury notes are part of the temporary loan, and will be paid in treasury notes, unless the holders prefer to exchange them," &c.

That was three months before Mr. Fessenden went into the treasury. He found the question *res adjudicata*. The gentleman is all wrong in charging this upon Mr. Fessenden. There is not the remotest foundation for his assertion.

Mr. Butler.—The House will judge whether I was wrong,

without the *dictum* of my friend from Maine [Mr. Blaine]. I did not say that Salmon P. Chase was not guilty of the same thing; I only said that William P. Fessenden was guilty of it; that is the distinction. [Laughter.] If Salmon P. Chase had broken the faith of this Government—if he had said that, although the Government had received gold in the hour of its necessity, immediately after the first battle of Bull Run, the darkest day the Government ever saw, and had pledged gold in return—for then we paid gold to meet all our obligations—if Salmon P. Chase, on the 18th of May, 1864, when called upon to say whether we should pay gold for the gold we had received, broke the faith of the Government, if he was one of those repudiators and scoundrels and knaves we hear of so glibly when we attempt to discuss this question of finance, why did not and why should not Secretary Fessenden overrule him when he became Secretary of the Treasury? If so great a wrong was *res adjudicata*, it was *res* very badly *adjudicata*, and should have been forthwith set right.

My friend does not pretend that Mr. Fessenden altered this; and when we, who believe in maintaining the faith of the nation, but not in oppressing the people with taxation, are attacked on all hands by hard words and strong inferences, and when, to get us down, we are yoked up with everybody who happens to have bad political sentiments, I would ask who was the first repudiator? The gentleman chooses to cite Mr. Chase as the promisor of this bad note. Be it so; I am dealing only with the indorser, William Pitt Fessenden. He indorsed it and acted upon it. By his decision the seven-thirty notes of 1861, issued when there was no other currency, were caused to be paid in greenbacks, and the gold-paying public creditor was obliged, for his gold paid to the Government, either to take his pay in greenbacks or convert his Government notes into bonds; and that whole loan was thus redeemed. And on what ground was this so great a wrong on the public creditors perpetrated? It was said by the Secretary that this three-year seven-thirty gold loan was a temporary loan only. Oh, then, it is right to cheat the temporary creditors of the Government, the hand-to-mouth men, who loan their hard coin for a few days to save the Government; but the long-bond creditors of the Government you must not cheat; you must let them cheat you. Is not that the proposition? Is there any escape from it? Is not that the Maine doctrine of finance, if you please? [Laughter.] My friend here from Maine [Mr. Blaine], following in the footsteps of the Secretary of the Treasury from Maine, holds it to be in the

last degree wrong if we do not pay principal and interest of our debt in gold. He invokes us, in the name of national honor, national faith, and everything else that is sacred, to save the long-bond creditor, who bought our bonds for currency, while the short creditor, who paid for his notes in coin, has lost his gold by the action of the Secretary of the Treasury from Maine. We have had many things good from Maine—among others a "Maine law"—and now we have got Maine finance. I repudiate the last, and I am afraid my State has repudiated the other [Laughter.]

The next authority adduced by the gentleman in support of his contract to pay gold for the five-twenties bonds is Secretary McCulloch. Well, if this House proposes to be bound by the financial theories of Secretary McCulloch I should hardly wish to argue this question further. But even Secretary McCulloch does not undertake to say that there is a contract to pay gold for these bonds. When asked by a foreign banker, "What is the contract as to the payment of the five-twenties?" what does the Secretary reply? Does he say that the contract is to pay in gold? Oh, no; he says that all the Government obligations that have fallen due have been paid in gold (he forgot that temporary loan), and that it is the policy of the Government to pay all its obligations in gold. I agree with him; such is the policy of the Government. But that is not the question. The question is, what has the Government contracted to do, and what is it able to do? I wish that we could pay this enormous debt in gold, or in anything else, so that we could relieve the people from taxation. You will find running all through this letter of Secretary McCulloch an evasion of this question. What is the contract by law?

When the $900,000,000 loan, commonly known as the ten-forty loan, was issued, what did the Secretary of the Treasury do? Of the six per cent. five-twenty loan (which the gentleman from Maine contends was payable in gold) he says only some $25,000,000 of the $500,000,000 authorized had been issued; yet he makes the Secretary of the Treasury guilty of the absurdity of attempting to put on the market $900,000,000 of the five per cent. ten-forty loan as a competing loan, expecting to get that taken up, when he could not get his five-twenty six per cent. gold-payable loan in principal and interest taken up. Why did he do this? If both loans were payable in gold he must have been entirely demented. But no; the ten-forty five per cent. loan was payable, principal and interest, in gold by its terms; and this same Secretary of the Treasury, through his brokers

advertised this ten-forty loan as the only one the principal and interest of which were payable in gold. And nobody objected in this House. I was not here then; but where was the eloquent voice of my friend from Maine protesting against selling this five per cent. loan upon an advertisement that it was the only loan payable, principal and interest, in gold? Why did he allow the public creditors to think that the only loan payable in gold was the five per cent. loan; that the six per cent. loan was not payable in gold? This only illustrates the fact that, in interpreting public law, we must not deal with what members of Congress do individually, but we must be bound by the statute.

MR. BLAINE.—Does the gentleman mean to say that the Government agents advertised that the ten-forty loan was the only loan payable in gold?

MR. BUTLER.—Yes, sir; I do. Certain Government agents, called the New York *Tribune*, the New York *Times*, or the New York *Evening Post*, contained that advertisement, and if the gentleman will go there he will find it.

MR. BLAINE.—Authorized by whom?

MR. BUTLER.—Authorized by the Secretary of the Treasury, so headed. It was a little difficult at that time to find out who the negotiators were. That was the advertisement. You can find it. If I had known this question was to arise at this time I would have had the advertisement to present to the House.

MR. BLAINE.—I gave the gentleman notice some days ago that I should speak on this subject.

MR. BUTLER.—True. But, while I presumed the gentleman would speak on this subject, it never entered my conception that he would make such a speech as he has. [Laughter.]

If the gentleman will tell me why it is that we are to construe this law differently from any other law I will be obliged to him. If he will inform this House why the people of this country should tax themselves to the amount of many millions ($400,000,000 is the difference this day and this hour), whether these five-twenties are payable in gold, as gold stood yesterday, or in greenbacks.

The only answer suggested is, why agitate this now. These loans are not payable now, and therefore we may wait until the twenty years are out, when we all believe greenbacks and gold will be correlative terms. I believe so, too, in twenty years; but in the meantime the interest on these five-twenties is sinking this country, the labor, the manufacture, and the commerce of this country, to a degree that even its vitality and its strength will hardly be able to meet it.

What is the rate of interest on the five-twenties? Six per cent. in gold, payable semi-annually, gold being at 140 to 145, equal to 150 and upward. That makes nine per cent.; they are exempt from State and municipal taxation, which makes from two to three per cent. more. So on these almost two thousand million of interest bonds the people of this country are paying at this day and at this hour, either by remission of taxes or otherwise, in the currency of the country, from eleven to twelve per cent. What is the consequence? They could stagger under this burden of taxes if needed to pay the soldiers; they could deal with this burden of taxes if it even were to be thrown into the sea; but the difficulty is that paying this high rate of interest on these five-twenties of from eleven to twelve per cent. causes capitalists to withdraw from legitimate business and keep their money in these bonds. See how it operates. I have my money in five-twenty bonds at eleven per cent., and I am told that I am to have gold at the end of the twenty years for the principal besides. You cannot tempt me, then, to go into any enterprise which shall not promise me more than eleven to twelve per cent. I must have much more before I will take my money out of Government securities and put it at the risk of business. And it is this high rate of Government interest which is crushing the life out of the industrial pursuits of the people. There can be no mistake about this. Look at the market reports of Cincinnati, one of the great marts of the West. No money can be got there for less than fifteen to eighteen per cent. Why? Because our capitalists get from eleven to twelve per cent, on five-twenties, and they are encouraged to hold on to their bonds and keep their money out of the business of the country; because the gentleman from Maine tells them that the Government will pay the principal in gold, although they paid but forty cents on the dollar for them when they bought them. This is the reason why this five-twenty loan is crushing our people, and why we must get rid of it at all hazards consistent with national honor and national faith, and no man asks that to be broken.

But I am told if we undertake to pay any portion of this debt in greenbacks we shall depreciate greenbacks so that they will be worthless; that there will be an inflation of prices. The gentleman from Maine riots in imagination over the picture of the payment of $200 for a pair of boots if we issue any more legal-tender notes, that is to say, notes not bearing interest.

Speaking of greenbacks, I am reminded of one thing to which I meant to have adverted: of the nation's being bound

by the advertisements by which its bonds were sold. My friend says we did not notify capitalists that we would claim the right to pay these five-twenty bonds in any other way than in coin. Why we put it upon $150,000,000 of United States notes, and thus advertised everybody we did not mean to pay them in gold. This notice was put on the back of every greenback. Let me read from one:

"This note is a legal tender for all debts, public or private, except duties on imports and interest on the public debt."

There is "*inclusio unius, exclusio alterius*" for the gentleman.

MR. BLAINE.—If the gentleman will allow me I hold the two notes in my hand, one of which contains precisely the words the gentleman has just read. But does the gentleman say that this is the lawful money authorized by the act of February 25, 1862?

MR. BUTLER.—Yes, sir.

MR. BLAINE.—I deny it.

MR. BUTLER.—Now, then, let us see. I will compare this indorsement on the note with the law which I have before me. The second section of the law reads thus:

"Shall be receivable in payment of all taxes, internal duties, excises, debts and demands of every kind due to the United States, except duties on imports, and of all claims and demands against the United States of every kind whatsoever, except interest on the public debt and customs."

MR. BLAINE.—Will the gentleman allow me to make a statement?

MR. BUTLER.—Yes, sir.

MR. BLAINE.—The act of February 25, 1862, was the first legal-tender act. It is true, the notes were made a legal tender for all debts public and private, but they were also convertible into five-twenty bonds. Now, the gentleman places himself on the ground that whatever was by contemporaneous construction lawful money the Government was bound to pay. I assert that the law for the issue of the five-twenties of 1862 was embraced in the same act which authorized the issue of $150,000,000 of legal-tender notes which were themselves convertible into five-twenties. Now, if the gentleman will stick to his own words, then the Government can only pay off these five-twenties by issuing a like amount of these same legal-tender notes, on the back of which are printed these words:

"This is a legal tender for all debts, public and private, except duties on imports and interest on the public debt, and is exchangeable for United States six per cent. twenty-year bonds, redeemable at the pleasure of the Government after five years."

Therefore, if, as the gentleman contends, these bonds are redeemable at the treasury in the kind of money which was declared a legal tender when they were issued, they must be paid in this kind of notes. In that case the treasury of the United States would be receiving five-twenty bonds at one door and issuing the legal tenders at another, and then again issuing the bonds and taking back the legal tenders, and so they would go round and round the circle.

MR. BUTLER.—And you do not think that desirable. [Laughter.]

MR. BLAINE.—Does the gentleman think it desirable to have a revolving wheel at which one class of men shall stand in a row for the redemption of their bonds, and another for a reissue of the same? Is that the gentleman's idea of finance? The gentleman adheres to the exact letter of the law.

MR. BUTLER.—The difference between my friend and myself is this: I was putting advertisement against advertisement.

MR. BLAINE.—And I law against law.

MR. BUTLER.—There is no law of this exact form, and it is not the exact form of the law or of the advertisement. I was only putting advertisement against advertisement. I will answer the gentleman, if I have time, that I do think it is desirable to have a currency, and if Congress agrees with me we will have a currency before we get through exactly like what the gentleman describes, so that when a man wants money he can give the treasury his Government bond and get it, and when he gets through using his money he can go back again and get his bond. That is exactly the thing I want, and I hope to get it if I live long enough.

MR. BLAINE.—And issue $2,000,000,000 of legal tenders.

MR. BUTLER.—I have not said I wanted $2,000,000,000 of greenbacks issued. I want only so much as will be absorbed in the needs of the business of the United States.

But this episode takes me a little way out of my course. I was upon the question whether there would be depreciation, whether there would be inflation if more legal tenders were issued to supply the wants of the country for currency, when I turned aside for a moment to speak to the question of advertisements on the back of the greenbacks.

The common idea is that there will be inflation when you

issue paper money. It is drawn from the old idea of bank circulation. A bank issued its notes without any basis except the gold basis. That gold basis was sometimes one to four. Let me illustrate: suppose there were four hundred millions of bank paper in circulation on one hundred millions of gold as a basis, then I agree it would be an inflation to issue another one hundred millions, making the relation of the paper dollar to the gold dollar as one to five. But what is a greenback? Have gentlemen considered? A dollar greenback as it stands to-day is one twenty-five hundred millionth part of the debt of the United States, secured by a mortgage upon every dollar of public or private property in the United States. Is it not that, under my theory or anybody else's theory of finance? Now, suppose we issue five hundred millions of greenbacks, and pay up five hundred millions of the interest-bearing debt of the United States, what is a greenback then? Why, it is still one twenty-five hundred millionth part of the national debt of the United States, appreciated, and not depreciated, by the amount of interest which we have saved by buying up five hundred millions of the interest-bearing debt. The way to test it would be this: suppose we could issue the whole amount and pay all interest-bearing debt at once, then the one hundred and fifty millions of customs which we have to pay for interest without getting ahead in payment of our debt at all could be directed to redeeming the greenbacks. There is a limitation on this power of issuing greenbacks, and only one, and that limitation my friend does not seem to understand. It is this: these greenbacks are non-interest-bearing notes, and therefore they can only be issued in such quantities without depreciation in fact as will be absorbed by the community to the degree that they are required for business purposes. They may be issued to the degree they will be absorbed as currency. I think that the country can bear to-day some two hundred millions more of them, not issued primarily and arbitrarily for the purpose of paying off the interest-bearing debt, but issued for the purpose of providing a currency for the country which should not be so contracted as to bring ruin, as now, upon the business interests of the country. When you have issued two hundred millions more of these greenbacks and paid your interest-bearing debt with them, have you altered their relation to property, to each other, or to gold? Are they appreciated or depreciated? Appreciated, in fact, because you save the interest on the two hundred millions which you have paid off with them; depreciated if you issue more than will be absorbed

as currency, because business men do not want non-interest-bearing notes on hand; and if they are not needed as currency they will sell them at a discount for some property that will pay interest.

Now, then, sir, let me state, for the benefit of my friend, my proposition of finance, and the House can contrast it with any other that may be better, and there will be found better I doubt not. There are now some two thousand five hundred millions of debt. Some two thousand millions of it stand in the shape of interest-bearing debt. There are nineteen different kinds of that description of debt bearing different rates of interest and times of payment. There are some five hundred millions, more or less, in various forms of non-interest-bearing debt, gold certificates, legal-tender notes, and others. Now, my proposition is that, in the first place, we should substitute greenbacks for the national bank currency, releasing to the banks the bonds which we hold as security for that national bank currency. It can be done without shock to the business of the country.

I agree, sir, that any proposition of legislation is vicious which tends in any considerable degree to interfere with the industrial pursuits of the people, but I propose we should enact in some proper form that the Secretary of the Treasury should each month retain in the treasury all the national bank bills which have been collected by the collectors of the internal revenue, or which have come through other means into the treasury of the United States, and at the same time should issue to the banks, if they desire to receive them, or to issue in payment of the interest-bearing notes which are payable in currency an equal amount of legal tenders. In a very few months, four or five, the national bank notes would be withdrawn from circulation and their place supplied with greenbacks without any shock to the business of the country, and, *pari passu*,[1] the bonds of the banks held as security for these notes could be restored to them. This proposition, sir, if carried out would put into circulation some three hundred million dollars more of national legal-tender notes without increasing that circulation, and release the country from the payment of between twenty and thirty million dollars in currency which is now paid to the national banks on these bonds, and the place of their bills would be taken by the non-interest-bearing notes of the United States without any shock to the business of the country.

What objections are urged to this proposition? The first

[1] "With equal step."

is that it would be a breach of faith with the banks. I would like some gentleman to put his finger upon any act of Congress by which we pledged ourselves for a single day longer than the good pleasure and discretion of the Congress of the United States thought best to allow this bank currency to exist. What effect would it have upon the banks? Those dependent wholly upon their circulation, which are not in fact banks of loans and deposits, would wind up, and their managers would seek some other and equally honest employment. Banks that are needed would still be banks of loan and discount, but not of circulation.

It is said that the banks furnish now the best currency this country ever saw, because it is the same in New Orleans, Boston, New York, and Chicago. But what is the currency? It is the notes of the bank. What makes them equal all over this country? It is the indorsement of the United States. So that we have come into this very remarkable position, that when a bank breaks its currency is better than when it was solvent, and sells at a slight premium. Therefore, as the United States is primarily responsible for all the circulation, we ought to supply the currency to the people and receive the profit of doing it.

But it is said that the banks really cost the United States nothing. One of the ablest bankers of them all, Mr. Jay Cooke, has undertaken to tell us that the banks pay in taxes a large amount, and therefore in equity we ought not to disturb them. Sir, if Mr. Jay Cooke or any one else will tell me of any business in this country that is not taxed and does not pay a large amount of taxes, then I will agree that the banks are not favored. Take for example a manufacturer. Take a single case, only two years ago, in the State of Massachusetts, of a manufacturing corporation of $750,000 capital and of $1,500,000 annual product of manufactured goods. It exactly divided profits with the United States. Its stockholders received two dividends of five per cent. each on $750,000, and it paid five per cent. tax on the entire amount of production, $1,500,000; so that they in fact took the United States into partnership, only the United States got all the profits, but the stockholders bore all the loss. Now, if there is any greater or more onerous burden of taxes on the banks than that, I have yet to learn where it is.

Again, it is said that this banking system is a better one than we ever had. For some purposes so it is. And it is said, further, that if we do not encourage it we shall go back to the old State bank system. No, Mr. Chairman, never, never! The day of State banks has gone by. They were always, in my poor judgment, unconstitutional; but they got themselves fas-

tened on to the country, and there was never power enough, until the necessities of the country required a new system of finance, to break off their hold. We have rid the country of them, and the Congress of the United States, ay, and the good judgment of the people, will never permit that system again to be imposed upon the country.

What is the next proposition? Why, it is said we must not interfere with the national banks because they patriotically helped us during the war. Upon that I take issue with each and every advocate of the banks. On the contrary, they helped themselves, not us. It is said they lent money to the Government. How did they do it? Let me state the way a national bank got itself into existence in New England during the war, when gold was 200, and five-twenties were at par, in currency, or nearly that. A company of men got together $300,000 in national bank bills, and went to the register of the treasury with gold at 200 and bought United States five-twenty bonds at par. They stepped into the office of the Comptroller of the Currency and asked to be established as a national bank, and received from him $270,000 in currency, without interest, upon pledging these bonds of the United States they had just bought with their $300,000 of the same kind of money. Now, let us balance the books, and how does the account stand? Why, the United States Government receives $30,000 in national bank bills more from the banks than it gave them in bills; in other words, it borrowed of the bank $30,000 in currency, for which, in fact, it paid $18,000 a year in gold interest, equal to $36,000 in currency, for the use of this $30,000. Let me repeat. The difference between what the United States received and paid out was only $30,000, and for the use of that the Government pay on the bonds deposited by the company, bought with the same kind of money, $18,000 a year interest in gold, equal to $36,000 in currency.

But the thing did not stop there. The gentlemen were shrewd financiers; their bank was a good one; they went to the Secretary of the Treasury and said, "Let our bank be made a public depository." Very well; it was a good bank; the managers were good men; there was no objection to the bank. It was made a public depository, and thereupon the commissaries, the quartermasters, the medical director and purveyor, and the paymasters were all directed to deposit their public funds in this bank. Very soon the bank found that they had a line of steady deposits belonging to the Government of about a million dollars, and that the $270,000 they had received from the

Comptroller of the Currency would substantially carry on their daily business, and as the Government gives three days on all its drafts if the bank was pressed it was easy enough to go on the street if they had good security. They took the million of Government money so deposited with them and loaned it to the Government for the Government's own bonds, and received therefor $60,000 more interest in gold for the loan to the Government of its own money, which in currency was equal to $120,000. So that when we come finally to balance the books the Government is paying $156,000 a year for the loan of $30,000. And this is the system which is to be fastened forever on the country as a means of furnishing a circulating medium!

This, only using round numbers for the purpose of illustration, is an actual and not a feigned occurrence. You will see it was a perfectly safe operation for the banks, though not a very profitable one for the Government, because they held ample security for the Government deposits in its own bonds. But the difficulty is the Government was paying interest all the while on its own deposits; and this state of facts is only rendered possible by this system of supplying the banks with circulation by the Government without interest.

The next reason advanced why we should not interfere with these banks, if I understand it, is that we are told by very high authority this system will become the banking system of the world; having inaugurated it, we are so much in love with it that all the nations will pattern after it. Let the rest of the world try it for a few years when we have done with it, and then, if the rest of the nations adopt it, we can return to it, but not till then.

Sir, am I slandering these institutions? Are they not making money at a rate which is beyond all precedent. Let me state another case, which might be an actual case, and perhaps I could call the name of the man. A very shrewd man takes his $100,000 and goes to the treasury and obtains bonds; he then gets a banking charter, and receives his bills amounting to $90,000; then he buys with those same bills $90,000 worth of bonds, and comes home and sits in his office, and that is his bank, and his money is all in circulation. Says he: Why should I trouble myself to lend my money to the farmers around me on sixty-day notes when I can lend it at from ten to twelve per cent. on long twenty-year Government bonds, and Mr. Blaine says I am to be paid in gold for them; that is as good banking as I want to do; the bills never come home; they are

going all over the West and South, and I am getting $22,800 interest on my original $100,000; what do I want more? I am comfortable and happy; I think this "banking system is the wisest one the world ever saw, and that it ought to be adopted all the world over."

But let us take the banks' own exhibit of themselves. I hold in my hand the abstract of reports of national banking associations for the 1st of October last. Let us see their condition. They have $419,000,000 of capital stock paid in; they have been in operation on an average of less than four years; they have divided from twelve to twenty per cent., about twelve in New England and from fifteen to twenty per cent. where money is scarcer and the rate of interest ranks higher. In addition to these dividends, take their own statement: "surplus fund, $66,000,000; undivided profits, $33,000,000"; showing that they have got, after all these dividends, near twenty-five per cent. surplus of that capital stock laid away. What other business, taxed or untaxed, if any untaxed business can be found in this country, will allow a yearly dividend of from fifteen to twenty-five per cent. and a surplus accumulation in four years of twenty-five per cent. on the capital? And from whom and from where do these profits come? They come ultimately from where all taxation, all profits, all productions must come, the labor of the country and nowhere else; and we are asked here to perpetuate a system which takes these immense profits from the labor of the country and puts them into the hands of capitalists without a pretence of adequate benefit received by the people.

Why, sir, it is an axiom in finance, if there are any axioms in finance, that any business which is safe should have small profits, and business that is hazardous should have large profits; but here the state of things is reversed; the banking business, which, if well conducted, is the safest business on earth, and which heretofore has always been content with small profits, is now the most profitable of all businesses, and has the largest returns without any risks.

Every member of this House can argue these propositions for himself better than I can argue them for him. It is my part only to suggest the topics upon the question of currency. I insist, as my first proposition, that there should be this change in bank circulation, and by that means we would diminish our interest-bearing debt $300,000,000 by redeeming it with the greenbacks we should thus issue.

We have to-day in circulation in various forms in round numbers $759,000,000. A portion of it, I agree, is locked up in

banks; fifteen per cent. in the country, and twenty-five per cent. in the city banks as their currency for the redemption of their bills; a procedure the wisdom of which I have yet to be taught, because the United States is the final indorser and payer of all their bills. I do not see how it makes it any safer to lock up fifteen to twenty-five per cent. of the indorser's notes for their redemption; and I desire some of the able bankers in this House to explain to me what good result is hoped for from this smothering of a portion of the national currency, which the banks take care, however, shall be interest-bearing to them.

I will suggest a reason why that requirement was placed in the statute book. There was a lingering idea in law of the old specie basis, and of getting an equivalent in its place. Legislators seem to have forgotten that we had wandered away from the specie basis; that they were putting in its place but the notes of the United States to redeem notes of the United States. If we can release, therefore, the whole circulation of about seven hundred million dollars, perhaps that will relieve the present contraction in the currency.

We are told that we must preserve the national banks, because if we do not there will be nobody to circulate our money. Let us examine that a moment. If money will not circulate it is because nobody wants money. My anxiety is to provide the people with money that they do want and will circulate, not with money they do not want. I have never yet seen any man who has refused the notes of the United States when the Government has paid them out. When I find such a man, I will agree to charter a bank for the purpose of forcing them upon him, and not until then.

The truth is that at the present hour the country is suffering from the want of those very notes. We have nominally some seven hundred and fifty millions of currency, but actually only about five hundred and fifty millions in circulation. Mr. Chase reported the circulation of this country before the war, including gold, to be about four hundred and seventy-seven million dollars. Now we have only $550,000,000 in actual circulation, though we are doing more than three times the business calling for the use of cash that we were doing before the war. During the ten years from 1847 to 1857 the deposits and circulation of the banks averaged about thirteen dollars per man. Now, on account of our doing so much more of our business for cash, the deposits and circulation of the banks are about twenty-four dollars per man. And, if you take into consideration the currency furnished by the United States, the $300,000,000 of

greenbacks, or about that sum, you will find that it is about thirty-four dollars per man, reckoning thirty-six million people in the United States. This shows that we require in our business three times, or certainly two and a half times, as much cash as before the war. Everybody knows this to be fact.

How was it before the war with the Eastern manufacturer? He sent to New Orleans and bought his cotton, giving drafts for six or eight months. The merchant in New Orleans came East and bought the manufactured goods, giving his notes for from six months to a year; and all the cash that was wanted was enough to settle up the balances.

And now, when we send out for cotton we must send out greenbacks, because of the change in the mode of doing business; and we have a currency that stands at par there, and for what they want from us they must send the greenbacks. Everyone knows that the business of this country is done twice or thrice as much in cash as it was before the war; and therefore I think this country will bear from eight hundred to a thousand million dollars of circulation without redundancy as soon as business revives, and that will make it revive. But my friends say "that may be too much." Perhaps it may be; but it is very easy, it seems to me, for us to have that amount of circulation without redundancy; and as each legal-tender note is, as we have seen, a part of the debt secured by mortgage of the whole property of the United States, without depreciation.

Our debt now is $2,500,000,000, about $2,200,000,000 of it interest-bearing. Suppose we issue our legal-tender greenbacks, as I will call them for convenience, and buy up or redeem our interest-bearing debt that is due to the amount of $1,000,000,000. Then our debt stands, $1,000,000,000 of non-interest-bearing debt and $1,500,000,000 of interest-bearing debt. Now, if that $1,000,000,000 of circulation is too much, *i. e.*, more than is needed for currency, I agree with the gentleman from Maine that it will be depreciated. But what is too much? Too much is more than will be absorbed as currency in the business of the country. That is to say, if because of an over-issue by the Government there is an accumulation of non-interest-bearing notes, greenbacks, in the hands of any man, they are not productive, and he will dispose of them at a discount, if he can do no better, for something that is productive. The only question as to redundancy, therefore, is whether the notes in his hands are worth more for use in his business as currency than they would be to him if invested in a loan to the Government. Now, then, I propose that for $300,000,000 of this non-interest-bearing debt

we shall issue an interest-bearing loan at once which shall be that exact loan which my friend from Maine yesterday thought would be so absurd—a loan bearing a low rate of interest and convertible and reconvertible into greenbacks at the pleasure of the holder at any day and at any hour.

Let us see how such a loan would operate. A man has more money than he wants to use. He with such a loan can go to a public depository, leave his money and take his bond. Then when he wants his money again he goes to the depository, leaves his bond and takes his money for his bond, principal and interest; that is to say, when the non-interest-bearing note of the United States is worth less to a business man than his bond he will exchange it for this bond; when the notes as currency are worth more to him to use in business or speculation than the investment he will return the bond and take the currency. Thus, without any banks to push out the circulation just when it is not wanted or draw it back just when it is wanted, as the practice now is, we shall have an automatic financial system, self-regulating, or rather regulated by the great law of supply and demand, the best of all regulators. When money is wanted by the business community up to the amount of notes issued by the United States, it will be at once got; when it is not wanted, it will be returned to the Government, which being a borrower for a long series of years to come will be glad to take it. There can be no redundancy, because every man will know exactly where to place these non-interest-bearing notes when he has got through with them as money. When money is wanted at the West to move your crops in the fall you take it from the treasury and move the crops; when you get through with the money you take it back to the treasury and get the bonds, in the same manner as when you have got through with your wagons you put them back in your barns for use next year. Thus the whole monetary system of the country will go on without redundancy and without shock and without inflation.

More than that, sir, as I believe I demonstrated yesterday, it will be impossible to have inflation, because this currency being convertible and reconvertible from time to time, and being always an integral part of the public debt, it will never change its relative value to the property of the people of the United States. Why, sir, what is the measure of the value of your house? If it is worth $10,000 it is ten thousand twenty-five hundred millionth parts of the public debt; and it will remain so until a portion of that debt is paid, when it will be appreciated, or until the public debt is expanded, when it will be depre-

ciated. It will remain of exactly the same relative value however much the form of the public debt be changed, but will always be more valuable as the public debt grows more valuable, *i. e.*, as it diminishes.

Now, sir, if I am right, and if the country will bear this thousand millions of non-interest-bearing notes as currency—and if it will not, the good judgment of the Ways and Means Committee and the Committee on Banking and Currency will settle that for us on full examination, so that I certainly may use that sum for illustration in so far as it will bear it—so far will it diminish the interest-bearing debt. You will, therefore, bring the interest-bearing debt down to $1,500,000,000, where it can easily be managed. It is said you must not pay these five-twenties in greenbacks? Why, sir, you will never need to pay them in greenbacks.

What shall you do, then? You should issue a loan on long time, at a low rate of interest, thirty or fifty years, with the proceeds of which to redeem them or to be exchanged for them. For, sir, I am not for this generation paying all this debt. I think we had done our share when we contracted it. [Laughter.] We ought to leave it to our children to do theirs by paying it. I see gentlemen smile. But, sir, in all solemnity, when we contracted this we contracted it with the loss of the best blood of the nation and the loss of the best lives we had; in suffering, in sorrow, in labor, in woe, amid horrors unnumbered, to save this great experiment of government, republican in form and freedom for all, for them and for our posterity forever, and they owe us some debt of gratitude for that so great a boon; and should we who bore all the suffering and agony bear also all the taxation consequent upon this great work?

I say, then, let us change these $1,500,000,000 of interest-bearing debt into a long loan—a taxable loan, taxable by State and municipal authorities. But some friend of mine may say that if we make the loan taxable by States the States will tax the loan out of existence; that there may be some State hostile to the general Government which will tax the loan out of existence. I beg his pardon; such hostile taxation will only tax the loan out of that State, and deprive the citizens of that State of a profitable and desirable investment, which will be taken up by citizens of other States where it is not so taxed.

There are some disadvantages in a taxable loan worthy of examination. Let us consider them. It is said that no government ever allowed another subordinate government to tax its loans. True, but there never was before any government, like

ours, having a complex government of States and a national Government over all and the people the same in both and each.

It is said that what States get by taxing the loan to carry on their municipal governments the general Government loses. But is this so? The people have to pay the taxes to sustain both State and national governments. So what the people lose as citizens of the United States because of taxation of the loan they gain as citizens of the State by taxation; for the people at last pay all, lose all, and suffer all. If it be said that there will be inequality of taxation it is answered again that unjust taxation, too burdensome, will only drive the loan out of such State, so that in practice there can be no inequality.

Another objection is that you cannot sell a taxable loan at so high a price. Why not? Because it will depreciate because of taxation. It will depreciate, however, exactly according to the amount levied upon it by taxation. Be it so. Who gets the benefit of that taxation? Why, sir, the people. All that it depreciates because of taxation, being received back from the taxes, will relieve the people from so much taxation. If in some States the loan is taxed more than in others there will not be any unequality, because such excess of taxation will only send that form of investment out of that municipality.

There is another objection to a taxable loan, namely: that it is a form of investment easily to be concealed from taxation. But it cannot any more easily be concealed as an investment than can notes, bonds, or money in all shapes. Let me ask you what is the operation to-day of your five-twenty non-taxable loan. A capitalist has money which he is using in his business, and he sees the assessor coming round. He goes into market and puts his money into Government bonds. The assessor calls, the man has no taxable property, the assessor passes by, and the next day the artful dodger sells his bonds for the money, and goes on speculating. He saves the taxation, and next year he repeats the operation.

These are, I understand, some of the objections to taxable loans. But it has also its advantages. In the first place it puts the wealth of the country and the labor of the country upon an equal footing as to taxation. It compels the surplus wealth as well as the industry of the country to be taxed.

Another advantage of a taxable loan is that it relieves the public debt from an apparent injustice. And it is of no consequence how small the injustice is, for the people feel an unjust burden, however light, more than a just burden, however heavy.

Still another advantage is claimed for a taxable loan. It

has been held by many financiers—I do not claim to be enough of a financier to give an opinion as to the merit of the claim, but each gentleman will settle the question for himself—that it is a great advantage to borrow money abroad, in the various markets of the world, at low rates of interest. Therefore we find our canal and railroad companies and all great enterprises attempting to place their bonds in Europe. If that is good financiering, what is the objection to our national loans going abroad, provided we get back the money for them? The principal objection has been found to be that, whenever there is war or rumor of war abroad, a financial panic is created there, our bonds come home for realization and interfere with our money relations and unsettle our business. But, if our bonds were taxable for State or municipal purposes, they would not of course be taxable abroad, and would then stand from ten to fifteen per cent. higher there—perhaps twenty or twenty-five per cent. higher—no man can tell, until the theory is reduced to practice, how much higher than at home; and the holder abroad, having to consent to so great a sacrifice before he could realize on them, would not be very likely to send them home upon us, which is the greatest danger now to our finances whenever there is the slightest financial trouble in Europe.

Such a taxable loan held abroad would be kept there steadily. If, however, any great trouble should happen in Europe so that the bonds would be sent home at all hazards, they would come at such low rates as to be economically and readily bought up here, and our people could afford to take them even with the burden of tax upon them.

Therefore, I have no doubt that a loan of $1,500,000,000 for thirty or fifty years could be placed to-morrow at five per cent. if taxable, with which to get the money to redeem the five-twenties or in which to exchange them, and thus save millions of taxation. I should prefer, so far as I am advised, until I hear further debate, that such bond should be a taxable one of five per cent., or three and sixty-five hundredths sterling, if untaxable. Either would sell, in my opinion, to-morrow at as high rates in the markets of Europe as does our five-twenty loan now, while they would not interfere with the ability of this country to pay its debts or keep our loan down both at home and abroad. Our loan does not now sell at a discount because anybody doubts the ability or willingness of this country to pay every dollar it has contracted.

A MEMBER.—Nor its willingness?

MR. BUTLER.—Nor its willingness. Nobody doubts that.

I am obliged to my friend for the suggestion. I think I can convince the House that nobody doubts its willingness. What are our gold certificates—$14,000,000 of them—only promises of the United States to pay in gold on demand? And yet they are at a little premium over gold, both at home and abroad, because they are more convenient to handle. If anybody feared the willingness of the United States Government to pay according to its promise or doubted its ability, why should not these gold certificates go below par? It is because all people understand that, when we promise to pay in gold by a contract—which my friend from Maine [Mr. Blaine] does not need to argue is a gold contract, or the legal intent of which my older friend from Pennsylvania [Mr. Stevens] does not need to explain to us hereafter—when it is on the face of the certificate, "payable in gold on demand," then that promise is above par. This pledge of the Government causes that note to stand better than gold in the markets of the world to-day.

Nay, more, our ten-forty, five per cent. bonds, having six years only more to run before the Government has the option of paying them, and therefore hardly to be considered as a funded debt, are selling now within one or two per cent. of some of the five-twenty six per cent. loans, payable in gold according to the argument of my friend from Maine. What makes the difference? On five-twenties there is one per cent. interest due more than on the other. Why do they come so near to each other in price? It is because no man can read the statute book and doubt that the one is payable in gold and the other in lawful money of the United States. Therefore I repeat that in the markets of the world there is no doubt, as there is none in any man's mind, of the willingness or the ability of the United States Government to perform its contract. But the doubt is as to what is the contract—whether it is a contract of Jews and sharpers or it is a contract of the Congress of the United States.

But I am met right here again with the proposition. Why stir this now? Since I began my speech half a dozen gentlemen, some friendly and some unfriendly, have tipped me on the shoulder and said, "Now, Mr. Butler, what is the use of making a fuss about this now? Why not let these bonds run twenty years and by that time gold and greenbacks will be the same? Why disturb the matter? What are you getting up this row for?" [Laughter.]

A MEMBER.—A sensible question. [Laughter.]

MR. BUTLER.—Yes, very sensible, and I am going to answer

it in a sensible manner; and the answer is this, that these five-twenty bonds are on eleven to twelve per cent. interest, and they will double oftener than once in eight years; and if we let them go on for twenty years the people will have to pay them twice over in interest, and then owe them still. That is the answer. Is there not good sense in that, now? [Laughter.] The reason why I am anxious about this now is that it is our urgent, pressing duty, not to be shunned or avoided, to relieve the people from the burden of this great weight of taxation.

Let me restate it so that nobody will forget it. At the rate of interest we are paying these bonds double once in six years; at six per cent. they double once in eleven years, and with the tax making eight per cent. they will double once in about eight years. Set down the figures and when you find out let me know how the figures read.

RUFUS P. SPALDING [O.].—The gentleman is mistaken.

MR. BUTLER.—When do you say they will double at eight per cent.?

MR. SPALDING.—Once in about twelve years.

MR. BUTLER.—Six per cent. in gold, with the tax off, is equal to eight per cent. semi-annually at compound interest, and it will not double under twelve years! I do not know anything about figures in Ohio, but figures in Massachusetts do not bring out that result. [Laughter.]

MR. SPALDING.—We have had enough of that sort of wit.

MR. BUTLER.—I presume you have had enough, sir.

MR. PRICE.—Will the gentleman yield to me just a moment?

MR. BUTLER.—Certainly.

MR. PRICE.—I presume the gentleman from Massachusetts means to be correct.

MR. BUTLER.—Yes, I try to be, exactly.

MR. PRICE.—And to place upon record facts in reference to those things about which he talks.

MR. BUTLER.—Yes, sir.

HIRAM PRICE [Ia.].—The gentleman said a moment ago that the difference between ten-forties and five-twenties was one per cent. I was satisfied in my own mind that was a mistake and on referring to the document I find that on the 20th of November five-twenties were 108 and ten-forties 102 3/8.

MR. BUTLER.—Has the gentleman read quotations of the lowest five-twenties and the highest ten-forties?

MR. PRICE.—I read those of 1862; I have not read the list.

MR. BUTLER.—Ah! that will not do, if you please, those of 1865 are lower. [Laughter.]

MR. PRICE.—Well, I will give them all if the gentleman wishes it.

THE CHAIRMAN.—Does the gentleman from Massachusetts yield further to the gentleman from Iowa?

MR. BUTLER.—Oh, certainly; I yield to everybody in this discussion.

MR. PRICE.—I do not wish to encroach on the gentleman's time.

MR. BUTLER.—It is no encroachment.

MR. PRICE.—The statement made was evidently incorrect, I presume unintentionally so, and I thought it best to put the gentleman right.

MR. BUTLER.—Now, will the gentleman take one or two things into this calculation and then I will stand corrected. He read from the quotation in the newspapers. Will he tell me how long before the coupons of the five-twenties are payable and how much interest is due, whether they are "flat," to use the language of the broker's board, and how long before the coupons of the ten-forties are payable? If he will make the calculation he will find this statement to be correct, and I am ready to meet him anywhere upon it; he will find that between the lowest class of five-twenties and the highest class of ten-forties there is less than two per cent. difference.

MR. PRICE.—Does the gentleman want an answer to that?

MR. BUTLER.—Certainly.

MR. PRICE.—I need not say to the gentleman, I presume, nor to any gentleman in this House, that the coupons of the bonds that I have quoted were paid the 1st day of this month, and consequently there is only the balance of this month's interest due on them, and therefore they are "flat." Everybody knows about the ten-forties. The interest was paid on the five-twenties that I have quoted on the 1st of November. Before that they were selling at 113 and a fraction, and as high as 114. With the coupons cut off the 1st day of the month they are selling at 108, according to the quotations of the board on the 26th instant (yesterday), and ten-forties from 102 1/8 to 102 3/8. I give you the largest quotations for ten-forties, and the benefit of the doubt if there is any.

MR. BUTLER.—I am always glad to be corrected, but I must still maintain my position. I may be wrong, but I must insist on the position until I am better advised than I have been yet. Is the discussion of this grave question to be decided by an accidental difference yesterday of one or two cents upon this class of securities?

Isaac Newton once said he occupied himself in his great studies by picking up pebbles on the shore of the great ocean of truth; but I have never heard that he selected the very smallest ones.

I was about saying, when I was interrupted, that the objection has been made that we shall never return to specie payments under this system. Let us be definite. What do gentlemen mean by "returning to specie payments"? Do they mean returning to the state of finances that existed before the war? That is, when this Government collected its dues in gold, and paid its debts in gold; and when people had a currency based on gold, but which never could be redeemed in gold? If they mean to return to that state of things I respectfully submit that for the present it is impossible.

It is impossible for this reason: we had a specie-paying Government from the time the sub-treasury law went into operation down to the war, that is, the Government collected all its dues in gold, and paid all its debts in gold; and all the money needed for governmental purposes collected and paid out was from about thirty to sixty million dollars from year to year, before 1860 running up at one time, I believe, to seventy-odd million. I am now using amounts bearing almost exactly correct relation to each other by way of illustration, and I hope no gentleman will hunt up an old newspaper to show that I am not right within two or three dollars. During the same period there was from about ninety to two hundred and ten million dollars of specie in the country. In other words, it took for governmental purposes alone about one-third of all the specie in the country. We all remember that whenever there was any hitch in governmental operations so that gold accumulated in the sub-treasury it disordered all our monetary affairs and produced financial crises.

In 1857, when some ten million gold had thus accumulated, it was deemed so disturbing an element in the commerce of the country that Mr. Cobb, then Secretary of the Treasury, paid thirty per cent. advance for the bonds of the United States in order to relieve the money market by putting out the accumulated gold in the treasury.

It took then one-third of all the gold in the country to carry on the Government business, and we could hardly get around at that. We now have from two hundred to two hundred and twenty-five million dollars of gold only, so far as is known, in the country. The Government is using every year for its operations some three hundred and fifty million dollars. If the

Government could not get around without disturbing the finances in collecting its dues and paying its debts in gold before the war, using only one-third of all the gold in the country, how can it now get on with its operations, requiring $350,000,000 to be taken out of $225,000,000, which is all the gold now in the country, not allowing anybody else to use a dollar? It is therefore entirely impracticable for the Government to carry on its great operations of $350,000,000 upon a gold basis, wholly irrespective of the question of the credit of the Government or its ability to command all the gold in the country. It might indeed carry on its operations partly in gold and partly in paper, but that is not a return to specie payments by the Government. But it is as utterly impossible at the present time for the Government to carry on its operations on a gold basis, in the manner in which it did before the war, as it is to make three hundred and fifty go into two hundred and twenty-five and have a remainder over, which, I take it, is impossible by any figures out of the State of Ohio. [Laughter.]

In my judgment, all talk about returning to specie payments in July, 1868, or any other period in the immediate future, is illusory and vain. How are we to get back to specie payments? In the first place, by reducing your taxation, stimulating your industry, raising your productiveness, bringing down the expenditure of the Government, specially the first and great expenditure and burden over all others—the taxation for the purpose of paying your doubly exorbitant interest on the public debt as now constituted.

Reduce your interest-paying debt as you may to some one billion five hundred million dollars, and then fund this at five per cent. at highest, even with taxation. This will call for $75,000,000 as interest of the public debt annually; or fund it at three and sixty-five one-hundredths per cent. sterling if untaxable, as you may, and that will make only some fifty-five millions as interest, and there will then be some $60,000,000 to $85,000,000 of gold coming in at your custom houses to help pay the expenses of the Government, after paying up the interest on the debt.

Then enforce faithfully and justly the collection of a judicious taxation on but two articles of luxury, whisky and tobacco, and you may release every other interest from taxation, and the land shall blossom as the rose, and the hum of productive industry give sweet harmony to the delighted ear.

Leaving financial matters as they now stand, you never can go back to specie payments. Get back to specie payments!

How is it proposed to be done by the Secretary of the Treasury? Why, in order to do that he asked Congress to aid him—to sell our bonds in Europe; and he came before Congress asking authority to deposit gold in Europe to pay the interest there, so that he might sell more bonds there. When he sells those bonds in Europe, what does he get for them? Seventy cents or thereabouts on the dollar. What is specie payment? Paying one hundred cents. How is he going to be able to pay one hundred cents on what we owe now? By making new debts at seventy cents? I would like somebody skilled in figures to cipher out that problem.

But the matter does not stop there. If the Secretary of the Treasury got even gold for his bonds he would have something to show. But what are those bonds sold for? They are sold abroad to meet the balance of trade. What does that mean? It means to pay the balances owing for broadcloth that we wear, for brandy that we drink, for cigars that we smoke. What would be thought of a financier who should insist he was getting solvent selling his notes at seventy cents on the dollar in order to buy broadcloth, brandy, and cigars? Who would insist such a one was a good financier? Yet this is the exact system upon which the finances of this country are being carried on to-day.

You may consult upon your tariff bills till you are blind; your Committees of Ways and Means may fix up schemes of protection for home manufactures till they are weary, but they will afford no protection to American industry. Why? The bankers and merchants of Europe never expect Government loans there to be paid. Most of the governments of Europe have irredeemable loans, the interest of which only is ever to be paid. Now, with the rate of interest two per cent. at Antwerp, two per cent. at London, one and three-fourths per cent. at Frankfort, two and one-fourth per cent. at Paris, our bonds are eagerly snapped up; foreign agents come over here to get them. With the discount of thirty per cent. on our bonds bearing six per cent. gold interest, they can always undersell us, and vitiate any tariff that we choose to pass. We are thus dealing with them in manufacturing at home with thirty per cent. against us. Nay, more; suppose there are two manufacturing establishments, one in this country and one in England, the two establishments equally well managed, both manufacturing the same article and making exactly the same profit; the English manufatcurer can make a ten per cent. dividend, while our manufacturer is losing money. Why? Because the capital of

the English manufacturer costs him but two per cent., while with our high rate of interest, reduced by our Government rate on the five-twentieths, the American manufacturer's capital costs him twelve per cent.—a difference of ten per cent., which should be a sufficient dividend for any well-conducted business that was not a national bank.

Under such circumstances we cannot compete with the foreign manufacturer. It is useless for my friends from New England and my friends from Pennsylvania to ask for a tariff on their manufactures; it is useless for my friends from the West to ask for a tariff on their wool so long as this great difference in money is against us. Why, my friends from the West thought that, if they could only get a tariff on wool, wool would go up, command a fair price, and the farmer should get pay for his labor. They got all the tariff they asked, and I am glad they did. But the more tariff they got, the more wool went down. Am I not right? Was wool ever so cheap as it has been this year, since we have put a duty on it? Why? Because of this difference between this country and abroad in the rate of money, our taxation and the discount on our bonds entirely neutralizing any tariff for the protection of the East or the protection of the West.

There are some things we must do. They are the pressing duties of the hour. First, we must stop this contraction of the currency now going on. It has been contracted at least $100,000,000 in the last year. Some men say only $48,000,000, or $4,000,000 a month. But $77,000,000 of compound-interest notes must be reckoned in, and the contraction of the currency will in fact be found to be more than $100,000,000. Secondly, we must have the gold hoarded in the treasury of the United States sold at public auction at stated periods of time, so all may know when, except of course enough, with the receipts from customs to meet the interest on the gold-bearing debt. Thirdly, we must repeal the immense number of discretionary powers with which the exigencies of the war caused us to clothe the Secretary of the Treasury. The treasury of the United States should not be left in the power of any one man. It is of no consequence who that may be. Whenever the Secretary of the Treasury has discretionary powers he may exalt this man's property and decrease that of another; he may issue this loan and take in another. He holds the business of the country in the hollow of his hand. I by no means mean to make any charges of corruption or favoritism against anybody. Following his views of finance, the present Secretary of the Treasury

has done his duty. But I say it is a dangerous power, one given in consideration of the exigencies of the war. The war now being over, the Congress of the United States, to whom the Constitution has wisely trusted the finances of the Government, should enact a positive law, not to be swerved from by the Secretary of the Treasury upon any pretence whatever, declaring exactly what shall and what shall not be done with the finances of the country. These three measures are of pressing necessity and imperative for prompt relief. When they are carried out, when the gold is sold and bonds paid with the proceeds so as to relieve greenbacks and send them back into circulation, when this discretionary power which may or may not be exercised improperly is taken away, and when the banks are brought back to their position of banks of loan and discount, then the country will be relieved. Then after full and fair discussion you will see exactly the amount which our country will absorb in non-interest-bearing notes of the United States, and fix that amount. Then consolidate the nineteen different kinds of loans and securities we have now into one long taxable loan of the United States that shall be a consolidated funded security known by all the people, exact in its terms, plain in its contracts, and unoppressive in its rate of interest. Then shall the country resume its onward march of prosperity.

GEORGE F. MILLER [Pa.].—I should like to put this question to the gentleman from Massachusetts: taking for granted that by a legal construction of the statutes allowing the issue of five-twenty bonds the principal was payable in lawful money, which, of course, would include greenbacks, yet if the Secretary of the Treasury, believing that the principal as well as the interest was payable in coin, and he and others who had charge of disposing of them represented to the public that such bonds (principal and interest) were payable in gold, and thus inducing capitalists and others to vest their money in such securities at a time the country was in peril and funds were needed to carry on the war to put down rebellion, would it not be bad faith in Congress now to refuse to sanction the payment in coin?

MR. BUTLER.—The question is fairly put, and deserves a fair and candid answer. The answer I make to it in the first place is this: That the Secretary of the Treasury did not believe these bonds were payable in gold, had no right to give any such assurance, and no man had the right to rely on such terms. Secondly, that we here, as the Government of the United States, are standing as trustees between the people of the United States, the debtor, and the bondholder, the creditor, and we have no

right to administer that trust upon any equitable considerations not clearly arising out of the terms of the contract, or upon any chivalric notions of honor, but exactly according to the words and spirit of the contract creating the obligation. We have no more right than a guardian would have to pay what he supposes might be an equitable debt of his ward, or an executor to exercise his notions of honor by paying out the funds of his trust against the protest of the creditors of the estate or the legatees.

MR. MILLER.—One question more. Is there any other obligation upon the United States but that of an equitable one? The United States being a sovereign cannot be sued.

MR. BUTLER.—The United States Government is bound by its laws to the same extent as the humblest individual; and it makes no difference as to its obligations that there is no court in which to enforce its contracts except this highest court, the Congress of the United States.

CHAPTER XIII

CONTRACTION OF THE CURRENCY

Report of Hugh McCulloch, Secretary of the Treasury, on Contraction of the Currency, Payment in Gold of Bond Interest, Etc.—Gen. Robert C. Schenck [O.] Introduces in the House Bill to Prevent Further Reduction of the Currency by Retiring United States Notes; It Is Opposed by James G. Blaine [Me.], Gen. James A. Garfield [O.], *et al.*; Passed—Debate in the Senate: in Favor, John Sherman [O.], William M. Stewart [Nev.], John B. Henderson [Mo.], Oliver P. Morton [Ind.], Timothy O. Howe [Wis.]; Opposed, Justin S. Morrill [Vt.], Henry W. Corbett [Ore.], William P. Fessenden [Me.], George F. Edmunds [Vt.], John Conness [Cal.]; Bill Is Passed with Amendments; House Refuses to Concur, and Bill Is Passed by Both Chambers without Amendments; It Becomes a Law Without Signature of the President.

THE report of Hugh McCulloch, Secretary of the Treasury, which accompanied President Johnson's message of December, 1867, is one of the most notable documents in the economic literature not only of the United States, but of the world. It deals with the principles not only of money, but also of taxation, in profound yet luminous fashion.

It was, in particular, a defence of the Secretary's persistent policy of contracting the currency on every opportunity afforded him under the law, and, connected with this, of paying in gold the interest of all Government bonds, whether or not such payment had been specifically promised in the law authorizing their issue.

MCCULLOCH'S REPORT

[ABRIDGED]

During the month of September, 1865, the army having been reduced nearly to a peace footing, it became apparent that the internal revenues and the receipts from customs would be

sufficient to pay all the expenses of the Government and the interest on the public debt, so that thenceforward the efforts of the Secretary were to be turned from borrowing to funding. Besides the United States notes in circulation, there were nearly $1,300,000,000 of debts in the form of interest-bearing notes, temporary loans, and certificates of indebtedness, a portion of which were maturing daily, and all of which, with the exception of the temporary loans (which, being in the nature of loans on call, might or might not be continued, according to the will of the holders), must be converted into bonds or paid in money before the 16th of October, 1868. The country had passed through a war unexampled in its expensiveness and sacrifice of lives; it was afflicted with a redundant and depreciated currency; prices of property and the cost of living had advanced correspondingly with the increase of the circulating medium; men, estimating their means by a false standard of value, had become reckless and extravagant in their expenditures and habits; business, in the absence of a staple basis, was unsteady and speculative, and great financial troubles, the usual result of expensive wars, seemed to be almost inevitable.

It was under such circumstances that the work of funding the rapidly maturing obligations of the Government and restoring the specie standard was to be commenced. While the latter object could not be brought about until the former had been accomplished, it was highly important that the necessity of an early return to specie payments should never be lost sight of. At the same time it seemed to the Secretary that a return to the true measure of value, however desirable, was not of sufficient importance to justify the adoption of such measures as might prevent funding, and injuriously affect those branches of industry from which revenue was to be derived, much less such measures as might, by exciting alarm, precipitate the disaster which so many anticipated and feared. Thus the condition of the country and the treasury determined the policy of the Secretary, which has been to convert the interest-bearing notes, temporary loans, etc., into gold-bearing bonds, and to contract the paper circulation by the redemption of United States notes. For the last two years this policy has been steadily but carefully pursued, and the result upon the whole has been satisfactory to the Secretary, and, as he believes, to a large majority of the people.

There is not, in the opinion of the Secretary, any insuperable difficulty in the way of an early and a permanent restoration of the specie standard. It may not be safe to fix the exact

time, but, with favorable crops next year, and with no legislation unfavorable to contraction at this session, it ought not to be delayed beyond the 1st of January or, at the furthest, the 1st of July, 1869. Nothing will be gained, however, by a forced resumption. When the country is in a condition to maintain specie payments they will be restored as a necessary consequence. To such a condition of national prosperity as will insure a permanent restoration of the specie standard the following measures are, in the opinion of the Secretary, important, if not indispensable:

First. The funding or payment of the balance of interest-bearing notes, and a continued contraction of the paper currency.

Second. The maintenance of the public faith in regard to the funded debt.

Third. The restoration of the Southern States to their proper relations to the Federal Government.

If this opinion be correct the question of permanent specie payments, involving, as it does, the prosperity of the country, underlies the great questions of currency, taxation, and reconstruction, which are now engaging the attention of the people, and cannot fail to receive the earnest and deliberate attention of Congress.

To this policy of contraction the action of the Secretary has been conformed, and the effect of it has been so salutary, and the continuation of it would be so obviously wise, that he would not consider it necessary to say one word in its favor were there not indications that, under the teachings of the advocates of a large and consequently a depreciated currency, such views are being inculcated as, if not corrected, may lead to its abandonment.

Money is simply a medium of exchange and measure of value. As a medium it facilitates exchanges, and by doing this necessarily stimulates production. It does not follow, however, that exchanges are facilitated and production stimulated in proportion to its increase. It is a measure of value, but it does not necessarily create values. It is an indispensable agent in trade between individuals, and in commerce between nations; the great incentive to enterprise and labor in the wide range of human energy and skill; but, great as is its power, and essential as it is to the progress of the race in civilization and refinement, there are limits beyond which its volume cannot be extended without a diminution of its usefulness. A certain amount is required for facilitating exchanges and determining values. The exact amount required cannot of course be accurately determined, but the excess or deficiency of money in a country is always pretty accurately indicated by the condition of its industry and trade. In all countries there is just as much money needed as will encourage enterprise, give employment to labor, and furnish the means for a ready exchange of property, and no more. Whenever the amount in circulation exceeds the amount required for these purposes, the fact will become apparent by a decline of industry, an advance of prices, and a tendency to speculation. Especially will this be the case when an irredeemable currency becomes the standard of value by being made a legal tender. Coin, being the circulating medium of the world, flows from one country to another in obedience to the law of trade, which prevents it from becoming anywhere, for any considerable period, excessive in amount; when this law is not interfered with by legislation, the evils of an excessive currency are corrected by the law itself. An increase of money beyond what is needed for the purposes above named, according to all experience, not only inflates prices, but diminishes labor; and coin, as a consequence, flows from the country in which the excess exists to some other where labor is more active and prices are lower: to flow back again when the loss by one country and the gain by another produce the natural results upon industry and production. Thus coin is not only the regulator of commerce but the great stimulator of industry and enterprise.

The same may be said of a convertible paper currency, which, by being convertible, will not for any considerable period be excessive; but it is rarely if ever true of an inconvertible currency, which is necessarily local, and would not be likely to be inconvertible if it were not excessive, and by being excessive and inconvertible is fluctuating and uncertain in value. The only possible exception to this rule would be found in the limitation of the amount in circulation to what might be absolutely required in the payment and disbursement of the public revenues. No matter what laws may be enacted to give credit and value to it, an irredeemable currency must, unless limited as above stated, always be a depreciated currency. The attempt to give value to paper promises by making them lawful money is not original with the United States. The experiment has been tried by other nations, and generally with the same injurious if not disastrous results. Indeed, with rare exceptions, nations that have commenced the direct issue of paper money have continued to issue it until prevented by its utter worthlessness. There may be no danger that this will be true of the United States; but there will always be ground for apprehension as

long as an irredeemable and depreciated currency is not regarded as an evil—an evil to be tolerated only so long as may be necessary to retire it without great derangement of legitimate business. Inconvertible and depreciated lawful money is an agreeable but demoralizing deception. It is agreeable because it is plentiful, and because it deludes by the creation of apparent wealth. It is demoralizing by familiarizing the public mind with dishonored obligations. The prices of most kinds of property in the United States advanced near three fold during the war, but this advance was mainly the result of the increase of the circulating medium, and in reality only indicated its depreciation. The purchasing power of the money in circulation was diminished in the ratio that its volume was increased. The farmer, for example, received three dollars a bushel for his wheat, but, except for the payment of debts, these three dollars were of no more value to him than one dollar was before the suspension of specie payments.

The same was true of other kinds of property and other labor. The advance, except so far as it was the result of an increased demand, was apparent only and unreal. The same cause is sustaining prices at the present time, and will continue to do so as long as the cause exists, but the advantages resulting from it are merely imaginary, while the evils are positive and actual. No sane man supposes that his own wealth, or the wealth of the nation, is increased by the depreciation of the standard by which it is measured. If the paper circulation of the United States should be doubled during the next year, and the prices of property should be likewise doubled, would it be imagined that the real value of property would be thus advanced? Or, if the paper currency should, during the same period, be reduced fifty per cent., and prices of property should decline correspondingly, would it follow that the real value of property would thus decline? In the one case the value of the currency would be reduced in proportion to its increase in amount; in the other the currency would be increased in value as it was diminished in amount. The increase or decrease of prices would, if no counteracting causes intervened, be the natural result of the increase or decrease of the measure of value, while real values remained unchanged.

The United States notes were made a legal tender and lawful money because it was thought that this character was necessary to secure their currency. By reference to the first debates of Congress upon the subject it will be noticed that those who advocated their issue justified themselves on the ground of neces-

sity. No one who spoke in favor of the measure favored it upon principle or hesitated to express his apprehensions that evil consequences might result from it. But the Government was in peril, the emergency was pressing, necessity seemed to sanction a departure from sound principles of finance, if not from the letter of the Constitution, and an inconvertible currency became the lawful money of the country. While the action of Congress, in authorizing the issue of these notes, seemed necessary at the time, and was undoubtedly approved by a large majority of the people, there can now, in the light of experience, be no question that the apprehensions of those who advocated the measure as a necessity were well founded. Had they not been made a legal tender, the amount in circulation would not have been excessive, and the national debt would doubtless have been hundreds of millions of dollars less than it is. The issue would have been stayed before a very large amount had been put in circulation, not because the notes would have been really more depreciated by not being made lawful money, but because their depreciation would have been manifest. By being made lawful money they became the legalized measure of value—a substitute for the precious metals—which, as a consequence, were at once demonetized and converted into articles of traffic. Made by statute a legal tender, they were of course popular with those who had debts to pay or property to sell; costing nothing, and yet seemingly adding to the value of property, supplying the means for speculation and for creating an artificial and a delusive prosperity, it is an evidence of the wisdom of Congress that the issue was stopped before the notes had become ruinously depreciated and the business of the country involved in inextricable difficulties.

But although the issue of these notes was limited, and we thus escaped the disasters which would have overwhelmed the country without such limitation, it can hardly be doubted that the resort to them was a misfortune. If this means of raising money had not been adopted bonds would have undoubtedly been sold at a heavy discount, but the fact that they were thus sold, without debasing the currency, would have induced greater economy in the use of the proceeds, while the discount on the bonds would scarcely have exceeded the actual depreciation of the notes below the coin standard. As long as notes could be issued and bonds could be sold at a premium or at par, for what the statute made money, there was a constant temptation to liberal if not unnecessary expenditures. Had the specie standard been maintained and bonds been sold at a discount for real money there would have been an economy in all the branches of

the public service which unfortunately was not witnessed, and the country would have escaped the evils resulting from a disregard of the great international law, which no nation can violate with impunity, the one that makes gold and silver the only true measure of value. The financial evils under which the country has been suffering for some years past, to say nothing of the dangers which loom up in the future, are in a great degree to be traced to the direct issues by the Government of an inconvertible currency with the legal attributes of money.

Upon the demoralizing influences of an inconvertible Government currency it is not necessary to enlarge. They are forced upon our attention by every day's observation, and we cannot be blind to them if we would. The Government is virtually repudiating its own obligations by failing to redeem its notes according to their tenor. These notes are payable to bearer on demand in dollars, and not one of them is being so paid. It is not to be expected that a people will be more honest than the Government under which they live, and while the Government of the United States refuses to pay its notes according to their tenor, or at least as long as it fails to make proper effort to do so, it practically teaches to the people the doctrine of repudiation.

If the views thus presented are correct, there can be no question that there is still an excess of paper money in the United States, and that the legal-tender notes are an obstacle, and unless reduced in amount must continue to be an obstacle to a return to a stable currency.

In opposition to these views it is urged by many intelligent persons that as the credit system has been very much curtailed since 1861, and sales are made chiefly for cash, a much larger amount of currency is required than formerly for the convenient transaction of business; that there is in fact no excess of money in the United States, but that on the contrary an increase is required to move the crops, encourage enterprise, and give activity to trade. As an evidence of the correctness of this opinion, reference is made to the "tightness of the money market" in the commercial cities, and the scarcity of money in the agricultural districts.

It is undoubtedly true that the effect of a curtailment of credits would have been to increase the legitimate demand for currency, if no other means had intervened to counteract the effect of it. But such means have intervened. In all the cities and towns throughout the country, checks upon credits in banks, and bill of exchange, have largely taken the place of

bank notes. Not a fiftieth part of the business of the large cities is transacted by the actual use of money, and what is true in regard to the business of the chief cities is measurably true in regard to that of towns and villages throughout the country. Everywhere bank credits and bills of exchange perform the offices of currency to a much greater extent than in former years. Except in dealings with the Government, for retail trade, for the payment of labor and taxes, for traveling expenses, the purchase of products at first hand, and for the bankers' reserve, money is hardly a necessity. The increased use of bank checks and bills of exchange counterbalances the increased demand for money resulting from the curtailment of mercantile credits. That money is in demand, and is commanding full rates of interest, is true, but this does not indicate a scarcity of it. The rates of interest in England and France have rarely been as low as within the last four months, and yet for commercial or manufacturing purposes money has not often been so difficult to be obtained. The speculative reaction or overproduction of manufactures, together with apprehensions of political troubles, have caused business to be sluggish and unprofitable, and made capitalists cautious and timid. Thus, in those countries, money was never more plentiful, and yet apparently never more scarce. Its apparent scarcity in the United States is attributable to high prices, to its uncertain value, and to its inactivity.

Money by no means becomes abundant by an increase or scarce by a diminution of its volume. The reverse is more likely to be true, especially when, as is generally the case, high prices are speculative prices, and prevent activity in exchanges. Money is in demand at the present time, not so much to move crops as to hold them—not to bring them at reasonable prices within the reach of consumers, but to withhold them from market until a large advance of prices can be established. Let the great staples of the country come forward and be sold at market prices, at such prices as, while the producer is fairly remunerated, will increase consumption and exports—let capitalists be assured that progress toward a stable basis is to be uninterrupted—and money, now considered scarce, will be found to be abundant. The actual legitimate business of the country is not larger than it was in 1860, when three hundred millions of coin and bank notes were an ample circulating medium, and when an addition of fifty millions would have made it excessive. Throughout a considerable portion of the best grain-growing sections of the United States there has been during the past year great complaint of a scarcity of money, and yet no single

article of agricultural product, except wool, was to be sold there for which there was not a purchaser at more than remunerating, if not exorbitant, prices. There was no lack of money in these sections, but a lack of products to exchange for it. The hard times complained of were the consequence of short crops, and not of deficient circulation. To the farmer, who had little to sell and much to buy, an increase of the circulation would have been an injury; a curtailment of it a benefit. And yet by men in such circumstances the policy of contraction has met with a condemnation second only to that which it has received at the hands of speculators in stocks.

Next to the stock board of the commercial metropolis, the opposition to the policy of contraction has been most decided in those sections where, by reason of short crops, the people have been less prosperous than heretofore. Unfortunately, in the same sections, the harvest has been again unsatisfactory, and the demand not only for a cessation of contraction but for an increase of paper money may thus be more pressing than ever. This demand, no matter from what quarter it comes or by what interest sustained, should, in the opinion of the Secretary, be inflexibly resisted by Congress. To increase the volume of paper money for the purpose of giving relief to the country would be to foster the cause in order to cure the disease. To stay the process of contraction this year will but prepare the way for an increase of circulation the next. Whenever the policy of reducing the paper circulation of the country, with the view of a return to specie payments, shall be abandoned, it is to be apprehended that the demand for an increase will be irresistible, and that the country will plunge into bankruptcy. The specie standard must be sooner or later restored. Whether this shall be accomplished by elevating the currency by lessening its volume, or after lessening its value by increasing its volume, it is for Congress to determine. That this question will be determined promptly and wisely the Secretary is not permitted to doubt. Some progress has been made in the right direction during the past year, but there is still in the United States a plethora of paper money. If this is not so, how happens it that coin commands a premium of some forty per cent. over legal-tender notes?—that a high tariff has proved powerless to prevent excessive importations?—that capitalists hesitate in regard to the uses to which they shall put their surplus means?—that business is speculative and uncertain?—that expenses of living are driving thousands into crime and making dishonesty excusable, while honorable men of limited means are indignantly

and justly complaining that they cannot live on incomes that formerly gave them a handsome support? Money may be inactive, but it is not scarce. Its inactivity is in fact the result of its uncertain value. With a circulation that is to-day at a discounty of thirty per cent., and which may by a change of policy be increased to sixty per cent. within the next year, with what safety can men engage in enterprises which look into the future, and which are needed to develop the slumbering resources of the country? Let the paper dollar truly represent the dollar in coin. Let men of capital and enterprise feel that the currency has come, or is steadily coming to the "hard-pan" of specie, and there will be a stimulus given to enterprise and labor which will banish all complaints of a scarcity of money.

If, then, it be admitted that the paper circulation is excessive, the question arises why should not the contraction be applied to the notes of the national banks instead of the United States notes, and thus a large saving of interest to the Government be effected? This question has already been answered inferentially, but its importance requires that it shall receive more definite consideration.

Prior to 1863 the banking institutions of the country, with the exception of the Bank of the United States, were created by the States, and were subject to State authority alone. They were State institutions, over which the general Government exercised no control. The right of the States to create and to manage them had been so long conceded that no interference with them by Congress, and no decision of the courts adverse to the constitutionality of their issues were apprehended.

Soon after the commencement of war it became manifest that a system of internal taxation must be adopted for the support of the Government and the maintenance of its credit, and that this would involve the necessity of a national currency of uniform value and undoubted solvency. To meet this necessity (United States notes being then regarded as only a temporary expedient) the national banking system was created, not to destroy the State banks nor injuriously to affect their business, but to furnish through their agency and that of new institutions which might be organized under it a permanent national bank note circulation. Had it been supposed that the object of those who advocated the measure was to bring the State banks under the control of the Federal Government for the purpose of destroying them, or that such would be its effect, it would never have been adopted. No such object was avowed or intended by its friends, and no such effect was anticipated by the banks.

With that spirit of patriotism which was so marked a characteristic of the people of the North during the war, the stockholders of the State banks relinquished, at the request of the Government, the greater privileges possessed by them under State laws, and in connection with the new banks organized under the law became efficient aids in negotiating the public loans and sustaining the public credit. To all banking systems under which circulating notes are issued there are grave objections, and if there were none in existence in the United States the Secretary would hesitate to recommend or to indorse even the most perfect that has been devised.

The question now to be considered, however, is not whether banks of issue should be created, but whether the national banking system should be sustained. In the present condition of the country, and in view of the relations that the national banks sustain to the Government (ignoring in this connection the question of good faith), the Secretary has no difficulty in coming to the conclusion that they should be sustained. They are so interwoven with all branches of business, and are so directly connected with the credit of the Government, that they could not be destroyed without precipitating upon the country financial troubles which it is now in no condition to meet. At some more propitious period, when the Union shall have been fully restored, and all the States shall have attained that substantial prosperity which their great resources and the energy of their people must sooner or later secure for them, it may perhaps be wise for Congress to consider whether the national banking system may not be dispensed with. The present is not a favorable time to consider this question. The condition of our political and financial affairs is too critical to justify any action that would compel the national banks, or any considerable number of them, to call in their loans and put their bonds upon the market for the purpose of providing the means of retiring their circulation. Conservative legislation is now indispensable. The public mind is too sensitive, business is too unsteady, and the political future is too uncertain to warrant any financial experiments. Fortunately none are required. The national banking system has accomplished all and more than was anticipated by its advocates. It has furnished a circulation, depreciated it is true, like the United States notes, but solvent beyond question, and current throughout the Union. It has prevented bank note panics and saved note holders from losses. It has aided in regulating domestic exchanges, and furnished the Government with valuable financial agents. Had it not been adopted

State banks would have continued, as long as they were tolerated, to furnish the country with bank notes.

Who can estimate the extent of the injury which the people and the Government would have sustained if State institutions, without any other restrictions than were enforced by State laws, had been permitted during the war to occupy the field? All having suspended specie payments, and thereby been relieved from the necessity of furnished evidence of solvency, banks unwisely or dishonestly managed would have stood on a level with those which were managed wisely and honestly. While the latter would have found it difficult to keep their issues within reasonable limits, stimulated as they would have been to issue freely, by the necessities of the Government and the increasing demand for money, which is always the result of an increased supply, the former would have poured out their irredeemable promises until distrust created panic and panic disaster. That the national banking system, with its limited and secured circulation, and its restricted provisions, by superseding the State systems, has prevented a financial crisis there can be but little doubt. For this it is entitled to credit; and for this and for other reasons suggested it should be sustained until a better system shall be devised, or the country is in a condition to dispense with banks of issue altogether.

The arguments in favor of compelling the banks to retire their notes, and yielding the field to the notes of the Government, are based upon the supposition that if $300,000,000 of United States notes were substituted for the $300,000,000 of national bank notes now in circulation the Government would save some eighteen million dollars in interest which is now a gratuity to the banks. That there would be no such saving, nor any saving, by the proposed substitution is clearly shown by the Comptroller of the Currency in his accompanying report, to which the attention of Congress is especially asked. If an account were opened with the banks, and they were charged with the interest on $300,000,000, and the losses sustained through those that have failed, and credited with the interest on the United States notes held by them as a permanent reserve, the taxes paid by them to the Government and the States, and with a commission covering only what has been saved in transferring and disbursing public money, it would be ascertained that the banks were not debtors to the United States. It is not necessary, however, for the Secretary to dwell on this point, as his main objection to the substitution would not be removed if a saving of interest would be effected by it. Regarding, as he

does, the issue of the United States notes in the first instance as having been a misfortune, and their continuance as a circulating medium, unless the volume shall be steadily reduced, as fraught with mischief, the Secretary can conceive of no circumstances that would justify a further issue.

These depreciated but legal-tender notes, notwithstanding the reduction that has taken place, still stand in the way of a return to specie payments; a substitution of them for bank notes would be regarded by him and by the country as a declaration that resumption had been indefinitely postponed. If those now outstanding shall be retired at the rate of only $4,000,000 per month, the amount in actual circulation will soon be so reduced that they may not seriously retard the restoration of the true measure of value. If, on the contrary, under any pretence, or for any purpose whatever, their volume should be increased, especially if they should be made the sole paper circulation of the country, a false measure of value will be continued, speculation will be stimulated, industry will decline, and the great risk be incurred that financial health will only be obtained by a revulsion, the effect of which upon the material interests and credit of the country no one can estimate. Such a revulsion the Secretary is most anxious to prevent; and he therefore cannot approve the proposition of substituting the notes of the United States for those of the national banks, but recommends that the policy of contraction be continued.

The apprehension that this policy will embarrass healthy trade is in his judgment unfounded. Legitimate business has not suffered by the curtailment which has taken place within the last two years, nor will it permanently suffer by such a contraction, prudently enforced, as may be necessary to bring the precious metals again into circulation. What business requires is a stable currency. What enterprise demands is the assurance that it shall not be balked of its just rewards by an unreliable measure of value. It is frequently urged by those who admit that the currency is redundant that the country is not now in a condition to bear further contraction; that its growth will soon render contraction unnecessary; that business, if left to itself, will rapidly increase to such an extent as to require the $388,000,000 of United States notes and fractional currency, and the $300,000,000 of bank notes, now outstanding, for its proper and needful accommodation. Nothing can be more fallacious than this unfortunately popular idea. An irredeemable currency is a financial disease which retards growth instead of encouraging it: which stimulates speculation but diminishes labor.

A healthy growth is to be secured by the removal of the disease, and not by postponing the proper treatment of it in the expectation that the vigorous constitution of the patient will eventually overcome it.

The next subject to be considered, in connection with the permanent resumption of specie payments, is the maintenance of the public faith, which involves the necessity of wise and stable revenue laws, impartially and rigorously enforced; economy in the public expenditures; and a recognition of the obligation of the Government to pay its bonds in accordance with the understanding under which they were issued.

Nothing but absolute insolvency will save from the infamy of repudiation a nation that does not pay its debts according to the understanding at the time they were contracted; and when a nation voluntarily violates this understanding it will soon be unable, from the very effect of its own example, to enforce its revenue laws; and its expenditures will only be checked by its inability to collect. How much of the demoralization which exists in the revenue service of the United States is attributable to the failure of the Government to redeem the legal-tender notes according to their tenor would be an interesting subject of inquiry, but hardly appropriate in a communication like this.

Now, to what is the United States pledged in regard to the public debt? Is it not that it shall be paid according to the understanding between the Government and the subscribers to its loans at the time the subscriptions were solicited and obtained? And can there be any question in regard to the nature of this understanding? Was it not that, while the interest-bearing notes should be converted into bonds or paid in lawful money, the bonds should be paid, principal as well as interest, in coin? Was not this the understanding of the Congress which passed the loan bills and of the people who furnished the money? Did any member of the House or of the Senate, prior to 1864, in the exhaustive discussions of these bills, ever intimate that the bonds to be issued in accordance with their provisions might be paid, when redeemable, in a depreciated currency? Was there a single subscriber to the five-twenty bonds, or to the seven and three-tenth notes, which by their terms were convertible into bonds, who did not believe, and who was not given to understand by the agents of the Government, that both the principal and interest of these bonds were payable in coin? Does anyone suppose that the people of the United States, self-sacrificing as they were in the support of the Government,

would have sold their stocks, their lands, the products of their farms, of their factories and their shops, and invested the proceeds in five-twenty bonds and seven and three-tenth notes, convertible into such bonds, if they had understood that these bonds were to be redeemed after five years from their respective dates in a currency of the value of which they could form no reliable estimate? Would the Secretary of the Treasury, or would Congress, when the fate of the nation was trembling in the balance, and when a failure to raise money for the support of the Federal army would have been success to the rebellion and ruin to the Union cause, have dared to attempt the experiment of raising money on bonds redeemable at the pleasure of the Government, after five years, in a currency the convertible value of which might not depend upon the solvency of the Government but upon the amount in circulation? No such understanding existed, and fortunately no such experiment was tried. The bonds were negotiated with the definite understanding that they were payable in coin, and the seven and three-tenth notes with an equally definite understanding that they were convertible at the option of the holder into bonds of a similar character or payable in lawful money. The contracts were made in good faith on both sides, a part of them when the Government was in imminent peril and needed money to preserve its existence, the balance when its necessities were scarcely less urgent for the payment of its just obligations to contractors and to the gallant men by whom the nation had been saved. Good faith and public honor, which to a nation are of priceless worth, require that these contracts should be complied with in the spirit in which they were made. The holders of our bonds at home and abroad who understand the character of the people of the United States and the greatness of the national resources ought not to need an assurance that they will be so complied with.

The acts of March 3, 1863, and March 3, 1864, are the only acts which state expressly that the bonds to be issued under them shall be payable in coin; and this provision in these acts, if not accidental, attracted no attention at the time, either in Congress or with the public. Under the former act $75,000,000 of twenty-year six per cent. bonds (part of those known as bonds of 1881) were issued, and under the latter act nearly two hundred millions of five per cent. bonds, known as ten-forties; and the fact that these six per cent. bonds have had no higher reputation than other bonds of the same class, and that the five per cent. bonds never were a popular security, and have in the market until very recently scarcely possessed a value corresponding with the six per cent. five-twenties, shows conclusively that dealers in Government securities, and the people generally, have not regarded this provision as placing them on a different footing as to the kind of money in which they are to be paid from the bonds issued under acts containing no such provisions.

There was nothing in the condition of the country when these acts were passed that required an unusual provision in order that the loans authorized by them might be successfully negotiated; on the contrary, the national credit was better then than at periods when other loan bills were passed; nor was there any intimation by any member of Congress, nor was it ever thought by the officers of the Treasury Department that the bonds authorized by them were of a different character from those issued under other acts. It is unreasonable to suppose that it was the intention of Congress that the bonds authorized by the acts of February 25, 1862, and June 30, 1864, might be paid in legal-tender notes while those authorized by the acts of March 3, 1863, and March 3, 1864, could be paid only in coin. The various issues of bonds, constituting the national funded debt, stand upon the same footing, and all should be paid in coin, if any are so paid.

National debts are subject to the moral law of the nations. Whenever there is no expression to the contrary, coin payments in such obligations are honorably implied. The policy of the Government of the United States in regard to the payment of its debts has been uniform and consistent. Prior to February 25, 1862, there was in the United States no lawful money but specie, consequently its treasury notes, and its bonds previously issued, were payable in the same currency. Subsequently all interest-bearing notes were made payable in lawful money, but no change was made in the form of the obligation of the bonds. Thus the seven and three-tenth notes issued after that date, the five per cent. notes, and the compound-interest notes were made payable in lawful money, while the bonds, not being so made payable, have ever been recognized by Congress, by the Treasury Department, and by the people, as payable only in coin. These different classes of securities were negotiated with this distinct understanding—an understanding which is as binding upon the honor of the nation as if it were explicitly stated in the statute.

It is true that the bonds, and notes convertible into bonds, issued after the passage of the first legal-tender act were paid for in a depreciated currency, and were therefore, in fact, sold at a discount; but it is not denied that they were sold fairly,

and that everyone had ample opportunity to subscribe for them. Agencies were established and subscriptions solicited in every part of the country; and liberal subscriptions were regarded as evidence of loyalty. That they were paid for in a depreciated currency was not the fault of the subscribers. They were sold at the highest price that could be obtained for them—not chiefly to the capitalists of the cities, but to men of moderate means throughout the country, who subscribed for them, not for speculation, but to aid the Government in its struggles with a gigantic rebellion; and it is a significant fact that, with rare exceptions, the complaints that they were sold at a discount come from those who, doubtful of the result of the conflict, declined to invest in them. How would the Government of the United States stand before the world—how would it stand in the estimation of its own people, if it should decline to pay, according to agreement, the money it borrowed when its very existence was in peril, and without which it could not have prosecuted the war, on the ground that the lenders took advantage of its necessities and purchased its securities at less than their value?

But if the honor of the nation were not involved in the question the inquiry arises, In what shall the bonds be paid if not in coin? Some five hundred and fifteen millions of five-twenty bonds are now redeemable according to their tenor. No one, certainly, would propose that some of them shall be called in and paid in a currency now worth seventy cents on the dollar while the rest shall remain unredeemed until the currency shall be more depreciated by additions to its volume or appreciated by contraction. The holders of these bonds stand on the same footing; if any are to be paid before maturity in a depreciated currency the whole should be so paid, and in a currency of equal value. But the Government has no United States notes in the treasury, and as the annual receipts are not likely hereafter to be much in excess of the expenditures, and as a new loan to raise money for the purpose of violating an agreement under which a previous loan was negotiated would be impracticable, there would be no way in which the bonds now redeemable could be paid as has been proposed except by putting the printing presses again at work and issuing more promises which must themselves eventually be paid in coin, converted into coin bonds, or repudiated. This process of making money seems an easy one, but our own experience and the experience of every other nation that has tried it prove it to be neither judicious nor profitable.

As the paper circulation of the country is already redundant

it would be lessened in value by every addition to it, and by the distrust thus created its depreciation would doubtless be in a greater ratio even than the additions would bear to the volume to which they would be added. It is not too much to say that an additional issue of $500,000,000 of United States notes would reduce the $700,000,000 of paper money now in circulation to one-half their present value; so that a legal-tender note or a national bank note, now worth seventy per cent. in coin, would not be worth more than thirty-five per cent., even if the apprehension of further issues did not place it on a par with Confederate notes at the collapse of the rebellion. The bonds would of course decline in value with the currency in which they would be payable. Can anyone seriously propose thus to depreciate, if not to render valueless, the money and securities of the people? Can anyone, knowing the effect which such an issue would have upon the Government bonds, upon the currency now afloat, upon business, upon credit, upon the public morals, seriously advocate such a measure, not as a matter of necessity, but to anticipate the payment of debts due many years hence? The statement of the proposition exposes its wickedness. When fairly considered it cannot fail to be stamped with universal condemnation. It is a proposition that the people of the United States, who own four-fifths of the national obligations, shall, by their own deliberate act, rob and ruin themselves, and at the same time cover the nation with inexpressible and ineffaceable disgrace.

In opposition to all such expedients for payment of, or rather for getting rid of, the public debt is the upright, world-honored *economical* policy of paying every obligation of the Government according to the understanding with which it was created —the policy of appreciating the paper dollar until it shall represent a dollar in coin, of giving stability to business and assurance to enterprise, and wiping from the country the reproach that rests upon it by reason of the low price of its securities in the great marts of the world. That this is the policy which will be sustained by the people and their representatives the Secretary has the fullest confidence. There may hereafter be nations which, ignoring their honorary obligations, may look only to their own statutes for the measure of their liabilities. If there shall be such nations the Republic of the United States will not be found among them. It has essentially suffered by the actual repudiation of some of the States and the virtual repudiation of others; it is still suffering from the same cause, although more than a quarter of a century has elapsed since this stigma was fixed upon American credit. It is suffering also

from the fact that Massachusetts and California alone, of all the States, have continued to pay the interest on their bonds in coin. But, although it has suffered, and is still suffering, from the bad faith or false economy of some of its members, its own financial honor is unsullied. It has committed the mistake of making its inconvertible promises a legal tender, but it has never taken advantage of its own legislation to lessen in the hands of the holders the value of its securities or violate its engagements by covert repudiation. In the darkest hours of the rebellion it faltered not in the observance of its contracts. Shall it falter now when its ability to pay to the uttermost farthing, even without oppressive taxation, cannot be questioned?

There is a general sentiment among taxpayers that the exemption of Government bonds from local taxation is not exactly right, and that it ought to be in some way avoided in future issues. The Secretary has no hesitation in admitting that he is in sympathy with this sentiment. The difficulty in the way, however, as has been suggested, arises from the fact that if bonds hereafter to be issued were to be subject to local taxation very few would be held where taxes are high, and there would be a constant tendency to a concentration of them in States and counties and cities where taxes are low, or in foreign countries, where they would escape taxation altogether. It is a matter of great importance that the Government bonds should be a desirable investment in all parts of the country, and it is obvious that the States should be in some manner compensated for the right now denied of taxing them as other kinds of property are taxed.

After giving the subject careful consideration the Secretary can suggest no better way of doing it than by an issue of bonds to be known as the Consolidated Debt of the United States, bearing six per cent. interest, and having twenty years to run, into which all other obligations of the Government shall as rapidly as possible be converted; one-sixth part of the interest at each semi-annual payment to be reserved by the Government and paid over to the States, according to their population. By this means, all the bonds, wherever held, would be taxed alike, and a general distribution of them be secured.

The manufacturers of the country and those who had incurred pecuniary obligations were greatly alarmed at the persistent policy of Secretary McCulloch in contracting the currency, which, they claimed, lowered the price

of goods as measured by money, and raised the price of money as measured by goods. Even the creditor class were opposed to too great a contraction, since this might throw their debtors into bankruptcy.

Accordingly petitions poured into Congress, asking that the hand of the Secretary of the Treasury be stayed, and during the first days of the session numerous bills were introduced to this effect. One of these, introduced in the House on December 5 by Robert C. Schenck [O.], was to the effect that "further reduction of the currency by retiring and canceling United States notes is prohibited." This was unanimously approved by the Committee on Ways and Means, and was passed on December 7 by 127 yeas to 32 nays. Among those who opposed the bill, as postponing the resumption of specie payments, were such prominent Republicans as James G. Blaine [Me.], and James A. Garfield [O.]. Samuel J. Randall [Pa.], who was rising in prominence as a Democratic leader, also voted in the negative.

The bill came up for discussion in the Senate on January 9, 1868.

Reduction of the Currency

Senate, January 9–15, 1868

John Sherman [O.], chairman of the Committee on Finance, supported the bill. He stated his reasons for doing so, as follows:

First. It will satisfy the public mind that no further contraction will be made when industry is in a measure paralyzed. We hear the complaint from all parts of the country, from all branches of industry, from every State in the Union that industry for some reason is paralyzed and that trade and enterprise are not so well rewarded as they were. Many, perhaps erroneously, attribute all this to the contraction of the currency—a contraction that I believe is unexampled in the history of any nation. One hundred and forty million dollars have been withdrawn out of $737,000,000 in less than two years. It may be wise, it may be beneficial, but still it has been so rapid as to excite a stringency that is causing complaint, and I think the people have a right to be relieved from that.

Second. This bill will restore to the legislature their power over the currency, a power too important to be delegated to any single officer of the Government.

Third. This will strongly impress upon Congress the imperative duty of acting wisely upon financial measures, for the responsibility will then rest entirely upon Congress and will not be shared with them by the Secretary of the Treasury.

Fourth. It will encourage business men to continue old and embark in new enterprises, when they are assured that no change will be made in the measure of value without the open and deliberate consent of their representatives. I have entire confidence that Congress will, in due time, provide such measures as will enable our people to pursue the industries of peace with all the energy and success with which they conducted war. Now, it is our duty to relieve them from perhaps a groundless terror; but, whether groundless or not, it is one that checks and paralyzes all classes and kinds of industry.

Justin S. Morrill [Vt.] opposed the bill as deferring the day of specie payments, and enhancing the price of gold measured in "greenbacks."

Henry W. Corbett [Ore.] opposed the bill as raising the price of commodities.

The present amount of currency in the country and the large amount that has been afloat the past few years have raised the price of every kind of product to such an extent that it is impossible for us to export anything from the country. We are using and consuming within ourselves our products. Flour has advanced to such an enormous price by reason of the inflation of the currency that it is impossible to ship it out of the country and compete abroad with the foreign product of that article. The inflation of the currency is acting as a protective tariff to foreign countries to produce this article, so important to our Western States, so that foreigners are furnishing flour and grain to England and other countries instead of our producing it ourselves and exporting it to them in place of the gold and United States bonds that we have been sending out of the country. We have sent within the past five or six years about six hundred million dollars of gold and United States stocks. Let this continue for one or two years longer, and by this inflated policy all our United States stocks will have been sent out of the country, and we shall be paying a tribute of gold interest to foreign-

ers, and we shall also have sent all our gold out of the country, and we shall perhaps be prevented from resuming specie payments for the next fifteen or twenty years. It is alarming when you see $3,000,000 of gold a week going out of the country, and only $1,000,000 coming in.

The state of financial affairs is alarming to me, and it looks to me as though we had better leave the matter entirely to the Secretary of the Treasury to govern the financial policy as he has heretofore done, wisely, in my opinion, and for the best interests of the country. He is not going to adopt a policy that will cripple the Government or cripple the industrial interests of the country.

William P. Fessenden [Me.] opposed the bill. He agreed with Senator Sherman that Congress should control the currency, but said that it was now doing so, the Secretary of the Treasury having kept within the limits assigned him by the national legislature. The present agitation against reducing the currency was created by people who entertain different views from those held by Congress when it set those limits. These agitators were men "who have multifarious schemes for having a currency in the country irredeemable, mere rags, after the necessity has ceased." If Congress succumbed to this demand it would be a notification to the country that it had abandoned its policy of restoring, as soon as possible, the finances to a sound specie basis.

I believe that all the trouble we have arises from something that is unavoidable. The country is in an anomalous condition in regard to the currency. This arose out of a matter that we could not avoid—the enormous expenditures of the war. We have got to a point where our currency is disordered; we want to get back to a safe position, and as soon as we can. Now, my idea is that only time will accomplish it. Such a position as we are in we cannot get out of without suffering to the country in its business affairs, and the more you legislate to postpone that suffering, the more you legislate with schemes of one kind and another to tide over this time and tide over that time and the other, the more difficult, in my judgment, will it be to meet the crisis at last.

William M. Stewart [Nev.].—The financial troubles we are now laboring under are owing, in the first place, to the

overestimates of the Secretary of the Treasury imposing burdens on the people heavier than they could bear, and in the next place to corruption in office causing a failure to collect the revenue. If Congress is to blame for these over-estimates and for this corruption in office, which has abstracted from the treasury, according to the estimate of some, $200,000,000 a year—if Congress is responsible for these two things, the one a great mistake and the other a great crime, it is time that the President of the United States held us up to scorn and contempt, and it is time that the people hurled us from power.

Now, I am anxious to know where the responsibility rests for these things. Being anxious to know these things, I am willing to pass this or any other bill which shall indicate that Congress does not feel full confidence in the Secretary of the Treasury, for disguise it as you will this bill amounts to nothing more nor less than a reflection upon the Secretary of the Treasury.

Senator Sherman denied that further contraction of the currency was a step toward resumption of specie payments, since

you cannot approach specie payments by contraction except through a distress and a destruction of all the business interests of the country that our people will not submit to. You cannot approach specie payments by contraction alone, though you must contract somewhat. Whenever money is easy it is right enough to contract, but when money is tight the contraction must cease.

So it is in England. When times become very tight the Bank of England is authorized by law to issue an increased circulation, and sometimes the very authority to increase destroys the necessity for it; and I have no doubt that if we could devise a way by which at times the currency might be increased temporarily it would be a wise provision. After the war between Napoleon and Great Britain by act of Parliament the time for resuming specie payments was extended four different times. They approached gradually the period fixed for specie payments; hard times came on; appeals were made to Parliament, and they extended the time one year, and again a year, and then a year more, and not until 1823, an interval of seven years, did they resume specie payments. The period was ex-

Gold for Bondholders, Greenbacks for Soldiers and Sailors
From the collection of the New York Historical Society

tended from time to time according to the condition of the trade of the country.

George F. Edmunds [Vt.].—Allow me to ask my friend whether on the passage of the last act the bank and the speculators were not just as much opposed to coming to specie payments as they were the first time?

Senator Sherman.—There is always a class of the community opposed to the resumption of specie payments. The debtors are always opposed to the resumption of specie payments and the creditors are always in favor of it.

Senator Fessenden.—Is it the intention of the Committee on Finance, with the view they take of the subject, again to assert the policy of contraction before Congress adjourns?

Senator Sherman.—The Senator from Maine knows very well that I cannot answer that question until the committee act.

Senator Fessenden.—I think the committee have acted, because they have reported what looks like the policy suggested by the Senator, of gradually increasing the currency when you want paper and reducing when you do not.

John B. Henderson [Mo.] compared the method by which the currency had been inflated to the getting of a canal boat through locks to a higher level.

Our public debt was created with a circulating medium rising one thousand million dollars. A large portion of the bonds were floated and sold at par. We did not want to sell them beneath par, but we floated them on a circulation of from one thousand million to twelve thousand million dollars. We passed laws declaring that we would not carry on the war with gold or the representative of gold, but we would adopt what we called a legal tender, and compel the creditors of the Government to take it. The soldier was paid in it. We had agreed to pay the soldier in coin, I suppose, if we agreed to pay anybody in coin. We agreed to pay him in what was known as the dollar prior to 1862. We paid him off, however, in the dollar fixed by the acts of 1862, 1863, and 1864. In order to keep our bonds at par we floated them up just as we would put a canal boat through locks. We run into the first lock, and we must have water enough to raise it to the second lock. We found a difficulty in floating our bonds. We wanted to get up into the second lock. We first issued $150,000,000 of greenbacks. That was not satisfactory. We issued $150,000,000 more, and then $100,000,000, making $400,000,000, or rather authorized it, and

issued very nearly that amount. We were not satisfied with that. We issued hundreds of millions of six per cent. compound-interest notes. We were not satisfied with that. We issued what we called, not United States notes, because those are the greenbacks, but we issued what were called treasury notes, bearing interest. All these went into the circulation. A great many of our bonds were bought by individuals at from forty to fifty cents on the dollar in gold. The debt was contracted with this bloated state of affairs.

Now, the very moment the war is over everybody looks to a resumption of specie payments. I want to come to it, too. We have now to bring our canal boat down the locks, and gentlemen will not permit us to let the water in the lock, but we must butt it down and destroy the boat. Sir, we went up by taking time and letting the water into the lock. Now let us come down in the same way, and thereby preserve the boat. If we undertake to come down otherwise we shall destroy the vessel.

Senator Edmunds.—We shall not come down by letting water into the lock. We must pour it out.

Senator Henderson.—I may not understand canal boating as well as my friend; but I undertake to say it would be well to leave the water in the lock and not draw it out before the boat comes upon it.

I may be allowed, perhaps, another illustration. It seems to me that to undertake to drive the country in this state of affairs to a resumption of specie payments by contraction is about as reasonable as it would be for a physician who should call upon a poor patient who had been laboring for some considerable length of time under *delirium tremens* to recommend that his liquor be stopped instantly.

Oliver P. Morton [Ind.] refuted the idea of Senator Stewart that the passage of the bill would be a reflection upon Secretary McCulloch.

We have a right to curtail the discretionary power of any officer without reflecting upon that officer. The Secretary of the Treasury is wise in financial matters, but he is not wiser than all the business men of this country, and they protest almost with one voice against having the further administration of the currency left absolutely in the hands of one man.

Timothy O. Howe [Wis.] supported the bill, because it released the people of the present tax-burdened generation from a system whereby the money paid into the

treasury was there destroyed instead of being returned to them to be used in the business of the country until such time as better conditions would enable it to be destroyed, thereby reducing the public debt.

He admitted that his knowledge of finance was limited.

Sir, the only master of finance under whom I ever studied was Wilkins Micawber, Esq.[1] [Laughter.] Mr. Micawber had a remarkable facility for contracting debts. That facility has characterized the United States for the past few years. Mr. Micawber had but a limited faculty for paying debts. That is another characteristic that I have noticed in the United States for several years past. Mr. Micawber was an honorable man, an honorable debtor. So I hope the United States will turn out to be, as so far it has appeared to be. When Mr. Micawber met his creditor, without any of the coin of the realm in his pocket, he met him like a man and gave him his I O U, and discharged the debt! The United States has practiced upon the same principle so far. We were obliged to contract debts that we could not discharge in anything like money. We had got to employ something that was not money, somebody's credit, and we did as Micawber did—we gave our creditors our I O U. We gave them our notes of hand; and every note that every one of you holds in his pocket, and I hope your pockets are full [laughter], is a certificate of the United States that you have advanced the amount of that note to the United States Government over and above the proportion that was required of you under the tax laws of the country. But Mr. Micawber lacked one facility, for circulating his paper, which the Government possessed. His creditors were perfectly willing to take his notes because they could get nothing else. Our creditors were willing to take our notes for the same reason. But Mr. Micawber could not enable his creditors to circulate his notes as money. We did effect that. We enabled our creditors, whom we compelled to take our notes, to pass them to their creditors and use them as money.

Mr. President, I thought the United States were acting upon a sound principle; I thought the course they took was the only course open to them; but it will be borne in mind that when they first commenced the issuing of this paper the amount was controlled by one idea, and that was that they never would issue a dollar of legal-tender notes when they could borrow the notes; in other words, that all the notes they issued should be convertible into interest-paying bonds. If the country were ready at any time to loan the Government the means to meet its engagements at a fair rate of interest the Government was willing to borrow; but when the country could not loan at a fair rate of interest the country would do like Micawber and issue its notes. That was a fair principle, and if we had kept sight of it until this time I do not think our finances would be in so embarrassed a condition as they are to-day. But unfortunately, to use the figure recently employed by the Senator from Missouri, although we did commence by floating the bonded debt of the country on to the country, we did not stop floating when we had reached the highest lock, so to speak. We kept on issuing these notes after the country preferred not to take them and after the country wished to loan them to the Government, when we might have borrowed them at a rate of interest which we agreed it was fair to pay. Hence, and from this cause you see to-day that it takes from one hundred and eight to one hundred and twelve dollars of the national notes which do not bear interest to buy one hundred dollars of the national notes which do bear interest. I do not think that is fair. If this law which you now propose to suspend had authorized every man holding these notes to turn them into the interest-paying bonds of the Government I think it would have been a just and honest thing; but that of itself would be a destructive measure while you have another statute upon your books which restricts by an iron rule the amount of paper circulation which can come from your banks.

The Senator from Ohio said that he thought the Secretary of the Treasury ought not to be authorized to restrict or to control the amount of circulation. I agree with him, but I think that Congress ought no more to be authorized to do it than the Secretary of the Treasury. Neither of them should do it. The law, in my judgment, ought to fix the condition upon which the first dollar of paper should be issued; but having fixed those conditions, having determined in its wisdom upon what conditions it was safe to let one dollar of paper be issued, every man who should comply with those conditions should have the same right to issue a dollar. This restriction upon the amount of bank circulation or of paper circulation, therefore, is open to two objections. First, I have this objection to urge: that I think there is no body of men in the United States of equal intelligence but what is just as competent to determine the amount

[1] A character in "David Copperfield," by Charles Dickens.

of money which the country wants to use at any particular time as the Congress of the United States; and the same number of business men, as my friend from Missouri [Mr. Henderson] suggests, are much more competent to determine it. We know less about it. We are not capitalists; at least I can speak with the utmost confidence for one [laughter]; and we have no necessary connection with capital; we are not engaged in the business of the country; and we are the last men, in my judgment, to know just how much money the business of the country wants. Men who have money to loan, men who have money to operate with, know, it is their business to know, to keep run of the course of business, and know when it is safer to buy property with their money or safer to loan it at the current rates of interest.

Senator Edmunds.—How is it with men who have to borrow to pay their debts with?

John Conness [Cal.].—To which side?

Senator Howe.—To the party who has to borrow. I heard a remark once from a neighbor of mine, a very sensible one, and I subscribed to the truth of it at once, and I believe in the truth of it to-day. He said it had been more than fifty dollars damage to him being poor. [Laughter.] But, Mr. President, I do not believe it is the business of the legislature of the nation to provide for men who are poor and have to borrow money. I think, being one of the class myself, it is the business of men who have to borrow money to go to men who have money to lend and borrow it like men and pay for it if they agree to do so, and when they agree to do so and the nation cannot by law provide for their necessities.

Mr. President, I said when your first treasury-note bill was pending here what I repeat to-day, that, in my judgment, there never ought to have been a note issued by the Government promising to pay specie on demand, because we knew the Government could not pay specie on demand; and I say now that there ought not to be a piece of paper circulated under the protection of law by anybody, either by the Government or a bank, which is not convertible into something that the world recognizes as money, whatever that is. The Government cannot do it without bearing the brand of a bankrupt on its brow. I cannot do it without subjecting myself to the same penalty; and a bank cannot do it. I have said that we were justified in using this paper while the war was upon us; but I believe with the Senator from Maine that that necessity has passed by, and we must get rid of this paper as soon as we can; but it must not be taxed out of the pockets of the people and burned; and it must not be taken from the circulation of the country unless you allow the capital of the country the option of putting something in its place.

Senator Fessenden.—How is the debt to be paid without taxation?

Senator Howe.—You can never pay anything except by taxation, but you cannot collect taxes when you have taken the whole circulation of the country out of the country. If you will destroy this kind of paper you must put something in its place if the business of the country and the exigencies of the country demand it; and we cannot tell, I say, how much is demanded. But take off the restriction upon the issuing of bank paper, take off the restriction from the circulation of your bank notes, determine the conditions upon which, as I said, the first dollar may be issued, and let every man issue who will comply with those conditions; place your banking circulation on the footing that it was before the war commenced and before the Government entered into the business of banking, and then you can go on and allow these notes to be funded into the interest-paying bonds of the Government—just the principle upon which the first issues of these notes were authorized. But that will subject us to one disagreeable thing—the people will have to pay interest on these new bonds.

Gentlemen tell us that the country can carry three, four, or five hundred millions of this paper and we save the interest. Sir, we pay the interest three times over in the increased price put upon every commodity the country deals in; in other words, in the depreciation of paper or in the appreciation—I think that is about as correct an expression—of that which is the true representative of values, the coin of the country. While you have that system of finance which makes gold a merchantable article the price of gold is not regulated by the law of supply and demand. The price of gold is regulated by those men there in Wall street, New York, who buy and sell their millions and millions every day without seeing a dollar of it; and, while it is a merchantable commodity and stands as the representative of all other commodities, when gold goes up under the manipulations of these gentlemen everything else goes up. So they have in their hands the price of every commodity.

Further discussion of the bill dealt chiefly with amendments proposed thereto. It was passed with amendments on January 15, 1868, by 33 yeas to 4 nays.

The House disagreed to the amendments, and a joint conference committee of the two Chambers was appointed, which reported on January 22 that the Senate should recede from its amendments. This was concurred in by both Chambers. President Johnson refused to sign the bill, and it automatically became a law ten days after its passage.

By this act the minimum limit of legal tender notes was fixed at $356,000,000—the amount extant at the time.

CHAPTER XIV

Resumption of Specie Payments

Oliver P. Morton [Ind.] Introduces Bill in Senate for Resumption of Specie Payments without Contraction of the Currency—His Speech—Bill Referred to Committee on Finance—John Sherman [O.] Reports the Committee's Bill—His Speech—Bill Is Not Acted Upon—President Grant Advocates Resumption of Specie Payments—John Sherman [O.] Moves Resolution in the Senate for Resumption of Specie Payments and Establishment of a Uniform Currency—Thomas W. Ferry [Mich.] Moves a Substitute Declaring for Increase of Currency, Free Banking, and against Discrimination against "Greenbacks"—Debate on the Two Resolutions: Senator Ferry, General John B. Gordon [Ga.], George S. Boutwell [Mass.]; No Action—President Grant Repeats His Recommendation—John Sherman [O.] Introduces Bill in the Senate to Resume Specie Payments on January 1, 1879—Debate: Senator Sherman, Allen G. Thurman [O.], Carl Schurz [Mo.], Lewis V. Bogy [Mo.], Thomas F. Bayard [Del.]; Bill Is Passed by Senate and House, and Approved by President Grant—Samuel S. Cox [N. Y.] Introduces in the House Bill to Repeal Date Set for Resumption; Passed in House, Committed in Senate—General Thomas Ewing [O.] Introduces in the House a Bill to Repeal the Resumption Act—Debate: in Favor of Repeal, General Ewing; Opposed, General James A. Garfield [O.]; Bill Is Passed; It Is Committed by the Senate, and (Next Session) Passed; House Fails to Take Further Action.

ON the opening day of the session of 1868-9 Charles Sumner [Mass.] introduced in the Senate a bill for the resumption of special payments; it was shelved in committee.

On December 14, 1868, Oliver P. Morton [Ind.] introduced in the Senate a bill that sales of gold should be stopped at once, and the surplus gold accruing in the treasury be applied to the redemption of United States notes; that after July 1, 1871, the treasury should redeem in coin United States notes presented to it for such purpose; that after January 1, 1872, the national banks should similarly redeem their notes out of a reserve col-

lected therefor; that after January 1, 1872, United States notes should cease to be legal tender except for Government dues; and that thirty-year Government bonds, payable principal and interest in gold, be issued to carry into execution the redemption at the treasury.

On December 16 Senator Morton spoke upon the bill. He first replied to objections against the resumption of specie payments at the time.

"It is said by many that the currency is redundant, and that we cannot return to specie payments until contraction has taken place."

He denied that currency was redundant for the business of the country; this, he said, had adapted itself to the large increase of currency, using it instead of the bills of exchange and promissory notes which were common before the war, when the local bank currency of one part of the country was not acceptable in another. About $100,000,000, he calculated, was employed in this way; $50,000,000 more was needed for the increase of business since 1860. He concluded that the currency was not more redundant now than then, when the banks were paying specie.

Again, it is said that the Government cannot return to specie payments until after we have checked the flow of our gold to Europe by largely reducing our importations of foreign goods. This is a clear case of putting the disease for the remedy. Gold, like every other commodity, is governed by the great commercial law of demand and supply. It goes where it is needed, and leaves the country where it is not in demand. In this country there is now but one demand for gold, which is to pay duties on imports.

In whatever country paper money has been made a legal tender it has invariably driven gold and silver from the circulation, and in great part from the country. Thus it is that Canada is now flooded with American silver. Thus it is that American gold has gone to Europe in a steady stream for five years.

We cannot retain our gold at home except by making a demand for it. The holders of it are not patriotic enough to keep it here for nothing. If we would reduce the importation of foreign goods we must withhold the gold with which they are pur-

chased. And this we cannot do except by making it more profitable to keep it at home than to send it abroad. Until we create this home demand the annual product of our mines in chief part will go to England, France, and Germany to swell the rich volume of their currency.

Again, it is said that specie payments cannot be brought about by special legislation, but can be produced only by the operation of general causes, such as the increase of the tariff, the increase of population and development of the resources of the country, whereby the general credit of the Government will be improved. It is alleged that we can only raise the value of our currency by raising the value of our bonds in the market; that as we bring up the price of our bonds we shall thereby bring up the value of greenbacks; that we can only improve the value of the currency by improving the general credit of the Government, as shown by the value of our stocks, and to this end the surplus gold in the treasury and that which is to accrue should be applied to the purchase of our bonds in the market, to be canceled, thus diminishing the number of them and improving the value of the balance.

This view of the question I hold to be a total misconception. I do not believe that the existence of our bonded debt has anything to do with the depreciation of our currency. I believe our currency would be depreciated as it is if the Government did not owe a single bond or if all our bonds were at par. Why is our currency depreciated? And why would it be depreciated if the Government did not owe a single bond? Because the greenback note is a promise by the Government to pay so many dollars on demand, which it does not pay. The promise is daily broken, and has long been dishonored. The note draws no interest, and the Government has fixed no time when it will pay it. Under such circumstances the note must be depreciated. The solvency or ultimate ability of the promisor never kept overdue paper at par, and never will. To do that something more is required than the ultimate wealth or ability of the promisor. There must be certainty in the payment and time of payment, and if the time of payment be deferred compensation must be made by the payment of interest. One of the wealthiest men in the Northwest, now dead, who left some five million dollars to be divided among his heirs, had an unfortunate habit of refusing to pay his small debts. Instead of paying he would give his notes for them, refuse to pay the notes at maturity, suffer himself to be sued, then hire a lawyer to fight the cases. The result was that his paper was hawked about the

streets at sixty or seventy cents on the dollar, while, perhaps, that of his near neighbor, who kept a small store and was only worth $10,000, but who was prompt in the payment of his debts, could be sold at a very small discount.

In overcoming the depreciation of the currency we have to overcome the difference in value between the greenback currency and the like amount of gold, and not the difference between two thousand millions of bonded debt and two thousand millions in gold. Even if the credit of the Government was so greatly impaired as that her bonds were not worth twenty-five cents on the dollar, still it would not be impossible to make the currency good and keep it at par. If the Government did not owe a single bond the value of our currency could not be improved, except by making arrangements to redeem it; and if the Government does make arrangements to redeem it the existence of the bonded debt will not prevent the improvement in its value. If we should take the surplus gold in the treasury and that which is to accrue and use it in the purchase of bonds in the market, to be canceled as purchased, we should inevitably further depreciate the value of the greenbacks. The explanation of this effect is simple. By taking the gold, which is the only means by which the greenbacks can be redeemed, and applying it to the purchase of bonds, it puts the redemption of the greenbacks out of the power of the Government, and proclaims to the world that it does not intend to return to specie payments.

The proposal to improve our currency by taking our surplus gold and investing it in bonds would be regarded by capitalists as absurd. The gold thus paid out would not enter into the circulation, but would sink back into an article of merchandise to be gambled for, as it now is in Wall street. What would the world think of the morality of such an operation? We have $356,000,000 of the public debt overdue and drawing no interest, and we take the only means of paying this debt and apply it to the purchase, at a discount, of our bonds, which will not be due under fourteen years. What would be said of the integrity of the man who should refuse to pay his debts which are due, leaving his creditors to suffer great loss, and should employ his money to buy up at a heavy shave his debts that will not be due under ten or fifteen years? Plain people would call such a man rascal and swindler, and would speak of the Government in the same terms under the same circumstances. The pretence that it was done to improve the value of the currency would deceive nobody. Such a plan of returning to specie pay-

ments is worthy of the circumlocution office, and should be labeled "How not to do it."[1]

The greenback currency is a part of the public debt, for the redemption of which the faith of the nation is solemnly pledged. The redemption of this pledge is not only demanded by every principle of national honor, but is imperatively demanded by the interests of the people, collectively and individually. The currency of a country lies at the foundation of its daily business and vitally affects the interest of every class and condition of people, and if the Government, overlooking its honor and its duty, should take the only means by which it can be improved and apply it to the purchase of bonds which will not be due for many years it would merit and receive the indignation and contempt of honest men everywhere.

But it is said that if the Government reserves and holds the surplus gold in the treasury, to be applied to the redemption of the greenback currency at some future time, to be fixed by law, it will suffer great loss in the interest on the gold thus held in reserve. In one point of view this objection is well taken. But what else can we do? Is not a difficulty to be encountered by every debtor who collects and holds the money wherewith to finally pay his debts? If a man owe $1,000 can he pay it in any other way than by collecting the money for that purpose and holding it until he gets enough to meet his debt? The Government owes a debt which can only be paid in gold, and it must, if it intends to pay it, collect the necessary amount in gold. If the debt was of that nature that the gold could be paid out on it as soon as collected, of course it should be done; but the debt is not of that nature. If the Government should pay out the gold as fast as it is received in the redemption of the greenback currency it would fail to bring the remainder of the currency up to par, and the gold thus paid out would not enter into the circulation, but would sink back into an article of merchandise such as it now is. The redemption of the greenback currency should not begin until the Government is prepared to redeem all that may be presented, for this would at once bring the whole body of the currency to par, and the gold paid out would go into the circulation and take the place of the paper money redeemed. But if paid out by piecemeal in advance it would not go into circulation or bring up the balance of the currency to par. But what will be the actual loss of the interest on the gold held in reserve compared with the loss sustained by

[1] Readers of "Little Dorrit," by Charles Dickens, will understand this allusion.

the great mass of the people in their labor, trade, and property, to be suffered by the continuance of the present condition of the currency? Scarcely as one dollar is to a hundred. The losses by the failure to employ labor; by the stagnation of business; by the paralysis of trade; by the delay in general progress and development, brought about by depreciated, fluctuating, and deceptive currency, when estimated in dollars, would form a vast sum, compared with which the loss of interest on the reserved gold would be a mere bagatelle.

But, if we do not obtain the gold to redeem the greenback currency in the manner proposed, in what other way or at what time shall it be obtained? Shall the Government go into Wall street and buy it like the importers or the gamblers? Or shall we sell new bonds in Europe at seventy or seventy-two cents on the dollar and obtain it in that way? Will it be easier to begin the process at the end of five years, the nation suffering in the meantime all the evils and losses of depreciation? Shall the nation stand shivering for years on the banks of this Jordan and then make the plunge when the waters are deeper, swifter, and colder than now? Such is not the part of wisdom or patriotic statesmanship.

If an individual fails to pay his debts payment may be enforced by the law against his property, but against the Government there is no such remedy. What would be mere neglect or failure, therefore, on the part of an individual would be repudiation by a Government.

If the greenback note is to be regarded as an obligation for the payment of which the faith of the Government is pledged the continued failure of the Government to make any provision for its redemption cannot be regarded in any other light than repudiation. When the first of these notes were issued it was provided that they might be funded into the five-twenty bonds, but that provision was shortly after repealed, and they now stand in the nature of a forced loan, drawing no interest, and, for all that appears, are to be left to perish in the hands of the people.

If when the five-twenty bonds fall due the Government should fail to pay them, or to make any satisfactory provision for funding them into a new bond, the cry of repudiation would at once be raised; and yet it cannot be shown that the legal and moral obligation to pay those bonds at maturity is greater than that resting on the Government to make prompt provision for the redemption of the greenback currency. The legal obligation is no greater, and the moral obligation hardly so strong;

for the greenback notes are in fact the people's bonds, the bonds of the million, in which are invested the laborer's toil and the meager profits of the humble occupations in life, which, more than any others, demand the fostering and protecting care of the Government.

But, while it is true that the discount on our bonds has little, if anything, to do with the depreciation of our currency, it is also true that the depreciation of the currency has much to do with the discount on the bonds. I do not believe that our bonds will ever reach par, or approach it nearly, until the currency is made good.

The legal-tender currency of a country bears an intimate and, perhaps, a mysterious relation to every form of credit and security, both public and private, and if it be depreciated inevitably drags them down to its own level. The legal-tender currency is at par in contemplation of law and in the payment of debts, though it may not be worth six cents on the dollar. It is the "par" and measure of price and value recognized in all the ordinary business of the country. The prices of property and all articles of trade are not given at so much in gold, but in greenbacks, and the legal-tender value of the greenbacks is so identified in the public mind with the measurement in price of every species of property, merchandise, and labor that it assimilates to itself as well the price of securities, even though by their terms they may be made expressly payable in gold.

As the value of our legal-tender currency goes up the price of our bonds will go up with it; and what is true of Government securities is equally true of the great mass of American securities, public and private.

Another obstacle to the adoption of any plan for returning to specie payments is the cry that the right way to resume is to resume at once. I have labored to find that this means anything but the indefinite postponement of resumption. Everyone must comprehend that the Government cannot redeem the greenback currency without first collecting the gold to do it with; that it cannot return to specie payments by contraction without taking time to contract, with all its attending calamities; that, in short, there is no process by which it can be done, however ruinous, that does not involve time. If the Government should pay out the $70,000,000 surplus gold now in the treasury in the redemption of an equal amount of greenbacks the whole country would know that it was not prepared to redeem any more. The gold paid out would not pass into circulation, but sink back into an article of merchandise, the bal-

ance of the greenback currency be but little improved, and the net result of the operation would simply be the contraction of the currency to the extent of $70,000,000 and the indefinite postponement of the redemption of the balance.

But the great obstacle to the return to specie payments, and the one which we will have the greatest difficulty in overcoming, is the interest against it. The premium upon gold, and the advantages it gives to certain classes over others were unavoidable in the beginning, but should not be allowed to continue a single day longer than is necessary. The present condition of things produces great inequalities among the people, which if longer continued will give rise to heartburnings and tend to demoralize the public sentiment in relation to our national obligations.

To illustrate: A is the owner of $10,000 five-twenty bonds, from which he derives an income of $600 in gold. This gold, when converted, will realize $800 in currency, and upon his bonds he pays no tax whatever. B is the owner of $10,000 in six per cent. railroad bonds, from which he derives an income of $600 in currency, and upon these bonds he pays at least two per cent. for State and county purposes, which will reduce his income to $400, just one-half the amount of A's. B may, perhaps, not feel very comfortable over this state of things, and will be led to inquire into the cause of this gross inequality. He will be told that so far as it arises from taxation it is unavoidable, as the States cannot tax Government securities; but so far as it arises from the condition of the currency speedy relief may be afforded by the Government if it will. Equal rights are the gift of God to all men, and equal conditions in society, equal facilities for acquiring wealth, equal rewards for labor, and the equal support of public burdens should be given by every Government to its people so far as it may be possible.

To the man who lent his money to the Government to carry on the war for the suppression of the rebellion I am grateful. Whatever may have been his motives he was a public benefactor, and entitled to the thanks of the nation. With him the Government must keep faith, whatever that faith may be; for good faith covers a nation like a clear and refreshing atmosphere, which imparts health and vigor to men and through which all nature seems beautiful and bright. But when faith is broken, it is as if the air were filled with noxious vapors, which obscure the sight, impair the health, and end in darkness, disease, and death. But while our creditors should receive all that they are entitled to in law and equity it is not bad faith to improve the condition of the balance of the people and bring them up as

nearly as possible to the same prosperous level. The exemption from taxation is a legitimate advantage, as it results from the nature of their securities; but the additional profit of a premium on their gold was accidental in the beginning, and if continued for their benefit, and beyond the necessity which created it, would become fraudulent to the rest of the nation.

The credit of the Government of the United States was never so good as it is now. Its resources never developed so rapidly as now, were never so well understood as now, and the faith of the people in the destiny of our country is greater than ever before. While there are very few men in the country who doubt the ability of the Government to pay off the whole debt, I have never met with one who doubted its ability to redeem or pay off the legal-tender notes. In regard to the redemption of these notes it has never been a question of ability but of purpose, and to say that these notes cannot be paid until the general credit of the Government is improved by the expenditure of some hundreds of millions in the purchase of bonds that will not be due for years is to fly into the face of common sense and insult the intelligence of the people.

The policy of the Secretary of the Treasury [Hugh McCulloch] travels in a circle which invariably brings him back to contraction. He proposes nothing for redemption, and offers only that policy which he says has been emphatically condemned by Congress and as emphatically by the country. Contraction is the "Sangrado policy," of bleeding the country nearly to death to cure it of a disease which demands tonics and building up. The withdrawal of even $100,000,000 of the circulation would produce great stringency in the money market, innumerable bankruptcies, and most likely result in panic and crash from which the country would not recover for years, and during which the power of the Government to fund the debt and redeem the balance of the greenback currency would be paralyzed. To contract the currency to the extent of funding all the greenbacks would be financial suicide—would precipitate a disaster to the trade, industry, and prosperity of the country for which there is no example in history. We must not return to specie payments in that way. We must descend the mountain by easy slopes and gentle curves, though it may take much longer, rather than spring from the top of the precipice to be dashed to pieces at the bottom.

But it is broadly intimated by the Secretary that the Supreme Court will decide the laws making the greenbacks a legal tender in payment of debts to be unconstitutional, and there-

fore void. If the deed is to be done let it be by the court, and not by Congress. But it would have to be a very clear case that would justify the court in making a decision fraught with such terrible calamities to the country. If there be doubts hanging about the question they should be cast in favor of the legislation of Congress and the preservation of the vast interests that are dependent on the maintenance of the law. The Supreme Court, having jurisdiction over questions involving vast political, commercial, and social interests, should be something more than the rigid expounder of statutes or the collator of precedents, and should view such questions as statesmen as well as lawyers.

It was Lord Mansfield who plucked up by the roots the hoary abuses of the law, however deeply imbedded in ancient authorities, and who, in the construction of statutes and settlement of great questions, decided them in accordance with the progress of the times and the new conditions of society, and thus rendered himself immortal in the history of jurisprudence.

The speaker concluded by justifying the details of his bill. His speech may be considered as a reply to the theory of Hugh McCulloch, the Secretary of the Treasury, that the reduction of the currency was a necessary step to the resumption of specie payments. [See chapter XIII.]

Senator Morton's bill was referred to the Committee on Finance, which reported instead a bill framed chiefly by John Sherman [O.], chairman. Senator Sherman brought the bill forward on January 18, 1869. Its provisions appear in his speech.

The object we have in view is to appreciate our currency to the standard of gold as rapidly as the public interest will allow. Our present currency or "lawful" money consists of notes of the United States, and these are a legal tender in payment of all debts. Based upon them, and of equal value with them, is a subsidiary currency of notes of national banks, and these are redeemable in United States notes, and are receivable in payment of taxes. We have also a form of demand notes, convertible at the will of the holder into lawful money, called three per cent. certificates. We have also a fractional paper currency which is convertible into lawful money on demand. These four

species of notes compose the paper currency of the country, and the amount of each is stated as follows:

United States notes	$356,021,073
National bank notes	299,806,565
Three per cent. certificates	55,865,000
Fractional currency	34,215,715
In all	$745,908,353

All this currency is by law at par. By law it is either made the standard of value or may at pleasure be converted into the standard of value. It is the legal measure of all commodities and of all debts, except for duties on imported goods and interest of the public debt. But in truth and in fact it is not at par in the standard money of the world. One dollar of it has only the same purchasing power as seventy-four cents in gold. Gold, which is real money, not the representative of money, but money itself, of intrinsic value, recognized as such by every man in all civilized countries and in all ages of the world—gold is demonetized by the law, cannot be collected in the courts, and, like cotton or wheat, is treated as a commodity whose value is measured by what we call "lawful money."

Now, it seems to me that the first step in our investigation should be to abandon the attempt to reason from a false standard. We must, to begin with, recognize the immutable law of currency; and that is, there is but one par, and that par is gold. Since the earliest records of humanity gold and silver have been employed as the equivalent for effecting exchanges. From Solon to our day innumerable attempts have been made to substitute something else as money, but in spite of all gold and silver have maintained their exclusive dominion as the money of mankind.

The gold in the shield of Achilles, the shekels that bought the field at Machpelah, the pieces of silver the price of the blood of our Saviour, will be current coin when the completed history of nations now rising into greatness will be folded away among the records of time.

No nation can permanently adopt a standard of value that will not be controlled and regulated by the standard of gold. No degree of isolation, no expedient of legislation can save any nation which maintains any intercourse with foreign nations from the operation of this supreme law. Like the tides of the ocean or the movements of the planets, it is beyond our jurisdiction. This higher law of the standard of values will sooner or later govern and regulate all prices, even of commodities that

do not enter into foreign exchanges. It is utterly idle for a commercial people like the United States, with a foreign commerce of $800,000,000 annually, with citizens trading in every port of the world, and receiving annually four hundred thousand immigrants, to escape from the operation of this primary law of trade. Different nations have tried various expedients to evade it, and have always failed. For centuries gold and silver coins were clipped and alloyed, but it only took more of them to buy a certain commodity. In modern times paper money or credit has been substituted for real money. Laws compelled the people to take them as money. As long as this money did not exceed the amount of real money in the country it operated well. It promoted exchanges and gave great activity to enterprises, and its nominal value was the same as its real value. But when the paper money was increased or the gold exported, the paper money depreciated; it had less purchasable power, prices rose, and either the paper money became demonetized, was rejected and repudiated, or the false standard was advanced in value to the gold standard.

During our brief national history we have made several efforts to substitute paper money for real money. Continental money was a revolutionary effort to coin paper into money. General Spinner [Treasurer of the United States] has had occasion recently to inform some Rip Van Winkle, who wished Continental money redeemed in lawful money, that provision had been made to redeem it at the rate of one dollar in coin for one hundred dollars Continental money, but even this poor privilege expired in 1793.

During the war of 1812 the United States undertook to treat State bank bills as lawful money. They soon became depreciated, and, when the war was over and it became necessary to appreciate them to the gold standard, notes, banks, and debtors were swept into general bankruptcy, and the people commenced again upon the solid basis of gold and silver coin.

So, during our Civil War, both the United States and the rebels undertook to make paper not merely the representative of money, but real money. The paper money of the rebels followed the course of Continental money and French *assignats*. Ours, carefully limited in amount, supported by heavy taxes and by great resources, is still called lawful money; but, after all, its value is daily measured by the gold standard. It is only the substitute of money to be paid at a future day, and is not real money.

Even silver, long the standard of value among civilized na-

tions, is now demonetized in some of them from the impossibility of maintaining a double standard. It was found by experience that the market value of these two precious metals varied as the production of one or the other increased in amount, thus creating confusion and compelling alterations in the coinage. The result is that silver in Great Britain and the United States is a legal tender for but small amounts, while gold is the universal standard of value. Even the stamp fixed by a government in the process of coining does not make it money or change its value. It only certifies to its weight and fineness as a matter of convenience and not as an addition of value. Indeed the mechanical process of coining has frequently reduced the market value of the gold by making it necessary to receive it when exported.

Let us, then, recognize as an axiom that nothing but coin is the real money before we undertake to deal with our currency. And Senators may think I consume too much time in dealing with an apparent truism, but it will be found that the denial of this truism, both in Congress and among the people, is the cause of most of the confusion in the public mind as to our currency. It affects our minds as it affected the Englishman in 1810. When told that the Bank of England note was depreciated he said: "Is not this pound note worth twenty shillings, and you tell me it is only worth sixteen?" Or like the reason of the learned priests in the time of Galileo, who saw the sun moving around the four corners of the earth and knew that Galileo was an imposter. So we call our paper money par, and having made a god with our own hands compare all other gods by it. We must, then, abandon the false standard, set up again the true standard, and compare again our money, our productions, our wealth, and our resources by the true standard, or we will allow ourselves to be led by false premises into the most erroneous conclusions.

And yet this does not impugn the wisdom of a paper currency founded upon the credit of a nation, or of it being made in times of great public danger a legal tender in payment of debts. Such paper money has exercised a powerful influence in ancient as well as modern history. It saved Rome in her fierce conflict with Hannibal. It enabled Great Britain to maintain her wars against Napoleon. Without paper money, and, as I believe, without making it a legal tender, we could not have mustered and maintained our immense armies during the recent war. Gold was banished by the war. The quantity was too small for the vast expenditure required by the war. We had then no legal

paper representative of value. The State bank notes were wisely excluded from national circulation. We then cautiously issued our legal-tender notes, carefully limiting their amount, and only increasing the amount when we could not borrow them back at a reasonable rate of interest. We called them lawful money, and as a measure of the highest necessity compelled our citizens to receive them as such, but after all they were only a forced substitute for money, the promise to pay money, and not real money. Though they were made the legal standard of value their own value was daily fixed in gold in the open market in New York. We watched their depreciation as the dark days of the war came on, and tried to arrest it. We utterly failed. The effort was patriotic, but it was impossible. England did the same in her wars. She passed laws forbidding the purchase and sale or exportation of gold, but, like ours, her efforts were abortive. I am not ashamed to confess my part in all the efforts made during the war to maintain our paper money as the true standard of value, and I confess it was impossible.

A distinction between the standard of value and the actual agent of exchange must always be kept in view. One must be gold and the other ought to be paper money convertible into gold.

Such paper currency, with proper measures to meet panics or extreme drains of specie, is proven by all experience to be the best possible currency that has yet been devised by man. An unmixed coin currency cannot exist in a commercial country, for necessity will compel, merchants will devise, and the people will use some representative of money whether it be banker's bills of exchange, certificates of deposit, or bank or Government paper money. And one unbending, unrelaxing rule that compels payment in coin at all times, during panics, distress, or war, as well as in peace, will periodically produce disaster and bankruptcy. The requisites of a good currency are:

1. That it be a paper currency.

2. That it be amply secured either by the credit of a nation or by unquestioned collaterals.

3. That except in extreme cases of panic it be convertible into coin.

4. That provisions be made for a suspension of the right to demand coin during such panics.

And the only legislative questions that can arise on these points are whether the paper money should be issued by the nation or by corporators, and what relief shall be provided in case of a necessary suspension of specie payments. As to the first

question, both England and the United States have settled upon a bank currency secured by the public credit. As to the second, they have tried various devices, as the raising of the rate of interest, a temporary suspension of payments, making the paper a legal tender; but all these expedients are merely temporary to bridge over a war, a panic, a period of starvation, or an unnatural adverse balance of trade. They are remedies in sickness to be discarded the moment that health comes again. Whatever theorists may suggest, however sugar-coated the remedy may be, there is but one test of a healthy paper currency, and that is its convertibility into gold coin.

If, then, gold only is the true standard of money, why shall we not commence our financial measures by restoring it to its place as a legal standard of money? Why not allow our citizens to base their future contracts on gold? Why not enforce these contracts in the courts as legal and valid? There are difficulties in applying a new standard to existing contracts made upon a different standard; but this difficulty does not apply to future contracts. We wish to restore specie payments, and yet we forbid all men from dealing in specie. Such contracts are put upon the same legal footing as gaming contracts. It would seem that if we are at all sincere in wishing specie payments we should not only promote specie contracts, but should encourage them.

Contracts, to a vast amount, are now from necessity made upon the gold basis. All our foreign commerce, exports and imports, amounting annually to over eight hundred million dollars, are based upon gold. The price of all public securities is fixed by the gold standard of London and Frankfort. The sale of all imported goods by the importer to the jobber is by the gold standard. The daily transactions in gold in New York often amount to $100,000,000. On the Pacific slope gold is the only standard of value. We could not alter this if we would. Why not recognize the fact, legalize these contracts, and conform our measures to the gradual adjustment of existing contracts, including paper money, to the standard of gold.

And, sir, let us also recognize the general principle that it is wiser and more in accordance with the spirit of our Government to leave this adjustment to the voluntary contracts of the people rather than undertake it by arbitrary rules of law. If our people are left free they can do this without injury to debtor or creditor, without confiscation of property, and without any change in the intrinsic value of property.

For these reasons the Committee on Finance regard the first

section of this bill, which legalizes gold contracts, as an indispensable preliminary to any plan for appreciating our currency to gold. This section has twice received the sanction of the Senate, and its primary importance has generally been admitted in popular discussions.

Not only ought specie contracts to be allowed, but they ought to be encouraged. Every such contract smooths the way to a general resumption. If they become general gold now hoarded will be let loose. This will produce an expansion of the currency.

It is only by restoring gold contracts that you can safely avail yourself of all the multiplied uses of paper money. Then, and not until then, you can issue paper money based upon gold. The gold now lying idle in the treasury may then be utilized, made to produce an interest by the issue of coin notes based upon it, and thus enter into actual circulation and gradually be made to perform all the uses of money now performed by a depreciated currency. This is the basis of the fourth section of the bill, which utilizes the gold by the issue of gold notes based upon it, and their application to the purchase of bonds and the reduction of interest.

And the right to make contracts in gold may now safely and properly be extended to banks organized under the national banking system. Upon a deposit of bonds existing banks or new banks may be authorized to issue gold notes equal to sixty-five per cent. of the value of United States bonds deposited to secure their circulation. Their payment will be in coin, but in all other respects they may be subject to the general provisions and limitations of the banking act. Many of the banks, especially in commercial cities, will gladly avail themselves of such a provision to withdraw their present circulation and substitute gold notes convertible on demand into coin. With such a provision and on such a basis the system may be free, and thus all the embarrassing questions about the inequality of the distribution of banking circulation will be avoided. A right conferred upon all, without limit as to amount and upon regulations applicable to all, would at once secure to the South and West new banking facilities, and would rapidly tend to substitute coin or its equivalent for legal tender notes, and without the severe process of contraction. The objection made, that this would create two currencies of unequal values, applies as well to the present state of the currency, for we have now two currencies of unequal value—gold and legal tenders.

If we are sincere in wishing specie payments we must not

only multiply the demands for coin; we must encourage coin contracts, issue coin notes both by the United States and by the banks, and thus without contraction dispense with the use of the inferior and depreciated currency.

The superior value of coin notes, their use in commercial cities, their convenience in the gold-producing States will soon give them higher credit, and secure them in every part of the country. I am confident that under such a system the national banks will, if allowed, and before specie payments are resumed, substitute coin notes for their present circulation, and that, too, without diminishing the aggregate of circulation. Many of them have now reserves and profits enough to make the requisite deposit of additional bonds; and the gold certificates now issued from the treasury might be used for their coin reserves without creating new demands for coin.

There is but one other consideration I wish to urge in favor of the sections of this bill relating to gold contracts and gold notes, and that grows out of the doubt that rests upon the validity of the legal-tender act. We must not forget that currency contracts depend not upon the agreement of parties, but entirely upon the validity of that act. This has always been doubted, and is now contested before the Supreme Court. It may be that the Supreme Court will deny the validity of the legal-tender act, or limit its operation to existing contracts made since its passage. It may subject currency contracts to enforcement in coin. Is it not wiser to bridge over this uncertainty by authorizing the adjustment of this matter between the creditor and debtor?

Again, sir, the law as it now stands is productive of gross injustice. You require nearly one-half of your taxes to be paid in gold, and yet you will not enforce a contract by which the merchant buys the gold for you. Cargoes of tea, coffee, and merchandise can only be bought in gold, and yet if property is delivered upon a promise to pay gold it cannot be enforced. Gross and palpable injustice may be done in a multitude of transactions necessarily based upon gold by appealing to the legal-tender act. I conclude, then, this branch of the subject by the earnest opinion that it was a good policy three years ago, and it is good policy now, to allow all parties to stipulate the time when, the amount, and the medium of payment, subject to the general laws of fraud, usury, and force. Free trade in domestic productions, liberty to contract and be contracted with, has never been restrained before. Let us restore these rights; and, having also provided a paper representative of the coin in

the treasury of the United States and a bank currency convertible into gold and founded upon the highest securities, let us now deal with the much more difficult question—the appreciation of the present currency to the standard of gold.

If this question affected alone the Government of the United States we might resume specie payments very soon; sooner even than the Senator from Massachusetts [Mr. Sumner] proposes.[1] By funding a portion of the United States notes, by requiring the banks to maintain their full reserves in legal tenders, by withdrawing the three per cent. certificates, and by the use of the gold in the treasury, we could resume at once.

And if the burden of resumption fell alone upon the national banks the task would be an easy one. Their securities, deposited with the Treasurer of the United States, are now nearly equal in gold to the amount of their circulation. A call under the banking act of ten per cent. additional security could be easily met by the great body of them, and thus enable them to resume whenever the United States is prepared to resume. Their profits in the past have been large. Those not now strong enough to perform the great object of their organization, namely, to furnish a uniform currency convertible into gold, may well give way to other banks ready to take their places.

But redemption by the banks means redemption by all their debtors; by the merchants, manufacturers, and traders of the country. And we are therefore compelled to deal with this question, not as affects the United States and the banks merely, but as it affects all the people of the United States. How will the appreciation of the currency affect their interests? Suppose it accomplished, how will it affect different individuals? A person entirely out of debt but possessed of property of productive value would not be affected by the change. His property would be of less nominal value, but it would be of the same intrinsic value. Its producing capacity is undiminished. It will buy the same food, clothing, and necessaries of life. The relative value of commodities to each other is not affected by the currency used, but by supply and demand.

If the currency is depreciated it will take more of it to purchase the article. If it is appreciated it will take less; but the appreciation or depreciation of the currency does not affect the price of other commodities in their relation to each other. This can only be affected by the demand for them, by the supply of them, and ultimately by the cost of producing them.

So a man without property and not in debt, but who de-

[1] July 4, 1869.

pends upon his labor for his support, is not in the end affected merely by an appreciation in the currency. His wages may be less, but what he receives of the appreciated currency has the same purchasing power as the higher wages received before. The change does affect him for a time, for land and labor are the last commodities to feel a change in the currency. The immediate effect of a depreciation in the currency is injurious to him, for his food and clothing rise more quickly than his labor, but appreciation of the currency is immediately beneficial to him for the reason that his labor does not fall in price so quickly as food and clothing. The value of labor, however, may be disastrously affected by the mode of appreciation. If it is brought about by a sudden contraction the result will be a suspension of work, of enterprises, and consequently a reduction in the price of labor.

Persons of fixed salaries and incomes are benefited by an appreciation of the currency to the full extent of the appreciation. Their incomes have increased purchasing power, and they are enabled to extend their purchases, supply new wants, and add to their capital. The opposite effect during the war, when the currency was being depreciated, carried distress and want and poverty into many comfortable homes. It fell with severe effect upon preachers and widows and old men, who saw the purchasing power of their annuities melt away, and a condition of independence changed to poverty and want. They will, by an appreciation of the currency, be restored to their own again.

Merchants, dealers, traders, and bankers will be affected by an appreciation of the currency precisely as their debts and credits bear to each other. If they owe more than they can promptly collect on debts due to them they must lose to the full extent of the appreciation, and they must make this loss good by a sale of a part of their property at reduced prices or by contracting new debts to be paid in an appreciated currency. As a general rule, any appreciation of the currency is injurious to all these classes, for they are generally in debt, and even where enough is due them to pay with yet the delay in payment or the failure of their debtors almost always embarrasses them. Commercial and banking usage compels promptness, so that a merchant or a banker, however prudent he may be, is often compelled to sacrifice his assets to meet a sudden appreciation of the currency.

But the distress caused by an appreciation of the currency falls mainly on the debtor class; others suffer only by reason of their inability to pay. What do specie payments mean to a

debtor? They mean the payment of $135 where he has agreed to pay $100, or, which is the same thing, the payment of $100 where he has agreed to pay seventy-four dollars. Where he has purchased property and paid one-fourth of it, it means the loss of the property; it means the addition of one-fourth to all currency debts in the United States. A measure to require a debtor now to pay his debt in gold or currency equivalent to gold requires him to pay one hundred and thirty-five bushels of wheat when he agreed to pay one hundred, and if this appreciation is extended through a period of three years it requires him to pay an interest of twelve per cent. in addition to the rate he has agreed to pay. When we consider the enormous indebtedness of a new country like ours, where capital is scarce, and where credit has been substituted in the place of capital, it presents a difficulty that may well cause us to pause. We may see that the chasm must be crossed, but it will make us wary of our footsteps. Good faith and public policy demand that we appreciate our currency to gold, but in the process we must be careful that bankruptcy, distress, and want do not fall upon our fellow-citizens who have based their obligations upon your broken promises. The debtors of this country include the active, enterprising, energetic men in all the various employments of life. It is a serious proposition to change their contracts so as in effect to require them to pay one-third more than they agreed to pay. They have not paused in their business to study questions of political economy. They have based their operations upon this money, which you have declared to be lawful money. You may change its relative value, but in doing so you should give them a reasonable opportunity to change their contracts so as to adapt them to the new standards of value you may prescribe for them.

The question then remains, what mode of appreciation of the value of greenbacks will operate the least injuriously to all the varied business interests of our constituents? and upon this point your committee, after the most careful consideration, came to the conclusion that the only and best plan was to allow them to be funded at the pleasure of the holder into interest-bearing bonds of the United States.

In designating the bond we have selected that now familiar to the people, the ten-forty bond. The market value of this bond is now but slightly above that of the legal tenders, so that the process of appreciation of the notes will be slow and will only advance with the improving credit of the country. It is a bond bearing as low a rate of interest as we are likely to negotiate, and yet of such intrinsic value that we may hope to see it at par with gold within a short period. It enables us after ten years to take advantage of the money market to still further reduce the interest. Its credit is supported by a permanent appropriation from an ample fund sufficient without further act of Congress to pay off every dollar of the debt in twenty-five years.

Again, sir, this provision of the bill is right when tested by the moral sense. When for sufficient reasons we cannot pay the note in coin we are bound to give to the holder our note with interest. Such from the beginning was the policy of the Government. When the notes were first issued under the act of February 25, 1862, they were convertible at will into bonds. We, with a questionable device, by the act of March 3, 1863, took away that right, and should now restore it. During the war a greenback would purchase an equal amount of bonds of any character offered in the market. It paid at par for the five-twenties, the ten-forties, and the seven-thirties. It is now less valuable than these bonds only because it is dishonored paper, which though due is unpaid, and is only valuable as a forced currency, which you compel your citizens to take in payment of their debts, but refuse to take for your own bonds except at a discount. You give the bond the benefit of the improving credit of the country, but you deny this to the note. The simplest and plainest rule of equity requires you if you cannot pay this note to give in exchange for it a bond bearing interest.

Such, sir, are the general provisions of this bill. It seeks to substitute gradually, by the voluntary action of the people, coin contracts, coin notes, and convertible bank bills for currency contracts and irredeemable and inconvertible paper money. It seeks to secure to the public creditor the prompt payment of his interest in coin, and to the people the like payment in coin of the depreciated notes held by them. If the process is too slow it is because the danger of a more rapid process is too great.

It now remains for me very briefly to state why other propositions submitted to the committee have not been approved. Your patience will not allow me to examine any of the multitude of suggestions that have been made in the public prints, though many of them are worthy of careful study. I will only allude to some propositions that have been referred to the committee. The suggestion of the President to pay the interest for sixteen years if the creditor would surrender the principal has already been disposed of. The plan of the Secretary of the Treasury to contract the currency until we reach the specie basis has already been incidentally referred to. The proposition of the Senator

from Massachusetts [Mr. Sumner], though not formally referred to the committee, yet having the sanction of his great name, was carefully considered, and so much of it as was approved was embodied in the bill reported; but its principal feature, the repeal of the legal-tender act after the 1st of July next, is far too sudden, and will, if I am correct in the views already expressed, be disastrous to the great body of the active business men of the country.

The plan of the Senator from Indiana [Mr. Morton], supported by an able speech, was carefully considered by the committee. It rests upon two leading ideas:

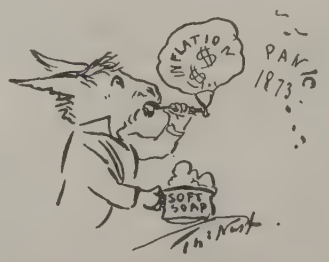
1. The accumulation of gold in the treasury; and
2. The fixing a specific day for the resumption of specie payments.

Now, in most of his speech I heartily concur. All that he says of the necessity of resuming specie payments, of the effect of contraction, and the unjust discrimination that now exists between the noteholder and the bondholder—all this meets my hearty assent. It is the remedy he suggests we have to deal with. Would not the effect of his measure be that the Government would hoard the gold and the people the greenbacks, and thus make the contraction he fears? What more profitable investment could any man make than to take this dollar, now having a purchasable power of seventy-four cents in gold, locking it in his safe with a certainty that in two years it must be worth one dollar in gold or an annual advance of seventeen and a half per cent.? Would not every bank sharply contract its currency and hoard greenbacks as the best investment it could make? What prudent man would dare build a house or factory, a railroad, or a barn, with the certain fact before him that the greenbacks he puts into his improvement will be worth thirty-five per cent. more in two years than his improvement then is worth? Why not hold his money for two years until his building will cost him one-third less? When the day comes every man, as the sailors say, will be close-reefed; all enterprise will be suspended; every bank will have contracted its currency to the lowest limit, and the debtor, compelled to meet in coin a debt contracted in currency, will find the coin hoarded in the treasury, no representative of coin in circulation, his property shrunk not only to the extent of the appreciation of the currency, but still more by the artificial scarcity made by the hoarders of gold.

All the historical precedents show that fixing the day for resumption inevitably led to a contraction of the currency by

the banks, so that when the day came the actual scarcity of currency prevented a demand for coin. We, therefore, think that the general objects sought for by the Senator from Indiana [Mr. Morton] can be better attained by legalizing specie contracts; by utilizing the coin in the treasury; by the gradual substitution of coin, United States notes, and bank bills for the present currency, rather than accumulating gold and fixing a day for resumption.

The bill was discussed at various times during the session, but no action was taken upon it.



FINE-ASS COMMITTEE
Sketch by Thomas Nast

In his second inaugural address on March 4, 1873, President Grant referred to the financial panic of that year, saying that, although it had materially lessened Government revenues, it might prove a "blessing in disguise" by inciting Congress to take steps against its recurrence, and to seize the opportunity afforded by it to hasten the resumption of specie payments.

Resumption of Specie Payments

Second Inaugural Address of President Grant

My own judgment is that, however much individuals may have suffered, one long step has been taken toward specie payments; that we can never have permanent prosperity until a spe-

cie basis is reached; and that a specie basis cannot be reached and maintained until our exports, exclusive of gold, pay for our imports, interest due abroad, and other specie obligations, or so nearly so as to leave an appreciable accumulation of the precious metals in the country from the products of our mines.

The development of the mines of precious metals during the past year, and the prospective development of them for years to come, are gratifying in their results. Could but one-half of the gold extracted from the mines be retained at home our advance toward specie payments would be rapid.

To increase our exports, sufficient currency is required to keep all the industries of the country employed. Without this, national as well as individual bankruptcy must ensue. Undue inflation, on the other hand, while it might give temporary relief, would only lead to inflation of prices, the impossibility of competing in our own markets for the products of home skill and labor, and repeated renewals of present experiences. Elasticity to our circulating medium, therefore, and just enough of it to transact the legitimate business of the country and to keep all industries employed, is what is most to be desired. The exact medium is specie, the recognized medium of exchange the world over. That obtained, we shall have a currency of an exact degree of elasticity. If there be too much of it for the legitimate purposes of trade and commerce, it will flow out of the country. If too little, the reverse will result. To hold what we have, and to appreciate our currency to that standard, is the problem deserving of the most serious consideration of Congress.

The experience of the present panic has proven that the currency of the country, based as it is upon the credit of the country, is the best that has ever been devised. Usually in times of such trials currency has become worthless, or so much depreciated in value as to inflate the values of all the necessaries of life as compared with the currency. Everyone holding it has been anxious to dispose of it on any terms. Now we witness the reverse. Holders of currency hoard it as they did gold in former experiences of a like nature.

It is patent to the most casual observer that much more currency, or money, is required to transact the legitimate trade of the country during the fall and winter months, when the vast crops are being removed, than during the balance of the year. With our present system the amount in the country remains the same throughout the entire year, resulting in an accumulation of all the surplus capital of the country in a few centers when

not employed in the moving of crops; tempted there by the offer of interest on call loans. Interest being paid, this surplus capital must earn this interest paid, with a profit. Being subject to "call," it cannot be loaned—only in part at best—to the merchant or manufacturer for a fixed term. Hence, no matter how much currency there might be in the country it would be absorbed, prices keeping pace with the volume, and panics, stringency, and disasters would ever be recurring with the autumn.

Elasticity in our monetary system, therefore, is the object to be obtained first, and next to that, as far as possible, a prevention of the use of other people's money in stock and other species of speculation. To prevent the latter, it seems to me that one great step would be taken by prohibiting the national banks from paying interest on deposits, by requiring them to hold their reserves in their own vaults, and by forcing them into resumption, though it would be only in legal-tender notes. For this purpose I would suggest the establishment of clearing-houses for your consideration.

To secure the former many plans have been suggested, most if not all of which look to me more like inflation, on the one hand, or compelling the Government, on the other, to pay interest without corresponding benefits upon the surplus funds of the country during the seasons when otherwise unemployed.

I submit for your consideration whether this difficulty might not be overcome by authorizing the Secretary of the Treasury to issue, at any time, to national banks of issue, any amount of their own notes below a fixed percentage of their issue—say 40 per cent.—upon the banks depositing with the Treasurer of the United States an amount of Government bonds equal to the amount of notes demanded; the banks to forfeit to the Government, say, 4 per cent. of the interest accruing on the bonds so pledged, during the time they remain with the Treasurer, as security for the increased circulation; the bonds so pledged to be redeemable by the banks at their pleasure, either in whole or in part, by returning their own bills for cancellation to an amount equal to the face of the bonds withdrawn.

I would further suggest for your consideration the propriety of authorizing national banks to diminish their standing issue at pleasure, by returning for cancellation their own bills and withdrawing so many United States bonds as are pledged for the bills returned.

In view of the great actual contraction that has taken place in the currency, and the comparative contraction continuously

STAND BACK!

"I am not a believer in any artificial method of making paper money equal to coin."—President Grant's Veto of the Inflation Bill.

Cartoon by C. S. Reinhart

going on, due to the increase of population, increase of manufactories, and all the industries, I do not believe there is too much of it now for the dullest period of the year. Indeed, if clearing-houses should be established, thus forcing redemption, it is a question for your consideration whether banking should not be made free, retaining all the safeguards now required to secure bill holders.

In any modification of the present laws regulating national banks, as a further step toward preparing for resumption of specie payments, I invite your attention to a consideration of the propriety of exacting from them the retention, as a part of their reserve, of either the whole or a part of the gold interest accruing upon the bonds pledged as security for their issue.

I have not reflected enough on the bearing this might have in producing a scarcity of coin with which to pay duties on imports to give it my positive recommendation. But your attention is invited to the subject.

During the last four years the currency has been contracted, directly, by the withdrawal of 3 per cent. certificates, compound-interest notes and 7-30 bonds, outstanding on the 4th of March, 1869 (all of which took the place of legal tenders in the bank reserves), to the extent of $63,000,000.

During the same period there has been a much larger comparative contraction of the currency. The population of the country has largely increased. More than 25,000 miles of railroad have been built, requiring the active use of capital to operate them. Millions of acres of land have been opened, requiring capital to move the products. Manufactories have multiplied beyond all precedent in the same period of time, requiring capital weekly for the payment of wages and for the purchase of material; and probably the largest of all comparative contraction arises from the organizing of free labor in the South. Now every laborer there receives his wages, and for want of savings banks the greater part of such wages is carried in the pocket, or hoarded until required for use.

These suggestions are thrown out for your consideration without any recommendation that they shall be adopted literally, but hoping that the best method may be arrived at to secure such an elasticity of the currency as will keep employed all the industries of the country, and prevent such an inflation as will put off indefinitely the resumption of specie payments; an object so devoutly to be wished for by all, and none more earnestly than the class of people most directly interested—those who "earn their bread by the sweat of their brow." The deci-

sions of Congress on this subject will have the hearty support of the Executive.

The Currency

Senate, December 10, 1873–January 22, 1874

On December 10, 1873, John Sherman [O.] introduced in the Senate a resolution that the committee report a bill for the early resumption of specie payments, and for the supply of "a currency of uniform value, always redeemable in gold or its equivalent, and so adjusted as to meet the changing wants of trade and of commerce."

On December 15 Thomas W. Ferry [Mich.] moved a substitute to the resolution to the effect that the bill submitted be one to

"restore commercial confidence and give stability and elasticity to the circulating medium, by making banking free to all, by pro-

Sketch by Thomas Nast

viding for an increase of currency of $100,000,000 (including the $44,000,000 reserve), by making the whole currency of Government issue and lawful money by the issue of currency bonds bearing 3.65 per cent. interest."

The issue of the "greenbacks," said Senator Ferry, was of the nature of a forced loan, justified only as a war

measure. Therefore the holders of these notes ought in justice to be protected, and not be discriminated against in favor of holders of other forms of currency.

Congress had made such discrimination in repealing, on March 3, 1863, the permission to convert greenbacks into bonds at the option of the holder.

From that time forth the greenbacks have been at a discount as compared with the bonds, and must continue so until Congress shall take measures either to allow their conversion into interest-bearing bonds or compel their redemption in coin.

As the matter stands now, we have $356,000,000 of this legal-tender issue afloat, circulating as money, without any power in the holders to get the promised coin, or to exchange them for bonds. They are dishonored promises to pay, or, as my friend from Vermont [Justin S. Morrill] the other day styled them, "engraved falsehoods." This state of things has continued for ten years, and is likely to continue for ten years to come unless Congress takes measures to wipe away the dishonor.

On January 20, 1874, General John B. Gordon [Ga.] spoke upon the two resolutions, with special reference to the agricultural interests of the country, particularly the South.

Let the apologists of our unfortunate financial system—unfortunate as manipulated—explain the recent panic as they may, or fail, as they will, to find any satisfactory explanation, it is still true that the recent commercial convulsion, which has changed in a day opulence to ashes, and, what is of infinitely greater moment, has deprived the laborer of his daily toil and his daily bread, is no inexplicable financial catastrophe. It is but the crowning effect of a system which can be perfected, but which is far from perfect at present.

I wish I had the time to analyze all the objections which I think lie against the present system. I think it would be easy to prove that, by the very operation of the law which lies at the bottom of the system, it does induce at seasons undue flow of money to New York and to the great centers.

That these accumulations do encourage speculations, and speculations create panics.

I think it would be easy to show that its very rigidity of volume, its non-elasticity, its insufficiency make it the subject of

control by heavy capitalists, and thereby place at the mercy of Wall street the profits on the legitimate industries of the country.

That it prevents competition, and thereby insures a high rate of interest, which is death to the debtor and to the producing sections.

That it brings of necessity the treasury into competition with Wall street in the sale of gold, and thus makes it not only a speculator in its own promises, but an absorber of the currency already insufficient for the people.

It changes, in a word, the Government into a gigantic banking establishment which, in violation of every principle of equity, and unmindful of its effects upon the morals of the people, demands payment in one currency, while it makes payment in another.

It thus sets an example whose pernicious influence is fast debauching the people and changing the nation into a nation of speculators and gamblers.

Mr. President, these are evils which I think exist in this system, and evils which can be easily, and I hope will be, remedied by the legislation of this Congress.

I come now to the most important question, the question of remedies. Senator Sherman proposes a speedy return to specie payments. This, sir, is a remedy hoary with age; but, as I shall show, hoary with failure also.

In all that I have to say on this subject I trust I shall not be understood as opposing specie payment when consistent with the best interests of the producing classes of this country; but I do wish to be understood as taking issue, broad and emphatic, with the position that a speedy return to specie payment under our circumstances, or any forced return at any date which this Congress could set, will relieve the country is practicable, just, or expedient.

First, can it relieve the country? The honorable Senator from Michigan [Mr. Ferry], in his able remarks on this question, referred to the well-known fact that specie payment never had prevented disaster when it existed; and it is true. In 1837 the suspension of specie payment followed, and did not precede, the commercial difficulties of the country. Suspension was the consequence, not the cause, of the disaster. Our whole commercial fabric was shaken from turret to foundation before a solitary bank in the United States suspended. The honorable Senator from Indiana [Mr. Morton] showed clearly the additional fact that a return to specie payment had never been suc-

cessfully resorted to to relieve commercial disaster. Absolutely the reverse is true. Suspension has been the remedy. It has been so in this country; it was so in England and everywhere.

Senators seem to have forgotten the good old adage that an ounce of prevention is better than a pound of cure; but the force of their logic would lead us to conclude that an ounce of cure was better than a pound of prevention. For if existing, established specie payments could not prevent a coming disaster, how —will Senators tell us how—can a prospective resumption cure an existing disaster? I leave to the ingenuity of Senators to reconcile such incongruous logic and bring it to the apprehension of the Senate.

I am unable, Mr. President, to see the wisdom of insisting on a program which, as has been shown, has never prevented disaster when it existed, has never cured disaster when resorted to, and which cannot relieve the country, and is neither practicable, just, nor expedient.

Is it practicable? Can we return to specie payments within any short period? The honorable Senator from Vermont [Justin S. Morrill] said in his remarks that it was not a question of the ability of the Government to redeem its currency in gold, but a question of will; and he facetiously added that "we might pardon the inability to pay, but who could defend the lack of will?" The honorable Senator will pardon me for suggesting that if a day were now set by this Congress upon which the treasury of the United States should begin the redemption of its greenbacks, and proclamations made thereof, in an incredibly short time thereafter the speculators on Wall street would control every dollar of gold in that treasury, or that is likely to be in the treasury within any given time.

Mr. President, this is not a question of whether Mr. A. or Mr. B. shall receive at the treasury five dollars for his five-dollar greenback when it is presented, but it is the infinitely greater question of whether the tens of thousands of holders of greenbacks all over this country shall be subjected to irretrievable loss by having the Government undertake to redeem when it cannot redeem, and thereby leave the millions of greenbacks dishonored in the pockets of those persons who fail to secure redemption.

But, if forced resumption were practicable, would it be just? If my surroundings were those of the honorable Senators from Vermont, Massachusetts, and New York, if the people who sent me here were creditors, as are their constituents, instead of

debtors, then I, too, might look upon this proposed change in our financial status with some degree of philosophic complacency.

But, sir, the people of the South and of the West are debtors; and their obligations were formed, mark you, when gold was at 110 to 150; and now to force them to pay in a currency equal to gold would be simply to increase their debts by the amount of 10 to 50 per cent.

But, if it were both practicable and just, would it be expedient, would it be consistent with the best interests of the producers, to return to specie payments within any limited space of time? This is the great question, after all. I apprehend that there are but two roads with a government currency to specie payments. One is by contracting the currency, as proposed here, to within a certain relation to the specie which you may hold in the treasury, which would bring bankruptcy to the country; the other by giving vitality to production, which can only be done by giving facilities for production. To give facilities for production we must give money at low interest in order that our exports, our trade, internal and foreign, may be built up, and that we may enhance individual as well as national wealth.

Which of these two roads shall we take? That is the question on which the Senate is to vote. Shall we contract, or shall we give to the country more currency? Here the battle is joined; here the roads diverge. I ask which shall we take? To my mind, supported, as I think I am, by experience and history, the latter is the shortest, surest, easiest, and best. We cannot pay gold for greenbacks until we get gold; we cannot get gold until we bring it back to this country; we cannot bring it back to this country until our exports and our sales bring it to us. We cannot increase our sales until we increase our productions; we cannot increase our productions until we increase our facilities for production, by giving to the producers money at low interest—not an inflated or redundant currency, as Senators would term it—but a sufficiency of low-rate money.

Sir, I want no inflation, which means a volume unduly swollen beyond all the legitimate wants of the country; but I make bold to say that when a people are burdened with debt, when every enterprise languishes, when every industry is prostrate, when widespread blight is upon us, even inflation, which, like the stimulant to the enfeebled pulse, may give new life and vigor, is better than insufficiency. I repeat, I want no inflation. Do you inflate the sick man starving for food by furnishing to him the nutriment which shall bring blood to his veins, flesh to his bones, and vigor to his whole system? Inflation is one thing; sufficiency is a very different thing.

But Senators talk of the idea of increasing the currency at all as a subject of alarm. Mr. President, are the teachings of history and our own experience to go for naught in solving this important and complex problem? Have Senators forgotten what history and our own experience have taught us upon this point? Let me repeat that mere theory should be silent when facts and history talk. Why, sir, look at Scotland, within the short space of twenty-five years nearly quadrupling her wealth after doubling her currency. Look at France, with her currency more than doubled, I believe, or quite doubled during the war. Notwithstanding her devastation she has been able, by quickening her enterprises and her industry, to pay her indemnity of one thousand millions in gold to Germany, to keep her interest at 6 per cent. per annum, to make her paper money receivable for all dues to government and individuals alike, and now confronts us with the overwhelming argument of this increased volume at par with gold. These are stubborn facts, Mr. President. Look at England, too, again and again, in times like these, by an act of government, suspending specie payment and authorizing an increase of the currency, even at the cost of the suspension of the most solemn enactments of the British Parliament. What was the effect there? Are the effects here to belie the effects everywhere else in the universe? What were the effects there? They were absolutely magical, as I intend to show. Panic subsided immediately; failures abated; commercial confidence was restored; and, what is a most significant fact, gold flowed into the country.

The relief which this expansion gave to England was not even delayed until the money reached the hands of the people; the very expectation of the money's coming gave relief; and I make the prediction here to-day that if this Senate and the other wing of the Capitol should announce by a vote that they intended to give more money to the people, and give it flexibility, the very hour that the electric telegraph bore the intelligence to the country, that very hour would relief be practically inaugurated, and it would bring millions of hidden greenbacks from the safes of the hoarders. I have no question about it. History does not belie itself. The people of England are not unlike the people of this country. The same disasters which were cured there by certain remedies can be cured here by the same remedies, and in no other way.

But now I wish to examine the effect of the opposite course—the course so eloquently pleaded for by the speedy resumptionists. I have shown what was the effect of expansion; now what was the effect of contraction? They tried that in England, too. At a later day, when commercial disaster approached, they did contract and they did resume; but did they cure the panic? Did they bring relief to the country? Nay, sir; hear again the facts:

It is clear at least that it did not in the more recent instance succeed, by the diminution of notes, in curing the evil which it aimed to remedy.—Mr. Thornton, M.P.

Now, sir, I believe it is conceded that no portion of English history furnishes a parallel in prosperity to the twenty years of suspension of specie payment; but I am not going into that question. I think our own experience teaches precisely the same lesson. Why, sir, at the South during the war, with one dollar of gold worth sixty dollars of Southern money, there was less of financial distress in the country than there is to-day. And what was the truth at the North? Prosperity reigned everywhere, notwithstanding your young men were in the army. Do you tell me that it was the mere semblance of prosperity; that it was a mushroom growth of wealth? Nay, sir; it remains there still, in your improved lands, in your railroads, in your bonds, in your banks, and your brown-stone fronts.

But what was the effect of the opposite course of contraction in this country? At the end of the war there were about $900,000,000 in all of currency, seven-thirties, and compound-interest notes—so estimated. The Secretary of the Treasury began a course, which has been much applauded by the specie resumptionists, of contraction, of calling in the seven-thirties and the compound-interest notes; and then, as was stated on this floor a few days ago, within two months contracting $16,000,000. What was the effect? Interest became high, agriculture began to languish, and disaster has followed.

Now, Mr. President, in view of all these facts is it wise to refuse to the people the currency which experience and history and reason demand should be furnished? To give currency to industry is a course, the wisdom of which is suggested by reason, sustained by experience, and demonstrated by history.

But, again, this contraction, which was inaugurated by the former Secretary of the Treasury, was inaugurated at the most inopportune time. It was just when the South was being restored to the Union, without a dollar of currency, without a bank, with more than $5,000,000,000 of her property gone down

forever in revolution; and with four millions of her newly emancipated population all paupers. It was therefore a time for more currency rather than less.

Before taking leave of this subject of specie payment, permit me to say that I was impressed by the remark of the honorable Senator from Indiana [Mr. Morton] in his opening speech on this subject. He said that he was not so much of a hard-money man as he once was. When, a few years ago, business engagements turned my attention to the investigation of this subject, I set out, as he did, with the idea that gold and silver were the only basis for currency—the only basis of a credit. I was born into that idea. It strengthened with my boyhood, and grew stronger with all of my political associations. But upon investigation, upon mature reflection, I have found the position less and less tenable, less and less supported by the experience and financial history of all countries. That specie is a good basis no one denies. That it is the only basis I do emphatically deny. That it is even the best basis which this Government can find I think will be seriously questioned before the country is much older. Why, sir, the suggestion that our houses, and our lands, and our crops, and our cattle upon a thousand hills would lose any portion of their value, or that their value would be less ascertainable if gold were banished from this country, occurs to me as the most irrational of propositions. All the gold of the universe could not pay for the property of the people of the United States; and if it were brought here and molded into a monument it would stand in one corner of this chamber, and would not then make a respectable monument to the absurdity of such a dogma. If every dollar of gold now in the treasury or in the pockets of individuals in the United States were banished from this country, and every gold and silver mine upon the continent were obliterated by Jehovah's fiat, or sunk by an earthquake, it would not make one farthing's difference in the productive value or the prosperity of this country, provided in lieu thereof we had a currency universally recognized; a currency universally receivable by Government and individuals alike; a currency founded upon the good faith and the stability and the revenues of the Government itself. Why, sir, some of the most beggarly countries in the world are countries where there is nothing but specie payment. Look at Spain, and Portugal, and Mexico. While some of the eras of great prosperity, as I have shown, in many of the leading countries of the world have been eras of the suspension of specie payment.

Mr. President, it seems to me difficult to determine which is

the more irrational, the laws of old Sparta that forbade gold coming into the country, or of modern Spain that forbade gold going out of it; but, more irrational than either is the effort of the United States to bring gold in and keep gold in the country by stifling industry, which is the surest way to keep gold out of it.

A sufficient supply of circulation of cheap money—cheap money which insures productions and enterprise; enterprise and productions which insure exports and domestic traffic—these are the links of natural consequence in which the blessedness of commerce lies. These are the links of natural consequence which lead to specie payments, too. Show me a country without cheap money—and I mean by cheap money, cheap interest for money—and I will show you a country where agriculture languishes. Cheap money is the one thing needful for the agricultural and productive interests of this country; and let the debt-burdened West and the debt-burdened South heed it. Cheap interest is what we want. If you will show me a country that pays, as we do in the South, from 15 to 26 per cent. per annum for its currency, I will show you a country where prosperity is dead or dying, and every industrial interest prostrate. High interest is *high* evidence of *low* prosperity. It is at the same time the evidence and the cause of the destruction of the prosperity of any community.

ELI SAULSBURY [Del.].—I ask the Senator if that high rate of interest did not occur under, and if it was not the result of, the very system which he is advocating?

SENATOR GORDON.—When I inform the Senator that the South has a little over two dollars of these greenbacks for each man[1] he will understand very readily how insufficient that amount is for the demands of the industries of the South, and why money must of consequence command these exorbitant rates of interest. I will inform the Senator in advance that I am not advocating greenbacks under the present system, but under a system which I shall indicate directly, and which I hope this Senate will adopt.

Now, sir, talking of the South, I trust the Senate will bear with me one moment while I discuss very briefly the high rate of interest and its effect upon the cotton culture, as well as the rate at the West and its effect upon the grain-growing. I affirm whereof I do know when I assert that the South is poorer to-day than she was the day Lee surrendered at Appomattox Court-house. Her lands, which after the surrender commanded from ten to thirty dollars per acre in the cotton belt, can be bought

[1] In fact, $2.98.

to-day at from two to five dollars per acre; and the cotton planters are so hopelessly involved that, unless this Congress gives them speedy and permanent relief, nothing but utter ruin and bankruptcy await them in the near future. Burdened with debt, each succeeding year, with its oppressive interest, adds to the burden.

The ruling bank interest is from 1 to 1½ per cent. per month, and has been ever since the war, and that discounted from the face of the note and compounded every thirty or sixty days; so that at the end of the year it amounts to from 24 to 27 per cent. I ask Senators what industry on the face of the earth can survive such a rate of interest? Did any ever do it in any country, however blessed of Heaven? Sir, this rate of interest has so impoverished us, that if the old laws of imprisonment for debt were in force, and I owned the debts, I could turn the jail keys within six months upon seven-tenths of the cotton growers of Georgia.

Am I asked why we borrow money at this exorbitant rate of interest? I will answer that question when I am told how our people, without a dollar, without a bank, without mules to plow, without food to feed the laborer, could begin their enterprises without borrowing; and each year's interest has not only eaten up the profit, but has brought the planter deeper and deeper into debt, and subjected him year after year to the necessity of additional loans and increasing loans.

But, Mr. President, we are told that as a means of relief we must diversify our labor. No man is more impressed with the importance and the necessity of diversity of labor than I am; but I shall appreciate that advice, so kindly given and so kindly meant, much more if Senators will also tell me how the people, without any money, with interest already at from 18 to 25 per cent., are to live, much less inaugurate new enterprises. Give us the means, give us a sufficiency of circulation to make interest cheap, and we will diversify our labor. Give us the means, and we will seize upon all the advantages which nature has given us. Give us the means, and we will soon wake up from our mountains, from their long sleep, our coal and iron, those twin sons of Hercules, whose stalwart arms will assist to lift us from our low estate. Give us the means, and we will improve our water powers, until the murmurs of discontent shall be lost in the chorus of the water wheel and the music of the spindles—until our very atmosphere shall revel and thrill and tremble with the triumphs of our industry. Give us the means. This is what we ask of Congress. Give us a financial system

which shall secure to us money at rates which rule in England and France.

It is a truth, which the national legislature would do well to note, that cotton has been grown in the cotton belt since the war at a loss. This cannot continue, of course. We can cease to make cotton and learn to make the grain and the meat which we now purchase from our brother farmers in the West; but we cannot continue to make cotton, which loses us money every year. The four million bales must soon give place to the three millions, the three to the two, and the two to one. Already a convention of the farmers of Georgia have, by formal resolution, declared that they will not plant during the next year more than one-third of their crop in cotton; and the planters of Alabama have determined the same thing, I believe, as well as the planters of other States. Sir, it is time that this great industry were rid of its burdens.

Do you tell me that it is a local interest, and therefore cannot be considered in the discussion of a great question like this?

Mr. President, no industry that gives food, or clothing, or employment to the people, that adds to our exports or to the revenues of the Government, however insignificant it may be, is unworthy of the attention of the proudest statesman and the lordliest intellect in this Chamber or in this Union.

Is it a local industry which employs in its production four millions of people and in its manufacture over twenty-five millions, whose yearly wages amount to over $37,000,000?

Is it a local interest which gives motion to over $133,000,000 of the machinery of the United States?

Is it a local interest which furnishes the mills of the East with employment and the farms of the West with a market?

Is it a local interest which, according to a late Secretary of the Treasury, prevented commercial disaster to the whole country at the end of the war, and now, to use his own language, "maintains its supremacy as an article of export"?

Is it a local interest which, like the ligament which bound together the twins of Siam, so unites the sections of this country that you cannot separate it without bringing disaster to all?

It is time, I repeat, that the national legislature looked to this interest; at least that the national legislature should relieve it of its burdens of high money. Do this, or England will drive this—your heaviest export—from every market of the world. Already by her wise policy she has become an exporter of cotton. In the years 1862, 1865, 1867, 1871, and 1872 England absolutely exported an average of two hundred and fifty million

pounds of cotton. Already she gives her money at low interest, and by her enterprise, by her appropriations of a thousand millions of money poured into the lap of India, she has almost driven us from the markets of the world; and now she stretches out her hands to Turkey, to India, to Prussia, to Austria, to Italy, to Brazil, to Peru, to Portugal, to Spain, to Egypt, and to Africa, and even Morocco and Greece are held in reserve for a last final assault upon the cultivation of cotton in America.

Sir, it is high time that the agriculture of both the South and the West were relieved of 25 per cent. money. It is high time that the agricultural interest, which is the foundation of all other interests, should have some special attention of this Government. Both the South and the West are prostrate. With money to the farmer at 18 and 25 per cent., with cotton below the cost of production at such a per cent. for money, with grain unable to pay its freights to market, with a financial system which places the productions of the country at the mercy of speculators, which in the striking language of the gifted Frenchman, Le Play, is "the art of oppressing the people," is it any wonder that this interest has at last awakened to a sense of its danger, and has combined for its protection?

Why should it not combine? Has not every other interest combined? Is not the money power of the country combined, and did it not dictate the financial policy of 1862, which has brought such disaster to the producer, and does it not now even at this very hour while I speak, by its delegations from Boston, from New York, and elsewhere, block the doors of this Chamber to influence the vote of this body? Labor combines, and receives at the hands of Government an eight-hour law. The fisheries combined, and received from the Government a bounty. Manufacturers combine, and receive a high protective tariff. The ironmongers combine, and, unlike the farmer's pigs which must be fed from his own crib, they have their iron pigs fattened at the Government crib. Railroads combine, and by Government bounties and Government grants they scale the mountains and link with bands of steel our eastern and western oceans. But, sir, this great interest, which lies at the foundation of all other interests; this interest, without which no other interest can survive; this interest, which numbers among its subjects near 25,000,000 of the 40,000,000 of the population of this country; this interest, which bears on its Atlantean shoulders the wealth, the commerce, the manufactures, and the very civilization of the country, has to-day less influence in shaping the legislation of the country than the fishers of salty codfish

on the shores of New England. Sir, it is time, I repeat, that this were changed; it is time that agriculture was heard.

I hope we shall give to the people more money. I hope we shall give to the money elasticity by the issue of convertible and reconvertible bonds, and I hope we shall do so without delay.

If we require the Secretary of the Treasury to prepare bonds, bearing say 3 per cent. interest, in which greenbacks may be invested, and require that these bonds shall be reconvertible at the option of the holder, we shall give at once the elasticity to the currency which is essential to move it beyond the control of speculators. If we will then require the greenbacks, which are converted by the voluntary action of the people into these bonds, to be immediately reinvested by the Secretary of the Treasury in 6 per cent. bonds, we shall increase the volume of circulating medium, and, at the same time, rapidly reduce the public debt. These bonds, sir, would take, in large transactions, the place of currency, and if made available to the banks as reserves would turn loose the greenbacks now locked up in the bank vaults, and the reinvestment of the greenbacks so received by the Government for the 3 per cent. bonds would keep these greenbacks in circulation also. Again, sir, the great desideratum to the agriculture of the country, to wit, cheap interest, would be secured. The Government rate would become the ruling rate. It would give to us money at little above the Government rate.

It would make the money so elastic that it could no longer be made to subserve the purpose of heavy combinations to depress or inflate the prices of productions.

It would make panics impossible.

It would reduce rapidly the public debt.

It would, in a word, if we will but take one additional step, which I desire to see taken, solve the financial problem of America, and give to American agriculture and American enterprise an "Independence Day" which would be celebrated for all time to come.

The other step to which I refer is to strike from the laws the words "except duties on imports," and make Government money receivable for all dues to Government and to individuals alike. Do you desire to see the currency at par with gold? You will not see it as long as the Government dishonors its own currency, by making it a legal tender to the citizen, and refusing it for dues to itself. I should be glad for any Senator to answer how Government money can be kept at par with gold while the Government itself repudiates its own money? Sir, to this

serious mistake—not to use the juster phrase, crime, against the people—are directly traceable all the depreciations of the currency, all the speculations in gold, all the "corners" to control the price of gold, and much of the disaster which has followed. The day we take this step the demand for gold will cease. It will be no longer needed for purposes of domestic trade or by Government. Relieve the merchants of the necessity of buying gold to pay duties, and that day the occupation of the Wall street gold kings, like Othello's, is gone. Gold being no longer needed for individual purposes, or by Government save to pay interest, would cease to be in demand, and the whole coin of the country would be upon the market without buyers. It must of necessity therefore fall to par, and if we continue this course would remain so forever. The amount of coin needed to pay interest would be largely supplied by the mines and receipts from abroad. If more were needed, let it be purchased abroad and not here. Free the farmers from the merciless claws of the speculators and the burden of high interest, and their exports will soon take care of foreign balances?

Mr. President, the day we take the step I have indicated, that day we shall proclaim a new Declaration of Independence—a declaration of the independence of our industries from the effects of our own money changers and "combiners," and of foreign intermeddlers with our currency. Let a dollar mean a dollar and not a promise to pay a dollar.

Equal rights to all demand a currency which gives equal benefits to all. From out of the black pall of smoke from the burning grain on the Western prairies and the desolation of agriculture all over the land the murmurs of discontent are already ominous. In their right to regulate wrong by the ballot the producers, despising party lines and party associations, will, sooner or later, rid the country of a system which, by its discriminations, but perpetuates their bondage to poverty.

On January 22 George S. Boutwell [Mass.] made an extended speech on the resolutions. He said in part:

I am of opinion that the process of holding the currency inflexible and allowing the business of the country to grow up to the volume of currency is a natural, in a certain degree an insensible, process, which does not interfere appreciably with the general prosperity. I believe that the country has never from the beginning of the Government enjoyed five years of such undisturbed prosperity as it has enjoyed during the last five years.

And if it be true, as the Senator from Georgia has asserted, that there is an absence of prosperity in the South, I apprehend, from the observations I have been able to make, that it is due to circumstances entirely independent of the policy of the Government. I call the Senator to witness that the cities of Charlotte in North Carolina, Columbia and Charleston in South Carolina, Jacksonville in Florida, Savannah, Macon, and Atlanta in Georgia, Chattanooga and Knoxville in Tennessee, are all more prosperous now than they were at any period before the war—that in all these cities there has been an increase of population, an increase of business, and an increase of wealth for the purposes of business.

SENATOR GORDON.—That is true., but it does not answer my question. My question was as to the producing classes in the country, not as to the growth of cities.

SENATOR BOUTWELL.—Cities are the outgrowth, the evidences of general prosperity. They exist only in the sunshine of general prosperity; and when you have demonstrated that a city is prosperous, increasing in numbers and wealth through months and years, you have established incontrovertibly the fact that that city is situated in a prosperous community.

There are two classes of people in the South. There are men who before the war were large landholders, and the possessors of immense estates in personal property and slaves. The fortunes of war divested them of all property except the land. They now hesitate to sell the land. Taxes are high, and they are unable to procure the capital for the economical and successful culture of their fields, and they are day by day growing poorer. Naturally they ask for some relief. There is also in the South a class of people, both black and white, a large and constantly increasing class of laborers who, either upon lands that they lease or upon lands that they have bought, are producing to the acre larger products than were realized under the old system. The aggregate products of the South demonstrate incontestably the fact that the South is prosperous as a whole.

SENATOR GORDON.—The increased production of cotton is not due to any great facilities that have been furnished to the production of cotton, but it is due entirely to the fact that new fields, new areas, higher latitudes, heretofore appropriated only to the growth of grain and grasses, are now used for the cultivation of cotton, and the cotton lands proper have so depreciated in value that they are no longer regarded as security for debt.

SENATOR BOUTWELL.—The statement made by the Senator

from Georgia is undoubtedly true. It is, if I do not misunderstand him, the process that was going on before the war. When lands were impoverished the owners abandoned them and sought new fields. That is what the owners of lands are doing now. But the general fact remains undisturbed that the South is a prosperous section of the country as compared with any previous condition of its history.

Before I pass from this branch of the subject, I wish to call the attention of the Senate to a remark made by the Senator from Georgia, which he submitted as a means of relieving the distresses which he imagined were afflicting his section. He demanded with emphasis and with repetition, "cheap money," "cheap money." If he meant by that demand to secure additional circulation of paper money for the purpose of cheapening it, I advise him to recall what must be to some extent his own experience in the South during the war. If we are not misinformed, the South then had cheap money, an abundance of it; so cheap that a householder would go to market in the morning with a basketful of currency and carry home his dinner in his waistcoat pocket. [Laughter.]

SENATOR GORDON.—I did not mean cheap money as the Senator understands it. I meant cheap interest upon money—money leant cheaply.

SENATOR BOUTWELL.—That is what I supposed the Senator might say in reply; otherwise I should have commenced this part of my speech at the other end. [Laughter.] If an increase of paper money diminished the rate of interest, then there would be one view of this subject which I could take with some degree of complacency. The theory on which an increase of paper money is demanded is that it stimulates business, inspires activity, opens new avenues for enterprise. Who does not see that the very process alleged to be beneficial upon which we are invited to accept the theory of inflation demonstrates conclusively that by the operation of those processes the price of interest must continually advance? But I ask gentlemen to consider further. Suppose a man wishes to deal in flour, and he can buy one hundred barrels of flour, as a stock in business, for $800. He wishes to borrow the money, and he can borrow the money for 8 per cent.; and with that capital invested in one hundred barrels of flour he can proceed with his business, at an annual interest cost of sixty-four dollars. Suppose the country enters upon a system of inflation, and the volume of paper currency is increased 50 per cent., and by an inevitable law prices advance 50 per cent., so that in order to buy one

hundred barrels of flour he must have $1,200 of money. Everybody else is in the same condition. At what rate must his interest be in order that he can avail himself of capital to pursue his business as he would have pursued it under the old system? Twelve hundred dollars must be hired for sixty-four dollars in order to place him in the same condition that he would have been without inflation—that is, 5 1-3 per cent. The reverse, then, is the truth. The rate of interest increases when you inflate the currency. The interest on the capital required to do a particular business is not only greater from the fact that additional capital is required, but it is greater from the fact that every dollar of the capital so required demands and will obtain a higher rate of interest. Therefore the operator, whether he be a farmer owing for his farm, a manufacturer or a merchant who depends upon borrowed capital to enable him to conduct his business, is impoverished by each and both of these processes.

SENATOR FERRY.—I would ask the Senator how he accounts for the fact that during the summer months, when there is a redundancy of currency in New York, the rate of interest is much below the rate in the winter, when there is a scarcity of currency. Why, sir, currency goes begging in New York during the summer when there is that redundancy, and during the winter money can hardly be obtained there, which is the fact to-day.

SENATOR BOUTWELL.—Mr. President, one of the difficulties in dealing with every financial and economical question is that there are many influences at work the effect of which cannot be measured; and therefore it is that what is called statistical information is so untrustworthy. The inquiry made by the Senator from Michigan leads me to reflect upon one of those influences, operating temporarily in the city of New York.

Money accumulates in the city of New York by natural and artificial processes during the month of July; but the operators, the merchants, the speculators are taking recreation, and they are giving very little attention to the price of money. But when the 1st of August comes, and these men return to their stores and their banking houses, speculation begins; the prices of stocks advance; fortunes are made; the rates of interest increase; when, finally, in the month of September or October, there is an active demand for money to keep the margins good on the stocks that have been bought by irresponsible people and a demand also by responsible merchants for money to move the crops. Then and thus the borrowers are ground between the upper and nether millstone. This is the process that takes place every

year, and is a satisfactory explanation of the phenomenon stated by the Senator from Michigan.

The Senator from Missouri [Carl Schurz] said he had been endeavoring to satisfy me that the true way to prevent inflation was to go for contraction, and that those of us (if I am allowed to say "us" in this connection) who think that the strong point is to stand on the present policy of the country and resist contraction on the one hand and inflation on the other are really in the interest of the inflationists. Further, that the strongest position we could occupy was to step off from this platform, to abandon this citadel, intrenched as we are in the settled policy of the country, and enter upon a contest outside; and then, in case we should be defeated by the inflationists, try to regain our position and hold to the old policy of the country. I am not sure that this may not be military strategy. There is certainly a great example in that direction. There was a student at West Point by the name of Charles Derby, known to the literary world as "John Phœnix." While a student there, it is said that a professor demonstrated, according to his ideas of demonstration, that a city or a citadel closely besieged could not hold out more than sixty days. That being demonstrated, he turned to the class, addressing them as a whole, but expecting answers of course by individuals, and said, "Young gentlemen, what would you do if you were commanding a force in a citadel subject to close siege?" "Well," said Derby, "upon the proposition that you have demonstrated, I would march out of the citadel, and let the enemy in, then I would besiege it closely, and in sixty days I would take it and reoccupy it." [Laughter.]

We have a citadel, and we had better keep in it. If we are driven out, we shall then only be in the position which the Senator from Missouri advises us voluntarily to accept. If those who are in favor of contraction and those who are in favor of the present condition of things, that is, a permanent volume of $356,000,000, are together unequal in the contest with those who demand an addition to the currency, I do not see how, even with the oration of my friend the Senator from Missouri, those who are in favor of contraction alone will be able to maintain their position.

There is but one remedy for the existing condition of things, and but one means by which we can ward off the evils which menace us—the remedy is taxation. I do not say on what, either of persons, classes, or property; but taxation there must be, or else the evils of an inflated currency, or the disgrace of borrowing money to pay the current expenses of our Govern-

ment, will fall upon the people. Moreover, a loan does not redeem our pledge to maintain the sinking fund. The inflation of the currency, which is one way, and a poor way, of borrowing money, does not redeem our plighted faith to the world. When we have exhausted every resource in the matter of economy, as it is our duty to exhaust every resource, then, as between taxation and borrowing, as between burdens and disgrace, I will put burdens on the people; but I will not consent to disgrace them.

The bill was not acted upon during the session.

RESUMPTION OF SPECIE PAYMENTS

SIXTH ANNUAL MESSAGE OF PRESIDENT GRANT

In his sixth annual message of December 7, 1874, President Grant referred to the industrial and financial depression that was still continuing throughout the country. Nevertheless he said that capital was abundant and at moderate rates when the security was good, and labor's wages, measured by the cost of necessities, were cheap. Land, too, was abundant and rich, producing more than the country required for its needs.

With these facts in view, it seems to me that wise statesmanship, at this session of Congress, would dictate legislation, ignoring the past, directing in proper channels these great elements of prosperity to any people. Debt—debt abroad—is the only element that can, with always a sound currency, enter into our affairs to cause any continued depression in the industries and prosperity of our people. A great conflict for national existence made necessary, for temporary purposes, the raising of large sums of money from whatever source attainable. It made it necessary to devise a system of national currency which it proved to be impossible to keep on a par with the recognized currency of the civilized world. This begot a spirit of speculation involving an extravagance and luxury not required for the happiness or prosperity of a people, and involving, both directly and indirectly, foreign indebtedness. The currency, being of fluctuating value, and therefore unsafe to hold for legitimate transactions requiring money, became a subject of speculation in itself. These two causes, however, have involved us in a foreign indebtedness, contracted in good faith by borrower and

lender, which should be paid in coin, according to the bond agreed upon when the debt was contracted—gold or its equivalent. The good faith of the Government cannot be violated toward creditors without national disgrace.

Our commerce should be encouraged; American shipbuilding and carrying capacity increased; foreign markets sought for products of the soil and manufactories, to the end that we may be able to pay these debts. But, in my judgment, the first step toward accomplishing this object is to secure a currency of fixed, stable value; a currency good wherever civilization reigns; one which, if it becomes superabundant with one people, will find a market with some other; a currency which has as its basis the labor necessary to produce it, which will give to it its value. Gold and silver are now the recognized medium of exchange the civilized world over; and to this we should return with the least practicable delay. In view of the pledges of the American Congress when our present legal-tender system was adopted, and debt contracted, there should be no unnecessary delay in fixing by legislation a method by which we will return to specie. It is easy to conceive that the debtor and speculative classes may think it of value to them to make so-called money abundant until they can throw a portion of their burdens upon others. But even these, I believe, would be disappointed in the result if a course should be pursued which will keep in doubt the value of the legal-tender medium of exchange. A revival of productive industry is needed by all classes—by none more than the holders of property, of whatever sort, with debts to liquidate from realization upon its sale. But, admitting that these two classes of citizens are to be benefited by expansion, would it be honest to give it? Would not the general loss be too great to justify such relief? Would it not be just as honest and prudent to authorize each debtor to issue his own legal-tenders to the extent of his liabilities? Than to do this would it not be safer, for fear of overissues by unscrupulous creditors, to say that all debt obligations are obliterated in the United States, and now we commence anew, each possessing all he has at the time free from incumbrance? These propositions are too absurd to be entertained for a moment by thinking or honest people. Yet every delay in preparation for final resumption partakes of this dishonesty, and is only less in degree as the hope is held out that a convenient season will at last arrive for the good work of redeeming our pledges to commence. It will never come, in my opinion, except by positive action by Congress, or by national disasters which will destroy, for a time at least, the

credit of the individual and the state at large. A sound currency might be reached by total bankruptcy and discredit of the integrity of the nation and of individuals. I believe it is in the power of Congress, at this session, to devise such legislation as will renew confidence, revive all the industries, start us on a career of prosperity to last for many years, and to save the credit of the nation and of the people.

A nation dealing in a currency below that of specie in value labors under two great disadvantages: First, having no use for the world's acknowledged medium of exchange, gold and silver, these are driven out of the country; second, the medium of exchange in use being of a fluctuating value—for after all it is only worth just what it will purchase of gold and silver; metals having an intrinsic value just in proportion to the honest labor it takes to produce them—a larger margin must be allowed for profit by the manufacturer and producer. It is months from the date of production to the date of realization. Interest upon capital must be charged, and risk of fluctuation in the value of that which is to be received in payment added. Hence high prices, acting as a protection to the foreign producer, who receives nothing in exchange for the products of his skill and labor except a currency good at a stable value the world over.

It seems to me that nothing is clearer than that the greater part of the burden of existing prostration, for the want of a sound financial system, falls upon the workingman, who must, after all, produce the wealth, and the salaried man who superintends and conducts business. The burden falls upon them in two ways: by the deprivation of employment, and by the decreased purchasing power of their salaries. It is the duty of Congress to devise the method of correcting the evils which are acknowledged to exist, and not mine. But I will venture to suggest two or three things which seem to me as absolutely necessary to a return to specie payments, the first great requisite in a return to prosperity. The legal-tender clause to the law authorizing the issue of currency by the national Government should be repealed, to take effect as to all contracts entered into after a day fixed in the repealing act; not to apply, however, to payments of salaries by Government or for other expenditures now provided by law to be paid in currency in the interval pending between repeal and final resumption. Provision should be made by which the Secretary of the Treasury can obtain gold as it may become necessary from time to time from the date when specie redemption commences. To this might and should be added a revenue sufficiently in excess of expenses to insure

an accumulation of gold in the treasury to sustain permanent redemption.

With resumption, free banking may be authorized with safety, giving the same full protection to bill holders which they have under existing laws. Indeed, I would regard free banking as essential. It would give proper elasticity to the currency. As more currency should be required for the transaction of legitimate business new banks would be started, and in turn banks would wind up their business when it was found that there was a superabundance of currency. The experience and judgment of the people can best decide just how much currency is required for the transaction of the business of the country. It is unsafe to leave the settlement of this question to Congress, the Secretary of the Treasury, or the Executive. Congress should make the regulation under which banks may exist, but should not make banking a monopoly by limiting the amount of redeemable paper currency that shall be authorized.

Resumption of Specie Payments

Senate, December 21-22, 1874

On December 21, 1874, John Sherman [O.] introduced a bill in the Senate, from the Finance Committee, providing for the resumption of specie payments on a new plan. In a speech on the following day he urged its immediate consideration. At this there was some demur.

Allen G. Thurman [O.] declared that his colleague had allowed his financial measures to be discussed through all the long previous session, until the Senate and the country were sick of them. Senator Sherman's purpose in this had been that the intelligent minds of the country might express their opinions on the measures. But now he introduced a new measure, which had not, like the old, been recommended by the President nor considered by the country, and proposed to push it through before the people had time to express an opinion on it. He hoped that it would lie over until after the holidays.

Senator Sherman, on the contrary, thought that "it would be a happy Christmas gift to the people of the United States if we could give them some bill that would

assure the business men of the country that stable times were coming."

Carl Schurz [Mo.] pleaded for more time for considering the bill. He himself wished to study it with special reference to "whether, under present circumstances, we can issue silver and keep it in circulation, or whether the circumstances surrounding us to-day, or liable to surround us to-morrow, are not such as will make it probable that silver put out will be melted into bullion and sent abroad."

By a vote of 39 to 18 it was decided to take up the bill. Senator Sherman explained its provisions.

The first section of the bill provides for the resumption of specie payments on the fractional currency. It so happens that at this particular period of time the state of the money market, the state of the demand for silver bullion, and more especially the recent action of the German Empire, which has demonetized silver and thus cheapened that product, enables us now, without any loss of revenue, without any sacrifice, to enter the market for the purchase of bullion and resume specie payments on our fractional currency. The market price of bullion to-day will justify the Government of the United States, without any sacrifice, at a price about equivalent to our fractional currency, to purchase silver bullion in the money markets of the world, mostly of our own production, perhaps entirely of our own production. This bill simply directs that the Secretary of the Treasury shall purchase this bullion and shall coin silver coin and substitute that in the place of fractional currency. To that extent it is a resumption of specie payments upon the silver standard for the fractional currency. This section is recommended not only by the Secretary of the Treasury and the President of the United States, but I believe will meet the general concurrence of every member of the Senate. The mints of the United States are now prepared, immediately upon the passage of this bill, to resume the coinage of silver coins of all the legal denominations.

The second section rescinds the charge now made for converting gold bullion into coin. This removes the inducement to send the bullion to Great Britain, where no charge is made for this conversion. The annual loss of revenue would be only $85,000. Gold when coined into

American money would naturally tend to remain in this country, and so aid the return to specie payments.

The third section of the bill contains only two or three affirmative propositions. The first is that after the passage of this act banking shall be free. Perhaps there is no idea stronger in the minds of the American people than a feeling of hostility against a monopoly—a privilege that one man or set of men can enjoy which is denied to another man or set of men. Under the law as it now stands banking is substantially free in the Southern and some of the Western States; but banking is not free in the great commercial States, in the older States, where wealth has accumulated for ages. This may be a mere sentimental point, but it is well enough to meet it; and by the operation of this bill banking is made free, so that there will be no difficulty hereafter for any corporation organized as a national bank either to increase its circulation or for banks to be organized under the provisions of existing law to issue circulating notes to any extent within the limits and upon the terms and provisions of the banking law. This section, therefore, by making banking free, provides for an enlargement of the currency in case the business of the community demands it, and in case any bank in the United States may think it advisable or profitable to issue circulating medium in the form of bank notes under the conditions and limitations of the banking law. Coupled with that is a provision, an undertaking, on the part of the United States that as banks are organized or as circulating notes are issued, either by old or new banks, the Government of the United States undertakes to retire 80 per cent. of that amount of United States notes. In other words, it proposes to redeem the United States notes to the extent of 80 per cent. on the amount of bank notes that may be issued; and here is the first controverted question that arises on this bill and the first that is settled. It may be asked if we provide for the issue of circulating notes to banks, why not provide for the retirement of an equal amount of United States notes? The answer is that under the provisions of the banking act by the law as it now stands a bank cannot be organized and maintained in existence unless the reserve which is in that bank, or required for that bank in the ordinary course of business either on its deposits or circulation, is at least equal to 20 per cent. of the amount of its circulating notes, so that it was believed, according to the judgment of the best business men of the country, and I may say, with the Comptroller of the Currency, that the retirement of 80 per cent.

of the amount of bank notes is fully equivalent to keeping the amount of circulating medium in actual circulation on the same footing, so that this provision of the bill neither provides for a contraction nor expansion of the currency, but leaves the amount to be regulated by the business wants of the community, so that when notes are issued to a bank 80 per cent. of the amount in United States notes is redeemed, and this process continues until United States notes are reduced to three hundred millions.

SENATOR SCHURZ.—Will the Senator permit me to ask him a question in reference to this section? When the 80 per cent. of greenbacks are retired will they be destroyed and never issued again?

SENATOR SHERMAN.—I will speak of that in a moment.

The third section fixes January 1, 1879, as the date for completely returning to specie payments.

It has always been a question in the minds of many people as to whether it is wise to fix a day for specie payments. That matter was discussed at the last session of Congress by many Senators, and the general opinion seemed to be that if we would provide the means by which specie payments would be resumed it might not be necessary to fix the day; but, on the other hand, it is important to have our laws in regard to the currency fix a probable time, or a certain time, when everybody may know that his contracts will be measured by the coin standard. We also know that by the example of other nations which have found themselves in the condition in which we are now placed, and by some of the States when specie payments were suspended, that they have adopted a specific day for the resumption of specie payments.

This bill also provides ample means to prepare for and to maintain resumption. I may say the whole credit and money of the United States are placed by this bill under the direction of the proper executive officers, not only to prepare for but to maintain resumption, and no man can doubt that if this bill stands the law of the land from this time until the 1st day of January, 1879, specie payments will be resumed, and that our United States notes will be converted at the will of the holder into gold and silver coin.

Mr. President, these are all the provisions contained in this bill. They are simple and easily understood, and every Senator can pass his judgment upon them readily.

Now I desire to approach a class of questions that are not embraced in this bill. Many such, and I could name fifty, are not included in this bill; and I may say this: that if there should be a successful effort by the Senate of the United States to ingraft any of this multitude of doubtful or contested questions upon the face of this bill it would inevitably tend to its defeat. I am free to say that if I were called upon to frame a bill to accomplish the purpose declared in the title of this bill I would have provided some means of gradual redemption between this and the time fixed for final specie payments. All of these means are open to objection. There have been three different plans proposed to prepare for specie payments, and only three. They are all grouped in three classes. One is what is called the contraction plan. The simplest and most direct way to specie payments is undoubtedly the gradual withdrawal of United States notes or the contraction of the currency. Now, we know very well the feeling with which that idea is regarded not only in this Senate, but all through the country. It is believed to operate as a disturbing element in all the business relations of life; to add to the burden of the debtor by making scarce that article in which he is bound to pay his debts; and there has been an honest, sincere opposition to this theory of contraction. Therefore, although it may be the simplest and the best way to reach specie payments, it is entirely omitted from this bill. The second plan, that I have favored myself often, and would favor now if I had my own way and had no opinion to consult but my own, is the plan of converting United States notes into a bond that would gradually appreciate our notes to par in gold. That has always been a favorite idea of mine. There is nothing of that kind in this bill except those provisions which authorize the Secretary of the Treasury to issue bonds to retire the greenbacks as bank notes are issued; and it also authorizes the Secretary of the Treasury to issue bonds to provide for and to maintain resumption. I therefore have been compelled to surrender my ideas on this bill in order to accomplish a good object without using these means that have been held objectionable by many Senators.

The third plan of resumption has been favored very extensively in this country, which is the plan of a graduated scale for resumption in coin or bullion; what I call the English plan. That is, that we provide now for the redemption at a fixed rate or scale of rates of so much gold for a specific sum of United States notes. At present rates we would give about $90 of gold for $100 of greenbacks, and then provide for a graduated scale

by which we would approach specie payment constantly, and reach it at a fixed day. This may be called a gradual redemption. This, also, is objectionable to many persons, from the idea that it compels us to enter the money markets of the world to discount our own paper. It is an ideal objection, but a very strong objection; an objection that has force with a great many people. We have undertaken to redeem these notes in coin, and it is at least a question of doubtful ethics whether we ought to enter into the markets of the world and buy our own notes at a discount. Although that plan has been adopted in England and successfully carried into execution, yet there is a strong objection to it in this country, and therefore that mode is abandoned. Either of these plans I could readily support; but they have met and will meet with such opposition that we cannot hope to carry them or ingraft them in this bill without defeating it. We have then fallen back on these gradual steps: first, to retire the fractional currency; second, to reduce United States notes as bank notes are increased; and then to rest our plan of redemption upon the declaration made on the faith of the United States that at the time fixed by the bill we will resume the payment of the United States notes in coin at par. That is the whole of this bill.

Not only are all these plans of gradual redemption omitted from the bill, but there are also many troublesome questions omitted from the bill, among the rest the one suggested by the Senator from Missouri [Mr. Schurz]. If we undertake to define precisely what shall be done four years hence on the resumption of specie payments, to say whether the legal-tender act shall then be repealed, or whether it shall be repealed before or not, we enter upon a very difficult field, and will undoubtedly divide the Senate and divide the country. Is it not better to postpone until the time comes to meet them these questions which must then arise, rather than to engage in an attempt to settle them now, four years in advance?

SENATOR SCHURZ.—The question I asked the Senator does not relate to a time four years ahead, but it refers to the immediate operation of the bill.

SENATOR SHERMAN.—I will answer that question. I did not intend to avoid it. The Senator sees the force of the argument that we ought not to put in this bill anything about the reissue of notes or the character of those notes when reissued after redemption shall come.

SENATOR SCHURZ.—Does the Senator say that I see the force of that argument?

SENATOR SHERMAN.—I think the Senator ought to see it.

SENATOR SCHURZ.—Ah! Very well.

SENATOR SHERMAN.—I hope the Senator does. If he was himself preparing a bill to resume he would probably take some other plan, but he may very well leave a difficult question to the time when that question commences to operate. We declare the time when specie payments shall be resumed in order to give fair notice, so that market values for the future may be adjusted and so that people will prepare themselves for resumption. Our people may then base their transactions upon that solemn declaration made by Congress.

SENATOR SCHURZ.—I think that the Senator from Ohio has probably not understood my question. What I meant to ask was whether whenever any greenbacks were retired by the Secretary of the Treasury, or as the bill styles it are redeemed in consideration of so many thousands of dollars of bank notes having been issued, the greenbacks so retired shall be canceled and destroyed never to be reissued again. The Senator will remember very well that we had a protracted struggle about a similar question once, and that the framing of a law gave rise to much controversy on that identical point. Now, what I am after is to understand whether the provisions of this bill will in their practical operation work in the direction of specie payments or not, and for that it is a very essential question whether the greenbacks so retired shall be destroyed never to be reissued again, or whether they shall be held as a reserve, as the forty-four millions were, certainly to be put into the market again.

SENATOR SHERMAN.—I say frankly that we do not propose to decide that question in this bill. I have no doubt that, when the time arrives when the question becomes material, it will be met. Undoubtedly until the reduction of the United States notes to $300,000,000 they cannot be reissued. The process must go on *pari passu* until the amount of legal-tender notes is reduced to $300,000,000. Before that time will probably arrive in the course of human affairs, at least one or two Congresses will have met and disappeared, and we may leave to the future these questions that tend to divide us and distract us, rather than undertake to thrust them into this bill and thus divide us and prevent us from doing something in the direction at which we aim.

SENATOR SCHURZ.—I want to be satisfied on that point. The Senator then admits that the bill is open to the construction that the Secretary of the Treasury may gather up the 80 per cent. as a reserve and reissue the notes again, and that it is the intent of those who made the bill that it shall be open?

SENATOR SHERMAN.—I made no such admission. I leave

that question to be decided upon the law as it stands. The case that is put of what I regarded as an illegal issue of notes probably may never arise, and certainly it cannot arise for a considerable period of time.

SENATOR SCHURZ.—I do not want to annoy the Senator at all; but I put it to him whether we should pass a bill on a subject like this, so delicate and so important, the meaning of which is so obscure that the champion of the bill has to admit himself that its construction will be left to the courts of the United States?

SENATOR SHERMAN.—In supporting a bill of this kind, I do not meet all possible questions that may arise in its construction, and no human mind could do it. I know this, and upon this rock I stand: that this bill has provisions in it which tend to accomplish the purpose which the Senator and I have so diligently sought, and I will not seek to obstruct the passage of this bill or defeat it by thrusting into it doubtful questions of law or public policy which may tend to the defeat of the bill. I take this bill not as the bill that I should propose myself, a bill which itself surrenders many of my convictions as to the means to be employed to accomplish the particular purpose designed, but I take it because I see that every provision in it tends to the object that the Senator and I seek, and I will not weaken it by putting in questions of grammar or construction which may tend to weaken and destroy it.

SENATOR SCHURZ.—I think I shall not want to annoy the Senator or obstruct the bill, but I submit that we are not interpreting financial legislation here, but that we are making financial legislation, and we want to make it as clear as it possibly can be made. The Senator knows from his own experience that, if the least loophole is left, he cannot foretell what the treasury will do; whether it will not under the pressure of public opinion some time or other issue twenty or thirty or forty millions again of that which was accumulated, as he says redeemed, but possibly accumulated only as reserve. The thing was done before, and it may be done again. He knows very well also that that may defeat the whole scheme of returning to specie payments.

SENATOR SHERMAN.—Now, sir, the great weakness of our currency is that we have undertaken to pay our notes in coin and do not fulfill our promise. No man denies that obligation. It is so written upon the statute-book now six years old. But from the fact that we have not said when we will do it, at what time we will do it, the question is still open to rest upon the

construction which each Senator and member may give to the words "as early as practicable"; an indefinite phrase at least, and one that applies to all future ages. The object of this bill is to fix a time within which the honor of the United States is pledged to redeem these notes in coin; and that pledge, if made by Congress (and I trust it may be made by the whole of Congress—all parties—and by the whole people) will be redeemed. It is true a subsequent Congress may repeal it, and anything we can do may be repealed by a subsequent Congress. All we can do is in our time to pledge the faith of the United States to do this in the future, and if the people in their power and might, through agents hereafter elected, violate this promise there is no power in our Government to prevent it. We only know that they probably will not do it; that a pledge thus specific, made as to a definite day and time, with ample powers given to an executive officer to execute it, will be maintained.

I desire to say to the Senator one word more, that this pledge is made knowing the full extent of the obligation imposed by this law, and I believe that every Senator who votes for this bill is personally pledged and all his influence is pledged, all his political influence is pledged to maintain that declaration just as our fathers felt themselves bound by their lives, their fortunes, and their sacred honor to maintain the pledges they made in the Declaration of American Independence.

SENATOR THURMAN.—The first two sections, so far as my opinion is concerned, are perfectly right; but they do very little toward the resumption of specie payments, for when you shall have paid the fractional currency in silver you will have paid it in something that is no more valuable than the greenbacks in which it is now redeemable. And when you shall have done away with the coinage charge, as provided in the second section, you will have done a little, it is true, toward increasing the amount of gold coinage and that is all—an almost infinitesimal step toward specie payments. Therefore, if there is anything in this bill that looks toward specie payments, it must be in the third section. Now let us look at that.

After hearing the statement by the chairman of the committee of the omissions from the bill, it is very difficult to find what there is in it. We know that there is a great deal of omission, but the least possible amount of commission that ever I have seen in a great public measure. Let us see what this section proposes to do. It proposes that there shall be free banking, and then for every $100 of bank notes that shall be issued there shall be redeemed $80 of legal-tenders, and that that

process shall go on until the amount of legal-tenders outstanding shall be three hundred millions and no more. If that were all there was in this section, and it were fairly and distinctly stated that the legal-tenders thus redeemed were not to be reissued but were to be canceled, one could very well understand what the section is, and it would only be a question of time when the effect of the section would be to reduce the legal-tenders to $300,000,000; but that is not all that is in the section by any means. It goes further, and provides that, after the 1st day of January, 1879, there shall be full and complete resumption of specie payments by the Government on the legal-tenders, and that means full and complete resumption by the banks, because the banks by their charters are bound to redeem either in legal-tenders or in coin; and, if legal-tenders are redeemed by the Government in coin, it is equivalent to declaring that the banks shall also redeem in coin. Therefore, this bill provides that from and after the 1st of January, 1879, four years hence, there shall be complete resumption of specie payments in the United States. Put that provision in the bill, coupled with the other provision for retiring 80 per cent. of greenbacks for every additional dollar of national-bank issue under this bill, and see how they work.

Does my friend, the chairman of this committee, believe that there will be in the next four years $100,000,000 of additional national-bank currency issued? What warrant has he to believe any such thing as that? But without the issue of $100,000,000 more national-bank currency he cannot retire $80,000,000 of greenbacks and bring them down to $300,000,000. Pray how much increase has there been in national-bank currency under the law which you passed last session? About $1,400,000. You will have no increased banking under this bill, if you pass it, until business begins to revive; and when will business begin to revive? All that is necessary is for a man to open his eyes and read the history of his country to know when it will revive.

At intervals of about twenty years we have one of those things called a panic, followed by stagnation in business, the result of overtrading, overproduction, of extravagance of all sorts and descriptions, extravagance in individuals, extravagance in corporations, extravagance in governments large and small, until at last the bubble bursts, and then comes a season of retrenchment, of economy; and how long does that last? How long is it before debts are liquidated and a surplus is accumulated, so that there begins to be an upward tide in the business

of the country? Never has it been less than four years in the United States.

My colleague says that this bill will have one great and good effect: it will let the country know what is to be our policy, and then business will go on steadily, because people will know what they have to expect. Yet my colleague says to the people—this bill, which is to inform you what is to be the policy of the Government, does not inform you whether these $80,000,000 of retired greenbacks are to be poured out again at the pleasure of a Secretary of the Treasury! Why, sir, if this bill were to have operation, if there were issued $100,000,000 of national-bank notes and then you retired $80,000,000 of greenbacks, it would become the most material thing in the world for the capitalists and business men of the country to know whether these greenbacks were to be reissued again; for, if they be reissued, the effect would be an inflation of the currency of $100,000,000. If they are to be canceled, then the inflation is only $20,000,000, and may not be even so much as that on account of the reserve that the banks are required to keep against their deposits; but if they are to be reissued then there is unmitigated inflation to the amount of $100,000,000, and the business men of the country are told by the chairman of the Committee on Finance: "I will not give you any light on this subject at all; I will not tell you; I will not even express my own opinion, whether or not you are to go on doing your business without knowing at all whether there is to be an inflation of $100,000,000 in the next four years or whether there is to be an inflation of only $20,000,000, or no inflation at all." That will not do, sir. Pass the bill in its present shape, and instead of settling you will unsettle, instead of fixing you will unfix, the minds of the people.

I felt this morning a little like complaining that our Republican friends should mature such a measure as this, if they did do it as the newspapers say in secret caucus, without allowing their fellows of the Senate on this side of the chamber to know anything about it; but that is a most venial offence, if offence it was, a most trifling thing compared to this studied ambiguity of the bill and keeping from the people the knowledge whether it means inflation or whether it does not.

I think my colleague is entirely right in saying that this is a bill from which all questions that have divided the financial people of this country and the parties of the country and the different sections of the different parties, have been carefully omitted. But there is one thing upon which my colleague places great reliance, and that is the declaration that we will resume at

the time named. Sir, I do not believe that a mere verbal declaration will satisfy the country or produce much effect. I have heard my colleague stand in his place here and with an eloquence that I admired, and felt proud of, speak of how this Government had failed to redeem its pledge in regard to these very greenbacks; how it had repealed the law, which was contemporary with them, that made them convertible into bonds of the United States; how it had broken that pledge. And now, after he has held up to the country these broken pledges of the Government, it will not do for him to say to the business men of the country "you can shape your business in perfect safety and rely on the pledge of the Government that from the 1st of January, 1879, we will have a specie currency." That will not do. That is entirely too small a foundation on which to build any such superstructure as the resumption of specie payments.

Therefore I propose to add a section to the bill:

Section 4. That from and after June 30, 1875, one-twentieth part of the customs duties shall be payable in United States legal-tender notes, or in national bank notes, and after June 30, 1876, one-tenth, and after June 30, 1877, one-fifth part thereof may be so paid.

LEWIS BOGY [Mo.].—I desire to move an amendment to his amendment:

On and after the 1st day of July, 1875, duties on imports may be paid in legal-tender notes or coin, at the option of the importer.

I am opposed to contraction. I believe that, if contraction is adopted as the policy to effect the object of resumption, it will paralyze the country so completely as to defeat the object intended to be accomplished. Under the existing circumstances, with the system of finance inaugurated by the Republican party, —which system they were determined should be enforced—I believe that, instead of contraction being adopted as the means to accomplish resumption, an increase of currency is needed, at least in the West, so as to stimulate industry and commerce and relieve the debtor class. Therefore, under the law, which has given birth to legal-tender paper and to national-bank notes, I favor an augmentation of the currency; never, however, admitting that paper money is equal to gold or silver; and paper money never can be equal to gold and silver unless it observes one law, and that law must be obeyed at all hazards and under all circumstances, and without any doubt attending it, and is its convertibility into coin on demand. Whenever paper money is

conveniently convertible into coin at all places, it is then for all purposes of commerce infinitely more convenient and better than coin; but it is only as a representative of coin, and because it can be converted into gold or silver. But under the law as it is now our paper money is not convertible, and we use no coin at all excepting for one purpose, and that is to pay duties on importations. Hence this paper money, good or bad, is the only means of exchange for the entire country. It being the only means of exchange, I believe that the way to get to specie payments is by issuing a reasonable amount of this paper money, so as to establish a healthy prosperity throughout the country.

Now, sir, to make paper money equal to coin, it must at all times be convertible. The fundamental law of its existence is its convertibility under all circumstances and with great facility. When the greenbacks were originally issued, they were convertible into 6 per cent. bonds. The object was to give them a positive value. Those bonds were coin bonds. If you could convert legal-tender notes into bonds payable in coin, you were giving to that paper money a value very nearly equal to specie. That law, in my estimation, was a wise one, but it was soon repealed.

Legal-tender notes were issued also upon another condition, that they should be received by the Government in payment of all debts, of every nature and description whatsoever; not only that they should be legal-tenders as between A and B in ordinary transactions, but they were to be such for debts due to the Government. It is so printed upon the back of every one of them. Although that was the promise to the ear it was not carried out to the hope, because in point of fact no individual in the nation owes the Government any money except two classes of persons, the importers and the defaulters, and these latter do not pay in greenbacks or anything else. The Government does not credit anybody. It pays in cash or in paper money for all that it buys, and there is in point of fact no debt due the Government excepting as already stated.

Yet by the very contract this debt due by importers is excepted. This excepts everything, and the legal-tender notes stand exactly in the attitude of a note issued by an individual payable in goods that may be in his store, excepting, however, brown sheetings, while keeping in said store nothing but brown sheetings. On its face it is a very handsome note, payable on presentation in merchandise at his store. Although it is a promise, the exception defeats the very promise. So in this case. What has been the result? From the very beginning the demand for gold to pay duties has been so great as continually to depre-

ciate the legal-tenders. This demand during the period of a year exceeds the supply of gold. The demand for gold has been two hundred millions; it is now one hundred and sixty-three millions; and according to the report of the Secretary of the Treasury the amount of coin in the United States is only $166,000,000, so that the demand for coin at this day to pay duties is virtually equal to the whole amount of gold that is in the country.

The result is therefore a very high premium on coin, and it amounts now to 10, 11, or 12 per cent.; and yet we have been heretofore so habituated to large premiums that we have got to think that 10 per cent. premium is a very small thing; but in point of fact it is destructive to the prosperity of the people. It is an enormous premium, and no commercial people can prosper when all the money that is used in the exchanges of commerce is at a discount of 10 or 12 per cent.

Now, sir, in order to resume specie payments, the first step is to give value to this paper. Contraction would give it value beyond all doubt, but in giving it value you would produce great distress and ruin over the land. But, if you will give to your paper money a value without diminishing its amount, you will have taken a great step toward resumption; and so soon as you make paper by legislation equal to gold, as it is more convenient in all the commercial transactions of the world than specie, gold will not be wanted.

If the legal-tenders are made receivable for duties, you at once give to them a positive value. You at once take away the only demand for gold. At the present day gold is not used for any purpose whatever in this country except to pay duties on imports. It is to-day an article of commerce as much so as iron or lead or dry goods or sugar or coffee. It is not used at the present time as a medium of exchange. It remains a measure of value, because it is so recognized by the entire commerce of the world. But as a means of exchange it is not used only as an article of commerce, and is sold from day to day in Wall street; and for what purpose? Only for one: to enable importers to pay duties amounting to from five to eight hundred thousand dollars a day. Do away with the demand, and what will be the result? There being no demand for gold, as the national-bank notes are redeemable in legal-tenders, and these are not yet redeemable in gold, the effect would be that the gold of this country, amounting to $160,000,000, would at once flow into the channels of trade, and you would really have an expansion of coin of that large amount. The $160,000,000 now used as an

article of merchandise would immediately go into the channels of business. It could not be used for any other purpose.

SENATOR THURMAN.—I should be inclined to favor the amendment of the Senator from Missouri but for one thing, to which I wish to call his attention; and that is the pledge of Congress that so much of the customs duties as shall be necessary are pledged for the payment of interest on the public debt and the creation of a sinking fund, and that interest is payable in gold. I have made my calculation in my amendment so as to leave an ample amount to meet that pledge; but the amendment of the Senator from Missouri would destroy the pledge altogether.

I wish to say further, in reference to that, that the bill as reported and now before us disregards that pledge quite as much and more, a great deal, than can be said of my amendment, for mine does not disregard it at all. This bill allows the Secretary of the Treasury to use all the gold that may be received from customs duties to carry out the purpose of the bill, and in fact disregards the pledge totally.

SENATOR BOGY.—The law of 1862 requires all duties to be paid in gold; not a part, not nineteen-twentieths, but the whole twenty-twentieths. The object of the law beyond a doubt was to create a gold fund to pay the interest upon the gold bonds. But what is really the essence of that contract? The contract is that we shall pay this character of debt, both interest and principal, in coin.

Now, Mr. President, I leave it to the intelligence of the Senate and the country, if we continue, as we shall be sure to continue, to pay our bonds as they fall due in coin, and if we continue, as we are certain to continue, to pay the interest every six months also in coin, will the credit of the nation be at all affected whether we raise this money by one means or another? I deny the proposition that a nation of the high character and standing of this need pledge any special source of revenue to maintain its credit at home or abroad, although it is customary for nations having doubtful credit to pledge certain sources of revenue by way of mortgage. The character of the nation, the means, the ability, the standing, everything that belongs to this people, is pledge enough to the world to maintain our credit, and there is no necessity for this additional security. Again, if you look at the law of 1862, which provided that the duties upon imports should be paid in gold, there is no pledge that this gold shall be used alone for that purpose. It is true it was a part of the legislation of that day, and I have no doubt that the ob-

ject was to give to us at that time a credit which the exigencies of the day required. But that awful day has gone by, and there is to-day no reason why we should be subjected to the necessity of maintaining a mortgage upon any of our means of revenue for the purpose of sustaining our credit. Our credit is good enough, and I believe is too good, for the interests of all classes of people.

As a question of finance, not as a matter of national honor, our credit is too good. The nation makes nothing because the bonds are worth 115 or 117. There is no profit to the people, but only to a few speculators. We as a people make nothing by it, and a large portion of that profit inures to the benefit of foreigners and not to the benefit of our own people; and, when to them, to a very small portion, the most of whom hold but a nominal citizenship and are to be found in the large cities.

But, sir, the answer, if I am correct in my argument, is that, if by receiving legal-tenders in payment of duty you appreciate them and make them equal to gold, there will be no necessity for having gold to pay interest upon the bonds. The interest is not paid by shipments of gold abroad. The Secretary of the Treasury, representing the United States, does not send every six months a load of gold to London or to Berlin to pay this interest. It is done through a system of exchange. He buys in New York or somewhere else the amount necessary to pay this interest abroad. It is not therefore paid by the shipment of gold. It is true that according to the laws of commerce if we are indebted abroad the balance has got to be paid in gold, but the mere payment of the interest is done through and by exchange. And if the legal-tenders are as good as gold, having been appreciated by receiving them for duties, you will not need gold to procure this exchange.

There is a remarkable case in point. On the termination of the French war with Germany an indemnity was exacted of five thousand million francs—a thousand million dollars —which had to be paid in a very short space of time. The German Government required every dollar of it in coin, and declined to receive any of the national securities of France. This exceeded the amount of coin in France by some four hundred million francs. Yet the obligation was met, and one large installment was anticipated, and every dollar of the indemnity was paid in coin. What did France do? It authorized the Bank of France to issue paper money, and three thousand million francs were issued, being six hundred million dollars, and this paper money was made a legal tender and receivable for all debts of every nature and description whatsoever. What has been the result? The prosperity of France continued, her manufactures were kept in a healthful condition, the circulation needed for commerce was not diminished, only it was changed from gold to paper, and gradually and rapidly, too, the gold came back to France in accordance with those great laws of trade which are just as fixed and certain as the laws of mathematics. The Bank of France reduced and canceled its circulation as the gold increased; and now, although they have not yet resumed, for a year or more resumption has in point of fact practically taken place. To-day the paper money in France is worth as much as gold. There is in point of fact no difference; and why? Because the government of France at once created a legitimate demand for that paper money, made it a legal tender between individuals, and made it a legal tender from individuals to the Government for everything whatsoever, and in a very short time the whole Government had righted itself financially, while we have been here floundering in the mud and mire for a great many years.

THOMAS F. BAYARD [Del.].—I do not desire to banish from this country the last trace of gold payments to the treasury. It is plain that if we are to resume specie payment there must be a fund of gold accumulated wherewith to resume, and this is nothing but a measure to abolish the only nucleus left by law for such accumulation and make a return to specie payments an impossibility while such a policy controls the Government. I hope this amendment offered by the Sentaor from Missouri will not be adopted, nor even that offered by my friend from Ohio.

Sooner or later, a sound public sentiment, born perhaps of the sufferings of the people, will demand that an honest measure of value shall be restored to the dealings of our citizens. That must come sooner or later, and I shall never be satisfied with the legislation of the country until it has produced that effect. Any measure tending to it shall find my vote recorded in its favor, and any measure hostile to it will find in me an opponent.

I want to vote in favor of a simple, straightforward, business measure, and I want to know the effect of what I vote for, and I do not choose to vote for a bill with two faces, and I do not choose to vote for a bill concerning which the gentleman having it in charge will not answer, if he can, plain questions as to the meaning of his own words used in the bill, but chooses to say, "You may make your own construction, you may put what amendment you please on the bill, and then put what construction you please on your amendments; but I do not choose to answer you as to what this bill is intended to do, or what is to be done with this currency which we have redeemed, or tell you how long it shall be redeemed, or whether the Secretary of the Treasury shall issue it the day after he has redeemed it, whether he shall accumulate it until it reaches $50,000,000 and then issue it again, or what he shall do with it."

Now, Mr. President, it seems to have been decreed in party caucus that this bill shall be passed to-night. To attempt to prevent it would simply be a question of physical endurance, of great personal inconvenience, and one that I am not disposed in this case to court for myself or others. My present feeling about it is that I would rather not vote at all upon the subject. I think that this subject has not been treated worthily in this debate and by this measure, and that the people of this country will say it has not been treated worthily by this debate and by this measure. There is no need for the passage of this bill this day, nor for two weeks to come, as a measure of relief. Its effect cannot be instantaneous. I do not think it is in the power of any man or party instantly to relieve the country from the financial embarrassments and pressure which are now upon it. Time must work relief. Wise laws will greatly assist and hasten the returning tide of prosperity, which, when it shall come back, should rest upon a sound basis. That, I think, is all that even wise laws can justly be expected to do. You cannot suddenly make a nation prosperous nor cure the ills of extravagant, corrupt, and reckless administration. Excess and improvidence must bear their punishment. All you can do is to set your administration upon a path of economy and honesty, that gradually prosperity may grow again.

The amendments to the bill were rejected, and it was passed by a vote of 32 to 14.

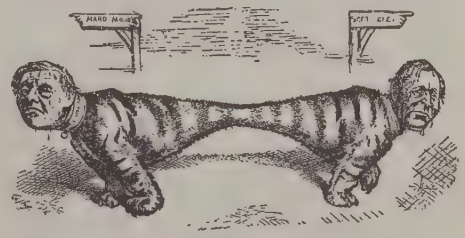
The bill was passed by the House on January 7 by a vote of 136 to 98.

It was approved by President Grant on January 14, 1875.

The rise of the silver question in 1875-7 caused a new aspect to be given to that of resumption of specie payments, and the Democrats made determined efforts to secure the repeal of the resumption act.

On August 5, 1876, Samuel S. Cox [N. Y.], chairman of the Committee on Banking and Currency, introduced in the House a bill providing for a repeal of the date set for resumption of specie payments in the act of January 14, 1875. The bill was adopted by a vote of 106 to 86, "hard money" Democrats, such as Abram S. Hewitt [N. Y.], voting in the negative. It was referred to committee in the Senate, and not acted on during the session.

In the presidential campaign of 1876 the question of "hard" money and "soft" money was a leading issue.



THE ELASTIC DEMOCRATIC [DEFORMED] TIGER
They Pull Together so Very Nicely
Caricature by Thomas Nast of Tilden and Hendricks, in "Harper's Weekly"

General Rutherford B. Hayes [O.] and William A. Wheeler [N. Y.], Republican candidates, were both in favor of "hard" money, while the Democratic candidates, Samuel J. Tilden [N. Y.] and Thomas A. Hendricks [Ind.] held opposing views on the subject.

REPEAL OF THE RESUMPTION ACT

HOUSE OF REPRESENTATIVES, OCTOBER 31–NOVEMBER 22, 1877

On October 31, 1877, General Thomas Ewing [O.] brought forward in the House, from the Committee on Banking and Currency, a bill to repeal the third section of the resumption act, which had repealed the restrictions on national banking, had provided for the retirement of 80 per cent. of the increased national bank circulation, and had fixed January 1, 1879, as the date for the final redemption of legal tenders.

Various amendments were offered to the bill by both

Democrats and Republicans, which ranged in their effect from one extreme view on the currency to another.

On November 16 General James A. Garfield [O.] spoke against repeal.

We are engaged in a debate which has lasted in the Anglo-Saxon world for more than two centuries, and hardly any phase of it to which we have listened in the course of the last week is

BY REPEALING THEY RESUME—BY RESUMING THEY REPEAL

Extremes Have Met, and Now You Can't Tell Which Is Which

Cartoon by Thomas Nast in "Harper's Weekly"

new. Hardly a proposition has been heard on either side which was not made one hundred and eighty years ago in England, and almost a hundred years ago in the United States. So singularly does history repeat itself.

That man makes a vital mistake who judges of truth in relation to financial affairs from the changing phases of public opinion. He might as well stand on the shore of the Bay of Fundy and from the ebb and flow of a single tide attempt to determine the general level of the sea as to stand on this floor and from the current of public opinion in any one debate judge of the general level of the public mind. It is only when long spaces along the shore of the sea are taken into the account that the grand level is found, from which all heights and depths are measured. And it is only when long spaces of time are considered that we find at last that level of public opinion which we call the general judgment of mankind. From the turbulent ebb and flow of the public opinion of to-day I appeal to that settled judgment of mankind on the subject-matter of this debate.[1]

If one thing was settled above all other questions of financial

[1] General Garfield again used this figure, and with great effect, in his notable speech in the Republican National Convention of 1880 nominating John Sherman for President.

policy in the American mind in 1860, it was this, that the only sound, safe, trustworthy standard of value was coin of a standard weight and fineness, or a paper currency convertible into coin at the will of the holder. That was and had been for several generations the almost unanimous opinion of the American people. It is true there was here and there a theorist, dreaming of the philosopher's stone, dreaming of a time when paper money, which he worshiped as a kind of fetish, would be crowned as a god; but those dreamers were so few in number that they made no ripple on the current of public thought, and their theories formed no part of public opinion, and the opinion of 1860-'61 was the aggregated result of the opinions of all the foremost Americans who have left their record upon this subject.

Every President who has left a record on the subject has spoken without qualification in favor of the doctrine I have announced. No man ever sat in the chair of the Secretary of the Treasury of the United States who if he has spoken at all on the subject has not left on record an opinion equally strong, from Hamilton down to the days of the distinguished father of my colleague [Mr. Ewing] and to the present moment.

What happened to cause a departure from this general level of public opinion? War, the imperious necessities of war, led the men of 1861-'62 to depart from the doctrine of the Fathers; but they did not depart from it as a matter of choice, but compelled by overmastering necessity. Every man in the Senate and House of 1862 who voted for the greenback law announced that he did it with the greatest possible reluctance and with the gravest apprehension for the result. Every man who spoke on the subject from Thaddeus Stevens to the humblest member in this House, and from William P. Fessenden to the humblest Senator, warned his country against the dangers that might follow, and pledged his honor that at the earliest possible moment the country should be brought back to the old, safe, established doctrine of the fathers.

When they made the law creating the greenbacks they incorporated into its essential provisions the most solemn pledge men could devise that they would come back to the doctrines of the Fathers. The very law that created the greenback provided for its redemption and retirement; and every time the necessities of war required an additional issue new guaranties and new limitations were put upon the new issues to insure their ultimate redemption. They were issued upon the fundamental condition that the number should be so limited forever that under

the law of contracts the courts might enforce their sanctions. The men of 1862 knew the dangers from sad experience in our history; and, like Ulysses, lashed themselves to the mast of public credit when they embarked upon the stormy and boisterous sea of inflated paper money, that they might not be beguiled by the siren song that would be sung to them when they were afloat on the wild waves.

But the times have changed; new men are on deck: men who have forgotten the old pledges; and now only twelve years have passed (for as late as 1865 this House, with but 6 dissenting votes, resolved again to stand by the old ways and bring the country back to sound money), and what do we find? We find a group of the orists and doctrinaires who look upon the wisdom of the Fathers as foolishness. We find some who advocate what they call "absolute money"; who declare that a piece of paper stamped a "dollar" is a dollar; that gold and silver are a part of the barbarism of the past, which ought to be forever abandoned. We hear them declaring that resumption is a delusion and a snare. We hear them declaring that the eras of prosperity are the eras of paper money; and they point us to all times of inflation as the periods of blessing to the people, prosperity to business; and they ask us no more to vex their ears with any allusion to the old standard, the money of the Constitution. Let the wild crop of financial literature that has sprung into life within the last twelve years witness how widely and how far we have drifted. We have lost our old moorings, have thrown overboard our old compass; we sail by alien stars, looking not for the haven, but are afloat on an unknown sea.

Now, what are the obstacles to resumption in accordance with the law we have passed? The first great obstacle stated by gentlemen who have argued the question is this: that we have not enough currency in the country for its business and that some measure of contraction will be likely to attend the further execution of the provisions of the resumption law. Before I enter directly upon that objection I desire to state a fact for the consideration of those who hear me. In that prosperous era of 1860, when there was free banking in most of the States and the banks were pushing all the currency they could into circulation without limit, there were just two hundred and seven millions of paper currency, and that was the largest volume that this country had ever known.

Now, the amount of coin in the country in 1860 was $200,000,000. Add that sum to the two hundred and seven millions of paper circulation and you have four hundred and seven mil-

lions of currency, paper and silver and gold. How much have we to-day? On the first day of this month we had seven hundred and twenty-seven millions of greenbacks, banking notes, fractional currency, and fractional silver, and if you add the nine millions of copper and nickel money now outstanding it makes a present volume of seven hundred and thirty-six millions of currency, counting no gold whatever, although the Pacific coast uses a large amount.

Now, I put it to the judgment of this House if under free banking in 1860 four hundred and seven millions was the limit of possible currency that could be kept in circulation, how can it be said that almost twice that amount is needed and is hardly enough for the wants of 1877? Have the laws of value changed in seventeen years? Gentlemen who assert a dearth of currency at the present time must point out the new elements in our fiscal affairs that require three hundred and twenty millions more money than was needed in 1860.

No theory of currency that existed in 1860 can justify the volume now outstanding. Either our laws of trade, our laws of value, our laws of exchange, have been utterly reversed or the currency of to-day is in excess of the legitimate wants of trade. But I admit freely that no Congress is wise enough to determine how much currency the country needs. There never was a body of men wise enough to do that. The volume of the currency needed depends upon laws that are higher than Congress and higher than governments. One thing only legislation can do. It can determine the quality of the money of the country. The laws of trade alone can determine its quantity.

General Garfield then pointed to the British cash-resumption act of 1819 as supporting his contention that the American resumption act under consideration, if unrepealed, would prove a blessing to the country.

MR. GARFIELD.—The evils which England suffered from 1821 to 1826 did not arise from the resumption of cash payments. I appeal to every great writer of acknowledged character in England for the truth of this position. I ask gentlemen to read the eighth chapter of the second book of Miss Martineau's "History of the Peace," where the case is admirably stated. I appeal also to the opinion of Parliament itself, especially to the House of Commons, which is as sensitive an index of public opinion as England knows. When they were within about eighteen months of resumption of specie payment, a motion was made, like the

motion of my colleague from Ohio [Mr. Ewing], that the resumption-act bill be repealed or modified, because it was producing distress. And a number of gentlemen in the House of Commons made speeches of the same spirit as those which we have heard here within the past week. The distress among the people, the crippling of business, the alarm of the mercantile classes, all were paraded in the House of Commons, and were answered by those knights of finance whose names have become illustrious in English history. And at the end of a long debate on that proposition, on the 11th of April, 1821, a vote was taken, and the proposition was rejected by a vote of 141 to 27. In other words, by a vote of 141 to 27 the House of Commons resolved that their act for the resumption of specie payments was not causing distress and ought not to be repealed and ought not to be modified except to make it more effective. As a matter of fact, it was so modified as to allow resumption to take place much sooner than was provided in the act of 1819.

But this was not enough. On the 11th of June, 1822, a Mr. Western moved for the appointment of a committee of inquiry into the effect of resumption, and charged that it had caused a violent contraction of the currency and an injury to the business of the country. Again the subject was fully debated, and the arguments against the resumption act completely answered, by a vote of 192 to 30. The motion of Mr. Western was rejected, and the Commons resolved that they would not alter the standard of gold or silver, in fineness, weight, or denomination.

Still, gentlemen tell us that the great distress in England was caused by the resumption act. I commend those gentlemen to such great writers as Tooke, who in his "History of Prices" has gone over this ground most thoroughly and ably. He says it was the corn law which produced the great evils from which England suffered in those years.

A law had been passed to prevent the price of wheat from falling below eighty shillings per quarter, by prohibiting all foreign importations whenever the price fell below that figure. In other words, England proposed to build a Chinese wall around the island so as to make wheat one of the most profitable crops for her farmers. Stimulated by that law, the agriculturists of England undertook the growing of wheat on a scale before unknown. And when they had expended millions in reclaiming waste lands and sowing an unusual breadth of wheat, they found their own harvest and the colonial importations had flooded the markets and lowered the price, and bankrupted thousands of English farmers. In spite of the law, wheat went down

to forty-seven shillings and nine pence per quarter, and brought great distress upon the agricultural population.

That this fall in the price of wheat was not caused by the resumption act is conclusively shown by the fact that the three great harvests of 1820, 1821, and 1822 were general throughout Europe, and throughout the Continent the price of wheat declined almost as much as in England itself.

In 1822 a committee of the House of Commons was appointed to inquire into all the causes of the distress. I have read that report in full, and there is not a word in it that attributes any part of the distress to the resumption act of 1819; but the causes given are those which I have named.

Before quitting this point I beg leave to refer to a paper of the late Secretary of the Treasury, Hugh McCulloch, in the *North American Review*. He said that every great crisis in this country has been preceded by an enlargement of paper circulation. I affirm that to be true, and I challenge any man to controvert it. It was true in England always. It has been true in this country always. We had a great crisis in 1797; another in 1817; another in 1837; another in 1857; and our last in 1873—almost exactly twenty years apart.

These crises are periodic and return as the result of causes springing up among the mass of our business people; and they have all been preceded by overtrading, speculation, an enlargement of credits, an undue expansion of the instruments of credit; and they have all resulted in the same sad uniformity of misery that has followed their culmination.

I now proceed to notice the second point that has been made in favor of this bill. It is assumed that specie payment will injure the debtor class of this country and thereby oppress the poor; in other words, that the enforcement of the resumption law will oppress the poor and increase the riches of the rich. It is assumed that the laboring men are in debt and that the rich men constitute the creditor class. I deny this proposition *in toto*. I affirm that the vast majority of the creditors of this country are the poor people; that the vast majority of the debtors of this country are the well-to-do people, in fact, people who are moderately rich.

As a matter of fact the poor man, the laboring man, cannot get heavily in debt. He has not the security to offer. Men lend their money on security, and in the very nature of the case poor men can borrow but little. What then do poor men do with their small earnings? When a man has earned out of his hard work a hundred dollars more than he needs for current expenses he

reasons thus: "I cannot go into business with a hundred dollars; I cannot embark in trade; but as I work I want my money to work." And so he puts his small gains where they will earn something. He lends his money to a wealthier neighbor or puts it in the savings bank. There were in the United States on the 1st of November, 1876, forty-four hundred and seventy-five savings banks and private banks of deposits, and their deposits amounted to $1,377,000,000, almost three-fourths of the amount of our national debt. Over two and a half millions of the citizens of the United States were depositors. In some States the deposits did not average more than $250 each. The great mass of the depositors are men and women of small means: laborers, widows, and orphans. They are the lenders of this enormous aggregate. The savings banks, as their agents, lend it to whom? Not to the laboring poor, but to the business men who wish to enlarge their business beyond their capital. Speculators sometimes borrow it. But in the main well-to-do business men borrow these hoardings. Thus the poor lend to the rich.

Gentlemen assail the bondholders of the country as the rich men who oppress the poor. Do they know how vast an amount of the public securities are held by poor people? I took occasion, a few years since, to ask the officers of a bank in one of the counties of my district, a rural district, to show me the number of holders and amount held of United States bonds on which they collected the interest. The total amount was $416,000. And how many people held them? One hundred and ninety-six. Of these just eight men had over $20,000 apiece, and the other one hundred and eighty-eight ranged from $50 up to $2,500. I found in that list fifteen orphan children and sixty widows, who had a little left them from their fathers' or husbands' estates, who had made the nation their guardian. And I found one hundred and twenty-one laborers, mechanics, ministers, men of slender means, who had kept what they had and put it in the hands of the United States that it might be safe. And they were the "bloated bondholders" against whom so much eloquence is fulminated in this House.

There is another way in which poor men dispose of their money. A man says, I can keep my wife and babies from starving while I live and have my health, but if I die they may be compelled to go over the hills to the poorhouse; and, agonized by that thought, he saves out of his hard earnings enough to take out and keep alive a small life insurance policy, so that, if he dies, there may be something left, provided the insurance company to which he intrusts his money is honest enough to keep

its pledges. There are of course some rich men insured in these companies, but the majority are poor people, for the policies do not average more than $2,200 each. What is done with the assets of these companies? They are loaned out. Here again the creditor class is the poor and the insurance companies are the agents of the poor to lend their money for them. It would be dishonorable for Congress to legislate either for the debtor class or for the creditor class alone. We ought to legislate for the whole country. But when gentlemen attempt to manufacture sentiment against the resumption act by saying it will help the rich and hurt the poor, they are overwhelmingly answered by the facts.

Suppose you undo the work that Congress has attempted—to resume specie payment—what will result? You will depreciate the value of the greenback. Suppose it falls ten cents on the dollar. You will have destroyed 10 per cent. of the value of every deposit in the savings banks, 10 per cent. of every life insurance policy and fire insurance policy, of every pension to the soldier, and of every day's wages of every laborer in the nation.

Daniel Webster never uttered a greater truth in finance than when he said that of all contrivances to cheat the laboring classes of mankind none was so effective as that which deluded them with an irredeemable paper money. The rich can take care of themselves, but the dead weight of all the fluctuations and loss falls ultimately on the poor man who has only his day's work to sell.

I admit that in the passage from peace to war there was a great loss to one class of the community, to the creditors; and in the return to the basis of peace some loss to debtors was inevitable. This injustice was unavoidable. The loss and gain did not fall upon the same. The evil could not be balanced nor adjusted. The debtors of 1862-'65 are not the debtors of 1877. The most competent judges declare that the average life of the private debts in the United States is not more than two years. Now, we have already gone two years on the road to resumption, and the country has been adjusting itself to the new condition of things. The people have expected resumption, and have already discounted most of the hardships and sufferings incident to the change. The agony is almost over; and if we now embark again upon the open sea we lose all that has been gained and plunge the country into the necessity of trying once more over the same boisterous ocean, with all its perils and uncertainties. I speak the deepest convictions of my mind and heart when I say that, should this resumption act be repealed and no effectual substitute be put in its place, the day is not far distant when

all of us, looking back on this time from the depth of the evils which will result, will regert, with all our power to regret, the day when we again let loose the dangers of inflation upon the country.

Gentlemen speak of the years of high prices as years of prosperity. It is true there was a kind of prosperity in the day of high prices; but do not gentlemen know that war prices cannot be kept up forever? Nothing but the extraordinary calamities of war can produce such prices as we knew from 1865 to 1870. To our foreign and domestic markets was added the war market. War sat like a grim monster swallowing up the accumulated wealth of the country. More than a million men were taken out of the ranks of the producers and added to the ranks of the consumers, and all prices went up; but does anybody dream that these prices can be kept up forever, when the soldiers are mustered out and the war has closed and business has begun to resume its normal level of peace? Oh, no, gentlemen, it was inevitable that the country must come down from the level of war prices, and the attempt to get it back is to fight against fate. Unless we bring ourselves steadily and surely by the strong courage and guidance of law back to resumption, we shall reach that level by a disastrous fall; but down to it we must come.

I do not undervalue the greenback or its great services to the country; but when the gentleman from Pennsylvania [William D. Kelley] spoke of the greenback as being the thing that put down the rebellion, I thought if I had been on the other side I would have said: We had a much more liberal supply of paper money than you had, why did it not put you down? [Laughter.] Our money was better than yours in one respect, for ours set a day of resumption, which was six months after the independence of the Confederate States should be acknowledged. [Laughter.] I think, sir, that those gentlemen who are familiar with the financial history of the Confederacy would not join the gentleman in his eulogy on paper currency which is cut loose from the coin standard.

Our country needs not only a national but an international currency. Let me state a fact of vast importance in this discussion. The foreign trade of this country—its exports and imports—amounts to $1,500,000,000 in value; and every dollar of that trade must be transacted in coin. We cannot help ourselves. Every article of the exports we send abroad is measured by and sold for coin. Every dollar of imports we must pay for in coin. We must translate these coin prices into our currency, and every fluctuation in the value of the greenback falls upon

us and not upon the countries with which we trade. Therefore the commercial interests of America demand that the international and national value of money shall be one, so that what is a dollar in Ohio shall be a dollar the world over. Our money must be international as well as national, unless we wish to isolate this country and have no trade or commerce, or glory on the sea.

The trouble with our greenback dollar is this: it has two distinct functions, one a purchasing power and the other a debt-paying power. As a debt-paying power it is equal to one hundred cents; that is, to pay an old private debt. A greenback dollar will by law discharge one hundred cents of debt. But no law can give it purchasing power in the general markets of the world unless it represents a known standard of coin value. Now, what we want is that these two qualities of our greenback dollar shall be made equal; its debt-paying power and its general purchasing power. When these are equal the problem of our currency is solved and not till then.

We who defend the resumption act propose not to destroy the greenback but to dignify it, to glorify it. The law that we defend does not destroy it, but preserves its volume at $300,000,000 and makes it equal to and convertible into coin. I admit that the law is not entirely free from ambiguity. But the Secretary of the Treasury, who has the execution of the law, declares that section 3579 of the Revised Statutes is in full force, namely:

> When any United States notes are returned to the treasury, they may be reissued, from time to time, as the exigencies of the public interest may require.

Although I do not believe in keeping greenbacks as a permanent currency in the United States, although I do not myself believe in the Government becoming a permanent banker, yet I am willing for one that, in order to prevent the shock to business which gentlemen fear, the $300,000,000 of greenbacks shall be allowed to remain in circulation as long as the wants of trade show manifestly that they are needed. Now, is that a great contraction? Is it contraction at all?

Why, gentlemen, when you have brought your greenback up two and one-half cents higher in value, you will have added to your volume of money $200,000,000 of gold coin which cannot circulate until greenbacks are brought to par.

Let those who are afraid of contraction consider that and answer it.

Summing it all up in a word: the struggle now pending in this House is on the one hand to make the greenback better, and on the other to make it worse. The resumption act is making it better every day. Repeal that act and you make it indefinitely worse. In the name of every man who wants his own when he has earned it, I demand that we do not make the wage of the poor man to shrivel in his hands after he has earned it; but that his money shall be made better and better, until the plowholder's money shall be as good as the bondholder's money; until our standard is one, and there is no longer one money for the rich and another for the poor.

This is the era of pacification. We believe in the pacification of the country. That is, we seek to pass out of the storm center of war that raged over this country so long and enter the calm circle of peace. We believe in the equality of States, and the equality of citizens before the law. In these we have made great progress.

Let us take one step further. Let us have equality of dollars before the law, so that the trinity of our political creed shall be equal States, equal men, equal dollars throughout the Union. When these three are realized we shall have achieved the complete pacification of our country.

We are bound for three great reasons to maintain the resumption of specie payments: First, because the sanctity of the public faith requires it; second, because the material prosperity of the country demands it; and, third, because our future prosperity demands that the agitation shall cease and that the country shall find a safe and permanent basis for financial peace.

The elements are now all in our favor. The Secretary of the Treasury tells us in his report laid upon our table this morning that he has $66,000,000 of gold coin, unpledged for any other purpose, waiting as reserve for the day of resumption. He is adding to that stock at the rate of $5,000,000 a month. Our surplus revenue of $35,000,000 a year will all be added to his reserve. Foreign exchange is now in our favor. We are selling to other nations almost $200,000,000 a year more than we are buying. All these elements are with us. Our harvests have been more bountiful than ever before. The nation is on the returning wave of prosperity. Everywhere business is reviving, and there is no danger except from the Congress of the United States. Here is the storm center; here is the point of peril. If we can pass that point and not commit ourselves to the dangerous act now threatened, we shall soon see resumption complete.

I notice that gentlemen do not move to strike out the first

section of the resumption act. Why? Two years ago my colleague [Mr. Ewing], in his debate with Governor Stewart L. Woodford, laughed at silver resumption, so far as the postal currency was concerned, as absurd and as impossible.

He spurned the proposition to destroy our paper scrip which cost but little, and replace it with silver change which had some value. He argued that every silver coin issued would be hidden away and none would go into circulation. But since that debate silver resumption under the first clause of the bill is completed, except that we have not yet been able to fund all the old scrip, so lazily do the people exercise their right of redemption. But gentlemen think that now, if we resume under this section, the currency will all be taken up.

General Ewing.—In the debate with Governor Woodford, in 1875, I did make the statement to which the gentleman refers. But that was before the people of this country, or I presume the people of the world generally, knew of the furtive and rascally act of demonetization of silver in the adoption of our Revised Statutes. It was before the immense fall of silver. It was when the silver dollar was at a high premium over the greenback dollar. Speaking from conditions then existing and the price of silver at that time, the statement was reasonable that the fractional silver currency would be taken up and sold, and not go into general circulation.

General Garfield.—The trouble with the statement of my friend is that, the fractional silver currency being 12 per cent. below the value of the silver dollar, there was not the slightest danger, at the time he speaks of, that the silver coin after being issued would pass out of circulation. My friend did not believe in silver resumption until that metal became so depreciated as to be worth vastly less than paper.

Gentlemen think there is danger that the people will present all their greenbacks and demand the coin, if resumption is enforced. Let us see. Remember how slow they have been in giving up their scrip. Suppose that a farmer in one of your Eastern States sells his farm for $10,000. He wants to remove to the great West. He gets ten greenbacks of the denomination of $1,000 each. This is easy to carry; he can put it in his vest pocket. Do you think as a mere matter of convenience he will go to the assistant treasurer in New York and get for those greenbacks forty pounds' weight of gold coin to carry in his pockets, or, if the silver dollar should be restored, six hundred and forty pounds of silver? No, gentlemen, the moment your greenback is equal to gold, it is better than gold; for it is more

convenient; and it will remain in circulation until the business of the country demands its withdrawal.

In conclusion, Mr. Speaker, if any of the substitutes offered to this bill will make resumption more safe, more certain, and will more carefully protect the business interests of the country, such amendment shall have my vote; but any measure that takes back the promise, that gives up what we have gained, that sets us afloat on the wild waves from which we have so nearly escaped, I will oppose it to the utmost, confidently trusting to the future for the vindication of my judgment. [Applause.]

On November 22 General Ewing spoke in support of his bill.

Mr. Speaker, it is characteristic of republican governments that the people confine their attention and interest to one great question until it is thoroughly settled. For six years preceding the war, nothing of public interest was generally considered but the slavery question. During the war the means of its successful prosecution absorbed all attention. Since its close, the status of the negro race as components of our political life, and the terms of rehabilitation of the revolted States, have been the controlling questions in every campaign. Now that the last of the Southern questions is happily settled by the triumph of the democratic principle of local self-government, there loom up, as paramount in importance and interest, the questions of the debt and the currency.

Happy would it have been for the people had they considered these questions twelve years ago. They would have been saved the infliction of five gigantic wrongs in their finance policy. They would have had a paper currency composed solely of greenbacks, and have avoided $350,000,000 of unnecessary bonded debt caused by dividing the circulation with national banks—a saving which would by this date have equaled one-third of our national burden. They would not have suffered the maladroit and mischievous funding in long bonds of the $1,200,000,000 of interest notes, the chief part of which were legal-tenders and performed the double office of investment and currency; which were dispersed throughout the country, and little felt as a burden because of the ebb and flow of payments from the treasury to the people as interest, and from the people back to the treasury as taxes. The funding of those notes largely contracted the effective currency just as our business wants were immensely increased by the return of the South to our

industrial life; and substituted for them a credit system which occasioned the panic of 1873.

So, too, if the people had been awake to these questions, the act of repudiation and extortion in 1869 would never have become a law, by which $500,000,000 were in effect taken from them and given to the bondholders without consideration; nor the silver swindle of 1873 and 1874 by which we were deprived of the power to pay our public debts in the coin of the contract, the metal of which America is the great producer; nor the crowning villainy of the act of 1875, by which about ten thousand millions of currency debts were made payable in gold, by which the great wealth-producing classes are being robbed of their accumulations for the benefit of usurers, and our land in the midst of the abundance of God's bounties is filled with the cries of hunger and despair.

Mr. Speaker, I wish it to be understood that the bill has no connection with the question whether the system of free banking established by the resumption law shall stand or fall. It will leave the bank system just where it now is, open to all in any locality who may choose to establish banks of issue. This measure will merely stop the redemption and destruction of greenbacks, and the purchase and accumulation of coin for that purpose. When it shall have been disposed of, it will be for Congress to determine whether the sovereign prerogative of furnishing the money of the people shall be exercised by the Government alone, or divided with private corporations.

Mr. Speaker, no greater wrong can be inflicted on a people by government than a contraction of the volume of currency to which their values are adjusted. The prices of commodities, whether land, product, or labor, are determined absolutely by the effective volume of the currency. An increase of the volume raises the price of all commodities; but, if not carried beyond the wants of business, does injury to only a comparatively small class, whose wealth or dependence is chiefly in money securities, fixed rents, annuities, or salaries. Yet, while it injures them in one way it helps them in another: it lightens the burden of taxation, promotes industry, stimulates exchanges, multiplies opportunities for safe and profitable investments, and thus indirectly compensates them for the diminution of the relative value of their money. Thus, during the war of the rebellion, so great were the general benefits from the increased volume of the currency, and so many the new opportunities for successful investment, that even the small creditor class suffered little by the decrease of the purchasing power of money.

On the other hand, a contraction of the currency, by diminishing the price of land, labor, and commodities, spreads ruin among the masses. It oppresses debtors, by reducing the price of those commodities by the sale of which money is raised to pay debts. It in like manner lays increased burdens on taxpayers. It checks business, because neither the maker nor the exchanger of values can work profitably on a falling market; and, by diminishing business, forces wage people into idleness and starvation.

David Hume, in his "Essay on Money," says:

> The policy of the good magistrate consists in keeping the money of the nation if possible still *increasing;* because by that means he keeps alive a spirit of industry and increases the stock of labor, in which consist all real power and riches. Accordingly we find that, in every kingdom into which money begins to flow in greater abundance than formerly, everything takes a new face: labor and industry gain life, the merchant becomes more enterprising, the manufacturer more diligent and skillful, and even the farmer follows his plow with greater alacrity and attention.
>
> On the other hand, a nation whose money decreases is actually at that time weaker and more miserable than another nation which possesses no more money but is on the increasing hand. The workman has not the same employment from the manufacturer and merchant; the farmer cannot dispose of his corn and cattle, though he must pay the same rent to his landlord. The poverty and beggary which must ensue are easily foreseen.

Mr. Speaker, this resumption law found the prices of land, labor, and products in the United States adjusted to a volume of $733,000,000 of money, exclusive of fractional currency. I do not include silver or gold, for they were not then, and are not now, any part of the actual currency. This volume was not excessive. It was but $17.50 *per capita,* including the fractional currency. Compare it with the money of other nations. Take England, which has by various estimates from $27 to $34 *per capita,* or Germany, which has $23 *per capita.* These are small nations, comparable only in area with our States; they are covered with networks of railways and their exchanges are swiftly made; while we are spread over a vast continent, imperfectly developed, and our exchanges are comparatively slow. It was the deliberate judgment of General Grant's Administration in December, 1873, as expressed in his message—an opinion concurred in by the public generally—that our currency was then too small for our business in the dullest seasons of the year.

Now, the immediate evil of this resumption law is that it necessarily involves a destruction of from one-half to three-fourths of our paper money; that the gold with which the paper will be redeemed will not go into general circulation, and that

therefore the execution of the law will result in a reduction of all values in substantially the proportion of the contraction of the currency, carrying with it an enormous increase of the burdens of debt and taxation, the widespread ruin of industry, and the pauperization of millions of our people.

This law was in fact devised by the money power to double their wealth through contraction and the consequent shrinkage of values, and at the same time to take from the people all control of the currency; to drive in the circulation of the country banks, and establish a dominion of the money power, through a few banks in the large cities, over the business and fortunes of the great wealth-producing classes and sections.

Under this law every greenback redeemed must be destroyed. My colleague [Mr. Garfield] says that Mr. Sherman now thinks they may be reissued. If so, he has changed front. He intimated most distinctly in the Senate, when the resumption bill passed, that redemption meant cancellation. But, whatever may be his opinion, the law stands, and whoever may be Secretary must execute its evident purpose. Section 3579 of the Revised Statutes, which Mr. Sherman is now reported to interpret as authorizing a reissue, was in force in 1875, when he expressed the opposite opinion. It provides that "when any United States notes are *returned* to the treasury they may be reissued." Certainly notes *returned*—that is, received *in payment of public dues*—may be reissued. The act of receiving such notes is not *redemption*—which is payment of a public debt, and involves extinction of the evidence of the debt unless otherwise expressly provided by law.

But Mr. Sherman's latest phrase of opinion on this question is not only unsustained by the law, but actually multiplies the difficulties and dangers of resumption. It compels redemption in gold not only once but over and over again, and requires the treasury to be the perpetual supplier of gold to all who need it; while it puts in the hands of the Secretary the power to expand or contract the currency by reissuing or hoarding greenbacks at his discretion.

Mr. Bristow, when Secretary of the Treasury declared the purpose and effect of the law in his report for December, 1875, saying, "the faith of the Government now stands pledged to the final redemption and *removal from the currency of the country* of the legal-tender notes as fast as they shall be presented for redemption." Mr. Morrill, his successor, reiterated it in his report in 1876, saying that the law "declared in effect *a monetary system composed of coin and national bank notes* redeemable

in coin." The Treasury Department has declared it every month by the destruction of fractional currency redeemed under the same language of the same law. The act itself declares it by providing for the "redemption" of fractional currency "until the whole amount *outstanding shall be redeemed*"; and by providing that legal-tenders shall be redeemed before January 1, 1879, "until there shall be outstanding $300,000,000 of such legal-tender notes *and no more*"—both these provisions plainly showing that "redemption" means final extinction and removal from the currency of the country.

Mr. Speaker, no nation ever maintained a redeemable paper currency equal to the volume of coin in the country. France with $1,200,000,000 in coin according to the estimate of Victor Bonnet, and $1,600,000,000 according to Mr. Carey, has not yet felt able to resume specie payments on $491,000,000 of paper. England with $700,000,000 of coin can maintain a redeemable paper currency of only about two hundred and sixty millions. Before the war, we had two hundred and eighty-five millions of coin in the United States, and our banks never had a paper circulation in excess of two hundred and fifteen millions. The reason is obvious: when coin becomes actually current, two-thirds of its volume, at least, is absorbed by the people or hoarded as reserves by banks of deposit only: and it is not possible for banks of issue or the Government to get control of over one-third or a fourth of the coin in the country as a redemption fund. Thus, before the war, the banks never held to exceed eighty-three millions of the two hundred and eighty-five millions of coin in the country. The British banks hold about one hundred and thirty millions of the seven hundred millions in Great Britain, and the Bank of France holds four hundred and forty-three millions of the twelve hundred to sixteen hundred millions of coin in France.

Hence, if our own experience and that of other nations are to guide us to permanent resumption, we must increase our coin, or cut down our paper, or both, until the amount of coin in the country shall far exceed the amount of paper money. It should exceed it about threefold to make resumption as safe as in England or France; and should exceed it one-third to get back to the merely spasmodic resumption we had before the war.

Now, what is our present supply of coin and bullion? According to a number of estimates made for me, by persons who have the means of information attainable, we have one hundred and sixty millions of gold and silver coin and bullion in the Treasury, the banks, and among the people.

But we have had two hundred and eighty-five millions of gold and silver coin and bullion in 1860, and in the seventeen years since we have produced from our mines one thousand and seven millions of gold and two hundred and fifty-five millions of silver; about half of which, or six hundred and thirty-one millions, have gone into coinage. What has become of this vast sum of coin?

It has flowed abroad to pay our debts. Much more than half of our national debt is owned in Europe. The interest on our national bonds held abroad is exceeded by the coin interest on State, city, railway, and other American securities held there; so that the aggregate coin interest annually due from the people of the United States to Europe is estimated at from one hundred to one hundred and fifty millions of dollars. Add to this from forty to fifty millions per year paid for foreign shipping, and a sum equally great for expenses of foreign travel, and we have an aggregate annual drain of from one hundred and eighty to two hundred and fifty millions of dollars in payment of debts and expenditures abroad.

How have we paid this enormous annual foreign demand?

First, by the shipment of coin and bullion. From 1860 to 1876, both inclusive, we shipped abroad one thousand and fourteen millions of gold and silver more than we imported, being an average of over fifty-six millions a year. The balance of the foreign demand upon us we have paid in part by an occasional balance of trade in our favor; but always, in whole or in part, by selling more bonds abroad, thus each year increasing the annual drain of the precious metals and making it more impossible for us to get or keep any large sum of coin in our country.

I do not ignore the consideration that our disuse of gold and silver as money would of itself have caused them to flow abroad. But I claim that our foreign debts and expenditures make the drain imperative, whether we do or do not use the coin as a foundation for a home currency. Our great specie product of the past seventeen years has become the property of creditor nations who have built their business on it. We can neither bring it back, nor hold future accumulations here, by creating a demand for it at home, be it ever so imperative; for with nations, as with individuals, "the borrower is servant to the lender." No nation greatly in debt abroad ever did, or can, have a redeemable paper currency for domestic business. Russia, Austria, and Italy, who are like us greatly in debt abroad, are also like us compelled to forego specie payments.

But my colleague [Mr. Garfield] says in effect that this bad

condition is all changed now, and resumption made easy by our favorable balance of trade. So far from the balance of trade helping us to coin, the report of the Bureau of Statistics of August 21, 1877, shows that we shipped abroad for the year ending June 30, 1875, seventy-two millions of coin and bullion more than we received; in 1876 forty-one millions, and in 1877 sixteen millions. So that, notwithstanding the unexampled balance of trade in our favor, and our great effort to accumulate gold for resumption, we have in the past three years exported one hundred and twenty-nine millions more of coin and bullion than we have received from abroad. How, then, has the balance of trade helped resumption?

Mr. Speaker, this vast and increasing drain of the precious metals makes a maintenance of specie payments absolutely impossible on one-third of our present volume of paper currency. Until the financial policy which has taken our debt from our own people to send it abroad shall be wholly reversed, and the debt is held at home; until the usury which forbids vessels built here, where money costs 10 per cent., from competing with those built on the Clyde, where money costs but 3, shall have been abated by a money policy which shall give money and moneyed securities a less exorbitant interest; we can no more arrest this outgoing drain of the precious metals than we can stop the waters warmed by an American sun in the Gulf from flowing to lave and enrich the British Isles.

The Administration has had in its hands for three years past the whole credit resources of our nation for the purchase of coin wherewith to prepare for resumption. It has been authorized to sell bonds bearing 4, 4½, and 5 per cent. interest. Three-fourths of the time allotted for preparation has already elapsed. The Secretaries of the Treasury have exerted themselves to the utmost to accumulate gold. The national banks have no doubt been fairly diligent in getting and hoarding it. The problem before the treasury and the banks has been to get gold enough to keep seven hundred and thirty-three millions of paper afloat, or to take up the paper with gold and destroy it. How successful have they been? We find from a report of the Secretary of the Treasury made to this House last Thursday that the United States had succeeded in obtaining to October 31, 1877, but $57,436,071 of gold, from which is to be deducted, however, accruing interest, amounting at that date to $24,840,093—leaving but $32,595,978 of gold applicable to resumption. Whether any of that small sum is what Jim Fisk would have called "phantom gold"—say subscriptions by the national banks for

bonds *payable* in gold, but not yet paid—does not distinctly appear. In addition to the thirty-two and a half millions in the treasury, the national banks hold $19,948,407 of silver and gold combined. How much of this is silver and how much gold does not appear from the bank statement. No doubt the chief part is subsidiary silver coin, which is of no use for resumption.

WILLIAM M. SPRINGER [Ill.].—If the gentleman will allow me, I would say that, according to the last statement of the Comptroller of the Currency—that for November—there are but five millions of gold coin in the national banks, the other specie in the banks being in silver and United States gold certificates.

GENERAL EWING.—After nearly three years of preparation, what have we accomplished? We have effected a net destruction of over seventy-five millions of greenbacks and bank notes combined; but have accumulated in the banks and the treasury less than fifty millions of gold and ten millions of silver applicable to resumption. Here we are, then, with resumption day not fourteen months distant, with not one-fifteenth of the amount of gold and silver indispensable to float six hundred and fifty-eight millions of paper money now outstanding—with no stock of the precious metals in the United States to draw from—with the outgoing drain still kept up—with our foreign creditors and the great banks of Europe determined to prevent the shipment of gold to America; holding in effect a mortgage on every dollar of the coined product of our mines; and able to drain the petty accumulations in our treasury or the banks at will by simply demanding coin payment of the interest on our public and private securities, or by sending them home for sale. Under these conditions, how utterly futile it is to hope that we can maintain resumption without the swift destruction of much the greater part of the present currency of the country!

If we were wholly out of debt to Europe, if our foreign commerce floated under our own flag, if there were no system of absenteeism among our wealthy classes, expending their wealth abroad, resumption in gold, or even in gold and silver, would be impossible on our present volume of paper currency for many years to come. In the proportion of coin in England to redeemable paper money, it would require about eighteen hundred millions in our country to maintain resumption on the six hundred and fifty-eight millions of paper money outstanding. In the proportion of France's paper money to her coin, we would require an accumulation of sixteen hundred millions. Take even the proportion of coin in our country in 1860 to the highest volume of paper money then in circulation and nominally redeemable,

and it would require nearly nine hundred millions of coin to float our present paper money.

How can we accumulate such a vast sum of gold? The coined product of our mines, if it were all retained here, would not yield it in forty years. If we were free from debt to-day and were to offer 6 per cent. bonds in the markets of Europe in exchange for gold, we could not get a hundred millions. Recollect, sir, that England, France, and Germany never suffer a shipment of gold from their shores, if by any artifice or power they can prevent it. All the vast sales of bonds abroad for fifteen years past have brought us nothing but our own securities or merchandise. England refused to pay the Geneva award of fifteen and a half millions in gold, but paid it in securities. An export of ten to fifteen millions of gold will always produce a panic there. It is the base of the pyramid of currency and credits in every specie-paying country, and the withdrawal of any part of the base shakes the industrial fabric resting on it. Hence every monarch of Europe guards his country's gold as he does his crown or scepter.

Hence resumption can only be *maintained* by the destruction of the greater part of the present paper currency. To accomplish that purpose the means provided in the law are probably adequate. Mr. Sherman says they are. He ought to know. His plan probably will be to limit the amount of redemption per day to, say, two millions; to require all the greenbacks to be presented through a chosen syndicate which can pay him two millions of gold per day for 5 per cent. bonds, and present two millions of greenbacks per day and receive the gold back. It could probably be managed so that most of the gold thus used would be merely diverted from European and American money markets long enough to flow through the treasury and back to the same markets, causing comparatively little disturbance, and accomplishing in effect merely a *funding* of most of the greenbacks into gold-bearing bonds.

My colleague [Mr. Garfield] says the people will not want the gold when greenbacks are at par. True, the masses will not. They never have wanted it in preference to greenbacks, which they always have regarded as being, in the language of President Grant's message in 1873, "the best paper money they ever had." But the *people* generally will have no more to do or say as to the redemption and cancellation of their currency than they have had with the finance policy of the Government for the past twelve years; than they had with the establishment of the national bank system; or the funding of the $1,200,000,000 of

interest-bearing treasury notes; or the passage of the infamous act of 1869; or the rascally sleight of hand by which silver was demonetized; or the enactment of that sum of financial villainies—the resumption law. The national banks, the importers, the gold rings in New York, the desperadoes of Wall street, the money kings of Europe to whom we are financially enslaved, *they* will present the greenbacks for redemption and destruction as fast as the gold can be paid over the counters of the treasury.

But we are assured there will be little more contraction, because gold will take the place of the redeemed greenbacks in the business of the country. That is a most fallacious conjecture. The dearth of gold here, the present large demand for it, the immeasurably increased demand arising from the fact that considerably more than two thousand millions of national, savings, and other bank deposits will then be payable in gold; that seven or eight billions of other debts, corporate and private, and seven hundred and fifty millions of annual taxes, now payable in currency, will then be payable only in gold; that every banking institution in the land will be at the mercy of the millionaire gamblers who may hoard it to burst the banks and place the business of the country at their feet, will create a general scramble for coin which will keep every dollar of it out of general circulation.

After our currency shall have been contracted over a half by destruction of the greenbacks, the bank circulation must also be largely reduced to maintain resumption. The national banks, since the resumption law was enacted, have made a net reduction of forty-eight millions of their circulation. Whatever other causes may have led to it, the obvious impracticability of maintaining even the present volume of bank currency redeemable in gold was the main cause. Over three hundred national banks have already surrendered their circulation in whole or in part. They are chiefly the banks of the country districts, that know perfectly well that it will be impossible for any banks to maintain their circulation except those situated in the great importing centers, where whatever of gold may remain in the country will accumulate, and where alone redemption will be practicable.

The destruction of over seventy-five millions of greenbacks and national bank notes under the operation of the resumption law has of itself caused much of the business distress we have witnessed; but the obviously impending destruction of more than half of what is left is the storm cloud which covers our heavens and fills all communities with alarm.

Sir, the assertion that the distresses that our country is now

undergoing are due to the large volume of currency, and to the wastes of the war, is contradicted by our experiences, and by the parallel experience of England's twenty years of continental war and irredeemable paper money. British industry was greatly wasted by that protracted war, but the loss was more than made up by the industrial prosperity which attended her full, stable, but irredeemable paper currency. It was in that season that she established her manufacturing and commercial supremacy over the world. Every sea was whitened with her commerce; every market filled with her wares. Napoleon said in his exile at St. Helena, "Great Britain conquered me with her spindles"—with spindles kept in motion by a prosperity due to the fact that she had during that period of suspension a fuller, better, and more stable currency than any which can be built on the quicksands of gold and silver.

So *we* had, during the rebellion and for some time afterward, a full and satisfactory currency which stimulated industry, and compensated to a large extent for the ravages of war. If the distress which now afflicts our country were due to the increased volume of paper money, how is it that during the period of the fullest currency bankruptcies were almost unknown? How is it that that period, though marked by extremely heavy taxation, was one of comparatively little accumulation of municipal or private debt?

Mr. Speaker, the records of commercial failures in the United States indisputably show that business distress was least when the currency was fullest, and that the contraction of the currency, by funding legal-tender interest notes, arrested prosperity and caused an enormous increase of bankruptcies throughout the nation. In place of this currency withdrawn was substituted a mountain of debt which toppled over in the panic of 1873. But in the year following the panic those records show, and our recollections attest, that the business of the country revived. The return of prosperity was stopped by this resumption law, which was an emphatic warning to moneyed men to withdraw or withhold their money from all industrial pursuits, and to hoard it in anticipation of a contraction and shrinkage of values unparalleled in our history. Had our home debt and our currency been let alone, the prosperity that accompanied and followed the war would no doubt have continued, prices would have gradually settled to a salutary level through a relative shrinkage of the currency resulting from the extension of business, and we would have been to-day richer, freer from debt, and far, far nearer a practicable resumption than now.

My colleague [Mr. Garfield] attempts to prove that our present disasters are the result of the increase of the currency during the war, by citing the hard times from 1837 to 1842 and from 1857 to 1859 as instances of the evils of redundant currency. Sir, the volume of currency was no larger at those periods than it was in 1860, which has been cited by the gentleman as the most solidly prosperous year in our history. Those panics were caused by the fact that the specie reserves of the banks were necessarily small, and that to accommodate the business of the country they issued more paper than they could get coin to redeem with, and therefore specie payments collapsed. To get back to redemption, the banks were compelled by their charters to do just what the resumption law now compels the treasury and the national banks to do, that is, contract their paper to the little measure compatible with coin redemption. That contraction, and that alone, caused the business distress which characterized the years following those panics.

But my colleague tells us that greenbacks are within 2½ per cent. of gold, and by the 1st of January, 1879, we will glide into resumption as a ship is launched from the stocks. Sir, that is the same jack-o'-lantern which beguiled the British people into the bog of resumption in 1819. Ricardo and other oracles assured the people that, as gold was at but 4 per cent. premium, resumption was an easy step, and that the fall of values caused by resumption would not exceed the 4 per cent. premium then existing on gold. Their assurances were credited, the law was passed, and the shrinkage of the currency and the fall of values which followed exceeded tenfold the predictions of these oracles of finance. This theory, which Ricardo himself subsequently admitted to be fallacious, is referred to now by the resumptionists with as much assurance as if it were a demonstrated maxim of finance. The fact is the premium on gold is no measure whatever of the extent of contraction necessary to resumption.

Equalization is not resumption. Equalization can occur without disturbance of the volume of the currency or of domestic business, for it leaves all who want gold to exchange greenbacks for it in the market. Resumption involves redemption and destruction of the home currency to the extent of the demand for gold, regardless of the disasters to business attending such destruction.

The reduction of the premium on gold is due to causes which may cease or be counteracted at any time. The depression of industries in Germany through contraction by silver demonetization; and in England through a falling off of exports to the

United States, and through the cheapening of silver, which has enabled the residents of British India to manufacture goods there at less cost than they can be manufactured in England (thus cutting off her greatest market), has tended to lessen the demand for gold in Europe, while the decrease of our own imports has lessened demand for it at home. Hence its fall in price in our markets.

A revival of commercial prosperity in those nations, increasing the export demand for our gold; a money panic abroad; a large crop in England next year; a short crop here; or even the termination of the European war, opening the Dardanelles for export of Russian wheat, may turn the balance of trade against us and send gold up to 10 or 20 per cent. premium before resumption day. Any one of these incidents, after resumption, would probably drain the little accumulations from the treasury and the banks, and throw them into insolvency.

But we are told that silver will be remonetized, and then resumption will be practicable without further contraction. That, in my judgment, is an egregious error. The total supply of silver coin and bullion in the United States, exclusive of subsidiary coin, is stated on excellent authority not to exceed from five to ten millions of dollars. There is no great stock of silver in the world on which we may draw for the enormous sum needed as an auxiliary to resumption; the only one large accumulation being the demonetized coin of Germany, which does not exceed $80,000,000. Remonetization by us will strengthen the already strong tendency in Germany to restore its silver, and will go far to remove the restrictions on that coinage in France, Italy, Spain, and the other states of the Latin Union. Mints have been established to coin it in Japan and India, and are about to be established in China with a view to the substitution of silver for copper in the domestic business of those countries, which is vast enough to absorb all the silver of the world. If our paper currency should be contracted no further, and if every contingency were to result in our favor, we could not possibly accumulate in the next twenty years enough of the precious metals to maintain even the sham redemption we had before the war. The only alternatives, therefore, are an indefinite postponement of resumption, or contraction of the volume of paper money to less than the attainable supply of coin, say $200,000,000.

Mr. Speaker, there is no law of political economy more universally recognized than that the reduction of the effective volume of a currency, by which the values of a country are measured, causes a ratable reduction of all values of land, labor, and

product. It was strikingly illustrated in the history of the British resumption law. When that act had been in force three years, and resumption day was but a year distant, Mr. Atkins showed on the floor of the House of Commons—and Tooke's "Tables of Prices" confirms his statement—that the reduction of the bank paper 45 per cent. as a necessary preparation for resumption caused an equally great reduction of all values on the island.

I think it safe to say that the combined effect of withdrawal of over seventy-five millions of the paper currency under the resumption law, and the hoarding caused by the threat of resumption, have together reduced its effective volume at least one-third, resulting in an average fall of values in like proportion.

Now, Mr. Speaker, what is the extent of injury thus inflicted? How have taxpayers suffered? We pay more taxes each year than the aggregate volume of our currency—seven hundred and fifty millions—for the support of national, State, and local governments. That is, a tax of $17.50 per head for every man, woman, and child in the United States—an enormous burden, far surpassing any borne by any people on earth. The British pay $11.09 per head; the French, $11.41; the Germans, $9.24; the Austrians, $7.22. This burden is insupportable, unless industries prosper. The resumption law has broken down industries and reduced one-third the average values of land, labor, and products, by the sale of which alone taxes are paid, and in effect has thus increased the tax burden 50 per cent. The burden has thus been made, in heavily taxed communities, absolutely insupportable. Several great States, and many counties and cities, have already sought relief in repudiation. Continue that process of reduction of values, bring them down much more, as will inevitably be done if this law be not repealed, and one-half of the corporate and municipal debts in the United States will be repudiated. The greed of the money power, in thus seeking to enhance so enormously the value of the dollar, is only equaled by its arrogant and dogged stupidity.

Consider, Mr. Speaker, the wrong done to individual debtors by this contrived shrinkage of values. The aggregate of private debts in the United States, including railway mortgages, is probably not less than seven and one-half billions of dollars, or three and one-half times the sum of our national debt. They are owed generally by the young, energetic, driving business men of the country, who are seeking to rise from poverty to competence, or from competence to wealth. They comprise two-

thirds of the merchants, manufacturers, and exchangers of values, and give employment to two-thirds of the wage men of the country. This law breaks down their business, strips them of their property, and casts out of employment millions of laborers dependent on them.

Above all, Mr. Speaker, consider the effect of the shrinkage of values on wage laborers and their families; on the millions who are compelled to eat up in idleness the little accumulations of thrifty industry; on the millions who have no accumulations, but rely only on daily labor for daily bread, and who are now unemployed, or half employed, or living on pauper wages. The president of the Springfield and Pomeroy Railway Company, Mr. Emmett, who is struggling to construct a railway across Southern Ohio, told me recently that he had plenty of laborers offering to build his road without other compensation than enough bread and meat to keep the poor machines of their bodies in working order—asking nothing for clothes, nothing for wives or children, nothing to lay up in store for winter—and this too in the midst of bounteous harvests, in a region one of the fairest ever fashioned by the Almighty for the abode of man—

> O God! that bread should be so dear,
> And flesh and blood so cheap!

Suppose, Mr. Speaker, that resumption were attainable without further fall of values and depression of industries, and that after January 1, 1879, prosperity should promptly return. Let us make a rough estimate of the cost of resumption. It will have cost the people at large, through the enforced idleness of factories, an enormous sum, probably surpassing several times the aggregate of our national debt.

The debtor class, instead of paying seven billions, which they owe, would have to pay one-half more by the shrinkage of former values; that is, the enormous sum of about three and three-quarters billions of dollars would be wrongfully taken from them, so far as they have power to pay it, and given to the creditor class, without consideration and in violation of the spirit of the contracts.

The census of 1870 indicates that there are not less than ten millions of wage people in the United States, men, women, and children. If there be no increase of demand for labor by resumption day, we may safely put the loss of labor, unemployed, or only partly employed, at a daily average of three millions of days' labor; and, putting wages at an average of a dollar

a day, the loss, from want of employment alone, will have been nine hundred millions a year for about three years—an aggregate of $2,700,000,000 wrung from the poorest class of our people.

The loss to taxpayers in depreciation of property with which taxes are paid, while the sum of taxes remains the same, would be three hundred and fifty millions a year, or over a thousand millions in the three years; and the increase of bonded debt in purchase of gold and silver to pay and cancel the greenback and fractional currency will be four hundred and sixteen millions more. Thus, under the specious pretext that national honor requires us to add 10 per cent. to the value of three hundred and fifty-four millions of greenbacks, the contrivers of this scheme will have wrested from the people many times the sum of our vast national debt.

But the shrinkage of the currency and of all values cannot stop here, if the resumption scheme be not arrested. The entire industrial system of this country has been pushed to the verge of destruction. Savings banks and insurance companies are now failing everywhere through depreciation of real estate mortgaged to them. Yet my colleague [Mr. Garfield] appeals to us, in the name of the workingmen whose means are in these failing companies, to adhere to the policy of contraction, which involves the loss of their savings in addition to loss of employment. There is not a savings or other bank in the United States which can possibly prepare for resumption by January 1, 1879. All the banks owe, by the estimate of the Comptroller of the Currency, about nineteen hundred and seventy-four millions to depositors, which will be payable in effect in gold on that day, in addition to three hundred and seventeen millions of bank notes. Those institutions have not to-day one million of gold for each two hundred millions payable fourteen months hence. When they shall have drifted on a few months longer, their helpless condition will become generally understood, and a panic will ensue which will involve the whole banking system and with it the entire industries of the country, to be followed by an enormous increase of suffering among wage people and by civil commotions, riots, and disasters which will shake the firm foundations of order and property.

Mr. Speaker, this is no phantom of the imagination, but a prediction of fact founded on the necessary effects of the law in the situation in which we are, as illustrated by the experience of England in her fatal scheme of forced resumption.

Our legislators slavishly borrowed this scheme from British

statute books, while shutting their eyes to every lesson its history taught the world. They are blind to the fact that, while resumption was possible in England, it is wholly impossible here. When she attempted resumption the paper money to which her values were adjusted was about $232,000,000; ours, seven hundred and thirty-three millions. She had far more gold in the country than we have. All the world owed her; we owe all the world. The precious metals flowed to her from every land; they flow out from us at every port. With her small volume of paper money, her comparatively large accumulation of coin, her supreme command as the creditor, the merchant, and manufacturer of the world, resumption might well have seemed practicable to her statesmen. With our large volume of paper money, our petty and diminishing supply of coin, in our helpless situation as the financial slave of the world, unable either to get or keep coin as the foundation of a redeemable paper currency, the attempt at forced resumption is theory or craft run mad.

England carried through the scheme of her theorists and usurers, stripped her laboring class of their homes and little accumulations, robbed debtors of their property, and suppressed with slaughter the cries of her starving wage men. Our theorists and usurers have a far more gigantic job on hand. Its monstrous immortality and injustice are understood by the people, who will not submit to be robbed and enslaved by it. The alliances of workingmen everywhere—their action in the late elections—the civil commotions of last spring—are but portents of a coming storm. Look at the multitudes in the streets of our cities fast being driven by hunger to despair! I saw hundreds last summer clubbed by policemen out of the parks in New York at night—homeless, starving workingmen, who had gone there to find a resting place on the grass under a pitying sky. I warn you, this scheme has been pushed just as far as it can go. Stop! or the spoliation of the masses, accomplished and still threatened, may arouse an avenging spirit which will not be content with merely righting wrongs.

Mr. Speaker, what are we to gain by this resumption scheme to compensate for the enormous calamities it has afflicted and will yet inflict? The answer is, "We will get a better and more stable currency redeemable in gold and silver, and shall then have a sound and lasting prosperity." Sir, I deny it, and confidently assert that we will get no currency at all comparable to that we have had for ten years past.

The most that can be said of it is that it will be in some respects a better and in others a worse currency than we had before the war. It will be better than then, because the State bank money had not uniform security or value. It will be a worse currency in this, that before the war we were comparatively out of debt abroad, and had more coin in the country and greater power to hold it than we can have for many years to come; and because the enormous aggregation of money and of money securities since then has created money kings and wreckers, who own and control the great banks and can contract and expand bank issues, make hard times and good times at pleasure, and rob the people at every change of values.

Imagine us back to an exclusive bank paper redeemable in coin. Let us view the inverted pyramid! We see $3 of bank paper built on each dollar of coin in the vaults and $3 of deposits on top of each dollar of paper, making $12 of paper and deposits, largely payable on demand, resting only on $1 of coin. Then suppose any year an abundant crop of cereals in Europe, and a consequent diminished export of grain from the United States, necessarily followed by increased coin shipments. The withdrawal of twenty-five millions of coin from the banks would involve a contraction of seventy-five millions of paper, taking the foundation from under two hundred and twenty-five millions of deposits—bringing on inevitably a general panic, just as the withdrawal from our banks in 1857 of seven millions of coin for shipment abroad caused the crash of that year. A war between any two great nations; a commercial crisis in any one of them; a combination of half a dozen of our largest creditors in London or the Netherlands; a combination of two or three great speculators at home; any one of a dozen incidents may occur in any month after resumption, causing the withdrawal from the banks for shipment abroad, or for making a corner at home, of coin enough to cause a disastrous panic.

The British have something approaching honest coin redemption, for there can only be $45,000,000 of bank paper in excess of coin in the vaults of the Bank of England; yet, there, with near seven hundred millions of coin in the country, "the export of ten to fifteen millions of coin," says Mr. Patterson in his "Science of Finance," "will produce a serious commercial crisis."

In the United States we have never had, and for many years cannot have, sufficient coin attainable by the banks to establish an honest redemption of one-third of the paper money which the necessities of business imperatively demand. Before the war the deposits but little exceeded the bank paper, while now they are three times the sum of our whole volume of paper currency, be-

ing near two thousand millions; yet then we had redemption only when coin was not generally wanted, but when the banks were called on for it the fact that $1 of coin will not redeem $3 of paper and $9 of deposits always threw them into insolvency. The system would have been a juggle if it were not a transparent lie. It is to get back to something even worse than this old system of insidious swindling that the American people are now undergoing the tortures of the damned.

But the gentleman from New York [Simeon B. Chittenden] declares with great vehemence that the greenback was originally merely a debt payable on a day not named; that the resumption law made it payable January 1, 1879; and that to repeal that law, and change the day of payment so fixed, is downright repudiation. Mr. Speaker, if the gentleman's statement be true that the greenbacks were payable on a day not named, then they were payable on *demand*. Then the resumption act postponing payment four years was an act of repudiation, and to now repeal that act is to restore as far as possible the original contract. Hence, by his own logic, he was a patriot when he voted against the resumption law in 1875. and is now a repudiator in sustaining it.

My colleague [Mr. Garfield] says the greenback was a forced loan. I deny it. It was issued as *money;* and solely because the people had not enough coin or other safe currency with which to prosecute the business of the war. I care not for the form of the contract, but for its meaning; not for the letter, but the spirit. It was and is only a pledge by the whole people to each successive holder that it shall be money; the money of the Constitution and law; the money of taxes, judgments, and contracts, in the transactions of domestic business; and that the function of money shall inhere in it until considerations of *public interest alone* require its redemption in coin.

A favorite scheme of the bullionists—those guardians of national honor—recommended repeatedly by Grant's Administration and the leading resumptionists of this House, has been and is to break this pledge of national faith by destroying the legal-tender character of the greenbacks in the hands of the people. They and they only are the repudiators; while those advocating the retention of the money, with all its faculties unimpaired, respect alike the obligations of national honor incurred in its issue and the considerations of national interest which demand its retention as the safest and best possible currency.

Sir, the resumption law was a trick and a fraud; hatched in the dark; its real purpose and effect concealed from all but the

initiated in the mystery of money; and put through Congress without explanation or debate, because its authors well knew that the people would never consent to increase the bonded debt or destroy the greenback, and that if the effect of the bill had been known it would have been instantly strangled on this floor.

That law is itself a repudiation of the compact by which the greenback became the measure of all contracts in the myriad transactions of domestic business. It sought to destroy the greenback and to increase by stealth the values of $10,000,000,000 of contracts, public and private, measured by it. To repeal that law, and thus restore as far as possible the just measure of those contracts, is demanded alike by the people to whom the greenbacks belong and by every consideration of interest and honor.

If a repeal of this law be repudiation, as the gentleman from New York [Mr. Chittenden] so loudly asserts, who are the hapless sufferers? Not the people at large, for they hold the money to-day and pay it out to-morrow, and a change in its purchasing power is not so instantaneous as to affect hand to hand transactions. Is it the few men who have hoarded greenbacks on the pledge of the law? They diverted the money from the uses for which it was issued and have already made exorbitant profit by it. Is it not enough for them that $6 in greenbacks will now buy ten dollars' worth of labor or property? Does justice or honor demand that we give the hoarders of one or two hundred millions of greenbacks the power to double or treble their wealth by purchasing the people's labor and property at mere nominal prices, and that to accomplish this the industries, the property, the happiness of the masses shall be sacrificed?

No, sir! no public debt, however clear or obligatory, would justify a sacrifice so stupendous. In the language of Edmund Burke—

> IT IS TO THE PROPERTY OF THE CITIZEN, AND NOT TO THE DEMAND OF THE CREDITOR OF THE STATE, THAT THE ORIGINAL FAITH OF SOCIETY IS PLEDGED. THE CLAIM OF THE CITIZEN IS PRIOR IN TIME, PARAMOUNT IN TITLE, SUPERIOR IN EQUITY.

I have not attempted, Mr. Speaker, to reply to all the arguments on the other side, or to sound a tenth part of the depths and shoals of this subject, which is as boundless as the sea. No greater question was ever presented to an American Congress for its action. It touches the prosperity, the happiness, the future, of three-fourths of the men, women, and children of this land. Countless homes have already been desolated by this rob-

ber law. Thousands of men have been drivin by it to insanity or suicide. Hundreds of thousands have been cast down from competence to poverty. Millions have been deprived of that employment for their labor on which rest the hope and dependence of their families. It is now too late to right these wrongs, but greater evils may be averted from the most of these victims, and from millions more, by the prompt action of Congress and the President.

I do not appeal to that money power which intrigues for its own aggrandizement over the wrecked fortunes of the unwary multitude—a power to which our unhappy civil war gave birth, which has grown so enormous through unjust finance legislation, and now "bestrides this narrow world like a colossus"; which subsidizes the press, the great organs of public opinion; which captures statesmen and parties, and makes them its subservient tools; which vilifies and seeks to crush every public man who dare raise his voice against it. That power, in the flush and arrogance of its enormous and ill-gotten gains, has a heart of stone, not to be touched by human sympathy or compassion. I appeal to the masses; to their faithful representatives of both parties on this floor; to all who think that the true aim of government is the greatest good of the greatest number; who believe there is a faith due to the people as well as to the holders of public securities; and that whoever by covert legislation changes the value of contracts is as accursed as he who moves his neighbor's landmarks.

For twelve years past the finance policy of this country has been dictated in Lombard street or Wall street, and the people have been plundered by every fresh enactment. They have suffered the fate of the giant Gulliver tied down by the Liliputians. Thank God! they are now about to rise, to burst the bonds their petty foes have fastened on them sleeping, and to walk abroad again in their own majesty. [Great applause.]

None of the material amendments to the bill were agreed to. The bill passed by a vote of 133 to 120. The Senate referred the bill to the Committee on Finance, which did not report it during the session.

During the following session it was brought forward in the Senate, and debated at great length. A number of amendments to it were made, and it was passed on June 13, 1878, by a vote of 45 to 15. On June 17 the House voted on suspending the rules and concurring in the Senate amendments—yeas 140, nays 112. A two-thirds majority being required to suspend the rules, the motion was lost. The matter was not brought up again during this session.

INTRODUCTION

Standardization of the Dollar as a Remedy for Fluctuating Prices

IN order to understand the history of the "free-silver" agitation in the United States, it is necessary to go back many years before that agitation seemed suddenly to burst upon the country after the financial crisis of 1893. The free-silver movement was really the outcropping again of the old inflationistic sentiment which, under another form ("greenbackism"), was rampant during the Civil War.

History would seem to indicate that inflationism is latent in all communities and ready to break out at the slightest provocation. Fundamentally, this seems to be due to a very natural confusion in regard to the nature of money.

Money is a great convenience in practice but a great stumbling block in theory. Most people identify it with wealth in general, and crudely reason from the fact that "we all want more money" to the conclusion that a community with much money is a community with much wealth. This fundamental fallacy, which is latent in the minds of those untutored in economics, has taken on innumerable forms. It has sometimes led to the disastrous experiment of unlimited issues of irredeemable paper money, and has often condoned the over-issue of money when the government's exchequer was in need of funds.

So it was that, during the Civil War, Secretary Chase, with the approval of New York business men who ought to have known better, issued the greenbacks. This event

brought in its train many unfortunate consequences from which we have not fully escaped even to-day. One of these consequences was the free-silver agitation.

As in most cases where a mistaken policy has been undertaken, it was prompted by genuine basic conditions. These, if they did not supply justification, certainly afforded extenuation for the free-silver vagary. The fundamental economic condition underlying the free-silver agitation was the prolonged fall in prices beginning with 1873. For two decades, with very little intermission, prices had been gradually sinking. The consequences were as unfortunate as are the consequences of rising prices to-day. They were, however, of the opposite kind. The prolonged fall of prices produced, first, an added burden for the debtor and an unearned increment for the creditor. Enterprisers felt the burden as they would have felt an increased tax. The farmer with his mortgage, the railroad with its bonds, the business man with his notes, had to pay practically the same number of dollars year after year in discharge of their interest-, rent-, salaries-, and wages-accounts, while, in consequence of falling prices, their receipts from sales were constantly diminishing. This produced a damper on business which was only partially relieved by the gradual reduction in the rate of interest which the lowered demand for loans tended to produce, and the almost equally tardy reduction in rent, salaries, and wages.

It was inevitable as well as justifiable that the falling prices should be ascribed to an inadequate money supply; just as to-day the rise of prices is being ascribed to a superabundant money supply. It was a very lame reply which the apologists for falling prices made when they tried to show by statistics that the quantity of money and even the quantity of gold in circulation had not been decreasing but had been increasing. This was true, but the question was not one of the absolute amount of money but of its amount relative to the business to be transacted with it. Money had not increased enough to keep pace with the increased demands of business. Since 1896, on the other hand, precisely the opposite has been the

case. The money supply has outrun the requirements of business, and hence the present "increased cost of living."

I realize, of course, that both of these statements have been and still are contested. Just as to-day there are many who insist that the rise of prices has nothing to do with the money supply, so in the '80s and '90s there were many who sought to show that the fall of prices could be explained quite irrespective of any monetary considerations.

As we look back on the debates of those days we can readily understand how inevitable it was that friends of sound money should oppose as dangerous not only the remedy of free silver but also the diagnosis on which that remedy was predicated. It might have been otherwise if the sound money men had had some remedy of their own to suggest. It is always hard to induce a patient to refrain from a quack remedy when you have no scientific remedy to propose instead, and it is altogether natural that in such cases the regular physician should attempt to assure the patient that his disease is of little consequence or even non-existent.

But the ugly fact that prices were progressively falling and that business men and debtors were being robbed of their normal rewards gave the inflationists their opportunity to come forward. As early as 1874 they had secured the passage by Congress of a bill to inflate the currency with more greenbacks, but this was courageously vetoed by President Grant, and the resumption act was passed instead. They did succeed, however, in partly frustrating the resumption act by providing that the greenbacks, after redemption, should be immediately reissued,—a proviso which, passed in 1878, still exists. In the same year, 1878, they also secured the passage of the Bland-Allison Silver Purchase Act, and in 1890 of the Sherman Silver Purchase Act. The injection of so much silver, combined with the impossibility of retiring the greenbacks, threatened serious disaster in 1893, by which time the increased silver currency had displaced gold to such an extent that the Treasury was on the point of

being unable further to redeem the greenbacks. These were presented in an "endless chain"—presented, redeemed, re-issued, etc.,—with no respite. As President Cleveland showed, the driving force operating this endless chain was silver inflation. He compelled Congress to repeal the Sherman Act, but too late to avert the crisis and panic of 1893, which, if it was not caused, was, at any rate, greatly aggravated by the reduction of our gold reserve and the distrust among business men of our monetary system. This crisis greatly increased the discontent which twenty years of falling prices had engendered. In 1894 appeared the book, "Coin's Financial School," by W. H. Harvey. It appeared just at the psychological moment, and had a wonderful vogue. None of the numerous replies to it could compare with it in popularity. It pointed out the scarcity of money and confidently proposed as the remedy the free coinage of silver at 16 to 1.

The public opinion which was created by this and similar writings led naturally to the free silver campaign of 1896. Many other conditions in the country also conspired to produce this result. Among these accessory or contributory causes were: the unpopularity of President Cleveland in the West—even in his own party; the political necessity for the Democrats to find a new and popular issue for the presidential campaign of 1896; the eloquent "Cross of Gold" speech of William Jennings Bryan at the Democratic convention, and his able, sincere, and enthusiastic support of the Free Silver cause; the organized support of free coinage by the silver mining interests; the clever invention of the "crime of '73," which took advantage of the coincidence of the year when prices reached a maximum with the year in which Congress decided (though we were then on a greenback basis) that the metallic standard, when we should again resume specie payment, was to be gold. Even the crisis of 1893, though largely due to silver inflation, was made to appear as the result of the scarcity of gold. Advantage was also taken of the discussion of international bimetalism which had been going on in Europe for many years.

There was a grain of truth in the claim that the abandonment of bimetalism in France in 1874, and the so-called "crime of '73" in the United States, were part causes of falling prices. If France and the Latin Union had not abandoned bimetalism in 1874 the result in those countries would have been a silver standard, and they would have contributed their gold to the rest of the world instead of draining some gold from the rest of the world. Moreover, if the United States had not passed the law of 1873, we, too, would have been a silver country, and, when we returned to a specie basis in 1879, it would have been to a cheap silver dollar instead of to a dear gold dollar. In other words, prices in the greenback standard would not have fallen as fast as they did prior to resumption in 1879; and, judging from the course of silver, they would not have fallen as fast as they did from 1879 to 1896. But these results could not have been and in actual fact were not foreseen in 1873, and Congress, in passing the law called the "crime of '73," had no sinister motive.

It must be further admitted that the silver men had some basis for their claim that bimetalism was a workable scheme. But, as I have tried to make clear in my "Purchasing Power of Money," it is only within well-defined limits that bimetalism can be made to work. In actual fact, France had bimetalism in successful operation between 1803 and 1873. On the other hand, bimetalism is always in danger of reverting to monometalism when one of the two metals becomes sufficiently abundant to expel the other from circulation. This had almost happened in France in 1874, and would actually have happened, had it not been that France then decided to avoid this result by becoming a gold standard nation.

But the free silver men did not acknowledge the limitations to which their beloved system is subject. For this reason they overlooked the importance—one might almost say the necessity—of having other nations join the United States in an international bimetalism. They were willing—eager, in fact—to "go it alone." (Incidentally, this put an end to the movement for international bi-

metalism.[1]) They overlooked the necessity of having the coinage ratio somewhere near the market ratio. The ratio of 16 to 1 was only about half the market ratio, and could only have resulted in a simple silver standard.

Fortunately, we were saved this folly through a popular "campaign of education" in which the Republicans were joined by "sound money Democrats." Naturally these allies overstated their case, just as the free silver Democrats overstated theirs; but their fundamental contention, that free silver would have meant a sudden inflation and depreciation of our money, was correct. Even granted that the debtors af the '70s, '80s, and '90s had suffered injustice—or, at any rate, loss—this loss was irrevocable. It could not be remedied by legislating in favor of the debtors of 1896. Two wrongs do not make a right.

The sober fact is that if free silver had been adopted in 1896 grave financial disaster would surely have followed. Not only would the United States have isolated herself from the gold standard nations, with which, for the most part, we do our international trading, not only would we have greatly injured our reputation and our credit abroad, not only would we have produced consternation, confusion, and unspeakable uncertainty for many months in the business world, not only would we have failed to reach many of the sufferers from falling prices during the previous twenty years, but we would have progressively produced contrary evils of the greatest magnitude.

It is easy for us to-day to appreciate these evils, because we are now experiencing them on a smaller scale. Even with the gold standard, prices have been rising; for scarcely was the campaign of 1896 over before gold production began to increase by leaps and bounds. This was partly due to the discovery of the cyanide process, and partly to the gold discoveries in South Africa, Colorado, and Alaska. This was a reversal of the previous movement and a falsification of the prophecies of the free

[1] See Henry B. Russell's "International Monetary Conferences," New York (Harper Bros.), 1898, chapters VII-IX, especially pp. 345-350.

silver men. The result was that the free silver issue soon became dead.

To-day the complaint is not of falling but of rising prices. Had free silver been adopted in 1896, we should have had an even more rapid rise of prices. This conclusion is to be fairly inferred from the history of prices and the relation of gold to silver, even after making due allowance for the fact that the free coinage of silver would have had a tendency to increase its value.

The evils of falling prices between 1873 and 1896 and the evils of rising prices between 1896 and to-day are merely the opposite facets of a single evil—the oscillation of the monetary unit. The time must ultimately come when business men will awake to the necessity of a dollar of fixed purchasing power. We have standardized every other unit in business, but have not standardized the dollar. We now have a dollar of fixed weight but variable purchasing power. We must secure a dollar of fixed purchasing power even if it be of variable weight. Those who have not studied the history of price movements seldom realize what mighty influences and evils come from fluctuations in the value of money. The free silver agitation was one of the fruits of such a fluctuation. It was reflected in politics and threatened the very foundations of business. To-day we have an agitation of an opposite kind as a result of opposite conditions, an agitation which is also reflected in politics and is producing discontent, bread and meat riots, socialism, and syndicalism. Yet few people realize the nature of these great changes. If they are not properly analyzed, and a scientific remedy is not proposed and adopted, we may again find ourselves face to face with proposals as dangerous as free silver.

Irving Fisher

CHAPTER I

"The Crime of '73"

[DEMONETIZATION OF THE SILVER DOLLAR]

Act of February 12, 1873, Dropping the Standard Silver Dollar from Coinage—Speech of Representative John M. Bright [Tenn.] against the Act as Practically Accomplishing the Demonetization of Silver—Aaron A. Sargent [Cal.] Introduces Bill in Senate to Increase Legal Tender of Silver Coins—John Sherman [O.] Introduces Substitute Therefor, Removing Legal Tender of the Trade Dollar (Coined by Act of 1873)—Debate: Sen. Sherman, Lewis V. Bogy [Mo.], Sen. Sargent, John P. Jones [Nev.]; Bill Recommitted—Sen. Sherman Reports Bill to Recoin the Old Standard Dollar with Limited Legal Tender; Sen. Bogy Moves to Make This Full Legal Tender—Debate: Sen. Bogy, Sen. Jones, Sen. Sherman, Gen. John A. Logan [Ill.], Justin S. Morrill [Vt.], Newton Booth [Cal.]; Bill Replaced by House Bill to Issue Silver Coin to Replace Fractional Currency, Which Is Passed.

DURING the session of 1872-3 John Sherman [O.] chairman of the Committee on Finance, introduced in the Senate an "Act revising and amending the laws relative to the mints, assay offices, and coinage of the United States." The important sections of this act were as follows:

Sec. 14. That the gold coins of the United States shall be a one-dollar piece, which, at the standard weight of twenty-five and eight-tenths grains, shall be the unit of value [here follows an enumeration of the other gold coins, with their respective weights], which coins shall be a legal tender in all payments at their nominal value when not below the standard weight and limit of tolerance provided in this act for the single piece, and, when reduced in weight, below said standard and tolerance, shall be a legal tender at valuation in proportion to their actual weight. . . .

Sec. 15. That the silver coins of the United States shall be

a trade dollar, a half dollar, or fifty-cent piece, a quarter dollar, or twenty-five-cent piece, a dime, or ten-cent piece; and the weight of the trade dollar shall be four hundred and twenty grains troy; the weight of the half dollar shall be twelve grams and one-half of a gram; the quarter dollar and the dime shall be respectively one-half and one-fifth of the weight of said half dollar; and said coins shall be a legal tender at their nominal value for any amount not exceeding five dollars in any one payment.

Sec. 16. That the minor coins of the United States shall be a five-cent piece, a three-cent piece, and a one-cent piece. . . . . which coins shall be a legal tender, at their nominal value, for any amount not exceeding twenty-five cents in any one payment.

Sec. 17. That no coins, either of gold, silver, or minor coinage, shall hereafter be issued from the mint other than those of the denominations, standards, and weights herein set forth.

Sec. 20. That any owner of gold bullion may deposit the same at any mint, to be formed into coin or bars for his benefit. . . .

Sec. 21. That any owner of silver bullion may deposit the same at any mint, to be formed into bars, or into dollars of the weight of four hundred and twenty grains, troy, designated in this act as trade dollars, and no deposit of silver for other coinage shall be received; but silver bullion contained in gold deposits, and separated therefrom, may be paid for in silver coin, at such valuation as may be, from time to time, established by the director of the mint.

Sec. 27. That, in order to procure bullion for the silver coinage authorized by this act, the superintendents, with the approval of the director of the mint, as to price, terms, and quantity, shall purchase such bullion with the bullion fund. The gain arising from the coinage of such silver bullion into coin of a nominal value exceeding the cost thereof shall be credited to a special fund denominated the silver-profit fund. This fund shall be charged with the wastage incurred in the silver coinage, and with the expense of distributing said coins as hereinafter provided. The balance to the credit of this fund shall be from time to time, and at least twice a year, paid into the treasury.

Sec. 28. That silver coins other than the trade dollar shall be paid out at the several mints, and at the assay office in New York City, in exchange for gold coins at par, in sums not less than one hundred dollars. . . .

The act was passed with very little discussion in either Senate or House, and with no reference at all to the fact that it practically accomplished the demonetization of silver in this country by dropping the standard silver dollar from coinage. It was approved by President Grant on February 12, 1873.

The first recorded protest against the demonetization of silver by the act was made by Representative John M. Bright [Tenn.] in a speech which, on January 25, 1875, he obtained leave to print in the *Congressional Record.*

"The Crime of '73"

John M. Bright, M. C.

In connection with our coinage I will develop another grievous outrage upon the people of the country. The act of 1837 made all *silver coins,* from a half dime to one dollar, a legal tender for all sums. The act of 1853, however, made all fractional silver coins from a half dime to a half dollar a legal tender only to the extent of five dollars, leaving the *silver dollar* a legal tender for all sums.

The act of June 25, 1834, made the silver dollar, of not less than four hundred and fifteen grains, of Mexico, Peru, Chili, Central America, and Brazil, a legal tender.

The act of May, 1846, made nearly all the foreign moneys of account, at fixed values, of European nations, a legal tender. These acts all remained unrepealed until the act of February 12, 1873, which enacted—

> That the silver coins of the United States shall be a trade-dollar, a half-dollar or fifty-cent piece, a quarter-dollar or twenty-five-cent piece, . . . and said coins shall be a legal tender at their nominal value for any amount not exceeding five dollars in any one payment.

The act of July 14, 1870, authorizing the refunding of our national bonds, provides that the bonds issued under it shall be redeemable *"in coin at its then standard value,"* which stipulation is inserted in the bonds and forms a part of the original contract. This is the only class of bonds payable in coin by express stipulation. Twelve other different classes of bonds were issued since February, 1861, and prior to the refunding act of 1870, all of which express on their face to pay *dollars,* with interest at a rate stated,

The point which I make is this, that the bonds, principal and interest, were payable in gold or *silver* coin up to the passage of the act of February 11, 1873. I waive the question at present whether the bonds payable in *dollars* were solvable in legal-tender notes. If they were payable in *silver coin* in dollar pieces, why did the financial ministers of the Government pay in gold, or its equivalent, interest amounting to $1,211,403,003 and principal amounting to $521,545,705, making together $1,732,948,708, when the gold was worth 6 per cent. more than silver, making a loss to the Government and people of $103,976,922.48?

But this is not all. The act of 1793 provided that "the proportional value of gold to silver . . . shall be as 15 to 1, according to quantity in weight." This act remains unrepealed. In Mexico, South America, Spain, Portugal, and in the West Indies generally, the value of gold is 16 to 1 over silver, and in Cuba said to be as high as 17 to 1. If the financial ministers had been as shrewd in protecting the people as the bondholders were as calculating to turn profits into their coffers, why did they not take the gold and exchange it for silver in other countries when it was worth 16 for 1 in value, and bring it home and pay the debts 15 to 1, and save one dollar out of every sixteen, or 6 per cent. on the amount paid? By this process $100,000,000 could have been saved on the payments already made. The silver was abundant and could have been easily obtained. The American silver mines were turning out an annual average of $23,000,000 and on the increase. The director of the mint in his last report, speaking of the quantity of gold and silver coin and bullion in the world, says:

> The world's stock of precious metals is generally estimated at from ten to twelve thousand million dollars, nearly equally divided as to the two metals.

All the bonds of the United States which by their terms are payable in coin at its then standard value may be paid in silver one-dollar pieces, which were a legal tender for any amount at the time, as much so as gold; and they ought yet to be paid in silver coin, for the double reason that such coin would meet the contract, and be to the advantage of the people 6 per cent. of the amount, being the difference in the value of gold and silver.

In like manner all the bonds payable *in dollars* may, and should be, discharged in legal-tender notes, for the same reasons, that they meet the contract and it would be to the advantage of

the people, 12 per cent. of the amount being the difference between gold and legal-tender notes.

The country has been laid under usury and extortion and flayed and victimized long enough. The Government, instead of being animated by a sense of paternal fairness and justice to the people of the country, has been obsequious in its concessions to the bondholders, many of whom are citizens of foreign governments.

To appease their clamor it gave them bonds bearing a coin interest, worth at the time $1,000,000,000 more in value than the depreciated currency paid for the bonds. It passed a declaratory act in 1869 saying that the principal of the bonds should be paid in coin or its equivalent, when the bonds by the terms were payable in *dollars.* It authorized by the act of 1870 the refunding of the bonds payable in *dollars* into 5 per cent. bonds payable in coin, with the interest payable semi-annually, and by the amended act of 1871 it made the interest on these payable *quarterly,* thereby making the 5 per cent. interest equivalent to 6 per cent. per annum. And the Government is at present paying the holders of these 5 per cent. bonds annually $4,934,386, the difference between the semi-annual and quarterly interest on $315,800,750, the amount of the outstanding 5 per cent. bonds. It has paid in gold since 1865, as I have shown, in interest and part of the principal of the public debt, $1,732,948,708, when it might have been paid, to say the least, in silver coin, and by proper financial skill have saved $200,000,000 to the people. It changed our coinage by the act of 1873 so as to destroy the legal-tender quality of silver coin except in sums under five dollars, and thus in the main to expel it as a currency from the country and leave the bondholders masters of the gold fields. And it now proposes to make our bonded debt permanent and to multiply the pernicious fecundity of the bonds by continuing them as an indispensable capital of the national banks. The whole design seems to have been to turn the people, property, and productions of the country over a lawful prey for the rapacity and speculation of the money power. And still the Government has no cure for these evils except more gold bonds and the increased taxation of the people. And the people might reply to the Government in the terrible irony of Patrick Henry:

> Shall we fill the pocket of the spendthrift with money to cure him of his prodigality?

For all these evils judgment is with the people.

On January 17, 1876, Aaron A. Sargent [Cal.] introduced a bill in the Senate making silver coins legal tender for a greater amount than $5. The bill was referred to the Committee on Finance. On March 28 John Sherman [O.], of the committee, reported as a substitute what was essentially a new bill, indeed, one negativing in part the original. This was to remove entirely the legal tender quality of the trade dollar, the only silver dollar coined under the act of February 12, 1873.

Silver as Legal Tender

Senate, March 28–June 8, 1876

Senator Sherman said that the trade dollar was made a legal tender in the act by inadvertence. In fact, it was simply a mercantile dollar, coined at the request of any holder of bullion. It was intended to promote our trade with China. It was not expected at the time the act was passed that this dollar would be used as legal tender, since it was then worth considerably more than a gold dollar.

In reply to a query as to the difference between the trade dollar and the silver dollar that had been coined before the act, Senator Sherman said:

> The trade-dollar contains four hundred and twenty grains of standard silver. The dollar of the law contains four hundred and twelve and one-half grains of silver. The subsidiary coinage contains three hundred and eighty-five grains in two half dollars. The trade-dollar was a dollar coined simply for the benefit of merchants in the foreign trade to compete with the Mexican dollar, which was a more valuable dollar than our legal-tender dollar. Now the result is, as silver has declined below the standard of gold, far below its former value, that private persons carry their silver bullion to the mints, and under the law as it now stands require it to be coined into trade-dollars, and then use them as a legal tender, silver being now depreciated below its legal standard. The other silver coins of the United States are coined at the pleasure of the United States and only for their benefit, and whatever profit is derived from the other coinage is derived by the United States, and not by private individuals. The trade-dollar is issued only as an ar-

ticle of merchandise, as a form of silver bullion, and therefore it ought not to be made a legal tender. Now any profit accruing by the issuing of the trade-dollar goes to private individuals, and thus we lose all our control over our silver coinage. The proposition is so plain that I think further debate is unnecessary.

This process of converting silver bullion into trade-dollars is pushed forward by persons interested in it, and thus the United States are deprived of their control of the silver coinage of the United States. This bill ought to pass immediately. As to the other question (silver as legal tender), it is a much broader question, and is now being considered by the Committee on Finance, and will be reported upon as soon as we are ready.

LEWIS V. BOGY [Mo.].—I think the whole subject had better be brought up, and I cannot see that any great harm can result by this law remaining as it is for a short time longer. If parties who own bullion desire to have it coined into trade-dollars, there can be no harm, and the export of that coin cannot hurt anybody, because it is of no use in this country, not being a legal tender.

SENATOR SHERMAN.—It is a legal tender now.

SENATOR BOGY.—Only to the amount of $5, which is next to nothing at all, and in point of fact amounts to nothing. . I am perfectly satisfied myself that we ought to make silver a legal tender to a larger amount. I do not think that silver should be made a legal tender to an amount unlimited as gold is, because, not being as valuable as gold, it would drive gold away; but I am fully impressed with the conviction that the amount of silver which should be made a legal tender ought to be increased to at least $1,000, and in that way we should be doing what is being done in France and other countries where the double standard is maintained. The silver would become the coin of the people, and be used in all small transactions, and gold would be used for banking transactions.

This involves the consideration of the great question as to the relative value of silver and gold. That is a question which has to be examined very carefully and very scientifically. I do not propose to go into that question at all just now; nor am I prepared to say what is the exact proportion; but, admitting that that proportion can be ascertained (as it can be, and ascertained beyond a doubt), I can see no reason why silver should not be made a legal tender, but I can see many reasons why it should be made a legal tender.

SENATOR SARGENT.—The original bill referred to the committee was introduced by myself and provided for a greater legal tender of silver coin. It is a question beset with difficulties, and I do not know that my mind is entirely clear as to the extent to which silver coin should be made a legal tender; but I am very positive upon one proposition, and that is that, if silver coin is a legal tender to any extent, it ought to be within the control of the Government to coin it on its own account. Your silver coin becomes abraded. Who shall redeem it? As it is now, the Government does it on account of the large profit it makes in coining the silver. Obviously, it should do so. But the trade-dollar is without a father; the Government is under no obligation to redeem that. It simply takes bullion of any one, puts it in a certain form, and stamps it, but there is no margin to the Government. It receives the mere cost of that coinage, and cannot be called on to redeem that coin when it become abraded. The question of the abrasion of coin is a very important one to the commercial classes in my State, both as to our silver and our gold coin. Who shall lose the difference between standard and naturally abraded coin? If the holder, he suffers for all abrasions before made by others and by the Government in handling it for years.

That which we are trying to remedy in this matter is a local trouble which has arisen among the people of the Pacific coast. They have in their hand some millions of silver subsidiary coinage, which they have bought of the Government, paying for it its full value in gold. As soon as the trade-dollar came in parties threw their bullion in immense quantities into the mint to have it coined in this trade-dollar form; and thus began depreciating the millions of subsidiary silver coinage which men had paid gold for and were using in all the avocations of life. The result was that complaint came from workmen that they were paid in this depreciated silver coinage; they could not pay their bills with it to the amount of over $5. We are thus finding the effects of a depreciated currency where we have stood for hard currency all the way along.

Of course, if trade-dollars were coined only on Government account and issued at the mints in exchange for gold, that would remedy the difficulty I have mentioned; but merchants could not afford to export them, and the original object would be defeated.

The course of trade will soon relieve the market of trade-dollars, and restore the tone of the money market and the value of subsidiary coin, if this bill is passed. The relief will be easy and natural, by sending trade-dollars abroad to China, provided

the issue for the purpose of circulation among ourselves is stopped. That, after a while, will cure the evil.

SENATOR BOGY.—The trouble on this question I think comes in this way: There is no law now fixing the relative value as between silver and gold. The silver coinage is not uniform. If the coinage of silver was uniform from the dollar down to the five-cent piece of proper standard (which standard of course I am not able to state now), and fixing the value as between silver and gold, there would be no trouble at all. The trouble is, in this case, that we, by the act of 1873—and I think without much consideration, because I have been unable to find much discussion on the subject—demonetized silver entirely excepting to the extent of $5, which really amounts to nothing at all. I think it is the greatest subject that can be discussed by the Senate with reference to the important question of resumption.

All nations are using gold coin at the present day pretty much, excepting France and a few of the southern peoples of Europe, who are using yet the double standard. I say, and am perfectly convinced of the fact that we in this country could most advantageously use silver as coin, provided the relative value as between that and gold is scientifically and justly fixed by law. As a matter of course, the subsidiary coin is depreciated, and persons who are compelled to receive their pay in silver to the extent of $5 do not like to take a coin which is of less purity than the silver dollar. Whenever you have fixed the value as between silver and gold, and fixed that properly, whatever that may be, there can be no flood of silver, because it will be just as good as gold, and yet it is not intrinsically as valuable as gold; and to that extent perhaps it would be wise to limit its legal-tender capacity. It formerly was without limit; and we all remember the day when silver was the coin of this country—I may say entirely—and gold was used as a sort of metallic merchandise. The act of 1873 demonetized silver in this country. We blindly followed the lead of Great Britain, and yet our position is just the reverse of the position of Great Britain.

ROSCOE CONKLING [N. Y.].—Is it true that there is now by law no American dollar; and, if so, is it true that the effect of this bill is to be to make half dollars and quarter dollars the only silver coin which can be used as a legal tender?

SENATOR SHERMAN.—Since the law of 1853 the use of the silver whole dollar has been discontinued and none has been issued.

SENATOR CONKLING.—Is there power to issue it?

SENATOR SHERMAN.—There is no power and has been none.

SENATOR BOGY.—The power to issue existed from 1853 to 1873; but since 1873 I think there has been no power.

SENATOR SHERMAN.—There has been no silver dollar issued since 1853, and my impression is that the law of 1853 did not confer the power to issue it. The Senator thinks it did confer the power; but the law of 1873 cut off the power, in my judgment, if it existed. The dollar was practically dropped from our coinage system for the best possible reason, the same reason that the five-franc piece and the large coins of England have been dropped out of their currency, simply because it is inconvenient in size and form for ordinary coinage and ordinary business.

JOHN P. JONES [Nev,].—Allow me to suggest that the reason the dollar was dropped and that no such silver coin has been coined since 1853 is because silver was at a premium at the then established ratio of gold, and nobody had any inducement to coin the silver dollar at that time. The law, however, authorized the coinage of the silver dollar then, and it was never demonetized until February, 1873; but it needed no law to prevent people from coining such a dollar for use in business, when there was another dollar to be got 3 or 4 per cent. cheaper. The people did in 1853 and up to 1873 have an option that if gold should become dearer they could fall back again on the silver dollar. In 1873 that privilege was taken away.

While I am in favor absolutely of monetizing silver, while I am in favor of the double standard, yet I think it would be the height of wisdom to pass this measure, in order that the business of the Pacific coast may not be disturbed until such relation can be established and until we shall ordain some law here that gold and silver shall pass concurrently. This is absolutely needed on that coast because it is impossible to do business at present either on the one basis or on the other. The subsidiary coins issued by the Government will pass if the privilege to private citizens to take their silver to the mint and have it coined is taken away, or at least if the legal-tender clause in the bill authorizing it is taken away. Then the subsidiary coin will pass on a parity with gold, and hereafter on another occasion it will be time enough to introduce bills, and advocate them, restoring the silver dollar and declaring the double standard.

SENATOR BOGY.—There could be no rise in silver if you established the relative value by law based on a certain purity of coinage.

SENATOR JONES.—On the contrary, under the double standard in France three times in fifty years did the relative value of

gold and silver change. Why? Because the legal-tender value of gold in the country was greater than its bullion value, and therefore silver went out and *vice versa*.

SENATOR BOGY.—That was owing to the fact that the legal-tender capacity was changed.

SENATOR JONES.—Not at all. No legal-tender capacity was changed at all. The market value of bullion changed because of the great expense and the great time necessary for subsidiary coinage where the subsidiary metal was a little debased and the issue limited. Nobody would pay a gold dollar for two silver half dollars if they would not buy gold again.

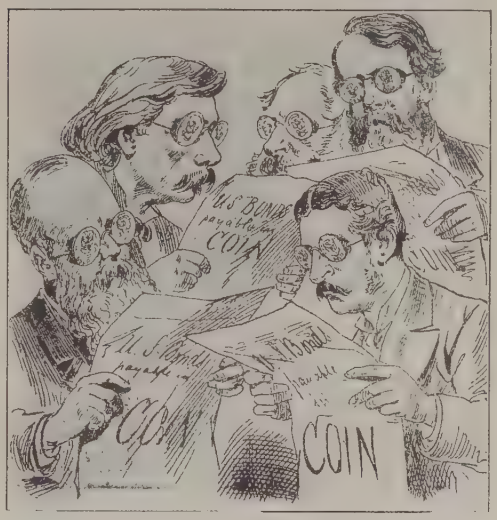
SENATOR BOGY.—There is no difference to-day in France between gold and silver taken at the value fixed by law. The trouble here heretofore has been under the act of 1853 that we had fixed a lower standard than France for silver, and the consequence was silver went to France. By the act of 1853 there was no limit to the coinage of silver dollars. There were none coined in point of fact, but the law did authorize the coinage of silver dollars until 1873. Now there is no law authorizing the coinage of silver dollars, except it be the trade dollar.

The bill was recommitted. On April 20 Senator Sherman reported it back with the amendment that the lawful dollar (412.8 grains) be recoined and made legal tender for a maximum of $20, except for customs duties and interest on the public debt. The Secretary of the Treasury was authorized to receive the dollars for an equal amount of United States notes, and to retire and cancel these, holding them to be a part of the sinking fund. Owners of silver bullion could deposit it at the mint at the market price, to be paid in silver, gold, or United States notes.

Senator Bogy moved to amend the bill by making the lawful dollar legal tender without any limitation as to amount or exception as to receivability for customs or bond interest, and fixing "the relative value between gold and silver of lawful standard at 15.5 to 1."

I am fully aware of the state of public opinion on this subject at this time, and particularly in one section of the country, and I am not unaware that I shall subject myself to a great deal of unkind animadversion for proposing this amendment to the committee's bill.

I am fully aware also of the fact that there is a very large, numerous, and influential class who believe not only that gold should be the only legal standard, but that it is our duty to pay



THE NEW YORK MORNING PRESS

Dana, Reid, Jones and the rest speak—"What spectacles we must make of ourselves! I can't see a thing but gold."

From the collection of the New York Public Library

our public debt in nothing else, and that any proposition which looks to a payment of this public debt in silver is a violation of the plighted faith. Believing that silver is a legal tender under the Constitution, and that its introduction into the money system of this country will lead to most beneficial results, I feel it my duty to impress these views on the Senate and the country.

What should be a legal tender in the payment of debts both public and private is one of the most interesting and also one

of the most important questions in the whole range of political science. It is interesting because it is identified with the history of the human race from the very earliest ages. It is important because it lies at the foundation of all national prosperity. And interesting as it is, and important as it is, yet it is still more so in this country than in any other, and at this time more than at any other period. When we consider the want of prosperity over the whole land, and the shrinkage of values both real and personal everywhere, manufactures stopped, all enterprises suspended, labor unemployed, a scarcity of money felt by every class except one, any proposition which can infuse life and activity in this sad condition of affairs may well be recognized as of the very greatest importance.

While I am willing to admit that the sad condition of the country is not the result alone of our vicious monetary system, but brought about by many well-known causes, nevertheless it is the most important and controlling of all the causes. I believe that the rapid coinage of silver of the proper standard and the making of it a legal tender for all sums in payment and in fulfillment of all contracts, private and public, and quickly and rapidly putting it into circulation, would soon have the effect of infusing new life and activity into the business of the entire country. I furthermore believe that, unless this be done and the resumption law of January 14, 1875, remains unrepealed, the business condition of the country will go on from bad to worse. But, on the other hand, if silver be coined as rapidly as it can be accomplished at the different mints of the United States, and be made a legal tender equal to gold, resumption will be effected easily and permanently, and a feeling of security and confidence will at once be created, which of itself would soon lead to a revival of business in every department.

Senator Bogy then discussed the constitutional aspect of the question.

Under our Constitution, in spite of the effort which has been made to change it, silver is yet a precious metal and as fully recognized as gold. Under its sanction it must remain a legal tender, and no power exists in the Federal Government nor in the States to prevent this from being so. The legislation of the Federal Government has until a very recent period always recognized silver and gold as the metals constituting the coin of the nation. There are but two provisions in the Constitution of the United States relating to money. Section 8, article 1, says:

> Congress shall have power . . . to coin money, regulate the value thereof and of foreign coin.

Section 10 of the same article says:

> No State shall . . . coin money; emit bills of credit; make anything but gold and silver coin a tender in payment of debts.

While this latter section is a restriction of the power of the States, it is equally a recognition of power in them to make gold and silver a tender, in the payment of debts. The power to coin was granted to Congress, but the power to say what should be a legal tender was reserved to the States. Nor could it be otherwise, in accordance with the theory of the Constitution, for the power to regulate and to enforce private contracts belongs to the States alone and, this being in the States and not in Congress, upon them necessarily was imposed the duty to prescribe what should be a legal tender. The Constitution restricted this to silver and gold; but the power was in the States nevertheless. In that way, and in no other way, gold and silver are made the metals of the Constitution, because nothing else can be made a legal tender by the States.

If the Constitution had said "gold or silver" it would have been competent for the States to have made one or the other, or both.

At the time that our Constitution was formed, in 1787, the usage of all the nations of Europe conformed to what I have stated. Gold and silver had become more important at that time than for centuries before—the New World had been discovered—the mines of South America and Mexico yielding millions of both. No nation had an exclusive gold standard, but many had the exclusive silver.

The first nation to make gold the exclusive standard was England in 1816. The others have done so since, and have blindly followed her lead. The practice of the Government has conformed to the letter of the Constitution without any departure whatsoever till the act of February, 1873. Up to that time both metals stood exactly on the same footing. Both were legal tenders, and the relation between the two was fixed by law. This act was passed without discussion in or out of Congress.

Up to 1853 all the silver coin was a legal tender for any amount, as unrestricted as gold. The legal ratio of silver to gold was 16 to 1. I propose in the amendment which I have offered to make it 15½ to 1 for reasons which I shall hereafter give. This ratio caused the exportation of silver from this coun-

try to France, where the relative value was 15½ to 1. To remedy this the act of 1853 was passed, which reduced the half dollar and smaller pieces to the condition of token coins by a depreciation of a little less than 8 per cent. The old standard dollar of 1792 (the same intended to be reinstated by this bill) remained the same, but was practically suppressed, because no longer coined at the mint; yet there was no law preventing the coinage.

Silver of all denominations coined previously remained a legal tender. That is, the old standard dollar, the old half dollars, and the old quarters, coined prior to 1853, remained legal tenders, and so continued till the acts of February 12, 1873, which constituted the gold dollar piece the unit of value and restricted the legal tender of silver to $5. It was then, and not before, that the double standard of gold and silver, which had existed from the very beginning of the Government, was abolished.

I desire this point to be well understood, as I shall argue, later on, that the public debt, including those parts affected by the law regulating payment of duties and the law regulating sinking fund, which were passed before 1873, is payable in gold and in silver. To continue to pay our bonds in gold exclusively is a most oppressive and unjust system, calculated to increase the burdens of the public, and is ruinous to the people, whose means of payment are restricted to one metal, while at the time the contract was made there were two, and while it is oppressive upon one portion it is greatly beneficial and advantageous to another.

It cannot be doubted, under the power reserved to the States under the tenth section of the first article of the Constitution, that each one can provide by law that gold and silver shall be a legal tender in payment of debts within its territorial limits. If each State has this power all can do the same thing. This being so, what becomes of the Federal law which says that silver shall no longer be a legal tender? Can they be controlled in the exercise of this power? And, if they cannot, the act of 1873, passed without discussion in either House and by way of amendment to another bill, and the act in the Revised Statutes are unconstitutional. The power to coin being in the Federal Government gives to it great control over the action of the States. If no silver was coined there would be none for the States to use in the way of a tender. In that way it has great power and control over this question. By the eighth section of the first article power is given to Congress to regulate the value of foreign coin; but, if it fails to exercise this power, cannot the States exercise it for themselves?

Reflection and study have satisfied me that the positions here taken are correct, and that our legislation on this subject is and has been unconstitutional. Congress cannot say that gold alone shall be a legal tender as between private individuals.

In 1791 Hamilton, being then Secretary of the Treasury, made a very elaborate report to Congress on the subject of a mint, and, like everything else from this remarkable man, it is very able. The question of the double standard was examined. He says:

> To annul the use of either of the metals as money is to abridge the quantity of the circulating medium of the world, and is liable to all the objections which arise from a comparison of the benefits of a full with the evils of a scanty circulation.

Jefferson was one of his colleagues in the Cabinet of Washington. This report was sent to him. He returned it, and wrote as follows:

> I return you the report of the mint. I concur with you that the unit must stand upon both metals.

This was recognizing what really was the settled policy of mankind in all ages, in all countries, and particularly at that period, and which continued to be our policy until 1873.

It is believed by statisticans that the quantity of gold and silver in the world is about equally divided, and the total quantity, according to Dr. H. R. Linderman, director of the mint, is from ten to twelve thousand millions.

The power of money is in the inverse proportion to its quantity. Where it is abundant interest is low, and where scarce it is higher; and those nations to-day (excepting our own) who are in favor of the single standard of gold are so because it is to their interest, being the creditor nations.

It is supposed that the public debt of all the different nationalities amounts to about $20,000,000,000, and one half or perhaps more of this is held by England and Germany, and of this amount we unfortunately owe a large portion. If these two creditor nations can in any way appreciate the value of gold by demonetizing silver is it not their interest to do so? Would not their wealth thereby be greatly increased? England saw this as early as 1816. Although yet in the condition of bank suspension it was already buying the bonds of all the states of Europe that were being resuscitated from the prostrate condition

in which they had been during the Napoleonic wars. The Rothschilds established themselves in London; the Baring Brothers, and other great banking houses, became the buyers of the bonds thrown then on the market, thick as the leaves of Vallombrosa. Germany at that time had an immense amount of silver coin and retained it until a very recent day. But recently, intoxicated by its victories over the French people, and no doubt greatly influenced by English diplomacy, it also established the single standard. But, however wise it may have been for her as a creditor nation to do this, the attempt has been expensive indeed. From being in a flourishing and prosperous condition the act of demonetization has brought her to a condition of widespread bankruptcy, and now it is reported that this subject will be reconsidered and that she will go back to the double standard. The great mass of her people are not bondholders, and it is ruinous to them to demonetize three hundred and fifty millions of silver coin.

It was believed the nations having the double standard would buy this silver. But the statesmen of France saw this and at once a union was formed with Belgium and Italy to refuse to buy this old coin. The result has been that silver has depreciated greatly and German coin has found no market. Silver to-day is quoted low. While there are several reasons for this, the most important is the fact of the large quantity withdrawn from the channels of trade as money and thrown on the market as bullion.

I will read from the report made by Dr. Linderman in 1873-74:

> The gradual adoption of the gold standard, and consequent demonetization of silver, will, of course, be followed by an increase in the value of gold, or, what is the same thing, a decrease in the price of articles measured by it.

Apply this idea to the two classes contending in this world, the rich and the poor, the capitalist and the laboring man, and judge what will be the result if you have only one standard.

> It is true that the mines of the world produce annually about one hundred millions of gold; but in considering this as a stock to be drawn upon for coinage, it must be remembered that the consumption of gold in the arts has largely increased during the last twenty-three years, and now approximates to about twenty-five millions per annum.
>
> Countries, however wealthy and prosperous, cannot, even with the aid of bills of exchange, maintain an exclusively metallic currency, and the use of paper money as an auxiliary to and convertible into coin is more likely

> to increase than diminish in the future. A more extensive use of subsidiary coin than heretofore is also probable.

Report of 1874-75:

> The present period has been one of unparalleled activity and progress, and the utilization of steam and electricity in the intercourse of nations and the great extension of international credits have effected a complete revolution in the commerce of the world. These important changes have not, however, enabled the world to dispense with the precious metals as the common measure of value and medium of exchange. On the contrary, those metals remain, in that respect, the same as they were at the commencement of authentic history: the only money of universal recognition and unlimited acceptance.

Report for year ending June 30, 1875:

> The principal money markets of the world have been occasionally disturbed during the last three years, and the margin of the exchanges has been such as to afford a wide field for speculation. In seeking for the causes of these disturbances, it would appear, at first glance, that the supply of gold is unequal to the legitimate demands of the rapidly increasing commerce of the world. A careful examination of the subject, however, will show that the monetary troubles have not been caused by insufficient supplies of gold, but by its having been withheld in large sums from circulation, *and the diminished use of silver as money.*
>
> The question of returning to a specie basis is receiving general and earnest consideration, and certain well-settled principles and facts in connection with the subject of money and the monetary system of this country may with propriety be briefly referred to.
>
> A money standard subject to as little variation as possible, and by which values may be computed, exchanges effected, and contracts fulfilled with uniformity and equity, has long been regarded as a necessity by every well-regulated government.
>
> The experience of nations has proved the *precious metals*, and particularly *gold*, to be the least variable as a monetary standard and the best adapted for a circulating medium of all known substances; their peculiar properties, and particularly those of easy manipulation and resistance to the elements and agencies which either destroy or injuriously affect other metals and substances, rendering them eminently adapted for this service.
>
> No material or substance not of intrinsic value, and comparatively imperishable, is suitable for a circulating medium and permanent standard of value. The value of the precious metals depends, as in the case of all other commodities, on certain inherent qualities and the cost of production. By value is meant the rate in the legal money-terms of a nation or government at which labor and property of all kinds are exchanged one for another. A given weight of gold or silver, unlike all other things, has a fixed value by law in the legal money-terms of all countries, and this peculiarity contributes greatly to maintain uniformity in their value.
>
> The units of the money of account of all countries associated in modern civilization were originally based on or declared by law to be represented by a certain weight of pure metal in the form of coins, and the latter made a legal tender without limit.

The quantity of pure metal representing the ideal unit of the money of account, once being fixed by law, becomes the basis of exchange and measure of contracts, and its steady maintenance has always been regarded by the most enlightened statesmen and eminent writers on finance as an imperative duty of governments.

The precious metals being the real basis of all well-regulated money systems, no one commercial country can even temporarily depart from such without subjecting itself to serious evils.

Without dwelling at any greater length on the reports of Dr. Linderman it would appear that, although he does not recommend the double standard, his arguments tend to prove its absolute necessity.

All the obligations of the Government issued prior and up to 1873, payable in coin, can be paid in silver as well as in gold. The act of March 18, 1869, recognizes in words silver as well as gold. I have no doubt the act was drawn by my distinguished friend from Ohio [Mr. Sherman], for he was at that time, as he is now, the able head of the Committee on Finance, and I would suppose naturally that he drew this act himself.

This act shows that at the time the minds of those Senators who voted for it understood the obligation to be payable in silver as well as with gold; and, if my friend from Ohio drew it, he himself thereby admitted that we could discharge our obligations with silver as well as with gold. There is no room to escape; the conclusion is inevitable.

If we look at all those acts from the first to the last we will find they all provide for payment in coin. Since 1873, however, we have made our bonds payable in gold.

It is proper to notice an argument which is advanced to refute the position that our bonds, being payable in coin, can be paid with silver. It is said by the act of 1853 silver was demonetized and was no longer a legal tender; and therefore in 1862 and the years following, when we obligated ourselves to pay coin, we could not have meant silver, it being demonetized and no longer a coin recognized by law. But the fact is not so. The act of 1853 did not in the least demonetize silver. It only provided for the issue of a subsidiary coin of a lower value, so as to prevent its exportation abroad. That subsidiary coin was only made a legal tender to the amount of $5. The old silver dollar and halves and quarters remained good legal tenders, and, with gold, constituted the legal coin of the nation.

Up to 1873 it does not appear that any one in this country ever advanced the idea that it was competent for Congress to demonetize silver. The law of 1873 was surreptitiously interjected into a bill pending at that time before the Senate in re-

lation to the mint. The effect of this amendment, apparently so small, has been most disastrous to the prosperity of this country. Gold has been at a high premium from that day to this.

Now, after all this, can we retrace our steps and make silver coin a legal tender, as the letter of the Constitution undoubtedly provides? Would it be wise to introduce the double standard coin as a part of our monetary system? If it is to be understood by a double standard that there would be two measures of value I would deplore its introduction; but this is not so. There would be but one measure. It would not be gold nor silver, but it would be the two; these two composing the coin of the nation.

The relative value of the two becomes of very great importance. We had it once at 16 for 1. It had been 15 to 1 before, which was an error. To remedy this it was fixed at 16 to 1, which, from what we can now see, we think was also an error. It should have been 15½ to 1.

This is an international commercial question. England, Germany, and France, the great commercial nations of Europe, have fixed the relation at 15½ to 1. That being so, we cannot err at fixing it ourselves at the same ratio. As to the Asiatic trade and that of the Indies, different conditions exist, which do not apply to the European nations. And, as it has been fixed at 15½ to 1 in Europe, I would fix it at that for this country. It is true that there is at times a slight variation in the commercial value of the two metals. Sometimes gold is slightly up and sometimes it is silver, but the difference has been so little for two hundred years as to amount to nothing of importance.

It is said that, the production of silver being on the increase, if we make it a legal tender, the danger is that in a short time there will be a great glut of it in this country. To this I answer that the amount we produce of both is about equal, being about $40,000,000 of each. While the total production of gold is greater than that of silver, it is diminishing, while the other is increasing. In the future perhaps gold will diminish yet more rapidly, and silver is likely to increase. We have 40,000,000 of people. If the silver coinage could be increased to the amount of $400,000,000 it would give a circulation of only $10 per head. The Senator from Ohio stated the other day that to pay our debt with it would be a violation of public faith and would impair our credit. While I would not wantonly injure our credit, yet I am not willing to allow our creditors to be the exclusive judges. There are always two parties to all contracts, and if we did not promise gold our creditors have no right to construe the contract so as to make it so.

It is again said that if we make silver the standard gold will go from this country, and in a very short time we will have nothing but silver. That may be true. And it may be true, also, that it might be well to demonetize gold, as has been done in Holland, and make this the great silver nation of the world. We have no new fields where gold can be obtained, but many new ones of silver are being discovered every day. We have reason to believe that the deposits of silver in our country are vast and inexhaustible. With the limited gold supply and the large demand that exists now and must continue to exist hereafter, and for years to come, I do not see how we can continue to pay our obligations in gold. We lost by exportation $25,000,000 last year, and from all I can learn the amount will be larger this year. And at this rate how long will the amount we have be able to supply this demand? In six years it will be exhausted.

There is no one so blind as not to see that the present tendency is to centralization of capital and concentration in large cities. This is effected at the expense of the great mass of mankind. It seems to me the part of wisdom and true statesmanship is to prevent the unnatural concentration of wealth in the few at the expense of the many.

I have heard many superficial arguments advanced by persons who have thought but very little on this subject against the use of silver as coin. I am yet to hear the first good solid reason in opposition to it. We have blindly followed the lead of England, and have sacrificed the interests of the debtor class to the other and wealthier class. We have, in my opinion, at this time the finest opportunity ever presented to a nation to establish a system of our own, based not alone upon silver, but upon both metals. The day is not far distant when every nation, including England, will have to go back to the silver and gold standard. It must be so. The gold production is not increasing in proportion with the expansion and augmentation of commerce. Hence the necessity in all commercial nations to issue a large quantity of paper money as a substitute. It would be better and wiser to introduce a larger portion of silver and less of paper money.

As I view this question it is not one between silver and gold, but between gold and paper, and this paper not convertible; for with a scarcity of coin you will not be able to redeem the vast amount of paper which the necessities of mankind and of commerce require. The only way to make paper answer the purposes for which it is designed is to increase the means of its redemption by increasing the coin, and this can be done only

by making silver a legal tender. To return to a metallic currency, or to a currency convertible into metal as we are trying to do, while we reduce the precious metals by one half, strikes me indeed as being most absurd. Let the nation rather stand by its silver coinage as the ally and the friend and the coworker of its gold, and in that way make of the two an impregnable money structure on which we may again build a new prosperity unequaled in the history of the past.

On April 24 John P. Jones [Nev.] spoke upon the bill. This speech occupied two days, and, with the ample statistical tables which accompanied it, and were relegated to the printed account in the *Congressional Record*, it furnished a comprehensive economic treatise, not only on the special subject of the demonetization of silver, but also upon the entire question of money.

"The Crime of '73"

Senator Jones

The act of February 12, 1873, which, under the guise of regulating the mints of the United States, practically abolished one of the precious metals, was a grave wrong; a wrong committed no doubt unwittingly, yet no less certainly, in the interest of a few plutocrats in England and in Germany and as certainly in the interest of the entire pagan and barbarian world; a wrong upon the people of the United States and of the whole civilized globe; a wrong upon industry, upon the natural tendency of wealth toward equalization, upon the liberties of peoples which are born out of the effects of such equalization of wealth, upon every aspiration of man which depends for its realization upon the development of those liberties.

The act alluded to practically abolished one of the precious metals as money, the one chiefly produced in this country, the one chiefly consumed in the semi-civilized countries of Asia, and the one which at the date of its abolition and under the time-honored laws that previously prevailed was becoming, as it has since become, the more available metal of the two in which to transact exchanges and liquidate debt.

Ratio of gold to silver

Under the act of April 2, 1792, both silver and gold coins—dollars or their multiples—were made a legal tender in this

country for the payment of debts to any amount, at the rate of 15 in weight of silver to 1 of gold. This coördination of silver and gold is called the double standard. A similar arrangement existed in the other countries of the civilized world; the relation fixed by law in those countries being either 15½ or 16 to 1. A few countries had a single silver standard, but no country, until 1816, had a single gold standard. In this country, up to 1853, the owner of either gold or silver bullion had the right, if the Government chose to coin any money at all, to have his bullion coined free of charge; and once coined it became a legal tender to any amount for the payment of debts, whether the bullion was of gold or silver.

From 1792 until the effects of the discovery of the Russian, the American, and the Australian gold mines were felt—gold was produced in deficit; and by reason of this fact silver, at the legal rate of 15 to 1, was the cheaper metal in which debts could be discharged. Accordingly, silver was used for this purpose in this country to the exclusion of gold, the debtor being at liberty to tender either metal he thought proper. By the act of June 28, 1834, this relation was changed to 16.00215 for 1, and by that of January 18, 1837, to 15.98837 for 1, in both cases substantially 16 for 1, at which figure it stood up to February 12, 1873.

When the great Russian mines threw their auriferous products upon the markets gold became the cheaper metal at the legal relation of, then, substantially 16 for 1; and our silver legal-tender dollar disappeared from circulation. Nevertheless this coin was not abolished, and the privilege of free coinage and the right to tender the silver dollar for debt remained the same as before. The pivotal point of this event was the period of depression which followed the panic of 1837. About the period of 1863-73 another great change in the relative production of the metals occurred, and gold instead of silver was produced inadequately. This occurrence began to operate about the year 1865, when the world's product of gold had attained its maximum. However, this change does not appear to have been felt until some few years afterward, when its influence upon the relative value of the metals was greatly intensified by the threatened demonetization of silver by the German Empire and its partial actual demonetization by other European states. In 1865 the relation of gold to silver in the London market was 1 to 15.33; in 1872 it was 1 to 15.63. This is considered the pivotal point of the change, because the legal relation of gold and silver in most of the countries of Europe was 15.50. In

1874 the London quotation rose to 16.15, and at the present moment it is about 17.60, a relation which shows that the value of gold to silver is about 10 per cent. above that fixed by our law of 1792, as amended by the acts of 1834 and 1837.

THE DOUBLE STANDARD

The double standard, or the legal establishment of a fixed relation between silver and gold at the calculated center of their mutual oscillations, is not the unnatural and one-sided measure which some recent writers have supposed it, but the fulcrum of a just balance whose scales are alternately depressed. Both gold and silver are indispensable, and needed for the coins of the world—gold for large payments, silver for large and small ones; and it will be found that in great commercial countries both gold and silver are needed. Outside of the great bulk of mankind who use either one or both of those metals for money, there is a small number on the one side who are too poor even to use silver, and a small number on the other who are too rich even to use gold. The very poor employ copper; the very rich paper notes and checks. In both of these cases the substitutes for gold or silver are not real money, but representatives. Copper coins are never of full weight, and are called tokens; paper instruments are intrinsically worthless, and are merely promises, direct or remote, to pay money of gold or silver. To the mass of mankind gold and silver are both indispensable for the purpose of exchange, and these two metals constitute the money of the world.

Were their quantitative relation unknown or changing always in one direction—for example, was silver always becoming cheaper or gold dearer—a double standard would prove inconvenient. But such is not the fact. The relation of these metals to one another for many centuries has been very constant, the pivotal point being 15½, and the oscillations—until within the past year, and chiefly in consequence of the demonetization of silver in Germany—quite inconsiderable. This constancy of relation is due to the stock of precious metals already in the world, to the proportion of gold to silver needed for the world's convenience, to the vicissitudes of production, to the occurrence of gold and silver in the same ore matrices, and to other physical circumstances which will be adverted to hereafter.

In case no such amendments had been made to the bill now before the Senate, as have been offered by the Senator from Missouri, it was my intention to offer a simple amendment to

restore the double standard of the United States, and to base its system of money upon the money of the world, upon which it is now not based. To accomplish this object it was suggested that I might, with, perhaps, greater assurance of success, attempt it by the same indirection which practically destroyed the double standard. But the wrong which has been done can never be fully undone by indirection. The undoing must be as open and explicit as the doing was indirect and implied.

I will summarize in the beginning of my speech what I propose to say on this subject.

First. I propose to set forth the function and nature of money, the various substances which have been used for money, and the characteristics which during fifty centuries of trials have induced the precious metals as a duality to be always resorted to for this purpose throughout the world.

Second. I propose to show that the use of money and the preference of the precious metals for money were both natural and voluntary acts, not due to law or edict, and that, therefore, money is of right, and ought to be, free and untrammeled by any regulations except of a kind specified.

Third. I propose to trace the stock of the precious metals in the world from the earliest period for which we have authentic data, to show its mutations down to the present time, and the political, industrial, and social phenomena which accompanied those mutations. From this review I expect to be able to show that the world's stock of specie, which is now of great magnitude, consists nearly one half of silver; that any diminution or disuse of such stock, whether resulting from failure of the mines or arbitrary legislation, is fraught with the greatest disasters which can befall society; and that, therefore, the two measures to which our country is committed by existing laws, viz.: resumption in specie, combined with demonetization of silver, are likely, if attempted to be enforced, to end in distress and defeat.

Fourth. Therefore one of these measures will have to be abandoned, and that one is the demonetization of silver. In other words, we shall have to restore the double standard of gold and silver which existed from 1792 to 1873.

Fifth. I next review the relative value of gold and silver from the earliest times to the present, and show how constant that relation has been, particularly since the discovery of America and the opening of the East India and China trades, since which time and up to 1873 it scarcely varied from its pivotal point of 15½ to 1. The sources of this long-continued

constancy of relation are then examined, and in their nature is found strong assurance that the relation will continue to be constant in the future.

Sixth. The principal and almost only cause of aberration in this relation is found to be the various edicts or enactments which in various countries and at various times have interfered with the freedom of money. Prominent among these were the demonetization of silver in England in 1816, the monetary treaty of the five powers in 1865, the demonetization act of the United States in 1873, and the pending measures of the German government. These various measures are adverted to and condemned as mischievous interferences with trade.

Seventh. The impracticability of abolishing the double standard is greatly strengthened by reference to the annual supplies of gold and silver separately since the beginning of the present century. From this reference it appears that the supplies of gold to the world have fluctuated between $5,000,000 and $182,000,000 per annum; that the supply has been diminishing since 1852, and that it is at the present time insufficient to meet the demands of the world for that metal for use in the arts and to keep good the wear and loss of coin. On the other hand, the annual supplies of silver have always been steady, and are now but little above the average. Moreover, it is shown that gold is essentially a British product, while silver is essentially American.

Eighth. I then propose to show the impossibility of resuming specie payments in gold, the disadvantages and danger of attempting to demonetize silver, the impracticability of demonetizing it permanently, and to discuss the various objections that have been urged against remonetization.

Ninth. I shall also endeavor to show that the effect of remonetizing silver, or rehabilitating the double standard, will be to equalize more nearly the values of the metals, so as to restore or tend to restore the relation that has hitherto, up to within a late date, existed between them for three centuries, and to afford a great impetus to the industrial and commercial prosperity of this country.

Tenth. I shall next endeavor to show that both gold and silver together at a relation fixed by law is the constitutional money of this country, and that all acts of legislation intended to subvert this institution are illegal and void.

Eleventh, and finally. I will quote the authority of the most eminent legislators and publicists in favor of the double standard.

For the support of these propositions the reader is referred to the speech of Senator Jones given on page 67 of the Appendix to the *Congressional Record,* session of 1875-6.

Senator Jones said in conclusion:

I have done. For the patience and attention with which Senators have listened to an exposition unusually lengthy and somewhat tedious I thank them, and can only plead the transcendent importance of the subject.

There is yet time to undo the work of 1873, to correct the grave blunder perpetrated by the mint act of that year, in interdicting the American silver dollar and substituting the single standard of gold for the money of the Constitution. The disastrous effects which, in my opinion, are bound to flow from this attenuation of the standard and the basis of prices and credit are not yet felt because of the existing suspension of specie payments; but so soon as specie payments are resumed—if indeed they can ever be resumed without the restoration and coördination of silver in the standard—will the bad effects of this legislation develop themselves and make their mark upon the affairs of the country. It may then be too late to reform.

The present is therefore the acceptable time to undo the unwitting and inconsiderate work of 1873, and to render our legislation upon the subject of money consistent with the physical facts concerning the stock and supply of the precious metals throughout the world and conformable to the Constitution of the country.

We cannot, we dare not, avoid speedy action upon this subject. Not only do reason, justice, and authority unite in urging us to retrace our steps, but the organic law commands us to do so, and the presence of peril enjoins what the law commands. By idly interfering with the standard of the country Congress has led the nation away from the realms of prosperity and thrust it beyond the boundaries of safety. To refuse to replace it upon former vantage ground would be to incur a responsibility and deserve a reproach greater than that which men have ever before felt themselves able to bear.

Senator Sherman replied to the criticisms made by Senator Jones in regard to the act of 1873.

I wish to correct a misapprehension into which the Senator fell in regard to the terms of the act of 1873. Perhaps there is

no law on the statute book that received more thorough consideration. That act was first introduced from the Treasury Department in January, I think, 1870, more than three years before it passed. It was discussed at some length in the Senate; was then printed and sent all over the country to every person who was familiar with the subject, especially to California, to Nevada, the mint at Philadelphia, and largely to Europe; and it was thoroughly examined. It came back, and in the following session, that is, the session of 1870 and 1871, it passed the Senate of the United States. Subsequently the bill failed in the House for want of time in that Congress. At the next session, however, it was introduced in the House of Representatives. It was there discussed, and finally passed the House of Representatives and came to the Senate, the same bill in effect that had previously passed the Senate of the United States. In the Senate it was again examined, rediscussed, considered, and passed. So that this bill really was pending in Congress nearly four years, and it was discussed in every stage of its progress. It was examined by experts not only in this country, but in Europe. It was prepared at the Treasury Department, and largely prepared by Mr. Patterson, of Philadelphia, who is now, probably, the most eminent authority in this country on the subject, and by Dr. Linderman, and others. It was submitted to all classes, and especially to persons living in California and other parts of the country interested in the production of gold and silver.

There is another thing to which I wish to call attention. The act of 1873 did not make any essential change in the then existing law. The only change of importance in the previous law made by the act of 1873 was made at the request of the interests in California. That is, the trade-dollar was introduced as a mercantile dollar to enable them to send in a convenient form the production of silver in this country to China.

My honorable friend from Nevada in his long and carefully prepared speech has gone upon the idea that the act of 1873 in some way demonetized silver. What I have stated shows that it did not in the slightest degree demonetize silver. My friend from Missouri [Mr. Bogy] was perfectly correct in saying that so far as the silver coins were concerned the act of 1873 did not have the slightest effect upon them. But, on the other hand, the act of 1853 did adopt the system of what is called a subsidiary coinage of silver; that is, it made the coinage of silver subsidiary to gold. It provided for a gold coinage, and made the silver coinage of fifty-cent pieces, twenty-five-cent pieces,

ten-cent pieces, etc., called subsidiary coins, and demonetized those by reducing them to about 6 per cent. below the legal relative value of sixteen to one; and if there is any law to complain of on the statute books of the United States it is the law of 1853, in that respect.

SENATOR BOGY.—That did not demonetize silver, nor did the act of 1873.

SENATOR SHERMAN.—But there is another thing to be remembered. The right to coin the silver dollar, which is now proposed to be authorized again, has always existed in this country, has never been taken away. It is the legal dollar to-day, and the silver dollars that are now outstanding, if there are any, and I suppose there are not many, are a legal tender for all amounts. The act of 1873 simply leaves the old dollar where the law of 1853 left it. It says nothing about it.

JOHN A. LOGAN [Ill.].—What was the effect of this act? The very moment you deprived the Government of the United States of the right of coining the silver dollar, which was a legal tender for all amounts, it being in value more than the gold dollar, the effect was that every silver dollar was bought up at once and smelted or put into the pot. As soon as those dollars went out of use the effect of that statute was just the same as if it had declared that the silver dollar should not be a legal tender for any amount whatever.

SENATOR SHERMAN.—It has been suggested by the Senator from Nevada [Mr. Jones] and perhaps by others that the purpose of this law was to take away from the debtor some advantage of paying in silver rather than in gold. That would be clearly a foolish idea, because at the time the law was passed silver was worth more than gold, and therefore it could not have been passed with any idea of depriving the debtor of a right which he would not have exercised in the then condition of affairs.

GENERAL LOGAN.—The point I was intending to get at was this: Inasmuch as the country and the people have been deprived of the right to pay in silver coin by an act denying the right to coin the silver dollar, it being a legal tender at that time for all amounts, the country will expect that when you restore that silver dollar you let it be a legal tender for all amounts just as it was up to 1873; and it is just and proper that it should. When you restore the silver dollar in this country and give it a place and say its place shall only be for $20, you deprive the people of this country of a right which they enjoyed from 1792 to 1873 and a right of which they have been

deprived in a manner that they know not how. If the silver dollar was a good legal tender in 1873, it ought to be a good legal tender to-day for all amounts, in my judgment. This bill as reported limits the legal-tender quality to $20. So far as I am concerned—and I speak for myself alone—I will vote to strike out the twenty-dollar limit and let the dollar stand as a legal tender, as it did up to 1873, for all amounts.

On June 8 Justin S. Morrill [Vt.] spoke against the bill in its present form as postponing the day of resuming specie payments, and leading away from the gold standard, with the consequent evils of repudiation of our national obligations, depreciation of the currency, etc. Upon the latter point he spoke as follows:

Silver is urged to the front because it is now more abundant and consequently cheaper than gold. So is copper, so is iron, the ancient currency of Sparta, but our country is not yet ready to adopt any metallic standard of money merely because of its abundance. A genuine standard of money best maintains ascendancy by its real value and known stability, of which silver has lost much of the former and can no longer claim the latter.

It is undesirable to place our money in actual use in such a condition as to bear no harmonious relations with that of other nations to which we are bound by the strong ligaments of a large as well as of a constantly increasing commercial intercourse. Our trade silver dollar should satisfy those engaged in commerce with the oriental world, without an extraordinary attempt to hamper that of vastly greater magnitude where gold is indispensable.

Nor will it be wise to degrade our own people to the level of inferior races whose rewards of labor are solely computed in silver, whose genius develops neither agriculture nor manufactures, and whose feeble ambition is unequal to the grasp of commerce. At a season when business of every kind is greatly depressed here and throughout the civilized world, when capital is seeking a bomb-proof shelter from all ventures, distrusting all enterprises, setting nobody at work, and afraid of the public faith of towns, cities, States, and even of nations, it would be extremely unfortunate for us to initiate a policy which may have no other goal than the threatened payment of a large portion of the public debt, not in gold but in either gold or silver, as we shall find most for our interest. Now the scheme embraces only United States notes, but these cannot be properly

held less sacred than any other description of the public debt; and some of those who now most conspicuously favor this scheme do not conceal their earnest desire for its adoption without any reservation whatever.

By the argument of my friend, the distinguished Senator from Nevada, and the statistical tables appended to his speech, it would appear that he regards the circulation of silver as the great panacea for failures in business, for fires, divorces, homicides, suicides, and other crimes. I respectfully suggest that this may be advertising rather more than any certificates of cure will be likely to support; and the fact that paper has been the only currency in circulation for the last fifteen years seems to have been overlooked.

No one could hail with more delight than myself any plan by which our public burdens could be honestly diminished, but no plan of using depreciated silver as the instrument of such a diminution at the expense of the slightest stain upon our honor and good faith ought to receive any countenance from the American Congress. We have invited the world to look at us upon our centennial anniversary, and shall we ask the vast crowd that comes at our bidding to make a note of the art and skill with which it has been proposed to scale a part of the public debt by the issue of a cheaper legal tender? A double standard might offer too great temptation—buying in one and paying in the other, as our visitors would think—for double dealing. The public credit is sensitive to the slightest touch of the law-making power, and we cannot afford to give a hint to all the holders of our public securities that, if they would save 10 or 15 per cent. of their investments, now is the time to unload. No greater financial disaster could befall all parts of our country than a panic arising from even a remote threat of paying off any portion of the public debt in silver. This bill, to be sure, only goes now to the extent of making it a legal tender for all dues to the Government, except customs, and to the extent of $20 between individuals; but the arguments brought forth in support of the step would justify the major proposition of removing all restrictions, its main spokesmen proclaim it, and the policy once begun, as it is here proposed, would not be likely to leave the Government any other sufficient available resource. We might continue to pay interest in gold, unless silver should invade the custom-house, but when it came to the principal it would be silver or nothing. For ten years we have been striving to obtain some substantial alleviation of the public burdens by the process of funding the public debt at a lower rate of interest, but this

sound policy will be ended from the moment we accept the policy of a double legal-tender standard, and the public debt of the United States will no longer be fundable at 4½ per cent. or even 5 per cent. Our credit might not perhaps be classed with that of the Khedive of Egypt or the Sultan of Turkey, but it would no longer approximate to the highest rank among nations.

Ready as I am to restore to circulation a legitimate share of silver upon almost any terms, I cannot aid in giving it a monopoly of the whole field, and believe it to be my duty, as I trust others upon a careful examination will find it to be their duty, to urge some radical amendments if the bill shall be pressed to a final vote. To me it is of little consequence, but it is to be measured by its possible results upon future generations. May I not appeal to the good sense of Senators, to their broadest patriotism and sober second thought, to see to it that the bill shall here be so shaped as to bring no reproach upon American statesmanship and no prejudice to the future prosperous career of our country?

Newton Booth [Cal.] replied partially to Senator Jones. As a sound system of currency he proposed the "interconvertible bond."

I confess I fail to perceive the important consequences which were attributed by the Senator from Nevada to the omission to provide for the coinage of the silver dollar in 1873. If he be right, the Congress of the United States, like Atlas, bears the world on its shoulders.

I believe I have a high appreciation of the responsibilities of public office, but I have always consoled myself with the reflection that the mighty stream of human life and activity would flow on in its great channel despite any accidental mistake of ours.

Why, sir, the whole silver coinage of the United States mints from 1821 to 1873 was less than $140,000,000. For more than twenty years the silver dollar had not been in use in the United States and was not known outside the collections of curious coins. To say that the value of silver and the monetary market throughout the world and the conditions of all values and all contracts was disturbed by an omission to provide for doing that which we had long ceased to do, may be true to that faculty, the imagination, which can construct the known out of the unknown, but is at least doubtful to the understanding, which can

reason only upon facts. And, sir, if we had authorized its coinage from that day to the first day of this month, the only use we could have put it to would have been to receive it for customs and pay our funded debt.

The Senator's theory, if I correctly understand, is that embraced by the amendments of the Senator from Missouri, which would result in the use of silver alike in place of greenbacks in general business, and of gold in payment of the principal and interest of the funded debt. The plan is not without its advantages. One is it would continue existing contracts substantially upon the same basis on which they were formed. This, however, would be destroyed if the hypothesis of the Senator from Nevada be correct that the value of silver would be enhanced by the new use created for it. Granting it, however, for the moment to the full, what is the advantage in this particular of exchanging one system for another at a large expense, simply for maintaining relations which will be equally maintained under the present system? Is it alleged that the advantage will accrue in that silver will appreciate to the gold value? National notes can be made to do so with far more ease and certainty. Is it argued that we shall get the benefit of the double standard? The true philosophy of the double standard is that the two metals should start with a common unit of value, that their variations might mutually correct each other.

To start with one thirteen degrees below the other is simply to adopt the lower standard and to abandon the only benefit—mutual corrections—which is claimed for the double standard. It is not the "double standard" in any proper sense where all offices of both must from the nature of things be performed by one.

Let us examine for a few moments the theory of substituting silver for gold in the payment of the principal and interest of the funded debt. If we have a right to do this, it is purely technical. At the time when we agreed by law to pay principal and interest in coin gold was cheaper than the silver which it is now proposed to pay, and that was the reason of our election to pay in gold. At that time the silver dollar which we now propose to pay had no existence in fact; it was only a legal possibility, a very "barren ideality," for it had passed out of memory and did not enter into the imagination; it was as obsolete then in fact as it is now in law. The revenues which were set apart for the payment of this debt were collected in gold, for there was no silver with which to pay them, and no one contemplated there would be any. The silver dollar was not so much elim-

inated from the law as it dropped out of it. What shall we gain now by availing ourselves of a technical legal right to pay in silver that which we elected to pay in gold when it was our interest to do so, and which election has determined the market value of our bonds at home and abroad, the price at which they are bought and sold?

We shall scale down our funded debt 13 per cent., say $200,000,000. But, if the argument be correct, that the use of silver for all purposes of money will bring its value on the basis of the proposed coinage to that of gold, then shall we take nothing by our device, *for Banquo we shall have filed our mind.*[1]

What shall we lose? We shall lose the high estimation of public opinion, which is the world's conscience. We shall lose that fine sense of honor which is the soul of credit, and which it is even more profitable to the debtor to observe than to the creditor to exact. In the distinction between a moral obligation and a legal right we shall place ourselves upon the lower plane.

A nation that owes vast sums, and whose policy it is to use its credit at the lowest rate of interest, cannot afford even to seem to seek a temporary advantage by availing itself of a technical right.

By keeping upon the high plane of moral obligation, by maintaining our credit to a nice sense of honor in the forum of the conscience of the public opinion of mankind, we shall not only honor ourselves and our institutions, but we shall receive a temporal reward far exceeding any the tempter can offer. By so doing we shall be able to convert our funded debt into a security (and there is a world of meaning in the word security; it does not mean insecurity), into a security bearing an interest of 3 per cent. per annum. If we begin to palter in a double sense, and keep the word of promise to the ear only, we shall lose the opportunity to save quadruple our questionable gains.

Something has been said of the Shylock spirit of the creditor which exacts the pound of flesh. The phrase is somewhat musty. It is to be remembered that the heroism of Antonio is shown in his willingness to submit to the penalty of his bond as he understood it as well as the rapacity of Shylock in exacting it; and it is only an evidence of a sad tendency in human nature that the rapacity is immortalized, the heroism is forgot. If Antonio had promised to pay ducats—elected to pay gold ducats when that was his rightful advantage, afterward sought to discharge the debt in silver when he found a profit therein, the world's verdict in the case of Shylock *vs.* Antonio would have been dif-

[1] "'For Banquo's issue have I fil'd my mind.'"—Macbeth, iii, 1.

ferent; Portia's legal quibble as *amicus curiæ*[1] would hardly have been justified, her divine appeal for mercy sadly out of place.

Sir, there is one rule of morals which can seldom mislead: in a doubtful question which involves your own interest give the doubt against yourself. The nation which observes this rule will find its reward exceeding great in this world as certainly as the man who does will in the world to come.

I have reached certain conclusions.

First. That the funded debt of the Government should be paid in gold.

Second. That the "double standard" requires at the time of its adoption a common unit of value, and to avail ourselves of its supposed benefits we must increase the silver dollar.

Third. That all forms of currency in use at any given time ought to be equivalent in value.

Fourth. That gold by the common consent of the commercial world is the ultimate standard by which all values are measured.

Fifth. That some form of credit is now and always will be used as money in every civilized commercial country.

Sixth. That with us we ought to use the national credit directly in the form of national notes and not lend it to the banks for that purpose, and that we can and ought as a matter of wise policy to make national notes as good as gold.

It is only the last proposition which I intend further to discuss.

I believe our funded debt can be reduced to the lowest possible rate of interest and United States notes appreciated to the gold standard and maintained there by the use of an interconvertible bond the interest upon which is payable in gold.

What would a man or a corporation do when embarrassed by debt? One thing, certainly: reduce the interest to the lowest possible rate. A nation may use its credit with greater advantage than an individual or corporation. It is perpetual, and the markets of the world are open to it. What species of loan will command the lowest rate of interest? A long loan, on account of its permanence as an investment, and a loan on call, by reason of its convertibility at pleasure. The national bond which would unite these qualities in the highest degree would be perpetual, but convertible at the pleasure of the holder.

The English consol is a perpetual 3 per cent. worth 95 per cent. and practically as steady as gold. The difference between

[1] Friend of the court.

3 and 5 per cent. on our national debt compounded for thirty-five years would pay it off. Visionary as it may appear, that is one effect which I believe can be accomplished by a bond perpetual in terms, interest payable in gold, and convertible at the pleasure of the holder into United States notes.

How can such a bond be put upon the market successfully? By making greenbacks and bank notes now in circulation convertible into it, and when it advances to par in gold redeem with it the outstanding 6 per cents. But if it does not advance to par? All legislation is to some extent experimental, and this will cost nothing; our 5 per cent. loan was offered long before it was all taken.

The great body of our circulating medium consists of greenbacks and bank notes. In what respect is the latter superior to the former? I admit that our present system of free national banking is the best that we have ever had. Perhaps it is the best system of banks of issue that can be devised. It is incomparably better than that which made shinplasters, wild cat, red-dog, and blue-pup familiar and significant names for paper money; when a bank note caught astray over a State line was arrested as a trespasser; when a counterfeit detector and bank-note list were as indispensable to every counting house as a cash book or diary; when exchange on New York could reach 10 per cent. premium in the Western States without an appreciable difference in the solvency of the banks; when a man going from Saint Louis to Boston would pass through as many systems of currency as States, and sometimes find a State system checkered with county lines like a schoolboy's atlas, and his "money of account" in the morning would be of no account in the evening. Our present system is infinitely better, because it is based upon better credit. There is absolute security for the ultimate redemption of national bank notes. Redemption of what? The notes of the United States. It is not the credit of the banks which makes their notes good and gives them uniform value wherever they circulate, but the credit of the Government.

If the present system owes its superiority to the fact that it is based upon the Government credit, why not go one step further and use the Government credit directly in place of lending it at 1 per cent. (out of which the expenses of the Government's connection with banks must be deducted) and paying 5 or 6 per cent.

If one-quarter the thought and attention had been given to improving the national currency which has been devoted to dovetailing into it the bank note and maintaining and reconcil-

ing a system artificially complicated, the greenback would have been at par with gold long ago.

Very seriously, I do believe a 3 per cent. interconvertible gold bond would appreciate to par, carrying the greenback with it with reasonable rapidity and certainty; that it would eventually take up all our bonds; that, as such a security would for many purposes be more valuable at home than abroad, it would be held in larger proportions at home than our present bonds are—large enough to afford an ample basis for any expansion of currency, if any should become necessary.

Under such a system, if more currency were necessary, in place of the circumlocution of lending Government credit to banks, the capital which now organizes banks would take Government bonds to the treasury, get notes for them, with the absolute certainty that when, for any cause, the notes came home, they would find the exact security left in pledge for them. Government promises under all circumstances would be fulfilled to the letter.

In place of accumulating gold in the treasury to redeem, enhancing its value by a large sudden demand, creating an artificial stringency of money—the treasury hoarding gold upon the one hand and the people hoarding currency upon the other to get the gold when the door of the treasury is opened—we should redeem the United States notes with an instrument which would be a draft at sight upon the treasury of the world, an open sesame to the universal cash box.

What an anomaly it is: a 4 per cent. forty-year bond is worth par in gold throughout the civilized world; a United States note is worth 13 per cent. less than gold at home. This anomaly, in my judgment, is owing to our system of banks of issue.

It is urged with plausibility that the interconvertible system would enable operators "for a corner" to retire large amounts of currency from circulation and create an artificial dearth. The objection is more seeming than real. Such operations seldom extend their effects beyond stock gambling. The ease with which the vacuum could be filled under the interconvertible system would greatly prevent the attempt. Every day we should know the exact amount added to or withdrawn from circulation; and this publicity would make a corner almost impossible. We should have a signal bureau to predict a financial storm with infallible accuracy. It would be more easy to create a stringency on the banking plan whenever we reach any system of specie payment by investing in British consols. But is the banking

system so perfect that it can discover so small a flaw as this and call it fatal? Are bank notes subject to no vicissitudes?

While human nature continues as it is, with its thirst for sudden riches, its spirit of speculation, its moral epidemics, its periods of elation and depression, we shall be subject to financial crises at the meeting of ingoing and outgoing tides. Even bank officers are not steel against human emotions or proof against moral epidemics, the excitements of hope and despondency of fear. When revulsions come, as come they will, what can banks do to mitigate them? The danger to banks is from all sides. Their depositors will be clamorous for pay, their note holders for gold, their debtors never so little able to assist them. They must contract from every quarter, add calamity to misfortune, and redouble the ruin which their notes redeemable in gold have made them powerless to withstand. In no American system of banking we have ever had or shall have can any bank in the most prosperous times redeem its obligations except by going into liquidation. Albert Gallatin truly said:

> The bank-note is a direct promise to pay on the part of the maker, with an implied promise never to ask payment on the part of the receiver.

The interconvertible system has been called inflation. Nothing can be further from the truth. Under it no one can put a dollar in circulation without depositing security for a dollar. In that it resembles and has all the advantages of the national bank system. Under the national bank system a bank desiring more currency deposits United States bonds in the treasury, gets currency, and draws interest on the bonds deposited; under the interconvertible system, whoever wants more currency must deposit bonds just as the banker now does, but, unlike the banker, he would draw no interest. Whatever defects are chargeable to the latter system, inflation is not one of them. But, under the banking system, whatever profit there is on circulation is an inducement to inflation; to an unwise expansion of credit. From the very nature of the system of banks of issue expansion and contraction are periodical and ruinous. Banks only issue currency for the sake of the profit on circulation; they will inflate it whenever it can be done with profit, and must contract whenever their safety is menaced. They contribute alike to the excitements of speculative periods and to the depressions which follow.

The idea of farming out to banks the privilege of supplying the people with currency is an absurdity whose enormity is only

concealed by custom. It is reconciled to the habits of men, not to their convictions.

Senator Sherman said that the main questions at issue were:

First. Shall silver coin be exchanged for United States notes as well as for fractional currency? And,

Second. Is it wise to recoin the old silver dollar with a view to exchange it for United States notes?

"DANCE TO YOUR DADDY"

The dear has swallowed the silver dollar (412½ grains) and is reviving

Cartoon by Thomas Nast in "Harper's Weekly"

The bill as reported embodies both propositions. It is purely a *voluntary* process. No one need surrender his notes for coin unless he wishes to do so. We do not take advantage of a public creditor to force upon him silver coin, for we have given him the assurance of positive law that we will on the 1st day of January, 1879, pay all notes or demands against the United States in coin. We cannot, or rather public sentiment will not,

allow us to pay in gold coin sooner. By this bill we authorize the Secretary of the Treasury to the extent of the sinking fund to pay silver coin to the holder of our notes in exchange for them if he demands it. In spite of all that has been said about the depreciation of silver, and of our coin being worth less than United States notes, we know there is an eager demand for silver coin. The long lines of people awaiting their turn at the doors of your custom houses show an anxious desire to surrender your promises for bright, shining coin. The instinct of the people, more wise than the calculations of the broker, assures them that hard money, real money, the result of and the representative of labor, is more desirable than a promise to pay money, and especially a promise that may be broken, changed, evaded, or postponed.

By the law as it stands only fractional currency, one kind of paper money, is redeemable in silver coin. United States notes, although based upon the same promise and of the same or more intrinsic value than fractional currency, because a legal tender for all sums, are not redeemable in silver coin. Therefore fractional currency is this day more valuable than United States notes. Why? Because they can at will be converted into silver coin, and United States notes cannot be. The first effect of the issue of silver coin is to advance the value of fractional currency. In like manner this bill if it passes will advance the value of United States notes. It will be resumption of specie payments in silver. It will tie our promises to pay to the solid basis of a metal which has always been a standard of value, is now, and ever will be, and which can only vary in a comparatively slight degree from the more precious metal which is now and ever will be the highest standard of value.

Now, sir, it is admitted that we are able to pay a portion of our indebtedness. What portion of our debt ought to be annually paid is purely a question of public policy and interest. We have heretofore paid our bonded debt; but this debt is now so valuable that it is worth 18 per cent. more than United States notes and 5 per cent. more than gold. It is therefore manifestly our interest to apply this fund to the payment of United States notes. Upon what ground of honor or interest can we refuse to pay this note now due while we are using large sums to pay bonds not due?

Nor can we refuse to pay silver coin for our notes because it is depreciated compared with gold. That is a question for every holder of our notes. When he demands silver it is idle, yes, it is dishonorable, for you to say, "Oh, we will not pay you silver,

because it is not worth as much as our notes. Wait until 1879 and we will pay you gold." Every market woman in the land knows that the reason for your refusal is false. She may well say she will not trust to your promise to pay gold three years hence when you will not pay silver now when you can.

If this subject was to be decided by considerations of public honor or public faith, no one would question how it would be decided. But I now propose to discuss it upon the basis of interest, upon the narrowest basis of commercial traffic; and by this sordid view, as well as by the more exalted one of public honor and public faith, it is manifest that it is for the interest of the United States now to redeem with silver coin such portion of the notes of the United States as the holders thereof may choose to exchange for such coin.

And, first, it is the cheapest mode in which we can pay our notes. One dollar of the subsidiary silver coin of the United States contains 385.8 grains of standard silver, worth to-day about 84 in gold or 95 in United States notes. It needs no logic to show that the United States makes money by the exchange of this dollar for a United States note; and yet no injury is done to the holder, for the exclusive power of the United States to coin money has imparted to the silver in the coined dollar additional value which makes the holder eager to accept it for his promise dollar. The silver in the dollar provided for in this bill is now of the market value of the United States note, but it is of intrinsic value, and even though the United States note may rise in value the silver dollar will keep pace with it. The Government pays its debt and yet replaces its note with a real dollar which takes the place of the paper dollar in circulation and does not have to be paid when resumption comes.

Not only is payment in silver coin the cheapest mode of paying our notes, but it strengthens us for full resumption in gold. It not only lessens the amount of notes to be maintained at par with gold, but it scatters among the people a large amount of silver coin which, without reserve or aid from the Government, will, from its intrinsic value, maintain itself at par with gold. And this quality of silver coin does not depend upon its being a legal tender, but upon its intrinsic value and its indispensable use among all classes of people for change and for the payment of labor and family supplies. Not less than $2.50 per inhabitant of silver coin of less intrinsic value than ours is maintained at par with gold by Great Britain, France, and Germany. The United States, before the war, maintained at par with gold more than fifty millions of the very silver coin this bill provides for.

No one inquired how much this silver coin cost the United States, but they knew it passed everywhere and was as good anywhere as gold coin. So now, with our increased population and business, it is manifest that seventy-five millions or more of this silver coin could be maintained at par with gold after we reach the full gold standard, and this amount is about as much as could be issued under this bill. The effect of substituting this silver money for that amount of paper money is obvious in appreciating the purchasing power of the remaining mass of paper money. Who does not see that the reduction of the aggregate of paper money to three hundred millions strengthens us for the duty of maintaining it at par with gold?

Sir, silver resumption is better now than gold resumption, for silver money will now circulate with paper money; gold will not. Silver money in intrinsic value is so near that of paper money that it will freely circulate, while gold would at once be hoarded. Even if silver money was of the same intrinsic value as gold, it ought to be put freely into circulation before gold. It must always be the specie of the people, and gold is not. Silver resumption must precede gold resumption. We now but avail ourselves of the present depreciation of silver bullion to prepare the way for gold resumption. It appears almost as a providential dispensation to enable us to follow the path of safety and honor. If we did not avail ourselves of this opportunity we would be blind to every instinct of a statesman and a patriot.

And, sir, the substitution of silver coin for United States notes meets and allays the fear of "contraction" that has been the direful cause of our long delay in approaching the specie standard. Reason about it as you will, you cannot persuade the people to endure for a time the process of contraction even to secure the acknowledged good of a specie standard. How often do we hear people say they are for specie payments, but not through contraction? They are in favor of getting well, but do not like the medicine. They want to get well by natural processes. Well, now, the silver opportunity offers; silver can be substituted for paper without contraction. Both will circulate together, because their market value is near each other, and we have the silver bullion and the sinking fund amply sufficient to sustain the process of exchange. By giving a market for silver we advance a domestic product, and by reducing the amount of paper money we approach and prepare for full resumption. The silver will circulate with the paper.

The bill reported by the Committee on Finance thus pro-

vides for an immediate resumption of specie payments in silver coin, and thus completes the first and most difficult step of the problem. It neither disturbs nor deranges business, or stirs up the phantom of contraction. It is in exact accordance with existing law, and leaves the silver coin, as now, a subsidiary coin, a legal tender only for limited amounts.

The next question presented by this bill is, shall we return to our silver coinage the old silver dollar? The committee proposes the silver dollar not as a legal tender for gold contracts, but only as a tender for currency contracts not exceeding $20 in any one payment. I would prefer to leave the silver dollar stand upon its intrinsic value as a legal tender the same as the smaller coin; but there is no injustice in enlarging the limit to $20, and but for the reasons I will state hereafter there is no injustice in making it a legal tender for all currency contracts. The silver dollar has that intrinsic value which in all periods of our history has made it a favorite coin not only for domestic uses but for exportation. It furnishes silver bullion in a shape and form more convenient for handling than any other form of coin. I fell into a common error in the debate a few days since in saying that this dollar had not been issued since 1853. Official reports show that it was issued in considerable quantities until it was demonetized by the coinage act of 1873. From 1870 to 1873 there was issued in silver dollars by the United States $3,336,348 at par with gold, and when specie payments were suspended and silver circulated only in the Pacific States and Territories. When the old silver dollars are issued at par with United States notes, a large amount of them will be taken as a reserve by the people to meet future needs, with or without a legal-tender quality. As their issue is not peremptory, and the aggregate cannot exceed the surplus revenue or sinking fund, there is no danger of an overissue, while their existence among the people will be the best reserve when gold alone becomes the full standard of value.

Every argument already mentioned in favor of subsidiary silver coin is equally potent in favor of the silver dollar. It will be eagerly taken in payment of United States notes. It is purely a voluntary exchange. It is the cheapest mode in which we can redeem United States notes. It is specie resumption in the old time-honored standard of silver dollars of full weight and fineness. It will accustom our people to distinguish between the real dollar that pays where it goes and a paper dollar which only promises to pay. It will prepare the way for full resumption in gold. To the extent proposed by the committee,

and to be used as a purely voluntary approach to a full specie standard, it is open to no objection or criticism, and should be assented to by gentlemen who have differed with each other on the present resumption law or on the merits and dangers of contraction and expansion. Why is it, therefore, that we cannot pass this bill without introducing controverted propositions which, if they do nothing else, will delay and endanger this bill?

I must appeal to the good sense of the Senators from Missouri [Mr. Bogy] and Nevada [Mr. Jones] not to embarrass this bill, the purpose of which they approve, by urging amendments that raise new difficulties of an opposite character likely to defeat its passage; or, if adopted, will demonetize gold not only in private transactions, but in the payment of customs duties and the public debt. They raise the most difficult questions of political economy and the most delicate questions affecting the public credit, and at a time when above all others we ought not to attempt to decide them. At this time, when we cannot pay our debt in gold or silver, and when the relations between gold and silver are unnaturally affected by the recent movements in Europe, and when it is impossible to fix their precise relations to each other, it is exceedingly inopportune to consider or decide any radical change in the existing law. Ever since 1853 silver coin has been practically a legal tender only for $5, and yet it has been maintained in very large sums at par with gold. Why disturb this law? Ever since the present debt of the United States was contracted we have religiously paid its interest in gold coin. To enable us to do so, we have collected our revenues in gold coin, and we have ample means to pay the interest. To claim now, on any pretence whatever, the right to pay this interest in silver coin, when the whole amount of silver coin that could be issued in three years would not pay the interest for a single year, would create a revolution in our public credit without any benefit whatever. The serious effect of such a proposition upon our national character or credit cannot be measured in dollars and cents.

Again, sir, if you undertake to pay your interest with silver coin, you must pay the whole of it with such coin. You cannot discriminate. You cannot pay the large holders of your securities with gold and the small holders with silver. The great body of your interest is paid to banks and bankers, even when the bonds are the property of private individuals. You have gold to pay with, but you have no coined silver and cannot have enough in three years; and the same objection applies to customs

duties. The only effect of such a proposition is to give an artificial value to silver bullion and silver coin in order to pay duties; and the immediate effect would be to demonetize both gold and silver coin and segregate it from our current money as gold is now segregated for the purpose of paying duties. It is manifest, therefore, that, if we mean to collect our customs duties and pay our interest in silver coin, we must postpone the operation of such a law until we have such coin in sufficient quantities to conduct the business, and by no possibility could this be done in less than four years. The amendment, then, as it is proposed, would have no effect whatever, except to take from the people the silver coin they now have and hope to receive and cause it to be held like gold in New York to pay duties. The Government would not and could not pay it out for fractional currency and United States notes when it would be at once bought up by brokers for its peculiar property in paying customs duties. This objection is clearly fatal to the amendment proposed by the Senator from Missouri for years at least; but there are other reasons why such a proposition ought not to be entertained.

The public debt was contracted and the interest to be paid was under the universal understanding that the coin stipulated for was gold coin. At that time all the silver in circulation was limited in its legal-tender quality to $5 in any one payment. And although by the act of 1853 the old silver dollar was not demonetized in terms, it was not issued, and no human being contemplated the payment of principal or interest of the debt in silver coin. In fact, during the whole period from the contraction of the debt up to and after the year 1873, when the silver dollar was demonetized, it was worth more than the gold dollar. No one foresaw or had reason to suppose that it would be less valuable than gold. Its great depreciation grows mainly, if not exclusively, from the action of foreign governments in dealing with their coin. To make now the silver dollar a legal tender in payment of the interest of our debt would not only be impracticable, as I have already shown, but would be universally regarded as a violation of good faith, and would destroy the confidence with which the commercial world now regard our public securities. The silver dollar was, it is true, a legal tender until 1873 and in strict law might be restored to its position then as a standard of value without a violation of the legal contract between the United States and the bondholder; but, sir, the effect of such a measure upon the value of our public securities would be far more injurious to us as a nation than the difference between the payment of the interest on our public debt for two or

three years in silver or in gold. For over forty years, since 1834, the silver dollar, though in law a money of account, was in fact demonetized, because it was more valuable than the gold dollar. It was for that reason alone the silver dollar was dropped from our coinage system.

The great revolution in the precious metals has occurred since 1873, and now the practical question is, Shall we avail ourselves of the extraordinary fall in silver to make the old silver dollar a full legal tender, and thus to reduce the market value of our bonds, which we are not bound to pay, which are not due, and which we have not the ability to pay; or shall we improve this opportunity offered us by an unforeseen event to redeem our depreciated notes without loss, and with the free and voluntary consent of the holder of them? Sir, this is the choice presented us. I say that not only public honor but public policy, our interest in the narrowest sense as well as in the broadest sense of that word, points to the redemption of United States notes.

As to making the silver dollar a full legal tender for contracts between private individuals, very different considerations arise. All debts contracted prior to 1873 were payable by the law then in force either in gold or silver dollars or in United States notes. At that time and for near forty years previously the payment would not be tendered in silver dollars because silver dollars were worth more in the market than gold; the legal option to tender silver coin existed until 1873, when the revised code was adopted which excluded the old dollar from among the silver coins of the United States.

It is thus apparent that all contracts payable in coin prior to 1873 were impliedly payable in gold coin, and all coin contracts made since 1873 could be paid only in gold coin. These contracts ought to be left to the precise law in force when made or payable. They ought to be left to the agreement of the parties or the action of the courts. Our laws ought to have effect only upon the future. Congress can coin money and regulate the value thereof, but this great power ought not to be made the pretext for impairing the obligation of existing contracts. It is no answer to say it was done when our present legal-tender act was passed. The condition of the country then authorized, yea, demanded, the most extreme measures, even to the confiscation of debts and property in the form of taxes. We know with what doubt and hesitation and under what circumstances the Supreme Court finally sanctioned the constitutionality of the legal-tender act as it affected preëxisting contracts. No one believes it would

sanction the exercise of such a power except as a measure of war, when Congress is invested by the Constitution with extraordinary powers. As one of those who in this Senate asserted and voted for the legal-tender act, I now say that I did it only under the shadow of a supreme necessity involving the national life, and that it ought not to be made the precedent for a retroactive legal-tender law passed in a time of profound peace to change or affect existing contracts.

It is wise at this time as a question of public policy to attempt by law to fix the precise relation of gold and silver to each other, and to make both a legal tender for all sums? Or is it best to adhere for the present to the policy of a gold unit, with subsidiary silver coins limited in amount of issue, or of legal-tender, or of both?

These two opposing policies have been debated here, but far more extensively in every European country, and especially in the writings of political economists. But, wherever debated, the action of modern governments has in all the great commercial nations settled down upon a composite policy, a coinage compounded of gold as a unit, and silver coins of somewhat less intrinsic value than gold, but kept at par with gold either by a limit of the amount issued, or by a limit of its legal-tender quality, or by both. This policy was adopted by Great Britain in 1815, by the United States in 1853, by the Latin nations in 1865, and by Germany in 1873. This policy is neither monometallic nor bimetallic. The first demands a single standard of gold and demonetizes silver; the other makes both metals a legal tender for all sums. The objection to the monometallic system is that it enormously adds to the value of gold by making it alone the metal in which all debts must be paid. The objection to the bimetallic system is that from the nature of things it is impossible to fix the true relation of silver and gold to each other, and when either advances in value a single hair it becomes demonetized and flees the country. These primary reasons have led to the composite system, which combines the two metals, gold for large transactions and silver for small, the silver purposely reduced in value, but kept at par with gold by limit in amount or otherwise. Now, sir, it is perfectly obvious that if we could in some way prevent gold and silver from fluctuating in their relations to each other the double standard is the best, as giving the largest store of the precious metals to draw upon, and it is now proposed by international treaties to bring this about. In the absence of such treaties it is far wiser for us to stand by the composite system in force in the United States since 1853,

and such is the basis of the report of the Committee on Finance. We propose, as now, to leave the ultimate unit of gold aided with subsidiary silver coin, including the silver dollar, and to limit the legal-tender quality of the silver coin and the amount to be issued to the amount of the sinking fund; while the amendments proposed adopt the bimetallic system, with all its uncertainties, at a time when it has been rejected or is being rejected by all commercial nations, and especially at a time when the difference between silver and gold is greater than it has been for two hundred years. The proposition of the committee will be amply supplied by our domestic production of silver and the sinking fund; the amendments offered will bring to us for market the rejected silver of Germany and Europe, and demonetize gold not only between individuals, but in the custom house and with the public creditors.

The time for this proposed radical change of our coinage is a truly unfortunate one. The wide margin between gold and silver is now 10 per cent. more than the rate fixed by law of 16 to 1. Nothing is clearer than that under the bimetallic system the legal relation between the two metals should be as nearly as practicable the market relation. That is the theory of the system. The first step in adopting the new system should be to adopt the relations of 17½ in silver to 1 of gold. But this would defeat the primary object of making the present depreciation of silver the means of a voluntary resumption of the specie standard. By the composite system this is easily done, and can be heartily accepted by all classes without contraction or expansion of our currency.

Sir, without going further into this argument, already too much protracted, I appeal to Senators charged with high duties at a critical period of our financial history not to press upon us extreme opinions, but to hold fast to the progress we have made, and let us seize the opportunity now offered us to make easy and straight the path now opened for a specie standard, when gold and silver and notes, all alike of equal value, will circulate side by side and revive again the flagging industry and enterprise of our people. To the one side I say that, if this bill does not give you all the silver you want, I answer that in three years it will give you all that will circulate at par with gold; and to the other side I say that, if this bill does not promise resumption in gold, it does provide for resumption in silver, which the present law does not, and prepares the way for resumption in gold by laying a foundation of silver coin, without which gold coin will never circulate and never has circulated in any country of the

world. Let us lay the foundation first and the superstructure will come in due time. Both metals are indispensable, but silver first. It is the granite rock of the money superstructure. Let us lay well this foundation, and in due time the golden dome will crown our work, and United States notes, redeemable in gold and silver at the choice and demand of the holder, will be the winged Mercury to do the business and promote the exchange of the products of human industry. Though the work is a great one and the difficulties in the way greater than Bunyan's pilgrim encountered, I will not surrender my hope to see it accomplished.

No action was taken by the Senate upon the bill, it being superseded by a bill passed on June 10 in the House by a vote of 106 to 86.

The House bill authorized the Secretary of the Treasury to issue the silver coin in the Treasury to an amount not exceeding $10,000,000 for an equal amount of legal-tender notes, these to be retained and reissued upon the retirement and destruction of a like amount of fractional paper currency received in payment of dues to the United States, which currency was to be destroyed and held as part of the sinking fund, as provided for in the act of April 17, 1876. Various amendments were made by the Senate, to which the House disagreed. A conference committee was appointed, which reported upon July 13 a bill in which the chief addition to the original was the provision to increase, by minting subsidiary silver coin, the aggregate of all such coin and fractional currency to $50,000,000, purchasing bullion therefor when the market rate was such as to occasion no loss to the Treasury. The report was concurred in on July 14, and approved by President Grant on July 31, 1876.

CHAPTER II

Legal Tender of Silver

Richard P. Bland [Mo.], in July, 1876, Introduces Bill in the House to Issue Legal Tender Coin Certificates for Gold and Silver Treasury Deposits—Debate: Mr. Bland, Benjamin Wilson [W. Va.]; Action Postponed—Mr. Bland, in December, 1876, Introduces Bill to Coin the Standard Silver Dollar; Passed by House, Committed by Senate—In November, 1877, House Passes the Bland Bill for Free Coinage of Silver; It Is Committed by the Senate—President Hayes on "Public Faith and the Silver Question"—Report of John Sherman, Secretary of the Treasury, Advocating Payment of Bond Interest Only in Gold—Stanley Matthews [O.] Introduces in the Senate a Concurrent Resolution Declaring All Bonds Payable in Silver as Well as Gold—Debate: in Favor, Sen. Matthews, Allen G. Thurman [O.]; Opposed, William W. Eaton [Ct.], Justin S. Morrill [Vt.], Roscoe Conkling [N. Y.], George F. Edmunds [Vt.], Benjamin H. Hill [Ga.]; Resolution Passed by Congress.

ON July 19, 1876, Richard P. Bland [Mo.] introduced in the House from the Committee on Mines a bill "to utilize the product of gold and silver mines." This provided that coin-notes of $50 and upward should be paid out by the mints for gold and silver bullion deposited therein, and be redeemed at any time at the option of the holders, and that a coin and bullion reserve to at least 75 per cent. of the notes issued be maintained for their redemption, gold for gold, silver for silver. These notes were to be full legal tender for all debts, public and private, where payment in gold was not specified. The lawful silver dollar was to be coined.

The bill came up for discussion on August 1.

Coin Certificates

House of Representatives, August 1-4, 1876

Mr. Bland supported the bill.

By the act of March 18, 1869, silver was specially recognized as coin competent to be applied to the payment of the public debt, as well as money of full legal tender receivable by law for duties on imports, and as a legal tender for all public debts.

Adjournment intervening, Mr. Bland continued his remarks on August 2.

The bill that demonetized silver in this country and perpetrated an injustice and fraud upon the people was passed through this House without even being read, in spite of the call of the honorable gentleman at present serving as Speaker of the House [Mr. Kerr] for the reading of that bill. It was passed surreptitiously and without discussion, and was one of the grossest measures of injustice ever inflicted upon any people. Now, this bill simply aims to restore the currency of this country which existed at that time; yet we hear objections on this floor, sometimes in the form of demands for debate, sometimes in the form of opposition to debate.

The Opposition again resorted to filibustering, with the result that discussion was postponed.

On August 4 discussion of the bill was resumed.

Benjamin Wilson [W. Va.] declared his purpose to introduce a resolution instructing the Committee on Banking and Currency to report a bill providing for the restoration of silver coinage as full legal tender, as it was prior to the Act of February 12, 1873.

If this Congress shall persistently and improperly refuse to repeal the specie-resumption clause of the act of 1875 there will remain a renewed necessity to return to a double metallic standard, a necessity such as the present generation never knew and, I may add, no past generation ever experienced. The fact is apparent that the great body of the people demand its repeal; their future prosperity demands and depends upon it. We have recently witnessed the sessions of two national conventions, one at Cincinnati [Republican] and the other at Saint Louis [Democratic]. At Cincinnati the delegates did not meet the question fairly and deal with it frankly. Notwithstanding a large preponderance of the Republican members on this floor and in the Senate and the candidates of that party are in favor of enforcing that act, and thus driving the debtor class to the wall, their delegates at Cincinnati did not dare to insert a plank in their

platform opposing its repeal, while at St. Louis, one of the largest conventions that ever assembled on this continent, composed of delegates from all sections of the country and fresh from the people, representing their views, its repeal was demanded in unequivocal terms. It remains to be seen whether Democratic Representatives in Congress will repudiate the instructions from the people as expressed through their delegates in that convention. If that act is not to be repealed there will continue to remain, I repeat it, a necessity such as the Anglo-Saxon race never witnessed before for a return to a double metallic standard.

The debt of the United States is about $2,100,000,000, and it was stated by the gentleman from Ohio [Mr. Garfield] a few days ago that private citizens of the United States owe probably $2,500,000,000 more. Now, sir, take it that the figures I have just quoted are substantially correct and contemplate for one moment the situation. It will be seen that the relation of debtor and creditor in the United States involves about $5,000,000,000. With that vast debt hanging over the heads of the American people, a mortgage on their property and involving the honor of the country, it is gravely proposed to resume specie payment on the 1st day of January, 1879, and that all this vast debt from and after that date shall be paid in coin; not in the coin that the fathers and founders of the Republic made legal tender, but in gold coin alone.

Is it not insane to talk or even think of paying the vast indebtedness of this country, public and private, in gold or upon a currency floated upon a gold basis? It is simply a physical and financial impossibility. If that is the fixed purpose of this national legislature, the destruction of the hundreds of thousands of the debtor class will be complete. The circumlocution of resorting to specie resumption might as well be avoided, for the result could be more directly but not more effectively reached by a simple statute transferring the lands and tenements, goods and chattels, of the debtor class to the bondholder, the broker, the banker, and the money changer. I repeat, that, if you would stay the hand of financial destruction and avert the cries of sorrow and woe that would otherwise fall upon our ears, you must remonetize silver and postpone the day of resumption. Resumption must come, when it does come, through prosperity and not through contraction, distress, and adversity. Our bonds were bought, or a large portion of them were bought, at forty cents on the dollar in gold, and since then they have been legislated up to par and even beyond par. The interest is paid in

coin and the bond is exempt from taxation. Therefore the bondholder is in a condition to resume, but the mass of the people are not.

Remonetize silver, economize in public expenditure, infuse confidence among the people, and in a few years the financial affairs of the country will be in a healthy condition. We may thus be able to tide over the threatened trouble. But why not remonetize silver? I have heard with pain and regret from two members of this Congress, one from Pennsylvania [Mr. Townsend] and the other from Ohio [Mr. Garfield] that they oppose the remonetization of silver for the reason, among others, that the great supply of American mines has tended to reduce its market value. Why, sir, the British dominions are the largest gold-producing sections of the world, and hence the Englishman, true to his interest, true to his government, and ever ready to add to its strength and material wealth and to add to the purchasing power of gold, has demonetized silver and reduced its market value; but why an American should join in the crusade against America's productions, his own country's coin, I cannot understand. It is a high constitutional duty that this Congress owes to the country to provide for the coinage of silver as of its former purity and to make it a legal tender for all debts, public and private. This will go far to enhance its purchasing power both in Europe and America. European capitalists hold large amounts of our bonds, and will be induced by their interest to give silver its proper place and standard in value in the coinage of the world.

By filibustering tactics the opposition to the bill succeeded in postponing action upon it until the next session.

Early in the next session Richard P. Bland [Mo.] introduced in the House a bill to authorize the coinage of the standard silver dollar, and to restore its legal-tender character. After some debate it was passed on December 19, 1876, by a vote of 167 to 53. The Senate referred it to the committee, and took no action upon it this session other than to place it upon the calendar.

On November 5, 1877, the House by a vote of 163 to 34 passed a bill, introduced by Richard P. Bland [Mo.], authorizing the free coinage of the standard silver dollar and restoring its legal-tender character. The rules having been suspended, the bill was passed without debate.

Among the Republicans voting for the bill were Joseph G. Cannon [Ill.], Charles Foster [O.], J. Warren Keifer [O.], William D. Kelley [Pa.], and William McKinley [O.]. James A. Garfield [O.] did not vote upon the measure. Distinguished Democrats who voted against the bill were Abram S. Hewitt [N. Y.] and Alexander H. Stephens [Ga.].

The Senate referred the bill to the Committee on Finance, which, on November 21, reported it with amendments, and it was placed on the calendar.

In his first annual message (December 3, 1877) President Hayes thus referred to the currency question:

Public Faith and the Silver Question

President Hayes

Holding the opinion, as I do, that neither the interests of the Government nor of the people of the United States would be promoted by disparaging silver as one of the two precious metals which furnish the coinage of the world, and that legislation which looks to maintaining the volume of intrinsic money to as full a measure of both metals as their relative commercial values will permit would be neither unjust nor inexpedient, I must ask your indulgence to a brief and definite statement of certain essential features in any such legislative measure which I feel it my duty to recommend.

In any legislation providing for a silver coinage, regulating its value and imparting to it the quality of legal tender, it seems to me of great importance that Congress should not lose sight of its action as operating in a twofold capacity and in two distinct directions. If the United States Government were free from a public debt its legislative dealing with the question of silver coinage would be purely sovereign and governmental, under no restraints but those of constitutional power and the public good as affected by the proposed legislation. But in the actual circumstances of the nation, with a vast public debt distributed very widely among our own citizens and held in great amounts also abroad, the nature of the silver-coinage measure as affecting this relation of the Government to the holders of the public debt becomes an element, in any proposed legislation, of the highest concern. The obligation of the public faith transcends all questions of profit or public advantage otherwise. Its unquestion-

able maintenance is the dictate as well of the highest expediency as of the most necessary duty, and will ever be carefully guarded by Congress and people alike.

The public debt of the United States to the amount of $729,000,000 bears interest at the rate of 6 per cent. and $708,000,000 at the rate of 5 per cent., and the only way in which the country can be relieved from the payment of these high rates of interest is by advantageously refunding the indebtedness. Whether the debt is ultimately paid in gold or in silver coin is of but little moment compared with the possible reduction of interest one-third, by refunding it at such reduced rate. If the United States had the unquestioned right to pay its bonds in silver coin, the little benefit from that process would be greatly overbalanced by the injurious effect of such payment, if made or proposed against the honest convictions of the public creditors. All the bonds that have been issued since February 12, 1873, when gold became the only unlimited legal-tender metallic currency of the country, are justly payable in gold coin or in coin of equal value. During the time of these issues, the only dollar that could be or was received by the Government in exchange for bonds was the gold dollar. To require the public creditors to take in repayment any dollar of less commercial value would be regarded by them as a repudiation of the full obligation assumed. The bonds issued prior to 1873 were issued at a time when the gold dollar was the only coin in circulation or contemplated by either the Government or the holders of the bonds as the coin in which they were to be paid. It is far better to pay these bonds in that coin than to seem to take advantage of the unforeseen fall in silver bullion to pay in a new issue of silver coin, thus made so much less valuable. The power of the United States to coin money and to regulate the value thereof ought never to be exercised for the purpose of enabling the Government to pay its obligations in a coin of less value than that contemplated by the parties when the bonds were issued. Any attempt to pay the national indebtedness in a coinage of less commercial value than the money of the world would involve a violation of the public faith and work irreparable injury to the public credit.

It was the great merit of the act of March, 1869, in strengthening the public credit that it removed all doubt as to the purpose of the United States to pay their bonded debt in coin. That act was accepted as a pledge of public faith. The Government has derived great benefit from it in the progress thus far made in refunding the public debt at low rates of interest. An

adherence to the wise and just policy of an exact observance of the public faith will enable the Government rapidly to reduce the burden of interest on the national debt to an amount exceeding $20,000,000 per annum, and effect an aggregate saving to the United States of more than $300,000,000 before the bonds can be fully paid.

In adapting the new silver coinage to the ordinary uses of currency in the every-day transactions of life and prescribing the quality of legal tender to be assigned to it, a consideration of the first importance should be so to adjust the ratio between the silver and gold coinage, which now constitutes our specie currency, as to accomplish the desired end of maintaining the circulation of the two metallic currencies and keeping up the volume of the two precious metals as our intrinsic money. It is a mixed question for scientific reasoning and historical experience to determine how far and by what methods a practical equilibrium can be maintained which will keep both metals in circulation in their appropriate spheres of common use. An absolute equality of commercial value, free from disturbing fluctuations, is hardly attainable, and without it an unlimited legal tender for private transactions assigned to both metals would irresistibly tend to drive out of circulation the dearer coinage and disappoint the principal object proposed by the legislation in view. I apprehend, therefore, that the two conditions of a near approach to equality of commercial value between the gold and silver coinage of the same denomination and of a limitation of the amounts for which the silver coinage is to be a legal tender are essential to maintaining both in circulation. If these conditions can be successfully observed, the issue from the mint of silver dollars would afford material assistance to the community in the transition to redeemable paper money, and would facilitate the resumption of specie payment and its permanent establishment. Without these conditions, I fear that only mischief and misfortune would flow from a coinage of silver dollars with the quality of unlimited legal tender, even in private transactions.

Any expectation of temporary ease from an issue of silver coinage to pass as a legal tender, at a rate materially above its commercial value, is, I am persuaded, a delusion. Nor can I think that there is any substantial distinction between an original issue of silver dollars at a nominal value materially above their commercial value and the restoration of the silver dollar at a rate which once was, but has ceased to be, its commercial value. Certainly the issue of our gold coinage, reduced in weight materially below its legal-tender value, would not be any

the less a present debasement of the coinage, by reason of its equaling or even exceeding in weight a gold coinage which at some past time had been commercially equal to the legal-tender value assigned to the new issue.

In recommending that the regulation of any silver coinage which may be authorized by Congress should observe these conditions of commercial value and limited legal tender, I am governed by the feeling that every possible increase should be given to the volume of metallic money which can be kept in circulation, and, thereby, every possible aid afforded to the people in the process of resuming specie payments. It is because of my firm conviction that a disregard of these conditions would frustrate the good results which are desired for the proposed coinage, and embarrass with new elements of confusion and uncertainty the business of the country, that I urge upon your attention these considerations.

I respectfully recommended to Congress that in any legislation providing for a silver coinage and imparting to it the quality of legal tender there be impressed upon the measure a firm provision exempting the public debt heretofore issued and now outstanding from payment, either of principal or interest, in any coinage of less commercial value than the present gold coinage of the country.

Report of Secretary Sherman

In his annual report submitted with the President's message John Sherman, Secretary of the Treasury, said that he had officially informed his associates that, "as the Government exacts in payment for bonds their full face in coin, it is not anticipated that any future legislation of Congress or any action of any department of the Government will sanction or tolerate the redemption of the principal of these bonds, or the payments of the interest thereon, in coin of less value than the coin authorized by laws at the time of their issue—being gold coin."

He earnestly urged Congress to give its sanction to this assurance.

On December 6, 1877, Stanley Matthews [O.] introduced in the Senate a measure (which he shrewdly made in the form of a concurrent resolution in order to avoid

submitting it to the President, who was certain to veto a joint resolution to its effect), which declared that all bonds of the United States are payable in silver dollars of 412.5 grains, and that to restore such dollars as a full legal-tender for that purpose is not in violation of public faith or the rights of the creditor.

This motion was made in accordance with an almost unanimous resolution of the Ohio State Legislature.

Legal Tender of Silver

Senate, December 10, 1877—January 25, 1878

On December 10 Senator Matthews supported the resolution. He showed that by the act of 1870 all bonds were payable in *coin*.

Prior to the passage of the resumption and bond act of 1875, but subsequent to the passage of the act of 1870, to wit, in the act of 1873, the Government of the United States, actuated by motives and in reference to purposes of its own, in the exercise of its sovereign prerogative, passed a new coinage act, in which there was dropped from the list of the authorized coins of the United States what had been always previously known to our law as the silver dollar.

Therefore it is true that since that year, and at the time of the passage of the act of 1875 and at every date when bonds have been issued since 1873, under the act of 1870 or under the act of 1875, there were no silver dollars which could have been paid for the bonds, and no silver dollars in which they could have been paid off if they had then been due. Now, in law or in morals what difference does that make? Could the United States by any act of its own, particularly any act not done with any such design, change, alter, make over again the terms of the contract between these parties, between itself and its creditors? Could it make any bond in the hand of a new purchaser different as to its obligation and value by any act of its own from those which had been originally and directly issued under the terms of the act of 1870? Was that the intention, or was it not most expressly the intention to make all these bonds identical, precisely alike in every particular as to the obligation of the United States Government and as to their values in the hands of the holders?

Then, Mr. President, if the United States, as one party to a

contract, could not of its own mere motion, by any act of its own, change the character of the obligation, its nature, and its extent, how can it be claimed that that act has affected the right of the holder of the bonds? Was it intended to increase the weight of the obligation? Was it intended to add a new term to the nature of the contract? It is not to the purpose, as I have already had occasion to say in another connection, that gold was in fact the only circulating medium since 1873, any more than prior to that act it makes any difference in the nature and extent of the obligation of the contract that no silver coins were in circulation. It is said, I know, that we exacted gold from the purchasers of our bonds, and therefore it would be unjust not to repay them in the same quality and kind of currency as that in which we demanded and exacted payment from them; but it is an abuse of language to say that we exacted anything of anybody. We exacted nothing. It was a voluntary thing. We made an offer to sell the bonds in the market at a price fixed by the law, and we agreed to receive in payment gold coins of the United States at par. We gave in exchange for them a paper writing, with certain words printed thereon, conveying in language not to be misunderstood the idea which entered into and formed a contract between the parties; and it was so plain that anyone who runs may read. The consideration that was paid and that was required to be paid had no more to do with the interpretation of the bonds than under the statutes of 1862 and subsequent acts of Congress the consideration for bonds then sold in greenbacks had to do with the interpretation put upon the bonds as to the obligation of the Government to pay in coin.

If the argument is a sound one now, it was an unanswerable one then. If because we have received gold as the consideration of the contract now we are therefore necessarily and justly to pay gold in return, then the public-credit act of 1869 was not only a mistake and a blunder, but it was a grievous wrong; a wrong to the people who are our constituents, because we had the right, or as it is now said it is our duty, to insist upon the just obligation of the contract being measured by the nature and value of the consideration received for it. We know as a matter of history that the bonds we then sold were paid for in currency at a depreciation which put them at about forty cents on the dollar to many of the holders. Would it have been regarded as honorable; would it have been looked upon as just, if we had said to our public creditors who held our 5.20 bonds "You ought not to ask more in value than we received; and, therefore, as you paid but 40 or 50 or 60 per cent. in coin on the dollar for

these obligations, you ought to be satisfied with interest on that principal, and that identical principal itself returned at the maturity of the bonds"? That argument was not heeded at that time, and in order to put it down and effectually to suppress it the Congress of the United States passed the act of March 18, 1869. Now are we, in reverse circumstances, to be treated with the same argument which was then overthrown and put out of existence by the enactment of a law? What is just for the creditor is just for the Government. What is right for the creditor is right for the debtor. It is a mutual right and obligation. It is to be measured by the same law, by the same principle, by the same measure of abstract justice.

Therefore, it does seem to me that the recitals contained in this resolution logically and legally justify the conclusion. It does seem to me that there is no ground in law, in any right application of the principles of jurisprudence to the obligations and duties of the Government, which does not, when applied to the facts in this case, necessarily result in justifying the conclusion which constitutes the substance of the proposition, and that is, that for the United States to retrace its steps, and for the Government to restore the law as it was in 1873, to put back in the list of its coins the silver dollar of 412½ grains of standard silver, and make this dollar as it stood then a legal tender in payment of all the outstanding bonds, principal and interest, is not in violation of the public faith nor in derogation of the rights of the public creditors. The circumstance that by the operation of that repealing act affecting our coinage the silver dollar was dropped from the list of our coins affects the question only in my opinion to this extent, in this degree: I do not believe that keeping our coinage as it is to-day, prohibiting the coinage of the silver dollar, and then at the date of the maturity of those obligations coming forward and manufacturing silver pieces containing 412½ grains of silver, nine-tenths fine, and tendering them in payment, would be a lawful performance of the contract, because the contract is for the payment of dollars which by law are entitled to circulate as currency, dollars which are legal tender, which have the quality impressed upon them by law of performing all the functions of money.

Hence, according to my construction of the rights of the creditors of the country, in order to keep ourselves in a position to perform the contract according to its letter and its spirit, we ought to restore the silver dollar and keep it as a part of our coinage just as it was before, without the loss of a particle of its value as a circulating medium, as a full and complete legal

tender, as it stood in 1873 when it was struck out of the list, qualified according to the ratio of its value to perform equally with gold every function of money, a lawful tender in payment of every debt, public and private. In this way, and in this way only, are we able to keep ourselves in the attitude required by the law and by the contract for the performance of the obligation.

Suppose that between now and the date of the maturity of these obligations such a change in the ratio and relation of the precious metals toward commodities and prices should happen in respect to gold as it is supposed has taken place in respect to silver. Suppose there should take place what did happen from 1848 to 1854, a sudden and unexpected and unprecedented accession to the stock of gold in the markets of the world, so that, compared with other commodities and compared with silver, gold should fall far below that standard, far below the point that silver has fallen in consequence of the demonetization of it in this country and Europe; would the contract change? Would the obligation of the Government vary? Would we then be chargeable if we sought to pay these bonds in that cheapened currency with seeking to evade the just performanec of our honorable duties? Clearly not.

Then if we had by the terms of the law and the terms of the contract, as I have shown, I think conclusively, we have the option, the right to select which of these two we would make the medium of our payment, was not that a reservation to ourselves of the right to use that medium of payment which when the time arrived should be most convenient to our own public interest? It does seem to me that there is no escape from this conclusion, and in coming to it in my judgment it is foreign to the investigation to make appeals to generosity, to magnanimity, to any of those emotions and sentiments which, while they are supposed to dignify human nature and to exalt the individual, none but the individual has a right to exercise, and then only upon his own. We are not acting here for ourselves; we are not dealing with our own private and individual interests; we are not interpreting a contract which we, as natural persons, are either bound to pay or expect to pay. We are here as representatives of a great public interest; we are here as trustees of the nation, trustees I admit of its honor as well as of its pecuniary interests, but bound to act in every respect, as all trustees are bound to act, according to well recognized and universally acknowledged principles of justice and of right as declared by the law; for the nation and the Government and the people

can express themselves only in that way; can be estopped by nothing else, find their voice only in the law and must have their rights measured as well as their duties estimated by the law. What right have you, sir, what right have I or all the Senators on this floor and all the Representatives in the other House to give away a particle of that great public domain which constitutes the public right; we are the conservators of it; we are the guardians of it; we are the trustees of it; and when we negotiate with third persons in reference to it they are adverse parties and we are acting for those whom we are bound to guard and to protect. Who has a right to speak for them? The President? Only in the limited channel of executive authority as defined by the Constitution. The Secretary of the Treasury? Only as he is invested and authorized by the express terms of the law or the necessary implications which arise from it.

It is the representatives of the people acting together in their capacity as the law-making body that speaks for them, and speaks in their name, and speaks by their authority, and speaks so as to bind and oblige them and their successors, posterity, forever. So when it is talked, as we hear the talk, that there was an expectation on the part of the creditor that, because he paid gold, therefore he was to receive gold, who excited that expectation in his mind? Who raised the desire? Who has given him so to understand? Have the people estopped themselves by an estoppel *in pais*, by some act and conduct and behavior which has induced this belief and led to this expectation, and which if now they were to defeat would be equivalent to a fraud? Where have they so spoken? How have they so conducted? Through what organ? By what agency? Let them produce the record; let them show the statute; let them bring into the light of day the enactment made under the Constitution and according to the forms of law which expresses their will. Then we have that which does, and that alone which can, bind them, either in the forum of judicial proceeding or in the forum of history and of public conscience. We have no right, sir, to barter the rights and the interests of the people. They do not belong to us. We are intrusted with certain express and limited functions. Beyond them we cannot lawfully go; beyond them we ought not to attempt to go. To transcend them is to be guilty ourselves of a breach of trust and make ourselves parties to the wrong inflicted by those who combine and conspire with us to do it.

If it were to be admitted that we are bound to repay the public creditor as full value as we got, if it were admissible to

claim, as I think I have shown it is not, that the public creditor has a right to insist that we shall keep the dollar which we promised in 1870 to pay him up to high-water mark of its purchasing power and its commercial value, so that with it when he receives it he may be able to command as much of the labor of his fellow-men and as many of the products of that labor as he could have done with the consideration which he passed for the bond, then, still then I should insist upon producing the dollar according to the present measure and standard of its value, to the standard of its value as it was in 1870. It is said that silver has depreciated in value. How depreciated? How do you measure the loss? With what standard? By what line and rule? With gold? Why not say that gold has appreciated rather than that silver has depreciated?

WILLIAM W. EATON [Ct.].—Has it not depreciated in the purchase of every product at home and abroad? Can you buy the same amount with the same number of grains of silver that you could with the corresponding degree of some other metal?

SENATOR MATTHEWS.—In Asia, in Europe, throughout this whole continent, nowhere, measured by the average price of the general commodities of the world, has silver depreciated the breadth of a hair. On the contrary, it has maintained its position. It can buy to-day more land, more houses, more machinery, more calico, more cotton, more everything than it could in 1870, the same number of grains of the same standard and fineness.

Who is there that does not know from actual personal knowledge of the fact that everything has gone down and that gold alone has gone up? Who does not know that there is and has been throughout this country, throughout Great Britain, throughout Germany, throughout France, throughout Austria, throughout Italy, throughout the civilized world everywhere, a most extraordinary depression in values for the last four years, and there is no cause that prevails as generally as that effect, and adequate to account for it, but the blindness of that conspiracy which has sought to exalt gold as the god and king of money. It is the demonetization of silver in Germany, followed by practical demonetization on the part of the members of the Latin union, and into which we have fallen, that by taking away from silver the principal part of its utility as compared with gold has appeared to diminish its value as compared with gold, and by investing gold with the monopoly, which does not either by nature or by right belong to it, has given to it a fictitious and a factitious value, so that everything expressed to be

payable in money by being converted into gold has had added to its value per centum upon per centum, until it has turned out that the very best and most fruitful and most profitable investment that in these days a man can make is to take his money and lock it up and keep it idle and divorce it from enterprise and labor, so that by its mere appreciation, by the mere progress of time toward this day, this millennial day, as my friend from Connecticut doubtless esteems it, when gold alone is to be the measure not only of all men, but of all things.

JUSTIN S. MORRILL [Vt.].—The Senator from Ohio set out with the idea that we had the right, the legal right, the equitable right, to pay our public debt in silver. Sir, it must be known to that Senator as well as to all others that we have not coined silver for forty years for any circulation except as minor coinage. All the silver dollars that we have coined have been for exportation; none of them to speak of have gone into circulation, and none of them have been paid out or received by the United States, and the whole amount that we have coined annually for forty years will not exceed about $160,000 per annum. During all this time we have been in receipt of gold for our customs duties; gold and nothing else; and every dollar of that gold has been pledged for the payment of the interest and the redemption of the principal of the public debt. Now, can it be possible equitably, after we have made a pledge of the revenues collected exclusively in gold, that we can now say that a debt contracted under such circumstances may be paid in anything else than that which has been received by the Government for duties?

Now, Mr. President, it does seem to me that the public faith has been pledged in relation to this subject. Our Secretaries of the Treasury, the only authorized agents of our Government, have given assurance according to this interpretation of the law, and their acts have never been repudiated. They have given their pledges in relation to this matter, and the Government has profited by those pledges.

Mr. President, we passed here at a critical period of our history an amendment to the Constitution [the XIVth] in these words:

> The validity of the public debt of the United States, authorized by law, including debts incurred for payment of pensions and bounties for services in suppressing insurrection or rebellion, shall not be questioned.

I must say that that amendment of the Constitution was adopted through some apprehension of the representatives that

might be returned here from the States lately in rebellion. It was not intended to apply to the heresies of Ohio; and yet I am forced to read it upon this occasion, and in this hour of conciliation and reconciliation, when gentlemen have come back here and are rebaptized to their faith in the Union to appeal to some of them for a patriotic endeavor to support the honor of the country. I say I appeal to them as against the Senator from Ohio.

The Senator from Ohio intimated that the law of 1869 was passed for the purpose of doing away with the heresy about paying the debt in paper. Did he and those who then—I will not include him, for I believe he was not included in that category—but did those who were then opposed to paying the public debt in paper reserve their forces in order that it might be paid in something cheaper, 6 or 7 per cent. less than the value of paper?

Mr. President, there are various other points of the Senator's speech that I should desire to answer, but I will not take time at the present moment. One particular point I will reply to now and no more. At the close of his remarks he referred to the locking up of money by many in order to gain thereby. Why, sir, there never was an opportunity since the foundation of this Government when money could be obtained at so low a rate of interest at any city or place on this continent as it can be to-day or at any period during the last year. If there is less use for money it is because there is a fear that they are not to receive as much for the new dollar as the old one. It is the dread of silver inflation.

Roscoe Conkling [N. Y.] moved to make the resolution a joint one, so that, if passed by Congress, it would go to the President for his signature.

The national Executive has deposited with him by the Constitution one-sixth of the legislative power; and in an instance so grave as this, in the case of a resolution applicable to a subject so important as this, I think we should have an expression from the entire law-making power, and not merely from the two Houses of Congress.

ALLEN G. THURMAN [O.].—I think, if Congress entertains an opinion in respect to the existing state of the law that opinion ought not to be nullified by a veto of the resolution of my colleague by the President of the United States. I do not want to invite any such veto. I want the President of the United

States, as well as everybody else, to understand what is the opinion of the Congress of the United States upon this question, and then it will be for the President of the United States to say what he will do in case he should be compelled to act hereafter.

GEORGE F. EDMUNDS [Vt.].—Is it not more candid, more fair, more right that, if we are to say anything upon this subject which differs from the general opinion that is supposed to be held by the people who hold public securities, we shall say it in the form of a law? The question is whether, if you are to have effect upon that body of people so that when they sell to somebody else, if no new certificates are to be issued, what sort of title the people will have who get the bond when it is sold, what sort of law they are to take it under, you propose to merely scare them by an opinion which is not law, or whether you are to define in a binding way for everybody hereafter exactly what the law is. You do nothing that is effectual, because you do not affect the legal right of any public creditor whatever at all. You only disturb the credit of your own securities, for the fear that the creditor may have; not that he is a "bloated bondholder," for, as in every such case, the bloated bondholder knows how to take care of himself. It is the widow and the orphan and the people who have invested in savings banks and so on that hold these securities who suffer at last, just as it is the laboring class that has suffered at last, by these bedevilments about the currency that are always carried on in the pretence or in the belief that the interests of these classes of people are being favored by such measures. That is where it falls at last.

Therefore, Mr. President, if we are to act at all, should we not act in such a way that hereafter in every change of securities everybody will be bound by the declaration of what the law is; not by the opinion of the two Houses as to what it ought to be, which merely has the effect, not of changing any legal right at all, but only of enabling speculators and gamblers in the public funds to trade upon the uncertainty and the doubt upon the public faith that is made by a declaration of the two Houses that has not the force of a law.

SENATOR THURMAN.—Mr. President, I have been nearly nine years in the Senate of the United States, and if there has been any financial legislation here for the benefit of the widow and the orphan and the laboring classes I have been too obtuse to discover it.

The Senator from Vermont warns us that we may be en-

dangering the public credit. Endangering the public credit! I opened my New York paper since the Senator from Vermont rose to speak, and the first thing that strikes my eye is this:

Gold is one-sixteenth lower for the week.

Gold is one-sixteenth lower for the week in the face of a vote of two-thirds of the Senate to fix the silver bill to-morrow! I turn then to Government stocks, and I find that every single bond of the United States has risen in value since last Thursday.

SENATOR EDMUNDS.—The Senator has said that gold is one-sixteenth lower for the week. Now, will he be good enough to tell us how, by the same measure, silver stands in comparison to what it did stand when what we call the Bland bill passed the House?

SENATOR THURMAN.—I cannot answer the Senator, because the market price of silver is not here given.

SENATOR EDMUNDS.—Does the Senator know that silver has fallen much more since the Bland bill passed in proportion than gold has?

SENATOR THURMAN.—I do not know it. If it is so, it is a marvelous thing.

SENATOR EDMUNDS.—The Senator had better take time to consider that.

On January 25, 1878, the amendment of Senator Conkling was rejected by a vote of 23 yeas and 39 nays.

A thorough discussion of the silver question followed, in which arguments already familiar were presented. The attitude of Benjamin H. Hill [Ga.], a Democrat, was, however, somewhat new.

I cannot vote for the resolution offered by the Senator from Ohio, because it affirms that to-day the debt of the United States, principal and interest, is payable in silver coin dollars. There is no silver coin dollar. It has been destroyed by the act of the Government. How can you pay in silver coin to-day when the Government, the debtor, has explicitly stricken silver from the coinage? I concede that as a naked legal proposition, if the silver dollar to-day were a coin, the bonds, according to the letter of the act of 1870, would be payable in silver or gold at the option of the Government. I believe if you should restore silver to the coinage, as was properly said by the amendment of the junior Senator from Vermont [Mr. Morrill], if you should restore the silver dollar to the coinage, then under the letter of the contract and the law of the contract possibly, and

I believe truly, the bonds would be payable in gold or silver at the option of the Government. Now, sir, whether silver should be restored to the coinage is a separate, independent, and distinct question. In my judgment it has no proper relation to the payment of the debt. My judgment as to whether it should be restored to the coinage depends on other and grave economical questions.

I believe that the proper remonetization of silver would be of great advantage to the country at this time. I believe it would aid in the great business of resumption, aid in a return to specie payments. I believe it would be a great benefit to the people in their present condition. But I believe an improper restoration of the silver dollar to the coinage will be a hindrance to resumption, will be the worst contraction of the currency this country has ever known, will inflict infinite evil upon the country, will mock all the pains that seem now to be pretended to be remedied, and will absolutely impoverish the very poor and hunger the already starving. Therefore the question as to the remonetization of silver, whether I will vote to remonetize it or not, will depend altogether upon the terms in which that remonetization is proposed. I believe that if you remonetize silver in any way that will make the silver dollar equal to the gold dollar, you will do a great thing for this country. I believe that if you remonetize the silver dollar in any way that throws it into circulation as a depreciated dollar, you inflict an infinite calamity on this country. I believe the silver dollar can be made equal to the gold dollar in any one of three ways. I believe you can increase the weight of the silver dollar and make it equal to the gold dollar. I believe you can limit the coinage perhaps, as in France, and make it equal to the gold dollar. I believe you can limit the legal-tender power of it and still make it equal to the gold dollar without increasing the weight. But I do not believe in the face of the manifest tendency of all great commercial nations of this day, I do not believe in the face of the great fact that silver is worth but ninety cents in the dollar to-day as compared with gold, that you can restore the silver dollar to equal value with the gold dollar by simply restoring it to the coinage with unlimited legal-tender power and unlimited free coinage.

I believe it will be a mistake, and one of the greatest mistakes ever made by the American Congress, to pass such a bill as the silver bill that came to us from the House of Representatives.

I say, then, make the silver dollar in either form that I have suggested or in any other form, equal to the gold dollar, and I am ready to support it. I believe it will be beneficial to the Government. I believe it will be beneficial to the people; I believe it will aid in bringing about resumption. Ask me about a silver dollar, a depreciated dollar, ask me to throw again on this country a depreciated dollar that keeps everything uncertain! I cannot do it. I do not believe there ever was a depreciated dollar that did not cheat some person every time it circulated, more or less. I believe as a rule, an almost universal rule, depreciated currency always cheats the laborer, the producer, and the consumer. I believe the money dealers speculate on every depreciated dollar and every depreciated currency and make fortunes by it.

The resolution was passed by a vote of 43 to 22. Senators William B. Allison [Ia.], Matthews, Richard J. Oglesby [Ill.], Preston B. Plumb [Kan.], Henry M. Teller [Col.] were Republicans who voted for the measure, and Senators Thomas F. Bayard [Del.], Francis Kernan [N. Y.], and Lucius Q. C. Lamar [Miss.] were Democrats who voted against it. Senator Hill was absent when the vote was taken.

The resolution was adopted on January 28, 1878, in the House by a vote of 189 to 79. Joseph G. Cannon [Ill.], Jacob D. Cox [O.], J. Warren Keifer [O.], William D. Kelley [Pa.], and William McKinley [O.] were Republicans who voted in the affirmative, and Abram S. Hewitt [N. Y.] was a Democrat who voted in the negative.

CHAPTER III

INTERNATIONAL BIMETALLISM

Samuel S. Cox [N. Y.] Introduces in the House Concurrent Resolution to Appoint a Monetary Commission—Debate: in Favor, John A. Kasson [Ia.], Abram S. Hewitt [N. Y.]; Opposed, Richard P. Bland [Mo.]; Commission Appointed: Its Report—Debate in the House on Senate Joint Resolution to Appoint Delegates to an International Monetary Conference: in Favor, Mr. Hewitt; Opposed, Mr. Bland; Resolution Defeated—William B. Allison [Ia.] Moves in the Senate an Amendment to Bland Bill for Free Coinage of Silver (Passed by the House) Authorizing the Call of an International Monetary Conference—Debate on Bill and Amendment: Justin S. Morrill [Vt.], Thomas F. Bayard [Del.], Timothy O. Howe [Wis.], Allen G. Thurman [O.], James G. Blaine [Me.], John P. Jones [Nev.], Sen. Allison, James E. Bailey [Tenn.], Thomas W. Ferry [Mich.], Augustus S. Merrimon [N. C.], Eli Saulsbury [Del.], John T. Morgan [Ala.], Samuel B. Maxey [Tex.], George F. Edmunds [Vt.]; Bill Passed with the Amendment; Vetoed by the President; His Reasons; Bill Passed over Veto—Proceedings of the International Monetary Conference.

ON August 5, 1876, Samuel S. Cox [N. Y.], chairman of the Committee on Banking and Currency, introduced in the House a concurrent resolution, originally proposed by Randall L. Gibson [La.], providing for the appointment of a joint commission, consisting of three Senators, three Representatives, and not more than three financial experts, to investigate:

First, into the change which has taken place in the relative value of gold and silver; the causes thereof; whether permanent or otherwise; the effects thereof upon trade, commerce, finance, and productive interests of the country, and upon the standard of value in this and foreign countries;

Second, into the policy of the restoration of the double standard in this country, and, if restored, what the legal relation between the two coins, silver and gold, should be;

Third, into the policy of continuing legal-tender notes concurrently with the metallic standards, and the effects thereof upon the labor, industries, and wealth of the country; and,

Fourth, into the best means of providing for facilitating the resumption of specie payments.

The commission was instructed to report on or before January 15, 1877.

Monetary Commission

House of Representatives, August 5, 1876

Richard P. Bland [Mo.] opposed appointment of a commission until silver had been restored to full legal tender.

I say it is the duty of this House first to restore the currency where it existed and then appoint your commission to ascertain whether it is proper or not to repeal that law. The gentleman from Ohio [Mr. Garfield] characterized this legislation, proposing to remonetize silver, as being the most corrupt that had occurred in this Congress during his official career. I suppose that the gentleman from Ohio had forgotten some of the legislation here during his official career in this House. I suppose he had forgotten the act of 1869, an act that he voted for, changing the contract in the interest of the money-sharks of this country and against the people, by which they were swindled out of millions and millions of money. I suppose the gentleman had not in his recollection at that time the Crédit Mobilier swindles and frauds in this country. I apprehend the gentleman had forgotten the fraud and corruption of the Boss Shepherd ring in the District of Columbia. If the gentleman does not recollect all these frauds the country recollects them.

Mr. Speaker, the common people of the country cannot come to this Capitol. They are not here in your lobby. They are at home following the plow, cultivating the soil, or working in their workshops. It is the golden slippers of the money kings, the bankers and financiers, whose step is heard in these lobbies and who rule the finances of the country. They are the men who get access to your committees, and who have ruled and controlled the legislation of this country for their own interests.

Mr. Bland then declared that the demonetization of

silver had been accomplished by stealth, at the instigation of the "money kings."

The act of February 12, 1873, was a fraud, because its title gave no clew to the real intent of the act. The record shows that the act was stealthily passed, without consideration and without debate. The public generally had no notice of the pendency of such a bill, and it was not till during this session of Congress the law was unearthed and exposed.

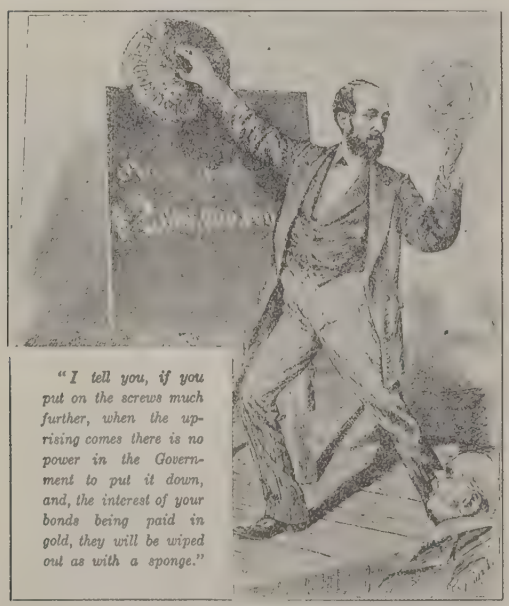
Mr. Speaker, when will the time come that mistakes and blunders will creep into our statutes favorable to the tax-paying people? All such oversights heretofore have uniformly been in the interest of the tax-consumer. Let this law be repealed as openly, as honestly, and boldly as it was stealthily, fraudulently, and sneakingly enacted. With the double standard, which will utilize our product of silver as well as gold, we can resume specie payments without detriment to any class. Indeed the question of resumption hinges upon this policy. With this bill enacted into law resumption is at once accomplished; but if we are to undertake resumption with the gold standard alone, the money sharks will foreclose the mortgages they have upon the people, sell them out of houses and homes, and turn millions of hard-working and industrious people into beggars. The road to resumption with the double standard will be one of prosperity and happiness; the other leads to a dark and dismal financial swamp, through the impenetrable gloom of which the eye of no statesman can discern the least glimmer of light.

John A. Kasson [Ia.] replied to Mr. Bland.

I regret exceedingly that the language of popular prejudice should be heard in discussion of a question of this sort on this floor. The relation between gold and silver and their relative value prospectively as well as at present are among the most serious questions that can be presented to this body. We cannot determine without further knowledge what that relation should be, whether we should coin exactly the old coin or whether we should establish a new fixed or variable relation to the gold dollar, in view of this unprecedented depreciation of silver or any other of these serious questions on which the greatest economists of the world are consulted by the legislative bodies of other countries before they come to a decision.

If at a time when European countries, especially the Latin

nations, are limiting the amount of their silver coin, and Germany is repudiating it, and England will not have it as one of her standards, if at this time the United States adopts



"I tell you, if you put on the screws much further, when the uprising comes there is no power in the Government to put it down, and, the interest of your bonds being paid in gold, they will be wiped out as with a sponge."

"A BLAND ALTERNATIVE"
Cartoon by Ph. G. Cusacks
From the collection of the New York Public Library

it, what will be its effect on us who open our hands for their refuse unless it be to depreciate it further here?

I am not one of the men who propose to take care of the labor of this country by paying it eighty cents for a dollar's

worth of wages. I am not one of those who propose that Englishmen buying the grain of our Western farmers shall send here in payment of the balance of trade in our favor the depreciated and abandoned silver of Europe, worth 10 per cent. less than our own paper money, and 20 per cent. less than the gold that England now remits in payment for the surplus products of our farms. I am not disposed to do all this until all the facts and relations of this question are submitted to us in a formal and carefully prepared report, with the evidence upon which its conclusions rest, that we may form therefrom a more intelligent and deliberate judgment.

I learn that in France, a double-standard country, about three weeks ago, the government suspended the coinage of five-franc pieces because of this uncertainty of information as to the result of the great agitation arising from the alarming depreciation of silver.

Another question is how much surplus, if we adopt the double standard, will come from Germany, how much will come from India, and how much will come from China and all Asia, from all quarters of the world. I know of these questions, but I do not know sufficiently of the facts, authentically, to justify myself in casting a vote on them, and therefore I urge the adoption of the resolutions appointing the Monetary Commission. [Cries of "Vote! Vote!"]

Abram S. Hewitt [N. Y.] supported the bill in a long speech in which he exhaustively discussed the objections to the Bland bill for the coinage of silver and its restoration to legal-tender value. Indeed, his discussion took on the character of a treatise, with the title of "The Use and Abuse of Silver as Money." It will be found on page 283 of the Appendix to the *Congressional Record*, 1875-76.

At the close he spoke as follows of the international character of the silver question and the need of appointing a commission of experts to investigate it in all its bearings:

The Bland bill proposes a revolution before which all political questions sink into insignificance; it undertakes at the heels of the session, and practically without debate, the decision of one of the greatest and the gravest questions now before the world; one which has already involved the Indian Empire in disaster and bankruptcy; one upon which a British commission

has been in session for months; one upon which a committee of the House of Peers of the French Republic has been and is still in session; one which seriously disturbs the German fiscal system and has caused the Latin Union to stop its coinage; one upon which the wisest and best political economists of the world are in doubt and at variance. This great question, which affects every household throughout the civilized globe, is sought to be disposed of by an inappropriate committee of this House as the doorkeeper would brush away a cobweb from one corner of this hall.

If these gentlemen really desire to deal intelligently with this great question, let them withdraw their bill and support the concurrent resolution now pending for the appointment of a commission of competent experts to consider this matter in all its bearings, political, financial, and social, and to report the results of the investigation at the next session of Congress, when they can be discussed with deliberation, good temper, and calm judgment, so that the really serious interests involved may be cared for with wisdom and with statesmanship.

The concurrent resolution appointing the monetary commission was adopted by a vote of 132 to 31. The Senate concurred in the resolution on August 15. The members of the commission were: *Senate,* John P. Jones [Nev.], George S. Boutwell [Mass.], Lewis V. Bogy [Mo.]; *House,* Randolph L. Gibson [La.], Richard P. Bland [Mo.], George Willard [Mich.]; *experts,* William S. Groesbeck [O.] and Professor Francis Bowen, of Harvard University, author of "Principles of Political Economy."

Report of Monetary Commission

On March 2, 1877, the commission presented its report—a most valuable document to students of finance because of its lucid summary of the history of the precious metals and of the various theories in regard to money.

Three members, Jones, Bogy, and Willard, believed that the United States should remonetize silver without regard to the future policy of Europe, and that a law should be passed fixing 15.5 to 1 as the standard of relative values between silver and gold in this country.

Groesbeck and Bland favored the remonetization of silver at the old relation in the United States of 16 to 1.

Boutwell expressed the opinion that it was not expedient to coin silver dollars to be a legal tender, and that the introduction of silver as currency should be postponed until the effort to secure coöperation of other nations had been faithfully made.

Bowen and Gibson thought that a double standard was an illusion and an impossibility, and declared the proper place for silver in the monetary system to be that of subsidiary or token currency, considerably overvalued by law, and a legal tender only within certain minor limits. They advocated the coinage of silver dollars of 345.6 grains, to be legal tender for sums not over twenty dollars, and to take the place of all paper currency of less denomination than five dollars.

During the session of 1875-6 the Senate passed a joint resolution authorizing the President to appoint commissioners to attend an international conference upon the relative values of gold and silver. The resolution was brought before the House during the next session.

International Monetary Conference

House of Representatives, January 10, 1877

Mr. Bland opposed the resolution.

This silver question has been debated for the last year, both in Congress and out of Congress, and after we have remonetized silver and taken the initiative and shown a determination to go back and resume specie payments where we left off with the double standard, it will be time enough for this Government to ask a commission upon this subject.

Let us take a step as a nation first. Let us act upon our own responsibility on this question, and then ask other nations to comply with our reasonable demands. It is simply a question before the people of this country and other nations, whether one-half of the money of the world shall be stricken from circulation and values reduced one-half; whether a man who owes a hundred dollars and whose wages for his work amount to $100 a month, so that he can pay his debt by one month's work, shall be required to work two months to pay his debt

because of the reduction of the value of labor induced from a scarcity of money, and whether that rule shall apply to all the debts of this nation. It is simply requiring a double amount of work or produce to pay the debts due in the civilized world. I hope this Government will act independently of foreign nations. We have had enough dictation from foreign powers upon this subject. Let us go back and remonetize silver. I believe it was at the instance of foreign emissaries that silver was demonetized.

The objection I have to this bill is that it involves the delay and postponement of this subject, when the people of this country are demanding action by this House and the other branch of Congress. And I will say that in my opinion that is the object of this joint resolution, to give some excuse, to afford some plea, for stifling the voice of the people of this country. I stand here in opposition to any measure or any proposition that proposes to postpone the desire of the people of this country, and to continue to grind men into the dust at the dictation of monopolized capital. If the Senate desire to thus postpone action on the silver bill, let it not be said that this House has concurred with them in passing this resolution for that purpose. I hope this House will afford the Senate no opportunity of shifting upon us the responsibility of delay in this matter. This House passed the silver bill by over two-thirds majority. Let us stand by that record and demand that the Senate shall act upon it or take the sole responsibility of their non-action. We will not share any of the responsibility of their shortcoming by telling them to postpone the subject till all nations give their assent.

Mr. Hewitt supported the resolution.

Mr. Speaker, I was very much surprised that the opposition to this resolution should have come from the same quarter as the advocacy of the Bland bill remonetizing silver. The advocates of that bill seem to think that this resolution is in some measure antagonistic to the proposition that silver shall be again made a legal tender. On the contrary, if silver is again to be made a legal tender in the United States, it is indispensable that there should be an agreement among the leading commercial nations of the world as to the relative value of gold and silver in order that the latter may maintain its position as legal tender. The reason is very obvious. If we alone undertake to give a definite value to 412.8 grains of silver and call

it equal to a dollar in gold, when it is not worth so much, we must buy all the silver of all the rest of the world and sell all the gold which we now have or are likely to have in circulation.

Under these circumstances—because we are a silver-producing nation and because we want it to bring a good price—because we want to pay our debts with silver—it is indispensable that there should be an agreement among the commercial nations of the world as to the ratio of convertibility between gold and silver.

Now at the present time the leading advocates in Europe of the reëstablishment of the double standard are Mr. Ernest Seyd and Mr. Henri Cernuschi. The latter gentleman, who is to-day in the city of Washington, is the most eminent and probably the most learned advocate now living of the remonetization of silver. And it is his mission here, as he has proclaimed it throughout Europe, to urge the necessity of bringing about this international conference in order, if possible, to come to some agreement as to the convertible value of gold and silver. It is in order that silver may be re-introduced, as it is possible it will have to be, into the commerce of the world as a standard of value that this conference is indispensable.

Gentlemen seem to fear that if these commissioners should be appointed they are going in some way to bind the United States to unprofitable engagements to sell out the interests of this country. Why, Mr. Speaker, the resolution on its face purports only to be what it is in reality: a proposition for a conference to ascertain whether an agreement can or should be brought about. Of course such an agreement, before it can be effectual, must be the subject of treaty between the nations concerned; and the whole matter will come before us in a definite and distinct form before it can be finally concluded. In no other way can the objects aimed at by the advocates of the Bland silver bill be reached. The passage of this bill is essential to the success of their plans, if success be possible, and I am, as I said before, quite at a loss to comprehend the grounds of their opposition to a measure which looks to placing the continued use of silver as money upon a stable basis, by agreement among the leading commercial nations. Whether with such agreement the maintenance of a double standard of value is possible may well be doubted; but without such agreement it is surely impossible; and, if the Bland bill should be enacted into a law, we shall simply put the United States

in the same category with India and China, and step back two centuries in the march of progress.

The resolution was rejected by the House, and the motion to reconsider was, on January 16, 1877, laid on the table by a vote of 127 to 104.

Free Coinage of Silver and International Monetary Conference

Senate, December 6, 1877–February 15, 1878

On the same day [see page 57] upon which Senator Stanley Matthews [O.] moved his resolution declaring silver money full legal tender the Band bill for the free coinage of silver, which had passed the House during the preceding session, was made a special order in the Senate. On December 13 William B. Allison [Ia.] moved as an additional section that immediately after the passage of the act the President should invite the governments in the Latin (monetary) Union, and such other governments as he deemed it advisable to invite, to join the United States in a conference to adopt a common ratio between gold and silver coin, and to establish bimetallism internationally.

The bill came up for discussion on January 28, 1878. It was debated at great length, the chief point of discussion being Senator Allison's amendment.

Justin S. Morrill [Vt.].—Politically, commercially, and morally, American influence, active or passive, is recognized in nearly every quarter of the globe. Broad as are our boundaries they do not limit the extent of our directing power; nor are we so far away and so insignificant as never to feel the tread and the invisible sway of foreign nationalities. When, therefore, a measure is before us that may change our habits or that may involve the daily dealings and in some degree the prosperity not only of forty-five millions of our own people, but which may touch the interests and provoke the action or counter-action of a considerable portion of the civilized world, it becomes our duty to give the measure thorough investigation and to reject or accept it only after deliberate scrutiny and

ample information. What we cannot mend we should not botch. Our example should not go down as foolishness among the nations, hereafter to be a reproach adhering forever to our own people. Our good name must be preserved.

We are the largest producers of silver, as well as of gold, and seek for both a permanent market, not an ephemeral nor a fickle one. Can this be realized by our separate, headlong adoption of a low-built silver standard, or will it not be more likely to be realized through the concurrent and possibly more scientific action of leading nations? The idea that by promptly coining silver dollars we can drive Europe to follow our example will work like driving an Irish pig, by contraries, and Europe will be sure to go off in the opposite direction. I am persuaded that an increased, fixed, and stable value to silver cannot be secured by our action alone, except for the moment or while we may be reckoned among its temporary purchasers; but if secured at all, which I am inclined to doubt, it must be secured by the combined action of Europe and America. Even this mode of advancing or maintaining the price of silver may have insuperable difficulties. If attempted by us alone it must surely turn out a stupendous failure, accelerating its ultimate declension in value instead of raising it, and the United States would swiftly become the common dumping-place where other nations, to free themselves from depreciated silver, would ship and unload their troublesome surplus. After that, with all room for it here exhausted, its further slide downward would proceed without let or hindrance, and without hope of future recovery.

Unquestionably some part of the value of gold or silver accrues from the more or less universal use and acceptance of each as money. There is a large and steady demand thus created for the metals, their weight and fineness are fixed, and that is all the "divinity that doth hedge" a legal-tender law. The omnipotence sometimes fanatically ascribed to such a law has no better foundation than the legendary virtues of the philosopher's stone and cannot change the swarthy Ethiop's skin nor the leopard's spots. Only among savages can glass beads be preposterously and successfully anything more than glass beads. Even the ancient Czar of Russia could not, when he tried it, make copper money pass as the equal in value of silver.

Let me quote from a speech made here April 1, 1874:

The value of gold is not affected by the stamp of government. That is merely the final and reliable evidence of its weight and fineness.

These words came forth clothed with the high authority of the Senator from Nevada [John P. Jones], and yet we have it now suggested in some quarters and asserted in others that there is power in legal-tender laws to give to silver many times its present value or to sink gold even to the level of silver. We are expected to believe this, and also that neither the future product nor the value of the one could then be increased nor of the other diminished. But a holy alliance of all the governments of the universe to make the ratio of silver 1 for 1 of gold, exchangeable pound for pound, would be as ineffectual as any decree ever issued by Sancho Panza while governor of the island of Barataria. Legal-tender of the present day must be in harmony with commerce, with science, and with the overwhelming judgment of mankind, or it will be ranked as a lame and limping subordinate, and made to stand aside for something more worthy of an enlightened age in the chief transactions of the world. It admits of some doubt whether stability and uniformity in the valuation of gold and silver, according to any recent ratio of a bimetallic standard, can be maintained, even by the coöperation of all the leading nations, when either metal far overleaps the other in the quantity produced or in the quantity required for coinage. Wholly demonetize either metal, thereby reducing its consumption, and the arts, encouraged by genius, skilled labor, and wealth though they be, would fail to employ it except at a correspondingly reduced valuation. The overmastering condition of an approximation toward the restoration of silver to its former noble position, as the co-partner of gold, everywhere dominant in the shape of money, is a concurrence of the major part of the enlightened nations in its more extensive use as a standard measure of value, upon a fixed ratio with gold, wisely adjusted and internationally and unalterably accepted. But this concurrence of nations, however exalted in theory, it is to be feared will be found in practice a long-postponed financial millennium. As a last resort it may yet be well to try some energetic diplomatic expedients, in order, if possible, to effect this concurrence and avert the dethronement of silver from the remnant of sovereignty it now enjoys.

The report of the commission, so recently laid upon our desks, was not presented in season to be of practical service at the last session of Congress, and its conclusions, after a long incubation, are found at length to be in favor of nearly such a bill as that which suddenly burst forth and has come to us from the House, or of an unbounded issue of silver, and

of making it an unbounded legal tender, though upon a new ratio, according to the views of some of the members of the commission, of 15½ to 1 of gold, or of 16 to 1, according to the views of others. In fact the ratio seems to have been an impassable bridge to the commission. They agreed not to agree, four to three.

While I have great respect for the ability of the commission and for their very able and elaborate presentation of the subject, including the essays of their clerks, they have yet failed to induce me to renounce my own opinions, only because I cannot disregard my higher obligations to what I conceive to be truth and to the welfare of the country. The majority seem to have determined wholly to supplant our gold standard, which has had practically an uninterrupted and prosperous existence, excepting during the present paper interregnum, for more than forty years, in order to make more room for silver. To them the recent lower valuation of silver by the Old World is a grievous wrong, which all the silver-shielded knights of America are called upon at once to redress. They will pardon me, I hope, if I suggest that in pushing the fortunes of silver, of which the world at present appears to have a surfeit, they seem to have adopted the main idea of the boarding-house keeper, who frankly avowed that the system on which she conducted her establishment was "to find out what her boarders didn't like and give 'em plenty of it."

The commission favor the remonetization of the silver dollar, but of a dollar containing so little of present value that it would at once demonetize gold, and send more of that out of the country than can possibly be coined of silver in four years. They assume, indeed, that a law of the United States will "establish exactly and permanently an equivalency between them"; but they so significantly and with such unction proclaim that, "a fall in the value of either or of both of the metals" has always "proved a benefaction to mankind," that it is impossible not to perceive that their highest purpose will not be consummated without such a "benefaction." Surely they do not intend to bring about a rise in the value of silver, as that, in their estimation, would be one of the greatest of disasters; and, let me add, might deprive them of the support of all those who are enraptured with the idea of sponging or scaling debts.

Senator Morrill then discussed the probable cause of the recent depreciation in the value of silver.

A fall in the price of any staple product often precedes an abundant harvest. It is the shadow of a coming event. A large cotton crop has frequently been sold in the aggregate for less than a much smaller crop of a previous or subsequent year. This effect of production upon prices is the universal law. It logically follows that silver, especially while widely divorced in Europe from its most potential legal-tender attribute, must be subject to the same inflexible law; and, when it is shown that the world's stock of silver within a brief time has largely increased, and that its annual production has been more than doubled since 1860, or has risen from $40,000,000 to over $80,000,000, with some telling evidence that indicates a further increase in both North and South America, we know at least one of the elements which must have largely contributed to its rapid depreciation. The volume annually required having been doubled, a sinking in value became inevitable. Years ago Humboldt declared that the mines of New Spain (Mexico) contained silver enough to deluge the world, and the world has been deluged, but the flood seems augmented from unexpected sources. Silver once derived great value from its scarcity and cannot escape some degradation from its abundance.

It is true that this might have been averted if new markets could have been found at once to absorb the unexampled supply; but, instead of that, many of the most important old markets have been abruptly closed, with no new outlet opening in any quarter and with Germany, not as formerly a considerable buyer of silver, but a very large, inconvenient, and obtrusive seller. Plenty of sellers makes silver cheap—will make anything cheap. Whether all markets have been glutted or not, the fact is obvious that, excepting the United States, there are now few heavy purchasers of silver, and even light purchasers have grown cautious and shy.

From this outlook it would seem that Europe has almost determined to cut loose from silver, with the exception of so much as may be required for subsidiary coinage, everywhere now largely adulterated or light in weight, and only kept in circulation at par by a rigid limitation of the amount issued and of the amount allowed as tender on debts. Certainly any large market for silver in Europe for years to come must be hopeless, unless a fundamental change of policy shall soon occur. Whether they need it or not they apparently do not intend to have it. This attitude of so many nations, which have heretofore given much of the value to silver by circulating it freely as money, it is to be greatly apprehended, may tend

to its ultimate permanent depreciation and instability, unless the wide-spreading abandonment of silver can be arrested by a convention of all the nations most deeply interested. The ponderous volume afloat is altogether too great to be immediately absorbed by one nation or perhaps by half a dozen nations. In the United States lightning was once drawn down from the skies with a kite, but single-handed most assuredly there is no "kiting" experiment by which the stable value of silver can now be uplifted and maintained.

Little aid can be expected from those nations which adhere to and practically use the silver standard. Their commerce is insignificant, and hardly amounts to a tithe of that of England alone. Compared with our own, their commerce is a bagatelle and their credit a satire and a snare.

Senator Morrill here discussed the legislative and economic causes which had led to a diminution in the demand for silver in various countries. "The margin of profit in buying silver rupees in England at one shilling and sixpence and selling them in India at two shillings sterling will soon disappear," being too great to last. India is coveted now as a market, not so much for silver as for manufactures, and this was intercepting the flow of silver thither.

Japan had established a gold currency, and China was calling for help from the depreciation of silver. Indeed, at times it was deporting this metal. The British colonies were following the gold standard of the mother country.

While the annual production of silver exceeds all former limits by more than 100 per cent. it is manifest that the usual markets have been overloaded or sadly curtailed. Under these circumstances nothing less could be reasonably anticipated than a sharp and remediless depression in the price and value of silver. This has already occurred; and, though it may vacillate and even for the moment halt, the ancient level cannot be regained. From being itself once a standard measure of values, utilized, and holding at least a divided empire in the coinage of a large portion of the world, it has come to be a commodity as variable as to market price as tin or copper. It appears to be no longer clinging to gold, sharing equal fortunes in the magical patronage of all commercial nations, but takes the

subordinate position of replacing the wear and tear of token coinage for minor transactions and of cheaply and not less usefully supplying the ordinary wants of the arts and manufactures. As coin—without a radical change in the policy of Great Britain, of Germany, and of the Latin nations—it is to be feared that it cannot be made to much exceed its value as bullion, except where the amount of coin issued is very narrowly restricted. Whether resulting from natural causes or by accident, a lower general valuation of silver, as a raw material or in any other form, is a fact accomplished, and its daily fluctuations are henceforth likely to be as coolly chronicled as the rise and fall of pig-lead or pig-iron.

Any attempt upon the part of the United States alone to stop this revolution by a taurine demonstration in the market, or by becoming the boldest and almost the only large purchaser of silver, would be as futile as Mrs. Partington's attempt to mop up the Atlantic and as unprofitable as would be an attempt by a single soldier to surround the nomadic warriors of Sitting Bull. Large purchases or large withdrawals of silver bullion from market may no doubt temporarily or locally somewhat advance the price of silver, but not to stay advanced; and if the United States shall inflate the pockets of the people with silver money far above its value, until they have neither inclination nor capacity for more, the price will then go down to its predestined level. The conclusion cannot be avoided that the present large annual supplies of silver will not, in any mode or manner now known, continue to be consumed at the old valuation; and the price of the entire stock, old and new, must stand, so long as Europe abandons its unlimited use as coin, where the world can still afford to use the whole of it. It will not lie idle nor be buried in napkins, but will be sold for the most it will fetch.

The United States cannot, any more than Mexico or South America, for any protracted period be expected even to furnish a market for its own vast domestic supply. A large share of it must find a vent elsewhere and abroad. Even with our mints in full operation we could not annually coin the silver bullion from our own mines, but, were they all in operation, what would prevent the foreign stock of silver, now eagerly seeking a market, from competing with the American production? Already it has been persistently knocking at the doors of the United States Mint and knocking down the price. The American mines are in their infancy and promise extensive future development. They are wondrously fertile and no doubt will be

prosperous in their aggregate results; but no legislation, even by excluding foreign silver, can give them protection against their own home rivalry so long as production largely outruns consumption. Adequate protection unaided by any foreign demand or coöperation is impossible.

It may be true that the value of silver will stand at not less than the cost of production from the least fertile mine that continues to be permanently worked. But silver will not rise in value so long as the world's stock largely exceeds the demand, for its price will then pay no heed to original cost nor to legislative enactments. Thus far there does not appear to be any diminution of foreign supplies in consequence of the extraordinary production of the Comstock lode. The cost of mining silver in the United States has been largely reduced by the new and, for the purpose, admirable steam-crushing machinery, an improvement nearly as important in cheapening the production of silver as was the cut-nail machine in making nails or as the cotton-gin in cleaning cotton. As much silver mining can now be done in one year as could have been done in twenty, ten years ago. There is also the further material advantage obtained in the process of reducing silver ore, through the comparatively low cost of California quicksilver, indispensable to the miners, which few other silver-producing countries find so near at hand.

These advantages are to some extent offset by the cheaper labor employed in other countries; and the general yield of silver is likely to be larger, rather than smaller, for many years to come. The mines worked prior to the Christian era or the days of Cæsar are still held to be inexhaustible; as are those which fired the zeal of the conquerors of Mexico and Peru, and nearly all the silver mines of the world appear about as productive to-day as when first opened, though newly discovered mines more fertile may affect their profits. Certainly the millions of silver steadily flowing from Nevada, garnished with other and only less millions of gold, will not long wait for a better market or a more appreciative age. The miners are after it, splitting mountains in twain and probing earth's innermost recesses, and mean to have it. If it were the treasure of Captain Kidd it could not escape their ardent pursuit. What has been produced, it is claimed, is as nothing compared with what will be.

In all ages the value of the precious metals has been little above the average cost of production, until the opening of the mines in Nevada, supplemented by those of other surrounding

localities; and the profits of the mines, even in Mexico and South America, may ere long be augmented by American energy and American machinery, and certainly will sink below a fair day's pay for a fair day's work before they will be abandoned to future enterprise.

The policy of making silver an unlimited legal tender, at anything above its real value, with the idea of elevating it to the par of gold, would result in national disaster, would flout the registered experience of mankind, and is little less preposterous than it would be to attempt by legislative witchcraft to make the baser metals circulate as money, high above their market value, by a mere legal-tender declaration. Any metallic legal tender must be kept at or near the cost at which it can be produced. If above this rate, then illicit or contraband coin is sure to be introduced, as the imitative art of coin-making is not difficult, and cunning workmen, at home and abroad, are not deficient in numbers or audacity. Any jury would be reluctant to hang the skillful and generous rascal who should make and vend just as good money as the Government itself. The profits upon such counterfeiting would be tempting and detection impossible. No government ever succeeded with an unlimited metallic legal-tender currency much above its intrinsic value, and whenever it has been attempted the result has been the issue not only of a currency depreciated, not only a currency to be refused by all those having the power of refusal, but of a currency which creates adverse exchanges with all the rest of the world. Where one pound of gold will buy in the open market seventeen and a half pounds of silver, there is no legislative alchemy in the conversion of silver into coin by which either fifteen and a half or sixteen pounds of silver can be exchanged for a pound of gold.

If we should be compelled or should choose to retain the mono-metallic standard of gold, as it has practically existed with us since 1834, there is no country where it could be maintained more buoyantly or with greater facility than in the United States. Undoubtedly it is destined to further depreciation, but never to rapid depreciation. We are one of the very largest gold-producing countries, and even our so-called silver ores literally present "apples of gold in pictures of silver," as they contain nearly as many dollars of one metal as of the other. What reserves are yet to be brought forth from all of our gold-embroidered plains and mountains, extending from Canada to Mexico, who can foretell?

Whether a single standard of gold shall continue practically

in force or not for the next forty years, as for the last, it seems incontestable that we have now more ability, with all of our known auriferous wealth, to uphold such a standard than we have ever had heretofore or than can be claimed by Germany or even by Great Britain, both being wholly barren of native gold. Two of our States, Texas and California, among the most prosperous of any in the Union, have tolerated no other money than gold. No crises overwhelm their well-founded industries; few disasters happen to their trade; and they may well feel proud of their solid and uninterrupted prosperity. Storms may come and the winds may blow, but gold is the rock of their salvation. New York, the most populous State in the Union, has already provided by her own legislative action, happen what may elsewhere, for resumption of specie payments on the first day of January, 1879; all taxes and canal tolls are to be paid in gold and all contracts after that date are to be payable in coin. Is there any other State that assembles more legislative wisdom or that has a deeper interest in the general prosperity of the country than New York? Her voice gives forth no uncertain sound, though it may be stifled by the jingling of the silver bill. None of our States can maintain an exclusive silver standard without immense loss, but to the cotton, wheat, and corn growing States it would be a peculiar hardship. The prices of their products being wholly controlled by the price of the surplus exported, they have a direct interest in maintaining a money standard in harmony with that where our great staple crops find a market.

The present stock of gold in the United States, amounting to not less, I am confident, than $200,000,000, and daily increasing, almost to the extent of our large domestic production, with the balance of trade, until very recently, long and immensely in our favor, makes a gold standard not only practicable but almost unavoidable. Within the last ten years we have received from customs nearly $1,800,000,000 in gold, and have actually sold for paper over $500,000,000 in gold at a profit of over $100,000,000. Our wheat and corn, cotton and petroleum, will always command gold, as will our bonds. With our mints in active operation for six years we could hardly produce as much silver coin as the country now holds in gold. For resumption of specie payments in gold we are nearly ready; but for resumption in silver we have not the first dollar. Certainly we have the right to do a foolish thing, but it is our interest to do a wise one. Can it be a wise thing to banish gold?

It is claimed that the freedom of coinage would at all times

regulate the amount of coin in circulation in accordance with the wants of trade, and that every needy man would then find the needed silver dollars in his pockets. Whether the coinage would be regulated by the amount in circulation or by the amount of marketable bullion on hand admits of very little question, and that little would be solved entirely in the interest of bullion-holders. It is very apparent, however, that, with free coinage minted and unminted silver would soon have, according to weight, the same value, and that value would be regulated not by the volume of coin, but by the volume of both. Silver bullion would be worth just as much before as after being fabricated into coin, whatever might be its denominational value. The chief service of the United States mints would be like that of mills where all grists are ground free of toll, and they would become the special workshops of the owners of silver bullion, gratuitously manned and supported by the nation, but controlled by anybody and everybody. The raw material would be furnished, but the Government would be called upon to manufacture it, not only without a large percentage of profit, but at an actual expense of 1½ per cent., or by an annual subsidy to the owners of silver bullion of from $500,000 to $750,000.

Whatever possible and glimmering chance there might be of elevating a limited amount of silver coinage to the high plane required as a standard measure of value would be dissipated by the final consummation of the new silver policy, which, being fully disclosed, has been found to include the extraordinary plan of elevating with equal pace the whole world's fast-growing stock of silver. The wisdom of attempting to push this last part at the present moment may be disputed, but it is the fixed and essential part of the silver policy as avowed by its most potential advocates, and they appear about as positive in their new philosophy as was Comté when he said he "could have made a better solar system than the real one" and declared he "would have made it always moonshine at night." They would evidently have it all moonshine.

The gold standard, it may confidently be asserted, is practically far cheaper than that of silver. I do not insist upon having the gold standard, but, if we are to have but one, I think that the best. A careful examination of the subject conclusively shows that the loss by abrasion is nearly in proportion to the length of time coins have been in circulation, and to the amount of surface exposed, although small coins, being handled oftener and with less care, suffer most. The well-

ascertained result is that it costs from fifteen to twenty-five times more to keep silver afloat than it does to maintain the same amount in gold. To sustain the silver standard would annually cost about 1 per cent. for abrasion; but that of gold would not exceed one-twentieth of 1 per cent. This is a troublesome charge forever to bristle up in the pathway of a silver standard. It must also be borne in mind that the mint cost of coining silver is many times greater than that of the same amount in gold. More than sixteen tons of silver are required as the equivalent of one ton of gold. As a cold matter of fact, silver is neither the best nor the cheapest standard. It is far dearer to plant and forever dearer to maintain.

A double standard put forth by us on the terms now proposed by the commission or by the House bill would be so only in name. The perfect dual ideal of theorists, based upon an exact equilibrium of values, cannot be realized while the intrinsic value of either of the component parts is overrated or remains a debatable question and everywhere more or less open to suspicion. A standard of value linked to the changing fortunes of two metals instead of one, when combined with an existing disjointed and all-pervading confusion in the ratio of value, must necessarily be linked to the hazard of double perturbations and become an alternating standard in perpetual motion.

The bimetallic scheme, with silver predominant—largely everywhere else suspended, if not repudiated—is pressed upon us now with a ratio that will leave nothing in circulation but silver, as a profitable mode of providing a new and cheaper way of pinching and paying the national debt; but a mode which would leave even a possible cloud upon our national credit should find neither favor nor tolerance among a proud and independent people.

The proposition is openly and squarely made to pay the public debt at our option in whichever metal, gold or silver, happens to be cheapest, and chiefly for the reason that silver already happens to be 10 per cent. the cheapest. In 1873, to have paid the debt in silver would have cost 3 per cent. more than to have paid it in gold, and then there was no unwillingness on the part of the present non-contents to pay in gold. Silver was then worth more to sell than to pay on debts. No one then pulled out the hair of his head to cure grief for the disappearance of the nominal silver option. Since that time it has been and would be now cheaper nominally to pay in silver if we had it, and therefore we are urged to repudiate our

former action and to claim the power to resume an option already once supposed to have been profitably exercised, of which the world was called upon to take notice, and to pay in silver to-day or to let it alone to-morrow. I know that the detestable doctrine of Machiavelli was that "a prudent prince ought not to keep his word except when he can do it without injury to himself," but the Bible teaches a different doctrine, and honoreth him "who sweareth to his own hurt and changeth not." If we would not multiply examples of individual financial turpitude, already painfully numerous, we must not trample out conscience and sound morality from the monetary affairs of the nation. The "option" about which we should be most solicitous was definitely expressed by Washington when he said: "There is an option left to the United States whether they will be respectable and prosperous or contemptible and miserable as a nation." Our national self-respect would not be increased when Turkey, as a debt-paying nation, shall be held as our equal and Mexico as our superior. The credit of a great nation cannot even be discussed without some loss; it cannot even be tempted by the devious advantages of legal technicalities without bringing some sense of shame; but to live, it must go, like chastity, unchallenged and unsuspected. It cannot take refuge behind the fig-leaves of the law, and especially not behind a law yet to be made to meet the case.

The argument relied upon in favor of a bimetallic standard as against a monometallic seems to be that a single-metal standard leaves out one-half of the world's resources; but the same thing must occur with a bimetallic standard unless the metals can be placed and kept in a state of exact equilibrium, or so that nothing can be gained by the exchange of one for the other. Hitherto this has been an unattainable perfection. A law fixing the ratio of 16 or 15½ of silver to 1 of gold, as proposed by different members of the commission, would now be a gross overvaluation of silver and wholly exclude gold from circulation. It will hardly be disputed that the two metals cannot circulate together unless they are mutually convertible without profit or loss at the ratio fixed at the mint. But it is here proposed to start silver with a large legal-tender advantage above its market value, and with the probability, through further depreciation, of increasing that advantage by which the monometallic standard of silver will be ordained and confirmed. The argument in behalf of a double standard is double-tongued, when in fact nothing is intended, or can be the outcome, but a single silver standard. The argument would wed silver and

gold, but the conditions which follow amount to a decree of perpetual divorcement. Enforce the measure by legislation, and gold would at once flee out of the country. Like liberty, gold never stays where it is undervalued.

No approach to a bimetallic currency of uniform and fixed value can be possible, as it appears to me, without the coöperation of the leading commercial nations. Even with that coöperation its accomplishment and permanence may not be absolutely certain, unless the late transcendent fickleness of the supply and demand subsides, nor unless the ratio of value can be adjusted with more consummate accuracy than has hitherto been found by any single nation to be practicable. One-tenth of 1 per cent. difference will always exclude from use one or the other metal, but here a difference nearly one hundred times greater has been proposed. The double-standard nations and the differing single gold or silver standard nations doubtless contributed something to the relative equalization of values so long as they furnished an available market for any surplus of either metal, but this they are doing no longer. Silver, though not yet universally demonetized, is thrown upon the market in such masses and from so many prolific sources as to be governed by the inexorable laws of demand and supply. Its magic as coin, if it has not hopelessly departed, has been, like the retreating soldier, fearfully "demoralized," and is passing to the rear.

Whatever change may be made in our monetary standard will not give us the slightest advantage in the prices of any commodities we buy or sell abroad. Foreign merchandise, whether dress-goods or iron, upholstery or salt, champagne or hardware, must still be paid for upon the gold standard of prices; but our own products, cotton, beef, corn, and wheat, will all be in the market, at the option of the purchaser, for either silver or gold, and will always be paid for in the cheapest currency. Commerce conducted on such a shifting basis—buying with the dearest and always selling for the cheapest—must manifestly be greatly to our disadvantage. The people with a cheaper currency always suffer most in exchange, whether buying or selling. The whole domestic trade of the country would also be equally exposed to the instability in the value of silver, lately so glaringly exhibited, with which greenbacks would be necessarily lagging behind, and prices of commodities would be increased or diminished in proportion to the daily risk. Labor alone—including that of salaried ministers and judges—would be forced to accept the silver dollar of far less value than our

present paper dollar, without higgling for anything better, and the wages of labor would not escape a silent and sinister, but certain reduction. It would have to resort to the merciless and futile remedy of strikes or give a dollar's worth of work for ninety cents in silver.

The United States would make a clumsy and most unprofitable mistake by making silver, in the guise of a bimetallic standard, practically an exclusive standard of value, unless at the same time other nations shall be first persuaded to unite in the same policy; and other nations just now appear very stubbornly to prefer the gold standard. We must wait for their conversion. There is no reason why we should move now, except that given by the man, when met with the question of an irate wife as to why he came home so late at night, who answered, "because all other places are shut up." All other doors to silver certainly appear to be shut up. Even the nations nominally upholding the silver standard are nearly all using nothing but paper greatly depreciated. An enterprising people as we claim to be, and have some reason to think we are—having commerce in almost every port and harbor on the globe, and full of invention, energy, and daring ambition—must use as money what the world everywhere accepts as money. No standard that is destitute of international recognition can be of uniform value or be tolerated or long endured in the United States. In peace or war, in shop or field, on land or sea, the best implements of service belong to us and should not be altogether alien from our standard of money. The natural aptitude of the American people for trade and commerce, the leading position they are soon expected to occupy, would be repressed by withholding from them one of the cardinal business instrumentalities or by depriving them of that kind of money which is good either at home or abroad, for wholesale trade as well as retail. We are bound to develop and utilize the full forces of the nation, and we should not wholly reject English, German, and French experience without some distrust of our own statesmanship. Our foreign exchanges have been for many years, and must be for years to come, wholly regulated upon a gold basis. The cost of exchange is the barometer which unerringly proclaims the depreciation of paper money and would just as surely expose the deficiencies of silver. A silver standard, or a bimetallic standard so adjusted as to banish gold from circulation, however acceptable to moss-covered, non-progressive communities, where their standard food may be rice and rats, and where women appear in the field and men do

not appear at the ballot-box, cannot fulfill the requirements of the American people. They want and must have the best.

To dispense entirely with the use of gold by the substitution of silver would be an economical blunder of the first magnitude, and we might with almost equal propriety dispense with railroads and go back to beasts of burden, or discard gunpowder and rifled cannon in order to "rehabilitate" human muscles and wooden cross-bows.

The commerce of modern times is incomparably greater than in former ages or when it was rigidly confined to a system of barter; but the more recent extensive introduction of paper money currency, bills of exchange, and bank-checks, convertible into cash at the will of the holder, those "wagons through the air" according to Adam Smith, have largely superseded both the holding and moving of large amounts of a metallic currency. The electric telegraph transfers credits from San Francisco to London and from New York to Hong Kong more swiftly than by the incantations of a magician. Even the accounts-current among traders or offsets of sales against purchases greatly reduce the amount of money passing from hand to hand. It is only the small remainders due after the final adjustments of trade which must be paid in coin or its equivalent, or less than 5 per cent. of paper money and only half of 1 per cent. of coin, and it is manifest that commercial transactions of greater magnitude than those in earlier days may be, and are, conducted now without the intervention of as much gold and silver as was once required. Where a sound, convertible paper currency prevails it is so much cheaper as well as more convenient that it cannot and should not be supplanted by anything more expensive and difficult to handle.

If it were to be declared that a peck measure should hereafter be counted as a bushel measure, in process of time we might become habituated to it; but if the peck measure had also a movable bottom and sometimes held but six or seven quarts instead of always eight, it would prove an intolerable cheat. Silver, as it seems to me, has no longer the stability required to withstand the lightest breeze of the market-places, and will be bent or prostrated whenever exposed to any monetary storm at home or abroad.

It is asserted by some rather imaginative logicians that silver has not fallen, but that gold has risen in value. As ludicrously untenable as this assertion appears upon its face, it may not be wholly amiss to place once more upon record its conclusive refutation by showing that gold has not only not risen in value

as to other commodities in general, silver excepted, but that it has itself fallen in value and no longer wields the purchasing power it possessed twenty-five years ago. If this has been or can be shown, it will then appear that silver has not only kept equal downward pace with gold, but that it has had such alacrity in sinking as to find relatively a far lower deep.

That gold has not risen in value may be proven by a comparison, wherever the gold standard prevails, of the prices of various leading articles now, in uniform and constant demand, with the prices maintained years ago. For this purpose I refer to the laboriously and carefully prepared table of the London *Economist*. This includes forty-five staple commodities and exhibits the variations from 1845 to 1876. From this very elaborate comparison it is clearly shown that gold has diminished in purchasing power since 1850 more than 20 per cent. The depreciation of silver is therefore inherent and independent, greatly surpassing that of gold, and by no means can it be chargeable to any advance in the value of the latter metal.

The interests of the States and Territories producing gold are not less in amount than those which produce mainly silver. Nevada, a silver and gold producing State, claims now a population of fifty-two thousand; and California, a gold-producing State, had a population at the last census of five hundred and sixty thousand and probably one hundred thousand more now. Oregon, a growing empire on the north, certainly should not be wholly ignored; and yet it is proposed to sacrifice that interest which has given to it and to the whole Pacific coast perhaps its greatest historic prominence—that interest with which all of its industries, commerce, and affections are indissolubly interwoven —without giving to any other State or Territory any real or permanent benefit. The production of gold, even in Nevada, surpasses that of other States. Let us try to take care of both silver and gold, and in taking care of both to take care of nothing less than the whole country.

Certainly it may be questionable whether the interests of the silver-producing States and Territories would not be injured rather than promoted by a solitary attempt here to remonetize the silver dollar. A more extensive and continuous demand will be needed, and we cannot afford to encourage the wider disuse of silver as money in Europe by opening here to its idle surplus even a temporary though narrow market. If we would really restore silver to the monetary systems of the world and prevent its further degradation, we should refuse to touch it until other nations are ready to join us. The owners even of

silver mines, unless largely in debt, which would not often happen, will not be benefited so greatly as their ill-advisers seem to anticipate by making silver an unlimited legal tender, as its exchangeable value cannot thereby be permanently increased. For them it might be far better to make at once and forever a larger demand for silver by courting concurrent action among nations or by increasing the amount of pure silver in the coinage issued, so as to make it equal even now with the standard of gold. Such a standard would at least remove from it some share of the world's repugnance. It would be an honest dollar.

To adopt any measure now with a provision for a subsequent convention of nations would be like committing suicide with a promise to send for a surgeon to make a subsequent *post mortem* examination. Pass a silver bill with a ratio utterly discordant with gold, unsupported by any allies in Europe, and a step will have been taken that cannot be retraced for generations to come, and if ever retraced the process will be painful, difficult, and expensive. The blunder will be practically incurable.

It cannot be for the interest or the honor of the United States, while possessed of any healthy national pride, to resort to any expedient of bankrupt governments to lower the money standard of the country. That standard should keep us "four square" to the world and give us equal rank in the advanced civilization and industrial enterprise of all the great commercial nations.

I have failed of my purpose if I have not shown that there has been so large an increase of the stock of silver as of itself to effect a positive reduction of its value, and that this result has been confirmed and made irreversible by the new and extensive European disuse of silver coinage. I have indicated the advisability of obtaining the coöperation of other leading nations, in fixing upon a common ratio of value between gold and silver, before embarking upon a course of independent action from which there could be no retreat. I have also attempted to show that, even in the lowest pecuniary sense of profit, the Government of the United States could not be the gainer by proposing to pay either the public debt or the United States notes in silver; that such a payment would violate public pledges as to the whole, and violates existing statutes as to all that part of the debt contracted since 1870, and for which gold has been received; that the remonetization of silver means the banishment of gold and our degradation among nations

to the second or third rank; that it would be a sweeping 10 per cent. reduction of all duties upon imports, requiring the imposition of new taxes to that extent; that it would prevent the further funding of the public debt at a lower rate of interest and give to the present holders of our 6 per cent. bonds a great advantage; that, instead of aiding resumption, it would only inflate a currency already too long depreciated, and consign it to a still lower deep; that, instead of being a tonic to spur idle capital once more into activity, it would be its bane, destructive of all vitality; and that as a permanent silver standard it would not only be void of all stability, and the dearest and clumsiest in its introduction and maintenance, but that it would reduce the wages of labor to the full extent of the difference there might be between its purchasing power and that of gold.

I cannot avoid the conclusion that, while we may coin dollars containing as little silver as we please, yet they will not secure more than a local recognition, nor exempt us from frequent and great disasters; and at last we shall have none of that money which represents the combined wants of the poor and the rich not less than those of the great commercial interests of the human race.

On February 4 Thomas F. Bayard [Del.] opposed the Bland bill.

If this bill shall operate as it seems to me it must, according to its present provisions and adjustments of value, we shall take our rank with the Asiatics. Are we ready for that? Why, sir, if even that was the case and we could procure stability of values, there would be something comforting at least in that result. The great thing for honest dealing is not to settle present contracts; it is to fix future contracts; it is to give the unknown future certainty and to so fill the possibilities of justice. It is the want of fixity in the future that makes capital timid and which to-day deprives this country and the people of this country of that confidence which is essential for the restoration of their prosperity. But even if upon a silver basis, passing by the fact of its cumbersomeness, passing by its inconvenience in counting and transportation, passing by the fact that we must turn our silver money into merchandise whenever we approach an international transaction, yet I cannot pass by the fact that silver will not be a stable standard, but that as in the past so in the future it will fluctuate in its relation to the world's standard of value, which is gold.

Why, Mr. President, what a curse is this element of fluctuation and uncertainty of values. Owing to fluctuations in paper money there has been taken from this country in every year of the last decade more than it would have cost us to resume actually at any day during that period. It may be accepted as an axiom capable of demonstration *that all losses which arise from a fluctuating currency fall upon the producing classes of the country whose currency it is.* My friend from Mississippi [Lucius Q. C. Lamar] the other day put that statement in the form of a forcible apothegm when he said that every production of the people whom he represented, and chiefly cotton, the great staple of the Southern States, produced gold for every man except him whose labor brought it into existence. It is not only cotton; it is corn, tobacco, wheat, coal, whatever may be the commodity to which human labor is addressed for production. In America all of them have their price fixed in the gold standard of the English market.

Talk to me about our not recognizing our relations to the other nations! Where could there be a more practical illustration than your grain markets afford? Talk to me about our setting up a standard of values that shall not be affected when they come in contact or comparison with the standards of other nations! Why, sir, it is not reasonable, it is not just, it is not true. Therefore if we shall choose that metal as our standard which fluctuates in its relations to the standard used in the market where the prices of our products are fixed, then every loss in the shape of brokerage or insurance against fluctuation will be borne by every producer in our country. I believe it can be shown that every year that we have delayed the resumption of specie payments, and a return to the standard value of the world, has cost this country more than would actual resumption at any time during those years.

Mr. President, the remonetization by the United States of silver single-handed and alone will not restore its value to an equality with gold, nor I fear prevent a further decline, because if other nations shall release their silver it will inevitably cause a fall in the price of that metal which unaided we cannot prevent.

Mr. President, at this time this question is undergoing the most careful and elaborate examination in Europe. Not now only, but for years past it has agitated that small circle of profound thinkers who are continually studying causes rather than effects. There is before me an address to the King of Holland from the Society of The Netherlands for the Promo-

tion of Industry, which recognizes this fact, that Holland had been prosperous under a silver standard, but that under the late legislation of leading governments of Europe, to use the words of this society, being forced to "change its monetary legislation" most unwillingly were they yielding to a pressure on this subject which they could not avoid, "*to adopt definitely the gold standard.*"

This is not done voluntarily; it is the result of the overpowering coercion of neighboring legislation which that country was unable to resist. And here I will say that unless there shall be a correspondence between the adjustment of the relative values of these two metals under the laws of the United States and an influential number of foreign nations, we shall become necessarily a nation upon a silver basis only; that in order to maintain a double standard we must have coöperation to that end; and that this is the admission of the strongest and most decided advocates of the double standard in the United States as well as in Europe.

There can be found no respectable authority that will tell you that, without coöperation and what they call "general understanding" between the leading commercial nations of the world, can the relative values of these two metals be permanently fixed, or fixed sufficiently to justify the erection of a double standard in one country, and in our present condition, if the undervaluation of the silver dollar of 16 parts to 1 of gold prior to 1873 swept from us our silver, *a fortiori* the undervaluation in 1878 of gold 10 per cent. relatively to silver will sweep from us our gold still more rapidly and just as certainly. Is there a doubt of the truth of that proposition?

Do not let us suppose that by our passing a law single-handed and alone, without the coöperation of those with whom we are in association in industry and commerce, we can fix a standard which shall be maintained abroad and here. Gentlemen might just as well tie up the vane, the weathercock, and fix it in a certain direction, and believe that the wind will forever blow from that point. The relative value of the two metals must be justly fixed, otherwise one of them will be lost from the circulation in which they are sought to be placed.

Therefore I say I shall vote with pleasure for this amendment of the honorable Senator from Iowa [Mr. Allison], and in the meantime I shall be most willing to see coined freely this dollar of 412½ grains, provided it shall not be used in a way to disturb our measures of value and account. In other words,

as it is of lower bullion value than the dollar which we call it, we shall give it a limited power in the payment of debts.

In the meantime and while this process of coinage is going on we can propose the coöperation and general agreement of other nations to a ratio between the metals. If the amount is limited to a legal tender of $10 in any one payment, so as not to interfere with gold payments, then when this commission shall have made its return to us, when we have by treaty established some means of fixing and maintaining a double standard by force of the combined legislation of other nations with our own, then we shall be in a condition to take advantage of any result that may follow. If we have undervalued the coin we shall call it in and stamp it with the value that shall be agreed on. If we have overvalued the coin we shall simply add to it, call it in and stamp it according to the new arrangement.

In either case we simply should have added to the currency of our own country, and for amounts which we have the power to control and for payments which will not interfere with the great business of exchanges between our own and other countries. It will be an honest currency of intrinsic value, and should it be that experience shall show us that we shall have to give it up as an international currency it still will be of use for our own people within our own boundaries. And the quantity that would be coined within time to ascertain this will not be in any degree inconvenient or excessive.

Nay, further, if the people of this country shall find that this disk, larger than those which they have been accustomed to, shall be needed in vast and increased amounts for their domestic uses, so be it; but do not let the producing classes of this country—and when I say them I mean the laboring classes, for labor alone produces—do not let them suppose that they will not be at a serious disadvantage, when they are dealing with a measure of values that shrinks up in distortion the moment that it touches the standard of those nations with whom they deal.

By resuming on a gold basis, we should not only prevent our bonds from coming back upon us from Europe and breaking down the market for all securities and producing a panic, the result of which no man can fully measure, but we should encourage other capital to come to us from Europe. It was only the other day that I saw in a newspaper of the South the proposition that the honorable Senator from Georgia [John B. Gordon] should be sent abroad for the purpose of procuring

loans of capital from European sources for the purpose of developing the resources of the South. Sir, such a result is most devoutly to be desired, but I would say to my friend and to those who propose to send him that it will be utterly idle to propose to the owner of any capital an investment the measure of value of which shall be a fluctuating commodity. One thing capital will and must have, certainty, security; and, that being given, then the money becomes cheap because interest is low. Bad security means high interest, and good security means cheap money; and every man knows that who has ever enjoyed good credit.

Benefit to public credit is benefit to private credit. Confidence will fill the atmosphere that surrounds all transactions; the creditor will feel more secure, and be more easy and liberal with his debtor, and the productive industry of the country will thrive in connection and with the ready aid of the capital of the country. Tariff reformation comes in an important element to unfetter the trade of this country, and let us deal more directly and more upon the principle of reciprocity with those countries whose prosperity is so consistent with our own. All this seems to me plainly within sight; and I ask shall the adoption of this unwise measure turn us back? It may enable some overburdened holder of unimproved lands or other unproductive real estate to scale his debts; but, where it helps one such man, it will bring new privations unto thousands of homes; and I say candidly that I fear that this measure will prove but the entering-wedge of renewed discredit and depreciation of our currency. As you shall diminish the purchasing power of the currency you create necessity for the increase of its volume, and there lies the danger which it seems to me necessitates a renewal of the events and legislation of 1864 and 1865, and 1866, and a reinflation of paper issues, the weaker in credit the greater in amount; and a reinflation of paper issues of this Government means national bankruptcy and nothing else.

On February 5 Timothy O. Howe [Wis.] supported the Bland bill.

We are vociferously told that the President will veto the pending bill. To that effect I will believe no tongue but the President's. But if I had access to his ear I should not hesitate to tell him it was his duty not to thwart, but to aid, the friends of the bill in passing it, and to approve it when passed, and

that it was his duty also, before the ides of March have come, to instruct every one of his ministers abroad to make early and earnest representation to the several governments to which they are accredited that the dearest interests of millions now everywhere languishing in adversity, and of other millions which every succeeding generation must add, that the welfare of the world, if not its peace, demands the prompt remission of all efforts to ostracise either of the precious metals from the standard of value and from the medium of exchange. I believe one-half the effort, to say nothing of the money, expended to bring this country into the great conspiracy would explode the conspiracy. But if other governments should prove deaf to these representations we could still show the suffering of all lands that there is here still a home for the oppressed where a generous soil and just laws await them, and where capital and labor are secured in their equal rights.

But we are told the cheaper metal will drive out the dearer and gold will be banished from our circulation. Silver will not drive out anything. Silver is not aggressive; put a silver and a gold dollar into the same purse and they will lie quietly together. If the owner wishes to part with one he can part with either. Neither will go abroad unless the owner sends it, and he will not send it unless he gets something he would rather have in exchange for it. That does not impoverish the owner nor injure any one else.

But the gold, they say, will all disappear and we shall be deluged with silver. Sir, let us not be frightened by terms. "Be deluged with silver?" I admit the last deluge which visited the world was wet, uncomfortable, and destructive; but a deluge of silver is quite another affair. That is dry and so dense that the weakest swimmer could keep on the surface without the aid of an ark, and it would be so great a novelty that I would be glad to be visited by such a deluge.

But, again, it is so heavy to handle it! Then do not handle it. Accept the proposition moved by the Senator from Maine [James G. Blaine], let your mints stamp bars instead of coining dollars; let the Treasury hold the bars, issue certificates for them, and then you will have a paper circulation not merely representing coin, but actually convertible into coin at the pleasure of the holder. But gold will not vanish in the presence of silver. It has not fled from the presence of greenbacks, not even when greenbacks were worth less than forty cents on the dollar in gold. The world has had all the gold it found absolutely necessary.

But after all we are asked why not put into the silver dollar the present commodity value of the gold dollar? I answer, for many and most commanding reasons.

In the first place, debts, public and private, have been contracted which aggregate thousands of millions of dollars. Each dollar is payable by 412½ grains of silver. You have no right to compel the delivery of 440 or 454 grains for each dollar. That is filching; only a few hundred millions, to be sure, but it is filching.

Secondly. Putting in that quantity of silver would make the measure a *felo de se*. The great object I aim at is to restore silver to that standard by which you measure the labor and the products of the world and to that medium by which you exchange the products of the world, and therefore I ask you to coin it into money once more. You say—yes, if you are allowed to put more into a dollar than can be procured for a dollar. Who does not see that silver cannot be coined upon such terms? Daily we are told by the opponents of the bill that when the coinage act of 1873 was passed silver dollars were not coined because 412½ grains could not be afforded for a dollar. This nation and other nations denounced silver as money, and it fell in the market. Now you generously offer to restore it at 454 grains to the dollar. When silver was money we could not get 412½ grains for a dollar in gold; we demonetized it; we can now buy, you say, 454 grains for a gold dollar. So you will consent to remonetize silver at that rate? Suppose once more all existing contracts for dollars were, instead, contracts for so many bushels of grain; that grain had in 1873 been recognized by commercial nations to include both barley and wheat, and both had commanded substantially the same price in the markets. Suppose, then, we had degrainetized barley; had enacted that it should not be deliverable on grain contracts. Of course the demand for barley would thereby greatly diminish; its price would decline. As the demand for wheat would correspondingly increase, its price would rise. Suppose we had watched the rise of wheat and the fall of barley until two bushels of the latter would only buy one of the former. Suppose there came to us then, as there would be sure to come, a cry like that we hear now, "the world cannot produce the wheat to fill our grain contracts; barley is abundant, and for it there is little use. In the name of mercy regrainetize barley." Can anyone who knows the honorable chairman of the Committee on Finance conceive that he would respond to such a demand, "Yes, we will permit you to deliver

barley for grain once more, provided you will deliver two bushels for one"?

I insist that silver shall be restored to the medium of exchange; but I am told that the two coins must be of equal value not only in our market but in all markets. Well, I say the first step toward equalization of the two is to remonetize both. When you have done that, I will agree to a convention of representatives from the commercial nations to establish a common relation. There can be no question that the general recognition of silver as money would demonstrate that the ratio fixed by the pending bill is too high rather than too low. But I will not consent to build a "lean-to" upon our coins so often as the malign legislation of any foreign government may succeed in discrediting the metal of which they are composed.

On February 6 Allen G. Thurman [O.] supported the Bland bill.

It is argued that if this bill pass silver will be a less valuable currency than gold and will expel gold from the country, in accordance with what is called Gresham's law, namely, that the less valuable currency drives out the more valuable. And hence several amendments have been offered to increase the number of grains in the silver dollar so as to make it an equivalent, as it is said, of the gold dollar.

This objection to the bill rests upon the assumption that the silver dollar of 412½ grains, if made full legal tender, will be of less value than the gold dollar.

But is this assumption true? The relative value of silver and gold, if the silver dollar of 412½ grains be coined and the gold dollar remain at 25.8 grains, will be 15.98 parts of standard silver for 1 part of standard gold. But in France and the other states of the Latin union the relative value is 15½ of silver to 1 of gold. So that as compared with those states we undervalue silver; and yet the silver five-franc piece is equal in value to the gold five-franc piece, and there is more gold in France than in England and Germany together, though England has long since demonetized silver except as a subsidiary coin, and Germany has decreed its demonetization, though she has not fully executed her decree.

I know that it is said that the reason why silver coins and gold coins are at par in France and the other states of the Latin union is because they have ceased to coin silver. But they have a stock of silver coins that we cannot for years acquire; that is,

it will take years for us to acquire an amount equal to theirs, and if they can now maintain a par between silver and gold, at the ratio of 15½ to 1, why cannot we maintain such a par at the ratio of 15.98 to 1? Nothing is more certain than that the depreciation in the market value of silver bullion is the result of the demonetization of silver by Germany and the United States and the efforts being made to demonetize it in the Latin union states.

Remonetize it in the United States and it seems to me that the probable effect will be to put a stop to its demonetization elsewhere, even if it does not bring about the readoption of the bimetallic standard in those countries that have adopted, improvidently as I think, the single gold standard. It is not correct reasoning to treat silver simply as a marketable commodity, simply as bullion. Such reasoning loses sight of the value that results from the function of money and the full legal-tender quality. If the greenback, which has no intrinsic value, no circulation outside of the United States, and is but a limited legal tender even here, is yet within less than 2 per cent. of par with gold, why should not silver money, which has intrinsic value and which circulates over the greater part of the globe, if endowed with the full legal-tender faculty, rise to a par with gold, especially if we rate the metals at 15.98 to 1, while most other nations using both give but 15½ for 1?

One reason why greenbacks have been and are depreciated is the fact that they have not been receivable in payment of customs duties or of interest on the public debt. But make the silver dollar at 412½ grains full legal tender and it will be receivable for both these purposes, and it must closely approximate, if it does not reach, a par with gold. I believe that it will reach that par.

But suppose it does not, and suppose Gresham's law to have its effect, to what extent would gold be expelled from the country by silver? Manifestly only so far as silver supplanted it. Three hundred millions in gold could not be driven out by an issue of fifty millions of silver—the utmost effect could only be to expel fifty millions of gold whose place would be taken by silver—and the volume of metallic money would remain the same. But would the fifty millions of gold be expelled? Not unless three hundred millions was all the metallic money that the country needed. If it needs three hundred and fifty millions (and it needs more than that to safely and certainly maintain specie payments), the gradual addition of fifty millions of silver to three hundred millions of gold would not drive gold out. But

in truth we have not the half of three hundred millions of gold, and when we consider how slow will be the process of coining silver dollars we will find that we are in no immediate danger of losing our gold.

If gold be expelled it will not be so much by a silver currency as by our small notes. The one and two-dollar notes tend to expel both gold and silver, while the five and ten-dollar notes drive gold out of circulation. Gold circulates largely in England and France, but the Bank of England issues no note of a less denomination than £5 ($25) and the Bank of France now pays out no note of a less denomination than 100 francs (nearly $20). Those who argue against this bill because they want a gold currency—not a mere standard of value, but an actual, free, and customary circulation of gold coins—lose sight of the fact that we never have had and never can have such a circulation while we continue to use small notes of either the banks or the Government.

Metallic money is said to have two faculties, namely, that it is a standard of value and an instrument of exchange. I shall not go into the much-disputed question of its merits and demerits as a standard of value, or whether it is possible to establish any such standard that will be invariable; but it is obvious that to serve as an instrument for the exchange of property or services it must circulate. But it will not circulate, except as subsidiary coins, in any country that uses small paper money. Whether the people of the United States will ever give up the use of small notes I do not venture to predict; but, if they will not, they must agree that, with us, metallic money shall be shorn of one of its functions, that of a circulating medium.

In direct opposition to those who say that the dollar of 412½ grains if coined and made full legal tender will expel gold from the country another set of reasoners say that it is silver that will go out. Their reasoning is that money flows to that country where its purchasing power is the greatest, and that as silver is undervalued in the dollar of 412½ grains as compared with its valuation in the states of the Latin union it will leave our country and flow into those states. And so it undoubtedly would tend to do were those states to open their mints to an unlimited coinage of silver five-franc pieces. But will they do so? I think not. I think they will neither do that nor will they demonetize silver. I think that France, for instance, dare not demonetize silver. But I expect that she will coin it to but a limited amount so as to preserve its par with gold. And if that shall continue to be her policy we will be in little danger of losing our silver.

Another objection to the bill—the opposite of that last considered—is that if it become a law we will be flooded with silver; that Germany will pour her surplus upon us and our mines will produce so much that we will have more than we know what to do with.

I have no fears from Germany. It is said that she has eighty millions to spare. Suppose it were all poured into the United States, I think that we could absorb it without injury. But will it be? Certainly not, as it seems to me. I do not believe that Germany can spare eighty millions of her silver. But, if she could, the greater part of it would be much more likely to go to Asia and to Russia, Austria, and Spain, to say nothing of the Latin states, than to come to us who undervalue silver as compared with the rest of the world.

Nor do I think that we have anything to fear from an excessive product of our mines. I have not been considered an inflationist, but I know of no valid reason against enlarging our specie basis, and if we are to have and maintain specie payments it must be enlarged.

Another objection to the bill is the well-known argument against bimetallism. It is said that bimetallism is incompatible with an unvarying standard of value; that to have such a standard we must use but one metal; and that, for several reasons, gold is preferable to silver. And the most gloomy pictures have been drawn of the ruin that will befall our country if we return to bimetallism.

I shall not, Mr. President, go into an extended discussion of the bimetallic and monometallic theories, about which so much has been said and written and upon which such opposite opinions are entertained. I prefer to rest upon a few facts that cannot be disputed and which seem to me to be a sufficient answer to the objection.

I premise, however, that it is by no means certain that the standard of value is less variable in monometallic than it is in bimetallic countries. An absolutely unvarying standard of value is an impossibility; and the thinkers who have endeavin any one thing. Neither gold nor silver, nor any annual product of the earth or of human industry, nor the wages of labor (once insisted upon as the best standard) have been found to solve the problem. And hence it has been argued, with no little zeal, that the average price, or the average cost of production, of a number of commodities, some say as many as twenty, must be taken to find a standard of value even approximately correct.

I merely glance at these speculations of ingenious men and rely upon the judgment and experience of mankind, who for thousands of years have considered and found gold and silver to furnish the nearest possible approach to an unvarying standard, and the safest though not the most convenient instrument of exchange. I am content to rest upon this experience, which has been full, ample, enduring, until something better shall be discovered, should that event ever take place. But now, in answer to the gloomy forebodings we have heard, the predictions of ruin should this bill become a law, I wish to appeal for a moment to the teachings of history.

Mr. President, has there ever been, so far as we know, a more prosperous country than were the United States from 1789 to 1861? Did any nation ever exceed the progress we made in population, wealth, education, refinement, and the general well-being of the people, in those seventy-two years? And yet during all that period we had bimetalism; for we gave no preference to gold over silver, or to silver over gold. Those metals fluctuated then as they have done since, and probably ever will do, but no American statesman of that period thought of demonetizing either. Great Britain had set the example of demonetizing silver as early as 1816, and adopted the single gold standard, but neither the American people nor the American Congress thought of following that example.

And now, Mr. President, let us turn to Europe for a moment, and what do we hear? The wailings of thousands of laboring men, women, and children thrown out of employment; the cries of anguish of thousands of other men who but a year ago were rich but now are bankrupts; in a word, the same notes of sorrow that so afflict our ears in our own distressed land. But from what countries do they mainly come? From two, sir—from two—from gold, monometallic England and gold, monometallic Germany; while bimetallic France, the land of silver as well as gold, enjoys a prosperity hardly exceeded by that of any people on the earth.

Among the gloomy predictions that have been uttered in this debate is the assertion that if this bill pass our foreign commerce will be disjointed and the national credit be destroyed.

Our foreign commerce disjointed! Why, sir, have we not carried on the business of this country for the last sixteen years upon an inconvertible paper currency, and has our foreign commerce been destroyed or disjointed? Do we not import all we need? Do we not export more than we ever before exported? Is not the balance of trade in our favor? And if all this be

true with a home currency of inconvertible paper money how can any man who has the faculty of thought seriously believe that our condition would be worse with an ample basis of metallic money to support our paper issues?

The national credit destroyed! How destroyed? By complying to the letter with our national obligations; by paying precisely as we promised to pay? Sir, when silver was demonetized it was worth more than gold. We seemed to have elected to pay our obligations in the cheaper metal. Did that destroy the national credit?

England, in 1816, adopted the single gold standard when gold was cheaper than silver. Did that destroy her credit, did that humiliate and degrade her in the eyes of the civilized world?

No, Mr. President, the United States need no such prop as the single gold standard to support their credit. The resources of this country are too great and too well known, her fidelity to her obligations has been too well proved, for her credit to suffer by her return to her ancient, constitutional, and well-approved policy. And, for one, I long for the day, which I am too old ever to see, but which will come, when our obligations, national, State, municipal, and corporate, will be held at home and not abroad; when there will be no annual drain of the resources of America to impoverish our own people and to enrich foreign nations.

"Our bonds will be returned from Europe if we pass this bill," cries an alarmist. No, sir, they will not be returned; or if they be to some small extent, or even in great amounts, they will soon be recalled. The telegraph says this morning that $6,000,000 are on their way from England. They will be getting back there very soon, whether this bill pass or not; for were every one of them payable in silver coin, and were the depreciation of silver to continue, the interest upon them would be greater than any equally safe European public stock affords. But, again, they will not be returned unless they can find purchasers in the United States. Suppose they do find such purchasers, will not every one of you, Senators, congratulate yourself that our public debt is held at home? Will not every one of you remember that a principal reason why England can endure her immense indebtedness, why France can live under hers, is that English debts are held by Englishmen and French debts are held by Frenchmen? And will you not hail the day when American debts shall be held by Americans and by Americans alone?

On February 7 James G. Blaine [Me.] supported Senator Allison's amendment.

I believe if Germany were to remonetize silver, and the kingdoms and states of the Latin Union were to reopen their mints, silver would at once resume its former relation with gold. The European countries when driven to full remonetization, as I believe they will be, must of necessity adopt their old ratio of fifteen and a half of silver to one of gold, and we shall then be compelled to adopt the same ratio instead of our former sixteen to one. For if we fail to do this we shall, as before, lose our silver, which like all things else seeks the highest market; and if fifteen and a half pounds of silver will buy as much gold in Europe as sixteen pounds will buy in America, the silver, of course, will go to Europe. But our line of policy in a joint movement with other nations to remonetize is very simple and very direct. The difficult problem is what we shall do when we aim to reëstablish silver without the coöperation of European powers, and really as an advance movement to coerce them there into the same policy. Evidently the first dictate of prudence is to coin such a dollar as will not only do justice among our citizens at home, but will prove a protection—an absolute barricade—against the gold monometallists of Europe, who, whenever the opportunity offers, will quickly draw from us the one hundred and sixty millions of gold coin still in our midst. And if we coin a silver dollar of full legal-tender, obviously below the current value of the gold dollar, we are opening wide our doors and inviting Europe to take our gold. And with our gold flowing out from us we are forced to the single silver standard and our relations with the leading commercial countries of the world are at once embarrassed and crippled.

The question before Congress then—sharply defined in the pending House bill—is, whether it is now safe and expedient to offer free coinage to the silver dollars of 412½ grains, with the mints of the Latin Union closed and Germany not permitting silver to be coined as money. At current rates of silver, the free coinage of a dollar containing 412½ grains, worth in gold about ninety-two cents, gives an illegitimate profit to the owner of the bullion, enabling him to take ninety-two cents' worth of it to the mint and get it stamped as coin and force his neighbor to take it for a full dollar. This is an undue and unfair advantage which the Government has no right to give to the owner of silver bullion, and which defrauds the man who is forced to take the dollar. And it assuredly follows that, if we give free

coinage to this dollar of inferior value and put it in circulation, we do so at the expense of our better coinage in gold; and, unless we expect the uniform and invariable experience of other nations to be in some mysterious way suspended for our peculiar benefit, we inevitably lose our gold coin. It will flow out from us with the certainty and resistless force of the tides. Gold has indeed remained with us in considerable amount during the circulation of the inferior currency of the legal tender; but that was because there were two great uses reserved by law for gold: the collection of customs and the payment of interest on the public debt. But, if the inferior silver coin is also to be used for these two reserved purposes, then gold has no tie to bind it to us. What gain, therefore, would we make for the circulating medium, if, on opening the gate for silver to flow in, we open a still wider gate for gold to flow out? If I were to venture upon a dictum on the silver question, I would declare that until Europe remonetizes we cannot afford to coin a dollar as low as 412½ grains. After Europe remonetizes on the old standard, we cannot afford to coin a dollar above 400 grains. If we coin too low a dollar before general remonetization our gold will flow out from us. If we coin too high a dollar after general remonetization our silver will leave us. It is only an equated value both before and after general remonetization that will preserve both gold and silver to us.

The responsibility of reëstablishing silver in its ancient and honorable place as money in Europe and America devolves really on the Congress of the United States. If we act here with prudence, wisdom, and firmness, we shall not only successfully remonetize silver and bring it into general use as money in our own country, but the influence of our example will be potential among all European nations, with the possible exception of England. Indeed, our annual indebtment to Europe is so great that if we have the right to pay it in silver we necessarily coerce those nations by the strongest of all forces, self-interest, to aid us in upholding the value of silver as money. But if we attempt the remonetization on a basis which is obviously and notoriously below the fair standard of value as it now exists, we incur all the evil consequences of failure at home and the positive certainty of successful opposition abroad. We are and shall be the greatest producers of silver in the world, and we have a larger stake in its complete monetization than any other country. The difference to the United States between the general acceptance of silver as money in the commercial world and its destruction as money will possibly equal within the next

half century the entire bonded debt of the nation. But to gain this advantage we must make it actual money—the accepted equal of gold in the markets of the world. Remonetization here followed by general remonetization in Europe will secure to the United States the most stable basis for its currency that we have ever enjoyed, and will effectually aid in solving all the problems by which our financial situation is surrounded.

On the much-vexed and long-mooted question of a bimetallic or monometallic standard my own views are sufficiently indicated in the remarks I have made. I believe the struggle now going on in this country and in other countries for a single gold standard would, if successful, produce widespread disaster in the end throughout the commercial world. The destruction of silver as money and establishing gold as the sole unit of value must have a ruinous effect on all forms of property except those investments which yield a fixed return in money. These would be enormously enhanced in value, and would gain a disproportionate and unfair advantage over every other species of property. If, as the most reliable statistics affirm, there are nearly seven thousand millions of coin or bullion in the world, not very unequally divided between gold and silver, it is impossible to strike silver out of existence as money without results which will prove distressing to millions and utterly disastrous to tens of thousands. Alexander Hamilton, in his able and invaluable report in 1791 on the establishment of a mint, declared that "to annul the use of either gold or silver as money is to abridge the quantity of circulating medium, and is liable to all the objections which arise from a comparison of the benefits of a full circulation with the evils of a scanty circulation." I take no risk in saying that the benefits of a full circulation and the evils of a scanty circulation are both immeasurably greater to-day than they were when Mr. Hamilton uttered those weighty words, always provided that the circulation is one of actual money, and not of depreciated promises to pay.

In the report from which I have already quoted Mr. Hamilton argues at length in favor of a double standard, and all the subsequent experience of well-nigh ninety years has brought out no clearer statement of the whole case nor developed a more complete apprehension of this subtle and difficult subject. "On the whole," says Mr. Hamilton, "it seems most advisable not to attach the unit exclusively to either of the metals, because this cannot be done effectually without destroying the office and character of one of them as money and reducing it to the situation of mere merchandise." And then Mr. Hamilton wisely

concludes that this reduction of either of the metals to mere merchandise (I again quote his exact words) "would probably be a greater evil than occasional variations in the unit from the fluctuations in the relative value of the metals, especially if care be taken to regulate the proportion between them with an eye to their average commercial value." I do not think that this country, holding so vast a proportion of the world's supply of silver in its mountains and its mines, can afford to reduce the metal to the "situation of mere merchandise." If silver ceases to be used as money in Europe and America, the great mines of the Pacific slope will be closed and dead. Mining enterprises of the gigantic scale existing in this country cannot be carried on to provide backs for looking-glasses and to manufacture cream pitchers and sugar bowls. A vast source of wealth to this entire country is destroyed the moment silver is permanently disused as money. It is for us to check that tendency and bring the continent of Europe back to the full recognition of the value of the metal as a medium of exchange.

I must say, Mr. President, that the specific demand for the payment of our bonds in gold coin and in nothing else comes with an ill grace from certain quarters. Hard names are hurled at us across the ocean, for simply daring to state that the letter of our law declares the bonds to be payable in standard coin of July 14, 1870; expressly and explicitly declared so, and declared so in the interest of the public creditor, and the declaration inserted in the very body of the eight hundred million of bonds that have been issued since that date. Beyond all doubt the silver dollar was included in the standard of coins of that public act. Payment at that time would have been as acceptable and as undisputed in silver as in gold dollars, for both were equally valuable in the European as well as in the American market. Seven-eighths of all our bonds, owned out of the country, are held in Germany and in Holland, and Germany has demonetized silver and Holland has been forced thereby to suspend its coinage, since the subjects of both powers purchased our securities. The German Empire, the very year after we made our specific declaration for paying our bonds in coin, passed a law destroying, so far as lay in their power, the value of silver as money. I do not say that it was specially aimed at this country, but it was passed regardless of its effect upon us, and was followed, according to public and undenied statement, by a large investment on the part of the German government in our bonds, with a view, it was understood, of holding them as a coin reserve for drawing gold from us to

aid in establishing their gold standard at home. Thus, by one move the German Government destroyed, so far as lay in its power, the then existing value of silver as money, enhanced consequently the value of gold, and then got into position to draw gold from us at the moment of their need, which would also be the moment of our own sorest distress. I do not say that the German Government in these successive steps did a single thing which it had not a perfect right to do, but I do say that the subjects of that empire have no right to complain of our Government for the initial step which has impaired the value of one of our standard coins. And the German Government, by joining with us in the remonetization of silver, can place that standard coin in its old position and make it as easy for this Government to pay and as profitable for their subjects to receive the one metal as the other.

When we pledged to the public creditor in 1870 that our obligations should be paid in the standard coin of that date, silver bullion was worth in the London market a fraction over sixty pence per ounce; its average for the past eight months has been about fifty-four pence; the price reckoned in gold in both cases. But the large difference is due partly to the rise in gold as well as to the fall in silver. Allowing for both these causes and striking the difference, it will be found, in the judgment of many of the wisest men in this country, perfectly safe to issue a dollar of 425 grains standard silver; as one that, anticipating the full and legitimate influence of remonetization, will equate itself with the gold dollar, and effectually guard against the drain of our gold during the time necessary for international conference in regard to the general reëstablishment of silver as money. And when that general reëstablishment shall be effected with a coinage of fewer grains, the dollar which I am now advocating will not cause loss or embarrassment to anyone. The miner of the ore, the owner of the bullion, the holder of the coin, and the Government that issues it will all in turn be benefited. It will yield a profit on recoinage and will be advantageously employed in our commercial relations with foreign countries. Meanwhile it will insure to our laborers at home a full dollar's pay for a dollar's worth of work.

And I think we owe this to the American laborer. Ever since we demonetized the old dollar we have been running our mints at full speed, coining a new silver dollar for the use of the Chinese coolie and the Indian pariah—a dollar containing 420 grains of standard silver, with its superiority over our ancient dollar ostentatiously engraved on its reverse side. To

these "outside barbarians" we send this superior dollar, bearing all our national emblems, our patriotic devices, our pious inscriptions, our goddess of liberty, our defiant eagle, our federal unity, our trust in God. This dollar contains 7½ grains more silver than the famous "dollar of the fathers" proposed to be recoined by the pending bill, and more than four times as many of these new dollars have already been coined as ever were coined of all other silver dollars in the United States. In the exceptional and abnormal condition of the silver market now existing throughout the world we have felt compelled to increase the weight of the dollar with which we carry on trade with the heathen nations of Asia. And shall we do less for the American laborer at home? Nay, shall we not do a little better and a little more for those of our own blood and our own fireside? If you remonetize the dollar of the fathers your mints will be at once put to work on two different dollars; different in rate, different in value, different in prestige, different in their reputation and currency throughout the commercial world. It will read strangely in history that the weightier and more valuable of these dollars is made for an ignorant class of heathen laborers in China and India, and that the lighter and less valuable is made for the intelligent and educated laboring man who is a citizen of the United States. Charity, the adage says, begins at home. Charity, the independent American laborer scorns to ask, but he has the right to demand that justice should begin at home. And, in his name and in the name of common sense and common honesty, I ask that the American Congress will not force upon the American laborer an inferior dollar which the naked and famishing and degraded laborers of India and China refuse to accept.

The bill which I now offer as a substitute for the House bill contains three very simple provisions:

1. That the dollar shall contain four hundred and twenty-five grains of standard silver, shall have unlimited coinage, and be an unlimited legal tender.

2. That all the profits of coinage shall go to the Government, and not to the operator in silver bullion.

3. That silver dollars or silver bullion, assayed and mint-stamped, may be deposited with the Assistant Treasurer at New York, for which coin certificates may be issued, the same in denomination as United States notes, not below ten dollars, and that these shall be redeemable on demand in coin or bullion, thus furnishing a paper circulation based on an actual deposit of precious metal, giving us notes as valuable as those of the

Bank of England and doing away at once with the dreaded inconvenience of silver on account of bulk and weight.

I do not fail, Mr. President, to recognize that the committals and avowals of Senators on this question preclude the hope of my substitute being adopted. Indeed I do not fail to recognize that on this question I am not in line with either extreme; with those who believe in the single gold standard or with those who by premature and unwise action, as I must regard it, would force us to the single silver standard. Either will be found, in my judgment, a great misfortune to this country. We need both gold and silver, and we can have both only by making each the equal of the other. It would not be difficult to show that, in the nations where both have been fully recognized, the most widely diffused, the steadiest and most continuous prosperity has been enjoyed; that true form of prosperity which reaches all classes, but which begins with the day-laborer whose toil lays the foundation of the whole superstructure of wealth. The exclusively gold nation like England may show the most massive fortunes in the ruling classes, but it shows also the most helpless and hopeless poverty in the humbler walks of life. The gold and silver nation like France can exhibit no such individual fortunes as abound in England, but it has a peasantry that with their silver savings can pay a war indemnity that would have beggared the gold bankers of London, and to which the peasantry of England could not have contributed a pound sterling in gold nor a single shilling in silver.

The effect of paying the labor of this country in silver coin of full value, as compared with the irredeemable paper or as compared even with silver of inferior value, will make itself felt in a single generation to the extent of tens of millions, perhaps hundreds of millions, in the aggregate savings which represent consolidated capital. It is the instinct of man from the savage to the scholar—developed in childhood and remaining with age—to value the metals which in all tongues are called precious. Excessive paper money leads to extravagance, to waste, and to want, as we painfully witness on all sides to-day. And in the midst of the proof of its demoralizing and destructive effect, we hear it proclaimed in the Halls of Congress that "the people demand cheap money." I deny it. I declare such a phrase to be a total misapprehension, a total misinterpretation of the popular wish. The people do not demand cheap money. They demand an abundance of good money, which is an entirely different thing. They do not want a single gold standard that will exclude silver and benefit those already rich. They do not

want an inferior silver standard that will drive out gold and not help those already poor. They want both metals, in full value, in equal honor, in whatever abundance the bountiful earth will yield them to the searching eye of science and to the hard hand of labor.

The two metals have existed side by side in harmonious, honorable companionship as money, ever since intelligent trade was known among men. Through all ages and through all changes, silver and gold have reigned supreme, as the representatives of value, as the media of exchange. The dethronement of each has been attempted in turn, and sometimes the dethronement of both; but always in vain! And we are here to-day, deliberating anew over the problem which comes down to us from Abraham's time; *the weight of the silver,* that shall be "current money with the merchant." [Applause in the galleries.]

On February 14 John P. Jones [Nev.] supported the bill.

As a question of political ethics, are governments morally bound, in respect of their own debts or generally in respete of the relation between debtor and creditor, to maintain not only invariability in the coin standard, meaning thereby weight and purity of metal, but also to maintain invariability in the commercial value or purchasing power of such coin?

This question was never raised until very modern times nor until the purchasing power of metallic money manifested a decreasing tendency, and was never raised except by the creditors, fundholders, annuitants, and income classes of the world.

The epithets of swindler and repudiator, according to modern ethics, seem not to apply when, through the vicissitudes of mining or other causes, money is rising in value and creditors are thereby enabled to reap where they have not sown, to exact more than they have loaned. Under all circumstances, as it would seem, the interests of the creditor classes are to be protected, and if possible enlarged. The epithets of swindler and repudiator are reserved for the debtor class, when, from the operation of causes which they have not brought about and over which they have no control, a divergence occurs in the value of the money metals, in either of which they have the right to pay if they do not foolishly exercise their option by paying in the dearer metal. They are denounced as lunatics if they demand

the privilege of paying in accordance with the precise terms of their contracts. The people are denounced in these dishonoring terms if they dare to resist attempts either to increase the weight of the coins which they have promised or to diminish the number of the money metals existing when the contracts were made.

So far as this question of honor and equity is concerned, I shall content myself at this time with declaring my deliberate conviction to be that the metallic-money system loses the only recommendation which it has if its value is not remitted to the automatic limitation of production without any governmental interference whatever. On this point I agree with all the advocates of metallic money, from John Locke down to the Senator from Vermont [Mr. Edmunds]. In a speech delivered in the Senate on December 5, 1867, Mr. Edmunds said:

> Our own gold and silver coins always have been and are still defined by law to contain in each denomination, be it a dime, a dollar, or an eagle, a certain named weight of silver or gold. They are the ultimates of value, the money of the Government.

And he fortified his position by quotations from John Locke, whose works he declared to be a "boon to mankind," one of these quotations being as follows:

> All contracts or engagements are to be deemed fully discharged and satisfied by payment of the specific quantity or sum of money agreed upon, without having any regard to the value of money with respect to other things at the different times of contracting and discharging of debts.

This quotation, of his own selection, from his favorite authority, will, I have no doubt, be conclusive with the Senator from Vermont, and ought to be conclusive with the Senate, upon the justice and equity of paying debts in strict accordance with the letter of the contract.

The question of fact, whether or not silver has lost purchasing power in a corresponding ratio to the widening of the relation between it and gold since 1873, or whether it has lost purchasing power to any extent whatever since that time, is the particular question which I now propose briefly to discuss. I think it will be made very clearly to appear that silver since 1873, although discrowned and shorn of its monetary function, denied mintage throughout the entire western world, and degraded to the rank of a commodity, instead of having become less valuable has nevertheless increased in its command over services and all kinds of property; that both gold and silver

have gained in purchasing power, and that silver only seems to have fallen in value because it has not risen to so great an extent as gold.

If these positions can be established, or if all the known facts tend to establish them, then the equitable objection to the payment of the national bonds in silver dollars of 412½ grains completely fails and must be abandoned.

In deciding whether silver has or has not depreciated in value it is indispensable that all the facts bearing upon the question be viewed from a proper point of observation. In order to discover the direction in which a boat is moving when headed to the current the shore, and not the stream, must be observed. Upon an alteration in the exchange relations between two commodities or between a single commodity and money, it is apparent as between them alone that one has risen or that the other has fallen in value. But in order to decide correctly which has really risen and which really fallen, comparison must be made between their present relations respectively and their previous relations to all other things in exchange.

A fall in the price of any one commodity would be justly regarded as a fall in its value and not as a rise in the value of money, and such fall might, to all appearances, overtake one commodity after another until the whole range of commodities and services would seem to have fallen and money would seem to have remained stationary. But all sound thinkers and writers on economical science agree that this is impossible and that a fall in general prices is the sure and only proof of a rise in the value of money.

The Englishman who looks through spectacles made of gold sovereigns believes without a single doubt—in fact knows—that for the past four years he has seen silver fluctuating and falling in value. The citizen of this country, looking through the metallic monetary unit last in use here, and with which he is most familiar, or when he borrows the Englishman's spectacles, thinks he sees the same thing. But the East Indian, who looks through spectacles of silver rupees, is equally confident that during the same period he has seen gold fluctuating and rising.

The idea that gold is the unmoving, unvarying center of value, around which all other values revolve in eccentric, irregular orbits,[1] is expressed in a letter from Mr. Royal Phelps, a distinguished New York merchant, to the United States monetary commission, in the following extraordinary statement:

[1] The speaker is cleverly discrediting this idea by comparing it to the absolute Ptolemaic theory in astronomy.

> Gold never rises or falls; it is now the sole and universal standard of value. Everything else which is exchanged or traded for rises or falls in accordance with the abundance or scarcity of this one metal.

Literally translated, this language conveys the idea that, while all other things may rise or fall in value relatively to gold, gold itself, rising superior to the economic laws that regulate and govern values, remains unchanged in its relations and unmoved in value.

The present Secretary of the Treasury, in a public speech not long since delivered, referred to the value of gold as being "as fixed as the sun."

This school shuts its eyes to the flood of light that facts and philosophy are shedding all around it, and stubbornly insists that the laws which govern and regulate all other values are suspended as to gold, and that gold never rises and falls, but is as "fixed as the sun." So did not teach John Locke when he said nearly two centuries ago:

> If you increase or lessen the quantity of money current in traffic, in any place, then the alteration of value is in the money.

And, again:

> Money being looked upon as the standing measure of other commodities, men consider and speak of it still as if it were a standing measure, though when it has varied its quantity it is plain it is not.

And so have taught all the economists since Locke's time, until new and strange doctrines were found to be necessary to justify the striking down of one of the two money metals of the world.

Money is the measure of the value of all other things, but cannot be the measure of itself. Its value is determined not by the price of one thing or many things, but by the average price of all things, by the general relations which it bears in exchange.

The New York *Public* of May 18, 1876, published elaborate tables of the wholesale prices in New York City of the principal articles of commerce, foreign and domestic, as they stood on the first day of May in various years, and covering all the years from 1872 to 1876, both inclusive.

The method adopted by *The Public* was to take quantities of different articles, proportioned to the relative quantities produced or purchased in this country, and to compare the aggregate cost of such quantities in different years, the quantities calculated being, of course, exactly the same in each of the

years compared. This method of deducing an average of prices has the indorsement of recognized authorities in this country and in Europe. The tables furnished by *The Public* show that the same quantities of breadstuffs, cotton, coal, iron, leather, tobacco, wool, butter and cheese, sugar and molasses, provisions, coffee and tea, which could have been bought at wholesale in New York on May 1, 1872, for $85, could be bought on May 1, 1876, for $69. As the premium on gold was almost exactly the same at the two dates, the fall in gold prices could not vary much from the fall in currency prices.

It has been persistently urged that if silver has not yet depreciated, its tendencies are in that direction, and that if we remonetize it we shall be overwhelmed by the discarded, refuse stock of other nations, and that this country will be cursed with a fluctuating, depreciated, unreliable, and worthless money.

Whenever the prediction has been made that the markets were to be flooded with any other articles than silver, such as cotton or wheat, it has generally been deemed necessary, if the object was to affect the prices, production, or use of those articles, to point out specifically from what quarter of the globe the flood might be expected.

But in respect to silver, there have been a beating of gongs and a universal shout of warning to the people to maintain legislative dikes against the incoming floods of that metal, whose sources they have been unable or unwilling to point out. This Chinese system of warfare against silver has proved ineffectual, because upon examination the masses of the people could not see that any evil would result to this country even if the entire stock of German and French silver should be sent here. On the contrary, the people believe that a silver flood of only that magnitude could result in no injury whatever, but would only serve to revive the stagnant industry and commerce of the country, like rain upon the parched, thirsty, and sun-cracked earth.

I have so far considered the rise in the value of gold since 1872 as demonstrated and measured by the average fall in the prices of commodities. But the rise in its value, as shown by the fall in the prices of land and labor, has been vastly greater and has contributed much more powerfully to the business prostration everywhere prevailing. Land and labor immeasurably overshadow in magnitude and importance the aggregate of mere merchandise that was ever in existence at any given period. Land in all civilized countries is the great basis and bulwark of credit, and a general or considerable fall in its price has

never failed to be ruinous to every commercial and industrial interest. It constitutes a great, if not a major, portion of the possessions of mankind.

A general fall in the prices of real estate would not seem to be possible unless caused by an absolute appreciation in the value of the medium in which it is measured, except under the blows of great national calamities, or except under the influence of one of those mysterious cycles of national decadence which at long intervals in the past have frowned darkly now upon one portion and again upon another of the civilized world.

Adam Smith, in treating of labor, said:

> Labor is the real measure of the exchangeable value of all commodities.

This view he maintained with the most conclusive arguments, and the same view is maintained by all reputable economical writers whose works are either read or remembered.

Testing the value of gold by these great measures, labor and real estate, what results do we find? Details need not be given. I hazard nothing in saying that under this crucial comparison it will be found that gold has very nearly, if not quite, doubled in value within the last five years.

Money is the oxygen of exchange, and when through a decrease in quantity it is rising in value commerce and industry become asphyxiated. The business of the world is now writhing and stifling under the exhausted receiver of a standard shrinking and shrunken to the constantly appreciating metal gold alone.

Savings banks, trust companies, and insurance companies are tumbling into ruin every day in all parts of the country. In the great majority of cases the real estate securities, now sinking in value on their hands, were judiciously selected. Their mortgages are weak, not because they were dishonestly or unwisely taken, but because prices have been struck down by legislation impossible to have been foreseen and guarded against.

The fall in the wages of labor, measured in gold, has extended to every part of the western world and over all fields of industry. It has been greatest, as always at periods of stagnation, in the wages of unskilled labor, but has been great in all employments. It is scarcely an exaggeration to say that average wages, measured in gold, have fallen one-half since 1872-'73. It is certainly no exaggeration to say that the receipts of the wage classes have diminished to a much greater extent, if to the fall in wages are added the losses from enforced idleness.

The most deplorable accounts of the condition of labor in England and Germany reach us constantly. In Berlin revolutionary outbreaks have been kept down only by the bayonet and the breech-loader. In England large groups of laborers are on the verge of starvation, and that catastrophe has thus far been staved off only by straining the resources of public and private charity to the utmost.

In this country the distress of labor, reaching a point never before known, has culminated in mobs which have given ominous expression to the despair of the people. The army of the United States, never before used for such a purpose, has been called upon within a twelve-month to perform police duty, to preserve social order, and to protect private property. The advocates of the gold policy, conscious apparently that it will make chronic this condition of things and permanently demand the same remedy, have insited that the numbers of the army should not only be kept up, but enlarged, not to resist foreign enemies, guard forts, or enforce the laws of the United States, but to repress the riotous uprising of a hungry, naked, freezing, and frantic populace.

I have not been unobservant of the efforts to create a general public impression that in advocating the rehabilitation of silver I am controlled by unworthy and sinister motives. Nor am I insensible to the labored endeavor to disparage my action by the repetition of the statement that I am one of the owners of these fruitful properties known as the bonanza mines and that my personal gains would be directly and immensely enhanced by the remonetization of silver. To this I now proceed to make specific reply. I never had any considerable interest in the bonanza mines, and the little interest I did once have has long since been disposed of. I have no investment in productive silver mines, and my investments in non-productive silver mines are much less extensive than in mines which produce gold exclusively. I advocate the remonetization of silver because both justice and expediency demand it, and because, even if it does not restore a full measure of prosperity, it will check the rapidly spreading bankruptcy and poverty which threaten to overwhelm the country.

The statement that $500,000 or any other sum has been contributed by the bonanza owners or by anybody else to procure the remonetization of silver is, in my belief, without foundation, and was so known to be by those who uttered it. The charge that venal combinations have been formed and money raised for such purpose by those interested in silver mining

would imply idiocy on the part of the mine-owners, if it be true, as is maintained by a majority of those who make the charge, that the remonetization of silver would tend inevitably to depreciate its value.

But denying as I do that I am personally interested in the remonetization of silver, I wish to have it distinctly understood that I do not even by implication admit that my right to legislate on the subject would be lost or in any way impaired if the reverse were true. A fastidiousness of this delicate order would be more nice than wise. It has never been required of anyone here except the alleged owners of silver mines. Has it ever been regarded as dishonorable for legislators, who may have personal interests in iron, copper, lead, and salt mines, in cotton factories, or in any other manufacturing industry, or in wool-growing, to vote for or against tariffs and other laws directly affecting those interests? Has this gauzy virtue restrained owners of stock in national banks from voting in controlling numbers for laws directly benefiting those institutions? Has the metropolitan press demanded that persons so interested should abstain from voting here on such questions? If such a rule were insisted upon, might it not leave one or both branches of Congress without a quorum? Might not the strict enforcement of such a rule render necessary the creation of an idle and privileged class to legislate for the country?

The silver miners of the United States have shirked no duty either in peace or war. They demand neither protective legislation nor exemptions from their full share in the burden of taxes, nor special privileges of any kind. They are engaged in a lawful and honest industry, and who between the two oceans are better entitled to fair treatment than they?

It was because they were known to be loyal and patriotic that Nevada was admitted as a State into the Union. If their numbers were and are few, they have maintained good government, efficiently protected life and property, liberally endowed institutions of education and beneficence, and have so well ordered their finances that their governor has been recently urged to convene the legislature in extra session to reduce taxes in order to prevent the accumulation of an inconvenient surplus in the treasury.

Have the recently formed expectations of bondholders to be paid in gold any foundation either in equity or antiquity comparable to the right of the miner of the Pacific coast to expect that silver would continue to enjoy its ancient franchise of coinage?

The bondholders have invested their money upon a contract embodied in a law, which was constructive notice to them of its terms. Direct notice was also given them by the law itself being referred to on the face of each bond, together with the terms on which they are by that law made payable. The bondholders' right to a faithful performance of this contract is as earnestly insisted upon by the advocates of this bill as by its opponents. The miners have not only invested their money, but have risked health and life upon the faith of the then existing law, which was a solemn pledge to them that the precious metals were both to continue to be used as money. The bondholder asks that laws shall be continued in force which were enacted after his contract was made, and which changed its terms to his advantage and to the disadvantage of the nation, and especially of the silver miner, whose industry it threatens to destroy. The miner asks that the Constitution shall be observed, and that the law under which his industry was organized and upon which it was founded shall be restored. These two demands are incompatible with each other. To the impartial judgment of the American people the miner submits their comparative equity. The prizes in mining are few, the failures many, but there is always hope enough to inspire continued effort; there is always doubt enough to check undue expansion. A comparatively small number have reached the plane of success, while many have fainted and fallen by the way. Shall those who are now hopefully toiling be punished for the successes of the few? No braver or hardier men ever courted fortune by the straightforward road of toil, sacrifice, and privation.

President Lincoln, in one of his messages to Congress, declared them worthy not merely of the ordinary protection of law and justice, but of "extraordinary" measures of encouragement.

Does anybody doubt that the Senators from Massachusetts would rise with indignation if anybody should stigmatize as blubber-gamblers, whalebone-speculators, and members of an "oil ring" the bronzed whalemen of Nantucket and New Bedford who, when fortune has favored, bring safely into port the wealth which they have not obtained by wrecking railroads or by watering railroad stocks or by puts and calls and short corners in stocks, but which they have created by struggling with the cold, the darkness, the storms, and the crushing ice-floes of Arctic seas? And why should I restrain my indignation when I hear the stigmatizing epithet of "bonanza swindlers" applied to my constituents who are to-day toiling in

gloomy passages under exhausting heats, two thousand feet below the surface of the earth, away from the cheering light of day, in an industry which is believed to pay less profit upon the average than any other known to man? I do not shrink from the comparison of the ways and methods of the acquisitions of wealth in the mining industry on the Pacific coast with the ways and methods of its acquisition anywhere on earth, and least of all with the ways and methods of Wall street, where these attacks upon my constituents originate.

In this country the national honor has never been tarnished and never has been in danger of being tarnished by those who propose to restore the ancient money in which every national bond is on its face payable. If the credit of this country is in any danger, it is from the charges of the opposing faction that a majority of the citizens of a majority of the States of this Union are innately dishonest.

Let the gold press of this country not forget that while power usually begets intolerance it always begets resistance. It is boastfully declared that capital is now "organized at last, and that we shall see whether Congress will dare to fly in its face." How long is it since the slaveholders of this country, intoxicated by the long possession of absolute sway, declared that cotton was king, and that grass should grow on the streets of Northern cities if its royal prerogatives were interfered with? The Southern men who hear me know that it was the arrogance begotten of irresponsible power, the dominating spirit engendered by slavery, that provoked and precipitated the revolution by which it was destroyed. Are the same people who carried that revolution through fire and blood on the bayonets of three millions of men likely to be patient under the taunt that their chosen representatives, sitting here under the dome of this capitol, dare not fly in the face of the organized money-lenders and bondholders of the country? Thank God and the Declaration of Independence and the patient heroism that made it a vitalizing force and the Constitution that crystallized it into law, the people of this country are furnished with a better method of righting wrongs and asserting rights than a resort to arms; and with not less resolution and enthusiasm than wars against oppression inspire will they in peaceful methods and under the forms of law trample under foot any power that seeks through corruption or intimidation to intrench itself in this citadel of their liberties. They will see to it that this remains a popular government in fact as well as in name and, despite the craft of the cunning and the wiles of the wicked,

that their representatives in this Capitol register through constitutional laws their imperial will. [Applause in the galleries and on the floor.]

On February 15 Senator Allison spoke in support of the bill and his amendment.

Mr. President, this war on silver began in 1867 and culminated in 1873. It was the Paris Conference that inaugurated this disarrangement of the precious metals. We had a representative at that conference, one of our distinguished citizens from the State of New York, familiar with this subject, who represented this Government as being in favor of a single gold standard; and the distinguished chairman of the Committee on Finance of this body, Mr. Sherman, only echoed the sentiment of the Paris Conference when he said that America demanded the single standard of gold. The monetary disturbance which followed began at Paris in 1867. I have here a statement of the Prime Minister of England (Mr. Disraeli) alluding to these monetary disturbances, and tracing their causes directly to the conference at Paris. He says, speaking in November, 1873:

> I attribute the present state of affairs very much to a commission that was sitting in Paris at the time of the great exhibition. That was a commission the object of which was to establish a uniform coinage throughout the world—a very beautiful idea of cosmopolitan philanthropy, etc. . . . This, I know myself, arose from an opinion extremely prevalent among the government statesmen of Europe, and among distinguished economists and merchants abroad, that the commercial prosperity and preponderance of England were to be attributed to her gold standard. . . . when the various states of Europe suddenly determined to have a gold standard, and took steps to carry it into effect, it was quite evident we must prepare ourselves for great convulsions in the money market, not occasioned by speculation or any old cause, which has been alleged, but to a new cause with which we are not yet sufficiently acquainted, and the consequences of which are very embarrassing.

He uses also these significant words:

> Our gold standard is not the cause of our commercial prosperity, but the consequence of our commercial prosperity.

Or, in other words, if England had not enjoyed great commercial prosperity she could not have maintained the gold standard. Yet we are asked now, in our depressed commercial and monetary condition, to imitate her example.

Mr. President, the Paris Conference began the war on silver, and Germany completed the evil work in 1873.

Now, if we plant ourselves firmly in favor of the policy of the utilization of silver, we take measurably the place of Germany in this regard, because by our own legislation from 1834 to the time of absolute demonetization we banished silver, and if we restore it we shall require very nearly as much silver in our circulation as Germany has lost by demonetization. And the equilibrium in the value of silver as compared with gold will be rapidly restored. But this bill proposes not only that we shall do this, but that we shall invite the other nations who favor the use of silver to join us in fixing a uniform ratio between the two metals; and, if that is done, as I believe it can be very soon—if a concurrence of those nations shall take place, then it will be but a brief period until the restoration of silver will be complete and absolute.

It follows from this that the dollar of 412½ grains is the highest standard dollar that we ought to adopt. If we could this day come to the relation fixed by the Latin union, there would be a likelihood that the union would again join us in restoring silver to its old relation without a conference with them, but this seems impracticable now; and the further we depart from the standard of 15½ to 1 so much the more difficult it will be for us to come back to the relation which must be established if silver is to be used continuously as a part of the money circulation of the world.

But, Mr. President, it is said, and has been often said here, that this conference of nations should precede our remonetization of silver. The honorable chairman of the committee stated that to remonetize silver and then call a conference was like calling a council of physicians after the death of the patient.

Why, Mr. President, our policy to-day is monometallism of gold; and with what face can we ask the bimetallic nations of Europe to join us in a conference with reference to the fixing of a relation between the two metals when we have a declared policy of monometallism? Our interest is first to declare our own policy and then invite the nations to join us in that policy, and by doing so we shall have weight in such a conference. Without it we shall have little or no weight. We can force, if I may use that term, the nations of Europe to the use of silver again. They have been driven from it with great difficulty in Germany and have not been driven from it at all in the Latin union as has been so often said here. Germany finds it very difficult to get rid of her silver, and she has in circulation now

a large amount of silver full legal-tender at the ratio of 15½ to 1. If we readopt silver, I think it is quite probable, more, I think we may feel certain that the Latin union nations will join us in continuing the use of silver. I do not see how they can discard silver. They have still from five to six hundred millions of legal-tender silver in circulation, or forming the basis of circulation. If this silver is discarded, gold must take its place, and from whence is that gold to come? This struggle for gold is now going on. You add a new demand for $500,000,000, and what will be the effect? Certainly to largely advance the price of gold and make it impossible for all the nations to secure it.

The question now before us is whether we shall place this country upon the gold standard alone and with it compel the nations of Europe to discard silver and thus secure universal monometallism of gold in all European states and in America, or whether we shall change our present policy and utilize both silver and gold as metallic money and thereby sustain and uphold the Latin union and other states in the continued use of silver.

They cannot stand alone against England and Germany and the United States. If we do not use silver they must discard it, and it will be banished as money from Europe and America except as a token coinage, and the world's commerce must be conducted upon the single standard of gold. Mr. S. Dana Horton, one of the most learned and careful writers in our country, predicts the fatal effects of such a policy upon civilized states to be universal bankruptcy and destruction of all values. All values will be reduced from 30 to 50 per cent., measured in gold; credits in this country will be scaled up from 30 to 40 per cent.; the means of debtors to pay those debts will be scaled down in like proportion. That is the effect of the proposition of universal monometallism of gold; and it will not do to say we are in favor of a limited standard of silver or of a token coinage of silver, because when the nations are placed upon a limited coinage of silver it will be but a few years until silver must be discarded entirely. It is certain that if it should fall 30 or 40 per cent. below its present value it would be impossible to keep it in circulation as a token coinage. We are called upon to defeat this bill and thus lend our aid and influence to complete this work of destruction.

I believe, and the people of my section believe, in fulfilling every national and individual obligation. We believe that the creditors of this Government and the creditor classes should

be paid according to the contract and stipulation made with them; but we do not feel ourselves called upon by legislation to at once strike down one-half of the means of payment of these debts and by legislation increase the value of debts to the creditor. We feel that when we have maintained our obligation according to the letter and the spirit of it at the time the contract was made we have done all that we can be required to do. The single standard of gold means a reduction in the volume and an increase in the value of money. The double standard means that the present volume and value shall be maintained as near as may be; that the same commodities which at a given price and the same labor will pay a debt to-day will pay it next year; that our debts shall not be scaled up for the benefit of creditors nor scaled down for the benefit of debtors, but that each shall stand on the values fixed when the obligations were incurred.

Mr. President, I believe that if we shall adopt the amendments proposed by the Finance Committee, first limit coinage in amount on Government account, then provide for a conference of nations to agree upon a standard, it will be but a brief space of time until silver and gold, with free and unrestricted coinage of both, will circulate side by side upon a common ratio, and each will be exchangeable for the other and each an equivalent of the other.

In speaking particularly of his amendment authorizing the President to invite an international monetary conference Senator Allison said, on February 15:

I regard this amendment as of vast importance to the success of silver coinage. The monetary commission that reported upon this subject reported in favor of a conference of nations. This subject has been discussed over and over again by the scientists and the men who study the question of money in all the nations. The Senator from Nevada [Mr. Jones] first upon this floor in 1876, in an able and exhaustive speech upon the value of silver, had the honor of proposing an international monetary conference for the purpose of fixing a monetary unit and relation between these two metals. We simply propose here, not to say whether the United States will adopt the sovereign, or the franc, or the rupee of India, if you please, or any other coin. We simply propose that this conference shall consider one subject, and one subject only, namely, the expediency and feasibility of establishing internationally the use of bimetallic money

and securing fixity of relative value between these metals. Now, why is such a conference necessary? We, by our legislation here, fix the value of a silver dollar at 412½ grains, which is at the relation of 16 to 1. The bimetallic nations of the world to-day have the fixed relation of 15½ to 1, which overvalues silver 3½ per cent. as compared with the monetary unit which we propose to establish by this bill. Every dollar of silver coin in existence, whether in the form of francs, rupees, or German thalers, has a relation to gold bearing 3½ per cent. more than the relation which we fix by this bill. Then what will be the result if we persist in this monetary unit? The result will be either that the bimetallic nations of Europe will keep their mints closed; or, when they open their mints to the free coinage of silver, every silver dollar that is in the United States will flee again to Europe, as it did after the unfortunate and mischievous legislation of 1834, because we then established a wrong relation between the two metals.

If we are to loosen these two metals and have them circulate side by side, I agree that we must have some fixity of relation so that the mints, not only of our own country, but of other nations, will be open to the free, unrestricted, and unlimited coinage of silver. Therefore, the friends of silver, those who believe that it is wiser for the civilized nations of the earth to utilize $2,250,000,000, or about that sum, of coined silver money, should unite in making an honest endeavor at least to secure and establish a fixed relation between this silver to be used as money and the coined gold which many of the civilized nations will adhere to, whatever we may do in such a conference as is proposed. I do not expect that Great Britain will join in this conference and agree to adopt the double standard, but I believe that the influence of that great government will be thrown on the side of bimetallic money. She has two hundred million people in India who have to-day a thousand million of silver rupees, which is the only coined money of that country, and it is not reasonable to suppose that Great Britain will adopt a policy now which will destroy this thousand millions of coined money belonging to her subjects. Although England may not adopt the bimetallic system, she will encourage other nations and our own to persist in the use of silver as well as the use of gold.

I say, then, that, if gentlemen on this floor are serious and earnest in the use of silver money, I beg of them to initiate a proceeding here which will have the effect of making the use of silver money perpetual in our own country or for a series of years. I trust this amendment will not be voted down by the

friends of silver. If it is to be crushed let it be crushed by gold monometallism, because the monometallists of gold have no desire to see legislation either in this country or internationally that will secure the use of silver.

AUGUSTUS S. MERRIMON [N. C.].—The amendment looks to a league with foreign nations. I wish to say that I am opposed to all foreign alliances and entanglements. Let other nations fix their money standard as they will; let us fix ours as suits our convenience. If it turns out that they make a standard of value that suits us to conform to, we will take advantage of the occasion and circumstances that present themselves when the time shall come for us to change our own and fix some other.

JAMES E. BAILEY [Tenn.].—I regret, Mr. President, that the measure under consideration has been offered by the Committee on Finance as an amendment, and that it was not proposed as a separate bill, for I much fear that if we shall continue to load the bill as it came from the House with amendments made by the Senate it may give rise to contrariety of opinion and differences between the House and Senate.

Moreover, this is a bill to regulate simply the coinage of the Government and people of the United States. It is purely a domestic bill in its operation and effect, having reference alone to our own internal wants, and having no reference whatever, in its main features, to the existing coinage laws of other countries.

THOMAS W. FERRY [Mich.].—I am satisfied that the cooperation of foreign powers is desirable, but I do not feel that their coöperation is indispensable. My view is that it is desirable to secure their coöperation, but, if they decline it, we can stand alone, independent of other powers.

SENATOR ALLISON.—Is it not a fact that at one period because we put 412½ grains of silver in the dollar all our dollars were expelled from this country and were reminted and recoined in France and we were left exclusively to a gold standard after the act of 1834? Now, that same condition of things will take place again, and the Senator from Michigan, who loves the silver dollar, will find himself in a few years without a silver dollar and thrown back again upon a single gold standard, unless other nations discard silver, and in that event we can of course maintain it; but if these nations reopen their mints to silver our silver will go away from us, as it has often gone before.

SENATOR FERRY.—I do not confess to such fear that silver or gold is going to leave this country because we happen to

change the relation. It cannot leave without giving us an equivalent.

SENATOR ALLISON.—With free coinage it must go.

SENATOR FERRY.—We have stricken out free coinage in this bill as far as silver is concerned. The Senator from Iowa in his own amendment has stricken out the free-coinage feature of the silver bill.

SENATOR ALLISON.—But my friend from Michigan does not suppose that that provision is to last always. The very basis of this amendment is that, when we have fixed the relation that silver shall have, it will be open to free coinage in this country, and not only in our own country but in the other countries using bimetallic money——

SENATOR FERRY.—I do not believe in legislating to-day and inscribing on the face of the statute fear of the efficiency of that legislation by asking the future to condone such folly. I believe in legislating for the present and for the future without question. Others who follow us will take care of the unforeseen needs of the future. My judgment is that 412½ grains is the proper standard for silver to hold its equivalent relation to gold. Believing this, I do not wish to commit myself to any proposition that weakens it by indispensable coöperation with other powers. I am opposed, in other words, to the argument of the Senator, while I stand by the measure as embraced in the bill.

SENATOR ALLISON.—Well, vote the argument down and vote for the amendment. [Laughter.]

SENATOR BLAINE.—There are two points that have struck me in this debate. The gold monometallist says other nations will provide for our silver by their making it money. The silver monometallist says he wants no coöperation from other nations.

SENATOR MERRIMON.—I do not.

SENATOR BLAINE.—The Senator does not want any on cotton. It is an entangling alliance to take cotton to England and get pay for it; it is an entangling alliance to send tar, pitch, and turpentine across the ocean and get money for them; it is a very entangling alliance to have commerce with other nations. It seems to me there would be just as much force in saying you want no entangling alliances or any interchange whatever as to say it of that which is the basis of all interchange.

SENATOR MERRIMON.—Mr. President, the examples put by the Senator from Maine are not apposite at all. We send cotton to England or to France or to wherever we will without the consent of England or France as nationalities, if we can find

somebody there who wants to buy our cotton. So of any other product that we desire to send abroad. We do not want a commission to regulate the price that we shall receive for cotton, tar, pitch, turpentine, or anything else. We are perfectly free to sell when we will and where we will and as we will. This case is very different from the one which the Senator puts, and therefore the case he puts does not weigh anything at all in the argument. The proposition embraced in the proposed amendment contemplates an alliance with foreign nations on the subject of money, from which, if it is engaged in, we cannot recede at will. It is to last for a number of years; forty or fifty years.

SENATOR BLAINE.—The longer the better.

SENATOR MERRIMON.—In the mean time, if it should suit the convenience of this country to recede from it and change our money standard, we should not be at liberty to do so without a breach of that alliance which might involve us in war or other difficulties.

SENATOR BLAINE.—I suppose the Senator from North Carolina, then, is opposed to a pound in his State being a pound in Liverpool, or a bale of cotton weighing the same, or to weights and measures being the same between any two nations.

SENATOR MERRIMON.—I am entirely unless——

SENATOR BLAINE.—He is for one weight for cotton in North Carolina and one in Manchester.

SENATOR MERRIMON.—I am unless it suits the business of this country to do it. If it does we will conform our action to the measure of value in that country and we will do it without a league, without an alliance.

SENATOR BLAINE.—Therefore the Senator thinks on the whole, if it is better to have fourteen ounces made a pound here, we shall have it despite the world.

SENATOR MERRIMON.—Certainly.

SENATOR BLAINE.—Well, it is a great free American right we ought to maintain. [Laughter.]

SENATOR MERRIMON.—And then we could adjust them as exchanges are regulated now. A dollar is not equal to a pound, and yet we can resolve Federal money into English money and English money into Federal money. There is no difficulty at all about that. The Senator from Maine a while ago asked with an air of triumph if moral considerations had anything to do with money transactions. I tell him yes, they have everything to do with transactions such as the bonds of this country or any country. What but the morality of this country, what but the

honor and good faith of this country, gives value to our securities in foreign lands or in this country?

SENATOR BLAINE.—That is the application of money.

SENATOR MERRIMON.—We cannot be sued on our bonds. There is nothing but the morality of this people that gives them credit. The morality of a man adds weight to the value of his personal bond, his personal security, it adds to it and makes up the very essence of the contract.

But, sir, my objection was that this proposition looks to an alliance with foreign nations, and I am opposed to that, and I predict now that when the vote is taken ten minutes hence it will be found that everyone in favor of a single standard votes for this proposition.

SENATOR BLAINE.—The Senator from North Carolina, I think, not intentionally of course, misrepresents what I said about moral worth not being of any value in the money market. What I meant and what I answered the Senator from Michigan was this: That Senator was maintaining that regardless of the weight of this dollar the moral weight of this Government beneath it could float it. The Senator when he comes to argue refers to the application of money. If you owe a debt you have got to pay it; but does the Senator say that, however great the moral worth of this Senate or the moral worth of the nation that the Senate represents, it can throw that moral worth into the scales to throw up or weigh down an indifferent or short dollar?

SENATOR MERRIMON.—I do not.

SENATOR BLAINE.—At what particular per cent. in the dollar does the Senator put moral worth? Is it 8 or 10? What is the component part when you come to the one hundred cents that make up a dollar, that the moral worth of any nation gives it?

SENATOR MERRIMON.—What I mean to say is this, that, while it would be convenient to have a universal standard of value, as I admit, while it would be desirable, I would not compromise this country by making an alliance with England or any other, or any number of foreign nations. But, while it is convenient to have a uniform standard of value, the world has never had it. I believe it is utterly impracticable that the world ever should have it.

SENATOR ALLISON.—Does not the Senator know that the yard stick is an English invention and that the Winchester bushel is our bushel, a bushel two or three centuries old? All we propose here is that the relation shall be the same. We make no alliance with anybody; we simply agree with France that if

she insists on 15½ to 1 we will adopt 15½ to 1 in the silver coined at our mints.

SENATOR MERRIMON.—Then, if it is not to be a league, I ask what good it does. Let England fix her measure, France fix her measure, Germany fix her measure, and if upon experience and observation we find it suits us to make our measure conform to that of these foreign nations we can do it without consulting them. In the exercise of our free right we can do it. We have nothing to gain by such an alliance, but everything to lose.

ELI SAULSBURY [Del.].—In addition to what has been said by the Senator from North Carolina, this fact looks us in the face: when we meet the Latin union upon the question of the relative amount of silver and gold which shall constitute the coins, we shall be met by the fact that there are about two hundred and fifty million people to-day who use coins at the relation of 15½ of silver to 1 of gold, and we, being a population of about forty-four million people, would necessarily have to yield to their views upon that question; and involved in that is the recoinage of all our silver dollars and all our subsidiary coin. Now, if the people of this country are going to be put to the expense of the recoinage of all their silver dollars for the purpose of being in harmony with the Latin union, you may commence to put your convention in operation to-morrow, and it will take two years at least before they will arrive at any proper conclusion in reference to this matter. Do you think the representatives of this country would agree to the recoinage of all the silver dollars and all the subsidiary coin of this country or that the Latin union would agree to abolish the five-franc piece and come to the dollar of America? You have got innumerable questions of difficulty to be met whenever you undertake to create such a league.

JOHN T. MORGAN [Ala.].—The first suggestion that strikes my mind in regard to this amendment is that the friends of silver remonetization upon that standard of value maintained at the time of its demonetization are apprehensive that this measure will not meet with public acceptance unless we go abroad for an indorsement of our policy. In that respect we do not give to the judgment of the legal tribunal of the United States, the Congress of the United States, that sort of value which belongs to the dignity and grandeur of our own country. I think that the American people have as much right to prescribe for themselves the standard of currency, the standard of value between the two metals used as currency, as they have to prescribe

for themselves a tariff or any other institution or establishment that belongs to American affairs.

I do not desire to go abroad to ask foreign nations what they will do in establishing a proper unit of value, or a proper standard of value either, for any part of the currency of the United States, whether it be gold or whether it be silver. Is there anything within the reach of the possibilities of human knowledge and human exertion that cannot be accomplished by the enterprise and wisdom and intellectual power of the American people? You, sirs, have proved your power in this world by one demonstration which centuries will pass away without affording to this country or to any other nation in this world an opportunity to prove. You have proved the power of a free, constitutional, liberal Government in the maintenance of the rights of States and of individuals amid the struggles of a war the like of which has never been seen on any other continent or in any other age. You have demonstrated that the greatest power that is possessed by any people in the world is that power of liberal constitutional government which is possessed by the American people. We have suffered by it, but we come to acknowledge the authority and the grandeur and the splendor of that authority erected in the Constitution of the United States, the like of which is not to be found in any other government among civilized men in this or any other age. Now, sir, having demonstrated this power, this capacity, this capability, this moral, intellectual, and political grandeur, why yield your power to foreign countries and invite them to come in here and participate with you in the administration of your local affairs? Sir, you surrender the grandeur of the American character when you resort to schemes and expedients like these. Let me conjure you, Mr. President and Senators, that we should now adopt, South, North, East, and West, that grand idea of American independence and American power, intellectual, moral, and physical, which is the result of the experience of the past and the view of the capacities of the present. I do object, in common with the Senator from North Carolina, to foreign alliances, foreign entanglements, and foreign associations.

SAMUEL B. MAXEY [Tex.]—The Constitution of the United States declares that Congress shall coin money and regulate the value thereof. In regulating the value of that money thus coined it adopts and regulates the "ratio between gold and silver." If Congress adopts the ratio, it does so upon its own judgment, and it cannot be controlled and should be wary of influence, in the exercise of that judgment, by any foreign power.

How can any conference with other nations result in international use of bimetallic money *"and fixity of relative value between these metals"* without all the nations engaged agreeing to be bound by it? If bound, does not Congress, however its action may be covered up by legislation, really designed to carry out the agreement, virtually abdicate its power to coin money and regulate the value thereof? If all are not bound then the whole movement is an abortion.

Mr. President, the proposition we have before us has nothing to do with international conferences, but is a substantive, distinct proposition. What is it? That we shall restore our coinage laws to what they were before this strange, mysterious process was gone into whereby the silver dollar was eliminated from the coinage of the country. We want to put it back where it was. Let us do that. Then hereafter, as a substantive and distinct proposition, if it may be important to consult with other nations in the direction of uniform coinage, it may be done; but it has in my judgment no business here.

SENATOR EDMUNDS.—I shall vote against this amendment not upon the ground that it is not proper to have a conference—I think the Senator from Iowa is entirely right about that; the constitutional objection to my mind is untenable—but this conference is limited on our part in advance to the question of adjusting a *bimetallic* standard. There is no authority to consider the fitness of establishing for all these nations a common unit of values in one metal, be it silver if you like it better, or gold if you like that better; but the commission is tied up; the matter is decided in advance so far as it affects the interests of the people of this country and those of others, to this thing of a double standard of value, which the experience of this country and every other has shown from the beginning to be only fraught with disaster to everybody that engages in it, because under a double standard one metal will constantly depart from the other and therefore constantly cheat and wrong somebody.

The amendment of Senator Allison was agreed to by a vote of 40 to 30. The bill was passed by a vote of 48 to 21. The Senate amendments were concurred in by the House. President Hayes vetoed the bill on February 28, 1878. He gave the following reasons for his action:

The bill provides for the coinage of silver dollars of the weight of 412½ grains each, of standard silver, to be a legal tender at their nominal value for all debts and dues, public and

private, except where otherwise expressly stipulated in the contract. It is well known that the market value of that number of grains of standard silver during the past year has been from ninety to ninety-two cents as compared with the standard gold dollar. Thus the silver dollar authorized by this bill is worth 8 to 10 per cent. less than it purports to be worth, and is made a legal tender for debts contracted when the law did not recognize such coins as lawful money.

The right to pay duties in silver or in certificates for silver deposits will, when they are issued in sufficient amount to circulate, put an end to the receipt of revenue in gold, and thus compel the payment of silver for both the principal and interest of the public debt. One billion one hundred and forty-three million four hundred and ninety-three thousand four hundred dollars of the bonded debt, now outstanding, was issued prior to February, 1873, when the silver dollar was unknown in circulation in this country, and was only a convenient form of silver bullion for exportation; $583,440,350 of the funded debt has been issued since February, 1873, when gold alone was the coin for which the bonds were sold, and gold alone was the coin in which both parties to the contract understood that the bonds would be paid. These bonds entered into the markets of the world. They were paid for in gold when silver had greatly depreciated, and when no one would have bought them if it had been understood that they would be paid in silver. The sum of $225,000,000 of these bonds has been sold during my Administration for gold coin, and the United States received the benefit of these sales by a reduction of the rate of interest to 4 per cent. During the progress of these sales a doubt was suggested as to the coin in which payment of these bonds would be made. The public announcement was thereupon authorized that it was "not to be anticipated that any future legislation of Congress or any action of any department of the Government would sanction or tolerate the redemption of the principal of these bonds or the payment of the interest thereon in coin of less value than the coin authorized by law at the time of the issue of the bonds, being the coin exacted by the Government in exchange for the same."

In view of these facts it will be justly regarded as a grave breach of the public faith to undertake to pay these bonds, principal or interest, in silver coin worth in the market less than the coin received for them. It is said that the silver dollar made a legal tender by this bill will under its operation be equivalent in value to the gold dollar. Many supporters of the

bill believe this, and would not justify an attempt to pay debts, either public or private, in coin of inferior value to the money of the world. The capital defect of the bill is that it contains no provision protecting from its operation preëxisting debts in case the coinage which it creates shall continue to be of less value than that which was the sole legal tender when they were contracted. If it is now proposed for the purpose of taking advantage of the depreciation of silver in the payment of debts to coin and make a legal tender a silver dollar of less commercial value than any dollar, whether of gold or paper, which is now lawful money in this country, such measure, it will hardly be questioned, will, in the judgment of mankind, be an act of bad faith. As to all debts heretofore contracted, the silver dollar should be made a legal tender only at its market value. The standard of value should not be changed without the consent of both parties to the contract. National promises should be kept with unflinching fidelity. There is no power to compel a nation to pay its just debts. Its credit depends on its honor. The nation owes what it has led or allowed its creditors to expect. I cannot approve a bill which in my judgment authorizes the violation of sacred obligations. The obligation of the public faith transcends all questions of profit or public advantage. Its unquestionable maintenance is the dictate as well of the highest expediency as of the most necessary duty, and should ever be carefully guarded by the Executive, by Congress, and by the people.

It is my firm conviction that, if the country is to be benefited by a silver coinage, it can be done only by the issue of silver dollars of full value, which will defraud no man. A currency worth less than it purports to be worth will in the end defraud not only creditors, but all who are engaged in legitimate business, and none more surely than those who are dependent on their daily labor for their daily bread.

Congress passed the bill over the veto, the House by a vote of 196 to 73, and the Senate by a vote of 46 to 19.

International Monetary Conference

The international monetary conference for which provision was made in the bill was held at Paris in the autumn of 1878. The American commissioners were Reuben E. Fenton, William S. Groesbeck, and Francis A.

Walker, the economist. The principal European nations were present with the exception of Germany. The conference came to no practical conclusion, simply agreeing that "it is necessary to maintain in the world the monetary functions of silver as well as those of gold"; but that "the selection for use of one or the other of the two metals, or both simultaneously, should be governed by the special position of each State or group of States." The proposition of the United States "that the delegations recommend to their respective governments the adjustment of a fixed relation between the two metals and the use of both in that relation as unlimited legal-tender money," was rejected.

CHAPTER IV

Free Coinage of Silver

Richard P. Bland [Mo.] Introduces in the House a Bill for the Free Coinage of Silver; It Is Reported Adversely by the Majority of the Committee on Coinage; Report of the Minority in Its Favor—Debate: in Favor, William D. Bynum [Ind.], Mr. Bland, Thomas N. Norwood [Ga.], Charles N. Brumm [Pa.], George D. Tillman [S. C.]; Opposed, Darwin R. James [N. Y.], William McAdoo [N. J.], Abram S. Hewitt [N. Y.]; Bill Is Defeated.

ON February 15, 1886, Richard P. Bland [Mo.] introduced in the House a bill for the free coinage of standard silver dollars as full legal tender. The bill repealed the provision of the act of February 28, 1878, which called for a fixed monthly coinage of silver. It was referred to the Committee on Coinage. It was reported back next day with an adverse recommendation from the majority of the committee.

On March 20 Mr. Bland submitted the minority report. The two other members of the minority were Samuel W. T. Lanham [Tex.] and William D. Bynum [Ind.].

The arguments in the report will develop in the speeches of Bland and Bynum.

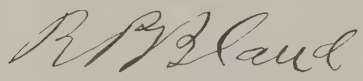
Free Coinage of Silver

House of Representatives, March 20–April 8, 1886

Darwin R. James [N. Y.], of the majority of the Committee on Coinage, opposed the bill.

I am not a lawyer nor am I a professor, neither has my life been closely interwoven with the interests of practical politics, but I have attended to the business of a merchant.

People are more wont to look to the lawyer, to the professor, and to the political leader for light on these questions than to plain business men. But unfortunately, Mr. Speaker, this habit



does not seem to have produced good results in this matter of the coinage of the silver dollar. We have tried it for eight years nearly, and here we are now in a slough. How are we going to get out of it? That is the question. The car of state is very nearly being ditched. It is not a question of doing something great, it is a question of getting out of something bad. It is not a question of making good time on the road, it is a question of getting the wheels out of the slough. It is a question of making salvage. What are we going to do about it? Things have gone on from bad to worse, and this is the outcome of the leadership of the lawyers, the professors, and the authorized leaders of politics.

It is through these circumstances, Mr. Speaker, that it has been borne in upon me that it is not out of the way for a business man to take a hand in the debate. There is all the more reason for this from the fact that the monetary question is peculiarly a business question. On final analysis—getting down to bed-rock—the monetary question is a question of prices, a matter of buying and selling.

I have no doubt that if the business men had had the power to deal with the silver question the team of State would not have been stalled in the mire as it is now, and it is largely their fault that it is so, for they knew what the end would be. They should have spoken out from one end of the country to the other; they should have insisted that their advice be followed.

I believe we should be practically unanimous after hearing from them in voting a measure which would close the current chapters of the history of compulsory coinage.

I have given study to the facts which make the theories upon this issue, and have measured the measures proposed with the same spirit of determination to be right which I applied to my own business while in India, where I handled the rupee, or in New York, where I sold the products of the East. The result may be summed up in these words: the so-called demonetization of silver has been from the start a great business blunder. I do not wish to be misunderstood by either the extreme gold men on one side or the extreme silver men on the other, in my use of this term. They presumably think I mean the anti-silver law passed by Congress in 1873, and the revision of the statutes in which the silver dollar was spirited away. Well, I do not. Perhaps they think I ought to mean it if I speak of demonetization. I do not think so.

In the first place, who demonetized silver? My friends here talk as if the United States had done it. The so-called de-

monetization, which is in fact only an effort at demonetization (a partial outlawry of silver) is the culmination of a joint undertaking. The chief quota of outlawry belongs to the nations that controlled most silver and gold. France and her allies of the bimetallic, free-coinage union controlled nearly two-thirds of the metallic money of Europe.

With their alternative free coinage, coining all that came, whether gold or silver, at an express valuation by weight, they held the par steady for generations. England's anti-silver quota had been subscribed and paid so long that it had all been spent. Germany's quota to the fund was very large; in fact the responsibility for the evil results which followed demonetization in Europe is chargeable to the action of Germany.

After the capture of Paris, in 1871, a series of anti-silver and pro-gold laws were enacted, followed in 1873 by direct acts of calling in silver coin to be sent to the melting pot, and thence to the bullion market. France saw that if she continued the coinage of silver she was simply "bulling" the market for German silver, and was paying out gold for a metal that would become a burden to her if Germany's action should be followed by other nations. She therefore stopped its coinage. The action of France was thought to be necessary, but it was very unfortunate. She felt that she could not afford (by keeping her mints open to silver) to enable Germany to transmute her stock of silver into gold, taking French gold for demonetized German silver. It was not agreeable to France to "bull" silver for Germany's benefit, and face the uncertainties of the monetary future with the added burden to carry off the rejected silver of Germany.

It was said in 1870 by a leading statesman in Europe, Peer-Herzog, that the anti-silver campaign is like a steeplechase—those that demonetize first will win the prize, and those that come later will pay for all the demonetization that has preceded theirs. Each was, therefore, in a hurry to demonetize for fear the other would demonetize first; each afraid to keep up silver coinage because the other rejected it. The impetus given by Germany's attack was passed along the line, and one after the other of the mints of Europe was closed to silver. Now, when I say this was a business blunder I do not say that it was a blunder of each nation acting by itself and in the sole alternative of keeping up free coinage within its own borders of all the silver that might come, or, on the other, of closing its mints. If it had been a simple choice between these two courses there would seem to have been no way other than to stop.

As the case was presented to France in 1874 and to Holland in 1875 it was the only safe alternative to be pursued. There are occasions in one's business experience when the question arises. "Shall we sell or hold?" Our neighbors, like ourselves, are loaded with the same article; if we sell it is at a sacrifice; if we hold there is a loss; but if we combine and arrange we can all sell at a profit.

But suppose you cannot arrange, or think you cannot, and therefore do not try, what is the result? You force sales; the bottom is knocked out of the market, and down goes the price. It was a great blunder of the nations as a whole, and it was a blunder of each single nation in so far as that single nation could have stopped the ruinous course of all. No one nation could afford to have the others unload upon it. In point of fact there was neither sense nor reason in any nation trying to unload. It was a blunder to try; each nation as it closed its mints to silver helped to depreciate the stock of silver coin it had on hand, helped to render the money basis of its valuations insecure, and helped to reënforce the momentum of Germany's attack on the stability of the existing valuations of property throughout the world. The result was insecurity, uneasiness in the money markets, and a great check to business activity.

I am aware that there has been a widespread habit of ignoring these facts. It was fashionable, so to speak, at one time to shout for the single gold standard and for the demonetization of silver. Those who did the shouting do not care at this time to be known. For several years they tried to conceal the harm they produced but they could not. The facts are against them. The business of Europe was done with both metals; by legislative enactment one is stricken down and becomes non-exportable except as bullion. Now, who will presume to maintain that a country like Holland can do business as easily and successfully with its twenty millions of gold, full weight and exportable, and eighty millions of non-exportable because depreciated token money, as with one hundred millions of full-weight exportable money? To depreciate the scope of that eighty millions or, in other words, to strike it with lameness, was bad business. Yet Germany and France had forced Holland into this position, and so she stopped coining silver and took to coining gold, doing what she could to increase her stock of this metal.

The outlawry of silver in Europe reduced a thousand millions of silver to the condition of inexportable, non-international, depreciated money; in other words, to the condition of tokens

which are a burden to the state and the business community. Now, all this never would have occurred if there had not been anti-silver laws. Had it not been for these there would have been no depreciation of silver. Hence it is I say that the outlawry of silver was an immense business blunder and a great business loss for each nation affected by it. The story of the last ten years in Europe is a story of business depression unexampled in history, and the main cause of the depression lies where any business man can see it if he takes the trouble to look, namely, in the series of laws in the different States of Europe artificially contracting the metallic basis of valuations and making insecure a foundation which should have been solid.

Now, we have heard repeatedly from the extreme silver men that this anti-silver movement has been and is a great conspiracy of the creditor class, of the bondholders of the civilized nations, and that they worked up this sentiment for selfish ends. Such is not the truth. The professors of political economy of a generation which directed thought were not what is called "the servile hirelings of bloated bondholders." These men thought they were reformers, and they meant well, but their foresight was incorrect. They made a mistake. The outcome of their work was an enormous business loss which they had not foreseen, and was consequently a great business blunder.

The end is not yet. We are only in the midst of this craze, which, as has been well said, was the outcome of scientific error, reënforced by national pride, and uniting the chief nations of Europe in a joint attack upon silver. Now, how is this movement to be reversed? It is a great question; those who have carefully studied the reports of the two international conferences called by the United States can form an idea of the extent and intricacy of the subject. People talk of the lack of success of those conferences. They do not comprehend how vast a matter we were trying to handle; nor do they comprehend the innumerable difficulties in the way arising through national pride, blind selfishness, and a reluctance to being taught which the commissioners had to meet.

Now, let me turn to the question, How has our coinage of the silver dollar operated upon Europe?

I affirm with certainty that it has operated injuriously to the success of the effort to restore bimetallic free coinage. There is one thing, Mr. Speaker, which we may take for granted: there is a good deal of human nature in Europe as well as in America —Europeans are men, and they are not devoid of sense. If you or I were European and lived in the midst of prejudice as general as that which induced the politicians of European nations to commit themselves to an anti-silver policy, and when those great bodies, which move so slowly, had already moved and taken a stand, I think that we should consider it a very pleasant thing if a great and wealthy nation across the sea would take hold and help us out without asking for any help in return.

The coinage of silver by the United States eased up the situation for the gold monometallists of Europe. The statesmen who committed themselves and their countries to monometallism found allies in the United States, and of this number not one more efficient than the gentleman from Missouri [Mr. Bland.] Outside of what the coinage of silver has been doing all the time, it has been a constant promise for the future that they are to be "let out" more completely. I cannot understand, Mr. Speaker, why the extreme silver men fail to see that they are really the cat's-paws of European monometallists. I do not use the word in any way offensively—but it is strong, in so far as they seem to be picking the chestnuts out of the fire. Perhaps there may be a tinge of blind self-interest in the ground they take, or, if that does not suit, let us suppose that they have found the silver question a much more momentous one than they have hitherto contemplated and do not now care to face it in all its diverse bearings. Perhaps they have thought that silver is a "local issue," as a certain distinguished gentleman once remarked with reference to the tariff. If so, they were again mistaken.

It is more than a local issue, it is an international one, and it is because the silver men have failed to comprehend this fact that they have gone on in their blind, selfish advocacy of a financial policy which has operated as disastrously at home as it has abroad, and which threatens at this moment to strike down with paralysis the commercial and industrial interests of the country. With these views and under these circumstances I do not hesitate to say that the coinage under the Bland act has been from the beginning and is now a colossal business blunder. The advocates of the measure proposed and expected it to restore the price of silver, but it has steadily declined as compared with gold from an average price of 52 9-16d. per ounce in 1878 to 46½d. per ounce at present.

If it had not been for the passage of the Bland bill in 1878, I believe that long ere this silver would have been remonetized in Europe, and that in Europe and the United States the mints would have been open to the free coinage of silver as they are to

gold, and that the two metals would have been at a parity one to the other at a fixed ratio, as agreed upon.

The true friends of silver, the people who want silver restored to its proper place relatively to gold, as it was before its outlawry in Europe began, all recognize this. They have said it in print continually. The European bimetallists have been in battle array all these years fighting for the cause of silver.

But during these years they have said and felt that the men in the United States who desire to keep up a local silver coinage when other nations have stopped are the enemies of bimetallism. Our bimetallist friends are there carrying on a fight against stupidity in high places, and those who ought to be their friends, who claim to be their friends, are all the time encouraging their enemies to hold out, encouraging them with present help and with promises for the future; in fact, many of these men who called themselves bimetallists have now thrown off the mask and are pronounced silver monometallists, and demand free coinage. Now, Mr. Speaker, these European bimetallists are the men beside whom we ought to stand and with whom we ought to join forces. We ought to help them in their struggle with indifference and prejudice in high places and with the gold monometallists who want the single standard through error or greed.

To do this we must follow the advice of those who know something about the importance of the international side of the controversy, and suspend the coinage of silver, in order that we may help our European bimetallist friends to accomplish that which is of paramount importance to us—namely, the remonetization of silver in Europe. But why have we not done this? Because our people have not understood the question. The silver mine owners, in their greed for present gains, have not looked to the future. They have been content to take the best price they could get for their bullion on a declining market rather than wait until international bimetallism is restored, when their profits would be largely increased. They have kept up a cry against bondholders and the "gold-bugs" of New York whereby they have deceived the people; they have flooded the country with their publications, and have had, as they have now, large sums of money at their disposal for manipulating public sentiment; in fact, they are thoroughly organized, with a headquarters in this city.

The true friends of bimetallism are undoubtedly largely in the majority, but they are scattered and are fighting at odds against an organized force. But I predict that it will be as it was in the days of the "greenback craze," that when the people

come to understand the question they will speak out for the suspension of the coinage of the standard dollar as they spoke in no unerring tone at the period to which I refer.

It may be that they will not learn the lesson except by further financial disaster consequent upon continued coinage. But, under any circumstances, this is a campaign in which there can be but one successful issue, namely, the reëstablishment of silver in its proper place relative to gold through international agreement. Until this is accomplished there must be no surrender. The fight must be maintained. Coinage under the Bland law must be suspended entirely, for to continue coinage under this law is but organized chaos for the United States.

The continuance of the present law is sure to thoroughly disarrange the monetary system and to further shake public confidence. It is the very indefiniteness of the continuance of coinage without concurrent coinage in Europe that so completely alarms business men; and I say this as a representative of the business interests which are concentrated in and around New York. New York is the commercial and financial center of the nation. That which affects the business interests of New York affects the business interests of the entire country, and *vice versa*.

With some regret I say that I have often felt chagrined at remarks made upon this floor concerning New York; there seems to be an impression that her interests are inimical to those of the great West and South; that her merchants are moved largely by motives of narrow selfishness, and that it is her "bloated bondholders" who are the conspirators against silver and who are seeking to bring about the single gold standard for their own profit. This is an eminently unfair characterization. There are extreme silver men in New York, in fact I see it charged in certain metropolitan journals that the seat of the agitators (I do not use the word conspirators) for free and unlimited silver coinage is in New York. Undoubtedly there are extreme gold men there also, but during the last two years important lessons have been learned, the subject has been studied in the light of new experience, and to-day New York as a State is pronouncedly in favor of international bimetallism.

Now, as I have intimated, the great mass of the merchants and bankers are international bimetallists who demand that silver be restored by treaty agreement to its proper place in relation to gold, and these men will not be satisfied until it is accomplished, for they recognize it as the only true solution of the silver problem. They recognize the fact that a gigantic business blunder was committed when silver was stricken down by the

European nations, and though some of them may at the time have thought the course a wise one they have long since repented having had any sympathy with it. Gentlemen, there can be no general prosperity upon a sound basis in this country until silver is restored through concurrent action of the nations agreeing to open their mints once more to free coinage at a fixed ratio with gold. The result of eight years' experience has shown to the true friends of international bimetallism that the enactment of the Bland law was a gigantic mistake as it has been the principal hindrance to the settlement of the question upon a broad international basis.

Judge Buckner, of Missouri, who served six terms in this House, was one of the ablest advocates of the Bland bill. In a speech made during the closing days of the Forty-eighth Congress he said:

> Our people are thoroughly bimetallic, and will never be content with a monetary circulation composed exclusively either of gold or silver. Their traditions as well as their interests demand the use of both metals—with the value of each regulated at such ratio as that neither shall be degraded to the condition of a mere money token, and both shall perform their part in the commercial exchanges of the world, on terms of perfect equality.
>
> This can be done only by the concerted action of the chief nations of Europe with our Government; and to bring about this concert of action the first step must be taken by us, and that step should be to suspend the operation of the silver coinage act for a time, in whole or in part, and at once enter upon negotiations with European nations to establish a fixed ratio of valuation between the two metals, and open their mints to the free coinage of both gold and silver on such terms as may be agreed upon. If we pursue our present policy there is nothing more certain than that the gap between the market value of the two metals will continue to grow wider and wider, and this country will be compelled to make choice between gold or silver monometallism. I would regard either as a great calamity to this country and the world, and I have an abiding conviction that the present is an opportune period for taking prompt and decisive action on this important question.

As a business man, and speaking from a business standpoint, I say that proposition is a sound one. But I desire to be understood that I am not opposing silver; I recognize its importance with gold as a coin of our Government. I have more confidence in it than the distinguished Senator from Colorado [Henry M. Teller], if he meant what he is reported to have said in his speech of January 19. His words are as follows: "Suspension will degrade silver to such an extent that it will cease to be a money metal."

In this one sentence he has given away his cause. He evidently has no respect for the article. In his view the only thing

that keeps it a money metal is the coming of two million Bland dollars per month! Preposterous!

If silver had no better advocates its cause would be lost. What, cease to be a money metal when Europe holds a thousand million of it as full legal tender, when it is still the standard of Austria and Russia and when all Asia uses it as money, whether coined or not, to say nothing of Mexico, Central America, and most of the countries of South America! Silver, had it a voice, might well cry, "Save me from my friends" if they be such as the Senator from Colorado.

We can continue the present anomalous law of compulsory coinage of two millions per month, or we can take the panacea proposed by the honorable member from Ohio [A. J. Warner], permitting the holders of silver bullion of standard fineness to carry it to the mint and receive therefor treasury certificates, or the plan proposed by the honorable Senator from Ohio [John Sherman], whereby the Secretary of the Treasury is authorized to purchase not less than 2,000,000 nor more than 4,000,000 ounces of silver per month, of standard fineness, for which coin certificates are to be issued on the cost of the bullion; we can continue as we are, or adopt either of the above plans or any one of the half dozen other plans proposed, but, in my judgment, they are all but temporary expedients and should not be entertained by the Congress of the United States.

Free coinage is what we want to accomplish, and in my opinion it can only be done through the medium of suspension. So long as this coinage continues and uncertainty exists as to our future course, so long it is easy for European statesmen to put off dealing seriously with the question. But a date for suspension would, as has already been well said, serve as "a notice to quit." Opinion in Europe is reassuring on this point. In Germany the convention of agriculturists has repeatedly discussed the silver question in its general assemblies and expressed itself in favor of the international double standard as being in the interest of German agriculture. During the past year the distress of these interests became so much greater that the executive committee of the convention felt it to be its duty to address an earnest petition to the Diet, and a resolution favoring the international double standard was passed November 12.

On February 11 a Reuter telegram from Berlin stated that the motion introduced by Herr Huene in the Reichstag on behalf of the conservatives, urging a new and searching inquiry into the currency question, with a view to ascertaining whether it would be better to adhere to momometallism or return to a

double standard, was adopted by a vote of 145 to 119. The result is a great triumph for the international bimetallists. Gentlemen, I could produce evidence almost indefinitely to show that Germany is alive to the importance of a settlement of this question, and with a little more pressure would be ready to agree to an arrangement, but so long as we are bound by law to continue indefinitely to grind out at least two millions of Bland dollars per month we greatly retard if we do not directly prevent success.

Turning to France, I think I am safe in saying that, judging from her past history and from recent action, she would not be slow to consent to enter into negotiations to establish international bimetallism.

From the London *Bullionist* of February 6 we learn that an official decree had been promulgated appointing a permanent commission to consider the monetary question in France and other countries. I can say on excellent authority that there is not a prominent man in Holland who is not an international bimetallist.

Turning to England, we find that the friends of the double standard are waging a hand-to-hand fight with the advocates of the gold standard, and that latterly the conflict has become very sharp. On January 22 the annual meeting of the "International Monetary Standard Association" was held in London. Henry H. Gibbs, ex-governor of the Bank of England, presided, and, among other things, said that "he believed that the royal commission (of which he is a member) on the depressed condition of trade in Great Britain would report that the present condition of the silver question had an important bearing on the depression."

The meeting before adjourning resolved to form a gold and silver league on a popular basis. At Manchester, on the evening of February 16, a large and important silver meeting was held, including many members of Parliament and prominent silver advocates.

International bimetallism can be accomplished, however, without England, for it existed without her from 1816, when she demonetized silver, until 1871. It was then that Germany began her attack upon silver in endeavoring to follow the example of England and became a gold single-standard country.

This brief review of the state of opinion in Europe shows that the scheme of getting the nations to agree upon the measure of mutual benefit which the United States proposed to them in 1878, and again in 1881, is a practical one, based upon the

FORCED TO PEDDLE, THOUGH HE IS RICH

And this humiliating state of things will continue until Congress regains its reason and gives him a sensible financial system

Cartoon by Dalrymple in "Puck"

enlightened self-interest of the various nations whose agreement is sought. It shows that the obstacle to success is the indifference, the dullness, and ignorance of men in power in those governments; and, further, it shows the practical difficulty of getting nations to move.

Now, gentlemen, the measure which I advocate will accomplish this result in every nation in Europe. A date fixed by us for suspension of the coinage of the standard dollar, unless there shall be international concurrence before this specified time, is a summons left in the hands of every European statesman who has any responsibility to his country, to his sovereign, or to his constituents; a summons which he cannot forget or ignore, to wake up and take hold of this question in order to bring about its settlement upon the only basis which can possibly be permanent and satisfactory, the basis of international bimetallism through treaty agreement to open mints to the free coinage of silver at an established ratio to gold.

In my judgment the silver mine owners have gone too far in trying to sell their silver; they have overestimated themselves. If they had been more modest in their claims they would have realized more than they have done. It was their fortune to have their private interests tied fast to one of the great interests of mankind, and they were so elated that they began to think they could control the monetary interests of the country. The silver men are trying to run the silver question, and the most they have done is to do harm to the cause of silver. Alas, for silver, if it had only such friends as these!

This Government started a movement to get the nations to combine on restoring silver. That work is now in progress. It is in the hands of its friends in Europe who are working their way toward success. They ask our help; they ask us not to weaken them by continuing our coinage at the ratio of 16 to 1.

And now comes the same old cry for free and unlimited silver coinage, which from the beginning has encouraged the gold men of Europe to hold firm in the position they have taken. Gentlemen, I appeal to the sober second thought of this House to stifle this cry, which is really, though its authors may not know it, treason to the true interests of the country.

Gentlemen, this country is for bimetallism; it is for the restoration of silver to its former rights side by side with gold, rights which it had and which were guaranteed by international concert, and which shall be given and guaranteed by international concert again. The country, I say, is for an international ratio. This country is not in favor of a local ratio.

Let me tell my colleague on the committee [Mr. Bland] that we are neither red Indians nor Chinese; that this ratio of 16 to 1, on which the present dollar is coined, is not a "totem" nor "medicine" nor a little "joss" to our people. What they want is to see silver as good as gold, and no local ratio can accomplish that result. The ratio of 16 to 1, and free coinage, mean the silver standard. I congratulate the three members of the minority who signed the minority report that they have been frank in saying that they "see no harm in coming to a single silver standard."

Now, Mr. Speaker, this country does not want the single silver standard. It will not have it. The only reason why the people tolerate the existing coinage of silver is because they have not fully understood the question. Error has been spread abroad throughout the land, and the Government Printing Office is being further used for its dissemination. It is time to call a halt, and I appeal to all men who care for the best interests of the people to unite in an effort to suspend compulsory coinage and for the accomplishment of international bimetallism. [Great applause.]

Mr. Bynum supported the bill.

Gold and silver are the only moneys of consequence in the world. Gold, being the more valuable and the easiest transported, has become the international money, and is used largely in the settlement of balances of trade, while silver, the less valuable, is more convenient for small transactions and is better adapted to the wants of the people in their dealings with each other.

Silver pays the laborer for his work in the field, in the manufactory, in the shop, and in the mine. It purchases his provisions from the grocer, pays his rent and clothes his family. As well said, "It is the people's money." Take away silver and you destroy the industries of the people which furnish the balance of trade in our favor, and our gold will leave us to square the account. Give to American labor plenty of silver and it will furnish products that other nations will purchase and pay for in gold. Gold will not be driven out so long as the balance of trade is in our favor; it will not remain when the balance is against us. Gold is, and ever has been, an unreliable money. The great interests of our people, transacted largely upon confidence and credit, should have a basis neither timid nor cowardly.

If you confine the people of this country to the single standard of gold, periods of depression more lasting and more terrible than we have ever experienced will be our portion. As well said by Senator John J. Ingalls [Kans.]:

No enduring fabric of national prosperity can be builded on gold.

GOLD IS THE MONEY OF MONARCHS

Kings covet it; the exchanges of nations are effected by it. Its tendency is to accumulate in vast masses in the commercial centers, and to move from kingdom to kingdom in such volumes as to unsettle values and disturb the finances of the world. It is the instrument of gamblers and speculators, and the idol of the miser and thief. Being the object of so much adoration, it becomes haughty and sensitive, and shrinks at the approach of danger, and whenever it is most needed it always disappears. At the slightest alarm it begins to look for refuge. It flies from the nations at war to the nations at peace. War makes it a fugitive. No people in a great emergency ever found a faithful ally in gold. It is the most cowardly and treacherous of all metals. It makes no treaty that it does not break. It has no friend whom it does not sooner or later betray. Armies and navies are not maintained by gold. In time of panic and calamity, shipwreck and disaster, it becomes the chief agent and minister of ruin. No nation ever fought a great war by the aid of gold. On the contrary, in the crisis of greatest peril, it becomes an enemy more potent than the foe in the field; but when the battle is won and peace has been secured reappears and claims the fruits of victory.

Driven to cover by the facts, upon the proposition that silver will expel gold, the advocates of suspension say that we have all the silver we can use, all that will circulate upon a par with gold, and that if we coin more the monetary value of the two metals will part.

Of all the sophistries advanced, this is the most fallacious. Will some gentleman tell me what relative uses they perform as money, after being coined by the Government, that will cause them to separate? After being officially stamped as money and given full legal-tender power, what advantage will one possess over the other? When will a silver dollar pay less than its monetary value—when will a gold dollar pay more? The power of sovereignty wthin the confines of the Government fixes the relative values of the two coins as money, and the values of the materials of which they are made as commodities in the markets can have no influence upon their circulation.

The fiat of the Government gives to one the same qualities as the other, and it is beyond the power of individuals to discriminate except by specific contract. What evidences have these claimants to support their assumptions? We have, in round sums, $600,000,000 of gold and $200,000,000 of silver, or three in

gold to one in silver. France has $900,000,000 in gold and $600,000,000 in silver, or one and a half in gold to one in silver. Germany, upon a monometallic gold basis, has $340,000,000 of gold and $215,000,000 in silver, being a fraction over one and a half in gold to one in silver. The silver coins of France contain but 15.50 parts, while ours contain 15.98 parts to one of gold.

If France and Germany can maintain at par one dollar of silver to one and a half of gold upon the relations of 15½ to 1, why can we not maintain an equal proportion at the relation of 16 to 1? It is false to pretend that there is any power beyond that of the Government that can fix the relations of the two metals as money.

The President and Secretary of the Treasury have strongly recommended the suspension of the coinage of silver dollars. A partisan and supporter of the Administration, possessing unlimited confidence in the integrity and patriotism of the Executive and his Secretary, I have and expect, whenever and wherever I consistently can, to support their views and uphold their policies. I am, however, upon this question compelled to dissent from their views.

Again the advocates of gold approach us with open hands and smiling countenances, but I fear with a dagger concealed beneath their cloaks. "Oh," they say, "we want silver! We are bimetallists, but we want an honest dollar. Suspend coinage and we will drive England, Germany, and other nations to bimetallism, and then the price of silver bullion will appreciate and our dollar will be worth a hundred cents." To the friends of silver I wish to say, "Be not deceived." A suspension of coinage means demonetization. How are we to compel England to adopt bimetallism by throwing into her lap from thirty to fifty millions' worth of silver bullion every year to further depress the market and give to her silver so cheap, so develop her cotton and wheat fields in India, that American farmers will be driven from foreign markets and probably compelled to beg for protection at home.

We should remember that the discrimination made against silver is what has already driven the bullion value of the silver dollar, as compared with gold, down to 80 cents. In 1872 and 1873 Germany, Denmark, Norway, Sweden, and later Holland, demonetized silver. The action of these governments had a double effect—it increased the demand for gold, thereby appreciating its value; it decreased the demand for silver, thereby depreciating its value. At that time the silver in our dollar was above par. The states of the Latin union, at that time possess-

ing an abundance of silver, were compelled, as a matter of self-protection, to close their mints to this unnatural stream. Our country without silver coin, with an immense debt to pay, every dollar of which, by every principle of law and equity, of honesty and justice, was payable in silver coin, was the desert upon which this current should have been turned. Such a policy would probably have averted the great panic of 1873, which swept across the continent like a besom of destruction marking its course by a destruction of values never before witnessed.

The motives which caused the American Congress to demonetize silver at this period are difficult to fathom. It is said, however, that $500,000 was raised in London and placed in the hands of Mr. Ernest Seyd, of that city, who was sent here as the agent of foreign bondholders and capitalists to accomplish the object. Mr. Seyd, we are informed, made many valuable suggestions to the committee framing the revision of 1873 which were adopted. Silver was demonetized without the consent or the least knowledge upon the part of the people. True, Congress succeeded in partially restoring it to its position, so far as the law was concerned, but in so far as its actual use it has never been remonetized. It has been relegated to the position of a subsidiary coinage by every Secretary of the Treasury, and the Government has been kept constantly upon a gold standard and occupies that position to-day.

With all this discrimination against it, silver has held a place in all the governments of the world, performing the functions of a medium of exchange between the great body of the people. It pays the laborer for his wages and purchases the food that feeds and the garments that clothe his family, and does this upon a par with gold. Free coinage will make the silver in a dollar worth a hundred cents. It will do more, it will make wheat and cotton, homes and farms, sweat and muscle worth a hundred cents to the dollar.

We are told that silver will not circulate; that we already have more than the people want; that out of a coinage of $220,000,000 but $50,000,000 are in circulation, while $170,000,000 are in the treasury and cannot be forced out. I am free to confess that silver is not a convenient money and that it will not circulate to any large extent so long as something more convenient can be substituted for it with safety. The people want neither gold nor silver for the great bulk of transactions. They want paper money, and they will never permit the Government to abandon this policy. It is not because they have an antipathy to silver, not because they believe it cheap money, that it does

not circulate, but because its representative, the silver certificate, is just as good and more convenient.

The Treasurer tells us that the use of certificates tends to make the silver dollar more unpopular. Why not say that the silver certificate is more popular than the coin, which is the fact? The demand for these certificates in 1880 and 1881 was so great that $66,000,000 were taken and paid for in gold coin, and this demand continued until the Secretary of the Treasury issued an order stopping the exchange. The same argument can with equal force be made against gold.

Silver certificates will circulate upon a par with gold, and by the use of certificates, under free coinage, there need never be an idle dollar in the treasury. If we are not to provide a currency in this manner, how are we to provide it? Our national-bank circulation is based upon the national debt, and with its rapid payment is fast disappearing. Our greenbacks are but a part of the debt and must be paid. How, then, are we going to fill this vacuum? There is no better, if any other, way than to issue certificates based upon coin in the treasury. Under such a system every dollar of paper money would be the representative of a dollar in coin, and nothing better can be conceived.

It is frightful to contemplate what the abject condition of the people might be

SHOULD SILVER MONEY BE STRICKEN DOWN

The world to-day contains but $3,513,000,000 of gold, a sum insufficient of itself to answer our own demands twenty-five years hence. Strike down $3,750,000,000 of silver and a contraction of values will follow that will swallow up in the vortex of bankruptcy and ruin every individual who owes a considerable debt.

Suspend the coinage of silver, contract your national debt bank currency at the rate of $15,000,000 a year, and let the banks of New York lock up the gold, and then picture to yourselves the condition of our Western people, where almost every home and farm is under mortgage to Eastern capital.

The people of the West are in debt; their farms, their homes, and in many instances their beds, are mortgaged. They have been paying exorbitant rates of interest to the East until they are impoverished. The prices of their products have fallen, their lands shrunk in value, until they begin to stagger beneath the weight of their burdens. They are energetic, laborious, and patriotic. During the days when the nation's body was bleeding from a hundred wounds and its life trembling in

the balance they poured out their richest blood and treasure that it might be saved. They faced the death-dealing grape and canister upon a hundred fields that this Government might be preserved as one great indissoluble nation, and they now ask that in the majesty of its strength and power its great strong arm shall not be raised to at one blow strike them down to want and beggary. [Great applause.]

Mr. Bland spoke on April 7.

The policy of holding silver in the treasury so as to maintain the gold standard was adopted and enforced by Mr. Sherman, the first Secretary of the Treasury after the passage of the silver coinage act, and his policy has been persisted in by all his successors up to the present hour. In this we see the baneful influence of a bad example. What good the present limited coinage of silver was intended to have has been hampered by the failure of treasury officials to give it a friendly execution.

Mr. Sherman, then Secretary of the Treasury, just before the time fixed in January, 1879, for the resumption of specie payments, when we had coined about twenty millions of silver dollars, entered into an arrangement with the New York Clearing House Association for the purpose of making a combination of the Treasury Department and the national banks of New York, composing the clearing house association, by which silver should be repudiated and demonetized as far as it was in the power of the Treasury Department and these banks to do it, and especially to demonetize it in so far as the payment of the public debt was concerned. The basis of this agreement is found in a letter of Mr. W. A. Camp, manager of the New York Clearing House, to John Sherman, Secretary of the Treasury, dated November 12, 1878.

This letter specifically prohibits the payment of silver dollars or silver certificates from the Government in the settlement of clearing house balances, all payments being confined to gold or legal-tender notes convertible into gold; and convertible into gold because of the ruling of Mr. Secretary Sherman giving creditors the choice of demanding and receiving gold in the redemption of greenbacks or other debts held by them against the Government after January, 1879.

Under this arrangement silver was virtually repudiated by the Government and by the national banks. From that day to this the policy inaugurated by Mr. Sherman has been adhered to by the Treasury Department; and that, too, notwithstanding

the law of 1882, prohibiting national banks from thus refusing silver. Every law passed by Congress and looking to the circulation of silver has thus been repudiated by this combination of the national banks, Government creditors, and the Treasury Department. The question is, ought not the law be so changed as to permit free coinage? It would be coined for all persons like gold, and would never reach the Federal treasury except by way of taxation.

In so far as you restrict this coinage you restrict the right of the debtor class to pay their debts in the legal-tender metal; and this restriction is adopted for the purpose of continuing the gold standard and preventing the minting of silver except in limited qualities, in order to make money more valuable, to depreciate all property and all prices, and to compel debts to be paid by the gold standard instead of the standard regulated by gold and silver freely coined at your mints.

SEIGNIORAGE

Now I want to discuss further this seigniorage question, and discuss it upon principle; for, as I understand it, it is one of the most important questions we have to discuss here.

Our gold and monometallic friends, and some of our silver friends also, think if we coin silver free we simply pay to the bullion holders the difference between 80 cents and $1. That is to say, bullion to-day in the markets of the world, measured by gold, is worth but 80 cents, and therefore, if you open the mints of the Government for all the bullion to go there to be coined into silver dollars and legal-tenders, you to that extent give the bullion holder 20 cents on each dollar more than he is entitled to to-day. Is that so? For if it be true, Mr. Speaker, then all that has been contended for under the principle of free coinage is admitted. You acknowledge that for which we have contended, that free coinage will have the effect to give silver the same value as gold, and that under it every coined piece of silver will be at par with gold at the ratio of 16 to 1. It is worth it to-day. Every silver dollar that has been coined at our mints is worth a gold dollar. Who can say that all we may coin will not be worth a gold dollar?

And when gentlemen tell us this law will restore silver to the same value as gold, but that in doing so we give the seigniorage or profit to the bullion holders, they simply admit all that has been contended for, and that is the silver dollar and the gold dollar will be at par everywhere. Does any gentleman object to that?

The only serious argument made against the coinage of silver is that it will not restore this parity of value—that it will not give that value to it—that it is not possible for the coinage laws of any country to give additional value to a metal. If that is true, then the argument about seigniorage is a myth and a humbug.

But we are told it is true that for a short time this loose bullion will be gathered up and brought here and dumped down upon us, and they will get a dollar for it in gold or its equivalent, and after they have coined up the surplus—how much they do not know—then silver will begin to sink and go down to bullion value again. How convenient this question is for our gold monometallists! Drive them from one point, turn their own batteries against them, and then they go off into the realms of prophecy. [Laughter.] They rise up here and tell us that if we do this or that certain things will occur. Now, Mr. Speaker, if the old Jewish law were in effect here to place false prophets beyond the outer walls and there stone them to death—if that law were in force in this country to-day we would have many less of these gold prophets among us. [Laughter.]

If this predicted fall of silver be true, it means that gold also would fall, because, silver being tied to gold by free coinage, both must fall together. That is, labor and the products of labor and all species of property would rise, being measured not by gold only but by a volume of money swelled by unlimited mintage of silver.

But on this question of seigniorage again—and I hope I will be pardoned, for I will have to be somewhat disconnected—how much interest do you want the Government to make, and at whose expense must it be made? We are making, it is said, 20 cents on the silver dollar to-day in the way of seigniorage. How can you make more? Simply by limiting coinage, and further depressing silver. I suppose the only way to make more is to coin less. Let us only coin $1,000,000 a month of silver and perhaps we will make 30 cents on the dollar; and, if that is not enough, let us go down and coin only $500,000 a month. Then we could make 50 cents of seigniorage on the dollar. If that is not enough, and it does not seem to be with some, then coin only $1,000 a month, and you can make still more seigniorage in the dollar as coinage.

The law permits us on the other hand to coin $4,000,000 a month. If that law is executed up to the maximum of $4,000,000, the seigniorage will be less in the dollar, but the bullion holder will be making money out of the Government again.

So, Mr. Speaker, when you come to the question of seigniorage you come into the vital question of gold and silver coinage. None but the tyrants of the old world, the kings, and those who desire to make money out of the people, ever charge seigniorage, except that which is necessary to pay the cost of coinage.

I will further explain this point.

An argument of the opponents of free coinage is that silver bullion at the ratio of 16 to 1, on 412½ grains of silver to 25.8 of gold, gives to the owner of silver bullion, or the silver miner, 20 cents on the dollar on his bullion.

This, at first blush, looks plausible, but it is not true, unless, as before stated, the coined dollar, by virtue of its coinage and legal-tender power, has this greater value; and, if it does, then all the silver bullion, having free access to our mints, is at once restored to a parity with gold bullion at our ratio, for no one would take less for his bullion than the price fixed at the mint—that is, every piece of silver bullion containing 412½ grains of standard silver is at once worth one dollar, less the expense of coinage. It is worth one dollar because the holder can take it to the mint and have it coined into a dollar.

Then there will be no more buying and selling of silver bullion in the market; unless, at this ratio, it should go to a premium over gold, for it will have a fixed value at the mint. This now being the law as to gold bullion, we would then have silver and gold bullion at par. The owner of silver would then have the same advantage as the owner of gold—no more, no less. Free access to the mint, it must be admitted, is greatly to the advantage of the holder of either of the precious metals, but it is an advantage he must necessarily have as long as we make metal money the standard of values; and so long as we maintain such a standard it is necessary to coin free in order to have a sufficient supply of money.

Seigniorage, or a gain to the Government in coinage, is a tax on the money of the people.

The idea of gain to the Government in coinage grows out of the old idea that the king should have his profits out of the coinage permitted at his mints. The consequence of this prerogative was that the greater the king's tax, or seigniorage charge, the less amount of money there was coined; because the tax or charge tended to drive the holder of the metals from the king's mint to some other mint where the tax was lighter. Discovering this, that the mint seigniorage was driving the metals out of his realm and rendering his subjects destitute of money, his mints were finally opened to the free coinage of the metals

for all comers thereto. Our Government has the most odious form of tax on silver. It limits its coinage, thus depreciating its value 20 cents on the dollar in order to buy it at that rate in the market. In order to accomplish this we coin only $2,000,000 worth per month, while we produce four million per month. Now, all our silver thus inhibited from coming to our mints is driven to the mints of other nations, or taxed out of circulation. In this way $24,000,000 of our own production is annually lost to our money circulation that ought to be coined at our mints. Who is benefited by this operation? It is the owners of gold, for the more silver we thus drive away the more is the gold worth which remains, by reason of the scarcity thus created in our circulating medium. By this operation the bondholders, the mortgage owners, and all classes of creditors are largely benefited, because it makes gold, the money in which his securities must be paid, more valuable.

If there were only $2,000 in all this country, and by some means one-half of it should be lost, the remaining half would become at once worth just as much as the whole formerly was to the creditor, while it would at the same time impose on one who happened to be a debtor exactly double the burden to pay his debt that he would have been under without the loss. It is quite plain, therefore, why the bondholding and creditor class are willing to outlaw silver at our mints. Seigniorage then is a tax not on the silver miner merely; it is a tax on the vast body of our people who need this money to pay their debts with. It is a tax on labor and the product of labor. It is a tax on the laborer because he cannot get work unless there is money to employ him. It is a tax on wheat, corn, cotton, meats, and manufactured products, because these products get no market unless laborers get money to buy them. For this reason bread and clothing are cheap because there is no demand for them, and no demand because there is no money to buy with.

There are a million of men out of employment in this country because there is not sufficient money among the people to employ them. The report of the Bureau of Labor Statistics, just published, shows this large number of men to be idle, and that in the last year we lost $300,000,000 by this lack of employment. These men have nothing to buy with; hence they must suffer almost to starvation while bread is cheap. Thus we have the awful spectacle of millions starving and naked in the midst of plenty. Gentlemen call this overproduction. I call it underconsumption, caused by a lack of money to effect exchanges. This want of money is caused by the tax or limitation

put on the coinage of silver in order that the gold kings may have their seigniorage of 20 cents in the way of dear money, brought about by driving silver out of the country, and to other countries, India, for instance, where it is utilized in stimulating the production of wheat and cotton there to compete with our own productions of these staples. Of all the rascally wrongs perpetrated on our people this seigniorage business, or limited coinage, is the most insidious because of its apparent plausibility.

If the silver miners, or bonanza kings as they are termed by the wily gold advocates, were the only sufferers it would matter but little. If they were not satisfied with their status they could hunt some other calling. But if we are to rely on the metals for money we ought to have all the metal that can find its way to our mints.

Hence it has always been considered a blessing to have both silver and gold miners to delve into the earth for us in quest of the precious metals for our money.

It is the invention of latter-day legislation to enact statutes to drive from us the metals out of which we coin money, either by seigniorage, tax, or limitations on their coinage. Down with the fraud!

We should have no such prerogatives of seigniorage here for the special benefit of the gold kings. Let the king's prerogative go. The monopoly of gold must go. Gold is not king nor is silver, but in this free country the people must exercise all kingly prerogatives.

THE DUMP FROM EUROPE

The enemies of free coinage of silver allege that its effects would be to cause all the silver of other countries to be dumped down upon us. The same persons also claim that free coinage would not increase the value of silver.

These positions are wholly inconsistent.

If the free coinage of silver will not raise its bullion value then all the silver that would be sent here would be sold at a great loss.

The bullion value here is but 80 cents to the dollar at our ratio, and would be about 77 cents at the ratio; hence France would lose about 23 cents on the dollar by sending her silver here to exchange for our gold. Does any sane person believe that such an exchange would ever be made? And that, too, in the face of the fact that none of these countries, unless it be France, now have a large enough circulation to meet the wants of their people? Not a single dollar would be thus exchanged.

Should free coinage restore silver and gold bullion to a parity at our ratio of 16 to 1 they would still lose 3 per cent. by the exchange, or about $57,000,000. These facts would effectually bar such an exchange and inundation of silver we hear so much about.

Gold will buy more silver here than in any other country, and silver will buy more gold in any other country than here, unless it be in Mexico, where silver is a little cheaper than here.

Why then talk of losing our gold for cheap silver? There is no such thing as cheap-coined silver. As compared to the price of labor and all commodities silver is worth more than it was twenty-five years ago. Gold has risen everywhere.

This silver question ought to be settled. It is disturbing the business interests of the country. Men who are capitalists, that have money to loan, claim that should we suspend coinage they would then know that the money they might loan would come back to them in kind as to value; that the coinage of silver will bring us to the silver standard, and then the money they might loan now would be paid back to them in a depreciated currency. For this reason they claim they can do better by holding on to their money. This causes money to be hoarded, and depresses business. They say if we suspend coinage they will put their money out. All this seems plausible. But, if a revival at all, such a revival would be spasmodic, and of short duration. It would be such activity as a galvanic battery would impart to a corpse—a spasmodic flutter, without living, circulating blood to sustain it.

Being thus brought to the single gold standard, with the output of the gold mines constantly decreasing, an annual supply of only ninety millions and seventy-five millions of that going annually in the arts, manufactures, and ornamentation, as statistics show, where would the giant America get the circulating life-blood in the way of money to keep alive? It is preposterous nonsense. A grain of gold would be worth its weight in diamonds. England, France, Germany, and all the gold countries are deprecating gold scarcity and the consequent depression of trade and hard times. If the overdeveloped and densely populated countries of the Old World find the gold standard too narrow how can we in this new country, just entering upon a new era of industrial development, increasing population and enterprises, limit business to the gold standard? It cannot and will not be done. The money proposed for us by the gold advocates, to consist of gold and bank notes only,

will not be accepted. A revival of business will come with free coinage of silver—not otherwise.

My friends who say they are in favor of silver, but are against unlimited coinage, remind me a good deal of the adage we heard during the war in regard to certain gentlemen who were in favor of the war, but opposed to its prosecution. If one piece of silver bullion is fit for coinage, the whole of it is. And if it is not all fit for coinage none of it should be coined, not a dime. There is no compromise or halfway house in this matter; and when gentlemen oppose free coinage they should consider how near they are approaching the gold camp.

That was the mistake made in 1878 in the Senate, according to my view of it. Had they passed the free-coinage bill then, and could that bill have become a law, all this difficulty about silver, and all this distress and unsettlement of business, never would have occurred. Whatever you may say against silver coinage, I have heard no gentlemen yet offer a substitute for it. Nothing except to stop its coinage and get to a single gold standard.

Now what would be the consequence of a single gold standard? We have six hundred millions of gold to-day. Will any gentleman assert that that is sufficient metallic money for our sixty millions of people? If not, where are you going to get the rest, when to-day you find that Germany and Great Britain, and even France, the whole of Europe, are ready to go to war before they will give up a grain of gold. They can afford to see the streets of their large cities run with the blood of their laborers; they can afford to see their populace starving; they can afford to go to war, but they cannot afford to give up one grain of gold without bringing on probably internal or civil war among themselves.

And where are you to-day in this country on the gold standard? You are not much better off. We are in the same condition—probably not so bad—but we have difficulties at home. We have been trying the gold standard. It has proved a failure here and everywhere up to this very hour, and is confessed to be a failure by the very gentlemen who were most active in bringing it about.

I believe the most of our gold advocates have turned to be bimetallists. They are in favor of bimetallism with a condition which has heretofore proven to be an utterly impossible condition, and that is the condition that Great Britain, and Germany, and France agree with us to coin silver at an international ratio. That was the delusion that prevented the settle-

ment of this question in 1878, when, as I have stated, the House passed a bill giving free coinage to silver. It went to the Senate. The idea the Senate had was to limit the coinage until we got an agreement with foreign countries, and it provided in the bill for an international conference. We sent our commissioners to Paris. They held that conference, and what was the result? Why, the delegations from other countries simply told our commissioners if they believed in silver it was good for money; they said, "Go home and coin it." That in substance Mr. Dana Horton and Mr. Walker were among the gentlemen representing us. They did not like the treatment they received, and in connection with Mr. Cernuschi, and other bimetallists of Europe, they conceived an idea that if this country would stop the coining of silver we could flood England with cheap silver bullion, and in that way bulldoze her into submitting to an international agreement. And that was the outcome of the monetary conferences at Paris in 1878 and 1881.

Now, I want to remark in passing, these bimetallists are international bimetallists. Their whole theory is based on the idea of having metallic money that will be good money at par everywhere; that a piece of silver will be the same in our coinage as in France and throughout Europe so that you can travel wherever you please without having to submit to brokerage. But this is almost impossible without disarranging the monetary affairs of various nations. As I have stated, the double standard and gold standard interfere; and on the other hand these gentlemen did not take cognizance of the fact that a national trade, ours for instance, amounting to $10,000,000,000, requires a consumption of money at home of vastly more importance to our people than international trade.

But, Mr. Speaker, this idea has been a failure. This idea of international coinage, this idea of an agreement between the nations of the world in a standard of coinage, has never occurred from the very dawn of history until now, except among the Latin states and Scandinavia. But is there any reason to suppose that by suspending the coinage of silver here and sending the bullion to Great Britain and to other European countries that that is going to terrify them so much? What is the difficulty to-day, especially with our Southern producers of cotton and our farmers in finding a market for our Western wheat?

We find that European countries, by purchasing bullion silver and sending it to India, are stimulating the industries of India to such an extent that its wheat and cotton are coming in competition with ours. I will not go into statistics—I have not

the time—to show the vast increase in the production in India, during the past few years, of wheat, which is taking the place of our Western wheat and can come here and compete with us at home. The very fact that we have demonetized silver and cheapened it and sent it abroad has stimulated India in the production of these commodities. I cannot go into an explanation of this point here, but I will print in my remarks some extracts going to show how the result is produced. Silver being demonetized in England and cheap when converted into bullion, it is not a paying business for India to settle her balances in England in silver, but it does pay her to sell her wheat and settle her balances in that way.

Now, Mr. Speaker, we have the advice of Mr. Cernuschi in last Sunday's *Herald* as to the best way out of our difficulty. I cannot state his proposition precisely, but in substance it is this: If a free coinage bill should fail to pass, or, having passed, should be vetoed, he proposes that we purchase silver, so much every month, and send it to England; that we purchase say $600,000 worth of silver bullion one month and ship it to London, double the amount the next month, and so on until, within the year, we shall have dumped down upon the London market about $22,000,000 worth of silver bullion, selling it at a lower rate every month, and in that way make a panic in the silver market and disturb the exchange between Great Britain and India, so that Great Britain will succumb and enter into a pact with France and the United States for the purpose of restoring silver.

Now, if it be true that Great Britain and France and those European countries are getting cheaper wheat and cotton from India with this cheap silver, certainly that would disarrange nothing. But is that statesmanship; is that sensible? If it is statesmanship, if it is sensible, and if Mr. Cernuschi is so anxious to have a par with Great Britain, France, and Germany—and certainly there is some reason why those countries should have the same money—let France and Mr. Cernuschi go into the market and buy the silver and ship it to England and run the risk. That they do not do it shows the fallacy of the argument. He says that France has got six hundred millions of silver that she wants to get rid of. If that is so, why not dump that silver down on the London market and strike terror into the Englishmen and compel them to submit to French dictation? Suppose this scheme should fail; suppose that (as we are invited to do by the gold advocates) we suspend silver coinage, for the purpose of shipping this silver bullion and disturbing

the English exchange and flooding Europe with cheap silver in order to bring them to better terms—suppose that policy fails and we find, after we have demonetized silver and suspended its coinage and adopted this plan, that it does not have the desired effect, in what condition are we left?

As to Mr. Cernuschi and the bimetallic school, no matter which way it goes they have won. They do not believe in bimetallism unless it can be international bimetallism, in order to carry into effect their particular views upon the monetary question. They are quite willing that the United States shall step into the breach and suffer all the loss and all the consequences, if their predictions and theories prove to be fallacious. Mr. Cernuschi is certainly a gentleman of education and ability; there is no doubt of his being well versed in financial questions, but, like other gentlemen, and probably myself among them, he may be a little inconsistent at times, and certainly he has changed his views within the past few years. Before the silver commission of the United States in 1876 he said that, had France continued the free coinage of silver, there would have been no silver question to-day, because for seventy years—so long as silver was coined free—gold and silver were at a parity at the French ratio of 15½ to 1.

Now, if it be true that France by continuing the free coinage of silver could have maintained the parity between the two metals, what may we expect by free coinage in the United States? Why, Mr. Speaker, we have a bimetallic union of our own. Under a bimetallic constitution we have a bimetallic union consisting of thirty-eight States in addition to the Territories. This bimetallic union includes a population of 60,000,000, and an area of over 3,000,000 square miles, embracing 2,000,000,000 acres of land. Here is a bimetallic union compared with which the Latin union is a mere bagatelle so far as the resources of the future are concerned. Having a population of 60,000,000, increasing at the rate of 1,000,000 annually, spread over this vast area, before we could coin the quantity of silver that France has to-day we would have a population probably as large as or larger than that of the Latin union, whose territory compared with ours is insignificant.

Suppose silver is 20 cents lower than gold and will so continue after we provide for free coinage, what then? All statisticians admit that so far as the value of silver is measured by commodities there has been no fall of silver whatever.

Then the question comes up, shall we in adjusting this ratio put more silver in a dollar or less gold in a dollar in order to do

justice to debtor and creditor and to the business interests of the country? That is a debatable question. But the gold advocates and the suspensionists make no proposition on that subject, but simply say, "Because silver has depreciated therefore we will coin none of it; we will have nothing to do with it." Why, sir, in all our history, whenever there has appeared any disparity in the market value of the two metals it has been remedied by readjusting the ratio. No one has ever before contended for demonetizing a metal because it happened to fall in the market. Yet that is the proposition made to us to-day. If gentlemen propose to increase the bullion value of the silver dollar I say that is a debatable question; but they show there is no sincerity in proclaiming that they want bimetallism when they ask us to totally demonetize silver and suspend its coinage, simply because there is a depreciation in its value.

Mr. Speaker, in our past history silver was never before demonetized. At one time the silver dollar was worth 3 cents more than gold; but the mints remained open, so that when the ratio might change silver would come back to our mints. Albert Gallatin, in his report to Mr. Ingham, Secretary of the Treasury in 1830, upon the state of the coinage, makes this significant statement in reference to bimetallism:

> The whole amount of the inconvenience arising from the simultaneous use of the two metals consists in this: Their relative value being fixed by law, if this changes at market, the debtor will pay with the cheapest of the two metals; and, therefore, at a rate less than the standard agreed on at the time of making the contract, if the change in the market price is due to a fall in that of the metal with which he pays his debt; and it is obvious, in the first place, that if the change is due to the rise in value of one of the two metals, and that had been the legal-tender, the choice given to the debtor to pay with either enables him to do it according to the standard first agreed on.
>
> But the true answer is that the fluctuations in the relative value of the gold and silver coins arising from the demand exceeding or falling short of the supply of either are less in amount than the fluctuations, either in the value of the precious metals as compared with that of all other commodities or in the relative value of bullion to coin, and even then the differences between coins, particularly gold coins, issued from the same mint; and, therefore, that those fluctuations in the relative value of the two species of coin are a quantity which may be neglected, and is, in fact, never taken into consideration at the time of making the contract.

By this I understand that where you are using and coining both metals debtors have the right to pay in the cheaper, and that the equity of the contract is not disturbed by this unless the cheaper metal has fallen in value as compared with commodities; if it has not, then the equity of the contract is pre-

served. On this point Mr. Weston, in his work on the silver question, says, "Upon this Mr. Gallatin observes that it will not be true that the debtor pays less than was agreed, unless the change in the market price is due to a fall in that of the metals in which he pays his debts," and he adds that, "if the change is due to the rise" of the other metal, he pays all that was agreed.

And when gold advocates ask us to demonetize silver in order to crush out the silver as money of this country and to build up gold monometallists, they are asking what the American people will never assent to, and gentlemen had as well make up their minds to it. [Applause.]

I know that in 1878 by limiting the coinage of silver providing for this international conference they expected finally to get their hands on the law to stop its coinage, and that is their only hope to-day. But I say that hope will be in vain; and they need not depend on it. I tell you the silver advocate who is an opponent to free coinage, as I said before, must get out of that position and take sides either for silver or against it. These half-hearted supporters will not satisfy their constituents on that subject.

I wish to say in conclusion, Mr. Speaker, that if I had not believed in free coinage I would not believe in any coinage. No man can support himself in this House or before his people upon the present law. I never advocated it; I took it simply as a compromise, as better than no law at all. I advocate it or hold to it to-day and stand to it because I believe in free coinage; because I believe silver ought to be coined, and coined free. If I did not believe it ought to be coined free I would not advocate the coinage of one cent of it. It is illogical policy. The idea of making money of silver or gold and limiting its coinage is an anomaly in the history of money. To limit the coinage of silver is an outrage upon the constitutional rights of the people. [Applause on both sides of the House.]

To sum up—the demonetization of silver is the outcome of the convention held at Paris by so-called experts and doctrinaires. The theories of these learned gentlemen, whose financial opinions the world is asked to view with awe, having been put in practice, have depressed prices, demoralized trade, and turned millions of law-abiding laborers into strikers and mobs. They have compelled the payment of all sorts of debts in the dearest money of the world—money made dear by the elimination of one-half the money metal of the world from its legitimate use as a debt-paying and labor-employing medium—the

effect of which upon the American farmer and producer has been to drive his breadstuff and cotton out of European markets. Our gold policy is driving the products of our silver mines to India, there to be used as money to employ Hindoos to raise wheat, corn, and cotton in direct competition with the farmers of America.

Why not give free coinage to silver here so as to permit our people to employ laborers to stimulate our own productions? Are they of so little importance as to deserve this fate? Will the day never come when others will be made to share with the agriculturists and laborers of our land the burdens of hard times?

Thomas M. Norwood [Ga.] wittily characterized the arguments of a number of speakers, which will thus be indirectly presented here.

The gentleman from Maryland [John V. L. Findlay] prescribes gold as a sovereign remedy—in fact, a panacea. He stakes his professional reputation on the infallibility of his therapeutic formula—that "what is good for the goose is good for the gander"; what is satisfactory to the lender must be equally satisfactory to the borrower; what will support the wealthy must be equally nourishing for the poor; that a homeopathic dose for a poor man is as curative as an allopathic quantity for the rich, even though the latter's soothing draught may be an infusion as rare as that of Egypt's luxurious and lascivious queen when she drank the costly pearl. The immortal Doctor Sangrado[1] from all materia medica evolved two remedies that he maintained against the world were a certain cure for every mortal disease, and they were "bleeding and hot water." But the gentleman from Maryland, who succeeded in the presence of this House in demonstrating that iron was evolved from dirt and brass from iron, silver from brass, gold from silver, and, finally, greenbacks and bank notes from gold, has taken a step in advance of Doctor Sangrado in that method of evolution which proceeds from the complex to the simple—from the heterogeneous to the homogeneous—by eliminating the hot water and maintaining that all our maladies can be cured by simply bleeding the people.

When a patient, by dissipation and excessive drafts on his vitality, has lapsed to the stage of physical decay that saps his blood, his physician sends him to a slaughter house to drink the

[1] A character in "Gil Blas," by Alain René Lesage.

warm blood of the fresh-slain bullock; and our financial doctors, when the Goddess of Commerce, standing on deck deserted and desolate, with cheeks wan and pale and eyes that have lost their luster, gazes on sea and air that are dead, without a tender breeze to fan her brow or move her vesture, assure her of the vitalizing power of deep potations of the toiling people's blood.

The gentleman from Iowa [Gen. James B. Weaver] is equally clear that there is healing in the application of fiat shinplasters. The gentleman from Ohio [A. J. Warner] has discovered a potent sedative, surpassing Clingman's tobacco cure, in a poultice of silver certificates. The chairman of the Committee on Coinage [Mr. Bland] predicts the return of bloom to the pallid cheeks and of brightness like the gazelle's to all eyes by an airing behind a double team of yellow and gray, harnessed abreast, so that if one should back the other will pull us through—if one should dash away for Europe, the other will fall back on the breeching, and hold the first in check and prevent a smash-up.

The gentleman from Pennsylvania [William L. Scott], while approving the team of the Bland doctrinaire, advises a tandem, with a yellow Percheron in the lead and in the rear a puny piebald pony mule, with Yum Yum's ambling gait, with one fore leg sound, but which every veterinary doctor in the treasury certifies cannot travel, and the other so wasted from swinney that all admit it cannot travel, and with subsidiary hind legs, one of which is shriveled from inanition and the other so shrunken and dry that even a starving disease would not waste time in an attack upon it—the relative indicated horse power in those four supports being respectively represented, in the order named, by the figures 412½, 420, 347, and nothing. The rich man takes the fine horse and the poor man rides the mule, and, mounted thus, they move cheerily on, presenting a spectacle of unmixed felicity in front and of infelicitous mixture in the rear.

Had I time, there are other shades of opinion I would like to notice, but the five gentlemen I have named represent the principal or main positions occupied in this contest. It has two angles more than were in Midshipman Easy's triangular duel; but there are really only three parties to the engagement, one is for an advance, one for a retreat, and the third for standing still and fighting it out on the present line. The first would advance by establishing free or unlimited coinage; the second would retreat by repealing the law requiring silver coinage, and the third says

—do nothing; let well enough alone. I am a humble disciple in the third class.

To advance is to experiment—to test a theory. It is to abandon a certainty for an uncertainty. It is to speculate, it may be "to fly to ills we know not of." What the result might be rests now in argument, and about it wise men differ. The laws of finance are as subtle as the laws of life. We see their manifestations, but we know not their hidden movements. "The wind bloweth where it listeth, and thou hearest the sound thereof, but canst not tell whence it cometh and whither it goeth." This I say with commensurate respect for the Signal Service Bureau, and with the apologetic acknowledgment that the language quoted was uttered some time before the bureau was established. In the physical as in the financial world a depression suddenly comes, whence and why no man can tell, and then follows fast and furious the cyclone or tornado, and men, helpless and dumb, go down before the pitiless storm. Where is the prophet who foretold the tempest that swept this country in September, 1873? It came as noiseless as the angel of death to the households in Egypt, and scarcely a roof in the land escaped its devastation. As a proud ship secretly scuttled at night suddenly goes down, a tall monarch of the forest in a dead calm falls without apparent cause, so the house of Jay Cooke & Co. in a night disappeared, and soon the whirlwind spread ruin in a swath as long and wide as the Union.

Whether free coinage of silver would raise the coin to a par with gold; whether it would create a depression that would force foreign silver in to fill it; whether it would brew rebellion in India and compel Great Britain to agree to an international standard; or whether it would create a panic and oppress the poor, no man can know, and therefore I hold it to be the part of wisdom at present not to try the experiment.

For the same reasons, in part, I oppose the suspension of silver coinage. There is nothing in our experience in the past eight years to convince us of the necessity for suspension. There is nothing to show it would be wise to go backward. The Bland law has done no demonstrable hurt to the country. Volumes have been written by financial essayists and economists and spoken by Congressmen against that law, but who among them has shown that the condition of the country is worse to-day than in 1878, when that act was passed? The *experimentum crucis* is better than all theories. Those who are now crying for the leeks and flesh pots of Egypt were the ones who protested against setting out from the dark region under the leadership of the

Missouri Moses, and who with wails prophesied that Pharaoh would overtake us, and that our last end would be worse than the first. They were the purse-proud and the pampered few, and not the many who had to make bricks without straw and hew the wood and draw the water, and they played the rôle of prophets, and with affidavit faces foretold that gold would leave the country like an exile, never to return. They are of the Wiggins[1] family of prophets. If their prophecy hits right, they are prophets; if it misses, they continue to prophesy.

But "tell it not in Gath, publish it not in the streets of Askelon"—gold, then $228,000,000, has increased to more than $600,000,000. True, they say, but it just happened so. The balance of trade happened to be in our favor. But why did it happen so? We have not had a period of signal prosperity for the past eight years. The burden of complaint by the advocates of gold monometallism is that the silver coinage has depressed prices, stagnated business, disemployed labor, kept the people poor, and diminished their ability to purchase. This is a "*petitio principii*," a begging of the question. Does the existence of the facts stated prove the truth of the alleged cause? If so, why was not the country prosperous and everybody happy between 1873 and 1878, a period of five years, when gold was monarch and had no brother near the throne threatening its supremacy? Why is it that business is improving; that furnaces closed last year are in blast this year; that looms idle then are busy now; that stocks and bonds are higher this year than last, and higher last year than in 1884 or 1883; that there are fewer failures and for less amounts than two or three years ago; that confidence in business circles is stronger, while the mints, *horribile dictu*,[2] are monthly stocking the country with two million cart wheels that the Government, with all its reserve, not to say its suppressed power, cannot make revolve.

And this suggests another objection to silver money, which is, that the people do not want it; that as fast as it is paid out it returns to the treasury. This is the resort of a winged and crippled logic. What else should it do but return to the treasury, as the law makes it payable for debts due the Government—for duties, customs, and internal revenue? The gold advocates speak of silver returning to the treasury as if the people give it away, disown it with contempt. No, sir; the fault is in the Government, not the people. Gold is paid to the bondholders and the silver held in the vault. Silver is dishonored and depreciated

[1] Wiggins was a Canadian weather prophet.
[2] "Terrible to tell."

by its own mother. It is not without honor save in the banks and treasury.

I listened with close attention and deep interest to the gentleman from Maryland [Mr. Findlay] when he opened the debate as the advocate of gold, and with admiration divided between the ingenuity of his logic and his rhetorical decorations. His was no masked battery. He unlimbered in the open field, with the black flag waving over his magazine, and proclaimed he would give no quarter to the enemy—silver. He assaulted the silver dollar on the ground that it is too bulky for circulation; and yet in the next breath he admitted that neither gold nor silver is largely used as a medium of exchange, and that "the world's commerce has come to be carried on in great part by a secondary or representative currency." That is to say, the statue, which the gentleman saw in his rhetorical vision, with feet of clay, legs of iron, body of brass, arms of silver, and head of gold, in the progress of modern financial evolution, is now crowned with a variegated chaplet of greenbacks and silver certificates. How consoling this must be to the gentleman from Iowa [General Weaver]. What a curious piece of ingenuity this logic is. In trying to prove that silver is too bulky for currency he admits that gold is not used as currency and is chiefly valuable as a base on which paper or representative currency rests. While trying to advance in a charge on the position of silver the gentleman has backed away from his own position. His logic is like a piece of mechanism invented by a genius who called it "the compound duplex back-action hen elevator," the object of which was to prevent predatory chickens from invading his dwelling, and which, when adjusted to the locomotive power of a hen, would, by its back action and elevation, convert her attempted forward motion into a backward step. Instead of advancing in the house, the hen found herself moving from her first position to the rear.

But the gentleman from Maryland is skilled in polemic warfare, and I take the liberty of warning him that the back-action logic he has used in his attempted advance on silver will end in his backing into the camp of General Weaver, who may or may not "welcome him with bloody hands to a hospitable grave." His disappointment on seeing his idol of gold give way to greenbacks will be as great as that of Apollo, who, madly enamored of Daphne, gave chase to her, and at the exquisite moment of his expected triumph he witnessed her transformation into the laurel.

But the gentleman from Maryland and others reiterate the

charge of Lombard street (London) that our silver dollar is dishonest, is a licensed swindler, a land pirate, bearing letters of marque and reprisal granted by the United States to roam over the country and pick the pockets of the poor (for the rich, he says, it cannot reach to despoil), and when gorged with spoils and weary of pillage it returns to its place of departure like a discharged criminal returning to his prison. Why is it a dishonest dollar? Mr. Chairman, I have heard this charge repeated with "damnable iteration," and yet I have not heard one reason given to sustain it except the one I shall heerafter speak of. Is it not of standard weight and fineness? Is it not one-half ounce more in the pound than our silver dollar was for eighty years? Is it not about in the ratio of silver to gold the world over—15½ to 1? Will it not purchase at home as much as a gold dollar will? Is it not coined by the United States, bearing the stamp and declaration of sixty million people that it is a dollar and worth a dollar in gold? Is it not receivable by our Government in payment of all dues to it? Is it not a legal tender for all debts, public and private? Can any more be said of gold? Then why dishonest? Why is this insult to the honor of every American citizen which is given abroad repeated at home?

Sir, it is only because Great Britain values it as bullion, and will not pay any more for it. This is the head and front of its offending, no more. And for this alone contempt is cast upon it by calling it the "buzzard" dollar. The gentleman spoke of this age of evolution. It is one, indeed. The superior learning of the children in ornithology has discovered that the eagle of our fathers is the buzzard of their children. The father was educated at home, in America; the son is educated abroad, in Europe and by Europe. The father believed it his duty to coin money for the benefit of his own country; the son thinks it his duty to coin silver for the benefit of Great Britain and Germany. The father believed in a strict construction of the Federal Constitution; the son calls the old man "an old fogy," and goes for the greatest latitude. The father was a plain gentleman, dressed neatly, believed in good government, called stealing "theft" and punished it, and worked for his living; the son dresses as richly as a gambler, believes in good government for everybody except himself, calls stealing "unfortunate speculation," using trust funds "crookedness in his accounts," and lives by generously dividing with the laborer the laborer's own earnings, that is, when the son is not hard up and needs it all for "margins" or a yacht.

It is charged by the friends of silver that a conspiracy exists for its destruction. I will not go to the length of saying that a conspiracy is formally organized. But there are a consensus among the monometallists and a subordination of them to a foreign power, the effect of which is as damaging to silver as if it were produced by an actual conspiracy. The head center is not in America; it is in London—the world's financial focus.

I once stood on the east bank of the beautiful Satilla, and, pitching my voice to the dense wood on the opposite side, a thousand responses echoed from leaf and leaflet beyond. When Lombard street on the eastern side of the Atlantic cries "Gold!" every city, town, banking house, and bondholder on the western shore echoes "Gold!" Lombard street, thirsting for gold, exclaims, "Dishonest silver dollar!" and through every street and avenue of commerce radiating from and connected with that gold center is reverberated by ten thousand bondholders and bankers, "Dishonest silver dollar!" Lombard street declares that the American silver dollar is worth only 80 cents in British money, and Wall street echoes: "Yes; our silver dollar is worth only 80 cents in British money."

About a hundred years ago some rebels asserted in an almost forgotten manuscript that Congress alone has the power "to coin money, regulate the value thereof and of foreign coin." They denied the power of king or queen to regulate the value of American coin. Some of their children still revere that manuscript, and in their simplicity believe it to be their right and duty to coin money for our own people and to regulate the value thereof for home use. If our fathers erred, why should not we of great faith be forgiven? "If Adam in the days of innocency fell, what shall be said of poor Jack Falstaff in these days of villainy?" Why shall the silver advocates, who try to maintain the honesty of our country's coin and to regulate its value, be condemned for entering our feeble protest against that regulation being committed by Wall street and banks and bondholders to the tender mercies of Lombard street, the Bank of England, and the Queen of Great Britain?

One hundred and ten years ago our rebel fathers proclaimed their independence of the British crown. The king then, as the queen now, coined, stamped, and issued the coin of the realm by divine right. And, while we save the queen the trouble and expense of coining American money, she still regulates the value thereof. We escaped the tyranny of the British crown to fall under the despotism of British gold. It is time for a second Declaration of Independence, but it must be made by the yeomanry of the land. The moneyed power of the country is impotent, and interested in our enslavement. A class who repudiate their country's coin because a foreign government calls it bullion cannot be trusted to rescue their country from the slavery of British gold.

I believe we should stand still—neither adopt free coinage nor suspend the present coinage. We have done well in the past eight years of silver coinage. We have acquired about $40,000,000 of Europe's gold. Property has appreciated and business is improving. Let us stand still. Should our condition grow worse, we can then determine what to do. We have invited Europe twice to negotiate and have been refused. We are getting her gold, and she is growing uneasy. The leading business body of London has appealed to Parliament to remonetize silver as a legal tender. The business men of Germany are moving at large for relief from gold monometallism. A financial seismic movement more powerful and alarming than one of her earthquakes is shaking Spain. Let us stand still. We are in the dark, and need light before it is prudent to move. The dawn is breaking in the east, and soon we can move with assurance of safety.

In this country we have three classes: First, the producers, who are farmers, manufacturers, miners, and inventors; second, middlemen, who are merchants, commission men, brokers, and others; and, third, the wreckers! Economists and financiers, many of them sincere but boy-blind, believe our ills arise from silver. Others know better; but, disingenuous and crafty, they throw silver out as a decoy to the people, as a tub to the whale. The number of grains of silver in our dollar, the limited number of silver dollars, and their bulk and inconvenient form have little more effect in producing the business depression and suffering in this land of plenty than the influence of the Pleiades. There is an effect, but it is factitious; it is the white-cap beaten up by the sharks, who attend the pirate fleet, prowling for shoals of smaller fish. The effect of the real piracy is an ominous ground swell on the bosom of this human sea, to allay which the wreckers would be wise to throw upon it some of their oil garnered from millions of victims.

To change the figure, the wreckers are the bulls who toss and gore to death those whom the bears do not squeeze to death. They are those who in the East wreck banks and railroads, and in the West wreck mines and miners.

The calamities that attended the late war between the States no prophecy could have foretold, no inspiration can ever record.

All over the South black chimneys stand like monuments raised to tell future generations the line of the bloody march of war.

But there are sorrows and misfortunes which time can heal or mitigate. Property is being replaced. The grave is giving oblivion and rest to the broken heart of age. The orphans are now busy in the battle of life. But another and a greater evil than these sprang from that conflict, like the destroying genius which leaped from the flame kindled by the magician. While the South lost over two billions of wealth, the North acquired more than that amount. It came from profits in contracts, the par value given to her bonds and paper money; and appreciation of all property by the triumphant result of the war. Then came extravagance, wild speculation, vast enterprises, and the wreckers. On the shore of the great Pacific—in the land of golden sunsets and golden sands—the wreckers appeared, and, by the power of union for destruction, they swept by stealth and cunning from the laboring masses hundreds of millions in less than ten years. In the East, since 1865, billions of dollars, by systematic wrecking of railroads and other vast enterprises and of individuals, have been, as if by Aladdin's ring, gathered from the toiling millions into the vaults of a few wreckers. We have seen fortunes varying from ten to two hundred million dollars accumulated by one man in less than twenty years; and to-day the majority of the wealth of this vast country is held by less than 1 per cent. of our population.

To determine where we stand, whether on a rock foundation or a crumbling brink, let us take a hasty retrospect of our country. At the laying of the corner-stone of our Government and for a human generation after, virtue and honor were the people's guide and shibboleth. They demanded these virtues of every public servant. That was our golden—our Augustan age. Then sectional interests began to clash and slavery became a national issue, and the North and South, through sectional pride and interests, disregarded personal virtue and substituted intellect. Then followed the gladiatorial age. The question was not What is he? but What can he do? What are his skill and strength, and can he meet the Philistine? Political parties cared little for personal honor and that high character that should shine afar across the land as a guide and example to youth. That period covers the second epoch in our history, and expired only at the close of the war—the genius and ability chosen by North and South, for the four years of that struggle, being selected from the military, instead of civil life. In the first epoch virtue was power; in the second intellect was master; in the

third and present money is king. It dominates all sections, all classes, all stations, all creeds, and both sexes. The wealth of the wreckers has poisoned every social avenue as the leprous distilment coursed through every vein of Denmark's king. The ambition of the young is not to be a Washington or a Jefferson, or a Great Expounder of the Constitution. It is to be the modern Crœsus.

While the fathers are rearing a brood of dudes and dunces, and educating them in the art of wrecking, as old Fagin instructed the Artful Dodger and Oliver Twist, the mothers and daughters, instead of trying to give to their country jewels, such as the mother of the Gracchi pointed to with pride—instead of nursing young Websters and Adamses and Marshalls—are spending thousands of dollars in nursing parrots, poodles, and pugs. While just around the corner are twenty, thirty, or forty families, crowded and packed away under one roof of a six-story house, living in squalor, hungry and ragged, seeking work but finding none, living and dying in disease-breeding air, the pugs and poodles on Fifth avenue are the favored objects of the tenderest maternal care and lack nothing of earth's luxuries and pleasures except intellectual companionship. And should one of these quadruped members of the family grow weary of the repetition of platitudes at home and in a fit of ennui violate domestic discipline and seek society in some neighbor's yard, a reward is offered for the return of that worthless, dirty dog, sufficient in amount to feed those famishing families for at least a month.

But what cares the wrecker for those starving poor! His business is to wreck, not to aid. Like Captain Kidd, his gain comes by sinking and gathering in.

> He cares not for those who go down in the cutter,
> He's thinking of the biscuit casks and butter.

Whenever these wreckers fix their basilisk eyes on a corporation its fate is sealed. A pliant board is elected or an existing board is bribed; all profits are put into betterments; no dividends are declared; the stock at once declines; the wreckers fabricate and circulate damaging rumors; the small holders—the poor, the widows and orphans, dependent on those dividends—are forced to sell, are "squeezed out." The stock is further depressed by every forced sale, then the bonds decline, and the wreckers, like the jackal hid in the bushes watching the lion die, steal out and buy the bonds, and when a majority is secured the only remaining step is a judicial process to sweep

the stockholders away. And thus the producers are robbed and labor loses its just reward. If these wreckers had never appeared, billions of useless and idle wealth would be in the hands of those who produced it, and this people would be the happiest on the earth.

And these are the men who are in league with Lombard street in this war on silver. Why should they not be? If gold were our only currency, one dollar would buy what two can buy. This untold wealth would be almost doubled, for the value of a dollar is its purchasing and debt-paying power.

These are the men who are keeping America bound to the Crown of Great Britain by the domination of British gold. They see no good in any coin that England will not receive, and therefore silver is condemned.

These are the men who, like Aaron, have fashioned a golden calf for virtue and intellect to worship. By the vulgar display of wealth in "barbaric pearls and gold" emulation has been stimulated until dishonesty in bank officers is about the rule, and Canada has become the Elysian Botany Bay for American thieves, who, without trial or sentence, go into voluntary exile.

The wrecker is the man who gives as his reason for opposing silver that his heart's desire is for the wage-earner to get an honest dollar. He descends from his sanctuary in Wall street as the high priest came from the sacrifice of doves, with garments dripping with the blood of a thousand "lambs" just sacrificed to Mammon, and beseeches the people to share with him an honest dollar. Shakespeare portrays his ideal of a friend in the noble character of Iago, as he strove by every manly appeal to allay the jealousy of Othello; he has given his best conception of a Christian creditor in the measured justice and mercy of Shylock; Dickens touched the limit of descriptive power in the pious sincerity of Mr. Pecksniff and the statuesque posing of Mr. Turveydrop; but when and whence shall come another Shakespeare, or Dickens, who can rise to the height of his great argument, and do justice to the disinterested, the self-sacrificing friendship, the Christian justice, the unmitigated sincerity, the exquisite pose of the wrecker, as he implores the people to "come without money and without price" and accept from his hands an honest dollar?

They are the men who have conspired and combined their hundreds of millions to oppress the laborers, and they are responsible for the counter-combinations of laborers to resist that oppression and to maintain the dignity of labor. The "strikes" are a protest against the heartless oppression of combined capi-

tal. They are the only hopeful sign of deliverance from the wreckers, and I hail it with a feeling of relief. The issue is at last joined, and the contest is between the wreckers and the strikers. My sympathies are with the strikers when they keep within the law. Public sympathy will support them so long as they are prudent and peaceful and respect the law, and within the law I bid them Godspeed in their struggle with the wreckers.

They should not feel discouraged. They are gaining ground. Public sympathy for them is stronger than in 1877, during the strike at Pittsburgh. They should not appeal to Congress for assistance. This is not the place to seek relief, even if Congress had the power to give it. It is to be found in the big heart of this mighty people; in lawful combinations and the use of lawful measures to oppose the tyranny of this vast aggregation of money in a few hands; by educating the people to heap scorn and contempt on the men who, through gluttonous greed for millions more, are grinding the poor to death; by taking care to be represented in every Legislature by pure, just, and able men; by retiring to private life every representative and office-holder who, with no income but his salary, acquires wealth while in office; by cultivating a patriotism that embraces all sections in a common brotherhood and destroys forever all unkind feeling and sentiment engendered by the war, and by refusing at all times to make wealth the test of qualification for office, or to permit it to buy its way to office and to power.

Charles N. Brumm [Pa.], a "Greenbacker," spoke upon the bill.

I believe that money should have no commodity or barter value *per se*, but should be purely a representative of all value, based, through the Government right of taxation, on all commodities within its jurisdiction, and limited in volume only by the needs of commerce; and that it should not be confined in volume to any one commodity or to several commodities. Neither should it in the slightest degree be affected by the value of any commodity, and more especially when that commodity, like gold, is so rigid and limited in its supply as to put it absolutely within the power of a few gold bouncers to juggle with its value by manipulating its volume. And as I know that this Government will not, and I frankly confess can not, at once throw off this yoke of barbarism, but must for a while longer foster the dishonest barter dollar and thus keep commerce bouncing around on stilts, I will do all in my power to give her at least

two pegs to travel on, and not force her to hop around and try to balance herself on one. [Laughter and applause.] Therefore I am for the present in favor of unlimited coinage of silver and gold. This will double its base and give at least two bearings for the superstructure to rest upon, and make it less susceptible to manipulation than if it were pivoted on a single basis. "But," says the gold bouncer, "you must have a standard of value, and therefore you must limit yourself to one thing, and, as gold is the money of the world, that one thing or standard is or must be gold, because," he says, "it is the least variable, and always represents the fixed rate of the labor involved in its production."

This, sir, is the premise upon which the whole monometal argument rests; and as this involves five separate, distinct, and palpable errors, all conclusions drawn from them must also be errors. First, it assumes that there is and must be a money of the world; second, that that money is gold; third, that there is and must be a standard of value; fourth, that that standard must have value *per se*, and therefore must be a specific commodity by which the value of all other commodities is gauged and regulated; fifth, that as gold is the least variable of the precious metals and always represents a fixed amount of value or labor in its production, it is and must be our standard. I shall consider these ridiculous fallacies in the order in which they are named.

First, that there is and must be a money of the world. Sir, there is not and never can be a money of the world until you establish a world government to create it. As money is a creature of law it must be the creature of some government that makes the law, and therefore it has powers as money only within the jurisdiction of the government that makes it. Hence money is never used in commerce between nations. You settle your international balances with bullion; you settle them with the commodity value or commodity element of bullion, and not with money; even if coin is used it is not counted, but is put in the scales and weighed and its alloy deducted in calculating its value as bullion.

Second, "the money of the world is gold." Since it is true, as I have shown, that there is no money of the world, this is already answered in the international or world sense; but even if it is contended that in a national sense it is the money of the world, this is also false, for gold of itself is never money, although money is often made of gold; yet there is not one nation in the world that makes all its money out of gold, while

every nation makes some, and a majority of nations make all their money out of silver.

Third, that there is and must be a standard of value and that standard must be gold. Sir, no commodity can be a standard of value. All values depend upon usefulness. Therefore, any article or franchise that is just as useful or will perform the same function or answer the same purpose as any other article or franchise will be just as valuable, no matter what material either is made of. Although the cost of a thing generally represents the labor required to produce it, yet the intrinsic value of a thing still depends upon its usefulness, while the price of it depends upon supply and demand and is usually called the market value.

Therefore as the cost, the intrinsic value, and market value of all commodities depend upon the local as well as the general conditions, circumstances, and changes incident thereto, there can be no fixed value or standard nor relative value for any commodity in any locality for any length of time; for there is no commodity that maintains the same relative, intrinsic or market value at all times in the same place, nor at the same time in different places, no matter what material it may be made of or what its nature, whether it be diamonds or a right of way, a physician's prescription or a dignity, a druggist's emetic or gold, silver, or paper, iron or a railway pass, a serpent's tooth or a tax receipt, lawyer's advice or copper, cockleshells or a priest's absolution, fiat paper money or a right of piscary. All, all are as unsettled and shifting as the winds.

If, then, you cannot fix the cost, intrinsic value, relative value, or market value of *any* commodity for *any* time in *any* locality, sir, how infinitely do the possibilities multiply when you attempt to create even an approximate standard for *all* commodities at *all* times in *all* localities of this heterogeneous world.

But even if an approximate standard could be established, the most unfit article for that standard, next to diamonds, would be gold, for if there is any one article which more than any other article fails to represent the amount of labor in its production by its value it is gold; because it is an original element that cannot be manufactured, grown, or produced by any combination of elements or manipulation of man. It is a hidden element, most uncertain in quantity, locality, and conditions. It is a very limited element, wherefore its supply cannot be accommodated to the demand, thus making its value depend almost entirely on the manipulation of its owners.

It is not an article of prime necessity, nor a substitute therefor, being neither food nor medicine for the mind or body; nor does it clothe, shelter, convey, or preserve man, beast, or any commodity, and, outside of the gratification of the savage passion for personal decoration, it adds very little to the comfort of man; and, were it not for the great value and power given to it by making money out of it by conventional laws, it would play but a very insignificant part in the affairs of men. Yet you tell us that you cannot add value to anything by law, no matter how useful the law may make it, but that all values depend upon the amount of labor it takes to produce them, no matter whether the value be intrinsic, relative, or market. If that be so, then God help the laborer; for I think it is time that he should get at least a visible share of the value of his product. That is, you mean to say, that if you demonetize gold by law all over the world, and thus destroy its usefulness, it will still retain its value because it represents a certain or fixed average amount of labor in its production.

Upon the same principle, I suppose, you would hold that to remonetize silver by law, and thus increase its usefulness, would not enhance the value of silver, because its value is fixed also by the amount of labor represented in its production.

But, again, how can gold alone represent the cost of its production when it is produced almost always with silver or copper, or with both, or with some still baser metal, in combination with it? By what rule of mathematics do you calculate the mammon value of the shattered limbs and the health and lives lost in its production? And if you had a rule, how would you apply it to each specific case or degree? Where have you the statistics of the number engaged in gold mining, with the hours of labor and the energy expended by the eager searcher for gold? And how will you ascertain the amount expended in the production of gold and how much should be charged to its companions, silver and other metals?

Moreover, gold under the commodity or barter-money system is of all things the most variable and uncertain, because it is not only subject to all the incidents of fluctuation that any other commodity is, but by reason of its limited supply it is absolutely under the control of the gold juggler on the one hand, while on the other hand its monetary uses subject it to all the whims, ignorance, avarice, and corruption of every national law-making power in existence. Therefore in proportion as you keep it isolated and allow it to monopolize these attributes, you in that proportion intensify and magnify these

functions, until by its unlimited power it becomes the hellish dynamite of tyranny and oppression in the hands of the few all over the world. Whereas, if you separate these functions and impart to silver an equal share of this power, you will at one blow strip gold of more than half of its power for evil, and to that extent at least, by easing up the interchange of commodities, steadying values, and liberating commerce, bring relief and blessings to all humanity. [Applause.] For we must not forget that the price or value of a commodity in an untrammeled state of commerce will fluctuate on its own basis—that is to say, will be affected by causes wholly incident to itself and its component parts, modified by effects upon its substitutes—and will not materially affect other commodities. But where all commodities are transferred by a medium of exchange, all such commodities are subject to the additional fluctuations incident to such medium. Therefore if that medium is gold alone, which is so absolutely within the power of the few, then these few will control all money and thereby control everything that money will buy; that is to say, by cornering this very small basis or commodity medium, aided by the credit based thereon, you simply play football with all values, and by bouncing them *ad libitum*, you at times impart a sudden and often violent impetus to production by enlarging its basis and inflating its credit. So that when the commercial fruit is ripening for the purpose of gathering in the harvest yourself you lower its value and thus lower its consumption, and consequently by impeding the interchange of commodities you find every producer with too much of his own commodity on hand and not enough of anybody else's. Then the subsidized press, the fossil statesman, and the superficial pulpit orator, like Henry Ward Beecher and Joseph Cook, will join the money-bouncer, and pointing to the undistributed products will say, "Behold the dire result of overproduction." [Applause.]

Sir, it is for this reason that these bouncers adhere so tenaciously to this false doctrine of standard of value, for they know full well no commodity can be a standard, as a standard means something fixed, stable, and unalterable, as a yard, quart, pound, etc., and that is just what they do not want, for like all speculators and gamblers they live on uncertainties that may be fluctuated, manipulated, and contaminated.

Would to God that under our present system gold was a standard of value. Then, sir, parties to this controversy would be reversed; we would sustain it, while its present advocates would be its worst enemies and would demand its immediate

demonetization. Sir, it would then no longer answer their purpose. They want no stability, no standard, no solid, honest basis, for, just in proportion as the basis is widened and made firm, you prevent manipulation and secure a more equal distribution of the products of labor, while just as you contract the basis to gold alone it becomes the artful dodger of commerce that enriches the few and impoverishes the masses.

Although no article or commodity can ever be a standard of value, yet there may be an approximate parity or ratio of values maintained between two or more commodities that serve similar purposes or can be substituted for each other; *e. g.*, anthracite and bituminous coal. Increase the demand for anthracite by making it more useful, you soon raise its price, and, as its price advances, bituminous will be substituted; this substitution of bituminous increases its usefulness and raises its value, while it decreases the usefulness of anthracite, and relatively decreases its value until the parity is again reached, and is in this way very approximately maintained. So it is with wheat and rye, gold and silver, oats and corn, the different kinds of meat, the different kinds of wood, etc.

But if Congress had jurisdiction over commodities as she has over money, and would allow an unlimited or free use of one commodity and would restrict the use of any or all substitutes, she would soon destroy the parity or ratio, especially if the favored commodity was very limited in its supply as gold is.

As the paramount object in commodity money is the maintenance of parity of value in the various commodities out of which the coins are made, the present discrepancy in the commodity value of our gold and silver dollar is the strongest argument (from monometallists' standpoint) against the limitation on our silver coinage—for unlimited coinage of silver would increase its value, while it would decrease the value of gold and thus bring both metals to the money or coinage ratio, namely, 16 to 1; because no metal can ever be above the coinage value and stay in circulation.

By the unlimited coinage of silver the bullion becomes more useful, and therefore more valuable, while gold is to that extent displaced, it becomes less useful and therefore less valuable, thus bringing them closer together until their parity is reached by an easy process that will do injustice to none, but will add unbounded blessings to millions. But, says the goldite, this country cannot do this alone; we must wait until we get England and Germany to join us. Sir, I deny this, for England never

will join us until we force her to, as it is her interest to widen the breach between the commodity values of gold and silver, as I shall show hereafter. Moreover, so long as we follow the British system we will be subject to their financial and commercial control, whereas if we adopt a system of our own we will be masters of the situation.

Therefore let us adopt unlimited coinage of gold and silver. We can hold the balance of power between the conflicting monometallic nations of the world, and maintain the parity of value between the precious metals, for we produce over half of all the precious metals; therefore the civilized world is largely dependent on us not only for the metal supply, but for food, cotton, oils, and many other products, while we are absolutely independent of them.

Sir, by a proper protective monetary system we could be as isolated commercially and financially as we are geographically. If gentlemen would have a clearer appreciation of the greatness of our country, a better knowledge of its unbounded resources and infinite possibilities, with a proper realization of the eminently independent position this nation could occupy; if they would only have the courage and self-reliance to stand with us and declare ourselves financially and commercially independent, as our fathers declared themselves politically and socially independent, we could, and ought to, have the commercial world under our control more absolutely than England has ever held it. We could then utilize our powers for the honor and greatness of our Republic and the elevation of all mankind.

But I said I would show that England would never join us until we force her, and why? Because she and Germany are the two great creditor nations of the world, while we are a great debtor nation; hence it is to their interest to shrink the basis of money and contract the currency by monometallism, so that we and all their other debtors must pay them in a commodity coin upon which there is a premium and thereby increase the value or purchasing power of their assets at least twofold.

But while England seems to have suspended the coinage of silver, she really coins silver every year; in fact the charter of the Bank of England calls for a certain amount of silver reserve in her vaults, yet practically she is a monometallic country, as in England proper gold is the standard of payment, while in the rest of the British Empire silver is standard of payment; *i. e.*, all payments to her must be in the higher-priced

metal, gold, while most all payments by her are in the lower-priced metal, or silver.

By the present disarrangement in the ratio and market value of gold and silver England robs from the treasury of India £17,000,000 annually on the single item "loss on exchange," and this is only the bonus on the taxes she exacts from her India slaves. Imagine, then, if you can, the unmerciful robbery she commits on the productive industries of India by the London bills drawn on Bombay, Calcutta, and Madras for the difference in the metal value of the India silver rupee and the English gold pound for all of their interexchanged products. By this process she deprives us of the foreign market for our wheat and low grade of cotton.

Mr. William H. Oliver, of North Carolina, says:

> When England buys wheat and cotton from the United States she pays gold or its equivalent for it, when she buys it from India she pays for it in silver. Her preferences are all in favor of India, and although the expenses of transportation are much heavier, yet the difference in paying for it in low-priced silver makes up for it.
>
> The interest of England and the United States is diametrically opposite.
>
> England produces no silver and wants it at ruinously low prices, hence she demonetized.
>
> England, on a gold basis, wants to buy silver cheap, and with that silver buy wheat and cotton from her own dependencies and thereby cut off the United States from the sales of those articles which her necessities compel her to buy; and, strange to say, in this country is found a class of our own people willing to assist England in this movement.

Then I ask again whether it is not high time for us to tear ourselves away from this barbaric English system, if not for the protection of ourselves at least let us no longer be accessories to the hellish crimes of Great Britain against her subjects and slaves. [Applause.]

Sir, with free coinage of both metals, a distinctive American system of finance and protective tariffs, we can tear the commercial jaw of the British lion, and so lubricate the wheels of progress that all the world will share its blessings.

But it is said that free coinage of silver would drive gold out of the country, under the operation of the Gresham law; but this is an error, because the Gresham law is applicable only to those countries where the balance of trade is against them, and where they are not gold-producing countries, as we are.

But, it is said, we have too much silver already; it will not circulate. Sir, there is no danger of too much silver as long as our per capita is below that of France, for the nearer we

get to the French per capita the further we get from our miserable, uncertain, blood-sucking credit system, which is the mother of panics and hard times; and the nearer we get to a cash basis. Of course, as long as our President and Secretary of the Treasury remain the willing tools of the gold bouncers and act as their turn-key in locking up the silver, it can not circulate even as much as the felon in his cell; but if, like honest officials, they would execute the letter and spirit of the law, and issue their call for bonds to the full extent of the surplus hoarded in the treasury, and pay only half in silver, then pay half the pensions, half the amount due the Government officials and employees and other creditors, in silver, do you suppose any one would refuse it? Oh, no; we would all take it, for we all know that it is, and always has been, a legal tender for all debts, and that a refusal to take it would cancel the debt pending such refusal.

But they say as soon as we pay it out it comes right back again. Well, what of that? Cannot you pay it right out again? And thus it will circulate more actively than any other kind of money. But that is just what these bouncers do not want, for by that process the debt will be paid too soon and bank circulation withdrawn, and I hope greenbacks substituted for them. Then when the debt is paid wipe out the cursed internal-revenue system, and by a high protective tariff reduce the receipts to the current expenses of the Government.

But you say free coinage will decrease the purchasing power of a dollar, and therefore will deprive the poor workmen and the widows and orphans of their savings; but this can only affect those whose assets are in money, while upon all other assets it will have the opposite effect. Why is it the President and the Secretary of the Treasury are so very solicitous about the few poor workmen and the widows and orphans who are creditors, and have no care for the millions of poor who are debtors, for, if free coinage will injure the creditor, then suspension of coinage will injure the debtor, and our debts, national, State, county, municipal, corporate, and private, are in excess of our taxable assets; therefore to demonetize silver or gold would double our debts and decrease the value of all property (except money assets or their equivalents) about one-half.

But, say these gentlemen, the silver dollar is a dishonest dollar; it is only worth 80 cents. I deny this, as you cannot get a silver dollar anywhere, even at a discount of 1 per cent. It will buy just as much as a gold dollar and will pay just as

much of a debt. But they say silver has fallen in value. This is also false, as silver has not depreciated in value, for it holds its own value with other commodities, all of which are lower, if measured by gold value. Hence it is plain that gold has appreciated in value and is therefore the dishonest, robber dollar.

Sir, if labor was paid in the commodity value of the silver dollar or its representative, then labor would lose; but being paid in its legal or money value it gets just as much as if paid in gold, as both have the same purchasing and paying power. But again, they say if you remonetize silver you depreciate the money value of the silver dollar. This is true; but by it you also depreciate the money value of the gold dollar relatively, and as the workingman as a rule has no considerable number of dollars of any kind on hand he need not be alarmed at their depreciation, especially when the depreciation of the value of the dollar will relatively appreciate, or raise, the value of all his other commodities, whether they be labor or any other assets. Hence I say that the fatherly care these gentlemen have for the poor workman is the kind that the wolf gives to the lamb.

But let it be admitted that, whether it be suspension or free coinage, wrong must be done either to the creditor or debtor. Then as the debtors are largely in the majority, it is better to wrong the minority than the majority, for all producers, property owners, stockholders, and taxpayers are debtors. Therefore the only ones that are not more or less benefited by the free coinage of the honest silver dollar are those who live on usury, or at least to the extent that their income is interest on money loaned. Therefore I want to legislate in the interest of the honest debtor. I want our debts paid whether they be public, corporation, or individual.

But, sir, it is not only a question as to the number or proportion that are to be injured or benefited by our legislation, but the degree of injury or blessing to those to be affected will always be considered by honest statesmen. I contend that to impoverish the people is a greater crime than to tax the wealthy. The widow's mite was a greater sacrifice to her than all the contributions of the rich.

It is not so hard to take from the few a small, or even a large, portion of their superabundance as it is to rob the poor of any of their necessaries. If wrong must be done, I would rather wrong the strong than the weak. I would rather have less gold for the rich than no bread for the poor. I would rather tax the luxurious surplus of the few than lay tribute on the sweat and blood of the masses. [Applause.]

William McAdoo [N. J.] opposed the bill.

Mr. Speaker, I am in favor of bimetallism and opposed to unlimited coinage of silver at this time as likely to produce monometallism. Demonetization of silver means gold alone. Unlimited silver, when all the world is grabbing for gold, means silver and nothing but silver for the United States.

The scheming gold-bugs can take care of themselves, and the powerful, autocratic, mine-owning silver kings, who have the country now under their feet, and are playing to swindle the poor and helpless, have advocates enough. Let somebody speak for the people. Sound reason, universal experience and consent, and the Constitution of the United States make gold and silver metals the medium of exchange or money of this country. These metals have the highest intrinsic value. Beyond this value the state gives them additional purchasing power by its patent. Commerce and international intercourse make it necessary that all or many nations shall unite to give value as money to these metals beyond their intrinsic value. If all the other nations of the earth unite to demonetize silver, the demand being less, it will depreciate. The world needs both metals. The grinding Shylocks prefer monometallism, but the people want a good volume for their wants, and will tax both metals for a supply.

To bring about bimetallism, free coinage of gold and silver, we must force international action on behalf of silver. The gold nations of Europe want us to become the great silver dumping ground. To begin the unlimited coinage of silver now is to aid the almost universal conspiracy against that metal, and postpone, if not entirely wreck, the cause of bimetallism. Gentlemen who want free trade in everything and unlimited protection for the silver mines should consider this phase of the question. Free-trade England, aptly dubbed by a great Englishman as the Pecksniff of nations, is cheering on the silverites so that she may have sufficient of the scarcer metal, gold.

Why does the present silver dollar pass for a dollar? Because it is intrinsically worth a dollar? No; but because the United States Government makes it by law a token whereby they obligate themselves to give you a real, honest, gold dollar for this stamped piece of silver. They could do the same for 60 grains of pewter or a pound of clam shells. So, it circulates some. Why does it halt and limp? Why are you legislative policemen all clubbing and "resolving" and "enacting" it to "move on"? Why does it not assume a bold manly stride and walk alone with erect crest? What ails it? That it is very weak since it has been violently and, as I believe, unjustly exiled you must know. It now only walks at all because of leaning on its big brother, gold. This big brother has so many pressing and impressing invitations to go to Europe that the poor silver dollar is afraid of the crash if he be finally called away.

The rich man who is getting afraid that soon you will have no gold to give him for your silver token is putting away his supply of gold as he does his winter coal, in anticipation of cold days in the financial world. The poor man for whom you declare so vehemently, he is a ready victim. He cannot help himself. He must take your token and forget his distrust. When its powerful twin brother, gold, has deserted it and the poor man goes to the bank where he now, as the result of his pain, labor, sobriety, and frugality, deposits your silver dollar, he will draw out 79 cents or less, and this with over $1,095,-172,147 in savings banks. Gold, says Mr. Tidman, the English economist, for the rich nations, silver for the poor nations. Gold for the rich men, silver for the poor men, says the Congress of the United States.

Sir, down in the subterranean recesses of the silver mines, in the darkness and the danger, brawny labor is striking at the heart of the hills; even as we speak, half-naked and begrimed in noisome chambers, it swings its ponderous sledge from morn to eve, from eve to morn, delving out the precious metals for the smallest pittance of its own production. These are not the men who from press and forum are sending out selfish and misleading cries for unlimited coinage and Government gifts to the millionaire owners of the mines, pleading in the sacred name of labor and poverty for the compulsory purchase by Government of depreciated goods at the valuation of the sellers.

As between this silver syndicate and the honest if mistaken Greenbacker, I infinitely prefer the latter. Our free-trade friends wax hot about the tariff barons, but vote protection and subsidy to the silver barons, who, having become enormously wealthy at the expense of the taxpayers, are now the ruling and controlling powers in several States. Let us in our zeal against contraction of the volume of money not become the dupes of metal owners, speculators, bonanza kings, and selfish, cold-blooded syndicates. I would not contract the currency beyond the wants of the people, neither would I cheat the people with a debased money. The divine command is still with us, "In the sweat of thy face shalt thou earn bread"—or its equivalent.

"In the sweat of thy face" is the veto message of Omnipotence against all financial dishonesty, whether this be of speculator or of legislator. National greatness must be based on honest finance.

Look at the wrecks of the cure-alls, rich-alls, and money-alls: Wood, wampum, shells, brass, copper, scrip, State banks, and confederate bills—there they lie, a mass of wrecked notions and dishonest ventures. The Keeley motors and airships of financial speculation, all wrecked at the first touch of the Divine injunction. "A false balance is an abomination to the Lord, but a just weight is His delight." Declamations, statistics, statutes, decisions, resolutions, speeches, printing presses will give no man money honestly unless he first win it by his labor. When he thus earns it, give him an honest requital in honest money, that will stand all tests, thus preserving national as well as individual morality in obeying the command, "Provide things honest in the sight of all men."

In the name of industry, labor, morals, and sound finance let us refuse to open the flood-gates at this time for the white stream to wash the golden sands into other channels, and permanently divorce the twin king metals of the world, gold and silver. [Applause.]

On April 8 George D. Tillman [S. C.] supported the bill.

One of the most conspicuous falsehoods that this overshadowing gold monopoly urges in its defence is that gold is now our sole "unit of value," by which it is claimed all other values or properties, including silver, must be measured, and this is the reason assigned by the present Secretary of the Treasury why no interest or principal of our huge public debt can or shall be paid in silver. Even President Cleveland countenances this idea by permitting it to be carried out in practice and by saying in his message: "Every patriotic citizen who does not desire his Government to pay in silver such of its obligations as should be paid in gold" ought to feel a deep concern against the further coinage of silver.

My colleague [John J. Hemphill] also says:

The act of Congress of February 12, 1873, declares that the gold dollar shall be the "unit of value" for the United States. This was a deliberate settlement of the "unit of value," by which, as a standard, the ratio of all other money should be determined. Measured by this standard, the silver dollar is only four-fifths of the value of the unit dollar.

Let us see if this "universal standard fixed for the United States," as alleged by my colleague, is really our only standard. Even if what he says were true, how can he assert that making gold the sole "unit of value" in this country "was a deliberate settlement" of the "standard" or "ratio" by which "all other money should be determined"? He admits that the act establishing this sole "gold unit of value," as he calls it, was the infamous law of 12th February, 1873, that demonetized silver, and was smuggled through both Houses of Congress without anybody except the conference committees knowing the effect of the law, and without even the President who signed it knowing until the next fall that an act had been approved by him demonetizing silver. If there was any "deliberate settlement of the unit of value" in that sort of legislation, then I do not know the meaning of either the words "deliberate" or "settlement."

It is strange doctrine that the disgraceful act of 1873 should have deliberately settled the unit of value in favor of an exclusive gold standard, when just as soon as the people found out silver had been demonetized they forthwith required it to be remonetized, and sought to place it where it was before as one of our money metals, having equal legal-tender power with gold on the ratio of 16 to 1, and the same privilege of "free" coinage as gold. That the act of 1878 remonetizing silver restored it to the old-established American ratio of 16 to 1, and made it at that rate a legal tender for any public or private debt, there is not the ghost of a fraction of a shadow of an atom of doubt; but this act of 1878 did not restore "free" coinage, simply because coinage had to be limited to secure a two-thirds majority in each House of Congress to overcome the veto of acting President Hayes.

And now because silver bullion is estimated 20 per cent. below its par value with gold on account of the compulsory veto of a fraudulent President denying it free coinage, is it just, is it truthful, is it candid, is it manly, to claim that silver bullion is really depressed 20 per cent. below the gold or "universal standard fixed for the United States" by the infamous act of 1873, which every honest American ought to be ashamed to quote?

A tyro in the knowledge of the Constitution and laws of the United States ought to know that we have but "one unit of money," although we have two standards of value. Our unit is the "dollar"; our standards are gold and silver. Every nation has a different unit of money from its standard of money, and the sneaking smuggler who interpolated the particle "the"

in the phrase "the unit of value" in the demonetizing act of 1873 was a bungler. It means nothing more than "the unit of money" or "the unit of measure."

Our Constitution clearly establishes two standards of value when it declares that Congress shall have power to coin money and regulate the value thereof, and that no State shall make anything but gold and silver a legal tender. "Regulate" implies more than one kind of coin and, as the States are prohibited from making anything but "gold and silver" a legal tender, the inference is irresistible that it was intended Congress should also make both gold and silver legal tender and nothing else but gold and silver legal tender for private debts. Our first coinage act of 1792 established the "dollar" as the "unit" of money, not the unit of value; but it also provided at the same time for a silver dollar and a gold dollar.

Yet in the face of law of 1878 rehabilitating silver as it was previous to 1873, in face of the laws of 1869 and 1870-71, declaring that all the war bonds should be paid in the coins that were then legal tender; indeed, in face of the stipulations printed on the face of the bonds themselves; and lastly, in face of the mandatory statute that all coin paid for duties shall be dedicated to payment of the interest and 1 per cent. of the principal of the public debt each year, the present administration, treading in the footsteps of its Republican predecessors, pays both principal and interest of the bonds exclusively in gold, upon the pretence that " the unit of value" means the same thing as "the standard of value."

All free-traders ought to support free coinage of silver. That is the logical result of their doctrine. My colleagues [George W. Dargan and Hemphill] are free-traders—ultra free-traders, I believe—yet they support the monopoly of gold for free coinage, thereby coöperating with the high-tariff men, who are the best friends gold monometallism has on this floor. If silver bullion could come and go at pleasure, as gold does at the mint, it would retain the steady market relation it has held to gold for over two hundred years, but being restricted in the exercise of one of its most important functions, to-wit, serving as coinage, its commercial value declines in exact proportion as the market value of the metal having a monopoly of free coinage rises. Commerce must be free, competition must be unrestrained, before the relative market value of two things can be fairly determined.

But we do know that the legal-tender power of a silver dollar is as much now as it ever was, is as great as a gold dollar; and we also know that the value of uncoined silver bullion has not fallen below its former nominal rate, compared with other things except gold, which proves that only gold has risen. Silver has not fallen and gold has merely gained in increased value what silver has lost by being deprived of free coinage.

Ah, Mr. Speaker, how easily Congress can make the people of this country prosperous and happy by simply letting them have plenty of money, as France does her people, to carry on their business. If you take nothing from nothing nothing remains, and if you add nothing to nothing nothing is still the result. In a country where there is but a scant supply of money how can a poor man get a start? How can he save anything? But an abundance of good money, whether coin or treasury notes, vitalizes a country, as copious rains from heaven fertilize the earth wherever they fall in summer. It has been said by more than one philosophic historian that the use of only one of the precious metals as money by Asia, while Europe has always used both, explains the wonderful difference in the civilization of the two continents.

The gentleman from Massachusetts [John D. Long] quotes several pages of comparative price-lists to show that a dollar will buy more of the necessaries of life these hard times than in flush times, and he deduces from that the conclusion that it is better for a laboring man and a poor man to have but little money in the country and low wages. Why, Mr. Speaker, that is adding insult to injury. If the poor laboring man could get profitable employment in hard times so he could procure dollars it would be better for him; but when he seeks in vain for living wages and has to strike or tramp, as tens of thousands of our laborers are doing now, what is the use to mock with the Platonic philosophy that a dollar will purchase more when business is dull than when it is prosperous?

It is a refinement of cruelty to torment a man with the show of pleasures or advantages which cannot be reached. Virgil tells us that the most excruciating torture in hell is that of Tantalus, who is surrounded on all sides by the near presence of the most tempting viands and beverages while he endures perpetual gnawing hunger and unquenchable thirst. Such is the fate of the poor laborer in dull times, with but little money and less employment, when he sees cheap food, clothing, etc., but cannot buy for want of the dollar.

Many, very many other things could be said in favor of unlimited coinage of silver, but it is unnecessary. Let it suffice to say that not only all our national debts, but nearly all our

State, municipal, and private debts likewise have been contracted on the basis of both gold and silver as unlimited legal tender. The people therefore intend to have as free coinage of silver as of gold. There will be no more Presidents of the United States elected without knowing whether they are for or against free coinage of silver. I for one am for paying all debts according to the contract, according to the stipulations in the bond. The holders of our public debt have grown fat and imperious on an exclusive gold diet. They must be treated with a little silver regimen.

It will be decidedly better for their patriotism and moral health generally. It will not do to let them profit more by cruel avarice than even Shylock. He was content with the first stipulation in his bond, while our creditors, whose claims mostly first called for only greenbacks, then changed the basis in 1869 to coin, and attempted in 1873 to convert it into gold alone, still demand gold, although their infamous law of 1873 was repealed in 1878 and silver restored to its ancient privilege. The check of these gold robbers is simply astounding and their cupidity without a parallel.

No, there is one similar case in the range of literature, and it is a remarkable coincidence that the parallel character should have lived in Boston, where the stupendous fraud of demonetizing silver was first conceived and the plot matured and the agents selected for carrying it into effect. The character to which I allude is Tom Walker. Shylock only wanted his pound of flesh as nominated in the bond, but our gold robbers, like Tom Walker, want all the flesh.

You may ask who was Tom Walker? He was a Boston man, who was meaner than the devil, as was proven in this wise: According to Washington Irving, our American Walter Scott, Tom Walker was a Boston usurer who formed a partnership with the devil to discover Captain Kidd's treasure and open a broker's office in Boston on condition that they should divide the profits for a long term of years, at the end of which time Tom was to deliver himself up, heart, body, and soul, to the devil as part of the contract.

Tom had a wonderful run of business and made immense sums of filthy lucre, but some time before the contract expired he was driving such a hard bargain with a poor, helpless debtor that the devil himself got enraged that anyone should be meaner than he was, and in wrathful indignation mounted a big black horse during a dark, howling storm, dashed up to the broker's office, and, snatching Tom by the hair, bore him off to hell.

It is needless, Mr. Speaker, to say that I am as indignant at the treatment of silver as the devil was on that occasion, and that I am for unlimited coinage of silver first, last, and all the time; against President Cleveland, the bondholders, national banks, the world, the flesh, the devil, and Tom Walker. [Laughter and prolonged applause.]

Abram S. Hewitt [N. Y.] opposed the bill.

In the long debate upon the silver question it is admitted by both sides that we are now upon the gold basis. It is a fact that the dollar containing 25.8 grains of gold, which by law is the unit of value, will purchase at its present market value 480 grains of silver. It is also a fact that the standard silver dollar contains only 412½ grains of silver. Hence if we open the mints to the unlimited coinage of silver no man will pay debts with gold dollars worth 480 grains of silver when he can take 412½ grains of silver to pay the debt and have 68½ grains left in his pocket as profit.

The unlimited coinage of silver, therefore, will transfer us from the gold to the silver standard. The business of the country, now adjusted to the gold standard, must readjust itself to the silver standard. As to outstanding contracts not specifically made payable in gold, there will be a transfer of 20 per cent. of capital from the creditors to the debtors. There can now be no justification for such an act of spoliation. Under the stress of a war for national existence such a transfer of property was made by the issue of irredeemable paper money.

And again a similar transfer was made when specie payments were resumed. In both cases the rich were made richer and the poor poorer. But when the silver dollar was demonetized no change in the relations of debtors and creditors was made, because we were not in 1873 upon either a gold or silver basis, but were in the abyss of fiat money. Whether demonetization was accomplished surreptitiously or not, as it was not, no injury was done or could be done to any human being. But now we are paying in gold. Every creditor and every wage-earner who now gets gold will, if this bill pass, get silver worth 20 per cent. less than the present unit of value.

There will be a profit to someone. Who will gain and who will lose? For it is inconceivable that the opening of our mints to the free coinage of silver on the ratio of 16 to 1 of gold will be sufficient to restore the actual value to this ratio. The free coinage of silver in India does not do it; the free coinage of

silver by the Latin union did not preserve the ratio of 15½ to 1. To save their gold they were forced to abandon the free coinage of silver. But on the face of it the proposition is absurd that the possible annual coinage of our mints could materially affect the value of the vast mass of silver in the world, estimated at $6,000,000,000. Who, then, are the debtors who will profit and the creditors who will lose? Are they the rich or the poor?

The banks and capitalists can and do always keep their assets practically on a gold basis. So far as they hold real property or merchandise the rise in value will be immediate and proportioned to the reduction in the standard of value. Only indebtedness for fixed sums, such as mortgage loans, will not rise, because they cannot rise in value. Now this class of property is mainly owned by estates, trust companies, life insurance companies, and savings banks. In the State of New York alone the assets of these corporations exceed $1,000,000,000, upon which the loss will be $200,000,000. The owners of this vast fund are widows, orphans, helpless wards, artisans, laborers, and sewing women. They are largely my constituents. In their behalf I have presented to this House the petition of the savings banks, representing over one hundred thousand depositors, praying that this act of injustice shall not be committed. The proposed change of standard cannot therefore benefit those who have accumulated a fund against old age, sickness, and want.

But if it will deprive them of a part of their savings it will also take away a part of their daily wages. For everything which the laboring man buys, food, clothing, and shelter, will advance at once to conform to the new standard of value, whereas his wages will not advance except by slow steps, spread over a long term of years. The conclusive demonstration of Mr. Walker on this subject has been cited by others, but further evidence is furnished by the condition of affairs in India, where, as is triumphantly asserted by the friends of this bill, prices of the food products, representing the earnings of labor, have not advanced, and hence it is possible for the first time to export them to England, where they are sold for gold, convertible into silver at a premium, which is not added to the wages of labor, or this export trade would cease. The remedy proposed by this bill is the reduction of wages here so as to meet the competition of India. The wage-earner then will be chief sufferer by a change in the standard of value, and the old process by which the fruits of industry are transferred to the capitalists will be repeated under the guise of justice and charity to the poor man.

The truth is that it is possible thus to rob the workman of his earnings and to reduce his wages, but you cannot displace gold from the position which it has won on its own intrinsic merits as the best and least variable standard of value. There is no deficiency of money for the business of the world. It was never so cheap as it is now for acceptable securities, and no increase in its volume can make it plenty for unacceptable securities unless you make it worthless, which I do not understand to be the purpose or the expectation of the friends of silver. But the free coinage of silver will not add to the volume of money. It will only displace a corresponding quantity of other money. Silver has its proper place in the circulation of the world as the chief money of poor countries where the wages of labor are low, but in rich countries, able, as we are, to pay a fair day's wage for a fair day's work, it is useful only as a subsidiary coin to the extent that it is needed in small transactions, but always to be kept at par with gold by certain redemption in gold. This is the present condition of our coinage, and this parity of value can and ought to be maintained, provided we do not coin so much silver that it cannot be redeemed in gold. Otherwise, as the least valuable money, it must drive gold out of circulation.

To maintain this desirable condition of parity in value legislation is needed, but not for the free coinage of silver, nor for the increase in the weight of the dollar. The true policy is to coin as much silver as the people desire to use in the ordinary course of business and no more. Repeal all compulsion to coin any specified amount, but require to be coined, as now, only for the account of the Government, all that shall be called for. There will then never be an excessive issue of silver and never any dead silver capital in the treasury, upon which we lose interest, and one of the most available commodities for export.

This result can be accomplished by the adoption of a brief bill, which I have introduced into every Congress since the passage of the so-called Bland bill, the paternity of which I am glad to see the gentleman from Missouri very properly disowns. This bill I shall offer at the proper time as a substitute for the pending measure. I ask now that it be printed for the information of the House.

Be it enacted, That the gold and silver coins of the United States which are a full legal tender shall hereafter be interchangeable at their lawful value, either for the other, upon the demand of any holder thereof; and it shall be the duty of the Secretary of the Treasury to provide for such interchange, and to cause to be coined such amount of standard silver

dollars as may be found necessary, from time to time, in order to meet the demand for such dollars; and that all provisions of law fixing or limiting the amount to be coined of such standard silver dollars be, and the same are hereby, repealed.

This bill recognizes gold as the unit of value, because its title to this distinction is based upon the eternal fitness of things in the gradual evolution of society from barbarism with rude appliances to the highest civilization, in which only the best tools and the most effective agencies are employed in the varied operations of life.

We are now the richest and most prosperous nation in the world, with larger exchanges of products than any other nation, using and requiring the best instruments of exchange, in railways, steamers, and telegraphs, with which no sane man would dispense; and yet we are seriously asked to give up gold, the best lubricator of commerce, which sets and keeps them all in motion at the least cost, and substitute silver, an inferior and variable standard of value, expensive to handle, uncertain in purchasing power, and fit only in this age of vast development for subsidiary uses, to which happily the law assigns it, and from which it never should be, as it never can be, divorced, even by act of Congress; for if gold is king in the domain of commerce it is king by a divine right in the law of social evolution, which no human agency can arrest or destroy.

The bill was rejected by the House by a vote of 126 yeas to 163 nays.

CHAPTER V

Silver Purchase

Justin H. Morrill [Vt.] Introduces Silver Purchase Bill in the Senate; Referred to Committee on Finance—John P. Jones [Nev.] Introduces from the Committee a Substitute—Debate: John H. Reagan [Tex.], Sen. Jones, John R. McPherson [N. J.], James K. Jones [Ark.], Henry M. Teller [Col.], Richard Coke [Tex.], John Sherman [O.], Preston B. Plumb [Kan.], John J. Ingalls [Kan.], George F. Edmunds [Vt.], William M. Stewart [Nev.], John W. Daniel [Va.], Sen. Morrill, Frank Hiscock [N. Y.], William M. Evarts [N. Y.]; Bill Is Laid Aside for House Bill—This Was Introduced in the House by Edwin H. Conger [Ia.]; Richard P. Bland [Mo.] Moves to Substitute a Free Coinage Bill; Motion Is Defeated, and Conger Bill Is Passed—Debate in the Senate: Sen. Daniel, Edward O. Wolcott [Col.]; Bill Is Amended by Free Coinage Clause, Etc., and Passed; Conference Is Appointed Which Reports New Bill without Free Coinage—Debate: George G. Vest [Mo.], Sen. Sherman, Daniel W. Voorhees [Ind.]; Bill Is Enacted.

DURING the session of 1889-90 separate bills were introduced, one in the Senate and one in the House, authorizing the issue of treasury notes on deposits of silver bullion.

The Senate bill was introduced by Justin S. Morrill [Vt.] on January 28, 1890, and was referred to the Committee on Finance, which on February 25, through John P. Jones [Nev.], reported a substitute measure.

This provided for the monthly purchase of $4,500,000 silver bullion at the market price, not exceeding a dollar for 371¼ grains, and all gold bullion offered, to be paid for in a new issue of treasury notes, redeemable on demand in lawful money (in which case they were to be canceled), and receivable for customs, taxes, and all public dues (in which case they were to be reissued), and lawful as national bank reserves. Sufficient of the bullion purchased was to be coined to redeem the said treas-

ury notes. The act repealed the purchase clause of the act of February 28, 1878.

The bill came up for discussion on March 31.

Silver Purchase

Senate, March 31–July 8, 1890

John H. Reagan [Tex.] opened the debate.

I suppose the bill is intended to relieve the country from the evil effects of the worse than blunder of Congress in suspending the coinage of silver dollars by the act of February 12, 1873. It is a hopeful sign that a Republican Senate should join in this great work, though the remedy proposed may not be the best.

I think it is to be regretted that the committee did not report a bill providing for the free and unlimited coinage of silver the same as of gold.

While this bill provides for a largely increased use of silver it perpetuates the legal discriminations now existing against silver and in favor of gold. It still retains for the Government the exclusive privilege of coining on Government account silver bullion as money, while gold is coined for any private person who may take it to the mints free of charge. And this bill recognizes the idea that there is too much silver produced and that the amount to be put in circulation must be limited by law.

It was not the great amount of the world's products of silver nor the amount of silver in circulation which caused its deterioration in value; for at the date of the passage of our act of Congress in 1873, suspending the coinage of silver dollars, our silver dollars were commanding a premium above gold. The reason for the demonetization of silver was that it would increase the value of gold and of bonds and other evidences of indebtedness, and that it would increase the value of fixed incomes; that it would tend to enrich the creditor classes and those who owned money.

During the last twelve years the United States has produced about 43 per cent. of all the silver produced in the world. A principal effect of the demonetization of silver was greatly to depreciate this vast fund of wealth in its value while reducing the value of all other property to gold prices. The royal commission of Great Britain, in 1886, which was appointed to

investigate the recent changes in the relative values of the precious metals, estimates that the reduction of the prices of commodities generally was about 33 per cent. by demonetizing silver.

The New York *World Almanac* for this year estimates, on the authority of the financial officers of each State and Territory, that the value of the property in the United States is this year $61,459,000,000. If the revolution in prices caused by the degradation of silver has reduced the value of this property by the sum of 33 per cent., it means a loss to the owners of this property of $18,437,700,000.

The wages of labor went down in very nearly the same ratio. And by the depression of business thousands of laboring people in this and other countries were thrown out of employment. And Senators will remember how bankruptcy and financial ruin spread their sickening pall all over this country from 1873 until 1878, and the vast amount of property which, during that time, was sold for taxes, because money was so scarce and dear that a large part of the people could not obtain it to pay either debts or taxes.

Judge Reagan here gave statistics to show that the increase of indebtedness of the country, owing to the 33 per cent. reduction in prices of commodities by the demonetization of silver in 1873, was as follows:

Increase of railroad indebtedness	$1,705,795,069
Increase of national debt	737,379,387
Increase of State, county, and municipal debts	348,672,768
Aggregating	$2,791,847,224

We have no means of determining the amount of other descriptions of corporate indebtedness and of the debts of associations and individuals, the payment of which, like those just mentioned, was influenced and rendered more difficult by the demonetizing of silver. But their aggregate doubtless amounted to more than a thousand million dollars.

Now, let us not forget that this was debt created by law, for which those who have to pay it received no consideration and for which those who received it have not paid anything. It was simply the transfer of that enormous amount of values from one class of our people, without price or consideration, by a bold, bald, audacious, and fraudulent piece of legislation, for the purpose of making the rich richer and the poor of the country

poorer, of making dear money and cheap labor and property.

Will this Senate continue to sanction this great work and outrage and refuse to adopt a partial remedy by restoring our ancient and constitutional currency of silver and gold, without any legal discrimination against silver? I say "partial remedy," because much injustice, much wrong, has already been done by demonetizing silver which can never be remedied.

The reduction of the value of farms, factories, and other kinds of property and labor in this country by the degradation of silver is almost incalculable. This policy has been the cause of the sacrifice of thousands of homes, and has entailed a vast amount of poverty and suffering on the people, for which no action which Congress can take can ever reward them. In the name of justice and humanity let us now by an act of wise statesmanship protect our people against such wrongs in the future.

These percentages of loss may to some extent have been influenced by other causes, such as the increased use of improved machinery and improved facilities for transportation. But I think there can be no doubt that it is mainly due to the efforts of the capitalistic classes to control the financial policy of this and other countries, so as to enrich the few at the expense of the many. The average fall of the prices of various staple commodities from the year 1873, when silver was demonetized by the United States, to the year 1886, as shown by the *American Almanac*, was 43.3 per cent.

The report of Mr. J. R. Dodge, the statistician of the Agricultural Department, for December, 1889, gives the average decrease in the value of corn, wheat, and oats from 1888 to 1889 as 13.57 per cent.

Great Britain has profited by our folly by buying the greater part of our silver bullion at the current London rates of discount and coining it into rupees and using them or the bullion so purchased at par in her trade with India.

The amount of silver produced in the United States, at coinage rates, from 1873 to 1889, inclusive, was $584,145,000. The discount on silver in the London market during the years just named averaged about 15 per cent. If all this had been sold in Great Britain, as the greater part of it was, our loss and her gain would have been $87,621,750 in the single item of discount on silver bullion.

Great as this sacrifice has been to the people of this country and great as the profit growing out of it has been to Great Britain, it is the smallest part of the profit that country has derived from the demonetization of silver.

Capitalists of Great Britain own, and did then own, hundreds of millions of dollars' worth of the interest-bearing bonds of other countries and of the corporations of other countries. They are the owners and holders of a considerable part of the bonds of the United States, of the bonds of the several States, of the bonds of the municipal corporations of this country, and of the bonds of the railroad corporations of this country. The bonds they hold on this and other countries constitute a considerable part of their dividend-paying property. It is to the interest of Great Britain to give these bonds the largest value.

To reduce the volume of the money of the world and the kinds of money out of which they can be paid is to increase the difficulty of paying them, by reducing the value of the property and labor required for their payment. For instance, a million bushels of wheat in 1873, when the average price of wheat was $1.90 cents per bushel, would have paid off $1,900,000 of American indebtedness. While a million bushels in 1886, when wheat was only worth 90¾ cents a bushel, would only have paid off $907,500 of our indebtedness to that country.

So a million pounds of raw cotton in 1873, when its average price per pound was 17 cents, would have paid off $170,000, while a million pounds of cotton in 1886, when it was worth 8 8-9 cents a pound, would only have paid off $88,880 of our debts to Great Britain. Germany has the same kind of an interest in this respect which Great Britain has, only in a less degree, as her people hold a less amount of the bonds of other countries.

The interest of the capitalists of both those countries was to secure the adoption of a financial policy which would make money scarce and dear and property and labor cheap, while, on account of the large indebtedness of the governments, corporations, and people of this country, our true interest was to have had an ample volume of money with good prices for property and labor. And our statesmen and financiers owed it to our people to sustain such a policy instead of weakly or wickedly aiding to carry out the British and Germany policy by demonetizing silver.

The monometallists, the bondholders, most of the bankers and large money-holders, and many of those who have fixed incomes in this and other countries continue their war on silver as money. They are continuing this struggle for dear money and cheap labor and cheap property. It is this that justifies, at this time, my review of the unwise and impolitic demonetization of silver.

This review is also made necessary by the fact that every Administration of the Federal Government from the time of the passage of the Bland-Allison law of 1878, providing for the coinage of not less than two million nor more than four million dollars' worth of silver bullion per month, has been hostile to silver coinage; and each of these Administrations has limited the amount of silver coinage to about the minimum amount prescribed by that law. And the officers of the Treasury Department have all this time used their official positions and influence to degrade silver for the benefit of capital and to the injury of the industry and labor of the country. And in my opinion each of these Administrations and every officer who has so acted ought to be held up to public reprobation for the violation of this great public trust.

The same interests and the same influences which have opposed silver coinage in this country have induced Congress and the Treasury Department, under the third section of the act of Congress of January 14, 1875, "to provide for the resumption of specie payments," and under the twelfth section of the act of June 12, 1882, "to enable national banking associations to extend their corporate existence, and for other purposes," held idly and uselessly in the United States treasury from year to year for ten years $100,000,000 in gold on the pretence that this was necessary to enable the Government to redeem and retire from circulation the outstanding legal-tender (greenback) notes. And this large sum of gold has for years been withheld from circulation and from use in the business and industrial interests of the country in disregard of the provisions of the act of May 31, 1878, "to forbid the further retirement of United States legal-tender notes." The national banks wanted the legal-tender notes retired so that they might supply their place with bank paper, while the bondholders, large money-holders, the creditor class, and those having fixed incomes required the contraction of the volume of circulating money. And their will seems to govern the financial policy of the United States instead of considerations looking to the general good of the public.

We have already paid $40,000,000 for the luxury of keeping $100,000,000 of gold idle in the treasury, to redeem notes which the law requires to be kept in circulation, and, instead of using that hoard to pay $100,000,000 of our public debt and to relieve the people from paying $4,000,000 interest a year, we tax them $4,000,000 a year to keep $100,000,000 of gold out of circulation.

I doubt if there is an intelligent person in the country, outside of the Treasury Department and of the class benefited by

the present financial policy of the Government, who does not know that the people prefer the legal-tender notes to gold. And there is no reason to doubt that, if this $100,000,000 of gold were paid out and put in circulation and the public debt and interest on it reduced by that means, still the legal-tender notes would remain at par with gold.

In this statement I do not forget the relative dates of the acts of Congress of 1875 and 1882 to which I have just referred. But the latter act does not repeal the former, and the retention of that large sum of gold in the treasury is certainly unnecessary for the redemption or for the preservation of the value of the legal-tender notes as currency.

Besides the wrong of keeping this large sum of money out of circulation, I submit that while the Government is collecting a million and a half dollars of revenue a day, even if the legal-tender notes were required to be redeemed, it would not be necessary for it to retain so large a reserve as this. Its position is entirely different from that of a bank, which draws no revenue from the public except the interest on its loans, and its policy, by the rules of common sense, ought also to be different.

Wall street and the Treasury Department recognize silver dollars as a good legal-tender in the payment of public contractors and the officers of the Government and in the payment of the army and navy and pensioners; but this Administration, like its predecessors, assumes that nothing but gold is good enough to pay to the bondholders. In reaching this conclusion it seems to have been convenient for the present and past Administrations to forget that these bonds originally cost the holders of them only about fifty cents in specie on the dollar.

Notwithstanding this fact, they have by the unjust policy of the Government been made its preferred creditors and have been allowed to dictate the financial policy of the Government. And this will continue to be the case until we elect a President who may draw his financial inspirations from the people of this country and from the consideration of what is their interest, and who will not permit Wall street to dictate to him who shall be Secretary of the Treasury.

The Secretary of the Treasury in his late annual report says:

> Every silver dollar coined at the ratio of 16 to 1 (actually 15.98 to 1) is an additional obstacle in the way of the adoption of any practicable ratio by international agreement, which is the only final solution of the silver question.

No one knows better than the Secretary of the Treasury that it is not possible to secure an international agreement as to silver coinage as long as the capitalists of Great Britain and Germany believe they are securing advantage and profit by degrading silver. The Latin union and other governments of Europe will not agree to any arrangement on this subject without the concurrence of Great Britain and Germany. And while the masses of the people of those two governments need and want silver coinage, as our people do, the wealthy and titled classes there control the financial as well as all other questions of public policy.

The capitalists there know as well as we do the advantage they are deriving from the present vicious policy in relation to silver. They will not surrender that advantage until forced to do so by the distress of their own people. The talk here about an international agreement on this subject is no doubt intended to amuse and delude our people and to postpone any action by the Government of the United States for their relief.

I am aware that both the President and the Secretary of the Treasury have used expressions in treating of this question which indicated that the use of silver as money was desirable. But no one can read all they have recently said on the subject without feeling that those expressions were meant to propitiate the general public, while the effect of their policy and recommendations is against the free use of silver as money. They keep up the policy of holding our laws on this subject in abeyance and carry out a financial policy in conflict with them.

I will suggest what seems to me to be a much wiser and better policy on this question than that of the bill, even though this bill is an improvement on the policy of the Administration:

First. I would provide for the free and unlimited coinage of silver the same as of gold, and I would make the silver dollar, like the gold dollar, a unit of value. This would abrogate all legal discriminations against silver and restore it to its former status as money.

Second. I would require the Secretary of the Treasury to use silver as well as gold in the payment of our bonded indebtedness. This would serve the double purpose of giving it use, employment, as money, and it would at the same time put it into the possession of the classes of men who have done so much to degrade it, and who would, when they had become the possessors of it, be interested in giving it full value and character as money. This course would without doubt do much toward restoring it to its par with gold. It would take away the temp-

tation to degrade it. And it would place our Government in the just and logical position of desiring the use of silver as money and of doing justice to our own people by paying other public creditors in the same sort of money with which they pay our soldiers, sailors, pensioners, contractors, and public servants.

Third. I would call in the gold certificates and silver certificates now outstanding and issue in their stead coin certificates, and I would issue like coin certificates and use them at par for the purchase of gold and silver coin and bullion, and for any gold and silver coin or bullion which might come in the treasury, and make these coin certificates redeemable in either gold or silver coin or bullion at the option of the Government; and I would make them receivable for all public dues and taxes, a lawful tender in the payment of all public and private debts, and allow them to be counted as so much of the reserve required to be held by the national banks. In this way I would have the Government hoard as much gold and silver coin and bullion as it could; and by so doing make it the interest of the governments of Europe to accept silver again as money at the customary ratio with gold.

Whatever doubt may be entertained as to the soundness of the opinon of the Supreme Court of the United States in holding that the issue of legal-tender notes of the Government, which rest on the general promise of the Government for redemption, was warranted by the Constitution, it seems to me there could be no difficulty in making coin certificates, which would simply be the representatives of so much gold and silver coin in the treasury, a legal tender. These certificates would be the same as that much coin.

Fourth. I would also issue coin certificates on the $100,000,000 of gold now held in the treasury for the pretended redemption of legal-tender notes, or use the gold as might be thought best along with silver in paying off so much of the public debt and thus relieve the people of that much of the principal and the annual $4,000,000 of interest on that debt.

Fifth. I would provide for the retirement from circulation of all legal-tender and national-bank notes of denominations less than $10 and substitute the small legal-tender notes thus retired by the issuance of legal-tender notes of denominations of $10 and more; and I would issue coin certificates to take their place and to take the place of the national-bank notes of denominations less than $10, and thus by use give value to the coin certificates.

Such a course would enable us to get the full benefit of our

extensive mines of gold and silver. It would give us a steady and reliable currency free from fluctuations, and (with the $346,000,000 of legal-tender notes) of sufficient volume, and it would make our Government the master of its own financial policy and enable it to defy the intrigues of money sharks to use it for selfish, unjust, and unpatriotic purposes.

The coinage of $4,500,000 of silver annually, or its use as bullion upon which to issue treasury notes, as provided by the committee's bill, would still be a recognition of a necessity for fixing a limit to the amount of silver to be used, would preserve the Government monopoly of its coinage, and would leave it subject to fluctuations in price.

The public mind is now ripe for just legislation on this question. The question is better understood than ever before, and it is now before us for consideration. The best interest of our own country and of mankind requires its settlement, not by means of a compromising expedient which may seem to tide over present troubles for a time, not with a view to the promotion of class and selfish interests, but upon sound financial principles, and so as to do justice to all, and so as to make the United States lead the nations of Europe out of the mire of wicked speculation into a condition of financial confidence and prosperity.

On May 12 and 13 John P. Jones [Nev.] delivered one of the exhaustive treatises on the silver question, for which he was noted. He spoke in part as follows:

The measure under consideration was reported by me from the Committee on Finance. It is hardly necessary for me to say, however, that it does not fully reflect my individual views regarding the relation which silver should bear to the monetary circulation of the country or of the world. I am, at all times and in all places, a firm and unwavering advocate of the free and unlimited coinage of silver, not merely for the reason that silver is as ancient and honorable a money metal as gold and equally well adapted for the money use, but for the further reason that, looking at the annual yield from the mines, the entire supply that can come to the mints will at no time be more than is needed to maintain at a steady level the prices of commodities among a constantly increasing population.

In view, however, of the great divergency of views prevailing on the subject, the length of time which it was believed might be consumed in the endeavor to secure that full and

rightful measure of legislation to which the people are entitled, and the possibility that this session of Congress might terminate without affording the country some measure of substantial relief, I was willing, rather than have the country longer subjected to the baleful and benumbing influences set in motion by the demonetization act of 1873, to join with other members of the Finance Committee in reporting the bill under consideration.

Under the circumstances I wish at the outset of the discussion to say that I hold myself free to vote for any amendment that may be offered that may tend to make the bill a more perfect measure of relief and that may be more in consonance with my individual views.

Senator Jones then addressed his remarks to the subject of falling prices. He denied that these were due to the tariff, trusts, speculation, overproduction, etc.

When a fall of prices is found operating, not on one article or class of articles alone, but on the products of all industries; when found to be not confined to any one climate, country, or race of people, but to diffuse itself over the civilized world; when it is found not to be a characteristic of any one year, but to go on progressively for a series of years, it becomes manifest that it does not and can not arise from local, temporary, or subordinate causes, but must have its genesis and development in some principle of universal application.

What, then, is it that produces a general decline of prices in any country? Is it produced by a shrinkage in the volume of money relatively to population and business, which has never yet failed to cause an increase in the value of the money unit and a consequent decrease in the price of the commodities for which such unit is exchanged. If the volume of money in circulation be made to bear a direct and steady ratio to population and business, prices will be maintained at a steady level, and, what is of supreme importance, money in which a large volume of business is conducted on a basis of credit will be kept of unchanging value. With an advancing civilization, extending over long periods, it is of the utmost importance that money, which is the measure of all equities, should be kept unchanging in value through time.

The inventions of the past one hundred years have established a new order of the ages. Under the operation of the new system, the rapidity and intensity with which, within that period, civilization has developed, are due in great part to an

economic feature unknown to ancient civilization and practically unknown even to civilized society until the present century. That feature is the time-contract, by which alone leading minds are enabled to project in advance enterprises of magnitude and moment.

The natural concomitant of such a system of industry is the elaborate system of debt and credit which has grown up with it and is indispensable to it. Any serious enhancement in the value of the unit of money between the time of making a contract or incurring a debt and the date of fulfillment or maturity always works hardship and frequently ruin to the contractor or debtor.

Three-fourths of the business enterprises of this country are conducted on borrowed capital. Three-fourths of the homes and farms that stand in the name of the actual occupants have been bought on time, and a very large proportion of them are mortgaged for the payment of some part of the purchase money.

Under the operation of a shrinkage in the volume of money this enormous mass of borrowers, at the maturity of their respective debts, though nominally paying no more than the amount borrowed, with interest, are, in reality, in the amount of the principal alone, returning a percentage of value greater than they received, more than in equity they contracted to pay and oftentimes more, in substance, than they profited by the loan. To the man of business this percentage in many cases constitutes the difference between success and failure. Thus a shrinkage in the volume of money is the prolific source of bankruptcy and ruin. It is the canker that, unperceived and unsuspected, is eating out the prosperity of our people. By reason of the almost universal inattention to the nature and functions of money this evil is permitted, unobserved, to work widespread ruin and disaster. So subtle is it in its operation that it eludes the vigilance of the most acute. It baffles all foresight and calculation; it sets at naught all industry, all energy, all enterprise.

During a period of falling prices the fear of impending calamity hangs like a pall over the business of the country. Notwithstanding unremitting efforts, men feel themselves constantly on the edge of disaster. Gloomy foreboding and timidity take the place of confidence and courage.

A shrinking volume of money is the most insidious foe with which civilization has to contend.

It is my firm conviction that the inexpressible miseries in-

flicted upon mankind by war, pestilence, and famine have been less cruel, unpitying, and unrelenting than the persistent and remorseless exactions which this inexorable enemy has made upon society. As the volume of money contracts, prices decline, and with the decline of prices come stagnation of industry and the relegation to idleness of thousands of willing workmen. Capitalists become unwilling to invest their money in enterprises that employ labor while the products of that labor are constantly decreasing in price. During all periods of falling prices therefore money capital is withdrawn from active industry and seeks investment in bonds and other forms of money-futures yielding fixed incomes; for, although the rate of interest in many such cases may be low, the capitalist is compensated for this by the enhancement in the purchasing power of each dollar of the principal and by the necessarily greater command it secures over the products of labor.

Avoiding the very purpose for which it was devised, money at such times seeks seclusion and declines to circulate. Its owner finds that he can better afford to leave it idle in a vault or bury it in the earth than subject it to the probability of diminution by investing it in business on a constantly falling market. Thus, contrary to all principles of progress and of natural justice, the man who keeps his money idle and deprives society of its use is rewarded by an unearned increment, while he who puts his money into active business, where industry and labor may profit by it, is punished by unmerited loss.

Under such conditions it is impossible for a community to reach that degree of material progress which, under proper circumstances, it would readily attain. At every turn distress and discouragement stare the people in the face. In every town and village men willing to work stand idle. Even their misfortune does not end with themselves, for not only are they a tax upon their friends, lessening to some extent the meager income of those who give them temporary assistance, but their necessary and eager competition for the little work that offers tends to reduce the compensation of those to whom they are thus indebted. Stores, workshops, and factories, unoccupied and unused, are found in every direction. Crime increases, bankruptcies multiply, and, even though the aggregate of wealth augments, it is unjustly distributed, and is consequently barren of beneficent results.

In view of all these facts, the demonetization of silver by the United States, resulting as it did in a contraction of the lawful currency of the country, must be regarded as one of

those historic blunders that are worse than crimes. It was the child of ignorance and avarice and is already the prolific parent of enforced idleness, poverty, and misery.

It is to undo as far as possible the effects of the blunder of 1873 that new legislation is now imperatively demanded by the people. And what better remedy could be applied than absolutely to reverse that legislation and to put the monetary position of this country back to exactly where it was when that wrong was committed?

The cry for relief appropriately now comes from the farmers, the artisans, and the laboring classes, as well as from the young, the enterprising, the thoughtful, of all classes, who have not inherited wealth, but are hewing out for themselves the rugged path to success. It is they who have had to bear the exactions of the system which has prevailed. It is from the proceeds of their labor that the extortions have been paid. If objection be made that the character of relief proposed is not indorsed in financial circles or by the literary guild or professional political economists that surround them, the sufficient reply is that the world cannot wait for the correction of abuses by those who are profiting by them. In the nature of things, all movements for reform must be initiated by those who cannot lose by the installation of justice.

But there are others besides the laboring masses who are working in the cause of humanity. There are noble, unselfish, and altruistic men in all the countries of civilization, who see the wrong and are indefatigable in their efforts to set it right.

I will read a cable dispatch recently addressed to me by Mr. Henry H. Gibbs, formerly governor of the Bank of England and now president of the Bimetallic League of Great Britain:

London, May 6.—The bimetallist party of the United Kingdom, now including over one hundred members of the House of Commons, attach the greatest value to the debate about to commence in your illustrious Chamber. We fully recognize not only that the support afforded to silver by your legislation during the last twelve years have helped to protect the industrial world from an acute monetary crisis, but also that the debates in Congress have served more than all else to educate our people to recognition of the important issues involved. We believe, also, that the increase and coinage of silver contemplated by Congress will restore, wholly or considerably, your coinage rates, and will thus make international settlement of this complex question comparatively easy. We anticipate further and with much confidence that the advance in the price of silver which must follow your action will stimulate both the export and the other trades of your country, and, while tending to the prosperity of your agricultural classes, will also assist the manufacturing industries of the United Kingdom and the whole body of our wage-earners.

During the debate on the limited coinage bill, not content with abuse of the advocates of the measure, with flimsy criticism of it, and specious arguments against it, its opponents in and out of Congress indulged in diverse prophecies and predictions. They pictured forth the lamentable results that would follow its passage and the direful consequences that would ensue from an increase of the circulating medium of the country. Among the results confidently predicted were the following: that the silver would not circulate at all, and again that it would circulate to the exclusion of gold, which metal, we were informed, would flow out of this country with a velocity and in a volume theretofore unknown; that we should be unable to redeem our paper money in gold; that we should be precipitated into a silver vortex; that an inflation of the currency would follow, which would ruinously raise prices of all commodities and that this inflation would result in an unprecedented contraction. We were charged with forcing upon the public creditors a dollar worth only ninety cents. We were warned that the passage of the bill would indefinitely postpone the refunding of the public debt, and would lower the price and impair the value of our national securities. It was charged that we were setting on foot a new and irrepressible conflict between two great sections of the country, the East and the West. We were charged with uttering a debased coin, with lowering the standard of American credit, with tarnishing the integrity and honor of our country before foreign nations, and with unprecedented moral turpitude in setting an example of flagrant and shameless national dishonesty.

The men of the far West, and of the Pacific slope especially, were the particular targets of this abuse. They were denounced by some as "lunatics," by others as dangerous and unworthy demagogues, because, as was charged, their constituents, if not themselves, were directly interested in the restoration of the ancient right of silver to full recognition as one of the money metals.

These prophecies of disaster were united in by the professors of political economy in all the Eastern colleges, by the President of the United States, by the Secretary of the Treasury, by the leading American newspapers, by the principal public men and journals of Great Britain, if not of all Europe, and, of course, by all bankers, money-lenders, and professional financiers the world over.

And now, Mr. President, how many of all those alarming prognostications by all these distinguished prophets have been

fulfilled? Not one! On the contrary, it is not too much to say that the public credit of the United States is to-day the highest in the world. It does not stand merely in line with that of other first-rate powers; it stands at the head. Our gold, silver, and paper money stand at a parity with each other. If a full measure of relief was not realized by the passage of that bill it is because the coinage of $4,000,000 a month was left optional with the Secretary of the Treasury, instead of being made mandatory on him.

But it is hardly necessary to assert that the predicted inflation of prices has not been observed as a consequence of the coinage of $2,000,000 a month. While the issuance of that amount has not, with our rapidly increasing population and wealth, been sufficient to arrest the downward tendency of prices, it has undoubtedly prevented them from falling much lower. Without that coinage, we should have had industrial depression, chronic and somber, with consequences of untold disaster.

But the result which gave most apprehension to those who advocated the gold standard, the evil which they regarded as on the whole the most threatening and direful of all the evils that were to result from even so small an increase in the money volume as that bill provided for, was the outflow of gold. They ridiculously underestimated the tremendous money-absorbing power of this great country. And, as if to emphasize to all the world the complete absurdity of their alleged fears, this apprehension has been conspicuously and notoriously set at naught by the constant inflow of gold. On November 1, 1889, the amount of gold in circulation and in the treasury was $689,000,000.

While the act of 1878 did not bring all silver to a parity with gold, since it limited the coinage of silver dollars while the coinage of gold dollars remained unlimited, nevertheless it is a significant fact that every silver dollar that has been coined under that act is at a parity with gold and will to-day buy as much of all the objects of human desire as will the gold dollar. Nay, more, silver bullion—disparaged and discredited as it is by being shorn of the money function and denied access to the mints, instead of decreasing in purchasing power, has maintained so steady a relation to commodities that 412½ grains of uncoined silver will exchange for as much to-day as would the coined dollar, whether of silver or gold, in 1873, when the full money function attached equally to both metals. If this be true, what an utter perversion of terms it is to say that silver has fallen in value!

If proof were needed that it is gold which has risen in value, it is to be found in the coincident fact of a decrease of rates of interest on first-class securities. That decrease has kept even step and pace with the rise in the value of money.

The rise in the value of gold, as shown by comparison with large numbers of articles of commerce, has been between 35 and 40 per cent. The rate of interest on gilt-edged securities shows a corresponding decline. But unfortunately for the struggling people of the country the fall in the rate of interest on farm mortgages and on property remote from money centers has been nothing like so great as this, nor has it been so great as the fall in the price of agricultural lands and in the products of labor.

I hold, therefore, that a new axiom should be added to the science of political economy, namely, that as the purchasing power of money increases its income-producing power decreases and in about the same ratio, and, conversely, when the purchasing power of money decreases its income-producing power increases. In other words, when prices rise interest rises; when prices fall interest falls. When money is increasing in volume and decreasing in value, prices rise, and its investment in productive enterprises becomes more profitable, and as a consequence interest rises. When it is decreasing in volume and consequently increasing in value, prices fall, investment in property and productive enterprises becomes precarious and unprofitable, and, as a consequence, it avoids them, and seeks investment in bonds and gilt-edged securities, aptly termed "money futures," which for years have been increasing and continue to increase.

The apparent is not always the real. Nothing seems more warranted by the evidence of our senses than the earth is a stationary object, while the sun revolves around it. For thousands of years the world was convinced of the truth of the geocentric theory of the universe. Even yet so ever-present is this impression, derived from ocular demonstration, that in spite of the declarations of science we speak of the "rising" and of the "setting" of the sun. In the same way we speak of the rise or fall in the value of commodities, without being particular to note whether the change that has taken place is strictly a change in the value of the article itself or a change in the money with which its value is measured.

Now our gold-standard men refuse to look at anything beyond the two things, gold and silver, to see what has happened, and, when it is finally demonstrated that all other things retain

their former relations to silver, still persist that the law which makes gold an unchanging standard of measure is more immutable than that which holds the stars in their courses. If they will compare gold and silver with commodities in general, to see how the metals have maintained their relations, not each to the other, but to all other things, they will find that, instead of a fall having taken place in the value of silver, the change that has really taken place is a rise in the value of both gold and silver, the rise in silver being relatively slight while that of gold has been ruinously great. And those who do not shut their eyes to the truth must see that that change of relation between the metals has been effected by depriving silver of its legal-tender function. The only thing that has prevented a greater divergency between the metals is the limited coinage by the United States.

In 1873 it required 224 grains of silver to buy a bushel of corn; to-day only 209 grains of silver are required to buy the same quantity.

In 1873 a pound of cotton could not be had for less than 77½ grains of silver; to-day the same pound of cotton can be bought for 61 grains of silver.

In 1873 96 grains of silver were required to buy one dozen eggs; to-day only 76 grains of silver are required to buy the same quantity of eggs.

These comparisons might be continued with the same results as to a great majority of the articles which enter into general use.

In relation to what, then, is it that silver has fallen? As it has not fallen in relation to commodities, there remains but one thing in relation to which it can be said to have fallen, and that one thing is gold. The phrase "the fall of silver" is the ingenious and cunning invention by which it is sought to cast on that metal the discredit of depreciation rather than subject gold to the suspicion of any change whatever. The term to correctly describe what has taken place would be "the rise of gold"; but that term is scrupulously avoided, as implying that gold does not remain immovably fixed. That gold has risen, however, admits of no doubt, except to those who willfully shut their eyes to facts of common observation. The true test of the increasing or decreasing value of any one thing is not to compare it with any other one thing, but with a large range of commodities generally dealt in. It is not of so much importance to know how much gold can be bought with a given amount of silver as it is to know how much bread, how much meat, and how much clothing

can be bought, and how much of all the things that are necessary to the comfort and well-being of the people can be bought with that amount of silver.

A bushel of wheat that, according to the figures of the Bureau of Statistics, cost $1.14 in gold or silver in 1873, and which still commands $1.12 in silver bullion, will to-day bring only 87 cents in gold.

A pound of cotton that in 1873 cost the purchaser, in gold or silver, 16 cents, and which still commands 13 cents in silver bullion, will bring only 10 cents in gold.

A barrel of flour which in 1873 cost the purchaser $6.60 in gold or silver, and which to-day commands $6.02 in silver bullion, will bring but $4.70 in gold.

Notwithstanding that 412½ grains of uncoined silver will to-day buy as much of the leading articles of commerce as the coined gold dollar would buy in 1873, yet the advocates of the gold standard characterize it as a 72-cent dollar. Then the gold dollar of 1873 was a 72-cent dollar. May not the debtors denounce the gold dollar of to-day as a 140-cent dollar?

The creditors and their friends glibly insist that all obligations must be paid in "the best money." This is the delicate and plausible euphemism resorted to in order to gloss over and, if possible, hide from the world the odious and repulsive fact that what the creditors always want is the *dearest* money, the money that costs the people the most sweat and toil to obtain and which, as time passes, grows dearer and dearer.

This cry for "the best money" is at last beginning to be recognized for what it is: the cunning device of creditors to "catch the conscience" of the people and play upon the sense of fairness that characterizes the great mass of mankind.

According to all fair canons of construction the best money should be and is a money of unchanging value, a money that exacts from the debtor the same amount of sacrifice that he bargained for, and which is all that the creditor is equitably entitled to receive. In other words, the money of the contract, not a money whose exactions are increasing at the rate of 2 per cent. per annum. As McCulloch says, debts being stated in dollars and cents, it is not possible for the creditor openly to augment his debtor's obligation by changing the figures of the debt.

But, Mr. President, while they cannot change the figures of the debt, they are enabled, by a crafty manipulation of the money volume, to do that which, to the debtor, means the same thing.

The principle that lies at the very foundation of the science

of money is that the value of each unit of money in any country at any given time depends on the whole number of units in circulation in that country. The larger the number of units out, population remaining the same, the less must be the value of each unit; the smaller the number of units out, population remaining the same, the greater the value of each.

Notwithstanding the variance sometimes found between the premises and the conclusions of economic writers, there is no economist of repute who does not admit this to be a fundamental principle.

On the theory I have propounded, 3½ per cent. of $1,700,000,000, or $56,000,000, is the minimum amount of money that should be added to the currency of this country during the present year, there being an estimated increase of this percentage in the population.

The true money standard of any country is not the material of which the money is made. The standard is not a concrete object, but a numerical relation. It is the relation between the number of units composing the monetary circulation of the country and the numbers of the population.

It is the legal-tender function that constitutes money. It is the power which the law imparts to any material to pay debts and liquidate obligations. It cannot for a moment be doubted that the money function, being conferred by the supreme authority, is the all-sufficient guaranty of the money value. There is no necessity for reënforcing that value with any inferior value that may attach to the material on which the money stamp is placed. The money function is immeasurably the most important that can be conferred by society upon any material, and it is absurd to urge that that function is not of itself sufficient for the maintenance of the value of money. All the value that money can possibly have—the totality of value that can exist in the shape of money in any country—will attach to anything upon which the sovereign authority stamps it, whether the material on which the stamp is placed be gold, silver, paper, or anything else. Legislators or executive officers of the Government, by increasing or decreasing the volume of money, correspondingly decrease or increase the value of each unit of that money; for, no matter how many or how few the units may be, the total value of the money of the country will be comprised within the total number of those units. A change in the number of units effects a proportionate change in the value of each unit, and, whatever the value of the unit may be, it is of the utmost importance that that value should remain undisturbed.

It is absurd to maintain that a gold unit, which, as time goes on, is constantly increasing in purchasing power, is a better unit than a unit of any other material that maintains unchanging value through time.

Whenever the business of the country accommodates itself to a given number of units, the only question for the Government to deal with is to maintain that value as free from disturbance as possible; and according to all authorities on political economy that can only be done by increasing or decreasing the number of units in circulation in accordance with the demands of increasing or decreasing population.

If it be admitted that one of the most important offices of government is to see that the equities are preserved between its citizens, then it cannot be denied that it is one of the highest offices of government to see that money, which measures all equities and which must for all time continue to be the principal measure in the service of civilized society, shall be of unchanging value. It is impossible to secure this characteristic of uniformity in the value of money if we are to select as the only material on which to stamp the money function a substance whose yearly production is becoming more and more limited and the prospect of whose sufficient yield becomes less and less encouraging.

If the diminution of the volume of money increases the value of the money unit—which is but another form of stating that it lowers prices and produces stagnation, distress, and discontent—what good reason can be offered by the advocates of the gold standard for confining the business of this rapidly growing country to a basis of gold, when it is well known that the entire stocks of gold and silver together are now insufficient to serve the purpose of the world's money and have to be supplemented and reënforced by large issues of paper notes? Do they not reflect that the production of gold is constantly diminishing and is likely to continue to diminish? And do they not know that our population is growing at the rate of over 3 per cent. per annum and will double in thirty years? To be sure, if we are to take no note of prices, the question is a simple one.

But prices must be taken into account. The entire money question is one of prices. When it is said that money is scarce, what is meant is that business is depressed and that money is difficult to get at the present range of prices. Should prices fall 25 per cent. money would be found plentiful enough to conduct exchange at the lower range. But when prices fall goods sell below cost, business is unprofitable, workshops are closed, and

men are thrown into idleness. If lowering prices do not affect injuriously either the business or the prosperity of the country, then it makes no difference what the volume of money may be; a small amount will meet the requirements as well as a large amount. In that case, the gold standard is as good as any.

But, if gold alone is sufficient to bear all the enormous monetary burdens of the Western world, why do the advocates of the gold standard admit the necessity for any more circulation? To be logical, instead of favoring an increase of credit money, which has always lurking within it an element of danger to the business of the community, they should demand the retirement of the $347,000,000 of greenbacks and the $350,000,000 of coined silver, and base the business of the country exclusively on what they call "honest money." If that should be done all that could happen would be a fall in prices. Judging by the experience of the past it would not be surprising if the next move of the gold-standard men would be an agitation for the retirement and cancellation of the greenbacks. Such a movement is fully in harmony with the opinions of the gold-standard advocates for the past twenty years. Indeed, the Secretary of the Treasury, who took charge of the finances at the opening of the last Administration, himself a banker, recommended the demonetization of the greenbacks almost as vigorously as he opposed silver.

HENRY W. BLAIR [N. H.].—Does the Senator mean to be understood that the falling of prices is an absolute demonstration of the increased value of the money without limitation?

SENATOR JONES.—When a fall in prices is brought about by a larger subordination of the forces of nature to the uses of man, as where the comforts and conveniences of life could be produced with less sacrifice than before, it is not an injury to society, but an advantage. In other words, if, by a certain amount of sacrifice seventeen years ago, only one pair of shoes could be produced and if by the same sacrifice two pairs could be now produced, there would be a lowering of the price of shoes to about one-half of what it was seventeen years ago, which would be a very great benefaction to mankind.

When prices fall owing to improvements in manufacture, business revives, the masses of the people are at work, those who toil find themselves possessed of more of the comforts, of the conveniences, and even of the luxuries of life than before. They are better contented with their condition and more buoyant and hopeful than before. On such occasions money becomes more and more in demand than it was before, and instead of

being hoarded is put into active and productive business where it will make a profit. But when interest falls, *pari passu*,[1] with the fall of prices, it shows that the fall of prices is not due, except in the smallest degree, to improved methods of production, but to the increased value of money.

SENATOR BLAIR.—Is it possible that some of the fall in prices in this country may be owing to the protective tariff?

SENATOR JONES.—The first effect of the tariff certainly always must be to raise prices. But, if you have a proper volume of money, you set all your people at work and at a variety of occupations. When all men are employed at their aptitudes new inventions multiply, progress is accelerated, and the secrets of nature are more rapidly unfolded.

JOHN R. MCPHERSON [N. J.].—Granted that there will be an increase of silver coinage in this country produced by the free coinage of silver, I want to ask the Senator if he asserts that no gold can be driven out of the country to a greater extent than dollar for dollar for the silver that comes in?

SENATOR JONES.—Absolutely; I say so.

SENATOR MCPHERSON.—Will the moneyed men of this country, holding $500,000,000 of gold, with a certainty of the free coinage of silver and going to a silver basis with 72-cent dollars —for that is what it means—put their gold in circulation, or will they hoard it? Will it disappear?

SENATOR JONES.—I scarcely know what the Senator means by a "silver basis." He talks about a 72-cent dollar. We have never seen a 72-cent dollar. The papers in the East have told us that the silver dollar was worth 72 cents. I recollect talking on that subject once with some Senators in the cloak room. During the conversation one of the Senate pages brought me a telegram, on which he said the telegraph messenger had told him there were 50 cents due. I gave the page a silver dollar and said to him: "I have been informed by some very respectable and intellectual gentlemen in here, some of them candidates for the presidency even, that this dollar is worth only 75 cents. I do not want to cheat a little boy. Take this out, and if the boy thinks it worth only 75 cents he can send me back 25 cents, and if he thinks it is worth a dollar he can send me back 50 cents. I will leave it to him." The page brought back 50 cents and said the telegraph boy told him he did not know what those old "duffers" in there might say, but it was as good a dollar as he wanted and was very hard to get. [Laughter.]

[1] "With equal step."

The Senator talks about the bullion value as though that had anything whatever to do with the value of the dollar. I have attempted to demonstrate that the material that was in the dollar has nothing whatever to do with it.

All we have to do is to take up the little "slack" of silver, and all of it will at once be at par with gold; then we shall hear no more about the "commodity value" of silver.

GEORGE HEARST [Cal.].—It will be $1.29.

SENATOR JONES.—It will be $1.29 the very moment you give it back its ancient right of coinage and restore to it its full money power. You coin of gold all that is brought to the mint and you deny to a certain portion of silver that same long-established privilege, and then you measure the value of the whole supply of silver by that of the little fraction that is not coined, and which therefore has to find a market as a commodity.

SENATOR MCPHERSON.—Then, if the Senator will permit me, he necessarily proposes that the Government of the United States shall take up all this "slack," as he calls it, in the surplus quantity of silver and shall use it in the coinage. The mints of Europe being closed against the coinage of silver, there is no other place where it will be coined. Now, if the Government of the United States should use all the surplus silver in the country, which has simply forced the price down since we remonetized silver in 1878 more than 20 per cent.——

SENATOR JONES.—Gold has risen 35 per cent.

SENATOR MCPHERSON.—Then I think the Senator's argument is upon this idea and upon this plan, that after we are upon a silver basis, as we should be most assuredly, there would be no inequality in the money, because it would be all silver.

SENATOR JONES.—And no inequality between it and gold.

SENATOR MCPHERSON.—Certainly not, because there would be no gold in circulation. But let me ask the Senator another question. While he can use his short-legged silver dollar for the payment of debts, when he comes to make a new obligation would not the price of the goods assume a price equal to the difference between gold and silver? In other words, while you can use a debased currency for the payment of debts, if a legislative decree requires that you shall accept it, you cannot use it for any other purpose.

SENATOR JONES.—We have not provided any "short-legged" dollar. The Senator is assuming a good many facts and attempting to adjust me to them. For example, the Senator tells us that gold is to disappear from circulation. What will the owners do with it? Where and in what are they going to invest it?

SENATOR MCPHERSON.—It will be held for a premium.

SENATOR JONES.—But who will buy it at a premium? For what purpose is it needed? Nobody is "short" on it, and there is no law which forces anybody to have it. It is only worth what is daily paid in the markets of the world. It is a bogy with which to frighten the people who demand reform in the currency of this country. Let them withdraw their gold.

I tell the Senator it is not the men who hoard the gold in vaults who maintain or promote the prosperity of this country, but the toilers in the wheat fields and on the farms of the country, the men who work in the planing mills, the forges, the furnaces, the factories, and in all our institutions of industry. It is they that bring us our prosperity, and not these people who are gambling for premiums on gold.

Let them gamble among themselves; let who lose and let who win, the people care nothing. The people of the United States are going to institute a money that shall install and maintain justice as between the citizens of this country, and they will not be impeded. I can tell the Senator that neither his party nor the Republican party will ever impede the march that this great country is about to make—the first in the world, I am glad to say—in adjusting to the demands of industry and commerce that great instrument, money, the non-adjustment of which, as I have already stated, has, in my belief, caused more misery than was ever caused by war, pestilence, and famine.

I predict that the restoration of silver to its birthright, Mr. President, will mark an epoch in the history of this country. It will place in circulation an amount of money commensurate with our increasing population. It will give assurance to our languishing industries that the volume of our circulating medium is not to continue shrinking and that the tendency of prices shall no longer be downward. It will increase the wages of labor and the prices of the products of labor; it will reduce the price of bonds and other forms of money futures, it will lighten, but not inequitably, the burden of mortgages; it will increase largely, though not unjustly, the debt-paying and tax-paying power of the people. It will loosen the grasp of the creditor from the throat of the debtor.

By the remonetization of silver, money will cease to be the object of commerce and will again become its beneficent instrument, activity will replace stagnation, movement will supplant inertia, courage will banish fear, confidence will dispel doubt, hope will supersede despair.

The lifting up of silver to its rightful plane by the side of

gold will set in motion all the latent energies of the people. It will banish involuntary idleness by putting every willing man to work. It will revive business and reanimate the heart and hope of the masses. Capital, no longer fearing a fall in prices, will turn into productive avenues. The hoards of money lying idle in the bank vaults will come out to bless and enrich alike their owners and the community at large; while the millions of dollars now invested at low interest in gilt-edged securities will seek more profitable investment in the busy field of industry, where they will be utilized in the payment of wages and the consequent dissemination of comfort and happiness among the people.

And this it will accomplish not for the United States alone, but for civilization. For it is not too much to say, Mr. President that upon the decision of this question depend consequences more momentous than upon that of any other question of public policy within the memory of this generation. In a broader sense than any other question attracting the general attention of mankind it is a question of civilization. It embodies the hopes and aspirations of our race.

The act of Congress which shall happily solve it will constitute a decree of emancipation as veritable as any that ever freed serf from thralldom, but more universal in its application. It will proclaim the freedom of the white race the world over, it will lift the bowed head of labor, it will hush the threnody of toil. It will inaugurate the true renaissance, a renaissance of *prosperity*, without which industry, learning, science, literature, art, are but as apples of Sodom. [Applause in the galleries.]

On May 13 James K. Jones [Ark.] opposed the bill.

The purchase of $4,500,000 worth of silver per month may, and I think will, consume the world's surplus of silver. If so, then bullion will rapidly rise in value after the passage of this act, and may soon reach the point at which the Government will, under the operation of the law, be required to suspend its purchases. What will then be the condition? Silver bullion will remain at that price; for the moment it falls a shade below one dollar for 371¼ grains of pure silver the Government becomes at once a purchaser and a large one, sending the price up again. We will then have as the net result of our legislation a great increase in the value of silver bullion as a commodity simply, but its demonetization, both as coin and as a basis for paper, will be complete and absolute.

The efforts which have been so persistently made for ten years past, but which have utterly failed when directly and openly made, will have succeeded by indirection, and this bill, which has been understood to be a silver measure, will have completed the destruction of silver as money. The great demand among the people for more money, for silver money, will have been treated with contempt, and we will have practically declared that when the mine owners have been cared for all has been done that needed to be done. If this bill is not a willfully false pretence intended by its friends as a trick to deceive the public they should amend it before pressing it further by at least providing for the unlimited coinage of silver whenever the price reaches the point at which the Government ceases to be a purchaser. This is an absolute necessity unless the purpose is to destroy silver as money.

The deliberate purpose to discredit the treasury notes provided for by the bill by refusing to make them a legal tender in the payment of debts further suggests that the real purpose had in view by the Republican caucus was that indicated above. I am in favor of the issue of certificates for coin and bullion deposited and of conferring upon these the qualities of legal tender as broadly and completely as they are conferred upon the coin they represent. There is no reason why these certificates should be in any sense inferior to any other form of paper money. The "greenback" money is a mere promise of the Government to pay, while these certificates are a promise to pay, and are also backed, each dollar of them, by a coin dollar which the honor and faith of the Government are pledged to safely keep for the sole purpose of their redemption. This is, then, the very best form of paper money, as it is rendered doubly secure by the pledged faith of the Government and the deposit of coin, dollar for dollar, which is devoted to its redemption. The Government of France, which has been considered a marvel of success in financial management, although they have 20,000,000 fewer people than we have, has a much larger volume of paper money as well as of gold and silver in circulation. To increase our volume of money cannot fail to bring a measure of relief to our overburdened people.

The amendment proposed by the Senator from Colorado [Henry M. Teller] provides for the unlimited deposit of silver and the issue thereon of full legal-tender certificates.

I shall heartily support this proposition because it provides for the restoration of silver to its legitimate function as money and provides for the issue of certificates which are not dis-

credited by the Government. The enactment of this amendment into law will bring a decided measure of relief to the people; it will not only stop the exactions caused by the increasing value of gold, but it will in some measure relieve the pressure caused by the already greatly increased value of that metal. It will relieve the overburdened and tax-ridden masses of the country of one of the burdens which have brought them to their present condition, and it will, I hope, serve to stimulate and encourage them to free themselves from its great twin iniquity.

The result of the course pursued upon each of these questions (silver and tariff) by the Republican party is the same; the one is the complement of the other and, taken together, they make the most insidious, adroit, and effective system of legalized robbery ever evolved from the brain of man; and both have been enacted and upheld upon the abominable theory that it was the duty of the Government to so frame its economic laws that the great body of the people should be compelled to contribute to the prosperity of the favored classes; and if the majority of its leaders dared they would openly and avowedly in the interest of those whose servants they are continue the same policy, as the Secretary of the Treasury evidently wishes to do. But those who come from the West know too well the real condition of the people to doubt that there must be a relaxation.

That the leaders of the Republican party feel their danger this effort to cajole the masses illustrates and every one knows. They are attempting to strengthen their hold on power by every device that political chicanery can devise. Standing in mortal dread of having the House of Representatives swept from their grasp and the Presidency pass into Democratic hands, they have been giving their earnest attention to strengthening their hold upon this body, because as long as they can control one body they can serve their masters by preventing any legislation upon silver or anything else in the interest of the great mass of the people.

Since 1873 the Republican party as a party has set its face like a flint against silver, just as steadily and persistently as it has championed the tariff, and for exactly the same purpose. It is true that in 1878 there was a temporary deviation from this rule, but that was the result of individual action and was against the general party policy and resulted from a wholesome dread of a thoroughly aroused public opinion.

"The ox knoweth his owner and the ass his master's crib," and those who have had their private fortunes swelled by the

unequal operation of unjust laws have in turn had the "fat fried" out of them to secure Republican success, and as a reward have dictated the course of economic legislation, including silver.

It requires no argument to show that if one-half of a nation's money is destroyed the other half becomes at once much more valuable. So we see how by these changes the conspirators were steadily increasing the value of their bonds, increasing the debt of the people, for which increase the people received no sort of equivalent. For seventeen years these men have reaped the harvest of this change in the value of money, and now suddenly, almost as the light shone around Saul on the way to Damascus, we find the Republican caucus bringing in a so-called silver bill.

Those who advocate silver money may well suspect the sincerity of these sudden converts, and it behooves us to look narrowly into this bill and see whether it is what it purports to be. That inspection, I submit, has shown what a miserable fraud has been offered to the country, and, under false pretences, to tide over a party emergency. Whatever may be said of the statesmanship and morals of Republican methods, there can be no doubt of the shrewdness and craft of the leaders of that party, as well as of monopolists whom they serve. No effort calculated to turn aside or allay the threatened storm will be untried.

There is a most extraordinary spirit of unrest pervading the entire people. The farmers, that class which in all the great North and West has uncomplainingly borne the burdens of tariff taxation, have borne the increase of their burdens made by demonetization of silver, relying with uncomplaining and unshaken faith on the assurance of their political leaders that their hardships would soon pass away and great prosperity would be sure to come to them, as it had to the manufacturers. These are at last driven to the wall. The mortgages can not be met. Instead of getting better it is growing constantly worse, and they have at last stopped and demanded an accounting.

The old platitudes about the sole purpose of the Republican policy being to raise the wages of the workingmen will not any longer serve their purpose, but a substantial, real change must be made or trouble is ahead.

In the West the demand for making silver money is strong. The silver mine owners, the great silver producers, demand it because it will increase the value of their product. The people

wish it because they feel the need for more money, and they know silver to be a safe and valuable metal for money.

Now, the policy of the Republican leaders seems to be to satisfy the silver mine owners and attach them firmly to the interests of the monopolists, and by making some show of meeting the wishes of the people to quiet them and at the same time not to disturb the bondholders of the East, whose servants they are.

If the Republican caucus should have the power to compel those who come from the great West to vote for this bill, there will be such a reckoning then as has never been seen before. But they will not dare to do it. I have no doubt they have agreed to do it, with one exception. I have no doubt that, with one exception, they would be glad to do it if they dared. But they will not dare, and when the roll is called, with a lively sense of the reckoning to come, they will cast their votes against this bill and for the free coinage of silver. Such is the power of the people when they are aroused.

The storm is rising, the mutterings of the thunder are heard on every hand, and when the crush and roar and flood have passed the political atmosphere will be purified and clear as it has not been since it was polluted by the passion and pestilence of war. This handful of beneficiaries of unjust legislation have heard the mutterings of discontent before; by shrewdly dividing their opponents they have avoided a crisis again and again. At other times by using false issues they have succeeded in diverting the minds of those they plundered from their own condition to that of other people of whose wretched and deplorable condition they were told. These tricks become weaker by each repetition, and they have, I hope, lost their power.

"In union there is strength" is as true of individuals and classes as it is of States. Almost all classes and callings are organized, and have been for years. Hence I have felt a great interest in each movement in this direction. It is impossible to organize a conservative class like farmers until an emergency has arisen. Many thoughtful and far-seeing men appreciate evils, and desire to organize for their resistance before the great mass feel the necessity for it; but the body of the people, and especially farmers, move slowly.

The Republican party, which has always had cause to dread an awakening among the masses to the fact that they have been steadily robbed under the forms of law for a quarter of a century, have been active in inducing every such movement to

destroy itself by attempting the organization of a new political party, instead of allying itself with the natural enemy of Republican methods, and the only enemy that that party fears, the great Democratic party.

When the Grange movement began there was a wide field for usefulness for it, but it failed in the accomplishment of its full purpose from a combination of causes. Local organizations of a similar kind have sprung up in many localities since, showing the growth of the conviction that something must be done.

It is perfectly natural that any new movement of this kind falling into inexperienced hands should make mistakes. It is natural, too, that demagogues should attempt to associate themselves with every such movement, and try to turn it to their own selfish uses.

I hope that the farmers will keep clear of party politics and avoid seductions of demagogues, and that their leaders will keep steadily on in the great purpose of educating them to a correct understanding and appreciation of the difficulties under which they labor, and to a patient and careful investigation of the causes of their trouble. That with a broad and catholic spirit of toleration they will permit the widest range of honest differences of opinion, feeling confident that after free discussion and a full understanding the truth will prevail.

Without undertaking to control the votes of anybody, if they will only bring out the truth clear and strong, their members will generally vote in the direction of their own interest, and for that party and those men who are advocating those principles most consonant with liberty and good government. There are but two great parties; one or the other will control the country, and that party whose principles of government are most in accord with the principles of justice and right ought to be supported.

When the present great movement takes this line of procedure and closely adheres to it, whether called the Grange, the Wheel, or the Alliance, its results will be marvelous, and the good it will do the cause of the farmers, good government, and freedom will be incalculable.

Millions of intelligent American farmers are now taking this course, organized and unorganized, and they will, as I firmly believe, be soon felt as a power for good.

To them and to their influence I look for a return to the principles upon which our Revolutionary fathers launched this experiment of government.

This silver movement, as I said in the beginning, is significant. It shows to what extremities the Republican leaders consider themselves driven when they deem it necessary to make terms with the producers of silver and at the same time make an effort to placate the masses by making a show of issuing treasury notes, although of a discredited class. It demonstrates a most wonderful trepidation on the part of the protected classes.

It seems they have not faith now in the efficacy of the "bloody shirt" to pull them through the next election. They doubt their ability to deceive and divide their opponents in the present struggle. I have already shown that the Republican is a minority party. For years they maintained power only by deceiving and dividing those opposed to them.

If any reform ever comes it must come through the Democratic party, and the Republicans know this. By all sorts of promises and false pretences they will collect to themselves every class they can. But a favorite method is, when they find that they can not control any particular class, to prevent their going to the support of the Democracy. They know if they can get them to throw away their votes that it will help them.

If the 300,000 votes cast for General James B. Weaver had been added to General Hancock's number, his vote would have exceeded Garfield's by more than 300,000 votes and would have changed Garfield's plurality of 7,000 into a minority of over 300,000. Then the policy of the Republican party will be, first, by false pretences to capture the farmer movement, and, failing in this, to urge them to organize a party of their own, and by all means to keep away from the Democratic party, the only power they fear. If they succeed in this, the present oppressive system of taxation will continue indefinitely and no relief will be had.

This farmers' movement is the cause of this pretence of a reformation of your silver policy.

They are speaking to you in no uncertain tones, and if you can not divert them by some sort of flank movement you know your days are numbered.

It is admitted now on all hands that the agricultural classes of the country are in a very depressed condition financially, although all predictions that such would be the case and all statements that this was the inevitable result of the economic policy of the Republican party have always heretofore been stoutly denied. The situation is such now that for the first

time no man can be found who will deny its gravity. The farms of New England, the site and home of the protected industries, are abandoned, tenantless, and can be bought for nominal prices.

The farms of the great West, "the growing and prosperous West," as it has been the habit to call it, are mortgaged and the farmers are looking anxiously for relief, and are beginning to fear it is never to come, while the South, where the cotton crop of the world is produced, is in little better condition. This state of things has not grown up, like Jonah's gourd, in a night; it has not come suddenly nor is it local; but this condition is widespread, touching every farm in the land. This condition is not inherent, for it was not always so; it is not a natural condition, for with a rich soil, strong arms, hopeful hearts, and intelligent minds, this should not be.

Unnatural conditions have causes, but are never brought by agencies other than human.

The change that has come over the condition of the country homes in this nation in thirty years is inconceivable to one who has not seen and felt it. In 1860 we were a nation of free, happy, and independent people. Peace and plenty were to be found in every house. Enter the humblest home anywhere, East or West, North or South, and while you might find no luxury you would find comfort and cheerfulness everywhere. While the clothing of the family and the food might have been the plainest, there was nothing in either to bring a blush to the cheek nor any sense of mortification or humiliation to the family. But how is it to-day?

I know from personal observation that men and women, noble, honorable people, shrink from having neighbors and friends at their tables at times because they are unwilling to have others know how hard they live. This is not from parsimony or greed, but from an honest, heroic fight to stay the mortgage to save their homes. Inquire about the people and you will find that from year's end to year's end, from the early dawn to dark, in heat and cold, in all sorts of weather, they are straining every power of both mind and body to make good crops, while they economize in the most rigid manner, deny themselves and wives and children necessaries of life, struggling to get out of debt. No eight-hour law with them, but often sixteen hours' hard toil per day, and yet with all this year after year finds them more and more hopelessly involved.

The route to relief is as clear as the noonday sun. It is as simple as it is natural. It is simply to repeal the laws

that have caused the present condition. Reverse the engine; go the other way. Stop screwing the vise and unscrew it. Untried expedients will not reach the evil. No action by the Government can give relief except to stop the robbery that has brought the trouble on. Allow the robbery to continue and all the schemes for the Government lending money to the people on real estate or on crops that have ever been dreamed of can not do any good, for the robbery will consume the money borrowed just as it has consumed the labor of a lifetime.

On May 14 and 15 Henry M. Teller [Col.] supported his amendment providing for free coinage of silver and the full legal-tender quality of silver coin and silver certificates.

If silver is not to be used as money, I have but little interest in the advancement of the price of silver.

The people of the State that I represent have comparatively little more interest in the advancement of the price of silver than other people; for, while we produce one-sixth of the silver of the world, we do not depend entirely upon our silver production, and we expect very shortly that the other interests of the State will far outweigh it. And the silver production of the United States, while it has amounted to 50,000,000 ounces last year, is an insignificant production in comparison with the great interests of this country that we think are involved in its rehabilitation as a money metal.

The silver question is not local in its character either as confined to one portion of this country or as confined to the American continent. It is a question that to-day is attracting the attention of all people everywhere. It has continued now for fifteen years to attract the attention of the financial and economic world. The brightest and ablest men of this generation have given time and study to this question, and it can not be cried down as a local measure. It will not do simply to say that the silver barons of the West are demanding it. It will not do simply to say that it is demanded in the interest of cheap money. It is demanded in the interest of humanity, in the interest of civilization, in the interest of progress, in the interest of the whole human race. He who approaches this subject with an idea that it is local in character, of minor importance, ought not to discuss it at all, for it is self-evident that he is ignorant of the great question that he attempts to handle.

Mr. President, the question presented, not for the American people alone, but for the entire world, is whether we shall do

business in the future as we have done business in the past, or until within the last seventeen years, by the use of the two precious metals, not made money by law, not made money metals by the edict of legislative minds, not by the consent of the merchants, but by the fiat of the Almighty when He created these two metals.

No, Mr. President, it is not a question simply whether we shall have four and one-half millions more of money a month or less, but it is, first, whether we shall provide for the American people a sufficiency of money with which they may transact properly the business of this country, and, second, whether we shall put ourselves in a position where we can aid potentially in bringing about what I believe to-day every practical financier almost in the world, every political economist almost on the face of the earth admits is essential to prosperity and progress, the use of silver as money, not as token money, but on equal terms with gold.

Mr. President, the American citizen has a right to draw upon all the resources of the world for money, if it is needed in his business. He is not confined to the production of the American mines of gold or silver. The automatic theory upon which we have been proceeding, and which is so dear to some men when it is applied to gold and so objectionable when applied to silver, goes upon the idea that a country can draw upon all the productive mines of the world and not draw upon its own alone. The bill goes upon the theory that we are to draw upon our own mines and our own alone and that all other mines are to be tabooed and their products kept out of circulation and degraded by our refusal to receive and use them.

A new idea in finance was adopted. Upon this purchase of the American bullion—for that is what it amounted to, although the bill did not say "purchase"—upon this deposit of American bullion in the mints there was to be issued a certificate. That certificate, under some conditions, could be exchanged for another certificate; but, without going through that, it is sufficient to treat it as a certificate that in the first instance demanded redemption at the hands of the Government. How should these certificates that were going out to do duty as money be paid? They were to be paid or redeemed in what? In coin? No! In bullion, in silver bullion, and tenaciously the Secretary of the Treasury has adhered to that view from that day to this.

Nothing else will suit the Secretary of the Treasury but

a treasury note or certificate payable in a commodity. It is the first time, in the history of this country at least, that we have attempted to pay our debts in goods. It is the first time that the store system which we have heard of in the mining regions and in other sections of the country is to be applied to the Treasury Department of the United States; and with that suggestion I am told in the public prints—not by the Secretary, but in the public prints—that I am recreant to a high duty which I owe as a member of the Republican party that I do not support that absurd, that to my judgment wicked and nefarious, proposition to redeem the public paper in a commodity.

Mr. President, this suggestion of the Secretary to pay these certificates in a commodity brought great satisfaction to a certain class of people in this country, that is, the advocates of the gold standard. They said, "That is the end of the coinage of silver; there is no longer any danger that you will get on a silver basis." Where are you going? On an absolute gold basis, without the use of silver as money. It is to be taken in as a commodity and taken out as a commodity and always treated in the treasury as a commodity, and yet they said, "Why, this is in the interest of silver; you silver men in the West who are interested in the production of silver ought to be satisfied, for it will put silver to par." Nobody knows better than the men who stood behind that scheme that it would not put silver to par, and nobody is more determined in this country than the men who fathered that suggestion that silver shall not go to par, and it never would go to par under that scheme.

If they have fooled some people there are a great many in this country whom they have not been able to fool with that kind of a statement. They did not want to put silver to par. If they put silver to par its use as money will be assured. The whole world will take silver if it is put to par, and the men who demonetized silver in this country and who have steadily, against public sentiment and the public interest and the public demand, prevented its recoinage and its full circulation as money, are not now going to surrender the advantage which they have held for seventeen years.

Mr. President, I have found one thing pretty safe in my practical life, that when my enemies want to do a particular thing and are anxious for it, look out. When I found all the monometallists everywhere singing praises to this bill, when I found the press that had been denouncing silver and denouncing every man who supported the free coinage or even the limited use of silver under the Bland bill as money supporting it, and all gold monometallists clapping their hands in glee over the prospect of this bill becoming a law, then I had reason to suspect that it was a Trojan horse. It was pretty certain, in a week, or I will say in a month, it was morally certain that that scheme would not succeed. The silver people—I do not mean by that the silver miners, I mean the political economists of the world who are not in league with the gold people—condemned it—so far as this body is concerned practically abandoned it. Even the great influence that a Secretary of the Treasury can bring to bear upon matters of this kind could not keep it alive.

Then the Finance Committee, as I now understand, of all the silver men except one, presented another scheme which was said to be an improvement on the former, and it is, for it does not have in it the objectionable feature, the payment in goods. We were to buy $4,500,000 of silver; and was that to be coined into money? Oh, no, Mr. President, not to be coined into money, but to be deposited in the Treasury of the United States as a credit, upon which the Government of the United States was to issue its money, or the treasury note was to be issued having no relation whatever to the coin in the treasury, save and except that it had been given for the purchase of it, and the holder of it had no more claim on the bullion in the treasury than any other citizen of the United States had or than he had upon any other property of the United States; and yet we were told that this was a silver bill, and that it was a bill in the interest of the use of silver as money, and that it ought to be satisfactory to us, inasmuch as it would raise the price of silver!

Why, Mr. President, I have not any doubt that it would raise the price of silver to some extent. It has not, I repeat, the vice in it that the other bill had, and it did look as if it was in the interest of silver to some extent, at least it was making a market for silver. Mr. President, if you want to put silver back to its original price of 1873, you have got to do more than make a market for it; you have got to recognize its money function, you have got to treat it as a money metal. The Government may buy it and drop it in the sea where the depth is so great that human ingenuity and human cupidity can never reach it, and you will not put it back to par unless you recognize it as money. Nobody ought to doubt that.

The demand for silver must be a demand for it for the purpose for which it has been used for more than three thousand years, nay more than five thousand years, and that is for money. That is its great value and that is its only real value. Compared to its moneyed use, all other uses are insignificant. Does this bill propose to use it as money? Does this bill come here with the recognition of the fundamental idea that it is money? On the contrary, the fundamental idea in this bill, as in the other, is that it is merchandise and nothing else. Under a contingency, I admit, by the kind will and good consent of the Secretary of the Treasury, some of it may be put into dollars; that is, the coinage of any part of the bullion so purchased is discretionary with the Secretary.

When I complain that I do not like this discretionary power in the Secretary of the Treasury I am told that that is a reflection upon our officials. Mr. President, I have been brought up in a political school that has taught me, and my observation has sustained the teaching, that that is the best law which leaves the least discretion to any human agent; that the best law is mandatory in all its provisions, in all its features. Of course I do not say that there are not exceptions to that rule, as there are to all others, but that is the principle upon which legislation must proceed, and that is especially the principle upon which financial legislation must proceed if it proceeds rightly.

Who determines the policy of the Government? The people. Who determines that in the first instance for the people, subject to their revision? This body and the other that unites with us in legislation, and not the executive department, for they have no legislative power; they are to execute the law. Is it not clear that a bill which commits discretionary power to the Secretary of the Treasury over the finances of this country is not the proper one, to say the least?

There has not been a Secretary of the Treasury since the Bland bill passed but has insisted that the Bland bill was a mistake. There has not been a Secretary of the Treasury who has not dinned this body and the other to repeal the Bland bill.

Whenever a new Administration came in, with a constituency back of them universally in favor of silver, the new Administration out-Heroded Herod in their desire to get rid of silver. The present President [Harrison] could not wait until he had taken the oath of office, but he addressed a letter to Congress, or to Congressmen, in which he demanded that we should get rid of the silver-coinage act at once; otherwise he declared we

should be on a silver basis, and the gold obligations of the Government could not be met.

Sir, if he had searched with a search-warrant and with the power of a detective he could not have found an obligation of the United States save those that were specifically payable in gold—that is, gold certificates—that could not be paid by a silver dollar. The first message that came here from that Executive recommended the suspension of silver coinage; the report of his Secretary of the Treasury recommended the suspension of the silver coinage; the Treasurer recommended the suspension of the coinage; the Comptroller recommended it, and if the messengers and doorkeepers of the department had had an opportunity to address Congress I have no doubt they would have been heard also demanding the suspension of the coinage of silver.

Mr. President, this Administration, in which I am glad to say I have an interest, was elected upon the solemn declaration made in our platform that we were in favor of the use of silver as money, and every Senator here went on the stump, every member of the other body, and our speakers everywhere, and arraigned the Democratic party for its hostility to silver. The Democrats had, in deference to their candidate, left out of their platform any allusion to silver.

We made that contest upon the theory that the Republican party was in favor of silver as money, not to use it to make teapots, not to make teaspoons, not to make tablespoons, nor for subsidiary coin. When we said it was for money, we said it was for all purposes that money is used for. We said it was to be equal to gold. We said "We are in favor of the use of gold and silver as money," and we hold our power now by virtue of that declaration in our platform. So far as I am concerned I am loyal to that platform as I am to all platforms to which I subscribe, and I intend, so far as my voice is concerned, here and elsewhere to give it in favor of the use of silver as money in accordance with that platform, whether it parts me from the Administration or whether it does not.

Mr. President, I say here that this question of silver, the use of it as money, is not and never has been before a political question. It is a question too big to be made a party question. We put it in our platform, not as a party principle, but as one that pervaded the whole country in recognition of a universal demand in this country for the use of silver as money.

Mr. President, as to the bill before the Senate reported from the Committee on Finance, does it recognize the right

of silver as money in the broad sense of the platform of the Republican party? Does it recognize silver in accordance with the general demand, as I think, of the country for its use? I think not.

Mr. President, under this bill these treasury notes are to be receivable for public dues, but not for private dues. They can be put in the reserves of national banks of the country and held as money, for the only parties in the country that they are legal tender for are the banks. They are legal tender for the banks for the purpose of meeting the demands of the Government, but they are not legal tender in the hands of any citizen in the country. And when we say that the interests of the people are paramount to the interests of the banks, when we say that all the people of the United States are entitled to as good money as the banks are, to money that will discharge their indebtedness as readily as it will discharge the indebtedness of the banks, we are met with the statement that it is very doubtful whether the Government of the United States has the power to make a legal tender out of paper.

Mr. President, we have made legal tender out of paper. We made it in the early history of the war. We made our paper legal tender for the soldier and the sailor, and we made it legal tender for everybody except the Government and the banks and the bondholders.

There never was a better illustration in the history of money of the ignorance that prevailed when that bill was passed. We were desiring to make good money. How do you make good money? By giving it all the functions of money. But here we withheld one of the principal functions for which money is used in this country. We said, "You can pay certain debts with it and certain other ones you can not pay with it." Looking back now, does anybody doubt that if we had given those notes full legal-tender qualities they would have maintained themselves during the war? The Senator from Delaware [George Gray] shakes his head.

Of course, Mr. President, these are speculations. You can not tell what might have taken place. But there is one thing nobody will deny, that it would not have sunk so low as it did, because it had a valuable use in discharging the debt of one citizen to another. If it could have discharged another debt of great importance for which gold alone was used by the Government—that was the payment of duties on imports—it would have been better money than it was and would have retained something near its original status when it was issued.

Nobody can deny that. My own judgment is that all the $400,000,000 issued of that money might have been kept at par with gold by proper management on the part of the Government had it been given full and complete legal-tender qualities.

Now, Mr. President, here comes this bill: certificates to be issued to discharge the duty of money. What is lacking in them? The power to discharge a debt; the very highest and most valuable function of money is withheld from them, and if they should depreciate as they will depreciate without that quality if issued in any great number, then we shall be told they have depreciated because the silver that has been put into the treasury is not good enough security and the people have not faith in it, and we shall be told again that we shall have a cheap dollar, a dollar cheaper than the gold dollar.

I heard it outside the Senate the other day that the way the silver certificates were kept at par was that the Government would and did redeem them in gold. I have an authoritative statement from the Secretary of the Treasury that not a dollar has ever been redeemed in gold, but they have always been and are redeeming at all times in silver, and they are as good everywhere as a gold dollar, as good in Great Britain as a gold dollar, as good in Germany as a gold dollar, as good in Canada as a gold dollar, and certainly as good in the hands of the American people, and they are redeemable in silver and are redeemed in practice in silver and in nothing else.

Before I leave this subject I want to call the attention of those who are in favor of increasing the circulation, and who believe it ought to be increased, to one provision in this bill as it is reported by the Finance Committee, which I think is dangerous.

The certificates are redeemable, according to this bill, in lawful money. They are not legal-tender; they can not perform the highest money duty; they can not discharge debts. "Oh," it is said, "everybody will take them." Mr. President, everybody will take them when they do not need the legal-tender quality; everybody will take them when business is all right. But what you need the legal-tender quality for is the time of distress, of financial convulsions and panics.

Why should this not be legal tender for all parts of the country? These notes are practically legal tender for New York City, for Philadelphia, and for the city of Washington, because they have a Government agency with money stored of a legal-tender character to which they can go and exchange their certificates for legal tenders, but in the city of Denver,

in the city of Omaha, in Kansas City, no man can exchange these certificates for legal tenders, and if he wants legal tenders he is at the mercy of banks that have them, or more likely the banks will not have them and he is at the mercy of his creditor.

Can anybody give me any reason why this certificate should not be a legal tender? There are constitutional objections, I am told. The Supreme Court of the United States has twice decided that we were able to make legal tender in our judgment.

SENATOR REAGAN.—On our naked promise.

SENATOR TELLER.—On our naked promise, without a dollar back of it. It is too late for anybody to stand here and say, "I object to the legal-tender quality of these bills because of a constitutional doubt." There is a power that is potent here, and it is potent everywhere in this country, which has dominated legislation in the interest of capital, and it is that power which stands back and says, "You can not make this legal-tender." Any bill that gets my vote will have a legal-tender clause.

The certificates or notes are to be used to buy bullion—where? In the bill introduced in the House it says "the markets of the world." That is what the Secretary will do, buy in the markets of the world, and what he has been doing under the Bland bill. He never bought it on New York prices; he bought it on the London price less transportation.

The certificates or notes are to be practically used in this country, and if they depreciate then silver must go up in order to meet that depreciation. Then the price of silver in this country will be higher than it is abroad, and no silver will be bought at all, and that, in my judgment, is what commends this bill to the consideration of a great class of men who are clamoring for its passage to-day, who are the opponents of silver, and who declare we need no more money.

Mr. President, I am not mistaken when I say that the dominant class in this country in finance—the creditor class—do not want any legislation that shall put silver up, nor do they want any legislation that shall give to the country more money. Why? They have studied the financial question, and they understand that it is the number of units that determines the value of money, and they say: "The number is great enough now; we want to stand where we are; we do not want any more." And the whole influence of that class of men will be to put down the value of these certificates that they may be below the gold value, and then they will buy no bullion here or anywhere else, and there will be a practical suspension of

bullion purchase and a practical suspension of the issue of money under this bill.

All the great interests that hold the credits of this country, amounting to nobody knows how much, are interested in having what some of the Senators here have been in the habit of calling "the best kind of a dollar," and if they can destroy silver by putting silver to par they will do it, and if it is put up to par for one hour that is the end of this bill, and then the special agencies that put it up will be interested in putting it down. There is no provision if silver goes down that there shall be any further purchases. This being so, it is a dangerous bill, either for the men who want to put up the price of silver or the men who want to increase the circulation of this country.

Under the existing law, what is called the Bland bill, the Secretary of the Treasury does not pay out silver certificates, but in practice he pays out whatever the seller of silver bullion desires, gold, greenbacks, or silver certificates. So, practically, the purchase of silver under the present statute is a purchase for gold. This bill is a departure in that particular, that it is to be purchased by this kind of paper, and this kind of paper alone.

Therefore, it becomes of absolute importance, essential to the success of this scheme, that this paper money should have the highest possible money function, that it should have all the value that we are capable of giving by law to paper money. If we withhold one of the principal duties of money, the discharge of indebtedness, or if its full legal-tender quality is denied to it, we invite its depreciation and a suspension of purchases under this bill. So there would be an end of this effort to do the two things that it is professed it is intended to do, to put up the price of silver and, what is of infinitely greater importance to the great masses of the people in this country, to furnish them a sufficiency of money for the proper transaction of their business, and thereby increase the prices of all human products in this land.

So, Mr. President, it seems to me that no friend of the amendment offered by the Committee on Finance ought to object to giving these notes full legal-tender qualities.

Senator Teller then reverted to the unfulfilled prophecies of the monometallists.

We were told in 1878 that all the silver of the world would come here, that we should be overwhelmed with it. We have

since that time exported silver and not imported it. We were told then that gold would be driven out. We have imported gold in untold amounts.

WILLIAM M. STEWART [Nev.].—And no country ever purchased it at a greater sacrifice.

SENATOR EDMUNDS.—Have we bought any gold?

SENATOR TELLER.—Yes, we bought gold, but not in the way that the Senator means. We bought it with our products, and we have sent our products to a fallen market. We have sent them to Great Britain to compete with the ryot of India. We have by this method of ours destroyed the wheat market of this country, not only for to-day, but, in my judgment, for all time. You may not only charge against this gold craze the losses that have occurred now, but you may charge up the losses that will occur for years to come. You have stimulated the industries of India, the wheat-growing, the corn-growing, and the cotton-growing in that country to such an extent that India has become a competitor with us for wheat and cotton and corn, which she never was before, and which she could not be now but for the cheap silver. But having established this industry in India she will keep it up probably to our detriment for all time.

India takes the gold price for her wheat in London or Liverpool, and buys silver with the gold, not silver dollars, but silver bullion, and instead of buying it at $1.29 an ounce, which it ought to be, she buys it for 92 cents, as she did last year. The exporter of the wheat takes that bullion to India and coins it into rupees, and the rupees buy and pay just as much as they ever bought in India.

India, under this impetus, has added a hundred million spindles in ten years.

SENATOR MCPHERSON.—Is the Senator anxious to have the United States pay tribute to England as India does now?

SENATOR TELLER.—Mr. President, we are paying tribute to England now. Therefore, England is not anxious that we should go to free coinage. If we did go to free coinage, how could it be said that we paid tribute to England?

SENATOR MCPHERSON.—The Senator has called attention to the fact of the large amount of debt that the people of the United States owe to England, in the shape of bonded debt upon railroads and other things, the interest and principal of which in most cases is payable in gold. India in like manner owes to England a large sum annually, which India can not pay in the products of India. As to the balance of that debt, India pays it in gold. Her rupees are taken to London and

are translated into English sovereigns, and must pay the debt due to England in gold. Whatever may be the price of silver, the lower the price the greater percentage she will have to pay in order to translate that money into money acceptable to England and money in which the debt is due. Therefore, if the Senator will place this country on a silver basis, which he proposes to do by the free coinage of silver, it will put us in exactly the same position with respect to all commercial transactions with England that India occupies to-day, and necessarily so.

The Senator is probably aware of the fact that in the past two years it has been necessary for the Treasury Department to make large loans of gold in the city of New York for the purpose of maintaining its obligations, which the Treasury Department received to be payable in gold. At one time no less than $10,000,000 was borrowed by the Treasury Department from the New York bankers. Therefore we have been pretty near the point when we should have been obliged to pay some of the obligations of the Government in silver.

Now, let me ask the Senator a question. He has made the statement, I believe, that there is but a very small quantity of silver bullion anywhere in the world. Conceding it to be true that there is but a small quantity available for coining purposes, suppose that you pass a law to-day providing for the free coinage of silver without any particular stock of silver anywhere whence to draw a supply to make dollars; let us suppose that the moment you pass a free-coinage bill you drive all the gold in the country, some five or six hundred million dollars, from its hiding-place, where are you going to get the money to take the place of the gold that you drive out of circulation? Would you not suffer? Would not the effect of it be the greatest contraction of the currency we have seen in this country? What resort then have you but again to apply to the printing press?

SENATOR TELLER.—When did the Government borrow gold?

SENATOR MCPHERSON.—Under Secretary Manning's administration.

SENATOR TELLER.—I had not intended to do so, to call the attention of the Senate and of the country to that remarkable transaction. I had supposed that was one which the average Democrat did not care to mention.

SENATOR MCPHERSON.—The Senator has found one Democrat who will admit everything that is a fact whether it hurts his side of the question or not.

SENATOR TELLER.—It is pretty well known that in July, 1885, Mr. Jordan, who was then Treasurer of the United States, was present at a congregation of bank presidents in New York who got together ostensibly for the purpose of sustaining the credit of the American Government, which was on the verge of bankruptcy! The new Administration had just come in. The President had appealed to his party associates to demonetize silver. They had told him, in terms polite but emphatic, that they would not do it; that the Democratic party was not in favor of the single standard of gold; and then this remarkable convocation of bankers in New York City got together to prevent the Government of the United States from paying its obligations in what? In silver. Every obligation that the Government had out was by law payable in silver. It was the money of this country and of the contract, and not even the gold barons had any right to complain that they were getting silver, for they had stipulated that they would have silver or gold. It was on the face of the bond. They had put it in the bond themselves and demanded that it should be put there before they would take the bond.

Now, that was the dire calamity that might overtake the Government. So they got together and said, "The Government is in danger." Of what? Disgracing itself by paying according to its contract. The next morning every financial region of the earth contained the statement that the Government of the United States was on the verge of bankruptcy. Had there been any executive officer in that meeting officially he ought to have been impeached. A more shameless attack upon the public credit has never been known in the history of the finances of this country.

Was the Government in danger of bankruptcy? I demonstrated in a speech that I made here, but I will not go over it, that there was an abundance of gold to pay every maturing obligation of the Government. There was not the slightest suspicion of danger of paying a silver dollar, and the Treasurer, and the Secretary, and the Chief Executive knew it. They said that they were not responsible for the transaction. They said they did not get it up; it was these loving bankers who were anxious to give the Government a lift and keep its credit at par. And Mr. Jordan, the Treasurer, said he was only a looker-on and not there officially.

That, I assert here now, was a combination and a conspiracy of the bankers of New York to frighten the American people, to compel them to bring the influence of public opinion upon

the legislative department to compel the suspension of the coinage of silver.

The Senator from New Jersey can not bring that up and say the Government has been on the eve of paying silver. But if it was, it would be all right, because it is according to the contract, and nobody has a right to complain. You may strangle the industries of this country, you may depress and destroy the profits of labor everywhere, and nobody complains; but if you threaten one of these bondholders with taking the money of the contract that he stipulated for, then there is a cry of alarm, and then the Government is to be disgraced.

If they had taken the 72-cent dollar that the Senator is so fond of talking about they would have made money off the Government. They bought the bonds for 60 cents on the dollar, but we are willing to pay them according to the contract in a dollar that is as good as any other dollar that ever went into the hands of man.

Mr. President, I am not afraid of free coinage; the people are not afraid of free coinage. What they are afraid of is contraction. What I am afraid of is an attempt to do the business of the world on one of the money metals. I realize that the day for the use of money metals in the way of coin passing from hand to hand is practically over, but if you have paper money there must be a coin basis. It is useless to talk about it and say we can maintain a large amount of paper without coin. I do not so believe. I believe that the base must be as broad as possible. It is too narrow to put it on gold. The necessities of the country will demand more paper than the gold will carry.

It is said by the advocates of the gold standard that it is practically immaterial what prices the farmer gets for his produce, the merchant for his goods, the laborer for his hire provided that everything falls. That is true; if nobody has any contracts out, if nobody owes anything. Money is not simply to make exchanges. Money is not simply to measure values. It is to discharge indebtedness; it is to complete contracts. It takes from 35 to 40 per cent. more wheat and corn and oats to pay the debts contracted in 1873 than it would take to have paid them then in gold. So it is through all the products of human labor.

I repeat, if we could all start in the same place and on the same plane, having the same amount of goods and owing no debts, there is but little difference how much money you start with; but when you make a contract upon the basis of

the money in existence and the money is suddenly contracted, what is the result? More products are demanded, more corn and more wheat. What is that but a legislative change of the contract?

What right has the Government to do by indirection what it dare not attempt to do by direction, and what the moral sense of mankind would be shocked at the suggestion of doing, to add to the debt of all the people of this great country, to compel the wheat-grower to add fifty more bushels to every hundred, when he pays his debts by the sale of wheat?

Ah, Mr. President, it is not only that. It is not simply that he has to give more hours of labor, more time, more sacrifice. He may be rendered absolutely unable to meet his engagements. The wheat-grower who was farming his farm to the full extent, the cotton planter who was cultivating his land to the full extent, is called upon to add 50 per cent. to his culture. But he can not do it; he does not have the land; or, if he can do it, the fall in the price of cotton and wheat may make it so low that he is actually working without a profit, and then bankruptcy stares him in the face.

Who compose the American people? The farmers, the laborers, 20,000,000 strong, are the American people. We are accustomed to hear persons talk about the "business men" of the country, and I have heard within the last few days more than one person say, "You must be in sympathy in your legislation with the business men of the country." Mr. President, the business men of the country are the men who till the soil, who operate the machines, who work in shops and in mills, and who create. It is not the men who deal in futures. It is not the men who handle money, checks, drafts, and money futures. They have but little to do with the creation of business and with production. The product of the farmers is infinitely greater than the transactions of the banks. I heard a Senator in this body once say that the product of the hens of the country was of greater value than the whole capital of the national banks.

The very existence of this country depends upon the prosperity of labor and the laboring people. They believe and I believe and hundreds of people who have studied this question believe that the whole thing is here in our hands if we have the courage to give the people a sufficiency of money, good money, sound money, silver money, international money, money that has discharged the duty of money for all time, even if it drives gold out of the country. I do not want to see gold go.

I want to see gold stay here, if it can remain, and perform the beneficent functions of money in connection with silver, as it has done in the past. If it can stimulate industries, if it can promote happiness among men, then I want gold; but if you have got to have a gold standard at the expense of the best interests of the country, at the degradation of the best elements of society, then I am willing to see it go, and it can not go too quickly to suit me. But it will not go. It is a bugaboo that is brought here to frighten us from doing our duty as we, and as the people to whom we are responsible, see it.

There is in this body a majority of men who believe that righteousness and justice demand the free coinage of silver. Some of them may be deterred by fear of opposition from other quarters. They may be retarded by the fear that they will not be enabled to enact such a bill into a law. My duty is done when I have exercised my judgment here as my Maker gives me to see it, and not as the Executive or anybody else may see it, and I propose to do my duty from my seat here according to my understanding of what my duty is, and I believe that if every Senator here will do that we shall pass a free-coinage act, an act that will relieve the suffering industries of the prostrate people, will increase opportunities, and bring prosperity and happiness and content not to the farmer alone, but to every class of men deserving the good will and special attention of the legislative mind. [Applause in the galleries.]

Richard Coke [Tex.] spoke against the bill.

This bill, Mr. President, is neither more nor less than a silver warehouse bill. I am opposed to the Government of the United States going into the warehouse business. An expansion of the volume of our circulating medium being imperatively demanded by the business interests of the country, if the coinage of silver is to cease and that metal is to be treated as a marketable commodity, rather than give it preferenec over other commodities by buying it up for storage in Government warehouses and issuing money on it, I would infinitely prefer to see paper money based, as our legal-tender notes are, on the wealth of the whole country and the power of the Government issued for the relief of the country.

Those having especial charge of the silver-mining interests would do well to see to it that a choice between these two methods is not forced upon the people of this country, for in my judgment the latter would be almost universally preferred.

If the committee's bill shall be so amended as to compel the coinage of the monthly purchases of silver into legal-tender coins and to invest the silver certificates provided for with full legal-tender power, I shall be willing to vote for it if the free and unlimited coinage of silver provided for in the amendment of the Senator from Colorado can not be passed, and I propose, so far as I am concerned, to leave no stone unturned in the effort to pass it. If this can not be done and the committee's bill shall not be amended in the particulars named, then I prefer the law of 1878 as it now stands to any proposition now before the Senate, believing that when the next Congress meets the people will have lashed into obedience to their will those who are now and have been for years openly defying it in obstructing the free coinage of silver.

On May 16 John Sherman [O.], of the Committee on Finance, proposed an amendment to the bill, providing that the Secretary of the Treasury redeem from the general cash, and cancel, notes of national banks coming into his possession, covering into the treasury as a miscellaneous receipt all deposits made by the banks for such redemption, with the exception of the 5-per-cent.-of-circulation deposits provided in the act of June 20, 1874.

Preston B. Plumb [Kas.] proposed as an amendment to this amendment that no funds available for the payment of the public debt, including deposits for the redemption of treasury notes, shall be retained in excess of $110,000,000.

Senator Sherman said:

I do not know the object of the Senator from Kansas. I suppose it is simply a kind of general direction to the Secretary to not keep unnecessary balances on hand. That every Secretary will try to do. You can not restrain him or limit him to $110,000,000 or any other sum. If there was a general declaration here that in the sentiment of Congress no larger balance should be kept on hand than is absolutely necessary to meet the incoming liabilities, I should have no objection to that general proposition; but that is the law now, and we ought to apply the excess of the sum over the amount necessary to meet the current expenses of the Government to the payment of the public debt, and every Secretary of the Treasury will, as a matter of course, do so.

A good deal of complaint was made about the Secretaries under the last Administration, that they kept too much money on hand, and they were subject to that complaint. Perhaps the present Secretary keeps too much money on hand, but who can judge? He has the responsibility and he must judge and you must trust him to a certain extent, and certainly you must not cripple him so as to prevent him from paying the debts and obligations of the Government as they come in.

Senator Plumb defended his amendment.

Mr. President, the question as to what relation the Treasury Department shall occupy toward the volume of currency is a very important one in view of the fact that we are making large collections, far in excess of the current needs of the Government, and by reason of the fact that various funds are kept in the treasury in apparent pursuance of law which results in diminishing the volume of currency actually in circulation.

During the period of the war and the period which followed resumption the treasury had a certain, perhaps vital, relation to the finances of the country, a relation which was discharged conscientiously, although I have not always thought advisedly, but which ought to cease. It is offensive to the relations which in my judgment should be maintained between the executive authority of the Government and the people and the law-making power that the Treasury Department should have anything whatever to do with the volume of the currency.

If the treasury should perform, as I think it ought to perform, an involuntary office in regard to this matter of currency supply, if that was the theory which pervaded that department and was the governing principle of the Secretary of the Treasury, whoever he might be, legislation would not be necessary. But as things stand now the Secretary of the Treasury thinks that he is in some way the keystone, the linchpin of the financial interests of this country, that he has got to take into account the barometrical condition of things in New York. I wish he would take into account what is the condition in other places besides New York. New York is the one place that is always within the purview of the Secretary of the Treasury, and which, as I think, limits his horizon.

I want, so far as I am concerned and in the discharge of my responsibility, to take the Treasury Department entirely out of all this scheme of national finances. I want to prescribe what funds the Secretary of the Treasury may keep in the

treasury, and I want to so prescribe it that, whenever a dollar comes in that is not necessary for the current expenses of the Government, he shall pay that dollar out in redemption of the public debt and put it into the channels of commerce.

Any reduction of the currency by the Secretary upon any pretence whatever that does not involve the solvency of the Government itself, whereby in obedience to it he keeps in the treasury money which before that time was in circulation among the people, is an economic crime.

I admit, Mr. President, the strength of inherited ideas; we all yield to them, and the treasury to-day is running upon the inheritance of the past, and wrongly, in my judgment.

Mr. President, the treasury has had so much pride in the great accumulation that it has resented any diminution of it, never advised legislation which would deplete it. And there has always been an actual or assumed fear that people were lying in wait, hoping and intending in some mysterious way to break the treasury by draining out its hoards of gold.

I will never believe, until I believe in the coming of the millennium, that any Secretary of the Treasury, be he Republican or be he Democrat, will do aught except to keep in the treasury every single fraction of a cent which comes in so long as there is possible excuse for it, and I want, so far as I can by my vote and influence, to disassociate the treasury from the current business of the country.

I want to see the treasury perform a purely automatic and involuntary office in currency supply, paying out what comes in in the shape of revenues as fast as received in order that the business of the country shall not suffer by contraction.

I do not want the Secretary of the Treasury actually, or according to current belief, to be the instrument of speculation in Wall street or elsewhere. I do not want circulars and bulletins from brokerage and exchange offices in New York to be indulging in speculations as to what course the Secretary of the Treasury is going to pursue and using such for the purpose of raising or depressing the market; and I do not want men on the streets in New York and elsewhere to be, or have the opportunity to be, peddling what they conceive to be "treasury points," claimed to be obtained from persons near the throne, in regard to what the Secretary is going to do. Money locked up in the treasury is of no more use to the people than if it were in the bottom of the sea. It is not the accident of the situation upon which wise men build. It is the general average, the thoroughly known and established conditions, and if I were in a business depending upon the question of currency supply, with a Secretary who might contract ten millions or more this month and put out ten millions more the next, I should adapt that business to the less volume rather than the greater.

Present conditions are as they have existed under all the Secretaries who have managed the Treasury Department since the war; and it is no reflection upon them to say this, for it is the inevitable result of the deposit of enormous power, coupled with the conditions and theories which have attended treasury management ever since the war debt was created.

It is undoubtedly useful to keep some money in the treasury for the purpose of redeeming treasury notes. Let us fix that sum at an amount which we regard as safe, treating it as so much abstracted from the volume of the currency, add to it an equivalent or a larger amount, as the case may be, in order to meet the current needs of the Government, and thus leave the outside money supply wholly independent of the treasury.

Senator Sherman.—The amendment I offer is an aid to the bill, because it will relieve from the operations of existing law a fund of $60,000,000. The amendment of the Senator from Kansas proposes to change the law in regard to the resumption of specie payment, to change the amount of the fund which has been set apart. It is not wise to do it, and I hope the proposition of the Senator from Kansas or any other proposition that looks to diminishing or weakening in the slightest degree this great fund, which is not only the protection of our United States notes, but is the protection of the whole currency of our country, will not be listened to by the Senate.

It is said, "Very well, none of these United States notes are presented for redemption." Why? It is because the Government of the United States is so strong, resting upon this solid rock of $100,000,000 of gold, that a man would be a fool who would try to break us up. It is the solid basis upon which our credit and our currency rest, and it ought not to be disturbed. We might save a little interest, we might pay off a few more bonds by using this money, but in the end we should lose in public credit. To impair this fund would in itself be an injury to the public credit; and although we have perfect confidence that we are able to pay all this money, yet that great fund in the treasury is the reliance upon which the people of the world rest for the prompt redemption of all obligations, and it ought to rest there. We gain by it.

It is true we do not get any interest on the $100,000,000

of gold in the treasury, but we save interest on the $346,000,000 of United States notes, and it is a bulwark to our national-bank circulation, because, while they redeem their circulation in United States notes, that redemption is based upon gold. So with our gold certificates and our silver certificates: the fact that the United States maintain that typical wise measure of holding dollar for dollar in actual wealth, bullion, for which the world is striving, for every dollar of these certificates outstanding, gives confidence in them. That is the rock upon which these certificates stand. Suppose somebody should say at some future time, "We have 290,000,000 silver dollars lying idle in the treasury and we have $292,000,000 of certificates outstanding; these certificates are not presented for silver; we will pay out the silver coin, in violation of the pledge made to the men to whom these certificates were issued." How long would these certificates maintain their power? What a shock to the public credit that would be, that a great nation, boasting to be the richest and most powerful nation of the world, should make a promise to a public creditor that it would hold that bullion in its vaults as a security for the redemption of certificates based on it. Suppose you violate that promise, it will not do to say to the world, "The United States will take care to pay the certificates when they come in." The very fact that we violated our obligation, our word of honor, our pledge, would destroy our credit.

Mr. President, I do not want to go into the argument about this bill at the present time. I do not like some of its features. I may be driven to support it, but it seems to me that some of the friends of the bill have abandoned it already or taken a different view of it. The gentleman who introduced the bill seems to have abandoned the principle of the bill. There are some good features in it which I should like very well to see adopted if we can agree in the Senate of the United States upon some measure which will furnish the people of the United States with more money, for I think they want it, and which will also tend to advance silver bullion nearer and nearer to the standard of gold.

I am willing to support any proposition of that kind and to vote for it, but I do not believe in the idea of the free coinage of silver, drawing from the mass of three thousand millions of silver in the world. I do not want Congress to pledge itself to buy all of the silver that is offered that may be melted from the pots of India or China or all over the world. When that proposition is made I feel startled and

surprised. If that proposition shall be adopted, then I do not want to vote for any of these bills, but will let those who wish to take the risk of such a speculation take the risk, and not I.

But I favor anything that can be done by this bill or any other bill to accomplish the objects which have been proposed, to give us more good paper money based upon actual deposits of gold or silver bullion, that will raise the value of silver. I would buy every ounce of silver produced in this country and keep it in our treasury vaults and issue our certificates upon it, based upon its market value, to any credit that may be desired, and I would make those certificates a legal tender so that they would travel all over the world and be as good as gold and upon a parity with gold. But these other measures which are now debated at such voluminous length and with such fulsome eulogies, that invite us into a competition with all the world in the free coinage of silver—I do not want "any of it in mine," to use a slang phrase.

As long as our money can be maintained up to the highest standards of the most civilized nations of the world, I will go hand in hand with these gentlemen and do anything I can to increase the volume of our currency based upon bullion or coin or to increase the value of every product, because I do regard silver like gold as one of the chosen metals by the Almighty for currency. But gold and silver have varied from the very beginning of time; one is sometimes up and sometimes down, varying now from day to day in the markets of the world. If we can adopt a measure that will enable us to use both these metals and keep them at a parity with each other, I shall vote for it. If not, I shall content myself by simply voting in the negative.

John J. Ingalls [Kas.] supported his colleague's amendment.

It has never been denied, so far as I know, that for a long period of years that fund which was provided by the sale of bonds as a reserve for the redemption of the United States legal-tender notes never was set apart for that purpose.

What would be said, Mr. President, speaking about the morality of it? A trustee who should mingle and confound the assets and the estate of his ward and put them into his own general account and draw upon them for his individual and personal expenses, although he might have enough to meet any claim that might be made upon him, would, upon the

revision of a court of equity, be held to have been guilty of laches and of delinquency, and would be removed promptly from office.

GEORGE F. EDMUNDS.—But the United States was not a trustee; it was a simple debtor.

SENATOR INGALLS.—I contend that the United States, so far as that fund was concerned, was a trustee. Else why were $95,500,000 sold in terms? There were gold and silver in the treasury at that time.

Why do I revert to this fact, Mr. President? I do it not for the purpose of entering into a contention with the Senator from Vermont or the Senator from Ohio upon a question of morality. Everybody knows that the credit of the Government was ample, that its faith was pledged for the redemption of these notes. I do it for the purpose of repelling absolutely the idea that the value of United States notes ever depended in the slightest degree upon the fact that there was $100,000,000 of gold in the treasury. It is an idle assumption.

SENATOR EDMUNDS.—If my friend will pardon me, the creditor, the holder of the notes, did not care how the books of the treasury were kept so long as he knew the gold was there and he could get it if he called for it. That is what made the credit of the Government.

SENATOR INGALLS.—The Senator from Vermont is wrong. There never was any declaration on the part of Congress that $100,000,000 should be set apart as a reserve fund for the redemption of United States notes. On the contrary, the declaration was that the Secretary of the Treasury should always maintain a sufficient fund for that purpose.

By the act of January 14, 1875, the whole matter rested in the discretion of the Secretary of the Treasury to provide such a fund as in his judgment would be sufficient to maintain specie resumption, and it was in accordance with that that the sum of $95,500,000 in fours and four-and-a-halfs was sold.

Does anybody suppose if those bonds had been issued and put in the treasury and filed there and maintained specifically as a fund for the redemption of those notes, with the coupons cut off every half year as they matured, there would have been any difference in the market value of the United States notes? Does anybody suppose they would have fluctuated? Does anybody suppose they would have been reduced in market value anywhere on the face of this earth? No, sir. Those bonds might just as well have been left in the treasury of the United States from that day to this, instead of that great

volume of idle and menacing gold, and the coupons cut off quarterly or semi-annually and burned and calcined to ashes, and the credit of the nation would have been exactly as good. The value of the United States notes would have been exactly as high. We should have saved from $40,000,000 to $45,000,000 that have been paid out in interest for the purpose of allowing that idle and enormous amount of gold to remain in the treasury.

I heard my colleague or some other Senator state the entire amount of indebtedness that had been presented for redemption during the eleven years. It was somewhere about $28,000,000, or $12,000,000, at least, less in amount than the interest we have paid upon the bonds that were issued for the purpose of providing this fund. That may be supplemented by another equally interesting fact, that during that period of time, the eleven years, there has been presented at the treasury in gold for exchange into greenbacks more than twice the amount that has been presented in greenbacks for redemption in gold.

Therefore, Mr. President, the claim that this $100,000,000 in the treasury is necessary to maintain the credit of this nation, that it ever was pledged to be deposited there as a matter of faith or of public honor, is a fiction. It is a dream. It is a barren ideality, as has been said about another transaction. There is no foundation for it, and there is no man in his senses, who is not afflicted with the mania for gold, who does not know that if that were unlocked and released to-day and set to work, as all money in the country ought to be set to work, the value of our United States notes would not fluctuate the minutest subdivision of a hair in the markets of the world. There is no weight of the apothecary's scale that would turn upon a knife-edge which would measure the value of depreciation that would occur to the notes of the United States if that $100,000,000 of gold were to be unlocked and turned loose and set to work, as it ought to be, in the financial affairs of this country.

Mr. President, it seems evident to me that we are conducting this debate upon an entirely wrong basis and assumption. I suppose it is not necessary for me to affirm that the credit of this nation is as dear to me as to anybody; that I would in no sense whatever impair it; that I would in no minutest manner in any way whatever impair a national obligation. But the claim here that when the Secretary of the Treasury has the right to sell a thousand million dollars of the bonds of the United States, when by the terms of the act itself requiring

the resumption of specie payments he has a right to use all the balances in the treasury and supplement any deficit that may occur by the sale of bonds, that the presence of that paltry $100,000,000 in the treasury is the basis of national security and honor is an absurdity. It is a superstition that is worthy only of the mediæval ages.

Senator Sherman said that Senator Ingalls' theory was that of fiat money.

Senator Ingalls.—"Fiat" money! Mr. President, there is no fiat money in this country that rests upon the credit of this Government when the capacity for redemption to the extent of $100,000,000 in the coupon bonds of the nation is lodged with the Secretary of the Treasury. No, sir!

On May 21 William M. Stewart [Nev.] spoke at length in favor of Senator Teller's amendment.

The people will not be deceived by the offer of the gold-standard contractionists to buy more silver. The reason they give for making such an offer is unsatisfactory. They say that they desire to enhance the value of silver, but that they have no intention of using it as standard money. The Senator from Oregon [Joseph N. Dolph] reëchoes the arguments of the Senator from Ohio and of the Secretary of the Treasury that everything shall be measured by the gold standard, that silver itself and the certificates which represent it shall be anchored to gold prices. Why buy silver if it is not to be money, but must depend for its value upon redemption in gold? Why not buy paper and advance its price? There is just as much reason for doing so as there is for buying silver if silver is not to be treated as standard money, and, although the material may have little market value, the paper currency redeemable in gold may circulate as money.

The gold monometallists indorse the Windom bill because it does repeal the Bland act and because it does not contemplate the use of silver as money. They are even willing to degrade the Government and make the United States a purchasing agent for the benefit of speculators in silver bullion. In other words, they would make the Government of the United States a broker for the Rothschilds, the Barings, and other purchasers of silver on foreign account without any commission for such services.

Why do not the gold monometallists meet the issue squarely and demand the repeal of the Bland act? Why are they willing that the Government should go into the brokerage business if they do not design to deceive the people by a flimsy pretence that they are in favor of silver when they are in fact seeking its demonetization? President Cleveland was more courageous and direct in his opposition to silver. He met the issue squarely and took the consequences. He was defeated, but he can not be charged with an attempt to deceive the people. The failure of President Cleveland to secure the repeal of the Bland act warned the gold monometallists to make no more open fights against the wishes of the people. It proved that open warfare on silver can not be successful in this country. Have they come to the conclusion that if the Bland act is repealed at all it must be done by some secret device?

Have they adopted the tactics of the cuttle-fish? They have certainly done all in their power to darken the waters and escape observation. This sudden conversion is suspicious. Why should the monometallists pretend to be friends of silver? "Beware of the Greeks bearing gifts!"

The Democratic party in its national platform in 1888 was silent on the silver question. It was compelled to be silent on account of its candidate [Grover Cleveland], who dominated the party and whose voice is still potent in its counsels. It is unfortunate that he is the only man named as yet as the Democratic candidate for 1892.

The Republican party met in convention at Chicago a few days after the adjournment of the Democratic convention. It recognized the demands of the people and declared that it was in favor of the use of both gold and silver as money. It is now pledged as irrevocably as was the Democratic party by its platforms of 1880 and 1884 to remonetize silver.

The question now presented to Republican Senators is, shall that pledge be redeemed or shall it be understood that both parties are so under the influence of the money-lenders that no pledge they make for currency reformation can or will be redeemed? If this be the fact, the sooner it is known the better. If both parties are so involved with the usurers that the people can get no relief through either organization, let that fact be known.

On May 22 John W. Daniel [Va.] spoke in favor of Senator Teller's amendment. At the conclusion of his speech, which was a long one reviewing the entire free

silver position, he upheld the view that the United States was powerful enough single-handed to restore bimetallism to this country and probably to the world.

Mr. President, just as soon as America stands up upon her own feet and lets Great Britain know that she will not bow down to her idol of gold, you will see our commercial policy bounding into the ascendant, our prices rise, our poor laboring men and farmers rescue themselves from mortgage and debt, and this nation enter upon the high career of independence which Providence designed in its making. [Applause in the galleries.]

On June 2 Justin S. Morrill [Vt.] replied to the argument that the United States alone could successfully establish the free coinage of silver.

I do not wish to have the United States divorced from the commercial world. I have hoped that we might soon have the primacy in the exchanges of the world. With our larger product of both gold and silver it would be easy by wise and prudent measures to utilize a prodigious amount of silver and yet maintain the bimetallic standard. That is not the policy of those who have led off in this debate, but the transparent design is, and only very thinly attempted to be concealed, to go by a single bound to a silver standard. Of course they are not so witless as to suppose by our action here that the value alone of the billions of silver in the whole world could be increased to the par of gold. A silver trust on the part of the Government while controlling the whole American product would cause some rise in the value of silver, and England and Germany would like to have us do it. Like the monkey in the fable, they prefer to use the cat's paw to pull the chestnuts out of the fire.

But the task of raising the price of the whole world's product is too great, and we should find ourselves in the condition of the Virginian, who, after being told by his lawyer that he had no legal remedy for his case, and then, when asked if he could not lick his antagonist, answered: "I think I could, but it would strain me." The whole task of raising the price of silver against the world would strain us.

On June 5 Senator Sherman opposed the free coinage of silver by the United States acting alone.

The tendency of public opinion in Europe is to abandon the double standard and rest all obligations upon gold alone.

The United States and France, both republics, are now upholding the double standard, not upon the basis of free coinage, but by refusing to coin silver except in limited amounts, and each maintaining the parity in purchasing power of its coins by receiving them and paying them out as money, or by holding bullion and coin of both metals as security for the redemption in coin of circulating notes. France and the United States have coöperated heartily with each other in two international conferences to establish the free coinage of silver and gold by the commercial nations of the world upon a common ratio, both admitting that neither or both nations combined can with safety enter upon such an experiment. Shall we try the experiment alone? As sure as fate, as certain as the waters of the ocean will find their level, silver will be the only standard of value in the United States. We will detach ourselves from the standards and monetary policy of the great civilized and Christian nations of the world, and take our place with China, Japan, India, and South America. The pound sterling will be worth $6 instead of $4.846; the franc, the thaler, and the florin, 25 per cent. more than now. Our dollar will be as in colonial times, worth less than 3 shillings, or about 4 francs.

But it is said that those of us who demand the gold standard or paper money always equal to gold are the representatives of capital, money-changers, bondholders, Shylocks, who want to grind and oppress the people. This kind of argument I hoped would never find its way into the Senate Chamber. It is the cry of the demagogue, without the slightest foundation. All these classes can take care of themselves. They are the men who make their profits out of the depreciation of money. They can mark up the price of their property to meet changing standards. They can protect themselves by gold contracts. In proportion to their wealth they have less money on hand than any other class. They have already protected themselves to a great extent by converting the great body of the securities in which they deal into gold bonds, and they hold the gold of the country, which you can not change in value. They are not, as a rule, the creditors of the country.

The great creditors are savings-banks, insurance companies, widows and orphans, and provident farmers and business men on a small scale. The great operators are the great borrowers and owe more than is due them. Their credit is their capital and they need not have even money enough to pay their rent.

But how will this change affect the great mass of our fellow-citizens who depend upon their daily labor? A dollar to them means so much food, clothing, and rent. If you cheapen the dollar it will buy less of these. You may say they will get more dollars for their labor, but all experience shows that labor and land are the last to feel the change in monetary standards, and the same resistance will be made to an advance of wages on the silver standard as on the gold standard, and when the advance is won it will be found that the purchasing power of the new dollar is less than the old. No principle of political economy is better established than that the producing classes are the first to suffer and the last to gain by monetary changes.

I might apply this argument to the farmer, the merchant, the professional man, and to all classes except the speculator or the debtor who wishes to lessen the burden of his obligations, but it is not necessary.

It is sometimes said that all this is a false alarm, that our demand for silver will absorb all that will be offered and bring it to par with gold at the old ratio. I have no faith in such a miracle. If they really thought so, many would lose their interest in the question. What they want is a cheaper dollar that would pay debts easier. Others do not want either silver or gold, but want numbers, numerals, the fruit of the printing press, to be fixed every year by Congress as we do an appropriation bill.

Now, sir, I am willing to do all I can with safety, even to taking great risks, to increase the value of silver to gold at the old ratio, and to supply paper substitutes for both for circulation, but there is one immutable, unchangeable, ever-existing condition, that the paper substitute must always have the same purchasing power as gold and silver coin maintained at their legal ratio with each other. I feel a conviction, as strong as the human mind can have, that the free coinage of silver now by the United States will be a grave mistake and a misfortune to all classes and conditions of our fellow-citizens. I also have a hope and belief, but this is far from a certainty, that the measure which is proposed for the purchase of silver bullion to a limited amount and the issue of treasury notes for it will bring silver and gold to the old ratio and will lead to an agreement with other commercial nations to maintain the free coinage of both metals.

And now, sir, I want to state in conclusion, without any purpose to bind myself to detail, that I will vote for any measure that will, in my judgment, secure a genuine bimetallic standard,

one that will not demonetize gold or cause it to be hoarded or exported, but will establish both silver and gold as common standards and maintain them at a fixed ratio, not only in the United States, but among all the nations of the world. The principles adopted by the acts of 1853 and 1875 have been sustained by experience and should be adhered to. In pursuance of them I would receive into the treasury of the United States all the gold and silver produced in our country at their market value, not at a speculative or forced value, but at their value in the markets of the world. And for the convenience of our people I would represent them by treasury notes to an amount not exceeding their cost. I would confer upon these notes all the use, qualities, and attributes that we can confer within our constitutional power, and support and maintain them as money by coining the silver and gold as needed upon the present legal ratio, and by a pledge of all the revenues of the Government and all the wealth and credit of the United States. And I would proclaim to all our readiness, by international negotiations or treaties, to bring about an agreement among nations for common units of value and of weights and measures for all the productions of the world.

This hope of philosophers and statesmen is now nearer realization than ever before. If we could contribute to this result it would tend to promote commerce and intercourse, trade and travel, peace and harmony among nations. It would be in line with the civilization of our age. It is by such measures statesmen may keep pace with the marvelous inventions, improvements, and discoveries which have quadrupled the capacity of man for production, made lightning subservient to his will, revealed to him new agencies of power hidden in the earth, and opened up to his enterprise all the dark places of the world. The people of the United States boast that they have done their full share in all this development, that they have grown in population, wealth, and strength, that they are the richest of nations, with untarnished credit, a model and example of self-government without kings or princes or lords. Surely this is no time for a radical change of public policy which seems to have no motive except to reduce the burden of obligations freely taken, a change likely to impair our public credit and produce disorder and confusion in all monetary transactions. Others may see reasons for this change, but I prefer to stand by the standards of value that come to us with the approval and sanction of every party that has administered the Government since its beginning.

Senator Teller replied to Senator Sherman.

Mr. President, I congratulate myself and I congratulate the country that the mask is off this so-called silver party that has paraded the committee's bill before the Senate. If there was any question as to the attitude of the distinguished gentleman who had taken his seat before I got up, no person who has listened to him can doubt it now. He is for the single standard, the gold standard to be the only standard, he is for the abandonment of silver as a money metal, to be used simply as subsidiary coin, or else his words mean nothing. I welcome the issue. The people of the United States will be glad to know that the so-called silver party who have heretofore been avowed goldites have resumed their natural, normal position and place.

Senator Stewart at great length discussed the "Crime of '73" and Senator Sherman's part in it. In conclusion he said:

It is quite probable that the Senator did not realize the consequences of the great change in the standard money of the world which the law he framed would produce, and that he was mistaken in the consequences which would follow the demonetization of silver. If the law was a mistake he should in all fairness have been the first one to rectify that mistake and aid in the restoration of the money of the Constitution. Has he done so? On the contrary, he has during all the years that have passed since 1873 persisted in his advocacy of the single gold standard, and he is not now willing to restore silver to the place it occupied before it was demonetized in the manner I have described. If the Senator from Ohio to-day would advocate the unlimited coinage of silver, a law for that purpose would speedily be placed upon the statute book. He is the author of the demonetization of silver and the great leader in the advocacy of the gold standard. If he should change his views the battle would be won and the money of the Constitution restored.

Frank Hiscock [N. Y.] declared free coinage of silver opposed in effect to the protective tariff system.

I call attention to the effect upon our customs taxes or duties. They will be payable in silver. So long as that metal in the ratio of our coinage is at a parity with gold we maintain the

present measure of protection; when measured by the gold standard, if silver has depreciated, to just that extent you remove protection. This may not disturb the other side of the Chamber, but it should and will solidify all in the North and South, East and West, who prefer protection of our industries rather than the unlimited coinage of silver by our Government against the measure.

On June 6 Senator Plumb replied to Senator Hiscock.

Mr. President, the sacred name of protection was invoked yesterday by the Senator from New York against the free coinage of silver. I was not surprised, because I had noticed with more concern than I care to express that for many weeks past the leading protection newspapers of the country have been denouncing the proposed free coinage of silver, and, in fact, all plans for adding to the volume of silver money as conspiracies, and impugning the motives of their advocates. According to them, only dishonest persons favor silver, and all the country needs in order to be prosperous is to increase the duties on articles of general consumption.

We have had rehashed the old talk about the 75-cent dollar, about repudiation, about the awful impropriety of increasing the value of silver because it would give profit to miners and mine owners. What does protection do if it does not make profit for the manufacturers? And what about the demonetization of silver in 1873, by which the miners and owners of gold have been enriched, by which, according to the best authority, gold has been increased more than 30 per cent. in value in the last fifteen years? Anything which helps gold and adds to the fortunes of those interested in it is moral and God-fearing; that which would help silver is dishonest.

Mr. President, I am a protectionist, and up to within a few days I have believed that protection meant the giving of value to any product the result of American labor on American soil. But now, in the sacred name of this—I will not call it a fetich, although I do not know what I may call it before I get through—but in the sacred name of this system we are asked to depreciate silver, notwithstanding it is an American product of much larger value than many which will figure in the new tariff bill [the McKinley bill] with an increase of 200 or 300 per cent. of duties beyond those now provided by law. When my friend from New York [Mr. Hiscock] got into the pathos and patriotism of his plea not to do anything which would deprive the

country of gold wherewith to make settlement of our foreign balance, I wanted to ask him what he proposed to do about this same tariff bill, which, if enacted in its present shape, will cut off the greater part of our foreign commerce for the present, at least, and thus obviate the necessity or even the opportunity of our paying out gold in payment for imported goods.

On June 12 William M. Evarts [N. Y.] opposed the free coinage amendment of Senator Teller.

The Senators from Nevada and my friend from Colorado [Mr. Teller], with many about them in concurrence of feeling and opinion, roundly assert that no harm can come or will come, and that this measure will not only be a safe movement set in action here, but will serve in the best way the ultimatum which they wish to reach and which they appreciate quite as much as I do.

Well, Mr. President, when the apostles Peter and John stood at the gate of the temple called Beautiful and looked with pitying eyes upon a cripple who lay there hopeless, they asked him to fasten his eye upon them, and then in the faith of their Master they bade him arise and walk, and he arose and walked, and he arose and walked and leaped, and went into the temple walking and leaping for joy. If I could attribute to these, my friends on my right here, that apostolic grace and endowment that belonged to those apostles, speaking in the name of an authority that could accomplish it, I, too, would like to see the limping silver leg on the march of money metal in the world thus raised and exhibited in the temple walking and jumping for joy.

But, Mr. President, this will have been the first miracle that these, my friends, will have performed. After it has proved a miracle we can estimate anything as possible within their compass. But if we ask a cripple to throw away his crutch and break his broken limb again, what shall happen to the hapless victim of faith without a miracle to carry it out? Here is the rub. Here is the sober and grave judgment that is to be made by the depositories of the wisdom of the people and of their desire, and of our wishes to accomplish that desire.

Let us look, then, at what would happen. We shall go on with the mintage at 16 to 1. No proposition has been made to reduce it. If we pile up additionally and *ad libitum*, not controlled by seigniorage and purchase, we shall be raising a wall of 16 ratio dollars. Senators say it will be $200,000,000, and

$200,000,000 can do no harm to our domestic money. Very well, let us hope so; let us think so. What is to happen? We can do this at 16, possibly, without inundation from abroad, because we have the protection of 3 per cent.; but just in proportion as we raise this mass, growing and growing at 16, we make it impossible for them in Europe to open their mints at 15½, for if that were done every dollar on this side to be minted, with all the patriotism that is to be impressed upon it by our oratory, would go across the water to be minted at 15½. Three per cent. is a good transaction when the risks are only in the transformation of the money. Therefore, it is to me utterly impossible, as a practical measure, that we should open the mints here if we wish to work up to opening the mints abroad.

I find insuperable difficulty in opening the mints of this country to silver. I will ask the favor that I may save my strength and the Senate's patience by inserting in my remarks an extract of some two pages from the presentation in behalf of this country which I made to the silver conference, as bearing upon the question of the ability of law to restore a parity when it is once disordered.

"Although, then, the precious metals, in their qualities as metals, may remain commodities whenever the act of the law, finding in their properties the necessary aptitudes, decrees their consecration to the public service as money, it decrees that they shall never after, in that quality of money, be commodities. In the very conception of money, it is distinguished from all exchangeable, barterable commodities in this, that the law has set it apart, by the imprint of coinage, to be the servant of the state and of the world in its use as money, and to abstain from all commixture, as a commodity, with the other commodities of the world.

"Wherever and howsoever this ideal of money fails to be real, it is because the law is either inefficient within its jurisdiction, which is its disgrace, or because its jurisdiction is limited territorially and its vigor fails beyond the boundaries. In the latter case I agree silver or gold, in the shape of the coinage of one country or another, may become merchandise to be bought and sold in other countries as a mere money metal. Manifestly these exposures to demonetization beyond the boundaries, because the legal force which has made metal money stops with the boundaries, is the main cause of the mischiefs in the monetary system of the world, which need redress. The cause understood, the cure is obvious. It is to carry, by some form of consensus among governments, the legal relations between the

two metals in their employment as money beyond the boundaries of separate systems of coinage. The legal relation between the metals once fixed, no important evasion of it would be possible, and no serious disturbance of it could arise from diversities of coinage. It is for this result and by this means that we are striving.

"Whenever any portion of the money which should be used as the solvent for the exchange of commodities turns into a commodity, it thereby not only diminishes the force and volume of money, but adds to the weight and volume of the exchangeable commodities. It is as little a condition of health, and may lead to as great calamities, as if the fevered blood should burn the tissues of the vital channels through which it circulates, or as if the coats of the stomach should turn to digesting themselves.

"To me it seems certain that the nations must contemplate either the employment of the two metals as intrinsic money of the world upon a fixed, efficient concord and coöperation between them, or their surrender to perpetual struggle, aggravating itself at every triumph of one over the other, and finally ending in that calamity which overtakes sooner or later those who care not to use the bounties of nature according to the gift and the responsibility of reason. I can see nothing valuable in the treatment of this subject which would leave the broken leash that so long held together these metals to be repaired by chance, or allow the contest to be kept up at the expense of that unity, concord, common advantage, and general progress among nations, which are the ideal and the hope, the pride and the enjoyment of the age in which we live."

By general consent the Senate laid aside its bill for one to the same end which had been passed by the House.

This bill had been originally prepared by William Windom, Secretary of the Treasury. It was introduced in the House on January 20, 1890, by Edwin H. Conger [Ia.], and referred to the Committee on Coinage. A substitute for the bill was reported by Mr. Conger on March 26. It came up for discussion on June 5.

It directed the Secretary of the Treasury to purchase $4,500,000 of silver bullion every month at the market price, not exceeding 371.25 grains per dollar, and to pay for same treasury notes of a new issue. These notes were to be redeemable in coin on demand, or, at the discretion of the Secretary, in silver bullion at the market

price and be legal tender for all debts public and private, and when received for customs, etc., to be reissued. They could be held by national banks as their reserve. The silver purchase clause of the act of February 28, 1878, was repealed. When the price reached $1 for 371.25 grains, silver bullion was to be admitted to unlimited coinage. National bank balances in the treasury were to be covered into it as a miscellaneous receipt, and all national banknotes subject to redemption coming into the treasury were to be redeemed from the general cash and canceled. The act, however, did not relate to the 5-per-cent.-of-circulation national bank deposits in the treasury required by the act of June 20, 1874.

After considerable debate the substitute bill was amended by suspending silver purchases in the event of free coinage becoming operative, and was passed on June 7 by a vote of 135 to 119, the nays being almost all cast by the Democrats. Before the passage of the bill Richard P. Bland [Mo.] moved to recommit it, with instructions to the committee to bring in a free silver bill. This was defeated by a vote of 116 yeas to 140 nays.

The Senate referred the bill to the Committee on Finance, the chairman of which, Senator Sherman, on June 11, reported it with amendments. It was debated at considerable length.

On June 16 Senator Daniel discussed the Senate amendments.

The Senate Finance Committee strikes out the provision in section 2 that treasury notes shall be a legal tender. I had thought at first that it was necessary to have these notes as legal tender, but I do not see that it is at all indispensable that they should be, in the light of the fact that the dollar or its equivalent is in the treasury, can be obtained on demand, and that it is a legal tender; still it is best to make them legal tender.

The Finance Committee also recommends the striking out of the bullion-redemption feature. That seems to me entirely wise, and, indeed, indispensable to the building up of the value of silver and to the establishment of a sound currency. It has been very well shown in one of the speeches made upon this subject that if you allow the bullion to be put in the treasury, the

treasury notes issued for it, and then the treasury notes to be carried back and bullion to be issued for them, the same quantity of bullion may flow to and fro for an indefinite time and extent, and that there will be no absolute assurance of the extension and expansion of your currency.

It also strikes out the free coinage of silver when silver shall come to par. It seems to me that this is a very unwise and unsuitable provision. It has always been contended that silver ought to be freely coined when it shall come to par, and it is curious that when we are taking measures to bring it to par a clause should be stricken out of the bill which authorizes free coinage when that "consummation, most devoutly to be wished," has been attained.

This bill also provides that at the end of five years its operations shall cease. I cannot see any need at the present time for a provision that we shall at any particular future day reverse a policy which we are now inaugurating. It may be that at the end of five years such a thing would be wise, and it may be that it would not be wise, and how can we undertake at the present time to forecast so long a track of years, especially as the currents of our financial history have taken an erratic course unexpected by our finance ministers? Why should we undertake to anticipate so long a track of time and announce a policy which might then be unwise and fatal?

On June 17 Edward O. Wolcott [Col.] opposed the bill.

The recommendations of the Secretary, largely followed in the House bill before the Senate, strike viciously at the interests of silver. The act of 1878 is infinitely preferable to the bill before us. Under that act we can at least have two millions a month of legal tender; and the whole purpose of the House bill seems to be to degrade and debase silver, and to make it a commodity, ranking it with the baser metals, and to forever prevent its again taking its place as a standard of value. Some amendments appear to be submitted by the Finance Committee, but while they eliminate one of the objectionable features, the bullion-redemption clause, other obnoxious clauses are retained and a curious amendment is added, concerning which I hope some explanation will be made. Why is the law to cease and terminate at the end of ten years? Instead of encouraging other nations to adjust their monetary system in harmony with ours, we give them notice that this increased silver coinage is a temporary device, expiring by its own limitation, and much of any good effect of the law is immediately destroyed.

Such are some of the difficulties under which the friends of silver have labored; but, though we have much to contend with, we are by no means hopeless. A bill for the free coinage of silver will some day become a law. Administrative influence is strong and far-reaching; the inducements it can offer are great, very great. Its friends, when it has any, are supposed to bask in the sunshine of executive patronage; those who, although of the same political faith, cannot agree with it must sit in outer darkness. Cabinet officers with patronage, soliciting support to a Government measure, are almost omnipotent, but not quite. We do not despair. The large majority of Senators on the other side were uninfluenced by the utterances of the last Chief Executive; a number of the Senators on this side of the Chamber feel able to form their own opinions. A bill for free coinage will become a law because the country is in favor of it, and in the end the wishes of the majority govern, notwithstanding the personal desires and efforts of the Executive. The measure is of vast importance; of far greater importance than a new election law, an anti-gerrymandering law, or a tariff law. So great are the interests involved that, in view of them, party lines are obliterated and forgotten, and the South and the West meet on common ground, animated by a common and patriotic purpose. [Applause in the galleries and on the floor of the Senate.]

The committee amendment to strike out the legal-tender quality of the new treasury notes was rejected in the Committee of the Whole by a vote of 14 yeas to 50 nays. The amendment to give the Secretary of the Treasury discretion to exchange bullion for these notes was rejected by a vote of 16 yeas to 46 nays. The amendment limiting the life of the bill was rejected by 4 yeas to 64 nays.

Senator Plumb then offered an amendment declaring the standard silver dollar to contain 412.5 grains and the gold dollar 25.8 grains, and making both full legal tender and admitting gold and silver to free coinage. This was passed, amid applause in the galleries, by a vote of 43 to 24.

Senator Teller then offered an amendment making all gold and silver certificates full legal tender. This was adopted by a vote of 34 to 22. The Senate then

adopted the amendments made in the Committee of the Whole by a vote of 41 to 26, and the bill was passed by a vote of 42 to 25.

The House refused to concur in the Senate amendments, and a conference was appointed, which reported on July 7. The majority of the committee, consisting of Senators Sherman and John P. Jones, and Representatives Conger and Joseph H. Walker [Mass.] reported a substitute measure directing the purchase of silver bullion to the aggregate amount of 4,500,000 ounces, or so much thereof as might be offered in each month, on the terms of the original Senate bill.

The treasury notes issued for the purchase were to be full legal tender, lawful for national bank reserves, and redeemable at the treasury in gold or silver coin at the discretion of the Secretary of the Treasury, "it being the established policy of the United States to maintain the two metals on a parity with each other upon the present legal ratio, or such ratio as may be provided by law."

Two million ounces of silver bullion were to be coined each month until July 1, 1891, and as much thereafter as was necessary to provide for the redemption of the said treasury notes.

The silver purchase clause of the act of February 28, 1878, was repealed.

The clause of the original Senate bill, providing for the redemption of national banknotes, was retained.

On July 8 the new bill came up in the Senate for discussion.

George G. Vest, of the conference committee, made a minority report.

I want to state, sir, very briefly the reasons why I shall not vote for the bill reported by the committee of conference.

A large majority of the Senate declared in favor of the free coinage of silver. We have now a conference report which absolutely gives away all idea of free coinage, and in my judgment continues, and is intended to continue, the system under which silver has been persistently and consistently degraded since 1873. There will be no contradiction of the assertion from any

intelligent source that the Treasury Department has been governed by the principle and upon the idea that, until silver came to a parity with gold, silver should not be paid out upon the bonded indebtedness of the United States. So often in the debate has evidence been given of the hostility of the Treasury Department under both Democratic and Republican administrations to the paying out of silver, as of gold, to the public creditors, that it would be simply a senseless repetition to go through that evidence again.

Mr. President, I, as much as any Senator here, am anxious to see an absolute parity between the two metals as money metals. I should like to see the time in this country when 16 ounces of silver will purchase an ounce of gold, and an ounce of gold continue as at present to purchase 16 ounces of silver. But, I repeat, the idea which has governed the gold party and the treasury of the United States through all the past years since this struggle commenced has been that until silver came to a parity with gold it should not be paid out to the public creditors.

I assert here now, as I asserted in the debate out of which has come this conference report, that, so long as the Government of the United States by legislation and the action of its public officials makes a discrimination between the two money metals, so long will silver continue to trail behind gold and gold will govern the price and value of silver.

Now, I call attention to the concluding part of section 2 of this conference bill:

It being the established policy of the United States to maintain the two metals on a parity with each other upon the present legal ratio, or such ratio as may be provided by law.

Why was that declaration put in this report? Why was that stump speech injected into the stomach of this bill? It was done, as we all know, for the purpose of saying to the Treasury Department, "Until silver comes to a parity with gold you shall pay out gold, and the public business of the country shall be conducted upon a gold basis." I, for one, will never vote to maintain and continue that idea and that practice in the monetary affairs of the country.

I was under the impression, sir, that the whole struggle was upon the idea that free coinage, with fair play to gold and silver, without discrimination against one and in favor of the other, should prevail, and that the Senate so voted; and here we have a report which absolutely does away with that idea

and puts us back to the old régime under which silver has continually gone down and has been supplanted by gold exclusively.

Again, sir, I never was a silver man in order to furnish a market for the silver miners of the West. I am against that bounty and that subsidy to silver mines as I would be against one to ships, or wheat, or corn, or any other commodity in this country at the expense of the interests of the rest of the people. It may be that this bill will give a market to silver and to the men who mine it, but the principle for which we fought, that the two metals should be alike, that they should have the same free and open play in order to determine their value, has been given away in this report absolutely and completely, in my judgment.

But there is another objection to this bill, and if there were no other I would not vote for it. The first section of the bill has language in it never found before in any similar measure in regard to silver.

The Secretary of the Treasury is directed to purchase 4,500,000 ounces at the market price when offered. No such language has ever been found in any silver bill before. The Bland bill, which was a tentative measure, which did not satisfy the demands of the country or the friends of silver, but was the best that could be obtained at the time, was mandatory, and directed the Secretary of the Treasury to purchase silver, and he was obliged to do it, in quantities not less than $2,000,000 worth a month. But here is a direction to him to purchase at the market price "when offered." Who makes that market price? Who is to be the judge of it? It is left to the nebulous and uncertain discretion of the Secretary of the Treasury, and we know what that means. We know from the past, from the influences that have controlled the Treasury Department, what will be done. It is useless to tell us this bill will be carried out in any other way than in which past legislation in regard to the currency has been carried out, in the interest of gold and against silver.

Sir, for these reasons I shall not vote for this conference report.

SENATOR SHERMAN.—The House of Representatives after full consideration sent to us a bill. It came to the Senate.

The Senate ingrafted upon it the principle of free coinage, together with some other provisions, changing the character of the House bill. Indeed, the Senate made a substitute for the House bill, embodying no part of the House bill except a single

section relating to the national banks. In this condition the two bills went before the committee of conference. The House of Representatives had by a decided vote, which I need not repeat, determined against the free coinage of silver, and the question then arose whether the two Houses could be brought to an agreement upon a proposition based upon both bills, embodying both, but omitting the free coinage of silver. That was the problem to be solved.

Now, what did we do? In the first section of the bill proposed by the conference committee we have changed somewhat the language of the first section of the House bill; we have increased the amount of silver to be purchased. We have placed, much to my regret I must confess, in this bill a larger amount than the entire production of American silver. We have made it mandatory, not permissive, but mandatory, upon the Secretary of the Treasury to buy four and a half million ounces of silver a month, which, at the full price that the friends of this bill believe it will attain ($1.29 at the ratio of 16 to 1), will purchase in a year something like $70,000,000 worth of silver bullion and will cause the issue of $70,000,000 of treasury notes per annum.

The majority of the Senate conferees insisted upon that because that was the limit that those who were in favor of free coinage sought to apply and demanded, and the House conferees with great reluctance yielded that point. The House had proposed the purchase of four and a half million dollars' worth per month, which would be a considerably less sum. That was finally yielded.

Now, in respect to the words "the market price thereof," that language is in every bill that ever authorized the Secretary of the Treasury or any other officer to buy anything. As a matter of course, the market price, not the fictitious value, is the only basis of the purchase. Those words are contained in the present Bland law and in every law on the subject. But it was said with a great deal of force that, as we propose now to buy more than the entire production of domestic silver, the Secretary should not be required to purchase unless the silver was offered to him, and that limitation (although I believe it is scarcely a limitation at all) was applied that he should not be bound to purchase that which was not offered. The rest of that section, I believe, is substantially like the House bill as sent to us.

As to the last clause of the second section, this was the proviso insisted upon strongly by the House conferees:

Provided, That, upon demand of the holder of any of the treasury notes herein provided for, the Secretary of the Treasury may, at his discretion and under such regulations as he shall prescribe, exchange for such notes an amount of silver bullion which shall be equal in value at the market price thereof on the day of exchange to the amount of such notes presented.

The House conferees finally yielded upon the Senate conferees proposing the following as a substitute, which is a declaration of public policy to abandon this mode of redemption:

That, upon demand of the holder of any of the treasury notes herein provided for, the Secretary of the Treasury shall, under such regulations as he may prescribe, redeem such notes in gold or silver coin, at his discretion, it being the established policy of the United States to maintain the two metals on a parity with each other upon the present legal ratio, or such ratio as may be provided by law.

This declaration of public policy has been announced from the beginning of the Government to this hour. There never has been a time when this proposition would not have received the sanction of both Houses of Congress. Hamilton and Jefferson acting together agreed upon the bimetallic standard, upon the coinage of the two metals, upon the parity of the two metals, and they sought to ascertain that parity by a long and careful examination. So from time to time all our legislation has pointed in that direction, to maintain the parity of the two metals; and the House conferees being satisfied with the declaration of this policy abandoned the clause that they had insisted upon, and this was adopted.

Then another difficulty arose. It was said that, as the present silver certificates represented all the silver dollars now in the treasury, there was no mode by which the Secretary of the Treasury could pay these notes if payment was demanded. It was supposed that in all probability it would not be demanded; but that was not a sufficient answer, because the law itself contemplated that a demand might be made for the redemption of these notes. Therefore, the committee provided that the present coinage of 2,000,000 of ounces, and they made it ounces instead of $2,000,000 worth, 2,000,000 ounces should be coined for one year so that the Secretary might have a fund of about $30,000,000 on hand available for this purpose, with the power and direction to coin more, if necessary, out of the silver bullion in hand.

DANIEL W. VOORHEES [Ind.].—What is the spectacle presented here in this body? I am amazed at the hardihood of

Senators who stand up in this body to take back all we said and all we did and all we voted for within the last three or four weeks. Seventeen majority of the Senate of the United States is treated as chaff—one-fifth of this body was embodied in a majority on this subject—seventeen majority for the free coinage of silver, and the representatives of this body on the conference committee have treated that expression as idle, and it is to go for naught!

My word for it, the American people, those who labor, those who toil, those who delve, those who sow, those who reap and mow, will not consider this action on the part of the Senate a few weeks ago as idle or as not binding. I think I know better why the people of this country in their trouble and distress lifted up their hands and looked this way, and they breathed a little freer when they saw that the Senate of the United States, that body so often spoken of and derided for its conservatism and its want of progress, had gone so far on a measure of relief for the laboring people. They rejoiced at it, and in the last three weeks, while this measure has been pending in the committee of conference bound up in doubt, more expressions in the way of petitions, and letters, and the like have reached here than even during the discussion that was on.

I repeat, sir, that something was done which cannot be taken back; and, if the men who compose the majority of this body for free silver and free coinage the same as gold, the same as it was when our fathers expanded this country, and the same as it was before the fraud and treachery that destroyed it in 1873, are willing to undo their work and vote that majority is null and void, I shall be utterly astounded; I shall be utterly amazed.

Ah, sir, some one says there is something gained by the monthly purchase of 4,500,000 ounces of silver. Yes, sir, at a market price which can be fixed by the Secretary of the Treasury, to the extent that it may be offered upon the market.

These notes are to be redeemed in gold or silver according to the discretion of the Secretary, leaving him the power to discriminate against silver and degrade and disgrace it; and other discretions could be pointed out which I will not take the time to do, but I say here to the owners of silver mines, I say to the Senators from silver States, that I am not here for the purpose of making a market for your commodity; I am not here for the purpose of selling the products of your mines; I am here in behalf of the dignity of the dollar of the fathers; I am here in behalf of silver as money, not as a salable or purchasable commodity.

SENATOR JONES [Nev.].—I should like to ask the Senator from Indiana how he would have those notes redeemable, by specifying one metal or giving the option to the Secretary of the Treasury to redeem in either?

SENATOR VOORHEES.—Yes.

SENATOR JONES.—Would the Senator like to have them redeemable solely in silver or solely in gold?

SENATOR VOORHEES.—I know the Senator's real mind. He believes that the silver dollar is as good as the gold dollar, and that it ought to be so, and so recognized; and, that being the case, let me ask him why should there be any discretion left to the Secretary which he will pay out? Let him pay both; let him pay either. It is money that he is to pay. It makes no difference, if one is as good as the other, whether he pays with a gold or a silver dollar.

SENATOR JONES.—In order to pay both or either he must have the discretion which this bill gives him.

SENATOR VOORHEES.—I thought it would be long before I would come in conflict with the honorable Senator from Nevada. I learned my lesson when I first entered this body under his teaching in behalf of the silver dollar. If he has changed his views I have not changed mine. If he has other views, I have the same that I have had for years, and with which I will go back to the people who have honored me with a seat in this body.

Mr. President, it was well pointed out by the able Senator from Texas [Mr. Coke] that after July, 1891, there is no compulsion in this bill to coin any silver.

There is a discretion after July 1, 1891, where silver can be discriminated against.

Mr. President, I will not say that this bill is a cheat, I will not say it is a fraud, because of the presence I am in, but under its malign influences I will say that silver instead of reviving as a currency, instead of being more potent as a factor for the people's prosperity, will wither, shrink back, and take its place as a miserable commodity instead of being clothed with the dignity of money.

Sir, the Senator from Ohio [Mr. Sherman] was inaccurate in another statement. He said this bill had passed the House of Representatives after full consideration. I deny it; I utterly deny it. I assert here that, if the bill had had free way without the tyranny of existing circumstances, 40 majority would have marked the passage of a free-coinage measure in the House of Representatives. The people are behind the measure, and when

they are you will generally find members of Congress going for it. If the Senators here who represent little States on the Atlantic coast, whose constituents are interested in the scarcity of money so that their investments may be more valuable and the purchasing power of money great over property and labor, think there is hostility in the great mind of the American people to the free coinage of silver, they are mistaken. Let them cross the Alleghanies and go into the great valleys of the West; go into the great laboring and mining regions of this country up in Wisconsin and everywhere else, and you will find that the people who produce the greatness of this country by labor are in favor of a free-coinage measure.

I deny that it has had full consideration in the other House. It did have full consideration in this body. I took but little part in it. I saw that everything was going on well, and I rejoiced when 17 majority pronounced in favor of the free coinage of silver, and it is a day of shame and degradation, in my judgment, when that majority is wiped out by the report of the committee of conference, and the Senate is asked to recede, to retrograde, to go back, to leave the whole question to the hostile Treasury Department, to see what will become of it.

I shall not vote for this bill. I shall vote for no such bill, unless it should be as a choice of evils. I was going to say that I would vote for no bill except one for the free coinage of silver. I will vote for any bill that betters the present law; but I agree with the Senator from Texas [Mr. Coke] that this is not an improvement upon the present law. On the contrary, it makes the situation more vague, more uncertain, leaves the Secretary more discretion, and consequently involves the people's interests in more doubt.

Senators Teller, Stewart, John P. Jones, and Plumb supported the conference bill as the best that could be obtained under the circumstances, and as leading in the direction of free coinage.

The report was concurred in by the Senate by a vote of 39 to 26. The House on July 12 passed the bill by a vote of 122 to 90. President Harrison approved it on July 14, 1890.

CHAPTER VI

REPEAL OF THE SHERMAN SILVER PURCHASE ACT

The Panic of 1892-3—The President Calls Congress in Special Session—His Message on the Repeal of the Sherman Act—William A. Wilson [W. Va.] Introduces in the House a Bill to This Effect—Debate: Isidor Rayner [Md.], Jason B. Brown [Ind.], Richard P. Bland [Mo.], Michael D. Harter [O.], Joseph C. Hendrix [N. Y.], Joseph W. Bailey [Tex.], Charles H. Grosvenor [O.], Samuel W. McCall [Mass.], William J. Bryan [Neb.], Jerry Simpson [Kan.], Champ Clark [Mo.], William D. Bynum [Ind.], Joseph G. Cannon [Ill.], James G. Maguire [Cal.], Tom L. Johnson [O.], Henry C. Snodgrass [Tenn.], Lafe Pence [Col.], Julius C. Burrows [Mich.], Jonathan P. Dolliver [Ia.], Thomas B. Reed [Me.], John M. Allen [Miss.], W. Bourke Cockran [N. Y.], Mr. Wilson, Charles A. Boutelle [Me.]; Bill Is Passed—In the Senate Daniel W. Voorhees [Ind.] Reports Amended Bill from the Committee on Finance—Speech: in Favor of Repeal by John Sherman [O.].

THE industrial and financial distress of the country beginning in the summer of 1892 took on the proportions of a panic in 1893. In July the gold reserve in the treasury sank below $100,000,000 for the first time, marking, if not the precipitation of the storm, at least that point on the financial barometer which signified settled bad weather.

The storm area was nation-wide; in the course of the year more than three hundred banks suspended payment, causing many bankruptcies in business; and hundreds of factories shut down, with consequent widespread distress among workingmen.

Nevertheless, chiefly through the liberal appropriation made by Congress, and the prosperity of the farmers, whose crops were abundant, although prices were low, the Columbian Exposition at Chicago (May 1-October 30, 1893), in celebration of the discovery of America, was a success unprecedented in the history of international exhibitions.

Demands came from industrial and commercial organizations all over the country to President Cleveland to call Congress together to repeal the Sherman silver purchase law, which was held by many financiers to have caused the panic, and to stand in the way of its abatement. In response to these appeals he summoned the new Congress to meet in special session on August 7.

DELIVERANCE AT HAND

Cartoon by Ehrhart in "Puck"

The political complexion of the Fifty-third Congress may be inferred from the reëlection of Speaker Charles F. Crisp [Ga.], Democrat, by 213 votes to 121 cast for Thomas B. Reed [Me.], Republican, and 7 cast for Jerry Simpson [Kan.] People's Party.

On August 8 a message from the President was read.

REPEAL OF THE SHERMAN LAW

PRESIDENT CLEVELAND

Our unfortunate financial plight is not the result of untoward events nor of conditions related to our natural resources; nor is it traceable to any of the afflictions which frequently check national growth and prosperity. With plenteous crops, and with satisfactory assurance to business enterprise.

suddenly financial distrust and fear have sprung up on every side. Numerous moneyed institutions have suspended because abundant assets were not immediately available to meet the demands of frightened depositors. Values supposed to be fixed are fast becoming conjectural, and loss and failure have invaded every branch of business.

I believe these things are principally chargeable to congressional legislation touching the purchase and coinage of silver by the general Government.

This legislation is embodied in a statute passed on the 14th day of July, 1890, which was the culmination of much agitation on the subject involved, and which may be considered a truce, after a long struggle, between the advocates of free silver coinage and those intending to be more conservative.

Undoubtedly the monthly purchases by the Government of 4,500,000 ounces of silver, enforced under that statute, were regarded by those interested in silver production as a certain guaranty of its increase in price. The result, however, has been entirely different, for immediately following a spasmodic and slight rise, the price of silver began to fall after the passage of the act, and has since reached the lowest point ever known.

This law provides that in payment for the 4,500,000 ounces of silver bullion which the Secretary of the Treasury is commanded to purchase monthly, there shall be issued treasury notes redeemable on demand in gold or silver coin, at the discretion of the Secretary of the Treasury, and that said notes may be reissued. It is, however, declared in the act to be "the established policy of the United States to maintain the two metals on a parity with each other upon the present legal ratio or such ratio as may be provided by law." This declaration so controls the action of the Secretary of the Treasury as to prevent his exercising the discretion nominally vested in him, if by such action the parity between gold and silver may be disturbed. Manifestly a refusal by the Secretary to pay these treasury notes in gold, if demanded, would necessarily result in their discredit and depreciation as obligations payable only in silver, and would destroy the parity between the two metals by establishing a discrimination in favor of gold.

The policy necessarily adopted of paying the notes given for bullion purchases in gold has not spared the gold reserve of $100,000,000 long ago set aside by the Government for the redemption of other notes, for this fund has already been subject to the payment of new obligations amounting to about

$150,000,000 on account of silver purchases, and has as a consequence, for the first time since its creation, been encroached upon.

We have thus made the depletion of our gold easy, and have tempted other and more appreciative nations to add it to their stock. The excess of exports of gold over its imports for the year which ended on June 30, 1893, amounted to more than $87,500,000.

Between the 1st day of July, 1890, and the 15th day of July, 1893, the gold coin and bullion in our treasury decreased more than $132,000,000, while during the same period the silver coin and bullion in the treasury increased more than $147,000,000. Unless Government bonds are to be constantly issued and sold to replenish our exhausted gold, only to be again exhausted, it is apparent that the operation of the silver-purchase law now in force leads in the direction of the entire substitution of silver for the gold in the Government treasury, and that this must be followed by the payment of all Government obligations in depreciated silver.

At this stage gold and silver must part company and the Government must fail in its established policy to maintain the two metals on a parity with each other. Given over to the exclusive use of a currency greatly depreciated according to the standard of the commercial world, we could no longer claim a place among nations of the first class, nor could our Government claim a performance of its obligation, so far as such an obligation has been imposed upon it, to provide for the use of the people the best and safest money.

If, as many of its friends claim, silver ought to occupy a larger place in our currency and the currency of the world through general international coöperation and agreement, it is obvious that the United States will not be in a position to gain a hearing in favor of such an arrangement so long as we are willing to continue our attempt to accomplish the result single-handed.

The knowledge in business circles among our own people that our Government cannot make its fiat equivalent to intrinsic value, nor keep inferior money on a parity with superior money by its own independent efforts, has resulted in such a lack of confidence at home in the stability of currency values that capital refuses its aid to new enterprises, while millions are actually withdrawn from the channels of trade and commerce to become idle and unproductive in the hands of timid owners. Foreign investors, equally alert, not only decline to purchase American

securities, but make haste to sacrifice those which they already have.

The people of the United States are entitled to a sound and stable currency and to money recognized as such on every exchange and in every market of the world. Their Government has no right to injure them by financial experiments opposed to the policy and practice of other civilized states, nor is it justified in permitting an exaggerated and unreasonable reliance on our national strength and ability to jeopardize the soundness of the people's money.

This matter rises above the plane of party politics. It vitally concerns every business and calling and enters every household in the land. At times like the present, when the evils of unsound finance threaten us, the speculator may anticipate a harvest gathered from the misfortune of others, the capitalist may protect himself by hoarding or may even find profit in the fluctuations of values; but the wage earner—the first to be injured by a depreciated currency and the last to receive the benefit of its correction—is practically defenceless. He relies for work upon the ventures of confident and contented capital. This failing him, his condition is without alleviation, for he can neither prey on the misfortunes of others, nor hoard his labor. One of the greatest statesmen our country [1] has known, speaking more than fifty years ago, when a derangement of the currency had caused commercial distress, said: "The very man of all others who has the deepest interest in a sound currency and who suffers most by mischievous legislation in money matters is the man who earns his daily bread by his daily toil."

It is of the utmost importance that such relief as Congress can afford in the existing situation be afforded at once. The maxim, "He gives twice who gives quickly," is directly applicable. It may be true that the embarrassments from which the business of the country is suffering arise as much from evils apprehended as from those actually existing.

It was my purpose to summon Congress in special session early in the coming September that we might enter promptly upon the work of tariff reform, which the true interests of the country clearly demand, which so large a majority of the people as shown by their suffrages desire and expect, and to the accomplishment of which every effort of the present Administration is pledged. But while tariff reform has lost nothing of its immediate and permanent importance, and must in the near future engage the attention of Congress, it has seemed to me that the

[1] President Cleveland refers to Daniel Webster.

financial condition of the country should at once and before all other subjects be considered by your honorable body.

I earnestly recommend the prompt repeal of the provisions of the act passed July 14, 1890, authorizing the purchase of silver bullion, and that other legislative action may put beyond all doubt or mistake the intention and the ability of the Government to fulfill its pecuniary obligations in money universally recognized by all civilized countries.

Congress sat until November 3. The chief subject of debate was repeal of the Sherman silver purchase act.

Repeal of the Sherman Act

House of Representatives, August 10-26, 1893

On August 10, 1893, William L. Wilson [W. Va.] introduced in the House a bill to repeal the silver purchase clause of the Sherman act of July 14, 1890. The bill declared that the repeal

"shall not impair or in any manner affect the legal-tender quality of the standard silver dollars heretofore coined; and the faith and credit of the United States are hereby pledged to maintain the parity of the standard gold and silver coins of the United States at the present legal ratio, or such other ratio as may be established by law."

Richard P. Bland [Mo.] offered a resolution that the votes on the amendments and the bill be taken in the following order:

The vote shall be taken first on an amendment providing for the free coinage of silver at the present ratio. If that fail, then a separate vote to be had on a similar amendment proposing a ratio of 17 to 1; if that fails, on one proposing a ratio of 18 to 1; if that fails, on one proposing a ratio of 19 to 1; if that fails, on one proposing a ratio of 20 to 1. If the above amendments fail, it shall be in order to offer an amendment reviving the act of the 28th of February, 1878, restoring the standard silver dollar, commonly known as the Bland-Allison act; the vote then to be taken on the engrossment and third reading of the bill as amended, or on the bill itself if all

amendments shall have been voted down, and on the final passage of the bill without other intervening motions.

On this motion Mr. Bland called for the previous question, which was adopted by a vote of 219 to 99. The resolution was then adopted.

Isidor Rayner [Md.] opened the debate with a speech in favor of repeal.

I am in favor of an unqualified repeal of the purchasing clause of the Sherman act, without any conditions or provisos whatever. I am not in favor of purchasing another ounce of silver, or of coining another dollar of it, either at the present ratio or at any other ratio that we can practically determine upon. Now, in saying this, I desire to add that I have no hostility whatever to the use of silver upon a proper basis as circulating medium; but with all the careful consideration I have been able to devote to this subject I am convinced beyond all doubt or question that its recognition by coinage, except upon international agreement, is a financial undertaking utterly impossible of accomplishment except at risk of ruin and disaster.

The proposition that I had occasion to maintain in this House before, and that I again assert with all the emphasis I can, is that in my humble judgment the present ratio is unjust and arbitrary, rendered so by conditions that did not exist at the time of the demonetization of silver, in 1873; and that it lies not within the power of this Government, strong as it is, to corner the silver product of the mines to keep up the price upon a constantly declining market, to impress upon it a fictitious value, and by legislative decree compel the people to take it at a price in utter disproportion to the figure that it bears in every commercial center of the world.

The universal experience of history, the action of every sound and solvent government, teach us that if we continue in this mad attempt to equalize that which is unequal, to appreciate a metal that is continually depreciating, to fix a standard for a coin that for over twenty years never has had a fixed value, but has fluctuated with every new acquisition from a premium in 1873 to a decline at this hour of almost one-half of its coinage value.

If this desperate system of finance, with nothing to justify it, with almost the whole intelligence of the country against it, with nothing in its track except disaster and ruin, is to prevail, then, in my opinion, until the day of a better judgment shall

come, we might as well retreat from the lofty position we have occupied in the confidence of mankind, and, descending, lock hands with every bankrupt government of the earth that believes in the manufacture of wealth at government mints, in cheap money, in broken contracts, and in repudiated debts, and so believing have by reason of their faith been excommunicated as heretics from the roll of civilized communities and banished from the field of honor.

I am aware of the fact that many of my colleagues, for whose opinions I entertain the greatest respect, assert, and it has been freely charged that the decline in the price of silver has been caused by its demonetization at the American mints and by what is constantly called a "conspiracy" to destroy it as a circulating medium among the governments of Europe. I deny this proposition, and the statistics will not sustain it. It may be true that the free coinage of silver at the mints would tend for a time to keep up the fictitious standard of the coin, but the value of the bullion would always be controlled by the market price, it would fluctuate.

Like every other commodity, it would be governed by the laws of supply and demand, and eventually, according to every accepted axiom of political economy, the coinage price would become the bullion price; the unit of value would be the market value; the money basis would be the basis of the cheaper metal; the dearer metal would leave the avenues of trade; inflation would give way to panic; private obligations would be nullified; public obligations would be discredited, and the honor of the nation would be impaired.

Now, it is claimed that what we require in this country is a system of bimetallism, a bimetallic standard—that is to say, the free use of both gold and silver at the Government mints. But, Mr. Speaker, we will never have this until the commercial nations of the earth agree upon a proper ratio, and just so long as the Sherman act remains upon the statute book so long is an international ratio a financial impossibility. So long as we purchase silver and part with gold, so long will monetary conferences result in failure. When we cease purchasing silver and proclaim to the world that the gold dollar is the standard and the unit of American value, then we can bring our rivals to terms, because, in my opinion, there is not a sufficient amount of gold in existence to supply the demands of commerce and the necessities of the world's circulation. [Applause.]

So long as the treasury continues to act as a pawnbroker's shop for the benefit of the Colorado and Nevada mines, so long

will Great Britain and Germany refuse to appreciate the collateral securities that we hold in our vaults; but when a silver certificate can be redeemed at par and a silver dollar is intrinsically worth the inscription that it bears, then we can proudly and defiantly meet them upon the field of finance without the slightest sacrifice of the stability of our currency or the slightest surrender of our honor as a nation. [Applause.]

Now, let us look for a moment at the arguments that have been used upon the other side. First, it is claimed that the coinage of silver will make money more abundant. How will it do this? Who will get this money? When a Colorado mine owner sends $600 worth of silver to the mint and the mint returns him a thousand silver dollars for it, who gets a thousand silver dollars? Do the people get it? Does it increase the wages of the miner who has dug the silver from the earth? I expect not. I expect that the only persons who will profit by this iniquitous transaction will be those who sell the silver and control the product. Now, I ask the Democracy of this House whether they are willing to stimulate an enterprise of this sort that deliberately robs the people to enrich a particular class who monopolize the mines. We who have never favored class legislation, are we prepared to lock hands with a few silver States to the utter ruin of the balance of our country? If more money is needed, can we not increase our currency upon a legitimate basis? Is there no method known to the ingenuity of man besides a device of this sort to enlarge the circulating medium of the country?

But it is said, if we do this and coin silver at the present ratio, the price of silver will be raised to the coinage value. What a shallow pretext that is! A schoolboy would be ridiculed if he asserted any such proposition as this in any college of the land. If the fiat of the Government can create values, what right have we to select silver and convert it from a commodity into a coin? Well, it is claimed that this should be done because the Constitution says so. Now, we all have a Constitution before us. Point me to the clause that says so. You cannot do it because it is not there. Not a word about a ratio, not a word about the coinage of either gold or silver for the Government of the United States. Yes, but it is said it will raise prices. I am not in favor of raising prices, on general principles. But how will cheap money raise prices? Is not the producer a consumer when he sells? Will he not be compelled to buy?

Now, Mr. Speaker, there is only one thing that it will do, and I admit that it will accomplish that. It will allow the

debtor to scale his debts. It will be a weapon in the hands of a dishonest borrower to break his contract and pay his creditor in a coin different from the one that was impliedly contracted for. To such an arrangement as this I am unalterably opposed, and I would stand here and let every species of legislation go by default before I would favor any system that would sow dishonor through the land, that would humiliate us in the eyes of mankind, and that would cover us with shame in every portion of the country where justice is respected and honor prevails.

One word more before I conclude. I can go to the treasury to-day and contract with the Government of the United States to furnish it a better dollar than the Government is coining—a dollar with far more silver in it and better silver in it; and I can make an enormous profit out of the operation. But what would become of me if I should undertake to provide such a dollar? I should be indicted and convicted and sent to the penitentiary. This shows what sort of a system of finance this Government is conducting, when it sends a man to the penitentiary for giving the people a better dollar than the Government itself is coining.

I ask what earthly right have the silver mine owners to haunt these halls demanding protection for their investment? Is the Government bound to guarantee to them a profit upon their enterprise? Is the Government in partnership with the mine owners? I deny it. Does the statute bind the Government of the United States to maintain the ratio of 16 to 1 when it ought to be 28 to 1? I deny it. There is no contract which is binding or valid which is not based on consideration and founded on mutuality.

But if there is a partnership, let it be forthwith dissolved, and in the decree of dissolution let there be a clause embodying the cardinal principle of governmental equity that we will never stamp a lie upon our coin to satisfy the greed or avarice of any section of the country or any set of men, no matter what may be their influence or how potent or powerful they may be. [Applause.]

A few months ago the Democracy, then in convention assembled, without a murmur of dissent from any quarter, in the most passionate terms denounced this measure, at the same time emphatically pledging the party to its speedy repeal. I am in favor of keeping this promise according to the strict letter of the instrument.

A MEMBER.—All of them?

MR. RAYNER.—Well, every one of them so far as they can be

kept. [Laughter and applause.] There was something said, I know, about the parity of the two metals, but you cannot keep the two metals, silver and gold, on a basis of absolute parity without an international conference. You cannot maintain a double standard in the Government of the United States in the face of the action of every other civilized government upon the face of the earth which has adopted the gold standard. That portion of the platform cannot be carried out, but you can take a step in the direction of it, and, if you cannot make your promise good, do as the President has said, carry it out as far as you can.

I believe in forever striking from the tenets of our political creed the superstitious folly that a nation grows rich in proportion to the amount of worthless money it can coin. In place of this idolatry I would plant high up on our altars, so that all mankind could read it, the inscription that we cherish our honor as much as our liberty, and that we would sooner fall and perish than dishonor any of the obligations upon which has been emblazoned the emblem of the Republic. [Applause.]

Jason B. Brown [Ind.] declared that the Democratic platform contained an unqualified declaration for the repeal of the Sherman act, that its declaration concerning coinage was an entirely independent proposition. Therefore he supported the President in advocating the repeal, and would wait for his declaration on the subject of silver coinage before condemning or approving him.

Mr. Bland replied to Mr. Brown.

I regret that any gentleman on our side of the House should see proper to read in this presence one part of our platform and to retreat from that part, above all others, which contributed to the vote that gave him a seat in this House. I regret that any Western man should turn his face toward the East and his back to the West.

We understood, Mr. Speaker, what that platform meant. The whole Democratic party voted against the Sherman bill, and, so far as I am personally concerned, I did what little my ability permitted me to do to prevent its passage in this House; but the so-called Sherman law passed, and, a better law having been repealed by its passage, it is now the only law on the statute books looking to the use of silver as money in this country.

I know, Mr. Speaker, that the gold-standard elements, the

very elements that are in opposition to the free coinage of silver, secured the passage of that act. I knew they would demand its repeal the moment they saw the opportunity. A promise to repeal that act was put in the platform at Chicago, I suppose, to satisfy that element of the Democratic party that wants no law upon the statute book for the coinage of silver. But following that, and in the same paragraph, a part and parcel of it at least, was the promise made at Chicago by the Democratic party for the use of both gold and silver as money in this country, with equal privileges at the mints of our Government. And, speaking for myself and for the people whom I have the honor to represent, they understood at least that the free coinage of silver, in accordance with our platform, necessarily repealed the Sherman law; and it would. [Applause.]

Mr. Bland charged that the gold men had conspired in 1885 to bring about a panic in order to repeal the Bland act.

Some time in September or October, before the meeting of Congress, these generous bankers in New York, who say that they control the finances of this country, and what they demand must be acceded, made arrangement with the then Secretary of the Treasury by which they were to withdraw $10,000,000 of subsidiary silver coin and to place in the treasury of the United States $10,000,000 of gold, in order to secure and maintain gold payments, advertising to all the country that the bankers of New York had come to the relief of the Federal treasury with $10,000,000 of gold to maintain the public credit.

It was done, Mr. Speaker, to terrorize the people of this country and, if possible, to bring about a panic such as you have to-day, and they know it. And we met in something of a financial panic; not so severe as it is now, however. The whole country was stirred on the silver question. We met in Congress and the question was debated. The result of it all was the refusal to repeal the silver law by over a two-thirds vote of that House; and the panic vanished. That was the end of it. When they ascertained that the free people of this country, through their representatives, could not be driven as a herd of buffaloes on the Western plains into a panic, to trample themselves and those depending upon them, they ceased.

The howl against silver and the panic stopped. The country continued in its usual prosperity, whatever that may be. We kept on coining these 70-cent dollars, and no disturbance was

made of it, practically, for four years. The Democratic party in the House maintained it against all assaults. But when, unfortunately, our friends on the other side got the power they enacted another law, repealing the law of 1878.

That law, Mr. Speaker—the Sherman law—I denounced in an article in the *North American Review*, about two months after it was enacted, as a "Janus-faced" statute. A law that provided for the purchase of 4,500,000 ounces of silver bullion per month, on which treasury notes should be issued at the market rate of the purchases; that these notes should not be kept in circulation in excess of the cost price of the bullion; that the bullion was to be coined for the redemption of the notes, and that it further provided that in the discretion of the Secretary of the Treasury the notes should be redeemed in gold, in order to keep a parity between the two metals.

The face of the gold part of it was turned to the East—the gold standard; the other part, to redeem in silver, looked to the West; and if in the statute was included with the purchase of bullion and coining it into money the redemption of the notes in the resulting coin it would in some respects, at least, be in harmony with the idea of ultimate bimetallism. But I predicted in that article, with the Administration then in power, the purchase of silver would probably go on and the law be executed until after the next presidential election, and, if an Administration hostile to silver was elected, gentlemen who gave it their support would be very sick of their bargain.

Now, sir, we are asked here deliberately to repeal this law, and I want to call the attention of my friends on this side of the House, who proclaim themselves to be friends of free coinage at a reasonable ratio, and to ask them this question: Why do you gentlemen insist that you will repeal this law and send silver down probably 15 cents an ounce before you fix the ratio? Is that an act friendly to silver? Can any gentleman here face his free-coinage constituency and defend his vote subtracting from the value of silver 15 cents an ounce before he votes to fix the ratio? I dare him to undertake it. He cannot do it.

It may be convenient to follow the recommendations of the President, but the President does not elect the members of this House. We do not hold our commissions from the Executive, and I am afraid that, if some of us undertake to act here upon that line, when our present commissions expire we shall have all the leisure that we want to study the silver question in peace and quietness at home. [Laughter.]

The claim is not sincere that the President expects hereafter

to recommend bimetallism, for he does not do it in his message, and that claim misrepresents his position. He recommends the reverse. The concluding paragraph of the message means, if it means anything, that, after you shall have totally demonetized silver by repealing this Sherman act, you will be required to go further in the same direction; and I want you to watch the proceedings of Congress in these coming weeks of this extra session, or of the next regular session, to see whether I am right or not.

My prediction is that in order to carry out the recommendations of that message we shall be called upon to sell bonds to procure gold. For what? To redeem all our pecuniary obligations, according to the very language of that message in that money which is recognized by the principal nations of the world. Why did not the President say "gold"? [Laughter.] We know what his language means. [Laughter.] You are asked to load up the Federal treasury with gold, to redeem every pecuniary obligation of the Government with gold, although the standard silver dollar is the identical dollar on which bond obligations were based when they were issued, because they called for coin of the standard value at the time of their issue, and that was the standard.

But now, I repeat, we shall have to redeem all this bullion, all these Sherman notes, in gold; we shall have to sell bonds to get gold to redeem all our greenbacks, all our silver certificates, and we will be compelled to carry our silver dollars as so much dead weight of bullion in the treasury, so that we might as well dump them into the Potomac. That is what all this means. In other words, every piece of paper money issued in this country to-day, every silver certificate, every greenback, every bond, every Sherman note, is to be redeemed in gold, and we must procure the gold for their redemption.

What, then, are you to do with your silver bullion and with all your silver dollars, together about $500,000,000? They are to be demonetized as a base metal, and you know it. I am talking to intelligent gentlemen who have read that message, and there is not an intelligent gentleman here who has read it who can misunderstand it. Why should you go on, then, to try to deceive yourselves and your constituents on this subject? There is no silver in that message, and gentlemen on the other side will simply do themselves and the subject justice if, hereafter, in the course of their debate, they will leave silver out of it, because they are proposing a measure in which there is no consideration whatever for silver.

No legislation which we can enact here is going to relieve the

panic. This panic has been brought about for the express purpose of repealing this law; there is no question about that. We were threatened last winter with a gold premium. I stated then on this floor, and I state now, that there is no gold premium.

On the contrary, I believe the people are now paying a premium for silver and silver certificates. We were urged that we must issue more bonds, that if we did not we were to have a panic. All the newspapers of the East especially were advertising a panic if we did not issue bonds. We did not issue them. The Secretary of the Treasury was threatened with a panic if he did not comply with the demand, and he refused. Those who were interested in getting up this panic began to refuse loans, to cramp, to draw in currency. Many of the banks which had been engaged in booming real estate, or in other questionable transactions, and were consequently weak, began to fail.

Stocks called industrial stocks, that had been watered in Wall street, cordage trusts, lead trusts, whisky trusts, railroad stocks that had been watered, began to tumble down to something like reasonable rates, and you had a panic. Banks which were weak began to fail, and the people began a run on banks which were strong. The whole country became alarmed. People began to take their money out of the banks and put it into safe-deposit vaults or into their safes at home. It is said they ought to let their money remain in the banks. Well, probably they ought to do so; but what is the difference? The banks are afraid to let the money go out if they have it. Now, the panic has come; and those who conspired to bring it about have got more than they bargained for. The idea is that we can relieve this panic by the repeal of the Sherman law.

Why, Mr. Speaker, I say right here (and history will bear me out in the statement) that while there was some alarm in the country before, yet the moment the British Government demonetized silver in India, then the panic began in earnest—not before; that precipitated this panic in its present shape. In this way desolation was brought into many of the States of this Union, and workingmen who had before been prosperous and happy were by the thousands sent as tramps throughout the land.

All parts of the country have felt the effects. It is this fight upon silver that has precipitated this panic; and the repeal of the Sherman law will only intensify it, not relieve it. The panic will be relieved when everything gets so low that people see they can make money by buying; when they begin to buy prices will go up; and when everybody is buying money

will come from its hoarding places and you will have some relief. In no other way will relief come.

Gold is coming to us to-day. Notwithstanding we are told the people across the water are afraid to invest here for fear that we will not pay in gold, yet these people are sustaining prices to-day and sending here all the money that they can spare. There was a panic in gold-using Australia that has bankrupted that whole people and sent terror to the banks all over England. We know that gold cannot be obtained there except by paying for it; yet it is coming here.

Talk about a premium on gold; here is the treasury of the United States that is open to the plunder of every speculator in the civilized world. He can take his Sherman note or his greenback or any other Government currency there and get gold without cost. Did you ever notice the names of these gentlemen in New York who are shipping gold abroad, or bringing it back? Every one of those names that I have seen has a foreign termination; every one of those gentlemen, so far as I am advised, is an agent or branch bank of some bank across the water.

If you go to the Bank of England to get gold for export you must pay a premium on it; if you go to the Bank of France to get gold for export you must pay a premium on it. The case is the same with every other banking house in Europe; no gold can be obtained there without paying a premium. But here is the treasury of the United States professing to be so helpless that it cannot prevent every gold speculator from robbing the Government of its gold. Our treasury will not pay out the silver which it might pay. Why not pay out the silver when we have more of it than we have of gold, or pay out gold when we have more of it than of silver, and thus protect ourselves?

It is because the Administration is hostile to silver; and thus it is surrendering this country to the Shylocks of the Old World who have made war upon it. The aristocracy of western Europe has absolutely tabooed silver in those countries; driven it away from there. Here it finds its only resting place. The last fight for the white metal is to be made here in this country and in this House, my friends. Will you stand by it now, or will you let the Shylocks come and have their way? It is for you to determine.

What does free coinage of silver mean? It means that the holders of silver bullion, at some ratio to be fixed in the bill, and I want the present ratio, 16 to 1, maintained precisely as it is, may go to the mints of the Government and have it struck into the legal-tender money of the country and deposit the dol-

lars so coined, if the holder so desires, and have a certificate issued to him in place of it. It means that the silver of the world can come here in exchange for what we have to sell.

But they say that we will be flooded with the world's silver, that it will be dumped down upon us. Now, let us see about that for a moment.

With the billions upon billions of property existing in this country to-day, and being produced in this country every year, we simply offer to exchange that which we have in abundance on a basis of 1 pound of gold as the equivalent of 16 pounds of silver. No nation now, it is true, offers in exchange for silver the gold at any fixed ratio; consequently all the silver that is coined is used in the countries where it is coined. And why? Because no great power offers to exchange commodities for one metal or the other at any fixed ratio. That is the only trouble with silver to-day.

Now, it must be remembered that France gave an example to the world in this regard, having kept its silver on a parity with gold for a period of seventy years on a ratio of 15½ to 1. It said to the nations of the world, "Come with your gold and your silver, 15½ ounces of silver or 1 of gold, and you can buy all of our salable property in France and you can pay us in silver or in gold, just as you choose, on that basis."

What has made the manufacturers in Manchester, England, the strongest bimetallists in the world to-day? Simply the fact that they must sell their commodities in India for the India rupee. They are thus interested in the value of that silver rupee. They want to maintain it; and if all the manufacturing products of western Europe that are sent here and sold to us are sold for silver, as they must be, or gold at our ratio, do you not see how quickly you will convert them all to bimetallism? Thus you will segregate all the industrial inhabitants of western Europe from those who live on fixed incomes, the aristocracy, the bondholders, and the coupon clippers. That is all there is about it, and we want to segregate them.

The oppressed of the Old World are appealing to us to settle for the world this great question, and to settle it not for men who are seeking advantages in the stock markets, not for men who are seeking advantages in bondholding, in interest drawing, in money lending, in seeking to have money increase in value every day and every year, but for the great toiling and producing masses of the other countries as well as our own, for whom it is our proud province here to think about and to legislate.

Mr. Speaker, the contention that we lose our gold, and that

we have got to exchange gold for silver, does not hold good in the case of so rich and independent a country as ours. But a short time ago when you looked across the Alleghany Mountains you beheld the Western wilderness roamed only by the savage and the wild beast. To-day it is teeming with its millions of civilized people, the great Mississippi Valley, and when you cross the Mississippi you just begin to enter the great domain of this country of ours, for more than two-thirds of it lies beyond the Father of Waters.

And, Mr. Speaker, it is that two-thirds of our territory, rich as it is in gold and silver, embedded together in the same deposits, in the same mountains, so that you can not extract the one without extracting the other—it is that portion of our territory that would give us the money that we need, the money of the world, good money, hard money, Democratic money [laughter and applause]—a country that the civilized world must look to for its future monetary supply if it is to continue on what is called the hard-money basis. And yet we are to-day asked to do what? To lay the blighting hand of confiscation upon the millions of people inhabiting that country, to turn them out as tramps upon the land, merely to satisfy the greed of English gold.

Oh, my God, shall we do such a thing as that? [Applause.] Will you crush the people of your own land and send them abroad as tramps, will you kill and destroy your own industries, and especially the production of your precious metals that ought to be sent abroad everywhere—will you do this simply to satisfy the greed of Wall street, the mere agent of Lombard street in oppressing the people of Europe and of this country? It can not be done, it shall not be done! I speak for the great masses of the Mississippi Valley, and those west of it, when I say you shall not do it! [Applause.]

Any political party that undertakes to do it will, in God's name, be trampled, as it ought to be trampled, into the dust of condemnation now and in the future. [Applause.] Speaking as a Democrat, all my life battling for what I conceived to be Democracy and what I conceived to be right, I am yet an American above Democracy. [Applause.] I do not intend, we do not intend, that any party shall survive, if we can help it, that will lay the confiscating hand upon Americans in the interest of England or of Europe. Now, mark it. This may be strong language, but heed it. The people mean it, and, my friends of Eastern Democracy, we bid farewell when you do that thing. [Applause.]

For myself I will not support such a policy here or elsewhere, but will denounce it, and as a Democrat I will denounce it as un-Democratic and un-American, and will ask the people of this country to condemn it as they ought to have condemned the so-called Democrats engaged in it as the agents, the tools—I withdraw that word, but I will say as the representatives, unintentionally—of the money power and the moneyed interests, and not of the masses of the American people. [Applause.]

Gentlemen, you can not hold the Democratic party together on that line. You can not pledge yourselves to bimetallism in your platform and ignore it in your legislation. We pledged ourselves in the first place to tariff reform, and the people had a right to expect us to deal with that first. But, when you come to say that you are going to demonetize silver, let me tell you that this is a bigger question than the tariff or anything else. This battle of the standards is a world-wide question; and one which in importance is away beyond the year-by-year regulation of your revenue.

We voted the ticket in good faith; we expected that we would have tariff revision, and that when we came to the money question it would be regulated according to the Chicago platform, that we should have the free coinage of silver, which in itself would destroy this makeshift. But lo and behold, we find that we were tricked, that we were deceived. [Laughter.] And I use that language advisedly. I believe it was not intended by our Eastern Democratic friends that tariff reform should be considered first, but their main, if not their sole, object was to put their hands upon silver and demonetize it and let tariff reform take care of itself afterward. [Laughter.] And here we are, just in that situation. Reduce the tariff 25 per cent., yet make money in gold 25 per cent. more valuable, the tariff remains as great a burden as ever. It takes the same quantity of wheat, corn, pork, and cotton to pay it as before.

By the repeal of the Sherman act you propose to remit us to the demonetizing act of 1873, which in all my section of country the Democratic party on every stump has denounced as the monumental fraud of the nineteenth century. Here is a Democratic House proposing to go right back to that act. When you do so you will be guilty of a greater fraud than that act itself.

But if you say we are not able to fix the ratio at 16 to 1, we have offered other propositions. I have stated that I will not vote against a free-coinage bill because the House may fix a ratio that I do not like. I do believe, and I admit the

proposition, that the fixing of the ratio is a fair question for discussion and debate; but I do assert that, as a constitutional question, free coinage is enjoined by the Constitution, notwithstanding the learned argument of the gentleman from Maryland [Mr. Rayner] to the contrary. [Laughter.] No State in this Union can coin money or make anything a legal tender except gold and silver. We are denying to them a privilege conferred by the Constitution of this country, which says they may make gold and silver a legal tender. Yet we will not coin it, will not conform to the Constitution and do our duty. Not only that, but "coin money" means an automatic supply. One of the arguments that you can adduce in favor of coin money in place of paper money is that coin money can not be overissued, and that is the most important distinction.

But here we want to interfere with that automatic supply. When we have free coinage and the mints open, nature limits the supply, so that we can not overissue it if we want to. Very good; but some wise people about twenty years ago thought that this continuing supply of gold and silver was interfering with those holding bonds and drawing interest, and living on fixed incomes. They thought the production of silver was going to be largely increased, and would probably lower the value of both gold and silver as money, and hence they undertook by legislation to prevent the automatic supply of money and to inhibit the coinage of one of the precious metals in order to protect the volume of money from that increase.

Now, we had better be on a paper system than a system like that. If we are to regulate the volume of money by prohibiting the coinage of one of the metals, why not abandon the metals altogether and go to paper at once? We are asked to believe that the contention is true that we do not need much money anyhow, because 90 per cent. of the business of the world is done on credit. Why not 100 per cent., and get rid of money altogether? [Laughter and applause.]

The time has come, my friends, when credit goes very slow and a little money very much faster. There is always a day of liquidation, and you must have the money. Let us print credit money, but let that money rest upon the credit of the Government and not upon the credit of some bankers in London or Wall street. There is about 90 per cent. of the American people who do not know anything about credit. They have to do their business on a cash basis. They must have money.

The concluding part of our bill provides that the dollar coined, whatever it may be, may be deposited and a silver

certificate issued on it, as now provided by law; so that if you reach a ratio of 18, 19, or 20 to 1, you still have the same right to a certificate that you have to-day.

I think it is the duty of this House, and especially of my associates, to settle this money question, and to settle it on the lines I have pointed out, not by piecemeal, and not by a repeal of an act that sustains the value of silver before fixing the ratio, not to demonetize silver and then undertake to restore it afterwards; but we have time now to arrange, according to the principles of bimetallism, a measure in conformity with our promise to the American people; and we ask our friends on the other side of this question—our Democratic friends on this side, who are so eager to get rid of the Sherman law, so called, and which I do not defend upon any other principle than that it is the only law which sustains silver until we can fix the ratio—I ask them to come in all fairness and enable us to carry out our pledges to restore bimetallism to this country. If you do not, yours is the responsibility, not ours. [Loud applause.]

Michael D. Harter [O.] argued at some length that the volume of currency had little to do with the prosperity of a country, but that security of the standard of value was essential to it.

Since 1878 we have gone on buying silver which we did not need, which we did not want, and have been indirectly paying for it with gold which we did want. What would be the result with any business man who could not tax others to maintain himself? He would be bankrupt in a little while. This nation of ours, but for its ability to tax everybody, would be bankrupt now.

What has it cost? The difference, Saturday, two weeks ago, between the market value of the silver which you have been piling up in the treasury, and the price you paid for it, was, since 1878, $141,810,980 of the people's money.

Why, gentlemen, this sum alone would be sufficient to complete the Nicaragua Canal, and yet, not satisfied with such a result as this, you are asked to dip deeper and deeper into the commercial vitals of your country. Is it not time to stop, put on the brakes to reverse the engine?

The very people who furnished this pig silver to the treasury at a price higher by $140,000,000 than it is worth, refuse to take these dollars, and the result is practically that the silver

certificate, printed on paper, circulates more freely than the silver coin, and I say that these certificates would circulate equally well if they had no silver bullion behind them.

The whole world, indeed, would have a higher esteem for the credit of this country if you issued the certificates without buying any silver to put behind them. We are a hissing and by-word for the whole commercial world; and they look upon us and say, "The hand of the American people lost its cunning when they entered on the folly of silver buying"; and, moreover, here we are in the midst of a panic as the result of these purchases.

Nothing can be said in favor of this thing—absolutely nothing. And to-day they come to us and propose that we should have the free coinage of silver at a ratio far below the market ratio, a proposition intrinsically dishonest. The gentleman from Missouri [Mr. Bland] said that France was a bimetallic country. The gentleman is mistaken, France is a monometallic gold-standard country; and it is only since it has been so that she has had gold and silver circulating freely at the same time. It is almost beyond belief that members of this House, in 1893, should believe in the theory that the two metals can be kept in joint circulation, both a legal tender, and both purporting to be equally a standard of value. Lycurgus, the lawgiver of Sparta, 900 years before the coming of our Lord, knew too much to believe that this was possible.

Charles J. Boatner [La.].—Do you regard it as impossible so to regulate by law the coinage of gold and silver that they can be made of the same intrinsic value and safely utilized in the regulation of our currency?

Mr. Harter.—It is not necessary for me to answer that question. All history, from the opening pages of its record, answers that question, invariably in the same way—in the negative.

I say to my friend from Louisiana, without a miracle we can not keep both gold and silver coin in circulation at any fixed ratio. The law of Thomas Gresham is as much the law of God as if it were written between the covers of the Bible. I say to-day it would be no more easy for Congress to secure bimetallism under free coinage—that is, keep both metals in general circulation at a fixed ratio, no matter how high or how low the ratio—than to discover perpetual motion.

Is there a man here on this floor who would be willing to exchange 100 cents this morning for 58 cents? Until you can find a people willing to do so you can not maintain any such

ratio as that. But you are going to vote on different ratios, and here is the great danger that underlies this question. You may not weigh the effect of the ratio. If you can not adopt 16 to 1 you are going to try to vote for 17 to 1, which will be no better. Eighteen to 1 would not help you. Nineteen to 1 would be of no earthly benefit, and finally you come to a ratio of 20 to 1. Now, suppose you adopt that, what would it be? At the present price of silver a silver dollar at the ratio of 20 to 1 on the day before yesterday would have been worth less than 75 cents.

NICHOLAS N. COX [Tenn.].—One moment, please. Does not the 58-cent silver dollar buy just as much of the products of this country as any other dollar?

MR. HARTER.—That is the present condition under limited coinage, but you are proposing to change it. The very morning that you have by your law established free coinage in this country, then it ceases to be true, and that every dollar in existence which is now held up to its full nominal value by our present law will sink to 58 cents, the bullion value, as soon as your law becomes operative.

MR. COX.—That is merely a prophecy.

MR. HARTER.—I beg the gentleman's pardon, it is a fact. I invite you to go across the border into free-coinage Mexico with me, where the dollar is worth what the United States dollar would be in the event of the adoption of this law which you propose—that is, the exact bullion price of the silver and no more.

If there is not enough money in the country, what is your plan for increasing the supply? Your plan is the free coinage of silver at 20 to 1, which would drive every dollar of gold out of circulation. It means that if you have eighteen hundred millions of money to-day to do the business of the country, which you say is not enough, that if you should have free coinage then you would have only twelve hundred millions. That is inflation with a vengeance, isn't it?

If you had three men employed to-day, on to-morrow morning you could then only employ two, and the competition between the three would reduce the price for the two men you could employ to starvation wages. Now, look at the laboring man's side of the free-coinage question. You reduce his wages by cutting off the demand for his labor, and then, after reducing his wages, you pay him in a 75-cent dollar. But you also say your plan will increase the price of everything he consumes.

Why, I have heard in Holy Writ of a son asking his father

for bread, and it says, "Will he give him stone?" You free-coinage men, when the workingmen ask for bread, would give them a stone; yes, you give them worse than that; you give them dynamite to try their teeth on. [Laughter.]

But see what we propose will accomplish for the country. We advocate the unconditional stoppage of the purchase of silver. Now, what would result from the adoption of this policy? If you pass the law which we propose, you will see the morning sun looking down on the country, and will find it in a vastly improved condition. Some gentlemen have been, I am afraid, unfair in trying to give the impression out in this House that stopping the purchase of silver would drive silver out of circulation. Not at all. If you stop the purchase of pig silver every dollar of silver now in circulation will remain in circulation; not 10 cents worth of it will be driven out. Every dollar of paper money would also remain in circulation; all the gold now in the country would also continue in our service. But what else would happen? The passage of this measure would declare to all the countries in the world that you mean to keep our standard of values permanent, safe, and solid. We now offer the best security for money obtainable in any country on earth. Men living in France, Germany, and Great Britain will again invest their money freely in our securities as soon as they feel that they will not be cheated out of a large part of it. Here we are at peace, with the greatest resources of any nation on the globe, without danger from within or without, and our security the most absolute that can be given for capital. Money would flow here on the wings of the wind for investment; and money would loan within ten days after the repeal at the rate of 2 per cent. on call in the city of New York.

Joseph C. Hendrix [N. Y.] spoke in favor of the repeal. His speech largely consisted of an exposition of the "evolution of finance," of which the gold standard was the culmination.

On August 14 Joseph W. Bailey [Tex.] replied to him.

I have, Mr. Speaker, been not a little diverted by the change in the arguments of our friends on the other side, and, as I heard the distinguished gentleman from New York [Mr. Hendrix] on Saturday last describe what he called the "evolu-

tion of finance," I could not avoid thinking that some financiers had been undergoing that same process of evolution. [Laughter.] Up to within the past few months it was not common to find a pronounced advocate of the single standard in this country. The men who denounced silver and demanded its demonetization professed themselves to be bimetallists, but insisted that the ratio between the two metals could only be fixed by an international agreement; along this line the argument proceeded until now, and when they think that they have brought the people up to that point they go a stage further, and beginning with the distinguished gentleman from Maryland [Mr. Rayner], who opened this debate, one after another their leaders have declared that even an international agreement can not preserve the parity of these two metals. If they succeed in destroying silver money in this country now, ten years from to-day not one of them will vote for its rehabilitation under any circumstances.

Mr. Bailey then entered into an economic discussion of the subject, presenting the quantitative theory of money as laid down by David Ricardo and endorsed by all the economists of note.

There is no great writer on the subject of political economy who does not lay it down as a primary law in the science of money that as you increase its volume you diminish its value, and as you diminish its volume you increase its value.

But, Mr. Speaker, it is a waste of time to detain this House in arguing that to make money scarcer makes it higher, and I pass to a consideration of the results which will follow the enactment of this bill into a law. An important and practical effect will be that an indescribable scramble for gold will ensue at once. There is not in the world enough gold to furnish France, Great Britain, Germany, the United States, and Austria with as much gold as France has to-day. Where, then, will the other nations of the world procure the gold with which to establish their gold standard? Procure it they must, and will, but in doing so they can neither acquire enough for their own use nor will they leave enough for the use of the nations from which they take it. The operation would manifest itself first in a tendency to limit purchases and increase sales on the part of all those countries which find it necessary or desirable to obtain gold. Nowhere is this tendency exhibited more plainly than in a recent report of the Treasury Department, which

shows that during the last fiscal year our exports have fallen off more than two hundred millions, and our imports have increased over ninety millions, as compared with the previous one.

We have another and impressive object lesson as to the effect of gold acquisition by other nations. During the past eighteen months the English banks, under the advice of Mr. Goschen, have been increasing their gold reserves. Austria-Hungary has been buying gold to complete the establishment f a gold standard. Under the influence of these two demands .e have exported something more than one hundred millions of gold, and the country is threatened with a panic. Yet with a strange infatuation, gentlemen who declare that these evils are attributable to our exportation of gold are advocating a policy which is certain to more than double that exportation.

They tell us that we can go into the open markets of the world with our bonds and buy gold enough to insure the safety of our gold reserve; but if this bill becomes a law you will meet the other nations of the earth in these same markets, with their bonds in their hands, trying to sell them for gold. Not only this, but the individual debtor in every country which undertakes to change its basis will be called upon by his bank to cancel his indebtedness, so that the bank can provide its gold reserve. The waters of every sea will be white with the sail of ships seeking a market in which they can exchange their produce and their merchandise for gold. The great mass of property thus forced upon the markets, coupled with the enormous demand for money, will reduce the price of all property to well-nigh the point of confiscation. The combination of these two forces—this unprecedented offer of goods and this unprecedented demand for money—will be followed by a greater and more sudden divergence between the value of money and the price of commodities than has ever before been witnessed in the history of the world.

Under these circumstances the only thing which can avert a universal and destructive panic is that the silver-using nations, perceiving the danger, will undertake the gradual adoption of a gold standard. This, while it will not subtract anything from the total suffering imposed upon the debtor class, will render their misery less acute by distributing it over a longer length of time.

It is not denied, and can not be successfully denied, that a law of this kind works a hardship upon the debtors of any country by requiring more of their property to pay their debts.

But we are told that they ought to be willing to suffer this single misfortune, however great it may be, in order to establish a sound and permanent system, and we are assured that these bad effects are only temporary. Mr. Speaker, that is but a partial view of the subject. This bill, if it becomes a law, will inflict a great and permanent injury upon all classes of our people except the money-lending class and the class whose incomes are fixed. I mean by this that a contraction in the volume of our currency must be followed by a contraction in the volume of our business. No subtlety about a standard of value and no refinement about the use of credits can convince me against the truth of this proposition. I know there is not an intelligent banker in the United States who would retire one-half of his capital and still attempt to transact his business undiminished in amount. I know that there is not a merchant or manufacturer so mad as to believe that he can withdraw one-half of his capital from his business without contracting his business to answer the reduction of his capital.

Even, sir, if we consider money merely as a medium of exchange, it still must be admitted that the amount of money ought to bear some fair correspondence to the exchanges which it is expected to perform. Of course there are credit devices which economize its use, but they derive their value from the fact that they are promises to pay in the money of ultimate redemption. Take the money of final payment from behind the checks and drafts about which we hear so much, and they would not be worth the clean paper on which they are written. The amount of our money must determine the amount and the value of the credits which we can see. No reasonable man, of course, expects a dollar in money to support every dollar of credit, but every sensible man knows that the more money we have, the safer our credit becomes.

All great writers on political economy affirm that money is necessary in the development of civilization and the extension of commerce; that without it there can be no division of labor, with its resulting skill and other benefits. Concede that proposition, and it follows as a corollary that enough money is necessary to attain the highest development of civilization and the greatest extension of commerce, and when we restrict the amount of money below the requirements of the people we obstruct the progress of mankind.

Gold alone can not furnish a sufficient supply of money to meet the necessities of commerce and civilization. There is not one-half enough of it now, and the supply as compared

with the demand is diminishing. During the last year its entire production was about $133,000,000. Of this amount, something like $33,000,000 were produced by the silver mines; this source of supply will be lost when the silver mines are closed and the world will be left with an annual increase of about $100,000,000. Of this amount it is estimated that more than $70,000,000 will be annually consumed in the arts and in dentistry, leaving about $30,000,000 for money uses, and this is not enough to replenish the losses and the abrasion from the present stock.

Mr. Speaker, I shudder to contemplate the effect of this catastrophe upon my race. A stagnation of business and a paralysis of industry must follow it. Another long night of intellectual darkness and political degradation will settle down upon the world; and there is now no new America whose discovery will reillume the ages and unfetter commerce.

Mr. Bailey, admitting that the maintenance of the parity between gold and silver at any given ratio was a difficult matter, declared that the difficulty would greatly be reduced by free coinage.

It is nonsense to tell me that a law which permits me to coin 412½ grains of standard silver into a debt-paying dollar will not greatly enhance the price of silver. It will, at least, render it more valuable in the payment of debts, and while the advocates of gold seem to have entirely overlooked the function which money performs as a standard of deferred payments, many of our profoundest thinkers on the subject regard this function as secondary to none of money's other uses.

Almost every gentleman who has spoken upon the other side, in discussing this phase of the question, has fallen into the curious contradiction of first asserting that this Government, acting alone, can not raise the price of silver bullion, and then in almost the next sentence declaring that if we enter upon a policy of free coinage the silver of all the world will flow into our mints. Both propositions can not possibly be correct, because there could be no inducement for silver to come here unless a free-coinage law had raised it above its present price.

We often hear it asserted that it is not demonetization, but the difference in the amount of their productions, which has caused the displacement of the parity between gold and silver. This can not be true, for if this were the explanation

the same cause would have produced the same effect at other periods.

The market value of gold and silver varies to-day so widely because one is a full money metal and the other is a commodity, and their value will continue to vary so long as this relation continues. The way, and the only way, to elevate and steady the price of silver is to open your mints to its free and unlimited coinage, and thus create, as a great nation like this easily can, an unlimited demand for silver at its coining value.

The authorities are unvarying and unequivocal in declaring that a decrease in the volume of money benefits nobody except the income class and the holders of Government funds, and that the increase of money benefits everybody except them.

I do not believe, sir, that legislation ought to be shaped for the benefit of any particular class, but if special privileges must be conferred by law on somebody, they ought to be conferred in accordance with the time-honored maxim of Democracy, which declares the sum of wise government to be comprehended in the motto: "The greatest good to the greatest number."

It is useless to disguise, or to attempt to disguise, the fact that, in a large degree, this is a contest between the debtors and the creditors of the world. The debtors are willing to pay in the money of their contract, desiring, however, to exercise the option which the law has allowed them. The creditors are determined to destroy that option, and thus compel a payment in the more valuable money, rendered more valuable still by the aid of legislation.

We have even been pleaded with in this hall to preserve the faith of the Government untainted. I trust, sir, that the American Congress needs no such urgence. I do not believe there is a thoughtful American citizen in this broad land, and surely there is not an American Representative in this hall who does not unswervingly insist that every contract of his Government shall be fulfilled religiously and according to its terms.

But, sir, I am no more willing that Congress should take from the people and give to the bondholders than I am that it shall take from the bondholders and give to the people. It is one of those rules which works both ways, and ought to work either way with equal justice.

Our fathers sold bonds, and the purchasers had it explicitly nominated in the law that they were payable in coin of the standard then existing. Let us pay them precisely as our fathers agreed to pay them, and to the utmost farthing,

even if it takes the pound of flesh and the heart's best blood goes with it. This far every honest man should be willing and anxious to go, but not one step farther.

Gentlemen, you deceive yourselves as to the temper of the people on this subject if you imagine that you can pacify them by shallow declamations about a dishonest dollar. If the present silver dollar is not an honest one, the people are willing to make it so, according to any reasonable definition that can be proposed, and all they ask of you to-day is an opportunity fairly to test the matter.

If you do this work faithfully and well, the people will bless the memory of this Congress for generations and generations to come. If you do it ill, they will undo what you have done, and they will not only sweep from the statute book the unjust law which you have written there, but they will drive forever from power and place the recreant representatives who have betrayed their confidence and disappointed their hopes. [Applause.]

On August 15 General Charles H. Grosvenor [O.] supported repeal in a long speech, at the conclusion of which he said:

The people of this country can rely upon the Republicans in Congress to do their duty. We can not afford to vote to put the Administration of Mr. Cleveland "in a hole." We can not afford to be influenced in our vote upon this momentous question by any desire for partisan advantage or any hope of the disruption of the Democratic party. The criterion of our vote, the basis of our judgment, must be whatever intelligence we have on this subject, and we will be instigated and inspired by our never ceasing love of country and patriotic devotion to that which is her best interest. [Loud applause.]

On August 16 Samuel W. McCall [Mass.] supported repeal, arguing in favor of the gold standard. Referring to the fact that John G. Carlisle, Secretary of the Treasury, who while in Congress had supported free coinage of silver, was now opposed to it, he said:

We should not have free coinage, simply because Mr. Carlisle is not a pattern of consistency and apparently has seen a new light. I do not agree upon many political questions with Mr. Carlisle, but he possesses the instincts of a states-

man; and the effect of the great responsibility of the office he now holds, with his hand upon the throttle of that mighty engine which can start or stop all our wheels of industry, has been to sober him, as it would sober any man who had at heart the interests of his country.

I do not imagine that it is necessary here to repeat any of the old classical arguments about the desirability of the gold standard as against the silver standard; and I may say here that I take no stock whatever in the exploded theory that we can have a double standard. I do not believe you can have any double standard of value any more than you can have a double quart measure or a double pound weight. It seems to me that we must adopt some standard in value; and while, from the nature of the case, we can not get anything that is inflexible, that will never rise or decrease in value, it is our duty to adopt that at least which will put us on terms of equality with the other trading nations of the world, and which will possess, in the highest degree obtainable, the quality of stability.

If we take the value of gold as compared with labor, which I think is fairly the unit of production, we shall see that gold and labor during the last twenty years have maintained their relations to each other, and that wages expressed in terms of gold are at least equal to-day to what they were twenty years ago, if not greater.

But gentlemen say you must take commodities as the measure of value. Now, Mr. Speaker, I submit that commodities do not constitute a proper test. If twenty years ago an article required so much human labor in its production, and to-day that article is produced by the mere automatic motion of a machine at one-third the cost at which it was produced, then I say it should have, with reference to human labor, only one-third the value that it had then. The work of a machine does not count in this matter.

The work of a machine, except as it may involve the ingenuity of the inventor, to whom money is paid for the invention and the cost of labor in producing the machine, should count for nothing whatever in the transaction.

And now let us see what terrible burden is laid on the debtor class in this country. Twenty years ago, for instance, you may have loaned a man $100. That $100 required on your part a certain amount of labor to procure it. To-day that man returns to you $100; and I submit that this sum of $100 should require as much human labor to-day to procure it as was

required to procure $100 when you lent him that sum. I submit it would be most unjust if to-day the man should undertake to repay you in any commodity which, by reason of the invention of a new machine, costs to-day only $20 in labor, although at the time the original loan was made the cost would have been $100 in labor.

Consider the improvement in various processes of human labor. Sixty years ago the labor involved in carrying a bushel of wheat from a point west of the Missouri river to New York would have been one hundredfold in excess of the amount of labor involved in the original production of that wheat. But by reason of improved methods of transportation that wheat can to-day be put down in New York for an infinitesimal fraction of what it would have cost then. Shall we select some metal as our standard of value which will go backward and simply record what was the cost of a given transaction sixty years ago—which will keep its par with the obsolete and expensive methods of twenty years ago? I submit that the most nearly correct unit of value you can get is the unit of human labor, which is the unit of production, and as measured in that gold has been the most stable.

Mr. Speaker, there is another reason in favor of the gold standard besides the reason that it is the better standard. The gold standard is the existing standard in this country, and it should require some very potent reason to justify us in changing that standard to another. But it is asked: "Why do you propose to diminish the amount of your money when we are having a money famine; when all our industries are crying out for more money, why should you go to work and practically demonetize a large part of the money of the country?"

Mr. Speaker, there never was a more patent fallacy than that. This country is not suffering from lack of currency or circulating medium. If you will compare the treasury report of the first of August in this year with the treasury report of one year previous, you will find that there has been an increase in the amount of circulating medium to the extent of at least $10,000,000; and when you take into account the $20,000,000 of gold which since the first of August has reached New York, and the increase of ten or fifteen millions more in the national bank circulation, it is entirely clear that our circulating medium to-day is $40,000,000 more than it was a year ago.

Why is it, then, that our business has declined? It may be from a variety of causes. I have no doubt that the fear

of a radical change in the tariff has contributed to a considerable degree and has curtailed the operations of our manufacturers. But it is to be observed that this depression did not begin with the stopping of mills and the consequent tightening of money; but when, with the wheels of our mills revolving, with our manufacturing establishments having orders upon which to run, they have had to shut down because of the lack of money, it is clear that there is some cause which affects those who have money, creating a fear which is paralyzing the business of the country.

So long as this Government is able, and so long as the people believe it able, to redeem all its money in gold, people will be entirely controlled in the kind of money they select by considerations of mere convenience. But the moment the point is reached when it appears that the Government may not be able to redeem all its money in gold, but that some holders of its obligations will be obliged to take a less valuable metal, then convenience gives place to fear; the bill holder becomes timid; and from the effect of this impulse of fear there is a locking up of our money from actual use.

Gentlemen call this a conspiracy to tighten the money market, but there never was such a widespread and universal conspiracy since the world began. It does not affect merely the great financial heart of this country, the city of New York, where the bankers to-day see their deposits constantly decreasing, where the national banks have run below their required reserve—$15,000,000—but this distrust has appeared in Boston, in Chicago, in Denver, and in cities beyond the Sierras; and I believe it is due to a fear which can chiefly be traced to the effect of the policy of the Sherman law and the continuance of the purchase of silver upon our circulating medium.

I have said what to my mind are the chief things which should be considered here in this discussion. In the first place, we have in this country to-day about the sum of $650,000,000 in silver. That is all that we can stagger under. But, if we stop where we are, I believe we can carry that amount and return to our normal financial condition, but it is necessary to stop there in order to prevent a further contraction of the currency which would result by the demonetization of gold, and in order to keep us from a silver standard.

The only thing for us to do, in view of the policy of the other nations of the world, is to take up the battle and fight, not merely for ourselves, but for the common interests of mankind; and in that view to go into a struggle with the

THE YELLOW PERIL THAT WE ARE ALL AFRAID OF
Cartoon by Victor Gillam in "Judge"

other nations of the world for gold. That is the surest way to fix the international status of silver. We will never get there—to the point desired by those who favor silver—if we are content to load down the energies of the nation with a burden that would swamp the greatest nation that ever existed by attempting to carry the silver of the world alone.

Mr. Speaker, I say, in conclusion, that if we want to maintain the two metals in circulation here, if we want to maintain the gold standard in this country, if we do not desire to drive from our business every drop of the rich, red, golden blood that vitalizes every civilized nation, if we do not wish to continue this paralysis of business, and subject our farmers to the system of exchange that is chiefly responsible for the degradation and practical slavery of the Indian peasant, we will have to repeal the act of 1890 unconditionally. And while we may not restore confidence in the minds of the people at one blow, we will go very far toward remedying the depression which has settled upon all of the industries of the country. [Applause.]

William J. Bryan [Neb.] spoke in favor of free coinage of silver.

He referred to President Cleveland's message.

If I am able to understand its language it points to the burial of silver, with no promise of resurrection. Its reasoning leads irresistibly to universal gold monometallism. If the United States, the greatest silver producing nation, which now utilizes more than one-third of the total annual product of the world, closes its mint to the coinage of silver, what assurance have we that it can retain its place as primary money in the commercial world?

We hear much about a "stable currency" and an "honest dollar." I denounce that child of ignorance and avarice, the gold dollar, under a universal gold standard, as the most dishonest dollar which we could employ.

I stand upon the authority of every intelligent writer upon political economy when I assert that there is not and never has been an honest dollar. An honest dollar is a dollar absolutely stable in relation to all other things. Laughlin, in his work on "Bimetallism," says:

> Monometallists do not—as is often said—believe that gold remains absolutely stable in value. They hold that there is no such thing as a "standard of value" for future payments in either gold or silver which remains absolutely invariable.

He even suggests a multiple standard for long-time contracts. I quote his words:

> As regards national debts, it is distinctly averred that neither gold nor silver forms a just measure of deferred payments, and that, if justice in long contracts is sought for, we should not seek it by the doubtful and untried expedient of international bimetallism, but by the clear and certain method of a multiple standard, a unit based upon the selling prices of a number of articles of general consumption. A long-time contract would thereby be paid at its maturity by the same purchasing power as was given in the beginning.

Jevons, one of the most generally accepted of the writers in favor of a gold standard, admits the instability of a single standard and, in language very similar to that above quoted, suggests the multiple standard as the most equitable if practicable. Chevalier, who wrote a book in 1858 to show the injustice of allowing a debtor to pay his debts in a cheap gold dollar, recognized the same fact, and said:

> If the value of the metal declined the creditor would suffer a loss upon the quantity he had received; if, on the contrary, it rose, the debtor would have to pay more than he calculated upon.

I am on sound and scientific ground, therefore, when I say that a dollar approaches honesty as its purchasing power approaches stability. If I borrow a thousand dollars to-day and next year pay the debt with a thousand dollars which will secure exactly as much of all things desirable as the one thousand which I borrowed, I have paid in honest dollars. If the money has increased or decreased in purchasing power, I have satisfied my debt with dishonest dollars. While the Government can say that a given weight of gold or silver shall constitute a dollar, and invest that dollar with legal-tender qualities, it can not fix the purchasing power of the dollar. That must depend upon the law of supply and demand, and it may be well to suggest that this Government never tried to fix the exchangeable value of a dollar until it began to limit the number of dollars coined.

If by legislative action the demand for silver is destroyed and the demand for gold is increased by making it the only standard, the exchangeable value of each unit of that standard, or dollar, as we call it, will be increased. If the exchangeable value of the dollar is increased by legislation the debt of the debtor is increased, to his injury and to the advantage of the creditor. And let me suggest here, in reply to the gentleman

from Massachusetts [Mr. McCall], who said that the money loaner was entitled to the advantages derived from improved machinery and inventive genius, that he is mistaken. The laboring man and the producer are entitled to these benefits, and the money loaner by every law of justice ought to be content with a dollar equal in purchasing power to the dollar which he loaned, and anyone desiring more than that desires a dishonest dollar, it matters not what name he may give to it. [Loud applause.] Take an illustration: John Doe, of Nebraska, has a farm worth $2,000 and mortgages it to Richard Roe, of Massachusetts, for $1,000. Suppose the value of the monetary unit is increased by legislation which creates a greater demand for gold. The debt is increased. If the increase amounts to 100 per cent. the Nebraska farmer finds that the prices of his products have fallen one-half and his land loses one-half its value, unless the price is maintained by the increased population incident to a new country.

The mortgage remains nominally the same, though the debt has actually become twice as great. Will he be deceived by the cry of "honest dollar"? If he should loan a Nebraska neighbor a hog weighing 100 pounds and the next spring demand in return a hog weighing 200 pounds he would be called dishonest, even though he contended that he was only demanding one hog—just the number he loaned. Society has become accustomed to some very nice distinctions. The poor man is called a socialist if he believes that the wealth of the rich should be divided among the poor, but the rich man is called a financier if he devises a plan by which the pittance of the poor can be converted to his use. [Laughter and applause.]

The poor man who takes property by force is called a thief, but the creditor who can by legislation make a debtor pay a dollar twice as large as he borrowed is lauded as the friend of a sound currency. [Laughter and applause.] The man who wants the people to destroy the Government is an anarchist, but the man who wants the Government to destroy the people is a patriot. [Applause.]

The great desire now seems to be to restore confidence, and some have an idea that the only way to restore confidence is to coax the money loaner to let go of his hoard by making the profits too tempting to be resisted. Capital is represented as a shy and timid maiden who must be courted, if won. Let me suggest a plan for bringing money from Europe. If it be possible, let us enact a law, "Whereas confidence must be restored; and whereas money will always come from its hiding

place if the inducement is sufficient: Therefore, be it enacted, That every man who borrows $1 shall pay back $2 and interest (the usury law not to be enforced)."

Would not English capital come "on the swiftest ocean greyhounds"? The money loaner of London would say: "I will not loan in India or Egypt or in South America. The inhabitants of those countries are a wicked and ungodly people and refuse to pay more than they borrowed. I will loan in the United States, for *there* lives an honest people, who delight in a sound currency and pay in an honest dollar." Why does not some one propose that plan? Because no one would dare to increase by law the number of dollars which the debtor must pay, and yet by some it is called wise statesmanship to do indirectly and in the dark what no man has the temerity to propose directly and openly.

We have been called cranks and lunatics and idiots because we have warned our fellow-men against the inevitable and intolerable consequences which would follow the adoption of a gold standard by all the world. But who, I ask, can be silent in the presence of such impending calamities? The United States, England, France, and Germany own to-day about $2,600,000,000 of the world's supply of gold coin, or about five-sevenths of the total amount, and yet these four nations contain but a small fraction of the inhabitants of the globe. What will be the exchangeable value of a gold dollar when India's people, outnumbering alone the inhabitants of the four great nations named, reach out after their share of gold coin? What will be the final price of gold when all the nations of the Occident and Orient join in the scramble?

A distinguished advocate of the gold standard said recently, in substance: "Wheat has now reached a point where the English can afford to buy it, and gold will soon return to relieve our financial embarrassment." How delighted the farmer will be when he realizes what an opportunity he has to save his country! A nation in distress; banks failing; mines closed; laborers unemployed; enterprise at a standstill, and, behold, the farmer, bowed with unceasing, even if unremunerative, toil, steps forth to save his country—by selling his wheat below the cost of production! And I am afraid he will even now be censured for allowing the panic to go as far as it has before reducing his prices. If it is difficult now to secure gold, what will be the condition when the demand is increased by its adoption as the world's only primary money? We would simply put gold upon an auction block, with every nation as a bidder,

and each ounce of the standard metal would be knocked down to the one offering the most of all other kinds of property. Every disturbance of finance in one country would communicate itself to every other, and in the misery which would follow it would be of little consolation to know that others were suffering as much as, or more than, we.

I have only spoken of the immediate effects of the substitution of gold as the world's only money of ultimate redemption. The worst remains to be told. Let the world once commit its fortunes to the use of gold alone and it must depend upon the annual increase of that metal to keep pace with the need for money.

Is it not probable that the supply available for coinage will diminish rather than increase? Jacobs, in his work on the Precious Metals, has calculated the appreciation of the monetary unit. He has shown that the almost imperceptible increase of 2 per cent. per year will amount to a total appreciation of 500 per cent. in a century. Or, to illustrate, that cotton at 10 cents to-day and wheat at 60 cents would mean cotton at 2 cents and wheat at 12 cents in one hundred years. A national, State, or municipal debt renewed from time to time would at the end of that period be six times as great as when contracted, although several times the amount would have been paid in interest.

When one realizes the full significance of a constantly appreciating standard he can easily agree with Alison that the Dark Ages resulted from a failure of the money supply. How can anyone view with unconcern the attempt to turn back the tide of civilization by the complete debasement of one-half of the world's money! When I point to the distress which, not suddenly, but gradually, is entering the habitations of our people; when I refer you to the census as conclusive evidence of the unequal distribution of wealth and of increasing tenancy among our people, of whom, in our cities, less than one-fourth now own their homes; when I suggest the possibility of this condition continuing until, passed from a land of independent owners, we become a nation of landlords and tenants, you must tremble for civil liberty itself.

Let me call your attention briefly to the advantages of bimetallism. It is not claimed that by the use of two metals at a fixed ratio absolute stability can be secured. We only contend that thus the monetary unit will become more stable in relation to other property than under a single standard. If a single standard were really more desirable than a double

standard, we are not free to choose gold, and would be compelled to select silver. Gold and silver must remain component parts of the metallic money of the world—that must be accepted as an indisputable fact. Our abandonment of silver would in all probability drive it out of use as primary money; and silver as a promise to pay gold is little, if any, better than a paper promise to pay. If bimetallism is impossible, then we must make up our minds to a silver standard or to the abandonment of both gold and silver. [Applause.]

Let us suppose the worst that has been prophesied by our opponents, namely, that we would be upon a silver standard if we attempted the free coinage of both gold and silver at any ratio. Let us suppose that all our gold goes to Europe and we have only silver. Europe will then have more money with which to buy our exports—cotton and wheat, cattle and hogs.

If, on the other hand, we adopt gold, we must draw it from Europe, and thus lessen their money and reduce the price of our exports in foreign markets. This, too, would decrease the total value of our exports and increase the amount of products which it would be necessary to send abroad to pay the principal and interest which we owe to bondholders and stockholders residing in Europe. Some have suggested the advisability of issuing gold bonds in order to maintain a gold standard. Let them remember that those bonds sold in this country will draw money from circulation and increase the stringency, and sold abroad will affect injuriously the price of our products abroad, thus making a double tax upon the toilers of the United States, who must ultimately pay them.

Let them remember, too, that gold bonds held abroad must some time be paid in gold, and the exportation of that gold would probably raise a clamor for an extension of time in order to save this country from another stringency. A silver standard, too, would make us the trading center of all the silver-using countries of the world, and these countries contain far more than one-half of the world's population. What an impetus would be given to our Western and Southern seaports, such as San Francisco, Galveston, New Orleans, Mobile, Savannah, and Charleston. Then, again, we produce our silver, and produce it in quantities which would to some extent satisfy our monetary needs.

Our annual product of gold is less than 50 cents per capita. Deduct from this sum the loss which would be occasioned to the gold supply by the closing of our silver mines, which produce gold in conjunction with silver; deduct, also, the amount con-

sumed in the arts, and the amount left for coinage is really inconsiderable. Thus, with a gold standard, we would be left dependent upon foreign powers for our annual money supply. They say we must adopt a gold standard in order to trade with Europe. Why not reverse the proposition and say that Europe must resume the use of silver in order to trade with us? But why adopt either gold or silver alone? Why not adopt both and trade with both gold-using and silver-using countries? The principle of bimetallism is established upon a scientific basis.

We were called together to relieve financial distress by legislation. Some propose to relieve the present stringency in the money market by removing the tax on national-bank circulation and allowing banks to issue 100 per cent. on their bonds instead of 90 per cent. This legislation would put values into bank stocks by law, because it would add to the profits of the bank, and such a law would probably raise the market price of bonds by increasing the demand for them. I will not discuss the merits of this proposition now. Let those who favor it prepare to justify themselves before their constituents—people who are not making 5 per cent. on an average on the money invested in farms or enterprises, and let those who will profit by the law cease to deny the ability of Government to increase the price of property by law. One is almost moved to tears by the sight of New England manufacturers protesting with indignation against the wisdom or possibility of giving fictitious value to a product, when for the last thirty years they have drained the rest of the country and secured artificial prices by protective tariff laws. [Applause.]

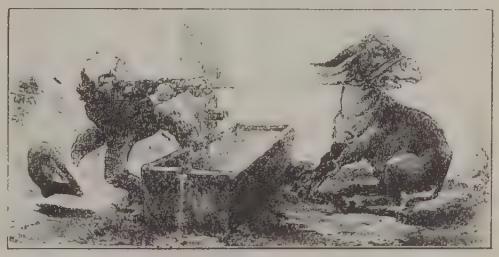
Some of our Eastern friends accuse the advocates of free coinage of favoring repudiation.

Repudiation has not been practiced much in recent years by the debtor, but in 1869 the credit-strengthening act enabled the bondholder to repudiate a contract made with the Government and to demand coin in payment of a bond for which he had given paper and which was payable in lawful money. That act increasing the market value of the bonds gave a profit to many who now join the beneficiaries of the act assuming the District debt in vociferous proclamation that "the Government can not create value." Does not the location of a public building add to the value of adjacent real estate? Do not towns contest the location of a county seat because of the advantage it brings? Does not the use of gold and silver as money increase the value of each ounce of each metal?

These are called precious metals because the production is

limited and can not be increased indefinitely at will. If this Government or a number of governments can offer a market unlimited as compared with the supply, the bullion value of gold and silver can be maintained at the legal ratio. The moment one metal tends to cheapen, the use falls on it and increases its price, while the decreased demand for the dearer metal retards its rise and thus the bullion values are kept near to the legal ratio, so near that the variation can cause far less inconvenience and injustice than the variation in the exchangeable value of the unit would inflict under a single standard. The option is always given to the debtor in a double standard.

In fact, the system could not exist if the option remained with the creditor, for he would demand the dearer metal and



BUT YOU CAN'T MAKE HIM DRINK
Cartoon by Joseph Keppler in "Puck" (1900)

thus increase any fluctuation in bullion values, while the option in the hands of the debtor reduces the fluctuation to the minimum. That the unit under a double standard is more stable in its relation to all other things is admitted by Jevons and proven by several illustrations. Mr. Giffin tries to avoid the force of the admission by saying that the difference in favor of the double standard is only in the proportion of 2 to 1, and therefore not sufficient to justify its adoption. It would seem that where stability is so important—and it never was so important as to-day, when so many long-time contracts are executed—even a slight difference in favor of the double standard ought to make it acceptable.

What is the prospect for the establishment of international bimetallism? I would be glad to see the unlimited coinage of

gold and silver at a fixed ratio among the nations, but how is such an agreement to be secured? The gentleman from Maryland [Mr. Rayner] says the unconditional repeal of the Sherman law will bring England to terms. Is it impossible to extract a lion's teeth without putting your head in his mouth? Is it not a dangerous experiment to join England in a single standard in order to induce her to join us in a double standard? International agreement is an old delusion and has done important duty on many previous occasions.

The opponents of the Bland law in 1878 were waiting for international bimetallism. Mr. Cleveland mentioned the prospect of it in his message in 1885, and again this year. It was a valuable weapon in 1890, when the Sherman bill was passed and the Brussels conference was called in time to carry us over the last presidential election. We are still waiting, and those are waiting most patiently who favor a gold standard. [Laughter and applause.] Are we any nearer to an international agreement than we were fifteen years ago? The European nations wait on England, and she refused within a year to even consider the adoption of the double standard. Can we conquer her by waiting? We have tried the Fabian policy.

Suppose we try bringing her to terms by action. Let me appeal to your patriotism. Shall we make our laws dependent upon England's action and thus allow her to legislate for us upon the most important of all questions? Shall we confess our inability to enact monetary laws? Are we an English colony or an independent people? If the use of gold alone is to make us slaves, let us use both metals and be free. If there be some living along the Eastern coast—better acquainted with the beauties of the Alps than with the grandeur of the Rockies, more accustomed to the sunny skies of Italy than to the invigorating breezes of the Mississippi Valley—who are not willing to trust their fortunes and their destinies to American citizens, let them learn that the people living between the Alleghanies and the Golden Gate are not afraid to cast their all upon the Republic and rise or fall with it. [Loud applause.]

One hundred and seventeen years ago the Liberty Bell gave notice to a waiting and expectant people that Independence had been declared. There may be doubting, trembling ones among us now, but, sirs, I do not overestimate it when I say that out of twelve millions of voters more than ten millions are waiting, anxiously waiting, for the signal which shall announce the financial independence of the United States. [Applause.]

This Congress can not more surely win the approval of a grateful people than by declaring that this nation, the grandest which the world has ever seen, has the right and the ability to legislate for its own people on every subject regardless of the wishes, the entreaties, or the threats of foreign powers. [Applause.]

Among those in favor of bimetallism, and in favor of independent action on the part of the United States, there is an honest difference of opinion as to the particular ratio at which the unlimited coinage of gold and silver should be undertaken. The principle of bimetallism does not stand upon any certain ratio, and it may exist at 1 to 30 as well as at 1 to 16.

In fixing the ratio we should select that one which will secure the greatest advantage to the public and cause the least injustice. The present ratio, in my judgment, should be adopted. A larger silver dollar would help the creditor. A smaller gold dollar would help the debtor. It is not just to do either, but, if a change must be made, the benefit should be given to the debtor rather than to the creditor.

We often hear our opponents complain of the "cupidity of the mine owner." Let us admit that the mine owner is selfish, and that he will profit by the increased price of silver bullion. Let us, for the sake of argument, go further, and accuse him of favoring the free coinage of silver solely for the purpose of increasing the price of his product. Does that make him worse than other men? Is not the farmer selfish enough to desire a higher price for wheat? Is not the cotton-grower selfish enough to desire a higher price for his cotton? Is not the laboring man selfish enough to desire higher wages? And, if I may be pardoned for the boldness, are not bankers and business men selfish enough to ask for legislation at our hands which will give them prosperity? Was not this extraordinary session called in order to bring back prosperity to our business men?

Is it any more important that you should keep a mercantile house from failing than that you should keep a mine from suspending? Are those who desire free coinage of silver in order that the barren wastes should be made to "blossom like the rose" any worse than those who want the Sherman law repealed in order to borrow foreign gold and retire clearing-house certificates? There is a class of people whose interest in financial legislation is too often overlooked. The money-loaner has just as much interest in the rise in the value of his

product—money—as farmers and miners have in the increased price of their products.

The man who has $10,000 in money becomes worth $20,000 in reality when prices fall one-half. Shall we assume that the money-lenders of this and other countries ignore the advantage which an appreciated currency gives to them and desire it simply for the benefit of the poor man and the laborer? What refining influence is there in their business which purges away the dross of selfishness and makes pure and patriotic only their motives? [Laughter.] Has some new dispensation reversed the parable and left Lazarus in torment while Dives is borne aloft in Abraham's bosom? [Laughter.]

But is the silver miner after all so selfish as to be worthy of censure? Does he ask for some new legislation or for some innovation inaugurated in his behalf? No. He pleads only for the restoration of the money of the fathers. He asks to have given back to him a right which he enjoyed from 1792 to 1873. During all those years he could deposit his silver bullion at the mints and receive full legal-tender coins at the rate of $1.29 for each ounce of silver, and during a part of the time his product could be converted into money at even a higher price. Free coinage can only give back to him what demonetization took away. He does not ask for a silver dollar redeemable in a gold dollar, but for a silver dollar which redeems itself.

If the bullion value of silver has not been reduced by hostile legislation, the free coinage of silver at the present ratio can bring to the mine owner no benefit, except by enabling him to pay a debt already contracted with less ounces of silver. If the price of his product has been reduced by hostile legislation, is he asking any more than we would ask under the same circumstances in seeking to remove the oppressive hand of the law? Let me suggest, too, that those who favor an international agreement are estopped from objecting to the profits of the silver mine owner, because an international agreement could only be effected at some ratio near to ours, probably 15½ to 1, and this would just as surely inure to the benefit of the owner of silver as would free coinage established by the independent action of this country. If our opponents were correct in asserting that the price of silver bullion could be maintained at 129 cents an ounce by international agreement, but not by our separate action, then international bimetallism would bring a larger profit to the mine owner than the free coinage of silver by this country could. Let the international bimetallist, then,

find some better objection to free coinage than that based on the mine owner's profit.

When we see a wheel of fortune with twenty-four paddles, see those paddles sold for 10 cents apiece, and see the holder of the winning paddle draw $2, we do not conclude that money can be profitably invested in a wheel of fortune. We know that those who bought expended altogether $2.40 on the turn of the wheel, and that the man who won only received $2; but our opponents insist upon estimating the profits of silver mining by the cost of the winning paddle. It is safe to say that taking the gold and silver of the world—and it is more true of silver than of gold—every dollar's worth of metal has cost a dollar. It is strange that those who watch so carefully lest the silver miner shall receive more for his product than the bare cost of production ignore the more fortunate gold miner.

Did you ever hear a monometallist complain because a man could produce 25.8 grains of gold, .9 fine, at any price whatever, and yet take it to our mint and have it stamped into a dollar with full legal-tender qualities? I saw at the World's Fair a few days ago a nugget of gold, just as it was found, worth over $3,000. What an outrage that the finder should be allowed to convert that into money at such an enormous profit! And yet no advocate of honest money raises his hand to stop that crime.

The fact is that the price of gold and silver does not depend upon the cost of production, but upon the law of supply and demand. [Applause.] It is true that production will stop when either metal can not be produced at a profit; but so long as the demand continues equal to the supply the value of an ounce of either metal may be far above the cost of production. With most kinds of property a rise in price will cause increased production; for instance, if the price of wheat rises faster than the price of other things, there will be a tendency to increased production until the price falls; but this tendency can not be carried out in the case of the precious metals, because the metal must be found before it can be produced, and finding is uncertain.

The money question is broader than the interest of a few mine owners. It touches every man, woman, and child in all the world, and affects those in every condition of life and society.

The interest of the mine owner is incidental. He profits by the use of silver as money just as the gold miner profits by

the use of gold as money; just as the newspaper profits by the law compelling the advertising of foreclosures; just as the seaport profits by the deepening of its harbor; just as the horse seller would profit by a war which required the purchase of a large number of horses for cavalry service, or just as the undertaker would profit by the decent burial of a pauper at public expense.

All of these receive an incidental benefit from public acts. Shall we complain if the use of gold and silver as money gives employment to men, builds up cities, and fills our mountains with life and industry? Shall we oppress all debtors and derange all business agreements in order to prevent the producers of money metals from obtaining for them more than actual cost? We do not reason that way in other things; why suppress the reason in this matter because of cultivated prejudices against the white metal?

To recapitulate, there is not enough of either metal to form the basis for the world's metallic money; both metals must therefore be used as full legal tender primary money. There is not enough of both metals more than to keep pace with the increased demand for money; silver can not be retained in circulation as a part of the world's money if the United States abandons it. This nation must, therefore, either retain the present law or make some further provision for silver. The only rational plan is to use both gold and silver at some ratio with equal privileges at the mint. No change in the ratio can be made intelligently until both metals are put on an equality at the present ratio. The present ratio should be adopted if the parity can be maintained; and, lastly, it can be.

If these conclusions are correct, what must be our action on the bill to repeal unconditionally the Sherman law? The Sherman law has a serious defect; it treats silver as a commodity rather than as a money, and thus discriminates between silver and gold. The Sherman law was passed in 1890 as a substitute for what was known as the Bland law. It will be remembered that the Bland law was forced upon the silver men as a compromise, and that the opponents of silver sought its repeal from the day it was passed. It will also be remembered that the Sherman law was in like manner forced upon the silver men as a compromise, and that the opponents of silver have sought its repeal ever since it became a law. The law provides for the compulsory purchase of 54,000,000 ounces of silver per year, and for the issue of treasury notes thereon at the gold value of the bullion.

These notes are a legal tender and are redeemable in gold or silver at the option of the Government. There is also a clause in the law which states that it is the policy of this Government to maintain the parity between the metals. The Administration, it seems, has decided that the parity can only be maintained by violating a part of the law and giving the option to the holder instead of to the Government. Without discussing the administration of the law, let us consider the charges made against it.

The main objection which we heard last spring was that the treasury notes were used to draw gold out of the treasury. If that objection were a material one, the bill might easily be

MISS DEMOCRACY—WHY, THAT PLANK BROKE WITH ME TWICE. IT WOULD BE SUICIDE TO TRY IT AGAIN

Cartoon by E. T. Richards, in the New York "Times" 1904

amended so as to make the treasury notes hereafter issued redeemable only in silver, like the silver certificates issued under the Bland law. But the objection is scarcely important enough for consideration. While the treasury notes have been used to draw out gold, they need not have been used for that purpose, for we have $346,000,000 worth of greenbacks with which gold can be drawn, so long as the Government gives the option to the holder. If all of the treasury notes were destroyed the greenbacks are sufficient to draw out the $100,000,000 reserve three times over, and then they can be reissued and used again. To complain of the treasury notes while the greenbacks remain is like finding fault because the gate is open when the whole fence is down, and reminds me of the man who made a box

for his feline family, and cut a big hole for the cat to go in at and a little hole for the kittens to go in at, forgetting that the large hole would do for cats of all sizes.

Just at this time the law is being made the scapegoat upon which all our financial ills are loaded, and its immediate and unconditional repeal is demanded as the sole means by which prosperity can be restored to a troubled people.

The main accusation against it now is that it destroys confidence, and that foreign money will not come here, because the holder is afraid that we will go to a silver standard. The exportation of gold has been pointed to as conclusive evidence that frightened English bondholders were throwing American securities upon the market and selling them to our people in exchange for gold. But now gold is coming back faster than it went away, and still we have the Sherman law unrepealed. Since that theory will not explain both the export and import of gold, let us accept a theory which will. The balance of trade has been largely against us during the last year, and gold went abroad to pay it, but now our exportation of breadstuffs has increased and the gold is returning. Its going was aggravated by the fact that Austria-Hungary was gathering in gold for resumption and was compelled to take a part from us. Instead of using that export of gold as a reason for going to a gold basis, it ought to make us realize the danger of depending solely upon a metal which some other nation may deprive us of at a critical moment.

The Sherman law fails utterly to account for present stringency. Let me suggest a more reasonable cause for the trouble. Last spring an attempt was made to secure the unconditional repeal of the Sherman law. We had no panic then, but the same forces which have always opposed any legislation favorable to silver demanded that the purchase of bullion should stop. Some who believe that 15 per cent. reserve makes a bank safe became frightened lest a 25 or 30 per cent. reserve might not be sufficient to make the Government safe, and wanted an issue of gold bonds. The great argument used in favor of both those propositions was that money was being drawn from the treasury and sent to Europe; that confidence was being destroyed and that a panic would follow. They emphasized and magnified the evils which would follow the departure of gold; they worked themselves and their associates into a condition of fright which did cause financial stringency. Like the man who innocently gives the alarm of fire in a crowded hall, they excited a panic which soon got beyond control.

The trouble now is that depositors have withdrawn their deposits from the banks for fear of loss, and the banks are compelled to draw in their loans to protect their reserves, and thus men who do business upon borrowed capital are crippled. The people have not lost faith in the Government or in the Government's money. They do not refuse silver or silver certificates. They are glad enough to get any kind of money. We were told last spring that gold was going to a premium, but recently in New York City men found a profitable business in the selling of silver certificates of small denominations at 2 per cent. premium. How many of the failing banks have obeyed the law in regard to reserve? How many have crippled themselves by loaning too much to their officers and directors? The situation can be stated in a few words: money can not be secured to carry on business because the banks have no money to loan; banks have no money to loan because the depositors have withdrawn their money; depositors have withdrawn their money because they fear the solvency of the banks; enterprises are stagnant because money is not in circulation.

Will a repeal of the Sherman law cure these evils? Can you cure hunger by a famine? I know that there are some who tell us that we have plenty of money. If I may be pardoned for a personal allusion, their attitude reminds me of a remark made by my father-in-law just after he entrusted his daughter to my care. "William," said he, laying his hand affectionately on my head, "while I have, we shall not *both* want." Others say, "What is the use of having more money? We can not get it unless we have something to sell." That is true, but the price of what we sell depends largely upon the amount of money in circulation. How can we pay our debts without selling something, and how can we sell anything without there is money in circulation to buy with? We need money. The Sherman law supplies a certain amount. Will the stringency be relieved by suspending that issue? If the advocates of repeal would take for their battle cry, "Stop issuing money" instead of "Stop buying silver," would not their purpose be more plain? But they say the repeal of the law will encourage foreign capital to come here by giving assurance that it will be repaid on a gold basis. Can we afford to buy confidence at that price? Can we afford to abandon the constitutional right to pay in either gold or silver in order to borrow foreign gold with the certainty of having to pay it back in appreciated dollars? To my mind, Mr. Speaker, the remedy proposed seems not only dangerous and absurd, but

entirely inadequate. Why try to borrow foreign capital in order to induce the people in this country to redeposit their savings in the banks?

Why do not these financiers apply the remedy to the diseased part? If the gentleman from New York [Mr. Hendrix], to whom I listened with pleasure, and who said, "I have come into this hall as a banker, I am here as the president of a national bank," desires to restore confidence, let him propose for the consideration of the members a bill to raise, by a small tax upon deposits, a sum sufficient to secure depositors against possible loss; or a bill to compel stockholders to put up security for their double liability; or to prevent stockholders or officers from wrecking a bank to carry on their private business; or to limit the liabilities which a bank can assume upon a given amount of capital, so that there will be more margin to protect its creditors; or a bill to make more severe the punishment for embezzlement, so that a man can not rob a bank of a half million and escape with five years, and can not be boarded at a hotel by a marshal, while the small thief suffers in a dungeon. [Applause.] Let him propose some real relief and this House will be glad to coöperate with him.

Or, if there is immediate relief necessary in the increased issue of paper money, let our financiers press the suggestion made by the gentleman from Ohio [Tom L. Johnson], viz., that the holders of Government bonds be allowed to deposit them and draw the face in treasury notes by remitting the interest and with the power of redeeming the bonds at any time. [Applause.] This will give immediate relief and will save the Government interest on the bonds while the money is out. But no, the only remedy proposed by these financiers at this time, when business is at a standstill and when unemployed men are suffering, is a remedy which will enable them both to control the currency and reap pecuniary profit through its issue.

What provision shall be made for the future? Upon that question our opponents are silent. The bill which they have proposed leaves us with no increased currency provided for. Some of the advocates of a gold standard, in the defence of their theory, find it necessary to dispute every well-established principle of finance.

We are told that as civilization increases credit takes the place of money and that the volume of real money can be diminished without danger. That recalls the experience of the man who conceived the idea that a fish could be made to live

without water. As the story goes, he put a herring, fresh from the sea, in a jar of salt water. By removing a little every morning and adding rainwater he gradually accustomed it to fresh water. Then by gradually removing the fresh water he accustomed it to air, and finally kept it in a cage like a bird. One day, in his absence, his servant placed a cup of water in the cage in order that the fish might moisten its food; but, alas! when the master came home he found that the fish had thoughtlessly put its head into the water and drowned!

From the arguments of some of our opponents we might be led to the conclusion that the time would come when money would not only be unnecessary but really dangerous.

The question, Mr. Speaker, is whether we shall increase our supply of primary money, as we do when we increase our gold and silver, or whether we shall increase our promises to pay real money, as we do when we increase national bank notes.

The larger the superstructure of credit, as related to the basis of metal, the more unsubstantial our system. If we present a bank note for payment we receive a greenback; if we present a greenback for payment, the treasurer has a right to pay in silver dollars, and now our opponents want it understood that a silver dollar is only a promise to pay a gold dollar. Is that sound money?

No, Mr. Speaker; if metallic money is sound money, then we who insist upon a base broad enough to support a currency redeemable in coin on demand are the real friends of sound money, and those are "dangerous fiatists" who would make the metallic base so narrow as to compel the Government to abandon it for the preservation of its people. If all the currency is built upon the small basis of gold those who hold the gold will be the masters of the situation. [Applause.] We have a right to demand that the future financial policy shall be a part of the repealing act, so that we may choose between it and what we have and reject it if it is less favorable than the present law. And I may add, in the language adopted by the Bimetallic League a few days ago—

> The refusal of the opponents of bimetallism to propose any substitute for the present law, or to elaborate any plan for the future, indicates either an ignorance of our financial needs or an unwillingness to take the public into their confidence.

But, sir, more serious than any other objection which can be made to the unconditional repeal of the Sherman law is the incontrovertible fact that a suspension of silver would tend to

lower the price of silver bullion and thus make the restoration of bimetallism more difficult.

The first question for us to decide then is, are we in favor of bimetallism or a universal gold standard? If we are in favor of bimetallism, the next question is, will a fall in the bullion price of silver as measured by gold help or hinder bimetallism? We are told by those who want a gold standard that it will help bimetallism; but the query is, if it would, "why do they favor it?" It is sufficient to arouse suspicion when every advocate of gold monometallism favors unconditional repeal, and the more emphatic his advocacy of gold the more earnest his desire for repeal. Is any subsequent legislation in behalf of silver intended? If so, why not propose it now? What money loaner, loaning upon a mortgage, would be willing to let the money go upon a promise that the mortgage should be delivered next week? Or what business man would cancel an obligation to-day on the promise of having money paid to-morrow? Shall we be more careless in protecting the sacred interests of our constituencies than a business man is in transacting his business?

What excuse can we give to our people for releasing what we have with the expectation of getting something in the future when the advocates of repeal boldly demand, upon this floor, the adoption of a universal gold standard, and predict that its coming is as certain as the rising of to-morrow's sun.

They tell us that our platform demands repeal, but does it demand repeal only? Shall we take away the "cowardly makeshift" before we restore the real thing for which that "temporary expedient" was substituted? As well denounce one kind of food because it lacks nourishment and then refuse all food to the patient. They shall not be permitted to thus mutilate the platform. No such inexcusable attempt at garbling has been witnessed since the minister took from the sentence, "Let him which is on the house*top not come down* to take anything out of his house," the words "topnot come down," and inveighed against the feminine habit of wearing the hair in a knot on the top of the head. [Laughter.] They demand of us unconditional repeal. They demand that we give up all that we have in the way of silver legislation before we know what we are to receive. Shall we surrender on these terms?

Rollin tells us that the third Punic war was declared by the Romans and that a messenger was sent to Carthage to announce the declaration after the army had started on its way. The Carthaginians at once sent representatives to treat for peace. The Romans first demanded the delivery of three hundred hos-

tages before they would enter into negotiations. When three hundred sons of the nobles had been given into their hands they demanded the surrender of all the arms and implements of war before announcing the terms of the treaty. The conditions were sorrowfully but promptly complied with, and the people who boasted of a Hannibal and a Hamilcar gave up to their ancient enemies every weapon of offence and defence. Then the Roman consul, rising up before the humiliated representatives of Carthage, said:

> I can not but commend you for the readiness with which you have obeyed every order. The decree of the Roman Senate is that Carthage shall be destroyed.

Sirs, what will be the answer of the people whom you represent, who are wedded to the "gold and silver coinage of the Constitution," if you vote for unconditional repeal and return to tell them that you were commended for the readiness with which you obeyed every order, but that Congress has decreed that one-half of the people's metallic money shall be destroyed? [Applause.]

They demand unconditional surrender, do they? Why, sirs, we are the ones to grant terms. Standing by the pledges of all the parties in this country, backed by the history of a hundred years, sustained by the most sacred interests of humanity itself, we demand an unconditional surrender of the principle of gold monometallism as the first condition of peace. [Applause.] You demand surrender! Aye, sirs, you may cry "Peace, peace," but there is no peace. Just so long as there are people here who would chain this country to a single gold standard, there is war—eternal war; and it might just as well be known now! [Loud applause on the Democratic side.]

There are thousands, yes, tens of thousands, aye, even millions, who have not yet "bowed the knee to Baal." Let the President take courage. Muehlbach relates an incident in the life of the great military hero of France. At Marengo the Man of Destiny, sad and disheartened, thought the battle lost. He called to a drummer boy and ordered him to beat a retreat. The lad replied:

> Sire, I do not know how. Dessaix has never taught me retreat, but I can beat a charge. Oh, I can beat a charge that would make the dead fall into line! I beat that charge at the Bridge of Lodi; I beat it at Mount Tabor; I beat it at the Pyramids; Oh, may I beat it here?

The charge was ordered, the battle won, and Marengo was added to the victories of Napoleon. Oh, let our gallant leader

draw inspiration from the street gamin of Paris. In the face of an enemy proud and confident the President has wavered. Engaged in the battle royal between the "money power and the common people," he has ordered a retreat. Let him not be dismayed.

He has won greater victories than Napoleon, for he is a warrior who has conquered without a sword. He restored fidelity in the public service; he converted Democratic hope into realization; he took up the banner of tariff reform and carried it to triumph. Let him continue that greater fight for "the gold and silver coinage of the Constitution," to which three national platforms have pledged him. Let his clarion voice call the party hosts to arms; let him but speak the language of the Senator from Texas [Mr. Reagan], in reply to those who would destroy the use of silver:

> Let us call the battle on and never leave the field until the people's money shall be restored to the mints on equal terms with gold, as it was years ago.

Let this command be given, and the air will resound with the tramp of men scarred in a score of battles for the people's rights. Let this command be given and this Marengo will be our glory and not our shame. [Applause on the floor and in the galleries.]

Well has it been said by the Senator from Missouri [George G. Vest] that we have come to the parting of the ways. To-day the Democratic party stands between two great forces, each inviting its support. On the one side stand the corporate interests of the nation, its moneyed institutions, its aggregations of wealth and capital, imperious, arrogant, compassionless. They demand special legislation, favors, privileges, and immunities. They can subscribe magnificently to campaign funds; they can strike down opposition with their all-pervading influence, and, to those who fawn and flatter, bring ease and plenty. They demand that the Democratic party shall become their agent to execute their merciless decrees.

On the other side stands that unnumbered throng which gave a name to the Democratic party and for which it has assumed to speak. Work-worn and dust-begrimed, they make their sad appeal. They *hear* of *average* wealth increased on every side and *feel* the *inequality* of its distribution. They see an overproduction of everything desired because of the underproductior of the ability to buy. They cannot pay for loyalty except with their suffrages, and can only punish betrayal

with their condemnation. Although the ones who most deserve the fostering care of Government, their cries for help too often beat in vain against the outer wall, while others less deserving find ready access to legislative halls.

HE CAN'T HELP DRAGGING IT IN
Cartoon by M. B. Trezevant in 1907

This army, vast and daily vaster growing, begs the party to be its champion in the present conflict. It cannot press its claims 'mid sounds of revelry. Its phalanxes do not form in grand parade, nor has it gaudy banners floating on the breeze. Its battle hymn is "Home, Sweet Home," its war cry—"Equality before the law." To the Democratic party, standing between these two irreconcilable forces, uncertain to which side to turn and conscious that upon its choice its fate depends, come the words of Israel's second lawgiver: "Choose you this day whom ye will serve." What will the answer be? Let me invoke the

memory of him whose dust made sacred the soil of Monticello when he joined

> The dead but sceptered sovereigns who still rule
> Our spirits from their urns.

He was called a demagogue and his followers a mob, but the immortal Jefferson dared to follow the best promptings of his heart. He placed man above matter, humanity above property, and, spurning the bribes of wealth and power, pleaded the cause of the common people. It was this devotion to their interests which made his party invincible while he lived and will make his name revered while history endures. And what message comes to us from the Hermitage? When a crisis like the present arose and the national bank of his day sought to control the politics of the nation, God raised up an Andrew Jackson, who had the courage to grapple with that great enemy, and by overthrowing it he made himself the idol of the people and reinstated the Democratic party in public confidence. What will the decision be to-day? The Democratic party has won the greatest success in its history. Standing upon this victory-crowned summit, will it turn its face to the rising or the setting sun? Will it choose blessings or cursings—life or death—which? Which? [Prolonged applause on the floor and in the galleries, and cries of "Vote!" "Vote!"]

Jerry Simpson [Kan.] spoke in favor of free coinage of silver. He declared that the bankers had stirred up the panic to procure the repeal of the Sherman act, and then that this panic had got away from them.

It has broken loose from them; it has not accomplished what they intended; and I fear that before it is stopped it will breed a revolution in this country that will shake this Government to its very foundation. That is the reason I think the hour has struck when every man in this country with any patriotism in his make-up should take the party collar off his neck, and stand up for the interests of the people and of his country.

Mr. Speaker, why should we trim our sails to fit the breeze of any country? Gentlemen talk about our inability to borrow more English capital. I want to ask those gentlemen this question: If we continue to borrow English capital as we have been doing in the past, paying these high rates of interest for it, who will ultimately own the industries of this country? It

is said that the English own to-day fifteen-sixteenths of our railroad stock. They own a great part of the great institutions of this country. That is the result of borrowing English capital.

Mr. Speaker, we have in this country all the resources that are necessary to create wealth for ourselves, a great territory stored by nature with all the materials that are needed to supply human wants. We have the most improved machinery; we have steam power which is doing the work each year of 22,000,000 men; we have millions of able-bodied men, willing and anxious to work that machinery and, by their labor, to produce from our own resources all the wealth that we require. Tell me why with all these materials, all these forces, we still should go abroad to Great Britain, the great creditor nation of the world, and ask her to lend us money! Why, sir, such a course is suicidal. I think the true financial policy of this country is to have our currency issued by the people, directly to the people, without the intervention of banks or other corporations. The issue of money is a public function which should not be delegated to individuals or private corporations.

I am opposed to a compromise on the ratio. I am opposed to a compromise on anything that is right. I believe that whenever you commence to compromise you are sure to compromise away what is right, and in this matter you will compromise away the interests of the debtor class. We have had too many compromises already intended to secure what gentlemen are pleased to call an "honest dollar." Five or six times already the contract has been changed, and we have to-day the most dishonest dollar that ever any country submitted to.

I am opposed to compromise, first, because it demoralizes the party that compromises; secondly, because it delays justice; and, thirdly, because it demoralizes the community. Now, what is the compromise that these people offer on this question? They say: "Let us increase the ratio; let us put more silver into the dollar"; that is, let us make the dollar dearer. The minute you do that you compromise away the principle that there is effect in the law to give value to money. You treat silver as a commodity, and you set gold up as the arbitrary measure of all values. If you but compromise away one single grain, you do that. If you make the ratio 20 to 1, you put so many more pounds in the bushel of wheat, so many more ounces in the pound of pork; you make the dollar dearer, and you compromise away the right of the debtor class. I want to tell these gentlemen that I did not come here to compromise away the rights of my constituency. I received a letter from a friend of

mine to-day that expresses my sentiments exactly. He says: "Jerry, you stand by 16 to 1 until hell freezes over, and we will send you a pair of skates to come home on." [Laughter and applause.]

We would never have had a rebellion in this country if our statesmen had not been compromisers—compromising away truth and justice and human rights. Webster and Clay, all the great statesmen of that era, were compromisers; and it finally ended up in a civil war which shook the country to its foundation and left a debt, with an attendant train of evils, that the youngest men in this House will never see entirely rooted out.

On August 19 Champ Clark [Mo.] spoke in favor of the free coinage of silver.

The gentleman from Maryland [Mr. Rayner], in his impassioned address the other day, declared that our contention that gold and silver are the money of the Constitution is an argument constantly addressed to the ignorance of the country. That is certainly a refreshing sort of statement. It appears to me that somewhere I have heard before of persons who exploited their superiority over the remainder of mankind, and who stood on the street corners rolling their eyes to heaven and thanking God they were not as other people. [Laughter.]

But there is no imminent danger that wisdom will die with the men from the East. [Laughter.]

But I undertake to say that until the chief industry of the East came to be lending money the wisdom of the East was on our side, and that until the senior Senator from Ohio [John Sherman] took a trip to Europe in 1867 every great statesman of this country, even in the East, had been a bimetallist. [Applause.]

It was one of the very few propositions agreed upon by Alexander Hamilton, the grandfather of the Republican party, and Thomas Jefferson, the chief priest, prophet, and apostle of constitutional liberty.

Aye, more. I state here and now, without the fear of successful contradiction, that, until unhallowed greed combined with prostituted ingenuity to discover new ways of despoiling the many for the benefit of the few, no great financier of any age or clime can be named who seriously advocated a single standard, while on our side the roll call includes all the eminent political economists who ever lived. [Applause.]

The gentleman from Ohio [Mr. Harter] likens our Uncle

Samuel to a patient suffering from alcoholism, and prescribes the gold cure. That he is very sick is true, but Dr. Harter makes an incorrect diagnosis. He is suffering not from delirium tremens, but from anæmia—from poverty of the blood—from inanition—from a lack of the circulating medium. The gentleman's remedy for our uncle, who has been bled almost to death by the Shylocks for their pound of flesh, is to still further deplete the tottering and enfeebled old man by more bleeding. Like the horse leech's daughter, he still cries in the dull ears of the illustrious sufferer "Give!" "Give!" [Laughter.]

What this country needs is not Dr. Harter's Iron Tonic, but Dr. Bland's Silver Cordial. [Applause.]

The gentleman from New York [Mr. Hendrix], who acknowledges that he is a Missourian by nativity, who is fortunate enough to be the president of a national bank, and who came to Congress by way of the East, draws a soul-harrowing and tear-compelling picture of the long-suffering and patriotic New York bankers standing in the breach after the manner of Leonidas at Thermopylæ and "holding up the financial system of the country by the neck." [Laughter.]

That is certainly a spectacle for men and angels.

The trouble is that they have had the business of the country by the neck until they have choked the breath of life out of its body [applause and laughter] and until the consuming desire of the great mass of the people is to break that same neck hold of Wall street. [Applause.]

He repeatedly told us that the monetary evolutionary processes which God set in motion had evoluted every civilized nation except ours into the single gold standard, and would in a few days evolute us into the same condition of ineffable felicity. [Laughter.]

Now, I never was much of an evolutionist, and have always preferred Moses to Darwin; but after listening to the gentleman's speech I believe more firmly in the Pentateuch than ever—for, if the highest product of all the evolutionary process is a Wall street gold bug, then the evolutionary process has been of little benefit to the human race. [Great laughter.]

According to his rather curious theory God Almighty—and not the Sherman law—is responsible for the condition that involves the globe to-day and is therefore presumably in favor of the gold standard.

In the absence of a revelation on the subject, and considering all the circumstantial evidence in the case, it looks as though God were on our side. [Applause.] In the beginning, in His

Infinite wisdom, He so distributed the precious metals throughout the world that after six thousand years of ceaseless human endeavor the quantities of gold and silver in circulation are almost precisely the same. [Applause.] He created man and woman to go in pairs, and bade them "Go forth, be fruitful, multiply, and replenish the earth." With alacrity has that command been obeyed. [Laughter.] He also created silver and gold to go in pairs, and sent them forth on the mission of propagating, multiplying, and replenishing the business of the world. Nobly have they discharged that duty, and of them, as of the bride and bridegroom at the marriage altar, may it be appropriately said: "Whom God hath joined together, let no man put asunder." [Applause.]

But we are dogmatically told that these metals which have been the faithful servants of humanity from a time whereof the memory of man runneth not to the contrary must now, after being lawfully wedded for sixty centuries, be divorced at the behest of England, the bully and freebooter among the nations of the earth.

I beg gentlemen to remember that, just so certainly as our mania for divorce between husband and wife is sapping the foundations of our social and moral fabric, just so surely will the divorce of gold and silver sap the foundations of our business fabric and cause the temple of our prosperity to topple to the dust. The gentleman assumes the rôle of prophet, and exhibits to us the happiness and glory in store for us if we vote with him, and the infamy and execration to which we are heirs if we vote as our constituents desire us to vote. Indeed, all the gentlemen on that side of the question indulge liberally in prophecies. They call to mind what Charles Dickens says of David Copperfield's sitting night after night under the gallery of the House of Commons, "recording predictions that never came to pass, prophecies that were never fulfilled, and explanations that were only meant to mystify." [Laughter.]

The gentleman from New York tells us that the panic was brought about, not by reason of the Sherman law, but because the Anglo-Saxon race has overdone the business of production. But he offered no remedy for the evil. The Anglo-Saxons are an industrious, ambitious, thrifty stock; but what would he have them do—stop the plow in the furrow, the sickle in the swath, and the mill in its grinding? That is decidedly rough on people who want to work, who know how to work, and who find their chief delight in work in the sweet hope of making pleasant the lives of their children.

But, if the panic in the United States is chargeable to the overproduction of Anglo-Saxons, how does it happen that it came on first in the South American republics, where few Anglo-Saxons find an abiding place, and where Spanish-Americans constitute the bulk of the population?

He professes himself an international bimetallist, and wants silver coinage postponed to a more convenient season, ignoring the fact that hope deferred maketh the heart sick.

The day has surely come at last when this Republic should lead and not follow in the procession of the nations, and if that day has not already dawned may God speed it in its coming. More than one hundred and seventeen years ago this country, then a feeble infant, declared its political independence of all the world, and some people have the audacity to believe that she, having grown to colossal proportions, should declare her financial independence and be free indeed. [Applause.]

And suppose that we completely remonetize and rehabilitate silver and England cuts our commercial acquaintance—what then? It would inevitably give us control of the commerce of every silver-using country on the globe—France, India, China, Mexico, the Central American States, and the republics of South America—which would more than compensate us for the English trade. [Applause.]

Gentlemen on the other side admit that there is not enough money in the country, for they rejoice with us that gold is now returning to this country; they try to make us believe that the annual output of gold available for coinage is constantly increasing, and they ask us to join them in passing a law authorizing the national banks to issue bills up to the full limit of the par value of the bonds on deposit.

The first source of increase which they suggest—the return of gold from abroad—may or may not be permanent; the second source of increase, the growing annual output of gold available for coinage, is without basis of fact, and as to the third source of increase—the leave to the national banks to issue more bills—we are not particularly enamored of the idea of placing ourselves absolutely at the mercy of the national banks and giving them power to expand and contract the volume of the currency at will. [Applause.]

The gentlemen of the single gold standard declaim grandiloquently about upholding national honor and about the sanctity of contracts. They charge us with being repudiationists. Now, who repudiated the contract? It was expressly provided that the bonds should be paid in "lawful money"—which meant

gold, silver, or paper; and this was just, for their owners paid for them in paper money worth 40 cents on the dollar. Then, after the war was over, and they had the bonds securely locked up, under the pretext of "strengthening the public credit"—that is the way they put it—not of "strengthening the bank account of the bondholders" [laughter], which is the way it ought to have been put—they induced a supple Congress to repudiate the contract with the people and to make the bonds payable in coin. That was step number one to rob the people. That was bad enough in all conscience. But worse was to follow. They by fraud induced Congress to pass the act of 1873 demonetizing silver, thereby making payment in coin mean payment in gold.

Again, I ask who broke faith? Who repudiated the contract? The people or the bondholders?

What was the result of these changes? It meant that it took from the people in way of taxes two horses, two cows, two sheep, two hogs, two bushels of wheat, corn, oats, barley, or flax, where one was taken before; it meant two blows of the axe, maul, sledge hammer, or pick where one sufficed before; it meant two drops of sweat wrung from the brow of labor where there was one before; it meant less food, fewer clothes, less time for study, poorer shelter, less leisure, and less enjoyment to every man, woman, and child in this broad land who works for a living. [Applause.]

It means that after the people have been taxed nearly to death for thirty years to pay the public debt, and, after paying two-thirds of it, they practically owe more of it than they did when they began to pay it. It is only a repetition of the story of the Sybilline books.

Solomon says:

> There are three things that are never satisfied, yea, four things say not It is enough: the grave; and the barren womb; the earth that is not filled with water; and the fire that saith not It is enough.

If he were writing his Proverbs now he could add a fifth thing that is never satisfied—the holder of American bonds.

The national banks are heard here and get what they want. The tariff barons are heard here and get what they want. The bondholders are heard here and get what they want. The subsidized steamship mail companies are heard here and get what they want. These can always offer a reason which carries instant conviction with it. But when the farmers of the country, through their representatives, prefer a request that they be not totally ruined, they are told to work more and talk less. When millions of honest laborers ask Congress to so order things as to give them the poor privilege of having a chance to toil, they are denounced as tramps and vagabonds. [Applause.]

"Let the people eat grass," quoth the pampered lackey of Louis XVI, who lost his head upon the block. "Let the people be damned," shouts William H. Vanderbilt.

For thirty-two years the legislation of this country appears to have had one end in view—that of building up a moneyed aristocracy, the very danger which the fathers of the Republic foresaw, against which they warned us, and from which Jefferson thought he had saved the country, when he abolished the law of primogeniture.

We have during this debate heard many sneers at "popular delusions."

"Popular delusions!" Those are sonorous words. We are gravely told by the single-standard gold men that the people do not know what is the matter with them, cannot understand what is destroying them, do not know what they want, and must rely for information entirely upon the leaders of the other side. That would certainly be repeating the ancient and futile performance of going to a goat's house for wool.

Now, the average American citizen may not be much of a political economist or logician, but he knows when he is hurt and when his business is crippled. [Applause.] He understands that when, after toiling sixteen hours a day through summer's heat and winter's cold, and after practicing the severest economy, he cannot at the end of the year make buckle and tongue meet, there is something radically wrong and that "something is rotten in the state of Denmark."

He may be afflicted with "popular delusions," but when he cannot, in 1893, sell for $50 per acre a farm which in 1872 cost him $100 per acre, he will search for the authors of that unpleasant phenomenon, and punish them when found. His weapon is the ballot, which, in the hands of resolute men, is more effective than shot and shell and Krupp's big guns. [Applause.]

The great Irish orator, Charles Stewart Parnell, once said:

> Opportunity is a horse, saddled and bridled, which stops at each man's threshold once in a lifetime. Be ready, mount, and he carries you on to success and honor. Pause but a moment, he is gone, and the clatter of his iron hoofs, echoing down the corridors of time, will forever remind you of what you have lost.

My Democratic brethren, the magnificent silver-white steed stands pawing impatiently at our gates. Let us vault into the

saddle and ride him into the realm of unfailing prosperity amid the benedictions of a grateful people. [Prolonged applause.]

William D. Bynum [Ind.] supported the repeal. In particular he defended Secretary Carlisle against the charges which had been made against him. After describing the drain upon the Treasury by the "endless chain," he said:

The Secretary of the Treasury was powerless to do anything to stop it. The law required him to maintain the parity between our gold and silver coin and to do this it was essential that he should redeem the treasury notes in whatever character of money the holders demanded. To have refused to do so would have been an acknowledgment that one was preferable to the other, one more valuable than the other—an admission the Government could not afford to make. To have refused payment in gold would have been to put gold to a premium and increased the excitement and aggravated the stringency.

In my judgment the Secretary, Mr. Carlisle, during the ordeal through which he has conducted the financial affairs of the Government, has not only sustained his high reputation, but has achieved a name that will compare favorably in history with those of the great men who have preceded him. That there was a great pressure to force an issue of gold-bearing bonds there can be no question. To have issued bonds would simply have been a restoration of the reserve by enlarging the demands to be made upon it.

It is not surprising, therefore, that the Sherman law has no friends; that it has been disowned by its reputed father. Every person condemns it as wrong in principle and vicious in practice. The singular fact, however, is that, while the friends of free coinage admit that it has worked great harm, they insist that it must remain in force unless something is adopted in its stead. The only excuse assigned for its maintenance is that it increases the volume of money and keeps down the appreciation of gold.

We have already seen that since its enactment $164,098,974 in gold has been driven out of the country. Nor is this all; during the same period the circulation of national banks was reduced $7,370,623, making a reduction in the volume of money in circulation of $171,469,597.

The entire amount of treasury notes issued under the provisions of this act to August 1, 1893, was only $148,286,234, showing a net reduction in circulation during its existence, if there had been no accessions from other sources, of $23,183,249. Why, then, should this measure, productive of such dangers, be maintained a single day? Why should it be used as a club to drive the representatives of the people into the adoption of some other measures which their judgments do not approve? [Applause.]

Gentlemen who are demanding that something shall be enacted in the place of the Sherman law know that that cannot be done now. They know it is unconditional repeal or nothing. If they succeed in grafting upon the measure for repeal a single one of their proposed amendments they know that the same cannot be enacted into a law. Your alternative, therefore, is to accept repeal or nothing, and upon that issue you must return and answer to your people.

Go home to your merchants who are unable to make collections to meet maturing bills, and say to them that you knew they were being pressed, but you could not secure just what you wanted, and that they will have to bear it the best they can. Go back to the farmers, who are unable to market their wheat at any price, and tell them that you admit there was and is great stringency in money; that the repeal of the Sherman law would probably have relieved the situation, but that you feared that if that was done you would be unable to get something in its stead in the future.

Go to the idle workingmen, against whom the doors of the mills and factories have been closed because their managers could neither collect nor borrow a sufficient sum to meet their pay rolls, and tell them that you knew they and their families were suffering, but that you felt it was better for them to bear their afflictions till your views should be incorporated into a new law, and, if they do not denounce your conduct in words of condemnation, bitter and burning, I am mistaken in their character and temper.

Mr. Bynum then defended the gold standard.

Why should we fear the gold standard? Above all nations on the face of the earth we should be benefited by it if any would. If Great Britain and Germany, which practically produce no gold whatever, can adhere to the gold standard, why cannot the United States, that produces one-fourth of the world's supply? Not only do we produce gold enough to supply ourselves, but over all nations we produce an abundance of supplies that draw gold from the furthest corners of the earth.

In the Brussels conference the British delegates had but one proposition to offer, and that was that the European nations should purchase £5,000,000 in silver for five years if the United States would continue to purchase 54,000,000 ounces annually. She was willing to go down into her pocket and assist in purchasing between thirty and forty million ounces of silver if we would but continue the operations of the Sherman law for the same period. It was a shrewd proposition. Her representatives no doubt calculated that if they could get us into an agreement for five years they would at the end of that time have all our gold, including the balance of the reserve in the treasury. We not only repel the insinuation but denounce the action of the advocates of free silver with striving to accomplish what the British Government would give a handsome bonus to have done.

Mr. Speaker, gentlemen upon the other side of this question, apparently, through the whole of this debate have been unable to distinguish the difference between the gold standard and gold monometallism.

There is not a nation on earth with a gold standard but what has more or less silver to supply the needs of its people in domestic trade. There is a large and useful field for silver, and no warfare is being made upon it. We are told that there is not enough gold in the world to supply the different nations with sufficient money upon which to transact their business. Most assuredly there is not, nor could the business be transacted with gold if there was a superabundance. But there is plenty of gold by which to fix and measure values and adjust the balances between nations.

The gold standard does not mean that gold alone shall be used, but that all measures must conform to that standard; silver, paper, drafts, checks, clearing-house certificates, or any other device may be used, but they must be used in such a way as to give exact measure by the standard. We who are contending for the preservation of the gold standard do so because it is the most stable that has ever been discovered and because all the civilized nations of the world have adopted it. I am in favor of the use of all the silver that we can coin and maintain at a parity with gold, of providing for the issue of all the currency that can be floated at par, but not another dollar.

I have no faith in that character of prosperity which comes with cheap money. Money to be of value to the people, to protect the weak against the strong, must honestly measure the results of human toil. I fully agree that the medium of exchange

should be ample to enable the people, at the least cost and in the briefest time, to exchange their productions, but an oversupply of money stimulates wild speculations, unsettles credit, and, sooner or later, brings on a collapse.

In my opinion there is not a scarcity of money in the country to-day. We have transacted a much greater commerce and enjoyed the highest prosperity with far less money than we have in circulation now.

I have been amused during this debate at the remarks of some gentlemen who have so indignantly scorned the idea that our standard of values should conform to that of the civilized nations of the world. We are a free and independent nation, they say, and therefore should cut loose from the monarchies of the Old World and establish one of our own. We can do this, but it would be well to know that our parachute is in good working order before we try the experiment.

Mr. Speaker, I am not a pessimist, but I look into the future with some forebodings. The belief that Congress, by legislation, can produce unlimited wealth, and distribute the same among the people, seems to prevail in every quarter. There is but one way in which a nation can become rich and her people prosperous, and that is by the productions of toil and not by the inflation of values by enlarging the volume of money. We should do our duty fearlessly and the people must do the rest. [Applause.]

On August 23 Joseph G. Cannon [Ill.] opposed repeal.

I am not here to degrade the currency; but, while that is true, I am not here to obey the command of the extreme people who want gold and gold alone for currency; that means contraction and wrongs the debtor. Nor am I here to obey the command of the extreme people who want silver and silver alone for currency, and only 60 cents' worth in a dollar; that would wrong the creditor. One would bring us to the yellow metal alone for money; the other, in the name of bimetallism, would bring us to the white metal alone for money. I want both metals. My party, in a national platform, pledges me to both metals. Good politics pledge me to both metals. I believe it is entirely practicable to have them.

What would I do in the meantime? I would let the purchase clause of the Sherman act stand until the other side of the House can meet this side of the House calmly and coolly;

not under the influence of panic or excitement or prejudice; not without power even to offer an amendment, but with the full power of amendment and debate, and after full consideration enact a provision that would utilize all the silver that may be offered for use as money at its commercial value. In my judgment this can be done by allowing any and all owners of silver bullion to deposit the same in the United States treasury at the world's market price and receive therefore certificates or treasury notes redeemable on demand, in sums of $100 or any multiple thereof, in silver bullion at the market price, or gold coin, at the option of the Government, making the treasury notes a legal tender for all debts, public or private.

I believe it can be done. But why do you not offer the amendment? says some one. Because, Mr. Speaker, the extreme silver and fiat money men in this House met and shook hands with the extreme gold men on the Democratic side of the House, and adopted the rule under which you are now proceeding, that says I shall not have, as the representative of my people, the poor opportunity of offering a single amendment of any character on this subject. [Applause.]

What does wisdom counsel us to do? I will answer in a sentence. There are six hundred millions of gold and about that much silver in this country; we have over 65,000,000 of people; the population is increasing at the rate of 2,000,000 every year; we now have power to sell bonds to maintain all the money at a parity.

Without the sale of one dollar of bonds, I am satisfied that during the administration of Grover Cleveland under existing law we can go on and have an increase in the currency of nearly $40,000,000 a year, and that all the money will be as good as gold. I think the people, having tried a new experiment, will turn back to their first love. [Applause on the Republican side.] In any event I will not help change existing law unless you put something better in its place.

But, says somebody, will you vote for free coinage of silver? No; not under existing conditions unless you put a dollar's worth of silver in a silver dollar. And I will tell you why. With the nonuse of silver by the principal commercial nations in the world, and the late action of England with regard to the India mints, I do not believe that the free coinage of silver on the ratio of either 16 to 1 or 20 to 1 will assure us both gold and silver.

My judgment is that such coinage of silver would drive the gold out of the country, and we would have silver in cheap dollars alone for money. In the fullness of time I believe the coinage ratio of gold and silver will be settled by agreement between the principal commercial nations of the world. When that is done, we can safely have free coinage of silver. In the meantime it is our duty to utilize silver at its commercial value for currency. Silver always has been, is now, and in my opinion always will be one of the money metals of the world. [Applause.]

"Ah! but," says somebody, "we want to repeal this act to strengthen our credit." Strengthen it where? I ask; in Europe or at home? Mr. Speaker, the Government's credit does not need strengthening at home. You cannot find any citizen of the United States who does not believe that the credit of the United States is now first class; in Europe the credit of the United States is first class.

Oh! But says somebody, The creditors are afraid they are going to be paid in cheap silver. Oh, no, the laws of this country can be read of all men, and the construction given to those laws by both Democratic and Republican Administrations, tells everybody everywhere that all the money Uncle Sam has in his hands, and all his obligations, as well as all the circulating medium, is to be gold and that which can look gold in the face and say, "I am as good as you are." [Applause.]

To my Republican friends, in conclusion, I say, to what feast are we invited? To the repeal of this act that we wrote upon the statute book, and that has been beneficent in its operation; and when it is repealed, with a contracting currency and an increasing population, we have full notice that there is to follow fast and furious upon its track the performance of the pledge made by the Democracy, upon which they say they won full power, namely, to strike down the last vestige of protection to American industries and American labor, and place upon the statute books in lieu thereof a tariff that will yield revenue only, but no protection to any American citizen who walks upon our soil and breathes our air.

In full competition with labor abroad, importing that which we heretofore made, with a contracting currency instead of an expanding, safe currency—that is the feast to which we are invited by our Democratic friends. For one I will go hungry before I dine at such a table; for that matter I would go hungry if I dined at such a table. [Applause on Republican side.]

James G. Maguire [Cal.], Single Taxer, opposed repeal. In the course of his speech, a long one, he gave

his ideas as to the best system of finance and the causes and prevention of panics.

It has long appeared to me that in the matter of finance, as in most matters relating to production and exchange, the world is governed too much; that governments in attempting to fix the values of commodities, whether they be gold or silver, or wheat or potatoes, always create more confusion and inconvenience than their efforts were intended to avoid. The establishment of *media* of exchange is purely a commercial function, and should be left to the jurisdiction of the flexible and unerring laws of trade. If commerce selects gold and silver as the most convenient commodities to serve as *media* of exchange, the only function of the Government, with respect to such *media*, should be to freely coin the pieces of either metal, placing upon each coin a stamp indicating its weight and fineness, leaving the laws of trade to determine when and where and in what proportions and at what ratios the metals should be used in exchange.

The Government should have no money but its own treasury notes, issued to the extent of its annual requirement for revenue, receivable in payment of its taxes of all forms, and made legal tender in the course of business, on an equality with the kind of money in which such taxes are levied. This would do away with all the struggles for business advantages to debtors and creditors and mine owners, by the alternate contraction and inflation of currency through acts of Congress. It would do away with the periodical appeals on the part of business this year to contract the currency in order to strengthen securities and establish confidence in the stability of our money; next year to inflate the currency, in order to afford a sufficient circulating medium to meet the requirement of commerce. It would leave the regulation of all those matters to the wiser and more certain laws of trade, which arise naturally out of the business relations and transactions of men, and do not depend for their correctness upon the information or the prejudices or the fears of arbitrary legislators.

For temporary relief in the present crisis, the plan of the gentleman from Ohio [Tom L. Johnson] to issue treasury notes to the par value of all United States bonds deposited by any and all holders of such bonds is the best that has been suggested.

The advocates of a single gold standard have made a desperate attempt to convince the people that the prevailing hard times are due to the disposition manifested on the part of our Government to favor an extension of silver coinage, and to the fear that the displacement of gold in our national treasury by silver bullion, under the provisions of the silver-purchase act, will naturally and necessarily force our Government to a largely extended coinage of silver, and thus enable the debtors of this country to pay their obligations in a depreciated silver currency. But the evidences of history and of contemporaneous events are all against that claim. Our industrial depressions may be increasing in intensity, but they are not all changing in kind.

This is the seventh industrial depression through which we have passed in this country within sixty years, and each of these depressions has extended to all of the leading civilized nations of the earth. They have become a feature of modern civilization, and recur at intervals of from eight to ten years, with almost the regularity of changes in the moon's phases. They produce greater havoc and misery than the periodical wars and pestilences of the earlier civilization.

In earlier ages they had no hard times, except when crops failed, resulting in famine, or when wars or pestilences interrupted the industries of the people. But industrial depressions come upon us now when we are at peace with the world, and when every natural condition seems radiant with the promise of prosperity and plenty. Suddenly thriving industrial and commercial enterprises become unprofitable. The capitalists who conduct them find that when their rents and wages have been paid out of their production they are not getting interest upon the capital which they have invested. They call a halt. They economize. They demand that labor shall share the loss which they are suffering. A conflict between capital and labor ensues, with its incidents of strikes, boycotts, and lockouts, unhappily sometimes attended with bloodshed and destruction of property. Compromises are from time to time reached, which are in turn broken as new conditions offer advantages to either of the contending parties.

The waste of the conflict takes away whatever return might otherwise come to business. Production is checked in that quarter and the producing laborers are thrown out of employment. The purchasing power of the laborers thrown out of employment is destroyed. Their demand for other commodities is checked by the destruction of their purchasing power, and the production of such other commodities is likewise checked. These effects of the great primary cause speedily communicate their influence through the whole network of the world's productive agencies, diminishing profit by checking demand for productive effort. With the cessation of production in one quarter or in one

line comes a corresponding suspension of demand for commodities of other kinds. The merchant cannot sell his wares because his customers have lost their purchasing power. He cannot collect the obligations due him for the same reason, and he cannot pay his debts to the wholesale merchant because he cannot collect his dues from his customers.

The wholesalers have arranged for commercial credit on a basis perfectly safe so long as sales continue and payments are made within the periods of ordinary trade credit, but wholly unsafe when collections from retail merchants fail. The wholesaler is pressed for the payment of his obligations. He in turn presses the retail merchant. The retail merchant presses his customers, but his customers are out of employment, and unable not only to make further purchases according to their necessities, but to pay their comparatively small debts for past purchases.

Universal stagnation ensues. Merchants and manufacturers continue nominally to carry on business, although profits are gone. They pay rent out of their capital for the sole purpose of saving their locations, which have become an important part of their business. The glimmering taper of hope allures them even to the vortex of general bankruptcy. Financiers become alarmed for the safety of their investments and for the sufficiency of securities. They insist upon the sacrifice of securities for the satisfaction of their claims. The millions of small depositors in savings banks are forced to draw upon their bank savings to meet their obligations and to pay the expense of living, which in good times are paid out of their daily wages.

Those who do not need their deposits for such immediate use begin to feel that the risk of the bank's stability is too great for the interest which the deposits yield. They attempt to withdraw their deposits, panic seizes upon the minds of depositors generally, and run after run is precipitated upon such banks, which, having the bulk of the deposits loaned upon securities on which they cannot immediately realize, are forced to the wall. Their suspension of payment increases the panic and adds to the general distrust. Credit, upon which nine-tenths of our business is done in good times, is entirely withdrawn.

Every firm, corporation, and individual is employed in gathering and hoarding such money as can be obtained to meet the exigencies of his or its own business, for in the best of times our industrial and commercial systems are honeycombed with debt, and a capital of $10,000 floats a credit of at least $30,000. This enormous contraction of the instrument of exchange is fatal to what remains of business. The business of the whole

country finally collapses under the strain. Then a new adjustment of rent, interest, and wages is made, and the wheels of industry and commerce revolve again, bringing the blessings of prosperity and peace. This is the history of every industrial depression, and the present depression is not in any respect exceptional.

Russell Sage, a distinguished financier, is reported as saying that this depression is exceptional because it has "touched bottom," as he expresses it. But every industrial depression of which I speak has "touched bottom"; that is to say, it has ultimately reached the land-owning class and has compelled that class to largely reduce its ground rent in order to give business a chance to pick up again. That is "touching bottom." Then by some process, as mysterious to the general observer as the beginning of the depression, times improve, business gets better, credit grows stronger, and an era of prosperity ensues which gives promise of perpetuity. For four or five years it continues to rise, then it is changed again, and the history of the former depression, through the course of another three or four years, repeats itself with marvelous exactness.

It is idle to attribute these depressions to local or temporary causes. Their cause must be as general as its results. A cause affecting this country alone will not explain an industrial depression existing at the same time in England, France, Germany, Belgium, and in all of the English colonies that girdle the world. Neither is it reasonable to attribute one of these depressions to a cause which manifestly did not contribute to any of the other precisely similar depressions occurring before it.

A brief history of all of these depressions will be found in a volume entitled "Industrial Depressions," published by Hon. Carroll D. Wright, our National Commissioner of Labor Statistics, in 1866. The first of these depressions reached its climax in 1837; the second about the year 1847; the third about the year 1857; the fourth in 1866; the fifth commenced in 1873 and continued to 1879, reaching its climax about the year 1877; the sixth reached its climax about the year 1884. All of these depressions swept over all of the countries which I have named. The present depression likewise prevails in all of these countries. It commenced in the latter part of 1889, and has, we may reasonably hope, reached its climax at this time.

Indeed, while we have been discussing this bill the telegraphic columns of our daily papers show that industrial, commercial, and banking institutions all over our country are resuming business operations.

I do not say that the crisis was not in any way accelerated by the Sherman act; but I do say that, with or without the Sherman act, it was inevitable. A much more important factor in intensifying the depression and hastening the crisis was "the culminating atrocity of class legislation" known as the McKinley tariff law, for the prompt repeal of which the people put the Democratic party in power.

I quite agree with our Republican friends that it is the duty of the Democratic party to get through with this question of finance at the earliest possible moment, not for the purpose of adjourning and going home, but in order that we may proceed to the more important work of tariff reform with all possible dispatch.

Philosophers, faithful in the pursuit of truth and daring to follow her wherever she may lead, have traced to their primary and universal cause these periodical calamities which blast the happiness and desolate the homes of half the people of the civilized world once in every decade. That cause is the constantly recurring pressure of ground rent, as a factor in the distribution of wealth, against the profits of capital and the wages of labor.

Here Mr. Maguire presented the arguments of Henry George in his "Progress and Poverty" as to the cause and cure of recurring financial panics [see Volume X, chapter II].

He said in conclusion:

I believe I have satisfactorily shown that the silver-purchase provision of the Sherman act, unsound as it is in principle, is not a materially contributing cause of the present crisis, and that the mere repeal of that provision, without other legislation looking to the extended coinage of silver, would result in more harm than good.

I am not satisfied that the free coinage of silver at any fixed ratio can be so maintained by this country alone as to secure the general use of both gold and silver coins at a parity. But I prefer such an experiment to the legislative elimination of silver from our currency.

I am opposed to any change from the present ratio in the coinage of gold and silver, because such a change would involve infinite confusion and great expense.

I shall, therefore, vote:

First. For the amendment of the gentleman from Missouri [Mr. Bland], providing for the free and unlimited coinage of gold and silver at the ratio of 16 to 1.

Second. That amendment failing, I will vote for the extended coinage of silver according to the terms of the "Bland-Allison act" of 1878.

Third. If both of these propositions fail, I will, as a choice between evils, vote against the unconditional repeal of the silver-purchase act.

I have no idea that we shall be able to do anything at this session of Congress to relieve the existing depression.

Some day it will be the province of this Congress, and of our State legislatures, to remove the primary cause of these periodical scourges of our country and of our civilization.

In that day the triumph and the vindication of Democratic principles, of the principles of Thomas Jefferson and his illustrious disciples, will be complete, and equal rights and natural justice will be irrevocably established among men. [Applause.]

On August 24 Tom L. Johnson [O.], Single-Taxer, spoke in favor of repeal, although he announced that he did not think the Sherman act was responsible for the panic, and that he did not believe that its repeal would restore prosperity.

Important as the money question may be, its importance is as nothing when compared with the question of taxation. Nevertheless, the money question is an important one—next to that of taxation the most pressing business before this Congress.

I am opposed to the storing up of silver before this Congress. as I would be opposed to the storing up of wheat, or wool, or whisky, and just as I am opposed to the subtreasury proposal of the Populist, so I am opposed to this subtreasury act of the silver producers. It is a taxing of the many for the benefit of a few—a prostitution of governmental powers to a purpose with which government should have no concern. It is a step on the road which must inevitably destroy government of the people, by the people, for the people, and make it a government of plutocrats, by plutocrats, and for plutocrats—a form of government more corruptive and more degrading than that of hereditary aristocrats or rulers by right divine.

If I could see in free silver what has been so eloquently claimed for it by its advocates, I would gladly join their ranks. If it would really cure, or even in some degree tend to cure, the inequalities manifest on every side, producing the millionaire

and the tramp; if it would stop, or even tend to stop, the closing of factories and the forcing of able-bodied, willing men into idleness; if there would be in it any remedy for the apparently overstocked labor markets and for the hardships that the producers of this country are now suffering from, it would be our duty, even though it worked some injustice to the rich, to adopt it as a measure calculated to bring greater comfort to that class of society which, in my judgment, bears the heaviest burden.

But what does the free and unlimited coinage of silver mean? It does not mean, as its advocates seem to suppose, the concurrent coinage and use of both gold and silver. It can only mean the concurrent coinage and use of both metals when and during such time as the legal ratio in the value of the two metals shall coincide with the commercial ratio. It is not the choice between bimetallism and monometallism which is offered to us, but the choice between gold monometallism and silver monometallism.

HENRY C. SNODGRASS [Tenn.].—Do I understand the gentleman then to concede that the country is to be reduced to a single gold standard?

MR. JOHNSON.—I understand that ...e country has been upon a single gold standard since 1834, except during the period of depreciated paper money; and I for one am not willing now to make a change. You offer no reason for it. You tell us that prices will go up. What of it? We are not here to deal with prices. We are here to maintain a unit (or if it were an original proposition, to select one) which will be fair to both debtor and creditor.

MR. SNODGRASS.—I wish to ask the gentleman whether, when the public debt was funded in 1870, that debt was not made payable in the coin of the country, both gold and silver, and whether, if we change the medium of payment now and adopt a single gold standard, we do not appreciate the claim of the creditor while we depreciate the ability of the people to pay.

MR. JOHNSON.—If you ask me whether a great injury was then committed, I answer yes. But can you, here and now, complaining of that wrong, ask us to do a similar injury to another class?

MR. SNODGRASS.—We simply ask that the contract shall be complied with.

MR. JOHNSON.—That is a transaction of twenty years ago. We are not responsible for what then occurred.

There is only one way to obtain even momentarily free coinage of both gold and silver at the same time, and that is to adopt a legal ratio that would conform to the commercial ratio—a matter as difficult as standing a needle on its point.

Mr. Johnson then presented his project for a currency system, which had already been alluded to in the debate.

That we are suffering to-day from a temporary scarcity in the supply of actual currency, caused by the curtailment of credits and a general distrust that has led to the hoarding instead of the circulation of money is too obvious for argument. But in a bill to establish an interconvertibility between United States bonds and treasury notes which I introduced at the last session of Congress, and a still simpler and more quickly effective measure of the same kind which I have introduced in this, I have endeavored to put into practical form what I believe to be the quickest, safest, and most efficient mode of putting an end to the currency famine and giving elasticity to our present currency.

I am deeply anxious to get this money question out of the way, that we may turn our attention to far more vital things. The three branches of the national Government stand pledged before the people to the abolition of the protective features of the tariff. We ought not to lose a day nor an hour in redeeming our pledge.

To strike off the shackles which protectionism has imposed upon production and trade, to strike down the trusts and monopolies which it has built up, would do more to open the factories and give relief, and create a demand for the products of mine and farm, than any amount of tinkering with the finances. And for that permanent relief which would do away with industrial depressions, which will end the strife between labor and capital, which will secure to all men their full share in the opportunities offered by nature and the improvements made by an advancing civilization, we can only look to a measure to which the advance of free trade leads, and which is its final culmination—that great measure popularly called the single tax. [Applause.]

Lafe Pence [Col.] made a humorous attack on Mr. Bynum for his change of front on the free silver question.

Mr. Speaker, I was born in Indiana, and bred in the school of Voorhees, of Cooper, of Bynum, of that State; and right well

they taught me my lessons, and set me upon a course concerning which I shall not turn my face at the suggestion of pie from the Administration. [Laughter.]

Standing here as a representative of the People's party, if I desired political advantage, I should greet with joy the probability of the Democracy surrendering to the command of the Executive, and of the Republican minority being chained absolutely to the Executive chariot; but I hope I am prompted by higher wishes and motives than that.

My people in Colorado, fifteen hundred of whom were taught by the gentleman from Indianapolis [Mr. Bynum], as was I, protest through me against this abject surrender that is being made by the Representative from the good old State. [Applause.]

I shall not carry the gentleman back far in recollection. Only to October, 1891, when the gentleman from Indiana [Mr. Bynum], with other Congressmen, made a tour through our country for the organization of Democratic clubs. On the night of October 13, 1891, the gentleman from Indianapolis [Mr. Bynum] addressed the largest audience ever assembled in the city of Denver, and he taught me no new lessons.

I read, Mr. Speaker, from the *Rocky Mountain News* of October 14, 1891.

I have always——

That means a long time past [laughter]—

been in favor of the free coinage of silver.

I was on the Committee on Coinage in the Forty-ninth Congress, and was one of the three members of that committee who reported the bill in favor of free coinage away back at the beginning of Mr. Cleveland's Administration. [Loud and prolonged cheering.]

[Laughter.]

Then this further quotation—but I hope if I scrape the mold from the memory of the gentleman he will thank me for it—

I have voted for free coinage from the time the question has been before Congress, and will do so every time it comes up.

[Great laughter and applause.]

Mr. Speaker, I trust that the teacher will not rebuke the scholar whom he trained for now telling him that the question has "come up." [Renewed laughter and applause.]

But that is only a part of it. Back in Indiana they do not

illustrate the speeches of public men; but with that spirit which marks all of our enterprises we do. I have here the front page of the paper of the same day which illustrates the impression made upon our people. First, the reporter, in addition to the report I have read, says:

Mr. Bynum was greeted with hearty and prolonged applause, and it was several minutes before the cheers had subsided and the orator could enter upon his theme. His declarations and his advocacy of free silver aroused the audience to the wildest enthusiasm, although the speaking had then been in progress for three hours.

[Great laughter.]

Mr. Speaker, that is only the beginning. Here we have what I cannot hold up and display to the House [referring to the bound copy of the paper before him].

Mr. Speaker, that it may not be lost to the members, I now shall request the privilege of having a copy of this cut made and incorporated as a portion of my remarks. [Great laughter.]

SEVERAL MEMBERS.—Describe it.

MR. PENCE.—What see I before me? A silver dollar. Supported; how? By the manly legs and feet of the gentleman from Indianapolis. [Great laughter.] Whose arms are these I see upraised as in invocation to high Heaven; whose face is this that I see announcing to the skies, "I always voted for free coinage; and always will when it comes up"? [Great laughter.] The noble presence to my left reminds me that I cannot be mistaken in the photograph. [Laughter.] If it requires unanimous consent to print that picture I hope I will get it [laughter]; and, if that is not sufficient, I hope my proffer will be accepted to pay for it myself and save the Government the expense. [Laughter.]

Mr. Pence then suggested that the change of front on the silver question by Mr. Bynum and other Democrats was due to their desire for political "pie." The President, he said, calmly counted upon this for the passage of repeal. Mr. Cleveland did not have to drum up supporters; they crowded to him offering their allegiance. He was in the position of the man in the poem:

"What! go to the ant?" said the sluggard;
"What a waste of my time that would be;
To the picnic I'll hie and sit down by the pie
And there let the ant come to me."

[Great laughter.]

When the gentleman who now is chairman of the Finance Committee in the Senate [Mr. Voorhees] is agreeing absolutely with the plans of Mr. Sherman, of Ohio, I could but be reminded of his article in the *North American Review* in November, 1891, when he [Senator Voorhees], writing of him [Senator Sherman], spoke of him as—

the financial weathercock of the Union; one who had been on all sides of the money question, who had changed oftener than anyone else, but always changed at the time and in the way that would best suit the purpose of Wall street and New York.

I will send the Senator from Indiana a copy of his own article by the first mail. [Laughter.] Mr. Speaker, it is no wonder that in our country we have come to be unable to distinguish the difference between the present Secretary of the Treasury, Mr. Carlisle, and the past Secretary of the Treasury, Mr. Sherman. It is true that upon this floor Mr. Carlisle denounced the Sherman policy, but little by little he has come to it, and now what scene do we behold? He who had been the denunciator of the policy of the Treasury Department in 1878 now the author of its continuance!

In my judgment, sir, the story of the gradual, slow temptation and change of Mr. Carlisle will be one of the saddest chapters in the history of this country. I worshiped at his feet as well as at the feet of the gentleman from Indianapolis continuously by day and by night during the soft and callow days of my youth. [Laughter.]

We can now see in our country the difference between the policy of the Treasury Department to-day and that of 1878. It is always against us. Now, Mr. Speaker, may I illustrate this case by a little story?

A stranger came into a little Indiana town on a certain Sunday morning, and, walking out from the hotel, he saw a little white church and a crowd going in, and he noticed that it was a Lutheran church. He walked on, and in the next block he saw a little brown church, and was surprised to see that it also seemed to be a Lutheran church. He went back to the hotel, and said to the proprietor, "It strikes me as rather strange that in a little town like this, hardly able to sustain one church, there should be two churches just alike."

"Oh," said the landlord, "while those two churches are somewhat alike, they are not *just* alike. Over in the white church they believe that the serpent tempted Eve, and Eve tempted Adam, and Adam fell; but over in the brown church

they think Adam was a bad egg from the start." [Laughter and applause.]

On August 25 Julius C. Burrows [Mich.] spoke in favor of repeal.

The gentleman from Nebraska [Mr. Bryan] tells us that we can enter upon this policy of unlimited coinage with perfect safety, independent of the nations of the world, and, repeating the story of "Liberty Bell," which sounded the birth of a nation, conjures us to break away from English domination; and yet that same gentleman, before the Fifty-third Congress shall have closed its labors, will be the first to toll the bell of a nation's dead industries and demand that the United States shall surrender its industrial supremacy and independence and the prosperity and hopes of its laboring millions to the unrestricted domination of British greed and power under the merciless policy of free trade. [Applause.]

I regret, Mr. Speaker, more than words can express, that in the course of this debate gentlemen have seen fit to employ language the effect of which, whether intended or not, is to arouse and ferment dissensions among the various classes of our people. The impression is sought to be made upon the public mind that there exists some monstrous conspiracy somewhere or somehow on the part of capital to oppress and outrage labor. I remember that the gentleman from Nebraska spoke of capital as "imperious, arrogant, compassionless"; and that "labor, workworn and dust begrimed, makes mute appeal."

Let me say, sir, that he who seeks in this country at this time or any other to inflame public passions and array one class of our citizens against another is an enemy to his country and to his race. [Applause.]

Instead of inflaming the public mind, let us rather by every means in our power seek to harmonize these conflicting forces, allay all public apprehension, and so legislate as to maintain the national credit unimpaired, restore public and private confidence, preserve the peace and good order of the State, and promote the happiness and prosperity of the citizen. [Prolonged applause.]

Jonathan P. Dolliver [Ia.] supported repeal.

I stand where I have always stood, for a national currency every dollar of which shall be equal in value to every other dol-

lar issued by the Government. So that if a man works for a day he may know what he earns; if a man has a crop for sale he may know exactly what he receives for it; if a man has a little property he may know exactly what it is worth; if a man is receiving a little pension that has escaped the malice of this Administration, he may know exactly what the pittance amounts to; if a man has a little money laid up in the bank for a rainy day, he may know exactly what his balance is; if a man has insured his life he may die without having his last hours embittered by the prospect of his family being swindled by the depreciation of his little estate; and if a man, like myself, has spent nearly all his lifetime bearing the burden of debt, he may know exactly what he owes [laughter], and make up his mind before God and man to pay it if he can, as our fathers did, without inviting a relief expedition from Bedlam. [Great laughter.]

Mr. Speaker, representing such a people I would not dare to cast a vote here which might have the effect of destroying the prosperity of American business by an experiment which, for all that has been said, presents itself to my mind in the form of an unlimited manufacture of short-weight dollars. [Laughter and applause.]

In voting to repeal the section of the act of 1890 requiring the monthly purchase of 180 tons of silver bullion I frankly confess that I am guided in part by what seems to be the prevailing belief of the business community. A friend in the city in which I live, in explaining to me his new views on religion and medicine, somewhat perplexed me by saying that a few months ago he "was caught in the elbow by a belief of rheumatism" [laughter], and, if I understood him correctly, his idea was that the way to handle it was to let the rheumatism go and pay attention entirely to the belief. [Laughter.]

On August 26 Thomas B. Reed [Me.] supported repeal of the Sherman act as an escape from silver monometallism.

The continuance of the purchases under the Sherman act would, in the estimation of the world, be a declaration that we intended to go on with our purchases to such an extent that we would find ourselves upon a silver basis after no great lapse of time.

It is asserted that by the repeal of the Sherman act we increase the burden of the debt upon the borrower. This would certainly be a very grave misfortune, if it were true. The business of borrowing and the business of lending are alike honorable. Such transactions arise out of the nature of man's needs.

Some men are willing to take the chance of the profit and pay the small gain which is necessary in order to obtain the stored-up wealth of another. Men who have money may not have enterprise and brains. Men who have brains and enterprise do not always have money. Borrowing and lending marries money and brains, to the great advancement of the world.

In order to constitute the transaction of borrowing and lending, the first thing is the lender. Until he is willing to lend, the transaction cannot by any possibility take place. The first thing to do is to coax the lender to lend. After that, borrowing is possible, and not until then is it possible.

Hence, laws must be made so as to enable the lender to be satisfied of the certainty of return. Consequently, if you make your laws in such fashion that the borrower has an advantage in payment, the lender will be sure to demand an advantage in lending, and, generally, such an advantage as will cover all the chances.

Therefore, any law which is made to reach the case of the lender and the borrower must be made in the spirit of fairness and of justice; and any proposition to a man to lend you money upon one standard to be paid upon another will necessarily be accompanied with such a rate of interest as will make up for the possibility of the lowering of that standard.

The proposition to lower the ratio I hail as the one good sign of this discussion. To drop from the bigoted determination that 16 to 1 is a heaven-appointed ratio raised up by the Almighty, and proceed even to discuss market values, seems to give some slight hope that when we really undertake anew to reform our financial system we may approach it with some reference to existing conditions and to the facts of the universe. As for the propositions now before us, we can all see that they are untenable. No one believes that we could maintain 20 to 1 any easier than 16 to 1 without the aid of the rest of the world.

What, then, is the pathway of duty? The unconditional repeal. That will either give relief or not. If not, then we must try something else, and the sooner the better. It is a matter of deep regret to all sensible men that we have delayed so long. Men are to-day struggling almost against fate and praying for relief. The banks are strained almost to the point of breaking. It is such a pity that we had to waste so much time in this weary welter of talk.

We stand in a very peculiar position, we Republicans to-day.

[Laughter.] The representative of the Democratic party just chosen President of the United States finds himself powerless in his first great recommendation to his own party. Were he left to their tender mercies [laughter] the country would witness the spectacle of the President of its choice overthrown by the party charged with this country's government. What wonder then that he appeals to the patriotism of another party, whose patriotism has never been appealed to in vain? [Applause on the Republican side.]

Never, I say, in vain! The proudest part of the proud record of the Republican party has been its steadfast devotion to the cause of sound finance. When this country was tempted to pay its bonds in depreciated money the Republican party responded with loud acclaim to that noble sentiment of General Hawley, that every bond was as sacred as a soldier's grave. It cost us hard fighting and sore struggle, but the credit of this country has no superior in the world. [Applause on the Republican side.] When the same arguments heard to-day were heard fifteen years ago, sounding the praises of a depreciated currency and proclaiming the glories of fiat money, the party of Abraham Lincoln marched steadily toward specie payments and prosperity. [Applause.]

What we were in our days of victory the same are we in our days of defeat—champions of true and solid finance. [Applause.] And when the time comes, as it surely will come, for us to lead this land back to those paths of prosperity and fame which were trodden under Republican rule for so many years, we shall take back with us our ancient glory undimmed by adversity; our ancient honor, unsullied by defeat. [Prolonged applause on the floor and in the galleries.]

John M. Allen [Miss.] made a characteristic speech against repeal.

Mr. Speaker, most of the gentlemen who have addressed the House in this debate have disclaimed being financiers or political economists. Sir, I am both. [Laughter.] But I insist that I am in no way responsible for the present panic and financial trouble. I have kept my money in circulation [laughter], and any person who doubts this has leave to search my stockings for "hoarded" currency. [Laughter.]

Mr. Speaker, I have been studying the money problem for the last forty years. [Laughter.] When, as a child, I first began to observe, one of the problems that claimed my attention and

aroused my budding curiosity was, why people would exchange their good candy and cakes, for these were the commodities of commerce I most desired then [laughter], for little pieces of silver that were neither beautiful to look on nor good to eat or wear.

I soon discovered that the money for which everybody seemed to be struggling and contending was not desired for the intrinsic qualities in the metal of which it was made, but for the function it performed in the affairs of the human race.

It is the important function in the affairs of men performed by money that puts every man in competition with every other man to obtain it, and not the material of which it is made.

I never favored the Sherman law. I voted and spoke against it. But, sir, it is the only law on our statute books providing for any increase in the volume of our currency, and to remove that without substituting anything in its place would, in my opinion, put us very much in the condition of the negro's cow. I saw a letter here some time ago, written to some friends of mine by the negro man who was left in charge of the home in Mississippi, and among other things he said.

The cow have been very sick; I give her some medicine, and she are now well of the disease, but I think she will die of the remedy.

[Laughter.]

Mr. Speaker, I am no defender of nor apologist for the Sherman law. The Republicans who passed it over our protest have abandoned it, and I am not going to the rescue of their bastard offspring. I never favored the purchase and storage of silver bullion and I do not favor it now. I favor silver money, but, sir, I do not believe for a moment that the Sherman law or our silver money is responsible for the distressing financial condition with which we are confronted.

Our whole financial machinery is overloaded with credit. It is top-heavy, and, whenever there comes the least distrust, panic and financial disaster are the logical consequences of our present system.

I have tried this scheme of doing 95 per cent. of my business on a credit basis [laughter and applause]; but, Mr. Speaker, it does not work well, for now my creditors are clamorous for me to do something to restore confidence. [Great laughter.]

I have heard gentlemen in this debate talk much of the evils of an inflated currency, but I believe that more of wrong and misery and ruin and cruel oppression has resulted from the contraction of the supply of money than from any other cause.

I have heard a great deal said here about an "honest dollar." It is a great "fad" here for gentlemen to proclaim their devotion to an honest dollar. I do not know when I have ever witnessed such an exhibition of verbal honesty. [Laughter.] They are very solicitous about an honest dollar for the creditor, but I do not hear much about it for the debtor.

Mr. Speaker, I have made many speeches against the financial policy of the Republican party. I have made a great impression on my audience when I have denounced their policies and practices. [Laughter.] I know of many of my Democratic friends over here who have achieved some of their greatest victories in denouncing in thunder tones the "deep damnation" of the "taking off" of silver by the Republican party. I did the same thing, but I meant and believed in what I said. Now, I find some of the loudest-mouthed Democratic orators—some who always supposed they were real and devoted friends of silver—making speeches here, the only logic of which is that the best the Republicans could have done and the only wise thing they could do was to demonetize silver; and, if I occupied the position of a good many of my friends over here on this side of the House, I should get up now and make an apology to the Republican party for having denounced it. [Laughter.]

Two of my constituents were candidates for the office of county treasurer of Alcorn County. One of them had held the office for two terms. The man who was running for the office the first time followed his competitor all over that county denouncing the proposition to elect a man to office for a third term.

The people indorsed him and he was elected. He held the office himself for two terms and the election was approaching. The time was coming when he must get out of office himself or go back on the platform upon which he had been elected. The situation was serious. [Laughter.] He came to town one morning and said, "Boys, have any of you seen anything of Beech Mitchell?" Beech Mitchell was the man whom he had beaten. They told him that Beech was in town. "Well," said he, "I want to see him; I feel that I owe him an apology. [Laughter.] Four years ago I ran against him for the office of treasurer in this county and I beat him on the third-term issue. I had heard this talk about Grant and the third term and I thought the third-term principle was all wrong. At that time I had never reflected very much about the question, but since that time I have thought about it a good deal, and when you come to apply that principle to the office of county treasurer there is not a

thing in the world in it, and I thank God I have the manhood when I see I am wrong to acknowledge it." [Great laughter.]

We are told, Mr. Speaker, that we are going very wrong about this matter because the President of the United States has marked out a different program for us, and the gentlemen who occupy a position antagonistic to the one I occupy to-day are set down now as the friends of the Administration. Why, Mr. Speaker, I would have to retract a great deal more than any of these gentlemen who have retracted their views on silver, if I were not a friend of the Administration. Why, I helped to make the Administration. [Laughter.] I have made more speeches and more good speeches [laughter] and bragged more on the Administration! [Laughter.] Why, in a private conversation between my friend Patterson and myself last winter, after the election, it was mutually conceded by both of us that we had done more to bring about his election than any other two men in the country. [Laughter.]

Why, we are getting into a pretty position here, if these gentlemen's ideas are correct—if the men who favor the repeal are the only friends of the Administration. Just think of it! The gentleman from Maine [Mr. Reed] and the gentleman from Iowa [Mr. Henderson] and the gentleman from Michigan [Mr. Burrows] the friends of the Administration, and all of us fellows kept out in the cold! [Laughter.] Why, gentlemen, do you know what it is that gave President Cleveland such a hold upon the affections of the American people? It was the fact that he had backbone and the courage of his convictions. [Applause.] I would like to know what sort of an estimate he puts upon gentlemen's ideas are correct—if the men who favor the repeal are change of front than that the Administration wants it. [Laughter and applause.]

Mr. Speaker, a conversation I had with the President one time, in one of our long, pleasant interviews [laughter], when he said to me that the Democrats were not like the Republicans; that they could not be controlled and hurled as a mass, but that the Democrats were men of independent thought, and that was what made a great party. [Loud applause.]

Why, gentlemen talk about breaking up, by reason of my exercising my convictions, the long-standing intimacy between the President and myself. You cannot do it. [Great laughter.]

My good friend from New York [Amos J. Cummings] got a little off the other day and gave some of the Southern Democrats a little lecture about having put Grover Cleveland on them, and now "we must take our medicine." We put him on

you as President, and then we elected ourselves here as members of Congress. [Applause and loud laughter.] I think, Mr. Speaker, that we had better have another bill or two introduced here—one to restore a parity between the executive and legislative branches of the Government [great laughter and applause], and then another to restore a parity of backbone to some great men. [Laughter and applause.]

W. Bourke Cockran [N. Y.] followed Mr. Allen. He opposed free silver.

Mr. Speaker: After the very interesting address which we have just heard nobody will deny that the argument for free silver coinage may be made picturesque, even if it fail to be convincing.

Mr. Speaker, I do not join in the tone of levity with which the platform of the Democratic party has been treated in some quarters. I believe that a declaration of political principles is binding upon a political party, and when I stand here to-day opposed to this measure of free coinage I stand on the Democratic platform with both feet, and he who seeks to pass such an act in the name of the Democratic party is trying to push me off the Democratic platform and to place me on the Populist platform. [Applause.] I assisted in the deliberations of the Democratic convention [laughter],[1] and, Mr. Speaker, the good humor which that remark provokes induces me to say that I had a good opportunity to discover with what vigor it set its foot upon opposition when any person undertook to interfere with its settled purpose. [Laughter.]

I remember, sir, that, when the financial plank of the platform was under consideration, a delegate from Colorado proposed as an amendment the insertion of the word "free" before the word "coinage" and supported it in a speech of about an hour's duration, and did not poll ten votes for it on the floor when the convention took final action upon the proposition. Talk to me about the Democratic party having declared for free coinage! I believe the claim comes from Colorado and from Nevada that those of us who favor the present bill are turning our backs on the platform of our party.

Why, sir, I believe it is owing to a great upheaval in Colorado and Nevada, caused by the union of Democrats and Republicans with the Populists, upon the ground that both the old

[1] Mr. Cockran had made a notable speech opposing the nomination of Grover Cleveland.

W. Bourke Cockran

parties had declared against the free coinage of silver, that we are honored with the presence of the eloquent gentleman from Colorado [Mr. Pence], who has delighted us so often. [Applause.]

The Democratic party did declare for the use of both metals as money; and, sir, while I am opposed to the free coinage of silver, I am equally opposed to the total demonetization of silver.

Silver is a part of the world's money, and it is and always will be a part of the money of every country, but there can never be a bimetallic standard of value in any one country. There never has been and there never will be.

In the nature of things one metal must always be the standard of value. This proposition was laid down by John Locke in 1695. He said:

> Two metals, as gold and silver, cannot be the measure of commerce both together in any country, because the measure of commerce must be perpetually the same, invariable, and keeping the same proportion of value in all its parts. But gold and silver change their value one to another. And one may as well make a measure, *e. g.*, a yard, whose parts lengthen and shrink, as a measure of trade of materials that have not always a settled, invariable value to one another.

And that doctrine was repeated by John Stuart Mill one hundred and fifty years afterward, when he said:

> The plan of a double standard is still occasionally brought forward by here and there a writer or orator as a great improvement in the currency. It is probable that, with most of its adherents, its chief merit is its tendency to a sort of depreciation, there being at all times abundance of supporters for any mode, either open or covert, of lowering the standard.

And again:

> The particular kind of variation to which the currency is rendered more liable by having two legal standards is a fall of value, or what is commonly called a depreciation, since, practically, that one of the two metals will always be the standard, of which the real has fallen below the rated value.

My friend from Nebraska [Mr. Bryan] says you cannot have an honest dollar, and that there is no such thing as a perfectly stable measure of value. He might as well tell you that there is nothing perfect on this earth and that human ingenuity is unable to make a government that cannot be improved. Gold fluctuates in value as all things must fluctuate; but the principle which makes bimetallism in one country impossible is this; that to the unavoidable fluctuations of one metal the bimetallist

wants to add the additional fluctuations of another. To the variations of the metal which fluctuates least he wants to add the variations of the metal which fluctuates most.

We on this side of this question want to have the minimum of fluctuation; we want to have the maximum of stability. In fixing our standard of value we want to take the experience of the world for our guide; we are unwilling to trust to the prophecies of the gentleman from Missouri [Mr. Bland]. [Applause.]

Even assuming that by any exercise of governmental power we could bring gold and silver to a parity, we would still be unable to retain a bimetallic currency; any attempt to establish it would inevitably reduce this country to a silver basis. If it were possible to bring these metals to a parity at a ratio of 16 to 1, that result could be achieved only by the use of an enormous mass of silver bullion at the mints.

But, if such immense quantities of silver bullion be deposited at the mints for the purpose of coinage, a redundant currency must be the result. According to economic law, a redundant currency in any country always causes an exportation of bullion. Now, as between gold and silver, gold will always be exported on account of its smaller bulk and the comparative cheapness in the cost of transportation. So that even if we follow our friends on the other side, fly in the teeth of all human experience, and accept their prophecies that the free coinage of silver at our mints will increase the value of the metal 45 per cent., after we have done violence to common sense and consented to base our laws upon prophecies rather than upon experience, we are confronted by another economic principle, which shows that, even if we succeed in bringing the two metals to an absolute parity, gold will still be driven from circulation, and we will be left upon a monometallic basis, with silver as the standard of value.

But my friend from Nebraska is not bound by the commonplace restraints of economic laws. He tells us with the solemnity of a seer warning us of unspeakable dangers that if we pass this act silver will be demonetized and gold will be brought to the auction block. I wonder where he would like to have it brought!

The purpose and business of money is to go to the auction block, there to be exchanged against commodities. If the purchasing power of gold be high when the farmer exchanges his commodities for it, will it not be equally high when he uses that identical gold for the purchase of the commodities which are necessary to his comfort?

My friend tells us, moreover, and here we approach the

ground occupied by all our adversaries that an ounce of silver still measures the value of corn and wheat and lard as well as it ever did. Well, if that be so, in the name of God and common sense, give the farmer a full ounce of silver when he is entitled to it, and do not deprive him of any part of the silver which is the fair equivalent of his produce. A dollar in gold is worth about 651¼ grains of pure silver, while the standard dollar contains but 371¼ grains. For every dollar's worth of produce which the farmer sells you want to give him 371¼ grains of pure silver [worth 54 cents in gold], while I want to give him 651¼ grains of silver. [Applause.]

Do you think silver operates on the farmer like alcohol on the human body—a little stimulates, an abundance stupefies and destroys? [Laughter.] Mr. Speaker, the stamp which these gentlemen would add to the 371¼ grains of silver may increase their value, it may make them worth a dollar and it may not; but I know that 651¼ grains will buy a dollar's worth anywhere in the world. [Applause.] You want to give the farmer for every dollar's worth of his produce 371¼ grains of silver, plus the prophecy of the gentleman from Missouri. I want to give him 651¼ grains without any prophetic adornment, and you may take my word for it that he would rather have the additional 280 grains than the words of any seer, of any sage, or of any prophet. [Laughter and applause.]

Mr. Cockran then referred to the "Drapier Letters" of Jonathan Swift, written against the debasement of the coin of the British realm.

Sir, I refer to the popularity which Swift achieved through a defence of honest money, because the most extraordinary feature of this free-silver movement is that it appears to be an attempt to win popularity by the debasement of the coin of this country. Never before in the history of the human race has such an attempt been made in the name of popular rights.

The adoption of the amendment of the gentleman from Missouri [Mr. Bland] would place us at once on a silver basis. The immediate effect of such legislation would be the robbery of every creditor throughout this Union of 45 per cent. of the sum due him.

I know that my friend from Missouri, my friend from Nebraska, and all those who think with them are rather proud of the fact that the enactment of their proposals into law would be likely to interfere with the collection of debts throughout the

country. They tell us that they are not anxious arbitrarily to scale down debts; but, in the language of my friend from Nebraska, "if we are to have a doubt, let us give the benefit of it to the debtor." Mr. Speaker, that brings up the question, Who are the debtors of this country and who are the creditors? As we recall the rhetorical vehemence with which these gentlemen assailed the national banks, we must conclude that they believe all the banks are creditors and all the laborers and producers are debtors.

Here, sir, we see a striking instance of that strange disposition of gentlemen on the other side to stand upon their heads whenever they examine economic questions, to turn all economic law topsy-turvy, as my friend from Nebraska turned the facts of history when he undertook to explain the victory of an army by attributing the supreme command to a drummer boy. The debtors of the United States are not the laborers; but the debtors of the United States are not the farmers; the principal debtors of the United States are the bankers, the railroad companies, the great corporations whom my friend from Missouri loves to denominate as Shylocks, gold bugs, and Wall street sharks.

My friend from Nebraska [Mr. Bryan] smiles, and I will take advantage of his complacent mood to instruct him on this subject. [Laughter.] I hold in my hand the report of the Comptroller of the Currency, containing a full statement of the business of the national banks of the United States for a single year. Opening it at random, I find the report of the largest bank of the country, the National Park Bank of the city of New York. It appears that the deposits of all kinds in this bank amounted during that year to about $34,000,000, while its loans were $25,000,000; that is to say, its debts to its depositors were nine millions in excess of the loans which it had made.

If my friend from Nebraska will consider the principles of banking for a moment and will examine this matter in his own mind, he will see that the very business of banking is the business of dealing with other people's money. The money which the banker deals with is not his own; it is the money which he owes to his depositors. Here we find in the case of this one bank that its debts are about $9,000,000 more than its credits; and if you pass a free-coinage law you simply reduce that $9,000,000 45 per cent.; you enable that bank to settle the balance between its debts and its credits for about $5,000,000. Instead of suffering a loss it would actually gain four millions by the adoption of the amendments proposed by the gentleman from Missouri.

MR. BRYAN.—I would like to ask the gentleman whether it is not true that every solvent bank has for every dollar that it owes either somebody's note or the money in the vault and its own capital besides?

MR. COCKRAN.—The gentleman undoubtedly presents a truism in his question. It is upon precisely that statement of facts that I have been endeavoring to penetrate his intellect. [Laughter.] It is because the reserves of a bank which constitute the difference between its credits and its debts are held in cash—in coin, in specie, that you cannot injure it by legislation such as you propose.

The loans and reserves of a solvent bank, taken together, must exceed its liabilities—the excess represents the capital and profits. But as between their debts and their credits all banks are debtors. If you debase the value of the circulating medium so that the debts due them will be reduced, the debts which they owe will be reduced to a corresponding extent, and, since their indebtedness exceeds their credits, they will be gainers by any legislation which degrades the standard of value.

We all know the method by which railroad companies are capitalized. They issue stocks and bonds not alone on the property they have—they issue them on their franchises, on their earning capacity, on the money which they make and which they hope to make. That is to say, they are capitalized for an amount far exceeding the value of any property which they possess. The debts which they owe must, therefore, exceed any sums which are due to them. Cut down those debts 45 per cent., and who will be the beneficiaries of your legislation?

But my friend from Nebraska [Mr. Bryan] has spoken in behalf of the workingman. He tells the legislation he favors is in the interest of the laborer, because it is avowedly hostile to the creditor.

I say now that the banker, the railroad company, the insurance company, the great corporation, is not a creditor, but a debtor. The man who is and must be always a creditor while the world lasts and while economic conditions remain the same—the man who, by the nature of his situation and the character of our social organization, is and always must be a creditor, is the laborer.

MR. SNODGRASS.—Because he has got everything everybody else has in his hands.

MR. COCKRAN.—I do not know exactly the meaning of my friend's language, but that is my usual condition after one of his orations. [Laughter.]

I say that the laborer is not paid in advance for his day's labor. His capital is his labor—that which he can expend in production. When you show me a mechanic whose week's wages have been paid in advance, or a day laborer whose day's wages have been paid in advance, then I will show you a laborer who is a debtor; but, while work must be done before wages are paid, the laborer is necessarily a creditor. [Applause.]

And he is different from all other creditors in that he cannot choose his debtor. He must accept employment whenever and wherever he can get it. He cannot hoard his capital for a day without injuring his family, without endangering the roof that shelters their heads and the clothes that protect them from the winter's blast. On behalf of those men, the real creditors, in the name of the laborers of this country, I protest against the degradation of the dollar, because it means a reduction in the value of the wages paid to toilers. I protest against the adoption of a variable and fluctuating standard of value, because it means that the wages of the laborer will be paid in a dollar of uncertain value, which will be rated at its highest when paid to him by his employer, and rated at its lowest when he seeks to use it in the purchase of the necessaries of life.

My friends insist that gold has appreciated in value. I deny it. If it has appreciated in value as measured by corn, by wheat, by pork, it has not appreciated in value as measured by wages. I hold here in my hand the Aldrich report, which comes to me with the approval of the distinguished Secretary of the Treasury, and which emanates from a Democratic Bureau of Statistics. The accuracy of its figures has never been impugned; and it shows that never in the history of human civilization have wages been so high, measured by gold. [Applause.]

Now, if, in its relations to commodities, gold appreciates, while in relation to the wages of labor it remains stationary, we are impelled to the conclusion that there has been a rise in the laborer's wages. It means that the purchasing power of his money has increased. It means, in short, that he obtains a larger measure of the product which his toil creates. That is the true meaning of this apparent appreciation in the value of gold. It is the healthiest sign in the entire body politic. If you pass a law to-day for the free coinage of silver, you reduce these wages 45 per cent. by reducing the value of the dollar in which his wages are paid, and you accomplish that which the employers of this country to-day are anxious to see accomplished but which they hesitate to undertake.

Oh, sir, remember the long tedious route, a veritable Cal-

vary, which labor has ascended in the long struggle to benefit its condition. Remember that every stone along that dreary way is stained by bleeding feet, by the tears of hungry women, weeping over children who moaned as they vainly sought sustenance at their mothers' breasts. Through long strikes and suffering and woe labor has improved its condition in this country until we find that it enjoys to-day the largest proportion of that which it produces that it has ever enjoyed in the history of the world. [Applause.] And you, my friend from Nebraska, you, my friend from Missouri, in the name of labor, in the name of the producers, in the name of the common people, would make the banks of New York a present of $21,000,000 and cut down the wages of toil 45 per cent. in every State and Territory of this broad land. [Applause on the Republican side.]

MR. BRYAN.—If it be true that the gentleman from Missouri [Mr. Bland] and the gentleman from Nebraska [Mr. Bryan] are desiring to make a present to the banks of New York and are trying to oppress the toilers of this country, will the gentleman from New York [Mr. Cockran] state why it is that the banks of New York denounce us, and why it is that Terence V. Powderly stands with us? [Applause.]

MR. COCKRAN.—Mr. Speaker, I will answer the gentleman's question. It is because the banks of New York have discovered that in all the dealings of life honesty is the best policy. [Applause.] And the attitude of Mr. Powderly can only be attributed to the same mental operation that has caused the gentleman from Nebraska [Mr. Bryan] to urge the debasement of the dollar in the interest of labor. [Applause.]

Now, Mr. Speaker, while I believe national bimetallism to be impossible, I believe that international bimetallism is entirely feasible.

Gentlemen claim that an increase in the circulating medium is absolutely essential to national prosperity. The advisability of increasing the circulation has been used as an argument alike for the free coinage of silver and for opposition to the repeal of the Sherman act, and it may therefore be advisable to examine the character of this argument and the grounds upon which it is based.

No man can tell the amount of money which is necessary to the trade of any country at any given time because the prosperity of trade depends not alone on the amount of the circulation, but largely on the activity of the circulation.

Let me illustrate. Assume this coin which I hold in my hand to be a dollar. It is not a dollar, I am sorry to say, but

following the example of my friend from Missouri [Mr. Bland] I will invoke an exercise of faith on the part of the House and ask gentlemen to believe that this is a dollar. Assume that with this dollar a man purchases at a fruit stand a dollar's worth of fruit. The dealer goes to the market and purchases a dollar's worth of fruit to replenish his stock, the wholesale fruit dealer goes to the meat stall and purchases a dollar's worth of meat, and, in short, the coin circulated among, say, ten trades.

It is plain that in this case $1 has been sufficient to circulate an amount of commodities equal to the value of $10. It has been just as effective for that purpose as if $10 had been used in these ten transactions. If the coin had been twice as active it would have circulated $20 worth of goods; if only half as active it would have circulated goods to the value of $5. The value of money, then, so far as trade is concerned, is not necessarily in its quantity, but its activity, or, as John Stuart Mill says, "its efficiency."

Mr. Speaker, I venture the assertion that we are not suffering to-day from a lack of money, but from a redundancy of money; and I think that proposition can be demonstrated to the satisfaction of any man who sits in this hall. According to the statement of the Secretary of the Treasury the circulation to-day exceeds by some seventy millions the amount in circulation last year, but last year the volume of business was vastly greater than it is to-day. If a smaller amount of money be able to circulate a greater quantity of commodities, will anybody pretend that the quantity of money we have now is not sufficient for all the purposes of commerce?

The fundamental mistake which gentlemen make in discussing this question springs from the assumption that money is wealth. It is not wealth. You can purchase wealth with money, but to obtain the wealth you must part with the money. The pretence that there is not sufficient money in the country is a pretence which has been refuted by the experience of the human race. It is the favorite cry of amateur statesmen; it has been the butt of every man who is familiar with the elementary principles of political economy.

Scarcity of money really means scarcity of credit, and scarcity of credit is the consequence of imprudence in trade. Every writer on political economy lays down the rule that money is merely the machinery by which trade is kept in operation. It is not property; it is not wealth; it is the great wheel that keeps commodities in circulation.

Sir, the machinery of our trade is disordered because the

Government is every day forcing a large quantity of paper into the channels of circulation. Our currency has been swelled far beyond the requirements of trade, and as a necessary consequence the good money, the buoyant circulating medium of international value, has left our shores, and we have been compelled to maintain our commerce with a paper money over which there hangs a cloud of suspicion, forcing us to do business in an atmosphere of doubt and distrust.

An excessive circulation always shows itself by the departure of good money. Money abhors idleness. When there is more money in a country than the business of that country needs the surplus is exported, and, as the best money is always the money of export, you find every panic preceded by a redundancy of money and an export of bullion. The panic from which we now suffer is a striking illustration of this rule. Now, it is perfectly true, as my friend from Maine [Mr. Reed] says, that these panics do not always come from vicious legislation, they often result from overtrading, from an undue expansion of credit. When a man gets credit in one place and uses it to make a purchase of goods, that very fact operates to give him credit in another place, which he often uses to make an additional purchase. Of course, these purchases operate to cause a rise in prices. Other traders, seeing an advance in prices, and not realizing that it has been caused by this exercise of the first purchaser's credit, begin buying on what they conceive to be a rise in market, and thus help swell the upward movement, which goes on increasing with each addition to the number of purchasers till some of the traders try to realize their profits. Then the upward movement hesitates and stops. Those who hold goods become alarmed. They hasten to offer their commodities for sale. The market becomes crowded with sellers, while few purchasers are to be found. Prices decline, the anxiety to sell becomes aggravated and produces a further decline, till the downward movement becomes a veritable panic, a total collapse.

My friend from Maine seems to treat these recurring crises as something necessarily produced by the action of the human race in its march of progress. I do not believe it. I think the history of the world disproves it. I think these commercial crises are like the great pestilences that sweep over the world. Ignorance attributes them to God; science knows they are the consequences of human folly. The black death that swept over Europe in the Middle Ages was called a scourge of God; but to-day we battle with cholera and all other epidemics ac-

cording to scientific methods. We trace them to their sources, discover their causes, and arrest the march of contagion. So these commercial crises can be investigated, their sources discovered, and their causes removed.

Here Mr. Cockran gave a history of British and American panics, and traced each either to an unnecessary inflation of the currency or to an improvident expansion of credit.

Now, sir, the operation of the Sherman law has been to flood this country with paper money without providing any method whatever for its redemption. The circulating medium has become so redundant that the channels of commerce have overflown and gold has been expelled. No power is conferred on any officer to secure sufficient gold to redeem the notes which the treasury is compelled to issue.

My friend from Missouri [Mr. Bland] finds fault with the operation of the act, as does my friend from Mississippi [Mr. Allen]. These gentlemen think that the Government should redeem the notes in standard silver dollars. And here, sir, we are confronted with one of the most extraordinary ethical exhibitions that I have ever known in public life. Here are men honest as the sun. The great apostle of free coinage of silver is a man whose rugged independence and integrity are an ornament to the membership of this House. Yet, under the extraordinary mental operation that is involved in the support of his monetary doctrine, he coolly proposes that while the Government purchases 651¼ grains of silver for a paper promise to pay, yet, if, in the course of trade, I find that same piece of paper in my hands, I be allowed to collect but 371¼ grains for it, the Government confiscating the balance in spite of my protest.

If the case involved the issue by the Government of promissory notes against purchases of oats or barley or wheat, and the redemption of them on any such plan of confiscation, my friend would condemn the proposition as absolutely dishonest; he would say that what the citizen can not honestly do the Government can not do and respect its moral obligations; that robbery is none the less an outrage when it is perpetrated openly by force of law than when it is perpetrated stealthily by fraud or violence. Yet we find gentlemen here insisting that the Government shall plunder its own citizens by forcing them to accept little more than one-half the commodity which had

been purchased by its notes, when these notes are presented for redemption.

Money, said Mr. Cockran, giving Adam Smith as the authority for his statement, can never become permanently scarce while we have commodities to give for it.

We produce the commodities which will always purchase money; but when my friend from Missouri [Mr. Bland] tells us exultingly that gold is now returning to this country, although the Sherman law is still in operation, I want to remind him of the method by which it has been forced to return, the sacrifice that has been made to secure it, and to tell him who it is that pays for it.

The currency famine from which we have suffered was the result of distrust in our monetary system, caused by the increase of paper money and the export of gold. We do not need more money, but we need better money. The inexorable laws of commerce are even now bringing back to this country the good money which is essential to its prosperity; but how? I ask the friend of the farmer who speaks on this floor as his special champion and who declares that the Sherman act operates to maintain the price of agricultural products—I ask him how is the quality of our currency to be restored, and who must pay the penalty which every violation of economic law entails upon the country?

I hold in my hands a report from the Treasury Department of the exports of wheat for the last three months and for the corresponding three months of 1892. It tells the whole sad story. I find that in 1893 we exported 4,400,000 more bushels of wheat than in 1892 and received 1,200,000 less dollars for them.

Where is the friend of the farmer who looks upon that result and wants to perpetrate the financial system which has produced it? Yes, gold will return to this country. Our currency will not remain permanently debauched. The commodities which we produce will always command a generous supply of the best money in the world. But when vicious laws force us to part with these commodities in order to replenish a circulating medium exhausted of its gold, the burden of the sacrifice falls on the shoulders of the producer.

Bread must always be consumed. While men live they must eat bread, and whoever can sell the material from which bread is made can force the stream of gold to flow in his direction.

My friend from Nebraska [Mr. Bryan] alluded in his speech to the recent purchase of gold by the sacrifice of agricultural products as though the farmer had submitted voluntarily to the loss. He was not a voluntary sufferer. He was the victim that was compelled to suffer under the imperious laws of trade which imposed this loss upon the primary source of national wealth. How can we bring gold back to this country except by offering for sale the products of the soil? We have no luxuries to sell, and there is no market for luxuries even if we were able to offer them. Our securities have been sent back by the cord, until they have depreciated in price so that we see a market full of sellers and void of buyers.

But bread must always be eaten and breadstuffs will always be purchased, and while we have the great staple products of the field we can always get our share of the circulating medium of the world. But when we are forced to extraordinary exertion in order to get the supply necessary to meet an extraordinary condition, we are forced to obtain a market for our agricultural products by a sacrifice in price such as we have made during the last few months. And the same laws that forced us to sacrifice our wheat will force us to sacrifice all other products unless we remove the causes which rendered the sacrifices necessary.

Sir, the friends of the farmer and the friends of labor, the enemies of the creditor and the friends of the debtor, are moving in a strange way to improve the condition of the producer. They oppose the repeal of a law which, by expelling gold from the country, has forced us to sell at a grievous sacrifice the product of the farms. They advocate a system of coinage which would reduce the debts due by the capitalist, and would enable the banker to escape paying 45 per cent. of the balance which he owes to his depositors over and above the debts which are due to him. The laws which they propose can not affect the reserve—the accumulated specie which represents the banker's capital and his dividends. But the great army of creditors, which comprises all the laborers and producers of this country, these men they will strip of 45 per cent. of the progress which they have achieved, and all this they would do in the name of the masses of the people, claiming to be the champions of the oppressed against the oppressor.

Gentlemen have appealed here to the country and to the sentiment of the country members as though the interests which they represent were hostile to the interests of the cities. Sir, I stand upon this floor, a Representative from a district in the

greatest city on this continent, and I say now to this House that the interests of the city can never be hostile to the interests of the country; that municipal wealth and prosperity depend upon the productive energies of the laborers who toil in the fields and who dig in the mines. Show me legislation which will benefit the farmer, the laborer, the producer, and even if it cut down the profits of the banker or the capitalist 50 per cent., I would gladly vote for it. I believe in the lesson which Mentor impressed on Telemachus, that it is not the splendor of the cities, but the prosperity of the fields that constitute the greatness of a nation; not the opulence of its palaces, but the comforts of its homes.

But the interests of the city and of the country are identical. What benefits the one must benefit the other; what retards the growth of the one will reduce the prosperity of the other. In city and in country alike labor is the sole source of wealth. In both man must eat his bread in the sweat of his brow. We have heard a great deal here of the conflicting interests of the various sections, and an attempt has been made to array the North and East against the South and West. As we heard the vehemence with which appeals were made to sectional prejudice a doubt must have arisen in the minds of the listeners as to whether after all the heroic struggle to preserve the Union was not a mistake.

Must we be forced to the conclusion that this country is so vast, its interests so diversified and irreconcilable, that any policy which the Government may adopt must necessarily be injurious to some part of the population; that legislation which is essential to the safety of urban interests must necessarily be hostile to rural interests; that laws which operate for the protection of New York must necessarily result in the oppression of Missouri and Nebraska? I do not believe that a law which benefits any part of this country can injure any other part. I do not believe that there ever has been a time in this country's history when an attempt to arouse sectional prejudice has resulted to the profit of anybody.

I believe this attempt to create prejudices based upon the occupations and interests of the various sections will be regretted by gentlemen when they come to realize the meaning of what they say; when they remember that the fires of disunion were stamped out by marching armies in this country; that the embers were quenched by the blood of martyrs and the tears of widows. [Loud applause.]

I prize my citizenship in this country, not simply because

it embraces New York, but because it embraces Nebraska and Missouri and every square inch of the territory which is comprised within the Union. New York has no function except as she administers to your welfare. No grass grows between the stones of her pavements; she produces none of the things which she consumes or which furnish employment to her workshops. Her mechanics, working at their benches, transform the rude products of the soil and of the mine into the finished articles essential to the luxury or the comfort of the human race. Her laborers transship the fruits of your toil from the cars in which they reach her borders to the great argosies of commerce that bear them across the sea for distribution throughout the globe; and so she stands upon the verge of this western continent, with one arm gathering the fruits of your industry to distribute them throughout the universe, and with the other gathering for your benefit the golden tribute which the world pays to the producers of this country. As you prosper, she prospers. As this nation grows, she grows. As this country becomes great, she becomes great; but material greatness will not satisfy our national aspirations unless it be accompanied by moral progress; and we who ask you now to make honesty, equity, justice, the distinguishing features of your legislation, ask you to do that which will conserve the greatness we have achieved, which will broaden before labor and industry the broad horizon that even now is theirs, which will make the march of this country along the pathway of material development a decisive step in the progress of the human race toward the cultivation of the virtues that dignify humanity, justify republics, make the flag of liberty glorious, and democratic institutions perpetual. [Prolonged applause and cries of "Vote!"]

William L. Wilson [W. Va.] defended the measure which was in his charge.

Let me consider briefly the objections that have been urged in this debate to the repeal of the purchasing clause of the Sherman bill. I can do no more than summarize them.

First, it has been said, from the very first speech to the last, that by stopping the purchase of silver bullion we shall throw the country to the gold standard for the settlement of all balances, the effecting of exchanges, and the payment of debts. Mr. Speaker, the countryman in the play, who was so astonished to learn that he had been speaking prose all his life, had no less reason for his astonishment than gentlemen

who have learned in this debate that we are already on the gold standard and that we have been on the gold standard throughout all the business life of every man who has taken part in the discussion. We have had the single gold standard since 1834, through the operation of those economic laws which no statutes of Congress can override or defy. We have had the single gold standard since 1873, by the express enactment of Congress which declared the gold dollar to be the unit of value in the currency of the United States. By this standard we buy and sell, borrow and loan, and make our contracts for the future payment of money. And so have we been doing for sixty years, except for that interval during and after the war when all specie payments were suspended in the country.

What then, Mr. Speaker, is our trouble to-day? Simply this. The Government is steadily increasing its issue of gold obligations and of depreciating dollars, and with the visible lessening of its stock of gold a fear and doubt—whether reasonable or unreasonable is entirely irrelevant—have arisen as to its ability and its purpose to meet those obligations and to keep those depreciating dollars up to the legal standard it has established for the money of account in our country. As the silver bullion in the treasury, or in the coined dollar, sinks in value as compared with this legal standard, a greater stress is laid upon the Government, a greater test is made of its ability and of its purpose to maintain these and all its other forms of credit currency at a parity with the gold standard.

Again, Mr. Speaker, it has been almost angrily contended from the beginning of this debate, that if we stop now the purchase of silver bullion, as required by the Sherman act, we shall demonetize our silver, or, as the gentleman from Missouri [Mr. Bland] has expressed it, destroy the silver currency of the country entirely.

Why, sir, the bill proposed does not demonetize a single silver dollar anywhere, circulating or stored away, in this country to-day. It has not come to destroy, but to save. It has not come to strike down or destroy any part of our silver currency, but to place it, once and forever, on an impregnable basis of parity with the gold currency of the country. [Applause.]

Augustus N. Martin [Ind.].—Will the repeal of the purchasing clause of the Sherman silver act necessitate the sale of United States bonds to secure gold for any purpose?

Mr. Wilson.—That is a question to be answered only in the light of experience. In the light of the experience of other

countries, especially of France and the Scandinavian nations, of Canada and of Holland, the mere passage of law limiting the purchase of bullion and the coinage and issue of silver dollars would, as I have already declared, at once and forever put and keep our silver currency on a parity with our gold, and there would be no necessity to issue a bond for that purpose. [Applause.] This repeal bill is not only the pledge and promise of such parity; it is in itself the performance of that pledge. [Renewed applause.]

Why, Mr. Speaker, when gentlemen declaim that the intention and effect of the bill are to strike down our silver currency and limit us not only to a gold standard, but to a gold currency, they not only ignore our own experience and our own laws, as I have already shown, but they shut their eyes to the experience and action of that people from whose dealing with silver we can just now learn most salutary lessons. I mean the people of India. The government of India has expressly declared that in shutting its mints to the free coinage of silver it has done so with a view to the introduction of the gold standard, but with no present intention of introducing a gold currency. Sir David Barbour, the financial minister, on whose advice the Herschel committee acted, and the final legislative decree of the Indian Government was made, directed especial attention to the fact that France and other nations have found it perfectly safe and feasible to maintain a large circulation of full, legal-tender silver, with a gold standard; some of these nations indeed with a comparatively small supply of gold.

Benton McMillin [Tenn.].—Do you propose, then, to follow up this bill with any measure looking to the extension of silver coinage, and, if so, when?

Mr. Wilson.—While I have no authority to speak for anyone except myself, I am satisfied that it is the earnest desire of this Democratic Administration not only to support the existing issue of silver in this country, but to increase the volume of silver currency to the utmost extent that it is safe to do so, and still preserve its parity with gold, without taxing the people, through bonds, to accomplish that result. [Applause.]

It has been generally argued by those who oppose this repeal bill that to preserve the gold standard as we have had it for sixty years, or, as they mistakenly contend, to adopt that standard, is to work injustice to the debtor class, because gold, they assert, is appreciating in value and the burden of debts is steadily increasing in consequence. The decline in the market prices of many products, and especially of most of our staple

farm products, seems to give color to this argument, and the facts that seem to sustain it have been put forward with great plausibility by several gentlemen in this debate.

But, Mr. Speaker, a very slight examination of those facts will show that they can not be made to prove any such argument. The true test, already stated by the gentleman from New York [Mr. Cockran], is the wages of labor. If gold has appreciated in value in recent years that appreciation ought to show itself in a decline in the wages of labor and in the price of articles still made by hand labor.

But there has been no such decline; on the contrary a visible and progressive rise. Wages are twice as high in the United States as they were fifty years ago; twice as high in England as they were fifty years ago; much higher than they were in the past in every one of the enlightened countries of the world. I venture to affirm, sir, that it will be very hard to find any great article that has fallen in price where the decline may not easily and unmistakably be traced to one of two great causes, and often to the joint operation of both of these causes; either an immense increase in the source of supply or immensely cheapened production through those great inventions and discoveries of our day that have so mightily economized and multiplied labor in the production and transportation of manufactured articles and even of agricultural products.

Mr. Speaker, will gentlemen complain of cheapened production and lessening cost of the necessaries of life if the wages of those who toil to produce them have meanwhile and everywhere gone up? Will they oppose the opening and development of new regions of our land because thereby cheaper food and cheaper clothing may come to all the people? Must we bemoan the triumphal march of invention and rail at the bounties of science because they open to the masses of mankind a way of escape from ignorance and poverty and beget the hope that all men may rise to a richer and nobler life?

What, sir, is all this but the emancipation of man from the servitude of constant drudgery? If by a less expenditure of labor he can free himself from incessant and grinding toil, enter upon a higher plane of life, and gather around him more of life's comforts, refinements, and luxuries, surely gentlemen ought not to declaim against this as a wrong to mankind and a hurt to those who labor.

And now, Mr. Speaker, I will consider, with equal brevity, the benefits that are expected to flow from the passage of this bill and from the immediate and unconditional repeal of the

purchasing clause of the Sherman law. The first benefit will be the restoration of confidence of the people of this country in their own money and in every dollar of it. If the experience of France and of the other nations I have mentioned is worth anything, it justifies us in the confident belief that as soon as we draw the line where it now is, and say that for the present at least we will purchase no more silver bullion and add no more depreciated dollars to the currency of the country, from that very day every dollar in existence will be recognized as the equal of every other dollar in purchasing and debt-paying power, and no man will be troubled as to whether his debts or his contracts are to be settled in paper, in gold or silver, or in representatives of gold or silver.

Again, Mr. Speaker, gentlemen demand an expansion of the currency as the vital need of the country, and inquire if this bill is to be followed immediately by some legislation to increase the volume of our circulating medium. Sir, there is no expansion of the currency within the compass of their imagination that would work as quickly, work as safely and as effectually to restore the country to commercial health as to let loose at once from its hiding places the $1,700,000,000 of money already in this country.

It has already been shown—and I am embarrassed in going over ground so much more fully and carefully gone over by others—that it is not so much the quantity of money as its unquestionable quality, that creates confidence and supports that wonderful superstructure of credit through which a large and increasing part of the business of every State in this Union is done to-day. In the growth of modern trade, in the natural development of our marvelous industrial system, economy in the use of actual money, increased efficiency of every dollar as a debt-paying instrument or measure of exchange, have kept pace with all the other improvements and progress of this age.

Money, to-day, speeds on the lightning express, flies on the wings of the telegraph, is transferred in the twinkling of an eye from one end of the country to another, from continent to continent, and it does this through the perfection and widening use of its convenient representatives which have become the tools of exchange of almost all our modern business.

To-day, sir, gold and silver, and United States paper money—in a word, what we generally understand by the term money, especially when we speak of currency expansion—perform but a small part of the actual transactions of the country. I have examined, in the past few days, the report of the transactions

of the New York clearing-house. For the year 1892 the average currency exchanges per day were nearly $120,000,000, while the average currency balances per day—the money actually required to settle those exchanges—were but little more than $6,000,000.

That which is done upon a large scale in New York is done upon a smaller scale in every other city, and even in the towns and villages of our country to-day. Not money itself, but representatives of money, pay debts, transact business, effect exchanges. Sir, this mighty fabric of $120,000,000 can rise and rest securely upon a basis of $6,000,000 of money upon one condition only. There must be no doubt of the permanence and stability of that basis. If doubt and distrust arise as to the safety of that foundation the fabric of credit shrinks, as we have seen it shrink recently from one hundred and twenty millions per day to sixty millions, a contraction of the currency in a single city of $60,000,000 in a single day.

Restore confidence in the actual money of the country, remove all ground for doubt that any dollar bearing the Government stamp is to be worth less than its face value, and you will bring forth, as if by magic, every hiding dollar in the land. You will renew and increase public confidence in the foundations of our great and expanding credit system. Vigor and enterprise will once again appear in our markets, and we shall have in a greater measure than we have had in recent years the blessings and encouragement that come from a stable currency in the development of the country, the increase of its production and commerce, and in the employment of its labor. [Loud applause.]

Charles A. Boutelle [Me.] ascribed the depressed condition of the country to the certain prospect of a radical revision of the tariff by Congress.

You can not raise the mailed hands of legislation in deadly threats against every productive industry of a great nation without inviting business calamity. The calamity has come. It is at our doors; and I tell you, my young friend from Nebraska [addressing Mr. Bryan], that if you go to your "Napoleon of politics" now, and, undertake to urge him, like your "drummer boy of Marengo," to let you beat just "one more charge"; when you remind him how you beat "*such* a charge" for free wool that sent all the American sheep scampering to the slaughter-houses and wool down to 10 cents a pound, and beseech him to "let me beat one more" [laughter]; when you remind him, "Sire, we did beat *such* a charge against the wool manu-

facturers, and see how their factories are toppling all over the land! Oh, sire, we did beat such a charge against the cotton manufacturers, and look how they are closing their doors and turning their army of unemployed workmen out into the streets! [Laughter.] Oh, sire, we did beat *such* a charge against the gold standard and monometallism, in favor of free and unlimited coinage of short-weight silver dollars, and look how our securities have come flocking home for redemption, how the banks of New York and all over the country have been brought to the verge of ruin, and idle workmen are being fed in the soup houses. Oh, sire, let us beat one more charge." [Applause and laughter on the Republican side.]

Mr. Speaker, he won't do it. I tell you, my young friend, that when your quondam chieftain comes back from Gray Gables, while he may applaud, as we all did, the beautiful imagery and fervid eloquence of your splendid speech, brilliant in all except the soundness of its premises and the logic of its conclusions [laughter], he will place his hand on your head and say, "My young friend, that was all very well before election, but we won't have any more charges beat just now." [Laughter and applause.] You just go to work and learn how to beat a first-class retreat. "That is what we shall most stand in need of." For I assure my friend from Nebraska that the "man of destiny" has already observed the omens of the times, and he will whisper in your ear that Marengo is a long way behind, that the victory of 1892 was nothing but a spasmodic return from Elba, that amid the uprising of the allied industries and interests of a deceived people he already hears the ground rumblings of the Waterloo of 1894 [applause on the Republican side], and against the bright sun-burst of Republican restoration in 1896 he sees, grimly looming, Democracy's St. Helena! [Loud and continued applause on the Republican side.]

The bill and its amendments came to a vote on August 28.

The amendment offered by Mr. Bland, providing for the free coinage of silver at the present ratio to gold of 16 to 1, was defeated by a vote of 125 yeas to 226 nays. The Bland amendments for free coinage at higher ratio were voted down by even greater majorities.

Then Mr. Bland offered the amendment providing for the restoration of the Bland-Allison silver purchase act of 1878. It was defeated by 136 yeas to 213 nays.

The bill was then passed, amid applause on the floor and in the galleries, by a vote of 239 to 108.

The Senate referred the bill to the Committee on Finance, the majority of which, through Daniel W. Voorhees (Ind.), the chairman, on August 29, reported an amendment to the bill which was of the nature of a substitute. It repealed the silver purchase clause of the Sherman Act of 1890, and added:

> And it is hereby declared to be the policy of the United States to continue the use of both gold and silver as standard money, and to coin both gold and silver into money of equal intrinsic and exchangeable value, such equality to be secured through international agreement, or by such safeguards of legislation as will insure the maintenance of the parity in value of the coins of the two metals, and the equal power of every dollar at all times in the markets and in the payment of debts. And it is hereby further declared that the efforts of the Government should be steadily directed to the establishment of such a safe system of bimetallism as will maintain at all times the equal power of every dollar coined or issued by the United States, in the markets and in the payment of debts.

The debate on this bill exceeded in duration of time and in volume that in the House upon its bill. As the arguments were necessarily repeated, only the speech of John Sherman [O.] is presented because of his unique position in asking for the repeal of a measure which he had fathered.

Repeal of the Sherman Act

Senator Sherman

Mr. Sherman.—Mr. President, the immediate question before us is whether the United States shall suspend the purchase of silver bullion directed by the act of July 14, 1890. It is to decide this question the President has called Congress together in special session at this inconvenient season of the year. If this was the only reason for an extraordinary session, it would seem insufficient. The mere addition of 18,000,000 ounces of silver to the vast hoard in the treasury, and the addition of fourteen

millions of treasury notes to the one thousand millions of notes outstanding, would hardly justify this call, especially as Congress at the last session neglected or refused to suspend the purchase of silver. The call is justified by the existing financial stringency, growing out of the fear that the United States will open its mints to the free coinage of silver. This is the real issue. The purchase of silver is a mere incident. The gravity of this issue can not be measured by words. In every way in which we turn we encounter difficulties.

If we adopt the single standard of gold without aid from silver, we will greatly increase the burden of national and individual debts, disturb the relation between capital and labor, cripple the industries of the country, still further reduce the value of silver, of which we now have in the treasury and among our people over $593,000,000, and of which we are the chief producers, and invite a struggle with the great commercial nations for the possession of the gold of the world.

On the other hand, if we continue the purchase of 54,000,000 ounces of silver a year, we will eventually bring the United States to the single standard of silver—a constantly depreciating commodity, now rejected by the great commercial nations as a standard of value; a commodity confessedly inconvenient by its weight, bulk, and value for the large transactions of foreign and domestic commerce, and detach us from the money standard now adopted by all European nations, with which we now have our chief commercial and social relations. In dealing with such a question we surely ought to dismiss from our minds all party affinities or prejudices; all local and sectional interests, and all preconceived opinions not justified by existing facts and conditions.

Upon one thing I believe that Congress and our constituents agree: That both these extreme positions shall be rejected; that both silver and gold should be continued in use as money—a measure of value; that neither can be dispensed with. Monometallism, pure and simple, has never gained a foothold in the United States. We are all bimetallists. But there are many kinds of bimetallists. One kind favors the adoption of the cheaper metal for the time being as the standard of value. Silver being now the cheaper metal, they favor its free coinage at the present ratio, with the absolute certainty that silver alone will be coined at our mints as money; that gold will be demonetized, hoarded at a premium, or exported where it is maintained as standard money. The result would be monometallism of silver.

Another kind of bimetallist, recognizing that 16 ounces of silver are not worth in the market 1 ounce of gold, proposes the free coinage of 20 ounces of silver as the equivalent of 1 ounce of gold. But this is only a difference in degree, because 1 ounce of gold is worth from 27 to 29 ounces of silver. Gold being undervalued, the hoarding or exportation of gold will inevitably follow, and silver will be the only standard. Another kind of bimetallist is one who believes that the essential quality of bimetallism requires that the coins of the two metals shall be maintained of equal purchasing power. The only way in which this can be done, in case the two metals are not on a parity of value at the legal ratio, is by freely coining the more valuable metal and coining the cheaper metal at the legal ratio, and maintaining by the fiat of the Government coins of the two metals at parity with each other.

The two metals, as metals, never have been, are not now, and never can be kept at par with each other for any considerable time at any fixed ratio. This necessarily imposes upon the Government the duty of buying the cheaper metal and coining it into money. The Government should only pay for the bullion its market value, for it has the burden of maintaining it at par with the dearer metal. If the bullion falls in price the Government must make it good; if it rises in value the Government gains.

The Government is thus always interested in advancing the value of the cheaper metal. This is the kind of bimetallism I believe in. It is the only way in which two commodities of unequal value can be maintained at parity with each other. The free coinage of silver and gold at any ratio you may fix means the use of the cheaper metal only. This is founded on the universal law of humanity, the law of selfishness. No man will carry to the mint 1 ounce of gold to be coined into dollars when he can carry 16 ounces of silver, worth but little more in the market than half an ounce of gold, and get the same number of dollars.

The free coinage of silver means the single standard of silver. It means a cheaper dollar, with less purchasing power. It means a reduction in the wages of labor; not in the number of dollars, but in the quantity of bread, meat, clothes, comforts he can purchase with his daily wage. It means a repudiation of a portion of all debts, public and private. It means a bounty to all the banks, savings institutions, trust companies that are in debt more than their credits. It means a nominal advance in prices of the produce of the farmer, but a decrease in the pur-

chasing power of his money. Its chief attraction is that it enables a debtor to pay his debt contracted upon the existing standard with money of less value. If Senators want cheap money and to advance prices, free coinage is the way to do it; but do not call it bimetallism. The problem we have to solve is how to secure to our people the largest use of both gold and silver without demonetizing either.

Now, let us examine the situation in which we are placed. Our country is under the pressure of a currency famine. Industries, great and small, are suspended by the owners, not because they can not sell their products, but because they can not get the money to pay for raw material and the wages of their employees. Banks conducted fairly are drained of their deposits and are compelled not only to refuse all loans, but to collect their bills receivable. This stringency extends to all trades and businesses; it affects even your public revenues, all forms of public and private securities, and, more than all, it stops the pay of a vast army of laboring men, of skilled mechanics, and artisans, and affects the economy and comfort of almost every home in the land.

The strange feature of this stringency is unlike that of any of the numerous panics in our past history. These came from either an irredeemable currency, which became worthless in the hands of the holder, or from expanded credit, based upon reckless enterprises which, failing, destroyed confidence in all industries. Stringency followed failure and reckless speculation.

This panic occurs when money is more abundant than ever before. It is the movement of fear, the belief of the people that their money will be needed, and that they may not be able to get it when they want it. In former panics stringency followed failures. In this failures follow stringency.

Now, as representatives of the people, we are called here in Congress to furnish such measure of relief as the law can afford. In the discharge of this duty I will sweep away all party bias, all pride of opinion, all personal interest, and even the good will of my constituents, if it be necessary; but, fortunately, I believe their opinions concur with my own.

Senator Sherman then justified his course in regard to the silver purchase act of 1890, which bore his name and which it was now sought to repeal. The conference committee which reported the bill, and of which he was a member, he said, was limited by the previous actions

of the House and Senate to adjusting the difference between the two Chambers.

We were limited to either the free coinage of silver or the purchase of silver bullion. We chose the latter alternative. The only latitude which parliamentary law allowed us as conferees was to provide the conditions of free coinage in case the Senate bill was adopted, or to fix the amount, price, and manner of purchasing silver bullion in case the House bill was adopted. The House had taken a vote which, by a close majority, rejected free coinage, and, therefore, I correctly stated this fact to the Senate; but I was not blind to the danger that, if the conferees reported a disagreement, the narrow majority in the House against free coinage would melt away under the pressure for some affirmative action by Congress.

I was not in favor of either free coinage at the present ratio, or the purchase of silver bullion except as needed for coinage. I regarded free coinage as another name for monometallism of silver. The other two conferees of the Senate were in favor of free coinage, or, that failing, were in favor of the purchase of silver bullion provided for by the House bill. After many meetings and great delay, we agreed to report a compromise bill providing for the monthly purchase of 4,500,000 ounces of silver bullion at its market value, and the insertion of several provisions which I deemed of great importance. One was that, instead of appropriating $4,500,000 a month for the purchase of silver bullion, we should provide for the purchase of 4,500,000 ounces. I believed that this was a safer proposition, as, if silver fell below $1 an ounce, the cost of 4,500,000 ounces would be less than $4,500,000. If, however, it should advance, the cost would be greater. As the result proved, after a brief period, silver continued to decline, so that now, at the market value, the purchase of 4,500,000 ounces costs the Government about $3,300,000.

We also agreed upon a provision that the Secretary of the Treasury might redeem the treasury notes issued for the purchase of silver bullion in gold or silver coin at his discretion, thus enabling him to maintain the two coins at parity with each other. We also agreed to the declaration that it was the established public policy of the United States to maintain the two metals upon a parity with each other upon the present legal ratio, or such ratio as may be provided. This was a direction to that officer to so exercise his discretion as to maintain the parity of the two coins.

With these provisions the law is far better than the bill of the House or the bill of the Senate.

When any Senator hereafter undertakes to criticize the law, which has been misnamed after me, he should remember that it was a substitute for a bill of the House of Representatives and a bill of the Senate, both of which would have been far more dangerous in their results than even the law of which I am now speaking.

Sir, "give the devil his due." The law of 1890 may have many faults, but I stand by it yet, and I will defend it, not as a permanent public policy, not as a measure that I take any pride in, because I yielded to the necessity of granting relief, but I do say that the beneficial effects that flowed from the passage of that law were infinitely greater even in the percentage of money than the loss we have suffered in the fall in the price of silver. Without it, in 1891 and 1892 we would have met difficulties that would have staggered us much more than the passing breeze of the hour—a storm for a month, or even for a year. The immediate result of the measure was to increase our currency, and thus relieve our people from a panic then imminent, similar to that which we now suffer. The very men who now denounce from Wall street this compromise were shouting "Hallelujah!" for their escape by it from free coinage.

Now the condition is changed. One year ago we had the experience of the operation of the law for but two years. The price of silver steadily declined. Every purchase made was in a falling market. Our purchases were inducing the mining companies to increase their production of silver, while European countries stopped their purchase of silver, and, in some cases, sold their silver on hand in our market. Then was the time to suspend our purchases and await the course of events. It is manifest that, if our Democratic friends at the last session had been willing to vote for the repeal of this clause, the existing panic, so far as it is the result of the purchase of silver bullion, would not have occurred. Instead of this, they were denouncing the law of 1890 as a miserable makeshift; they were demanding and promising free coinage of silver, cheap money, and plenty of it.

In certain States this largely influenced the result of the election of the President of the United States. Now, that they are in power, we have a different call. The President asks us to suspend the purchase of silver because it "has led to renewed and persistent efforts in the direction of free coinage of silver."

I am glad to notice that many of the gentlemen who voted for the free coinage of silver are now in favor of the repeal of this act. My only surprise is that the great body of them who voted against this act, and denounced it as a makeshift, are now unwilling to vote for its repeal.

My reasons for its repeal are now stronger than ever before. The result of the act has by unforeseen events disappointed the hopes and expectations of its authors. It has, by its operation, tended to reduce rather than to increase the value of silver. The burden assumed by the United States led to the completion of gold monometallism in Europe by giving a market to silver that was demonetized. Its results encouraged and led to the Indian policy of the British Government. The act of 1890 may have contributed somewhat to the amount of gold sent to Europe, though I think that the cause of this movement is that the balance of trade has lately been against the United States, and therefore transferred to Europe the only money they will accept in payment of balances due them. One of these imports paid for in gold was silver sent us from Mexico and Europe.

The act of 1890 has demonstrated also the inevitable result of free coinage in our country. If the purchase of 54,000,000 ounces of silver a year did not prevent the further decline of that metal, what would have been the result if we received and coined all the silver that would be brought into the United States from any region of the world at the fixed price of $1.29 per ounce, worth in the market 73 cents an ounce? This is a proposition the logic of which it is impossible to avoid. It is a lesson necessarily to be taught. Without it many honest people could not be persuaded that the fiat of the Government was not sufficient to lift the price of silver or to prevent its fall.

There is no doubt that the act of 1890 is made the imaginary pretext for many evils it did not produce. It is made to bear the results of wild speculation, of fears well or ill founded as to future legislation, of failures and disturbances with which it has no connection. It is made the scapegoat for extravagance and folly. The fears of business men that the tariff policy of the Democratic party will disturb all domestic industries and open our markets at cheap rates to the productions of every country in the world, and the cautionary measures taken by them to guard against this competition are far more potent causes for distrust, stopping of factories and workshops, than the purchase of 4,500,000 ounces of silver a month.

Certain it is that the act of 1890 did not produce a scarcity of currency. The evil which our people are suffering now is

not the volume of money, but the hoarding of it. It is a currency famine caused by the hoarding of money taken from its ordinary channels and hidden away in secret places by reason of the fears of millions of people in all ranks and conditions of life. This act which we are called upon to repeal has furnished yearly from $34,000,000 to $50,000,000 of treasury notes issued for the purchase of silver bullion. If the issue of this great sum in monthly installments had any effect, it must have been to expand the currency. Its repeal leaves no law in force for any increase of a circulating medium at a time when above all others currency of every kind is in great demand and is bought at a premium.

Let us not deceive our people as to the reasons for this repeal, for when the purchasing clause is repealed you will still have to deal with the real causes of the prevailing stringency and distrust. I do not vote for this repeal with any expectation that it will in any considerable degree relieve us from the industrial stagnation that has fallen upon all kinds of business and production, and that has thrown out of employment hundreds of thousands of laboring men and women. They care little about the kind of money that is paid them, provided that it is equal in purchasing power to any other money, and is backed by the United States. They do not study the question of ratio, or the difference between silver and gold, and, if left to choice, prefer the notes of the United Sattes to either coin.

What they want is employment, fair wages for home industry, reasonable protection against undue competition with foreign laborers miserably paid, fed, lodged, and treated. Give them these, and you may make your standards of value as you choose. Mete out to them the same measure of value that you do to yourselves and they are content. The fear that industrial conditions will be so changed that the prosperity of the past will be followed by diminished production, lower prices, lower wages, diminished exports, and increased imports, resulting in a continued balance of trade against us—these are the chief factors of the present financial stringency. It is manifest that if this law is repealed it is not to relieve the people from a stringency of currency, but to relieve the money market from the dread of the effect of free coinage of silver.

The President, in the midst of a panic, appeals to us to repeal this law. He will not make this appeal in vain to me. I am under no obligations to him and have no sympathy with him in many of his ideas of public policy, but in this matter I believe he is right, and that, without respect to party divisions

or party affinities, it is my duty to respond to his call. We ought to suspend the purchase of silver bullion. The strange spectacle is presented that those of us who confess ourselves responsible for this law and voted for it are willing to repeal it, while the great body of his political friends who voted against it and declaimed against it refuse to repeal it and cling to it as their ark of safety. Our Democratic friends have denounced this purchasing clause as a miserable makeshift. It was a makeshift, but I think a good one to defeat the free coinage of silver on the ratio of 16 to 1. I believe in this respect it has rendered the country an enormous service.

I will vote for its repeal because I believe the purchase of silver is no longer necessary, that it is unprofitable and dangerous—not that I wish to depreciate silver, for if I had the power to regulate the market I would gladly advance it to par with gold at the legal ratio. As this is impossible, I am willing to vote for any measure that will tend to maintain the parity of the two metals at some fixed ratio approaching their commercial value. I will coöperate with any person or any party in any measure that will tend to maintain the harmonious use of silver and gold as standards of value for all human productions.

The bill was passed on October 29 by a vote of 43 to 32. The House concurred in the Senate amendment, and President Cleveland approved the bill on November 2, 1893.
